8. The Air Ministry require a minimum of safety, but it is not only that minimum of safety which is being obtained at the present moment. The ground engineers, by their efficient work, *have enabled the machines to be maintained in a greater degree of flying excellence than the minimum required*.

## Notes on "Civil Aviation"

9. The operating firms have to look after their machines from hour to hour and minute to minute. This is especially important [as pointed out by Colonel Outram] during the few minutes before flight. No Government office can *guarantee the execution* of such work.
  1. It is up to the ground engineer to do his work [to the highest possible degree] and
  2. It is up to the operating firm to employ only the best ground engineers they can get, and,
  3. A "*most important obligation*" is that the operating firm must back up the ground engineer in every possible way.

Captain Goodman Crouch

remarked that Colonel Outram had dealt more with the "ground engineer" than with "ground engineering".

It was not, by any means, an easy job, and, although one could bind the ground engineers by regulations, a great deal remained with them as to adapting- an intelligent and keen way of going to work, especially as they were torn between two interests, holding their certificate from the Government and being- paid by the firm.

As a contrast to that he might mention that during the war he passed out over 500 machines, but there was no difficulty, as everyone was keen to help him. The ground engineer might find it difficult to enforce his opinion. Records obtained by ground engineers should be kept for reference. Ground engineers would like to have the information picked up at other stations. It might be useful to get to know the ordinary life between overhaul periods.

It was discovered during the war that certain small types of machine lasted 40 to 45 hours' flying without requiring overhaul, larger ones 60 hours, and still larger ones 90 or 100 hours. - information of considerable value to the ground engineer.

They were all anxious to get rid of Government control, but in this case it concerned the safety of the public. How could machines be classified into groups for different insurance premiums?

Accidents due to structural weakness were negligible.

Lieut. -Colonel Beatty

said that the Government must control all forms of public transport sufficiently to ensure the safety of the public.

The lesson learnt from the early days of railways caused such control to be adopted at the inception of civil air transport. The maintenance of the aircraft is probably the most important point to control in air traffic as far as safety is concerned, and Colonel Outram had given a clear description of the system of Government control, which consists in legal compulsion on the owner to employ responsible men of a certain standard of skill and knowledge, whose work is supervised by Government inspectors. Captain Crouch has pointed out the weak point in this system, which is using an employee of the owner as the responsible person.

The only practicable alternative scheme would be to have (Government inspectors for each machine, and such a system would undoubtedly tend to kill air transport by overmuch bureaucratic control.

Captain Acland has referred to the desirability of taking drastic action against ground engineers who do bad work.

The Secretary of State has wide powers under the Air Navigation Act, but he would be a rash man who inflicted punishment for infringement of any regulations without legal proof of such infringement. No Government department could possibly act in such a manner in England, and the difficulty of obtaining legal proof may frequently enable offenders to escape.

The active co-operation of the industry, and more especially that side of it which is concerned with insurance, will do much to strengthen the present system and to remove any cause for complaint.

Insurance provides a means of rewarding good work by reduced premiums, while punishing bad work by increased premiums or refusal to insure.

He hoped as air traffic develops we should see introduced a system of rebates on premiums where the maintenance work is really good—the ground engineer concerned receiving a share of such rebates.

Such a scheme should result in first rate maintenance with a minimum of Government supervision.

It is possible also that the industry might benefit if owners employed ground

## Notes on "Civil Aviation"

engineers recommended by the constructors of the aircraft, and he should certainly like to see the aerodrome managers of a transport firm holding licences as ground engineers and taking responsibility in questions of maintenance in special cases.

Mr. L. Woods Humphrey (communicated) :

1. I am sure that everybody in the aircraft industry appreciates the very efficient way in which the examination of ground engineers has been carried out in the past, and it is the earnest hope of all operators that the Examining Board will keep up this present standard and will gradually incline more and more towards the Board of Trade policy in respect of marine engineer certificates until it practically coincides therewith.

2. In part two, can you explain further why those applicants who applied for full licences were only finally recommended as qualified for a licence in only one category, as in many cases it is extremely desirable that a man should have a full licence, as it may save a company sending two or perhaps three men abroad for perhaps a long and expensive journey instead of only one man?

3. Your observations on the difficulties encountered by the Examination Board are only too well appreciated. The ground engineer's position is not a little an anxious one, even from the employer's point of view, as it is almost invariably necessary to use ground engineers as foremen, though one is not necessarily the other. The employer neither wants to run the risk of a crash, which may ruin his business, nor does he want to run the risk of large maintenance bills, which may equally ruin his business.

4. No mention is apparently made of the question of suspension of licence. One would not like to think that a man, having had his licence cancelled, is deprived of all chances of re-employment in his profession.

5. Last, but most important, is one perhaps not definitely applicable to the discussion of ground engineers, but nevertheless it affects them very considerably. The question of basing the depreciation, wear and condition of any aeroplane, engine or parts on the basis of the "hours" they have done in the air. Nothing could be more ruinous practically, in view of the very little experience which anybody has yet in regard to the real life of any of these things.

The Appendix 2 of your paper happens to draw my attention to the one concerning the disuse of the high compression Puma engine; it reminds one also of the Rolls-Royce. I have many figures on this subject, all of which would show without question that the high compression engine of both of these types saves from 20 to 40 per cent, in overhaul costs over the low compression. It cannot be too strongly emphasised that the very greatest care should be taken and the utmost possible evidence obtained before any notices such as the withdrawal of the engine of an aeroplane or part thereof from the approved list are issued.

I think I am right in saying that too much evidence is taken at the present from R.A.E. service experience, or from the makers; with regard to the R.A.F. experience, the conditions are, I think, sufficiently different from the commercial as to be almost incomparable. They use higher altitudes, they stunt, and they invariably run their engines on a higher percentage of their full power. Concerning the makers, I do not think it follows necessarily that they know more about their own engines than anyone else, and I am sure it will be agreed that it will be iniquitous to have a system which makes it possible for engine manufacturers, by reason of recommendation to the Air Ministry, to be in a position to enforce the operating companies to entail expenses which may amount to thousands of pounds, without the very fullest investigation from all possible points of view, and the maximum evidence being obtained and published.

General Sir Sefton Brancker

that at first sight the position of a ground engineer under present regulations is an anomalous one, for he is responsible to his own employer and to the Government, and it is conceivable that the interests of each of these authorities might clash. The

1921-1922 Air Estimates - Great Britain :

The Secretary of State for War (the Right Hon. Sir Laming Aforthington-Evans) Air estimates for 1921-22 were presented to the House of Commons and showed a total net expenditure of 18,411,000 a reduction of 4,581,230. An explanatory statement issued by the Secretary of State for Air contained the announcement that it had been decided, after consultation with the Admiralty, to suspend the Royal Air Force Airship service.

The maintenance of such a service for fighting purposes considerable expense would have involved a diminution of effort on services of which the fighting value had been more fully demonstrated. This step, it was stated, would result in considerable economies.

With a view to encouraging the development of Civil Aviation in a time of difficulty, it was proposed, with the sanction of Parliament, to devote a sum not exceeding 60,000 to the grant of subsidies to Civil Aerial Transport Companies. The total sum allocated to Civil Aviation (including meteorological services and the cost of headquarters staff) was again 1,000,000

The Secretary of State for Air\* [\* At the beginning of April Mr. Churchill was succeeded in the office of Secretary of State for Air by Captain the Right Hon. F. E. Guest, the Patronage Secretary to the Treasury.] (the Right Hon. Winston Churchill) said he pointed out two years ago that, quite apart from clearing away the gigantic debris and enormous mass of material which the War had left, it would take five years to make an efficient, self-respecting, well-disciplined, economically organised Air Force. About 18 months of those five years had gone and the progress had been much greater than he had ventured to hope.

*The training organisation of the Royal Air Force would, as it developed and perfected itself, become a great technical university for the nation, with the glamour and tradition of a gallant service super-added, without a complete training organisation they could not have my efficient force of air squadrons ; once they had that organisation it would carry a few more or a few less without any particular inconvenience or additional expense.*

The fighting squadrons and training establishments comprised 2,900 officers and about 25,000 men, with a certain number of civil assistants. *It was proposed this year to begin the formation on a very small scale of a Territorial Air Force, for which 20,000 was taken in the estimates. The idea was to have six squadrons stationed near centres where there was a large engineering population and aerodromes were available.*

Referring to the Admiralty decision to give up airships, the right hon. gentleman said that if any company would give a reasonable undertaking to operate the vessels and continue to experiment they should have all the airships as a free gift.

<sup>169</sup> 11 GEORGE V SESSIONAL PAPER No. 33 A. 1921 DEPARTMENT OF Public Printing and Stationery ANNUAL REPORT FOR THE FISCAL YEAR ENDED MARCH 31 1920

## Notes on "Civil Aviation"

Major-General the Right Hon. J. E. B. Seely (Coalition Liberal, Ilkeston) said it was an indefensible arrangement that a man should be Secretary of State for the Colonies and Secretary of State for Air at one and the same time.

Colonel J. R. P. Newman (Coalition Unionist, Finchley) moved :

*"That to promote efficiency and economy, a closer co-operation between the Air Force and civilian air services and aircraft manufacturers is essential."*

Sir W. Joynson-Hicks (Coalition Unionist, Twickenham) in seconding the amendment, pleaded for civil aviation, not merely because he thought it would be fatal to have no civil aviation lines while other countries had them, but because it would provide a reserve in personnel and on the factory sick of aviation for their military aviation when they wanted to increase it.

After debate the amendment was withdrawn, and the motion to go into Committee on the estimates was carried by 177 votes against 50. In Committee the Votes for men 30,880 of all ranks and for pay 4,794,000 were agreed to <

23rd May 1921 : the House in Committee of Supply discusses the following items : THE Air BOARD. Salaries, \$75,000 ; Contingencies, \$25,000  
Civil Aviation, \$700,000 ; Canadian Air Force, \$825,000.

### DEBATE IN HOUSE OF COMMONS.

The Minister of Militia and Defence (Hon. Hugh Guthrie stated that an Air Board was established by legislation in the Spring of 1920. Last year was practically the first year of their operations and was largely taken up with the work of organisation. The four items which appeared in this estimate fairly represented the work of the Board and the expenditure of the money. Last year they accomplished considerable work in what might be called research or exploration. The Board had established Provincial Boards throughout the Dominion, the presiding officer of these Provincial Boards being the Lieutenant-Governor of the Province. The Provincial Board met periodically and discussed the situation in regard to its own province and made recommendations to the Government. Several Provinces had agreed with the Air Board to share half the expense of all flying operations undertaken within their territory.

#### Survey.

The Board did a lot of valuable work last year in the Province of Quebec. It surveyed all the northern part of Quebec from Lake Saint John for a distance of 250 miles north, and he believed that the results obtained in two weeks' flying operations were far better than the work accomplished during five years of progress on the land. Air photographs had been taken of that territory showing the location of the lakes, the rivers, and the timber areas the photographs being distinct enough to show the burnt timber and to distinguish hard from soft wood. In many cases also they showed whether the streams were navigable or not. In British Columbia they did fire ranging. In Alberta something was being done in the exploration of the northern territory. It was hoped that during the coming season the air service would be of the greatest assistance in connection with the surveys of oil lands, etc. In addition, an air line had been mapped out across the Continent, and certain landing stations had been erected, but the policy had not been to establish such stations at the expense of the Dominion ; the municipalities desiring landing stations must establish them ; the Board located them and left it to the municipalities to decide whether they wanted landing stations established at those places. They received a very large number of aircraft from the

## Notes on "Civil Aviation"

British Government at the conclusion of the War ; he anticipated that there would have to be an appropriation for new Aircraft. They were practically operating now with machines given them.

^nti-smuggling operations.

He supposed as time went on the usefulness of the airship\* would be demonstrated. Only a few days ago they were

\*

Throughout the debate the word "airship

" was used to imply heavier-than-air craft.

asked to act for the Government of the Dominion in connection with Customs examinations at Victoria and Vancouver.

There had been a good deal of smuggling of drugs into Vancouver and Victoria, these drugs being dropped from incoming ships into the ocean and picked up by smaller vessels ; aircraft would be very satisfactorily used not only in the detection of such operations, but also in their prevention. Since their airships had taken part in the work of prevention that class of smuggling had largely ceased.

In answer to a question by Mr. Lemieux on the commercial value of aviation, the Minister said that there was no question as to its being successful as a system of transportation, but it was practically prohibitive up to the present time on account of the cost.

Mr. A. R. McMaster (Liberal, Brome, Que.) declared that the country could not afford this experimenting with civil aviation.

The Minister of Militia thought that now that they had started it would be unwise to stop at this time. He believed that in civil aviation the results already obtained justified the expenditure. Last autumn fires, which might have cost them several millions of dollars, were located through these civil air operations and promptly extinguished.

Service and Civil Aviation.

Mr. I. E. Pedlow (Liberal, Renfrew, S. Riding, Ont.) asked what service the Canadian Air Force rendered to the country. The Minister of Militia replied that they could not maintain a military or naval system of any kind if they had not an air force in connection with it. The late War demonstrated that it was absolutely impossible to operate troops without an air service. All scouting was done by the air service now ; all artillery work was directed by the air service, as well as all movements of troops.

Mr. Pedlow asked if it was not possible that either one of these branches might be dispensed with entirely and the training necessary in case of emergency made available through one of these two services.

The Minister of Militia replied that he did not think that would work out satisfactorily. The Civil Aviation Branch had charge of the training of all airmen, the granting of certificates and the prescribing of all flying conditions. Regulations were passed prescribing the law under which all flying was done in Canada. Just at the moment there was an

## Notes on "Civil Aviation"

anomaly in the conditions between Canada and the United States. Canada having become a member of the League of Nations was bound by certain general regulations applicable to all nations which became parties to the Covenant. In the meantime, they were providing their own regulations and had notified the United States authorities that their machines flying over Canada must comply with Canadian requirements, notwithstanding the fact that the United States had not become a member of the League of Nations.

Mr. Pedlow : "To what extent is Canada bound in this matter by her membership in the League of Nations ?

The Minister of Militia :

" Canada has given her assent

as a signatory to the Covenant of the League of Nations to certain general rules applicable to all members of the League and not applicable, of course, to the United States, which has not become a member."

Mr. W. D. Euler (Liberal, Waterloo, N. Riding, Ont.) :

i

"

Is there any co-operation between the two branches of the service ?

"

The Minister of Militia :

"

They are kept separate but one Board presides over them both. Their duties are, of course, separate ; one is purely military and naval."

Mr. William Duff (Liberal, Lunenburg, N.S.) thought it was an absolute waste of money to have a seaplane station at Halifax.

The Minister of Militia said that the naval service nowadays must have as an adjunct a seaplane service, and the best place for that on the eastern coast they considered to be at Halifax, and on the west coast in British Columbia. These were their two seaplane stations.

After further discussion the items were agreed to.

### "GROUND ENGINEERING".

#### PART I.

##### Introduction.

(i) The development of aircraft during the war was such that a new and reliable means of transport had come into existence before the Armistice was signed. It possessed the supreme advantage of greater speed than any other form of public transport, although the commercial possibilities of the new service had still to be proved.

A committee was formed under the chairmanship of Sir Frederick Sykes, and as a result of a series of meetings held during March and April, 1919, framed the first Air Navigation Regulations and the directions issued thereunder, which became a part of the law of the land on April 30th, 1919. In this paper I propose to deal with the sections of the regulations and directions concerning ground engineers.

Schedule 3, paragraphs 5, 7 and 8 of the "Regulations" read as follows:

—

(5) All passenger aircraft must be inspected, overhauled and certified as airworthy by competent persons appointed by the owners or users of them, and licensed for the purpose under this schedule, at such times as the Secretary of State may direct, and such certificate

or certificates must be produced to the Secretary of State on demand.

(7) No passenger aircraft carrying passengers shall on any day proceed on any journey unless it has previously been inspected at least once on that day by a competent person licensed for the purpose under this schedule, who shall not be the pilot of the particular machine.

(8) If such competent person is satisfied that the aircraft is fit in every way for the flight or flights proposed, he shall sign in duplicate a certificate to that effect, which certificate shall be countersigned by another person in the employment of the owner, giving the time and date of such certification. For this purpose the counter-signature of the pilot may be accepted."

Section IV. of the "Directions" refers to the "competent person" as a ground engineer, and details the procedure for licensing and the form of certificate they are required to render when carrying out their duties.

(2) Three years ago the title of "ground engineer" was unknown. To-day the term is familiar to very few of the general public, and its exact signification to a still smaller number. It is hoped that this paper may clear away any misunderstanding regarding this new profession; provide fuller information than is at present available for candidates desiring a licence as ground engineers; and that the discussion will assist towards our main object, the maintenance of an ever rising standard of safety in aeronautical travel.

(3) It may be well to consider at this stage why the creation of a new class of official was necessary. Every form of public transport is under some measure of Government control. The railways, although their vehicles operate only on their own property, have to conform to Board of Trade Regulations. Public transport services using the seas, the highways, and the rivers are under a larger measure of control in that not only are the members of the public who travel thereon safeguarded, but also the safety and convenience of other users.

The case of aircraft, while similar in many respects, differs fundamentally in that any other form of public service vehicle on land or sea once built in accordance with prescribed conditions and operated under certain limiting regulations only loses its measure of safety through accident, or by a slow process deterioration which can easily be detected by its behaviour and checked by occasional

external examination. It is possible by the examination of the design of any aircraft to forecast its behaviour in the air, and comparatively easily by careful and detailed inspection to ensure that it is built in accordance with such design and of the required materials. As a result we can certify that the completed aircraft is airworthy, and guarantee that no undue risk will be taken by its passengers or caused to that section of the community over which it passes in its various flights. At the first landing some small damage may be done to some important part of the structure; during the first flight some part of the controls may wear, or a single but vital nut loosen, and in consequence, the aircraft, although landing safely, without any outward indication of the trouble, may within a few hours of the issue of the certificate of airworthiness have passed into a dangerous condition. In other words, a certificate of airworthiness is valid only until the aircraft takes the air, and its validity must be maintained by repeated examination, to prove that everything is in the same condition as when the certificate was first granted. The ground engineer has been appointed to carry out these examinations. PART II. Examination of Ground Engineers.

(i) A candidate, having applied for a licence as a ground engineer, is requested to attend an examining board composed of Air Ministry inspectors. The result of this examination guides the Controller General of Civil Aviation in his decision as to whether the candidate is qualified for a licence.

It has been suggested that the examination should be in part or wholly written, but the experience gained in the last two years is rather against such a procedure, and in favour of retaining the viva voce method. When the various courses in aeronautical engineering that have now been introduced at certain colleges are in operation, their successful completion may possibly be accepted as replacing a part of the present examination.

(2) It cannot be too strongly emphasised that an examination only guarantees to weed out those who are insufficiently qualified. Alone, it cannot prove that all those that "pass" are fully qualified to discharge their important duties. An examining board, having considered a candidate's past experience, questioned him, and formed their joint opinion on his abilities, can do no more than state that in their opinion he is reasonably likely to be an efficient ground engineer. We have had examples of men who have shown brilliance at such examinations, but have developed in practice some little failure in personality which has prevented them carrying their extensive knowledge into effect. It would appear, therefore, that the only way to determine definitely whether a man is a properly qualified ground engineer is to watch him at his work, and in particular to note the results of such work.

The figures given in Appendix I. show that some preliminary elimination of the unqualified candidate by examination is essential. Since the publication of the Air Navigation Regulations in April, 1919, and up till 1st January, 1921, 164 candidates have been examined; 509 passed and 155 failed. Of the 509 who passed many had applied for a full licence, but were finally recommended as qualified only for a licence in one category, and even that endorsed to apply to but one or two types, as explained hereunder.

(2) It is seldom that any one man is called upon to cover the whole range of a ground engineer's duties, which would require knowledge of the construction of aircraft, construction of aero engines, and the operation of both the engine and the aircraft.

It has therefore been arranged to issue licences for a part of these duties, to enable men to carry out that section for which they are suitably qualified, Ground engineers' licences are divided into four main categories :

- (a) Rigging and daily maintenance of aircraft at the aerodrome.
- (b) Overhaul and construction of aircraft.
- (c) Top overhaul and daily maintenance of the engine.
- (d) Overhaul and construction of aero engines.

It was found that many candidates required licences for duties for which they were qualified, but which formed only a part of any one of these categories. For example, several candidates only required a licence to certify the overhaul of one particular type of aero engine of which they had the requisite knowledge and sufficient experience of the construction, though they knew little or nothing about other types. In such cases, therefore, it was arranged to recommend the issue of a still more limited type of licence in one category only, endorsed as being restricted to the particular type of engine or aircraft of which the candidate possessed the requisite knowledge.

(3) The examining board report on each candidate's qualifications, and from these reports one fact is most apparent. The majority of candidates may be divided into two classes. One class has a sound knowledge of aerodrome practice, a fair knowledge of ordinary workshop methods, and a surprising ignorance of the qualities of the materials from which an aircraft or aero engine is built, and even less of the many ways in which such materials may be spoilt by bad treatment and ignorance of their peculiar properties. The other class consists of men whose experience has been limited to a large extent to the construction of aircraft or aero engines, and who have gained the knowledge of materials referred to above, are expert in modern aeronautical workshop practice, but have only a very general or theoretical idea of what happens when the aircraft takes the air. Each of these classes is again subdivided into the metal-worker and the woodworker. Generally a candidate with good and sound knowledge of metal work has but an elementary knowledge of wood and non-metallic materials, or his knowledge of the latter predominates. Only a few men have shown equally sound knowledge of both branches of aircraft construction.

It has been found that in the majority of cases a candidate can be placed in one of these classes within the first few minutes. The remainder of his examination is spent in ascertaining whether his experience and knowledge in the other divisions are sufficient to warrant a recommendation.

It has also been found that the examination of a successful candidate seldom lasted more than half an hour, but on the other hand it is often necessary to prolong the examination when candidates have failed to convince the examining board of their ability.

On occasion the employers of candidates who have failed have challenged the decision, stating that the man failed was in their opinion a better man than another of their employees who had passed. In such cases inquiries have usually shown that the man may have been a better workman, but was insufficiently qualified to inspect the work of others.

The ground engineer is in many cases engaged in the first instance as a mechanic, and from his employer's point of view his qualifications as a ground engineer may be subsidiary thereto. Only his qualification as a ground engineer can be considered when deciding whether he is entitled to a licence.

### PART III.

The Supervision of Ground Engineers.

(i) As has already been mentioned in Part II., the examination of a ground engineer is only completed when his work has been watched.

This is one reason why he must be supervised, but the greatest need for supervision is that the knowledge that this exists, and is effective, provides that power behind him necessary to enable him to enforce his decisions. The best

ground engineer may be faced with the alternative of issuing a certificate for a doubtful machine or the risk of dismissal and replacement by a less conscientious man. If ever, therefore, an operator suggests that his ground engineer should grant a certificate against his inclination, the latter should be able to reply that he cannot do so, since the supervising inspector would recommend the cancellation of his licence, and any certificate would thus become invalid.

On the other hand, the simplest way for a ground engineer to carry his responsibilities is to insist upon immediate replacement of each and every part so soon as the first sign of wear became apparent. Commercial considerations, however, inevitably tend to postpone that moment, and an opposing force is required, obtained by supervision by a disinterested party.

(2) In order, therefore, to supervise the work of the ground engineer, the power of reinspection provided in paragraph 6 of Schedule 3 of the Regulations and paragraph 8 of Part I\ of the " Directions " is exercised.

It was found at an early date that it was impossible to keep in touch with each individual holder of a ground engineer's licence, since a large proportion of those who successfully obtained such licences did not operate.

It was therefore decided to arrange for periodical reinspection of all aircraft in use, and thereby supervise the work of the active ground engineers. The method adopted is as follows:

All certified aircraft must fly from licensed aerodromes.

The Air Ministry have a complete list of such aerodromes, which is kept up to date. Each is visited in turn, and the aircraft examined, the work done by the ground engineers responsible for the daily certificates for such aircraft being checked and noted.

The reports thus obtained on each ground engineer are sub-diA'ided and recorded.

It has been found that this method gives a useful record of nearly every ground engineer who is operating. Should any escape such supervision, the fact becomes apparent when they apply for renewal of their licence, and in such cases particulars of the work done are required, special arrangements being made to judge therefrom as to the man's capabilities. If the evidence of his qualification thus obtained is insufficient he may be called upon (under para. 10 of Section 4 of the " Directions ") to submit to re-examination before his licence is renewed.

The first two years supervision has shown that operators may be divided into two classes; those whose chief aim is to run a regular and reliable service; who have a number of machines in operation, and employ an organised staff of ground engineers; and the owner-operator or small syndicate with one or two machines, whose main object is to obtain the biggest return for their outlay by " joy-flying," exhibition flights, and the like, at sea coast resorts or inland holiday centres. It is appreciated that at this stage the latter class of operator is important from the point of view of the public education in flight. A man who has had one or two short flights (hiring his summer holidays is more likely to consider the possibilities of proceeding abroad by air on business than a man who has never been in the air. It is, however, this latter class of operator that requires

## Notes on "Civil Aviation"

the more careful supervision, and it is claimed that the small number of accidents which have occurred have proved that adequate and efficient supervision is possible without undue expense to the State or such a (k'grcc of State control as to seriously hamper the operator.

(3) It is of course essential that the supervising inspector should possess knowledge, ability and experience that will (M)n\ince the ground engineer concerned that the inspector knows what he is talking about, and equally the inspector must obtain the confidence of the operator (i.e., the ground engineer's employer).

The following incidents in this work of supervision may be of interest :

In one case it was found that the aircraft had sustained considerable damage owing to a bad landing. The operating company executed the necessary repairs, but having no ground engineer licensed in aeroplane construction, borrowed one from another firm. It was subsequently discovered that the ground engineer was licensed only for daily maintenance and rigging of aircraft, and had therefore contravened the Regulations by inspecting such repairs and signing up for these in the log-book.

During a visit to another aerodrome the operating company's machine was found to be in a very bad condition, despite which the ground engineer had been issuing daily certificates of safety. On the case being taken up the man's licence was cancelled by the Secretary of State.

A case was discovered of an aircraft flying without a daily certificate of safety being issued, although it was known that the operating company employed a ground engineer. It subsequently transpired that he was engaged on other work during the day, his services as a ground engineer being available only for evening flights, whereas the company operated both afternoon and evening.

In another case an operating company had employed a man who represented himself as a licensed ground engineer ; it was found that although he had applied for a licence he had never actually been examined, and had therefore assumed a position for which he was not qualified.

### PART IV.

#### The Duties of a Ground Engineer.

(i) A ground engineer is responsible for maintaining the validity of the certificate of airworthiness, and to do so is required to certify each day on which a flight is made that the aircraft is safe in every way for flight.

The experience during the past two years has been that in some cases there has been a tendency to consider such certificates as merely a piece of formality which must be fulfilled. Certificates have been signed without the ground engineer being in possession of the necessary evidence. When an aircraft has been granted an Air Ministry certificate of airworthiness, has been used in a normal manner, and is reported satisfactory by the pilot, there has been a tendency to assume that all is well, and to certify accordingly without making that careful examination of the machine and that detailed inquiry into what has happened to it since the last examination, which is essential.

The latter point is particularly emphasised. If the ground engineer constantly travelled in the machine he would know exactly what had happened to it and exactly where to look for possible signs of trouble. He could put his finger on defects which many hours of search would not reveal unless their existence was suspected.

Sometimes the ground engineer hands over the machine to the pilot and takes but little, if any, interest in what happens on its journey, although the pilot generally bases his certificate as to fitness for each flight on the ground engineer's daily certificate, and may also rely on the ground engineer to see that the petrol, oil and water in the tanks are sufficient for the proposed journey. The ground engineer is responsible for the airworthiness of the machine until the very moment when it takes the air, and the last few minutes on the ground and the first few in the air often provide evidence which should be carefully noted.

(2) Aircraft, like any other form of transport vehicle, require continuous

## Notes on "Civil Aviation"

maintenance, and the ground engineer is responsible that the machine to which the original certificate of airworthiness was granted is unaltered by such maintenance. He must also consider the conditions under which the machine

is stored ; how these are likely to affect the various parts of which the machine is composed ; he must be familiar with the deteriorating effects of different storage conditions on the various units of the machine, and if he knows that these are particularly deleterious to one especial part, must watch that part and detect the first signs of deterioration that call for its replacement.

The ground engineer must decide when it is necessary to fit a spare part, whether this be a nut or a complete component. The mere fitting of the new part is but the smallest part of this duty. He must satisfy himself that the part has been correctly made in accordance with the drawings on which the certificate of airworthiness was granted, and is of the material specified in these drawings. It must have been inspected during construction (as laid down in detail in paragraph 21 of Section 3 of the "Directions"), and he must have actual evidence that it has passed such inspection, and further, must satisfy himself that the part has not been damaged or deteriorated since such inspection was carried out. A ground engineer might possibly be excused if he failed to discover a hidden defect that had developed in a machine during flight, but there should be no possible excuse for permitting a new part to be fitted into a machine unless fully satisfied as to its history.

(3) The certificate concerning the fitness of the engines is probably one of the most difficult duties of a ground engineer. Obviously the airworthiness of the aircraft depends very largely upon the engines. No one would dream of certifying that a machine designed to use engines developing 300 h.p. each was airworthy if fitted with engines developing, say, 200 h.p. each, yet some have tried to use aircraft when the engines have lost power to such an extent that it has been almost impossible for the machine to take off with its full load. Records taken over a considerable period show that for every eight forced landings due to engine failure, one is actually due to defect in the engine itself, the remainder being directly caused by some defect in the installation of the engine. So long as the engine and the aircraft structure are designed as separate units, installation must remain a weak point of the whole machine, so that the ground engineer must give his constant attention to the daily routine of cleaning petrol filters, checking petrol flows and water connections, etc., ensuring that all ignition leads, switches and contacts are in good order. He should verify each day that the engine runs up to its proper speed, see that the oil pressure builds up and is properly maintained, and that the radiator temperature is normal. He should also make a point of inquiring of the pilot as to any sign of excessive engine vibration in the air, the flexibility of the engine and any unusual circumstances which may have characterised its running during the daily trips. His discretion must be used as to the period of running requiring a top overhaul for cleaning purposes, minor adjustments and replacements, and in due time have the engine removed for complete overhaul. No hard and fast rule can be laid down as to the period of running before top overhauls and complete overhauls should be carried out, since there is still a considerable variation in this respect, even in engines of the same design and origin.

The repairing of an engine requires on the part of the ground engineer in charge of it almost a wider and more detailed knowledge than is needed in the building-up of a new engine, in that he must determine the safe limits to which crankshafts, cylinders and the like may be reground, and the extent to which partially-worn components may be retained. A sound knowledge of materials and their heat treatment, too, is essential to justify his responsibility in the acceptance of new parts. This all-round knowledge is not easily obtainable under normal conditions of works organisation and employment. More often than not a would-be ground engineer is found to have excellent experience in the erection and testing of a particular type of engine, but for materials and heat treatment he has relied entirely, and probably quite justifiably, on another department of his works organisation. So long as he has this other department to fall back on in his supervision of the overhaul of the engine, he is safe, but it is eminently desirable that he should endeavour to improve his own knowledge, and so become self-supporting and capable of carrying through his job on his own, and without the resources of a complete works organisation, which may not always be at his disposal.

## Notes on "Civil Aviation"

(4) One result of both Service and civil experience is that various small points come into prominence which it is desirable to draw to the notice of all ground engineers. "Notices to Ground Engineers" are therefore issued. A list of these publications to date is attached as Appendix II. They are published in the technical press and are sent to all registered owners of aircraft, who are expected to pass them on to their ground engineers. To make certain that they are obtaining these "Notices," ground engineers are required to state that they are in possession of a complete and up-to-date set when applying for a renewal of their licences.

It is here urged that ground engineers and aircraft operators generally should suggest matter for such Notices. Experience with any particular type of aircraft or engine usually brings to light the little troubles to which it is particularly prone. Such experience gained by the larger Companies operating a number of machines would be of value to the owner or operator of a single machine of the same type, and in many cases to owners of machines of similar types, and could often be published as "Notices to Ground Engineers" with advantage. Occasionally particular points of weakness only become apparent after more or less prolonged use or as the result of an accident. When such cases come to light the certificates of airworthiness for all machines of the type in question are suspended until such time as the defect has been remedied. Information of such suspensions is issued as a "Notice to Ground Engineers." Once the ground engineer's attention has been drawn to a point of weakness it is sometimes possible to permit the aircraft to fly until temporary or permanent replacement has been made without taking the machine out of service.

It is an important duty of the ground engineer to pay particular attention to the terms under which certificates are thus modified, and he must adhere strictly thereto while continuing to grant the daily certificate.

(5) The insurance of aircraft is already of such importance as to call for a separate paper, and on this occasion it is only proposed to touch on one aspect, that of the relation of the ground engineer to the insuring company.

So far as the Air Navigation Regulations are concerned, the ground engineer is only required to certify that the aircraft is in every way safe for flight. The risk of insuring any aircraft is governed to a large extent by the following points, all of which have to be taken into consideration :

- (a) The design and primary standard of construction, (b) The condition of the aircraft when setting out for the flight.
- (c) The nature of the flight and the proposed load.
- (d) The skill and experience of the pilot, particularly with regard to the particular journey undertaken.
- (e) The meteorological conditions at the time of the journey.

Of these factors the second is that which concerns the ground engineer. It may often, therefore, be his duty not only to maintain that minimum standard insisted upon by his supervisors, but a higher standard which may be laid down by his employers, by the reputation for which they may obtain advantageous insurance terms.

(6) It is suggested that it may be found necessary to consider the formation of a superior grade of ground engineer. It is already probable that a large operating company would find it desirable to place their ground engineers under the control of one man who had higher technical qualifications and ability than are required for the ordinary ground engineer. Such a man would go far towards ensuring the reliability of any service and would advance the status of "ground engineering" nearer to that which must be attained if these men are to safeguard adequately the aerial transport of the future.

I must apologise for the fact that this paper is so disconnected and inconclusive, my excuse being the fact that ground engineering itself is still in an experimental stage and awaiting its certificate of approval, and in conclusion must state that the foregoing notes and remarks represent nothing but my own interpretation of the regulations and my personal views on the subjects dealt with.

They have not been in any way authorised by the Air Ministry, and must not be assumed to be in any sense official statements.

#### AIR MINISTRY NOTICES TO GROUND ENGINEERS.

No. 1-Explanatory Statement.

No. 2-Petrol-Resisting Rubber T'ul)ing and Connections.

No. 3-Streamline Wires.

No. 4-Safety Belts and Harness.

No. 5-Control Pulleys and Running Cables.

No. 6-Arrangement of Oil Filter on Aeroplanes fitted with Napier " Lion " Engine.

No. 7.—Avro 504 and 536 type machines : Upper Shoe Fitting for Engine Diagonal Strut (Part too).

No. 8.—Fitting of Ballast in Aircraft.

No. 9.—Defects in Aircraft Timber.

No. 10.— Foreign Matter in Petrol Systems.

No. II.— Strength of Control Cables.

No. 12.—Avro 504 and 536 type machines: 1^ ppcr Shoe Fitting for Engine Diagonal Strut (Part 100).

No. F3.—Handley Page 0/400 Tail IMane Fittings.

No. 14.— 120 h.p. and 160 h.p. Beardmore Engines, Water Pipe, Part No. 1 1358/12 B, Connecting the Top Water Rail with the Carburettor Jacket.

No. 15.—Siddley " Puma " Engines: Disuse of High Compression Pistons.

No. 16.—Renewals of Licences : Complete Sets of Notices Necessary.

No. 17.—Air Navigation Directions Amendments : Authorised Patterns of Log Books to be used.

### DISCUSSION.

The Chairman said it was a pleasure to the layman to read Colonel Outram's paper, which, though technical, was written in untechnical language. It dealt with another form of Government control. They had got so used to Government control that one almost forgot that before the war they had practically none of it. As long as it was directed to something which was thoroughly understood he did not think anyone objected to it, provided it was effective. If it was not one was restive under it. As an example of inefficient Government control he mentioned that some years before the war, when there was plague in India, a system of plague inspection was instituted at Port Said. All the first class passengers were fetched out of bed at six o'clock in the morning, filed in front of a doctor and went back to their beds. It annoyed them very much, as any of them might have been bad with the plague and the doctor would not have noticed it as he did not know their usual appearance. That made them restive and it would be the same with this ground work unless the pilots knew that the inspection was done well and that their safety was insured by it. An inspector who ordered the alteration of controls might be making himself a nuisance, but the pilots would come to respect him, as they would see he was not there just for the fun of the thing. Colonel Outram would be glad to have constructive criticism, and he thought any criticism was likely to be constructive, as the whole thing was so new. Captain P. D. Acland congratulated Colonel Outram on the able manner in which he had dealt with a very difficult subject and on the clear way in which he explained the steps being taken to put in motion the new duties called for under post-war civil aviation.

He stated that he had discussed the whole of this question with his own pilots

## Notes on "Civil Aviation"

and engineers at his works, and they all agreed that the work to be undertaken in this new profession was of prime importance. If machines were going to be kept in good order regularity of service is very materially assisted, for after all, if machines cannot fly safely the rest of the organisation would go for naught. In this connection he felt that the actual constructors were bound up with the transport companies at the present time owing to the fact that in the present stage of development the closest liaison between designers and operators was essential if useful types of commercial aircraft are to be evolved. The question of the certification of ground engineers is one which gives rise to several problems.

It is suggested that under existing conditions it is a simple matter for a man to receive a ground engineer's certificate who had had none of the practical experience of aircraft which is considered essential.

It is felt that a high standard of knowledge of the art of aviation—that is flying—is more important, perhaps, than that of engineers on a ship. Up to the present, to attain practical training and experience presents difficulties, for men who have been through the shops are possibly inclined to be pedantic with shop practice, and those with only outdoor experience are not sufficiently familiar with the best methods as applied in the shops.

It would appear that if many of the fine mechanics who graduated in the Flying Corps had an opportunity of further training in workshops and vice versa, there would be a blend of knowledge which might be useful for future working. The education of future ground engineers

07 January 1921 : The Monetary Times : Growth and Possibilities of Aviation Insurance

By HEDLEY C. WRIGHT  
Assistant Manager for Canada, London Guarantee and Accident Co., Ltd. presented before the Insurance Institute of Toronto.

THE business of Aviation Insurance did not take definite form until the spring of 1919, and our study of it will be interesting, not so much because of what it has been or of what it is, but rather because of what it is likely to become. It was only in 1909 that Bleriot made the first flight across the English Channel and only a few months back the first trans-Atlantic flight was made.

Between the time of the first channel flight and the outbreak of war, flying scarcely went beyond the experimental stages. Then on the outbreak of war it received an unparalleled impetus. Neither men or money were spared in its development; but it was all for war purposes. Since the armistice much attention has been given to the question of civil flying, which to-day is still but an infant in swaddling clothes. In the few moments at our disposal we will attempt to take a look into the future and see what justification there is for hoping that in the fullness of time the infant will grow into sturdy manhood.

Good Field in Canada

The commercial growth and prosperity of a country necessarily depend upon the means of transportation at that country's disposal. It is stated by those closely in touch with aeronautics that aviation can be wisely developed so that it becomes an efficient means of transportation. And the possibilities

of commercial aviation seem to be more bright in Canada than in many other countries, such as for example in the British Isles, where up to the present more has been done than here to develop the business. There the short distances, the completeness of railway transportation and prevalence of fog tend to limit air transport; but in Canada conditions are different. The big distances between our commercial centres, the vast areas still to be surveyed and developed, the clear atmosphere and the broad inland waterways, lending themselves admirably to the use of flying boats, all invite the peaceful conquest of the air.

Up to the present, commercial aviation has not taken really profitable or tangible shape anywhere, and possibly it is less developed in Canada than in most of the other countries where it has been receiving attention. Amongst the aerial activities on this continent to date may be mentioned:

1. The carrying of passengers for joy rides. It is reasonable to assume that the next development will be the carrying of business men as a time saver, as is being done by regular aerial passenger lines in Europe.
2. Photographic and survey work.
3. Mail carrying.
4. Carrying small cargoes of goods.

#### Conclusions of Air Conference

Governments are recognizing the need for encouraging flying, and only the other week Mr. Winston Churchill, the Imperial Secretary for War, announced at the Air Conference

in London that the Imperial Government intended to help civil aviation by every means in their power. It is interesting to know in passing that the Air Conference in question came to two important conclusions. The first was that the state which first makes aviation pay commercially will win in the next war. And here it may be noted that Marshall Foch is reported to have stated that the next war will begin with a great battle in the air, and the side which wins that battle and gains control of the air will have a lasting advantage over the other side. It is further believed that in war time what the mercantile marine is to the navy, civil air fleets will be to the Royal Air Force.

The second conclusion of the Air Conference was that commercial aviation in Great Britain, where the matter has been receiving considerable attention, is at present far from being a paying business. This being the case, we in Canada must not expect too great results too soon.

The convention dealing with international air navigation matters will shortly come into being among all the allied states. The text of this convention was adopted by the Supreme Council of the Peace Conference in September, 1919, and defines the law on nationality marks, certificates of navigation, licenses for air pilots, aerial signalling, etc. The problem of custom duties has been based on the principle of the sovereign rights of all states to the atmosphere over their respective territories.

### Air Board in Canada

The Canadian government is alive to the situation and has created an Air Board, whose functions are to supervise all matters connected with aeronautics. The Air Regulations, 1920, issued by the board provide amongst other things for:

—

1. The examination and licensing of all pilots.
2. The inspection, licensing and regulating of all aircraft, aerodromes and air stations.
3. The prescribing of aerial routes.
4. The undertaking of such technical research as may be required to develop aeronautics.
5. The control and management of all aircraft and equipment necessary for the conduct of any of His Majesty's services.

### Insurance Will be Required

Now as regards the insurance of aircraft. I need not remind this gathering that the credit system of a country depends upon insurance. And insurance on aircraft is naturally essential to the success of commercial aviation; for, without insurance facilities, men will not risk their capital, pilots will not risk their limbs, passengers will not risk their lives, and merchants will not risk their goods in schemes of air transportation.

As far as I know there are at the present time two American companies and one British company prepared to write fire casualty aviation insurance in Canada-, and we will now briefly examine the coverings obtainable and the approximate premiums charged.

1. Public Liability.—Taking care of all claims in excess

of the first \$50 against owners of aircraft for accidental bodily injury caused by the aircraft to any person other than an employee of the assured or passengers. Limits of 5 and 10. Premium \$100.

2. Property Damage.—Providing for all claims in excess of the first \$50 for destruction of or damage to property not owned or controlled by the assured or conveyed by the aircraft of the assured. Rate 5 per cent.

3. Collision Insurance.—Covering damages to the aircraft and necessary accessories whilst in or on the same, as the direct result of accidental collision or impact with any object while the aircraft is in the air or on land or water under its own power. The first 20 per cent, of any loss or damage to the aircraft and also loss or damage to propeller and under-carriage are excluded. Rate 12 1/2 per cent.

4. Fire Insurance.—Covering loss or damage in excess of the first 10 per cent, caused (1) by fire, explosion, self ignition or lightning to the aircraft of the assured or to accessories whilst in or on the aircraft; (2) while being transported in any conveyance by land or water. Rate 4 per cent.

It may be of interest, while on the subject of fire hazard, to mention that following a crash a number of fires have been caused through heated parts of the engine coming into contact with gasoline vapour. At the present time an aeroplane on the ground is a much more hazardous fire risk than an automobile, because in the case of an aeroplane there is very little chance of putting a fire out when it really has a start, particularly if the tanks are full. This means that the salvage is negligible.

5. Theft Insurance.—Covering the assured against loss or damage in excess of the first 10 per cent, to the aircraft by burglary, theft, robbery or pilferage by any person or persons other than employees of the assured. Rate 1 per cent.

The purpose of the various deductions is, of course, to impress upon the assured the fact that he is a co-insurer and to encourage him to exercise care.

For Six-Months' Term

The term of the policy is for six months covering the principal flying period in Canada up to the present. It is considered wise in any event to limit the term of the policy to six months. Aeroplanes are subject to considerable and rapid deterioration, and it is wise to have an opportunity of inspecting them before renewing the insurance.

Cargo insurance may also be obtained at an average rate of one quarter of one per cent.

Personal accident insurance on pilots and passengers is also purchasable either by means of a coupon policy covering from sunrise i.o sunset or by a policy for a longer term.

The coupon rates for \$5,000 for accidental death and \$25 per week for 26 weeks for total disability and \$12.50 per week for partial disability for 26 weeks are \$10 for a pilot and \$5 for a passenger. A policy on a pilot on an annual basis is purchasable at the rate of approximately 10 per cent, on the amount of the principal sum insured.

The commission payable on all classes of aviation insurance is 10 per cent.

#### Attitude of Life Companies

As regards life insurance, the life companies in Canada have, I understand, discussed the situation from time to time, but they find difficulty, owing to the experimental nature of the business and the lack of adequate statistics, in arriving at a premium charge for life policies for aviators, and up to the present time the business is not being sought by the life companies.

The rule of one of the large life companies is:

—  
"No amateurs or aviators engaged in fancy or exhibition performances will be accepted. Experienced aviators engaged in commercial or patrol work as pilots, or persons engaged in similar work as passengers, will be accepted for a maximum amount of \$2,000 on any plan, except term insurance, subject to a minimum extra premium of \$50 per \$1,000. The extra will vary, according to the degree of hazard involved."

It would be helpful to the development of commercial aviation if the life companies could see their way clear to institute a class for aviators and pending the experimental stages of the business arrange a pool or in some other way work out a scheme which will enable them to encourage the development of aviation at not too great a cost to themselves.

In underwriting aviation business, it is already recognized that many things must be taken into consideration, and undoubtedly there are many more which will be learned only by experience as the business develops. Here are some of the things to be taken into consideration:—

1. Record of the firm who owns the machines—from knowledge of the company's record and personnel can be judged the spirit of its organization and whether the ground engineers are capable and careful at their work. Carelessness with aeroplanes spells disaster.
2. Types of machine and engine.—The reliability of the machine or engine can be judged from its past records, or in the case of a new type from the previous work of the designer.
3. Record and standing of pilots.—A great percentage of the risk depends upon the pilot. He has control of the aeroplane, and no matter how good the machine may be, it can come to grief easily under the guidance of a bad pilot.
4. Nature of flying being carried out.—This needs no explanation. Obviously a higher rate must be charged for a machine flying from Toronto to Calgary than for one flying from Toronto to Hamilton. Again, a machine engaged in photographic or survey work and flying away from a recognized air route is a far more serious hazard than that of a machine travelling on a regular air route and simply carrying passengers.

It is customary to exclude covering an aircraft while it is flying between one hour after sunset and one hour before sunrise of any day.

The rating of cargo is affected by methods used in packing, whether it is easily damageable, the effect upon it through exposure to atmospheric conditions, and so on.

Past Experience

## Notes on "Civil Aviation"

As already stated, it is difficult to secure statistics at this time. It may, however, be of interest to give a few figures which have been published on American and British civil aviation experience. The American experience for the year ending May, 1919, and derived from reports of the Washington, Philadelphia and New York postal service, supplies the following particulars:

Number of flights projected 1,263

Number of flights accomplished 1,208

Total mileage flown 128,255

Number of parcels carried 193,021

Total expenses in dollars 137,900

Forced descents, due to Miiotor 37

Forced descents, due to weather 53

Deaths 2

Accidents to persons • 6

Total loss of machine 2

Other losses 3

It is of interest to compare the experience of British civil aviation, as given out by the British Air Ministry, covering a period of six months: October, 1919, to March, 1920:

—  
Number of flights 21,000

Hours of flight 4,000

Passengers carried 52,000

Total mileage flown 303,000

Accidents 13

Deaths 2

Pilots killed 2

Pilots njured 6

Passengers injured 10

Passengers killed 1 in 10,000

The results of the "Paris-London" express route over a period of fourteen weeks were as follows:

—  
Flights projected 213

Flights accomplished 177

Flights abandoned 19

Flights internapted 12

Total miles flown 48,090

Average speed per hour 104

The Handley-Pajre Sei-vice, operating between London and Paris and London and Brussels, in November, 1919, carried 154 passengers and 19,900 pounds weight of parcels.

It is probable that more authentic and extensive statistics will in due course be obtainable from the Canadian Air Board.

Air Tossibilities Deserve Attention

On the whole, I am persuaded that the aviation situation in Canada gives us cause for sane optimism rather than pessimism. Given reasonable support from the government, the public and the insurance companies, it should be a means of assisting materially in the development of the Dominion during the next twenty-five years. In some respects, perhaps, other countries are giving the matter more energetic attention than ourselves. It may not be out of place here to call attention to the size of the Zeppelin, L. 71, which was recently surrendered by Germany to Great Britain. It is 745

## Notes on "Civil Aviation"

feet long and has a maximum speed of 75 miles per hour, and is equipped with engines of 2,100 horse-power. When flying at 45 miles per hour it is capable of remaining aloft for as long as a week and of traversing a distance of 8,000 miles. In the light of this, who can tell where the next progressive step will lead, or measure the magnitude of the future of aviation?

Finally, I am confident that no Canadian will neglect any opportunity to make Canada greater, commercially, by means of aviation, and that no Britisher will fail to do his share in making the Empire invincible in the air, as on the sea, in all righteous causes.

07 January 1921 : Waterloo, Ontario : THE MUTUAL LIFE ASSURANCE CO. OF CANADA - life insurance policies impose no restriction on account of residence, travel or occupation - *excepting military or aeronautic service.*

14 January 1921 : Sir Frank Baillie, one of Toronto's best known citizens and well-known throughout the Dominion, died in the Wellesley Hospital, Toronto, last week. The late Sir Frank Baillie, K.C.B.E., was president of the Canadian Aeroplanes, Limited, Toronto; president of the Canadian Cartridge Company, Limited, Hamilton, and president of the Burlington Steel Company, Limited, Hamilton. src ref : monetary times 1921 - january : Trade Review and Insurance Chronicle of Canada

## Notes on "Civil Aviation"

Laws of Aviation from around the world.<sup>170</sup>

31 March 1921 : UK : Ministry of Munitions ceases operations.

31 March 1921 : UK : The Ministry of Munitions - A.I.D becomes a department of the Air Ministry. Civil aviation began, at first using modified versions of redundant wartime aircraft. Civil aircraft designed as such soon followed. The AID then took on a new responsibility, inspecting them for airworthiness and licensing Ground Engineers until the Air Registration Board was formed in 1937. (Flight International Sept 1963)

Early 1921 : All domestic (Private) British Air Lines cease to operate in UK due to costs, forcing Government to step in to continue to provide ongoing passenger air service.

July 1921 : Ernest L. Janney arrested (where?) brought to Lethbridge, and charged with fraud arising from bouncing cheques.

A. Ernest L. Janney then went on a hunger strike to protest jail conditions.

B. This became big news and brought forward more people—from Edmonton to Michigan—who remembered "Captain Janney", earlier business dealings, unpaid bills and bad cheques.

09 September 1921 : Richmond Kentucky : Capt. Ernest L. Janney an Ex-British officer entered his 33rd day of hunger strike to protest his arrest, he is charged with obtaining money under false pretences - src - The Richmond (Richmond, Madison County, Ky) Daily Register No. 215 (56th Year)

30 September 1921 : Ernest L. Janney convicted of fraud and sentenced to two years in the Penitentiary at Prince Albert, Sask.

1924 : Ernest L. Janney mentioned in the aviation press, reportedly flying in the U.S. and planning an air service in British Guyana.

1927 : Ernest L. Janney acquired a Canadian commercial pilot's license—the first ever flying certificate issued to him.

1927 : Ernest L. Janney chartered "Janney Transatlantic Flights Limited": "to purchase an aeroplane or aeroplanes and finance a flight or flights across the Atlantic or elsewhere." This was to be financed with 1,600 shares of stock at \$25 each. The venture was cancelled when two Canadian pilots vanished over the Atlantic the same month his company was created.

25 January 1921 : Airco DH.4 "O-BAIN" (Belgium) crashes near the Valiant Sailor pub at Dover Road, Folkestone.

24 January 1921 : Air Supremacy <sup>171</sup>

MAJOR GENERAL SEELY, British Under Secretary of State for Air recently made the claim that "England's claim to air supremacy cannot be gainsaid by any other power," He is further quoted as having stated: "Our peculiar position demanded it. and it was essential to our far-flung Empire to have both air and sea supremacy. Marshal Foch -said that the next war would lie in the air. because it will be swift, secret and most deadly."

Just what "supremacy in the air" means in *the present confused state of aeronautical opinion* is difficult to determine.

If it means airplanes in service the conclusion is incorrect as practically all airplanes now in the service of all countries would be obsolete the day war was declared. Every country has advanced types that are now in the experimental stages which will render present aircraft valueless against them. If General Seely means the forces now available in the permanent Air Service organisation, the basis will be deceptive for the reserve power of each country in the form of ex-service fliers will for several years at least be a real factor in determining a country's air strength.

It would be interesting if the Chief of the US Air Service would give to the public a comparative estimate of the present air power.

It might surprise some of our foreign friends to learn the situation.

24 January 1921 : US Aircraft Flying to Canada THE Canadian Air Regulations of 1920 <sup>172</sup> provide:

1. that airplanes entering Canada must be registered in the United States;
2. that their pilots must be duly qualified military pilots and
3. that they must not carry passengers for hire between points both of which are in Canada.

Since all Air Service officers must obtain authority to fly outside the limits of the United State's before embarking upon a flight, it is believed that the infringement of the laws referred to comes from civilian fliers, who, no doubt, may not be

<sup>172</sup> AVIATION AND AIRCRAFT JOURNAL Vol. X No. 4

## Notes on "Civil Aviation"

aware of the Canadian air regulations.

Under present legislation:

1. There is no governmental agency in the United States charged with the control of aerial navigation
2. There is no means in existence for promulgating regulatory information to Civilian aviators except through aeronautical publications and the newspapers.

It is fortunate that the Canadian authorities have been so tolerant of the lax control of flying in the United States. There is no doubt that if this condition continues much longer many delicate questions will arise which may prove embarrassing to both countries.

24 January 1921 : Advertisement : Moose Factory To Cochrane In 2 Hours! Instead of 3 the weeks of hardships experienced by the Navy Balloonists.

Last July the Canadian Government sent an expedition to make aerial photographs and surveys of the territory lying between Cochrane, the northernmost railhead, and the Hudson Bay.

This expedition had at its disposal the best aircraft produced by any of the Allied Powers, but finally selected for this perilous trip a U. S. Navy HS-2 Coast Patrol Flying Boat.

They flew from Toronto to Cochrane over the northern wilderness, and then made eight trips from Cochrane to Moose Factory. Mattice. James Bay and Hudson Bay.

The flying time from Cochrane to Moose Factory was two hours—a trip that requires from three to six weeks by dog sled and canoe.

Although they flew thousands of miles, the perfect performance of this Navy HS-2 Flying Boat fully justified these experts in their selection of it as the type of aircraft best fitted to meet such a rigid test. All over the country individuals and corporations are making big profits operating flying boats for passenger carrying, sight-seeing, aerial photography and other purposes.

This opportunity to buy one of these brand new, thoroughly reliable boats enables men of vision to start an aerial transportation company and purchase their equipment now, at one-third of what it can be purchased for later.

There are numerous points where aviators have made \$500 to \$1000 per week in passenger carrying in two and three seat machines. With one of these six seat boats the profit opportunity is doubled.

Write for our easy payment plan.

Un-converted boat: \$6160.

Open cockpit six seat boat: \$6500.

Enclosed cabin "de-luxe" six seat "flying limousine": \$9000.

Aeromarine Navy HS2L Open Cockpit—Model- 83 PRICE \$6500. IMMEDIATE DELIVERY

This is the celebrated HS2L Navy Coast Patrol Flying Boat converted to meet the requirements of aerial photography, forest patrol, timber scouting, surveying and mapping, locating schools of fish for commercial fisheries, fire patrol, etc. Opposite is described remarkable feats of this particular model. To encourage commercial aviation the U. S. Government has chosen The Aeromarine Engineering & Sales Company as a channel through which you may be allowed to purchase these beautiful boats at less than one third of what it cost to build them. Aeromarine Service Includes the training of Pilots and Mechanics - Aeromarine Engineering and Sales Co., Inc. # 1800 - TIMES BUILDING, New York, Ny

24 January 1921 : U.S General Nivelle Sees Two Miles of Aero-Planes at Kelly Field

When the first sentry at Kelly Field saluted Gen. Robert Georges Nivelle word was passed to the waiting airmen. As General Nivelle's car rounded Hangar No. 1. he saw a line of ships that stood wing to wing from Hangar No. 1 to No. 24. A line of S.E.5's, DeHaviland's, Fokkers, Spads, Curtiss JN-6-H's, Capronis and Handley Pages, every 'plane in working order with its crew and pilot lined up in front.

The General rode down the entire line. When he returned to the reviewing stand the word of command was given and the big line of pilots and mechanics simultaneously broke, and from Hangar No. 1 the bark of a single S.E.5 was the signal for the entire line of ships to "come to life," and they did. Three minutes later there was not a single dead engine on the line, and the First Pursuit Formation was already out on the field ready to take off. They were followed by three other S.E.5 formations; then the DeHaviland's rounded off.

The formation circled the field and passed over the reviewing stand. The highest formation was 2000 feet; the lowest 500.

After the exhibition, a tea was given at the Aviation Club in honor of the General.

27 January 1921 : Shorts Sliver Streak flown 2nd time.

February 1921 : Shorts Sliver Streak flown from the Isle of Grain to the Royal Aircraft Establishment at Farnborough. During the flight the aircraft cruised at over 120 mph (193 km/h). At Farnborough, the Silver Streak received the Air Ministry serial number

## Notes on "Civil Aviation"

J6854. Very limited test flights were performed through June 1921. RAE Testing revealed the aircraft could climb to 10,000 ft (3,048 m) in just 11 minutes and had a top speed in excess of 125 mph (201 km/h). Pilots noted the Silver Streak's quick acceleration, steadiness in the air, and ease of control. ("The Olympia 1920 Aero Show" *Flight* (22 July 1920) "Air Ministry Acquire Short 'Silver Streak'" *Flight* (24 February 1921) "Short Bros. and Metal Construction" *Flight* (11 December 1924)

February 1921 : the Birmingham Small Arms Company (BSA)'s Daimler Company purchases Airco subsidiary Aircraft Transport and Travel (Air Express) from Frank Searle to form what became Daimler Airway. Searle remained managing director, Major George E Woods Humphery, an engineer and a former RFC pilot and general manager of Handley-Page Transport from June 1919, was appointed manager of Daimler Airway.

16 March 1921 : CANADIAN AIR BOARD questions in Parliament - Ottawa, Canada <sup>173</sup>:

Mr. PROULX: Laurier Liberal :

1. What are the names of the members of the Canadian Air Board and the Canadian Air Force Association?
2. How many departments have been created in the Air Board and Air Force, and what are they?
3. What salaries are being paid to the heads of departments?
4. Is it correct that the amount of salaries for heads of departments is partly dependent upon the number of employees they have?
5. Is it correct that the heads of departments get a raise of as much as \$1,000 a year when they have 30 employees or over in their departments?
6. How many departments have 30 employees or over, and in these are so many really required?
7. Who is responsible for saying what number of employees are required in each department?
8. (a) Who is the responsible head of the Air Board, and (b) is he engaged on the work as much as he should be?
9. Why is the pay of certain officers and appointments in the Air Force reduced after they have served a certain length of time?
10. What measures, if any, are being taken to enforce the O.T.A. in the vicinity of Camp Borden ?
11. If a man enlists in the Canadian Air Force as a mechanic, how much of his time is employed in actual work on aero engines and aeroplanes, and how much time on fatigues and useless squad drill by incompetent instructors?
12. Are Air Board employees authorized to carry unofficial passengers when flying aeroplanes?
13. Is it permissible to use Government aircraft on joy rides with lady passengers?
14. What has happened to the flying boat used on the trans-Canada flight, which was last heard of as lying in the Red river at Winnipeg? Is it still unnecessarily exposed to the rigours of winter storms and weather?

Hon. Mr. GUTHRIE: (Solicitor General of Canada; Minister of Militia and Defence) Unionist <sup>174</sup>:

1. The names of the members of the Canadian Air Board and the Board of Management of the Canadian Air Force Association are as follows: Honourable Hugh Guthrie, K.C.; O. M. Biggar, Esq., K.C.; Air Vice-Marshal Sir Willoughby Gwatkin, K.C.M.G., C.B., etc.; Captain W. Hose, C. B.E., R.C.N.; Lieut.-Colonel R. Leckie, D. S.O., D.S.C., D.F.C.; Lieut.-Colonel J. Stanley Scott, M.C., A.F.C.; E. Deville, LL.D., D.T.S.
2. and
3. The administrative duties in the Air Board are distributed under the following officers, whose salaries are as stated: Inspector General, C.A.F., \$4,180; Director of Flying Operations, \$4,500; Controller of Civil Aviation, \$3,500; Technical Director, \$4,500; Director of Equipment, \$2,400; Secretary, \$4,250.
4. No.
5. No.
6. None.
7. The Civil Service Commission in consultation with the Air Board.
8. (a) The chairman, Hon. Hugh Guthrie, K.C. (b) Yes.
9. The Canadian Air Force is organized as a *non-professional force*, the personnel of which in all ranks from the lowest to the highest undergoes normally one month's training every two years. Certain staff and administrative duties require for their performance a longer term, normally six to nine months, and to secure the services of competent officers and other instructional personnel for these duties which involve absence by the personnel performing them from their ordinary civil occupations for substantial lengths of time, special rates of pay are provided. These special rates do not apply if the service of any individual is prolonged beyond one year, and the pay receivable is reduced accordingly.
10. Under the Canadian Air Force Regulations "No officer or airman shall bring into or have in his possession in any barrack or camp intoxicating liquor." This regulation is being strictly enforced. There have been fourteen arrests made for breach of the

02 May 1921 : CIVIL SERVICE ACT, 1918, AMENDMENT - Parliament - Ottawa, Ontario

Alexander Kenneth Maclean (Halifax) Unionist: Mr. Speaker, I am sorry that on Friday last I was out of the House when the motion for the second reading of this Bill was moved by the Government. Had I been present I certainly would have protested against the procedure adopted from the beginning to the end. I think it is most peculiar. Nobody could help but be suspicious of the motive and purpose behind the Bill, particularly by reason of the manner in which it has been presented to the House. There has been an absolute absence of candour or frankness in the explanation upon the first reading of the Bill or upon the second reading. The purpose of the legislation has not been disclosed at all, in fact any explanation has been evaded, and apparently every step taken has been with the view of preventing the House gaining any knowledge of that purpose.

I do not say that I am right in that assertion, that will be for members of the Government to state themselves, but I do say that the procedure adopted in presenting such an important measure to the House is open to serious criticism indeed. In the first place, the Bill was introduced in blank when the first reading was moved. On Friday last, before the second reading, a committee was appointed without an opportunity being given by the House to hear from the Government as to the purpose and provisions of the measure or to express its opinion on the principle involved. In that respect the procedure has been most unusual. It might naturally have been expected that upon the second reading at least some explanation would have been forthcoming. I say that for the reason that the Bill affects fundamentally the main provisions of an Act which, after great deliberation Parliament adopted three years ago. That Act is difficult to understand at best, and most members, I fancy, have never given to it that direct study which would enable them to understand the importance of its main provisions, to say nothing of its many subsidiary clauses. I would not object to a Bill being sent to a committee without a full discussion of its principal provisions, if the legislation being amended were well known to the House and if the amendments were of a trivial or unsubstantial character. But the Bill before us for consideration is extremely important. It is a reversal of every principle of importance contained in the Civil Service Act of 1918, it is a reversal of public policy as declared in the elections of 1917, and it is not a Bill that the Government should have contemplated sending to a committee without full and ample discussion in the House. It is a Bill that cannot be properly, effectively and intelligently considered by any committee until the House has decided whether as a matter of principle they intend to revert to the patronage system as it prevailed prior to 1918. And that is the purpose of this Bill—a clear-cut, definite reversion to the practice of political patronage as it prevailed before 1918, with a few trivial and perhaps unimportant exceptions—exceptions which, I think, if the Bill is accepted by the House, might as well go along with the other portions of the Act that are being amended. Therefore I say that this measure should be discussed by the House; that it should not be sent to a committee before the principle involved is adopted by the House, and that the motion setting up this committee should be rescinded if only as a matter of respect to members of the House.

Now, when the Bill was introduced the other day the hon. member for Yarmouth (Mr. Spinney), in presenting it, said:

If the introduction of the present measure, which proposes to amend the Civil Service Act of 1918, leaves the impression on the mind of any hon. member that the Government is receding from the main principles of that statute, namely, the abolition of patronage, he may at once dismiss that thought.

Now, with all due respect to my hon. friend I do say that that was hardly a fair description of the measure, because it is, without a scintilla of a doubt, a reversion to the patronage system as it prevailed prior to 1918. There are some exceptions, I admit, but they are unimportant, and, as I have already said, if we adopt this measure we might as well let these exceptions go with the other provisions of the Civil Service Act of 1918 which are being amended.

The Prime Minister (Mr. Meighen) sought to hasten the transmission of this Bill from the House to the committee upon the ground that the principle of the Bill had already been discussed upon a resolution of the member for Victoria (Sir Sam Hughes). Well, I do submit to my right hon. friend that that was hardly good ground for hastening the measure

## Notes on "Civil Aviation"

from the House to the committee. A discussion upon a resolution asserting abstract principles can hardly be regarded as taking the place of a discussion of the principles involved in definite legislation.

On the resolution of the hon. member for Victoria many matters were discussed. While I was not present on the occasion of the debate upon that resolution, upon reading some few days later the speeches that were delivered, I was gratified to learn that the principle of the Civil Service Act had been supported by practically every hon. gentleman who spoke, no matter on which side of the House he sat. I was very much pleased at that time to read the remarks of the right hon; Minister of Trade and Commerce (Sir George Foster) whom I had always known to be a sincere and zealous supporter of the principles embodied in the Civil Service Act.

He stated, as reported on page 844 of unrevised Hansard of March 11, 1921:

Now, in so far as there may be betterments in administration, I am open to the adoption of those betterments, but I am absolutely against putting patronage back either here or in the Outside Service, except under very exceptional circumstances.

Later on he said: I do not want to go back to the old system of patronage. I felt my heart throb in response to sentiments expressed by the member for Ottawa (Mr. Chabot), when he faintly adumbrated the joy and the pleasure of living in Ottawa as a public man in these days as compared with the times...

John Allister Currie Unionist : What is the system of promotion?

Alexander Kenneth Maclean (Halifax) Unionist: I am coming to that later. It robs the Civil Service Commission of its principal duties;-it is doubtful whether it would be worth while retaining the Commission to carry on the duties left it under the Act if amended as proposed. It would be worth while, I think, for the House to consider briefly the history of the events leading up to this legislation and to study carefully the provisions of the Bill-because, having regard to the remarks made by hon. members of the Government in support of the measure, it is evident that they themselves are not fully conversant with it.

I should like to recall the attention of hon. gentlemen to the fact that in the election of 1917, the then Prime Minister (Sir Robert Borden), in his platform, stated to the public that he proposed the elimination of patronage in appointments to the public service. That pledge was deliberately and fully carried out. I admit that it was a tremendous step to take in legislation of this character, and that we proceeded further than any other country in the world had up to that time. I can quite understand how this might affect political organizations, how it might directly and indirectly affect members of Parliament and prospective candidates to Parliament.

I can understand what confusion it might possibly create, and it created some. But, nevertheless, this Parliament, after due deliberation, with the support of hon. gentlemen on both sides of the House, unanimously accepted the Civil Service Act of 1918 introduced into Parliament in fulfilment of the pledge which the then Prime Minister made to the country in 1917.

I think I may assert without much serious criticism that when a measure is placed on the statute books of this country in such circumstances, no Government should attempt to violate the main provisions or principles of that Bill without at least absolute and due frankness to the House, without affording to the House an opportunity of discussing the Bill, and certainly there should be no evidence of an attempt to send it by a subterranean passage to a committee of this House without the House knowing what the Bill contains.

Further, I think every hon. gentleman opposite, who is now a member of Government, heartily supported the Bill of 1918, and all the amendments that have been made to it since then. I remember reading reports of speeches delivered by the Prime Minister (Mr. Meighen) and his colleague the Minister of Immigration and Colonization (Mr. Calder) on their western tour during the autumn of 1920, and I observed that on frequent occasions they solicited support for the Government upon the fact that the Civil Service Act of 1918 had been introduced and adopted, and evidently they were both seeking support from the western provinces upon this measure. It seems strange that, within a few months after soliciting electoral support upon this measure, they should become responsible for the introduction into this House of an amending measure, which practically destroys the most vital principles of the Civil Service Act. I wish to assert the following proposition as a sound principle, applicable to the question, and to the parliamentary system obtaining in this country. In 1917, an election took place upon several issues, including the Civil Service Act, under circumstances which I detailed a moment ago. That platform or public pledge was converted into definite legislation. There has been no election since that date, and, therefore, no attempt should be made to destroy that measure without an appeal to the

## Notes on "Civil Aviation"

country. Some hon. gentlemen opposite express dissent; but if those gentlemen opposite were elected on that platform and supported and assented to the principle involved in that legislation, by what authority can they openly and brazenly revert to conditions which existed prior to the passage of the Civil Service Act of 1918? I deny that constitutional authority rests with the Government or with Parliament to make such important amendments to the Act prior to a dissolution of Parliament and an appeal to the people. Of course, Parliament is all-powerful; it may amend to-day anything to which it committed itself yesterday. Parliament undoubtedly has the power; but considering all the circumstances in which this legislation was submitted to Parliament and to the country during the election preceding the constitution of this Parliament, I say that this Parliament cannot very well now go back on the principle of that legislation.

This Act has been in force for three years. I concede that it has not been a very popular measure with certain sections of our people. It is not popular, it is quite true, with many members of parliament. I do not question their right to that view or to opposition to the measure. I appreciate fully the basis and reasons for their opposition to the Act and their prejudice against it. The measure was not popular amongst certain civil servants and I think the Act was made unpopular with the public by the unjustifiable attitude of many sections of the Civil Service at one time or another since the introduction of the Act. There has been much confusion, of course, by reason of the enactment of such legislation. That was to be expected; it was unavoidable; you could not cast away the Civil Service Act of 1908 and insert in its place the present Act, with the very important and almost violent changes which it includes, without creating confusion. But the present law has been in force for three years; it is beginning to be understood; it is becoming popular with the masses of the people; it is becoming more acceptable to the Civil Service than ever it was; and as the days go by, it should become more acceptable to members of Parliament and they should be glad to have upon the statute books of this country legislation which would do away with the harassing and disconcerting duties attaching to matters of patronage in connection with appointments to the public service.

If it were not for the Civil Service Act of 1918, there would be thousands more  
[Mr. A. \*K. Maclean.]

people in the public service than there are to-day. It is true there are ten or eleven thousand persons more in the public service than there were in 1914, but it is not difficult to understand the reasons for this increase. The Soldiers' Civil Re-establishment, the Soldiers' Land Settlement, the Income Tax Branch of the Finance Department, the Pensions Board, the Record Office, the Air Board, and sections of the Militia Department, are all practically new departments; they are war departments; they are incidents of the war. Their growth and development and the employment of many persons within those different branches of the public service was not due to the Civil Service Act, but was, as I say, one of the incidents of the war. I fancy that if one were to go through the various departments with a view to ascertaining the number of persons within the service, he would learn that there are no more persons engaged in the public service to-day than there were in 1914, and I say that the tendency in the future will be to reduce the number. Why? Because there is no incentive to-day to create new positions, for the reason that no person seeking appointment and no person seeking the creation of a new position or office, knows who under the competitive system will obtain the appointment. Now if Parliament and the country are serious in wishing a reduction in the Civil Service Staff to proper proportions, they certainly should not desire a reversion to the provisions of the Civil Service Act of 1908 and its amendments. The Civil Service Commission and the Act deserve credit for some of the things that have taken place in connection with certain departments of government. Great improvements are to be made, so far as the number of persons employed is concerned, in the Post Office Department and the Customs Department. I have not personally seen the report of the Commission to the Government, but public rumour would justify me in saying that several hundred persons are to be retired from these two departments, and I believe I am right in saying that this can be done without injustice to the departments and without in any way lessening their efficiency. This means a saving of money, and surely this is a time, with our mounting expenditure, with our taxation now already at the breaking point, when we should restrict public expenditure for all purposes, but particularly should we protest against the creation of unnecessary public offices and the appointment of persons unnecessarily to public offices.

[...] Now, I venture the statement that if the Bill now before the House becomes law, that [...] we shall very quickly revert to the condition of affairs when it will cost anywhere from half a million to a million dollars more to run that department than it does to-day. You cannot reorganize the public service, you cannot reduce the numbers therein, unless the whole force is entirely removed from political influence, and such is the great value of the Civil Service Act, because, the motive for the creation of new positions having been removed, positions will not be unnecessarily created. I want to make this further point: we are embarking to-day upon the experiment of Government control and, practically, Government operation of railways, and when the Grand Trunk has been acquired, our railway system will probably involve a mileage of considerably over 20,000 miles. I think I can safely say to-day, to the credit of the Government and its immediate predecessors, that the railways, in so far as they were subject to the control of the Government, have been remarkably free from political influence. I have heard that statement questioned by some of my friends on this side of the

## Notes on "Civil Aviation"

House, but I do affirm, without any fear of successful contradiction, that the railways of this country have of late been remarkably free from political influence. Why? I say, Mr. Speaker, that this is due merely to the fact that the Civil Service Act of 1918 was passed and has since been in operation. The effect of that Act upon the public mind was such as to make it possible for the Government, or members of the Government, to permit the operation of our railways free from political influence and political patronage such as were known to exist in the years gone by. If that Act is destroyed, and if the Bill now before the House becomes law, then I declare that the railways of this country will become a machine of the political parties, in which case this country might as well get rid of the railway system which we own and control, and endeavour to make some disposition of it that might give it a show for its existence. Some hon. gentlemen may say that there is very little connection between the fact that the Civil Service Act is in force, and that therefore appointments and promotions are free from Government control, and the operations of the railways, which do not come under the Act. But hon. gentlemen know the psychology of the public mind as well as I do, and they will readily perceive how easy it is to secure public approval of the operation of the railways without political influence, when you have the great body of civil servants of the country under the Civil Service Commission and altogether free from any political influence or control. There is another reason, I think, why the Civil Service Act should be allowed to stand as it is, - for the present at least, and why this Bill should not pass. I refer to the matter of preferential treatment given to returned men in appointments to the public service. Hon. gentlemen will remember that back in 1916 an Order in Council was passed making all appointments to the Civil Service, whether in the inside or the outside service, subject to a certain qualification, in regard to returned men. I think I had better read the Order in Council: In making all appointments to the Civil Service, whether in the inside or in the outside service, preference shall be given to those candidates who have served overseas in His Majesty's Forces during the present war, and who have been honourably discharged therefrom, especially to those who, through disability occasioned by active military service, are unable to fulfil their previous occupations. In 1918, a further Order in Council was passed, as follows: In all competitive examinations held under the Civil Service Amendment Act, 1908, persons who have been on active service overseas in the military or naval forces of His Majesty, or of any of the Allies of His Majesty, who have left such service with an honourable record or who have been honourably discharged and who obtain sufficient marks to pass such examinations, shall, irrespective of the marks they have obtained, be placed in the order of merit, on the list of successful candidates, above all other candidates. Such was the position of affairs in relation to preferential treatment of returned men in appointments to the public service in February, 1918. Naturally, these provisions, as contained in the Orders in Council, would be incorporated in the legislation following, namely, the Civil Service Act of 1918, and I shall read section 39 (a) of the Act, which is as follows: Provided, however, that in all examinations for entrance into the Civil Service, persons who have been on active service overseas on the military or naval forces of His Majesty, or of any of the Allies of His Majesty, during the present war; who have left such service with honourable record, or who have been honourably discharged; or, when any persons who have served as aforesaid have died owing to service overseas, the widows of such persons, and who in either case obtain sufficient marks to pass such examinations, shall, irrespective of the marks they have obtained, be placed in the order of merit, on the list of successful candidates, above all other candidates. I submit that this provision of the Civil Service Act in respect of preferential treatment for returned men, can operate only under that Act as it stands to-day.

The Bill before the House repeals it, I would say, as regards fifty or sixty per cent of the total service. It is actually impossible to carry that section into effect if the Bill before the House becomes law. Further, no means are provided in the Bill for giving preference to returned men, and I doubt whether means can be so provided, for the reason that appointment upon competition is very largely done away with by the Bill, as is also promotion upon the competitive basis. I do not see how the Bill could be amended to safeguard that provision as contained in an Order in Council passed in 1916, and further supported by an Order in Council passed in 1918, and later by the legislation-

John Allister Currie : Will the hon. gentleman permit me a question, because he seems to have a brief for the Civil Service Commission and of course he will have all these facts.

Alexander Kenneth Maclean: No, no.

John Allister Currie : would he be kind enough to inform the House "what percentage of the returned soldiers appointed have been appointed as permanent civil servants, as compared with the other appointments that have been made by the Civil Service Commission" ? That is the point at issue.

Alexander Kenneth Maclean: I am sorry but I cannot answer my hon. friend's question. It is altogether too big an order for me to answer offhand and I would need to have access to the records of the Civil Service Commission to inform

## Notes on "Civil Aviation"

myself. But my hon. friend knows, just as well as I do, that thousands of returned men have been appointed to the public service.

John Allister Currie : Nearly every one of them has been fired by the Civil Service Commission.

Alexander Kenneth Maclean: I say this to my hon. friend, and I say it to the Government: If they desire to restrict the operation of that section in relation to the appointment of returned men to the public service, if they wish to withdraw the preference given returned men in whole or in part let it be said so; that may not have been the intention of the framers of the measure, but very largely it is the effect of it. Now, as I say, if it is desired to amend section 39 (a) of the Civil Service Act let the Bill make provision for it

17 9i

clearly so that we can understand the possible effect of the thing if it becomes law. I do not say that this section should always remain in the Civil Service Act. We may be approaching the time when it should be amended somewhat, there probably will come a time when it should be stricken out entirely from the Act; but it has been a provision of the Act highly regarded by the returned men, it has done a great deal towards the rehabilitation of many of them, and it should only be cut out, or amended, or restricted in any way, after due deliberation.

Mr. McGIBBON (Muskoka): Will the hon. member tell us what percentage of the higher appointments, if any, have been given to returned soldiers?

(The term "returned soldier" was defined in the 23 June 1920 Act of Parliament as "any person, male or female, who had served in :

1. the naval,
2. military or
3. air

forces of Canada in the Great War, or, having been domiciled and resident in Canada on August 4, 1914 had served in any of His Majesty's:

1. naval,
2. military,, or
3. air

forces abroad in the said War; or in the

1. naval,
2. military or
3. air

forces of one of His Majesty's Allies or Associated Powers in the Great War; and who had been retired or obtained honourable discharge therefrom".

Alexander Kenneth Maclean: I cannot answer that question either

Mr. McGIBBON : Practically none

Alexander Kenneth Maclean: I should say a great number of men have been appointed to the higher positions but exactly what number, of course, I cannot say.

Now, further, Mr. Speaker, I want the House to understand this point. It may be that the Civil Service Act of 1918 proceeded too far, I can quite understand any hon. gentleman raising that point, but when it is raised I should like the privilege of debating it, I should like to see it come before the House in a clear-cut fashion so that we may be faced with a definite issue. It may be that the rural postmasters should be excluded from the operation of the Act; it may be that manual labour should be excluded from the operation of the Act; but there is no necessity of introducing a Bill for that purpose. If hon. gentlemen will turn to clause 38 (a) they will find a section framed with that express design; I am in a position to speak with some authority upon this point. That section is as follows:

-the provisions of this Act shall not apply to positions in connection with the Government railways or any railway owned or controlled by His Majesty, or to any position on any ship of His Majesty until the Governor in Council otherwise directs in any case where

## Notes on "Civil Aviation"

the Commission decides that it is not practicable to apply this Act to any position or positions, the Commission, with the approval of the Governor in Council, may make such regulations as are deemed advisable- Now, Mr. Speaker, when the Act was drafted it was foreseen that it might be difficult or impracticable to carry out certain of its provisions, and that it might some time in the future be desirable to remove certain classes of public servants from its operation, and, that was the purpose of that section. For some reason or other which I have never been able to understand, the Civil Service Commission undertook to make appointments to His Majesty's Ships-I do not mean the naval ships but the ships controlled by the Marine Department. For a certain time they made appointments to this part of the public service; I do not know why they did, or where they got their authority for it, but at least they did it. Last July they submitted to the Governor in Council a recommendation to withdraw this class from the operations of the Civil Service Act and they were withdrawn. Now I am sure if the Government feel that rural postmasters and manual labourers, for example, should be withdrawn from the operations of the Act, and they ask the Civil Service Commission to meet them face to face to discuss the suitability and practicability of such a suggestion, the commission would meet them in a fair spirit and I have no doubt they would reach a right conclusion upon it. I do not hesitate to say that very many strong reasons could be given for the elimination of these two classes from the operation of the Act, although I do not say that I would so change the law at the present moment. And my reasons for not doing so now would be these. In the first place the Civil Service Commission affords the best safeguard that the returned men will be given the preferential treatment required by the Act and which I think represented the judgment of Parliament and the wishes of the country.

John Allister Currie : Will the hon. member show me where, in any single instance, any body representative of the returned soldiers has passed a resolution endorsing the Civil Service Commission?

Alexander Kenneth Maclean <sup>175</sup>: The returned men will have an opportunity of making their views known to Parliament and the country. I cannot speak for them; but I say I would object to making that change at the moment for two reasons: First, the Civil Service Commission affords a safer assurance for preferential treatment in the appointment of returned men to the public service than would be afforded if the appointments were made by the Governor in Council. For the well-being, comfort and happiness of my 'hon. friends opposite, who are members of the Government I would like to see the Act remain as it is.

In these difficult and trying days when there is so much unemployment, is not the public treasury better safeguarded by the intervention of the Civil Service Commission in the appointment of manual labourers, than if that duty were thrown upon the departments of government who inevitably would be influenced-I know I would be myself and I believe they would be-by demands from constituents for employment of one kind and another?

And, Mr. Speaker, the House knows just as well as I do that the creation of public positions, merely for the purpose of affording employment, will never solve the difficulties which are presenting themselves to us today.

Therefore let me make this suggestion, Mr. Speaker, that if the Government really desire to withdraw certain classes from the operation of the Act, let them invoke section 38 of that Act; let them request a conference with the Civil Service Commission. I am sure they will be met in the proper spirit and that both parties will endeavour to do what is right in the circumstances.

Now, I purpose to briefly go over some of the provisions of the Bill.

It is for me at least a difficult measure to understand, and I am not clear what the draftsman intended when drafting the Bill. I would ask hon. gentlemen to accompany me as I go over the several clauses, which are few in number. Subsection 1 of section 1 states that the Civil Service Act: - in respect to organization and changes in organization, changes in classification, appointment, transfer, promotion, salaries and increases of salaries - **Shall not include:** Manual labourers. . . . post masters. . . . professional, scientific and technical officers.

I desire to add another word to what I have already said in respect to manual labourers, and that is that the lexicographer will have to conjure up a new definition of the term "manual labourer" if they would include all who would be appointed to the public service under subclause (a), if it became law in its present form.

Manual labourers to-day are, after all, controlled by the Government or the departmental heads, and there is really no purpose to be served by the amendment. Casual labourers employed for less than thirty days are selected by the heads of departments without regard to the Civil Service Commission. If employed for more than thirty days those heads of

---

<sup>175</sup> <http://www.lipad.ca/full/1921/05/02/6/>

## Notes on "Civil Aviation"

departments must submit a list of the same to the Civil Service Commission, accompanied by a certificate which reads as follows [this is the form used in the Public Works department]:

I certify that the employment of the above person is necessary for the efficient carrying on of the work of the department. The selection has been made without reference to personal or political consideration and strictly on the merit principle, as between persons applying or available for such positions. The appointee has satisfied me as to his qualifications. The appointee is suitable as to age, character and habits. The salary is fair and reasonable and does not exceed the rates approved by the Department or prescribed by the Civil Service Commission. The above-named civilian was employed only after efforts were made to obtain the services of a returned soldier and none were found to be available.

In Ottawa the Civil Service Commission have an employment bureau, and heads of departments requiring any short-time employees or manual labourers go to that bureau, where they are furnished with a list of those available. That list is practically given to the Civil Service Commission by the Great War Veterans' Association. If manual labourers are required outside of Ottawa the practice is to use the employment bureaus established under legislation of 1918 or 1919 and directed by the Minister of Labour. There the Great War Veterans' Association also list those of their men requiring employment. Those bureaus are co-operating with the Civil Service Commission and departmental heads, and so far as manual labourers are concerned the situation is very satisfactory; nobody is complaining, the returned men are protected according to the spirit of the Act, there is no loading of the Civil Service because of the watchfulness of the Civil Service Commission, and the departmental heads do not want to go back to the old conditions.

Subsection 1 also refers to postmasters. I think if ever the time arrives when certain of these positions should be excluded from the operation of the Act, the exclusion should not be so wide as is indicated in this section. I think it would be quite sufficient if it were merely extended to appointments to rural post offices; and, of course, I am not admitting that even that should be done.

Subsection (c), however is the very objectionable portion of the proposed enactment. It covers: Professional, scientific and technical officers employed for the performance of duties as such.

Proceeding with subsection 2 it will be found that it provides that these three classes shall thereafter: - be appointed, promoted, transferred and otherwise regulated- as they were before the passage of the Act in 1918.

Now, just imagine what would come within the classes of "professional, scientific and technical officers."

I fancy it would include one-half of the Civil Service in Ottawa.

All lawyers, doctors, engineers, architects, draughtsmen, actuaries, accountants;  
technical men of the Mining Department would come within its scope;  
also a great portion of the staff of the Department of the Interior-all within the Reclamation Service, the Natural Resources Branch, the Parks Branch, the Water Powers Branch, the Topographical, Geodetic and other branches of that department;  
technical men in the Marine Department;  
technical men in the Naval Department;  
all the Air Service;  
a large proportion of the Militia Department, and a great portion of the Finance Department as constituted at present.

We had experience of the equivalent of this in the Act of 1908, where under section 21 it was provided:  
If the deputy head reports that the knowledge and ability requisite for the position are wholly or in part professional, technical or otherwise peculiar, the Governor in Council, upon the recommendation of the head of the department based on the report in writing of the deputy head, may appoint a person to the position without competitive examination.

Large numbers *improperly got into the service through that clause*, and one can readily see how it could be greatly abused.

That was our experience. But taking this sub.-C section 1 literally, which provides that all professional, scientific and technical officers in the Inside and Outside Services are to be employed by the Governor in Council, nothing would be left but practically the clerical and stenographic services. Now under subsection 2 of section 1 the salaries of these persons are to be fixed by the Governor in Council making the appointment, which doubtless will be out of alignment with the remuneration to that part of the Civil Service which remains under the operation of the Civil Service Act.

## Notes on "Civil Aviation"

The result would be great variations in remuneration and consequent discontent in the Civil Service; there would really be a recurrence of the position which we sought to avoid in the Civil Service Act of 1918, that is, *of paying different salaries to different persons for doing the same class of work.*

[...] Now, I would like to direct the attention of the House to the latter part of subsection 2 of section 1: Provided that, except in the case of manual labourers, and professional, scientific and technical officers as above described, no person appointed shall be retained in employment and then it goes on to provide that a certificate of competency must be obtained from the Civil Service Commission. Now, [Mr. A. K. Maolean] that section really means this: I will read it as it really.

23 May 1921 : Parliament - Ottawa, Ontario : The House on Committee of Supply, Mr. Steele in the Chair re: Air Board, Civil Aviation, Canadian Air Force,

Mr. Hugh Guthrie (Solicitor General of Canada; Minister of Militia and Defence)(unionist) : As the committee is aware, an Air Board was established by legislation in this country in the spring, I think, of 1920. Last year was practically the first year of our operations, and was largely taken up with the work of organization and of getting ready. The amount expended last year was considerably in excess of the amount asked for this year, by something like \$375,000. There are two branches of the Air Service, the Civil Aviation Branch, and the Canadian Air Force, which is an adjunct to the military service of Canada. The four items which appear in this Estimate fairly represent the work of the Board and the expenditure of the money. Our salary list amounts to about \$75,000, and we have 106 employees.

William Daum Euler (Laurier Liberal) : What is meant by "Civil Aviation?"

Mr. Hugh Guthrie : It is work in connection with civil flying, purely and simply. We are attempting to do, in fact last year we accomplished, considerable work in what might be called research or exploration. The board has established provincial boards throughout the Dominion, the presiding officer of these provincial boards being the Lieutenant Governor of the province. The provincial board meets periodically, discusses the situation in regard to its own province, and makes recommendations to the Government. Several of the provinces have agreed with the Air Board to stand half the expense of all flying operations undertaken within their territory. We have such an agreement with the province of British Columbia, with Alberta, and, I think, although I am not sure, I could ascertain the fact readily -with the province of Ontario. The Board did a lot of valuable work last year in the province of Quebec. It surveyed all the northern part of Quebec from Lake St. John for a distance of 250 miles north, and I believe that the results obtained in two weeks, flying operations were far better than the work accomplished during five years of progress on the land. Air photographs have been taken of all that territory, showing the location of the lakes, the rivers, and the timber areas, the photographs being distinct enough to show the burnt timber and to distinguish hard wood from soft wood; in most cases also, it shows whether streams are navigable or not. These photographs were regarded as a great achievement by the Air Force, and were welcomed by the province of Quebec. In British Columbia, we do fire ranging, and some exploration work on the coast, and we are also establishing a station there in connection with timber in the railroad belt.

As the House is aware, the Dominion of Canada owns a very valuable block of timber in the heart of British Columbia. In Alberta, something is being done in the exploration of the northern territory; the work there has not been as far advanced as it has been in the province of Ontario. It is hoped that during the coming season the Air Service will be of the greatest assistance in connection with the surveys of oil lands, etc. They are making preparations now in that respect, although actual work has not yet been begun. Work is also being carried on in connection with fire ranging in the Rocky mountains. This is all a part of the work of the Civil Aviation Branch, in addition, an air line has been mapped out across the continent, and certain landing stations have been erected. But the policy has not been to establish such stations at the expense of the Dominion; the municipalities desiring landing stations must establish them; the Board locates them and leaves it to the municipalities to decide whether they want landing stations established at these places. As the committee is aware, we received a very large number of aircraft from the British Government at the conclusion of the war. We have not been required to purchase much in the line of aircraft equipment, although year after year our equipment will become more and more obsolete. New inventions are taking place almost monthly, and certainly quarterly. Great improvements were made last year over the year before, and I anticipate that as time goes on there will have to be an appropriation for new aircraft. The figures to-day, however, do not contemplate such an appropriation. We are practically operating now with machines given us.

William Daum Euler : How many airships are in commission in the two services, respectively, and how many men are employed?

Mr. Hugh Guthrie : I do not know that I can give the number of machines that we have at present; there are a large number of them not actually in operation, not having yet been fitted up for the purpose. The following machines have been erected and

## Notes on "Civil Aviation"

tested: 12 D.H. 9A's.-These are technical terms-12 S.E. 5 A's; 43 Avlo, 135 h.p.; and 6 D.H. 4. We have 105 civil employees, and we have taken over Camp Borden, which is our military air centre, and fitted it up as an aviation station. We have there an air superintendent, a superintendent of engine repair shops -

Frank S. Cahill (Laurier Liberal) : What are their salaries?

Mr. Hugh Guthrie : The following is a list of these employees:

1. Air Foreman Mechanic 2,040
2. Superintendent of Engine Repair Shops. 2,940
3. Air Pilots 2,460 and
4. Navigators 2,460
5. Air Foreman Mechanic 2,040
6. 3x Air Foreman Mechanics (3) each.. .. 1,800
7. 4x Air Riggers at 1,620
8. 9x Air Riggers at 1,320
9. 5x Engine Fitters at 1,620
10. 10x Air Engine Fitters at 1,320
11. One Air Fabric Worker at 1,080
12. 2x Carpenters at 1,080
13. One Motor Transport Driver at 1,080
14. One Sign Painter at 1,080
15. 2x Clerk-Stenographers at 960

Frank S. Cahill : Is that in the civil force?

Mr. Hugh Guthrie : That is all in the military force.

Frank S. Cahill : Have you the civil force?

Mr. Hugh Guthrie : The civil force totals 105.

1. In the operations branch we have 16;
2. in the certificates branch, 6;
3. headquarters, Canadian Air Service, 7;
4. secretary's office, 2;
5. technical branch, 5;
6. equipment branch, 17;
7. medical branch, 2;
8. accounts branch, 27;
9. intelligence branch, 8;
10. records branch, 15

Frank S. Cahill : What is the reason for the increase of 50 per cent in salaries over last year?

Mr. Hugh Guthrie : The chief increase is due to increase in staff.

These salaries are fixed by the Civil Service Commission, under whom all appointments are made.

In connection with the mechanics, it must be remembered that there are at Camp Borden a large number of expert men.

*In one or two instances we could not get any men in Canada; we had to bring them from Great Britain.*

*These are the highest type of artisans, and as a rule they call for more than the ordinary artisan's salary.*

*They are expert and highly trained men.*

Mr. William Daum EULER [DOT] : Is there any system of allocating the civil aviation force to the various provinces?

Mr. Hugh Guthrie : That is done in accordance with the demands made upon us.

Mr. William Daum EULER : By whom?

## Notes on "Civil Aviation"

Mr. Hugh Guthrie : *By the provincial associations, with the concurrence of the Provincial Governments*, because, unless the Provincial Government is prepared to stand part of the expense, we do not undertake the work.

We have done some work, however, wholly at the expense of the Dominion Government, in Alberta, and, I think, in British Columbia.

The provinces send in their recommendations and we allocate the work according as the staff is available, and as we have the money.

The demands on us for the coming season are perhaps a little more than as represented in this vote.

I have the particulars and the matter may come to the House on another vote; but I cannot speak with certainty in that regard because it is not settled.

Isaac Ellis Pedlow (Laurier Liberal) : Do the Provincial Governments contribute anything to the air force?

Mr. Hugh Guthrie : Yes, for civil aviation in connection with work done for the provinces in the way of exploration, surveys, fire protection, etc. They enter into an agreement on a fifty-fifty basis.

Frank S. Cahill : Is it the intention to continue the civil air force? When did the Government decide to undertake the work of surveying the different provinces? Is not that work that should be done by the provinces themselves, and not by the Dominion?

Mr. Hugh Guthrie : This work is not being done for the provinces alone. There are territories of our own, belonging to Canada and not to any province, away to the North, and also in the Railway Belt, in which we operate. Work has also been performed in connection with our coast service. I suppose as time goes on the usefulness of the airship will be demonstrated. Only a few days ago we were asked to act for the Government of the Dominion in connection with customs examinations at Victoria [DOT] and Vancouver, and if the money is voted by Parliament we will certainly do so. It is charged that there has been a good deal of smuggling of drugs, opium and the like, into Vancouver and Victoria, these drugs being dropped from incoming ships into the ocean and picked up by small vessels; and air craft can be very readily and satisfactorily used not only in the detection of such operations but also in their prevention. We have experimented in that direction and, since our airships have taken part in the work of prevention, that class of smuggling has largely ceased. Then there is work, and a great deal of work, asked of us in regard to Dominion lands by the Department of the Interior. As the House is aware these lands are largely vacant lands and in regard to them a very long programme has been prepared—at least it is now in the shape of requisitions which have not yet been finally passed upon. <sup>176</sup>

Mr. Hugh Guthrie : [...] the Civil Aviation Branch has, of course, charge of the training of all airmen, the granting of certificates, and the prescribing of all flying conditions. That branch is already kept busy with applications of various kinds. Regulations are passed prescribing the law under which all flying is done in Canada. Just at the moment there is an anomaly in the condition between Canada and the United States. Canada, having become a member of the League of Nations, is bound by certain general regulations applicable to all nations which became parties to the covenant. In the meantime we are providing our own regulations' and have notified the United States authorities that their machines flying over Canada must comply with our requirements, notwithstanding the fact that the United States has not become a member of the League of Nations.

Isaac Ellis Pedlow (Laurier Liberal) : To what extent is Canada bound in this matter by her membership in the League, of Nations?

23 May 1921 : Ottawa, Canada - Mr. Hugh Guthrie : Canada has given her assent as a signatory to the covenant of the League of Nations to certain general air rules applicable to all members of the league, and not applicable, of course, to the United States, which has not become a member.

William Duff (Laurier Liberal) : The minister has told us that he is maintaining an air station at or near the city of Halifax. So far as I can learn, that station is absolutely useless, either for commercial or for military purposes. There may be four or five aeroplanes or seaplanes situated there, but they are of no use to the people of Canada. I am sure that the people of Nova Scotia have no desire for an air force or for aeroplanes either in Halifax or anywhere else on the coast of that province. I would like to ask the minister how many accidents occurred during the year 1920, fatal or otherwise?

Mr. Hugh Guthrie : I could not say with any exactitude. I think there were about eight or nine accidents, three of them fatal, if I remember rightly. Later in the evening I can get the exact number for my hon. friend. The secretary of the Air Board is not in the city this afternoon, but he will be here to-night.

---

<sup>176</sup> <http://www.lipad.ca/full/1921/05/23/8/>

## Notes on "Civil Aviation"

William Duff : It seems to me that this is a pretty high price to pay for an air service in peace time. If we had war, of course it would be necessary to keep our air service and we would expect to have accidents. But it is a crime to render our very best young men, those from 21 to 25 years of age, liable to be killed or dangerously injured, just for the sake of having in Canada a service which is absolutely unnecessary. I protest against it.

Mr. Hugh Guthrie : I do not believe they could, because these appropriations are pared down even to a dollar. These are the details of the \$825,000 item:

28-day refresher course for 190 flying officers \$380,000

28-day refresher course for 50 *ground officers* 22,000

Three months course for 400 mechanics 240,000

Spares 100,000

Seaplane training 60,000

*Provincial executives, C.A.F. Associations* 23,000

Total \$825,000

Those are right to a dollar without any room for contingencies. I have not the items for civil aviation, but I know the basis on which the appropriations were made up, and I know there is not a dollar left over unless there was a special item for contingencies, so closely was the expenditure pared down.

William Daum Euler : By whom are the items made up?

Mr. Hugh Guthrie : By the vice-chairman [Col. O. M. Biggar, K.C.] and the secretary.

William Daum Euler : Who are the members of the Air Board? What salaries are they paid? What are the expenses?

Mr. Hugh Guthrie : I am the chairman of the board. Col. O. M. Biggar, K.C., is vice-chairman. [...] Col. Biggar gets no salary. Sir Willoughby Gwatkin is inspector general of the force. Lt.-Col. Leckie is director of flying operations. Lt.-Col. Scott is controller of civil aviation, Captain Hose is director of the Naval Service. Dr. Deville is surveyor general. Captain Hose and Dr. Deville receive nothing for their services. I think the salaries are \$5,000 each for the three other officers whom I named. It may be that General Gwatkin receives more than that. I can verify that in a minute or two. <sup>177</sup>

Samuel William Jacobs (Laurier Liberal) : How is the distinction made between those who receive a salary and those who receive nothing?

Mr. Hugh Guthrie : The other members of the board like myself and Col. O. M. Biggar, Capt. Hose and Dr. Deville *are in other offices of the Government* and receive other compensation.

Frank S. Cahill (Laurier Liberal) : Are the members of the board all Canadians?

Mr. Hugh Guthrie : That depends upon what you call a Canadian. General Gwatkin is an Englishman, long resident in Canada. Captain Hose is an Englishman, resident in Canada. The others are Canadians.

Mr. Arthur Bliss Copp (Laurier Liberal) : My hon. friend said that there was an appropriation of some \$23,000 for provincial organizations. How is that distributed? Are there boards in the different provinces?

Mr. Hugh Guthrie : There are nine provincial boards, one for each province, and there is a certain amount of expense in connection with each board. This appropriation of \$23,000 covers the expense of the nine boards.

Mr. Arthur Bliss Copp (Laurier Liberal) : Are there any salaries in connection with these boards?

Mr. Hugh Guthrie : There are no salaries paid *for the boards*. They *hold periodical meetings*, and they have examinations of their men and things of that kind. *Our officers attend the meetings from time to time for the purpose of conference and discussion.*

William Daum Euler : Is there any co-operation between the two branches of the service?

---

<sup>177</sup> <http://www.lipad.ca/full/1921/05/23/11/>

## Notes on "Civil Aviation"

Mr. Hugh Guthrie : They are kept separate, but one board presides over them both. Their duties are, of course, separate. One is purely military and naval.

William Daum Euler : Is a man ever transferred from one branch to another?

Mr. Hugh Guthrie : A man may be transferred, but none of the officers.

William Daum Euler : What about equipment?

Mr. Hugh Guthrie : Certain equipment is suitable for military and naval purposes and certain is not suitable for that. *In matters of repairs, civil aviation machines are repaired by the military repair shops.*

William Duff : Who comprise *the Nova Scotia Aviation Board*?

Mr. Hugh Guthrie : I do not believe I could give the names. *The Lieutenant Governor is president of it.*

William Duff : He is a flier all right.

Mr. Hugh Guthrie : He is chairman of the board, *reputable citizens named by the provinces themselves comprise the boards. We have nothing to do with the selection of them.*

William Duff : Are they gentlemen who have any knowledge of aviation, or are they appointed on account of some other qualifications? I am speaking only for my own province, because I have some knowledge of the work that has not been done in regard to aviation in my province. It is not necessary to have this aviation board or any aviation in Nova Scotia. I should like the minister to tell the committee what work was done in Halifax last year before we are asked to pass an appropriation, a portion of which is to be spent- in Nova Scotia. As far as my knowledge goes, not one dollar of benefit resulted in 1920 from either a war or a civil standpoint. I doubt if five people in Nova Scotia can say that they ever saw an aeroplane or a hydroplane during 1920, and before we are called upon to vote a large amount of money to maintain a station in Nova Scotia, we should be satisfied that some beneficial result has been obtained. As far as my knowledge goes, it is an absolute waste of money to have this station in Halifax.

Mr. Hugh Guthrie : The board is for the Maritime Provinces, not for Nova Scotia. These are the members of the board:

His Honour the hon. Wm. Pugsley, Lieutenant Governor of New Brunswick;

His Honour McCallum Grant, Lieutenant Governor of Nova Scotia;

His Honour M. McKinnon, Lieutenant Governor of Prince Edward Island;

J. O. Hyndman;

W. H. Dennis;

Pilot Officer A. E. Stephenson;

Flight Lieutenant R. A. Logan, C.A.F.;

Flight Lieutenant J. L. M. White, D.F.C.;

Flying Officer A. McGregor, D.F.C., C.A.F.;

Pilot Officer H. H. Whitlock, C.A.F.;

Secretary, Flying Officer H. R. Stewart, 57 Grafton Street, Charlottetown, P.E.I.

The station in Nova Scotia is considered as absolutely essential for the purpose of a seaplane service.

The naval service nowadays must have as an adjunct a seaplane service, and the best base for that on the eastern coast was considered to be at Halifax in Nova Scotia, and on the west in British Columbia. These are our two seaplane stations. They are kept up very inexpensively at the present time, and our hope is that they will justify the money we are spending on them.

William Duff : The minister has given us the names of the members of the Air Board for the Maritime Provinces, and I notice that some very estimable gentlemen are members of that board. The Lieutenant Governors of Nova Scotia, New Brunswick and Prince Edward Island are members of the board, and I think perhaps no gentlemen are held in higher esteem in the Maritime Provinces than the gentlemen who occupy these positions at the present time, but I think everybody will agree with me that these gentlemen know nothing about aviation. They are on the board, I presume, simply on account of their high official position. I presume that the other members of the board are members of the aviation corps. So far the minister has not given us any reason why this station should be continued. It no doubt is quite proper to have such a station in time of war, and, of course, if a station has to be established, Halifax is the logical place on the eastern seaboard, and the station in the West must be in British Columbia, but at the present time I think there is absolutely no necessity to have any air board or any expenditure on either of these stations. I think that no benefit has been derived by the people of Nova Scotia from having this station at Halifax during the past year or since the war. It is quite true that during the war we had seaplanes in the province of Nova Scotia, but they were supplied to us by the

## Notes on "Civil Aviation"

American Government and were officered by American officers. They did good work. We had absolutely to depend on American officers to guard the coast of Nova Scotia during the war. I doubt whether you could find five men in Nova Scotia who knew that there was a seaplane in or near the city of Halifax in the last year or so, and I say there is absolutely no necessity for maintaining this station at the present time.

John Howard Sinclair (Laurier Liberal) : How many men were trained at Halifax station last year, and to what use is the station being put? I can well understand that Halifax would be an excellent base for such a station, but we would like to know what this station is useful for. Is it training men, or doing something that contributes to the defence of the country?

Mr. Hugh Guthrie : It is not a training station at the present time. All the work that is done up as far as Lake St. John, and, in fact, further west than that, is done by seaplane. All these seaplanes are assembled at Halifax and distributed from there. For instance, the ones that went to lake ' St. John came up the St. Lawrence to that place opposite Riviere du Loup. They made a landing there, and from there went on up the river a considerable distance, and then northward They have to depend upon lake and river landings. You cannot make a landing in the rough forest country at all. It is therefore absolutely necessary to utilize seaplanes. They are assembled at Halifax, and go back to Halifax at the end of the year. *We have a staff of repair men there, but no training takes place at the station. The training, which is largely military training, takes place at Borden in the province of Ontario.*

William Daum Euler : How many bases are there throughout the country, and what is the equipment of each?

Mr. Hugh Guthrie : I do not think I can give the exact equipment. We have a seaplane station at Vancouver in British Columbia, one at Morley in Alberta, one at High River, in Alberta, and we are equipping one for both airships and seaplanes near Winnipeg, Lake Winnipeg being the landing stage for the seaplanes.

Coming easterly, we have a military base at Camp Borden, and a small establishment in Ottawa at Rockcliffe.

We have one in northern Quebec, but from there east we have none until we get to Nova Scotia, where we have a seaplane station.

13 June 1921 - Canadian terms for the AME of the day differ from the United States and Great Britain. The Canadian Air Board refers to the Aeronautical Ground Engineers as "air engineers". It is pointed out that this might lead to some confusion in the future and that "an agreement on such and similar terms as far as they affect English speaking peoples would therefore appear highly desirable".<sup>178</sup>

June 1921 : The Shorts Sliver Streak is relegated to static testing, Royal Aircraft Establishment, Farnborough. ("The Olympia 1920 Aero Show" Flight (22 July 1920) "Air Ministry Acquire Short 'Silver Streak'" Flight (24 February 1921) "Short Bros. and Metal Construction" Flight (11 December 1924)

26 June 1921 : Air Accident : Type : Curtiss JN-4, registration : Canada C-GAAM, Fatalities : None, Injuries : Minor. Pilot : R. Flemming. Aircraft owner : McCall Aero Corp. Calgary, Alberta. BOI convened : Capt. W. May, Finding : post the 1919 daily stunt show over Calgary (flown by May until August 30, and Freddie McCall - until the fall of 1920 for stunts and wing-walking by a Mr. Maybee), the aircraft had been in tension all winter. Pilot Flemming - admitted the rigging may be poor. A confirmation of the rigging was not undertaken - the aircraft had been "re-checked" just before the flight. William Pearce -only eye witness and former RAF mechanic gave evidence the pilot did not stall, but appeared to get into an air-pocket. investigation of the wreckage led to conclusion the machine was faultily rigged. Unable to attach blame to any one individual, closer inspection of aircraft of this age and more Air Engineer courses recommended".

The Dir of Air Operations later commented 13 Feb 1923 "it would appear the Air Regulations were not complied with"

---

<sup>178</sup> With reference to Air Engineer notices by the Editor. Aviation Weekly - 13 June 1921

## Notes on "Civil Aviation"

1921 : Regina, Saskatchewan, Mr. Lloyd Rees attempts to climb down a ladder from Curtiss JN-4 G-CAAM to Curtis JN-4 G-AABZ in mid-air. Mr. Rees loses his grip and falls to his death. The Air Board Official report is laconical, however Rees's death prompted the formation of regulations prohibiting performances by aerial stunt-men.

1921 : "May-Gorman Airplanes Ltd" ceases operation.

1921 : Imperial Oil Air exploration using G-CADP - Employs Air Engineers Pete Derbyshire and William Hill

01 April 1921: Pilot Keith Tailor killed in "Category A" accident of Avro 504K G-CYBD (built by Grahame-White Aviation Co. Ltd, UK. ex RAF H9755 - Imperial gift) while instructing at Camp Borden. First Canadian Air Force officer lost in an accident.

20 August 1921 : UK : DH.18 "G-EARI" operated by Aircraft Transport and Travel force-lands at Wallington, Surrey due to engine failure and is wrecked.

August 31 - Sept 02 1921 : Cincinnati Ohio USA - 44th meeting of the American Bar Association : National Conference of Commissioners on Uniform State Laws <sup>179</sup> : We now have under consideration "an act to regulate the subject of the operation of aeroplanes in the science known as aviation." Delegates were present from 43 state associations ^ and there were delegates present representing 87 local bar associations ^ and, in addition, some 20 odd delegates who were not classified at the time these figures were compiled. I think there must have been fully 500 in attendance at the meeting during the day. The man in this Association who was first alert to the situation was Simeon E. Baldwin, formerly Chief Justice, and afterwards Governor, of the State of Connecticut. In 1911, seeing what was coining and having a prophetic instinct and an appreciation of conditions, even as they then were, he asked this Association to take action in respect to the law of what has been styled in the name of this committee, "Aviation, ^ ^ but what is now technically, in the proper terminology called \*\* Aeronautics."

The matter was referred to the Committee on Jurisprudence and Law Reform, and that committee reported that it was not then a matter of such general interest, or of such urgent importance, that any action needed to be taken on the subject by the American Bar Association.

There, until this day, except for the appointment of this committee, the matter has rested. In the meantime there has been the great World War, and the covenant of the League of Nations with respect to Aviation, and the consequent Air Convention, which has been formulated by those participating in the League of Nations, and which has been made applicable in many, if not all, of its members. Though that convention was signed by a representative of the United States, it contains regulations which have never received the approval of the United States Senate, and which are not the law in this country.

The United States is pitifully behind some of the smaller nations of the world in its law of aeronautics ^ substantially speaking, there is no law on aeronautics in the United States. There are certain state laws, there are certain federal laws, in relation to operation ; there are certain local ordinances ; but we are in the humiliating position now that under the Air Convention that has been signed by many of the nations, we are technically under boycott, although it has not been put into operation.

The Air Convention, among other things, provides that the

---

<sup>179</sup> 44th meeting of the American Bar Association : National Conference of Commissioners on Uniform State Laws : Officially reported by Charles A Morrison, New York, NY : The Lord Baltimore Press - 1921

craft of non-signatory nations shall not be permitted to fly across the borders of the signatory nations, except under temporary and peculiar conditions. England has had air navigation laws for several years and now has a complete set of those laws regulating flight in that kingdom. Canada has an air navigation law, and has an air board and an air force, and it is only by sufferance that any flyer from this country can cross the Canadian borders today, because there is no power in the United States which is legally qualified to comply with simple regulations for aerial navigation across the Canadian border.

I am advised that as an act of courtesy the Air Board of Canada has given special permission to fly from the United States ^ but that this permission will expire on November 1 of the current year. And when it was contemplated that there should be a balloon race in this country last April, both because of scientific interest and because of sport, the balloons not being dirigible, and being liable to drift across the International Boundary, they had to get special permission from the Air Board of Canada, that if any particular balloon should cross the border it would be hospitably received, on certain conditions, which were prescribed by that Air Board. In Ottawa there is an Air Board, and I have been in correspondence with it.

The report contains a condensed story of the present situation of the law of aeronautics in this country. There are two or three things that I want to call your attention to in the most hasty way. There are several factors which have stood in the way of the proper commercial development in this country of the law of aeronautics and of civil flight. I do not need to say anything about the flight of government air craft. The government has already prescribed numerous statutory and other regulations with respect to government air craft. But so far as civil aircraft is concerned, and so far as a commercial flight is concerned, there never was a greater need for adequate laws than there is today, and there is practically no law whatever on the subject.

All the investigation which this committee has made has shown that those who are interested in commercial development find that it is the law that is defective and not the progress of the art that is at fault, and that if there was adequate law on the subject, we would have commercial aircraft developed rapidly in this country as a means of transportation both local and interstate and international. But capital will not invest in the purchase and operation of aircraft under present conditions. The insurance companies will not insure, because they do not know the extent of the risk.

The fundamental factor is not the mechanical factor, but the legal factor, and the sooner we appreciate that the better.

Now, there are two embarrassments in the proper development of the legal factor. The first is the theory, which our committee suggests ought not to be readily conceded, which is found in the very apt expression of Major Johnson, the legal adviser of the United States Army, on the subject, that the owner of land has no ceiling to his dome. . Major Johnson, in the Air Service Information Circular, concedes that fact ^ and says that it calls for the exercise of the power of eminent domain in order to establish air

routes in the air over the territory of the United States.

The first thing, then, to get through our heads, as I conceive it (and the committee's suggestions are all tentative) is that the burden is on the property owner to demonstrate that he has such a private property in the air though there is no possibility of jeopardizing his possession of the surface. That is, that he has such an interest in the air at a considerable distance above the surface that the power of eminent domain is necessary to acquire that right, and this proposition has not yet been established.

The other embarrassment in the proper development of this law is the dual nature of our government and the undoubted fact that there are constitutional limitations. Gentlemen who are very much interested in the subject matter may say that the United States Government has the unlimited power and the exclusive power to legislate with respect to flight through the air. But they will, in my judgment, be in the same category as those enthusiasts who championed the law that was passed in New York at a recent election to provide \$45,000,000 for the payment of a bonus for returned soldiers. That was passed by an overwhelming majority of the voters. Yet day before yesterday it was declared by the Court of Appeals of New York State to be unconstitutional. You cannot get past the Constitution and you cannot enact any law that you wish by merely shutting your eyes and denying its existence.

The committee calls attention to the fact that although there are undoubtedly powers that may be exercised by the Congress of the United States, those powers have their limitations, and that there are certain powers still reserved by the Constitution to the people of the states. Our judgment and it is a tentative judgment, is that the best ultimate solution of this question is one that will put the United States on a par with other nations and that is a constitutional amendment, which will extend the power of Congress to legislate on flight through the air.

Major Johnson, representing the legal service of the United States Army, reaches exactly the same conclusion. With this conclusion the majority of the committee is in accord. He proposes a tentative amendment to the Constitution of the United States. Our observation with respect to that is this: That a reading of the amendment which he proposes leads to the obvious conclusion that it is framed upon present concepts of flight and its possibilities, and that it is so limited that it has no broad vision for the future, and that if any such power is granted to Congress by a constitutional amendment, it should be by an amendment of the broadest possible vision, and of the utmost possible scope. The committee has no recommendation to make with respect to the form of the law or the form of constitutional amendment. We think that the present, however, is an excellent time to call to the attention of the Bar for their careful consideration and for their best professional thought the fundamental principles by which we should be guided in attempting a proper solution of the question.

I will now read the recommendations which the committee reports and asks you to concur in. For Recommendations, see Report of Committee in Appendix, page 498.)

## Notes on "Civil Aviation"

I must not neglect this opportunity to speak with praise of the fact that Mr. William V. Eooker of Indiana, has had much to do with the recent activity that has induced the American Bar Association to enter upon this inquiry. When Governor Baldwin, in 1911, attempted to do so, it was not deemed the proper time. It is true that Mr. Booker entertains the opinion that the Admiralty and Marine jurisdiction of the United States is sufficient to cover the entire field of this subject and that it needs no constitutional amendment, a view which the committee does not accept.

I submit the report and ask that the committee be continued as a special committee, by the Association. I would suggest in that connection that we have been snfficieBtly educated in the terminology of the art now, so that hereafter the committee shall be known as the Committee on Aeronautics.

I submit these recommendations and move their adoption.

The motion was seconded.

The Chairman :

The matter is now open for discussion. The proposition comes before the Association on the four recommendations stated by Mr. Boston.

R. Wayne Parker, of New Jersey :

I have to compliment the committee on the exceeding good judgment with which their report and recommendations have been drawn. One provision, the most important of all, in my opinion, is that no national legislation shall infringe upon the general powers of the states. Aviation is a matter of great importance, but it is not the only subject that involves these considerations: the whole subject of navigable waters inside the three-mile limit, involves the states and the federal government, the ownership of the land being in the state, while the navigation of the waters for interstate commerce is in the federal government. The question of the improvement of navigable rivers is in the same category. There is much doubt as to whether a dam constructed for the purpose of confining the waters of a stream is under the control of the state or of the TTnited States. A more modem question is the control of hydroelectric power generated by a dam. Then there is wireless telegraphy, which is almost similar, going sometimes within states and sometimes across into other states and into other countries. The same question arises as to whether the United States has jurisdiction over the wireless. There are also the old questions of quarantine and the protection of agriculture from pests, and the regulation of migratory birds.

Aviation is not a single problem all by itself. It is one of a host of questions that has come up before this generation because of the wondrous progress in communication not only by wire, or by land and by sea, but through the aii, electricity, and through the ether\*

I only mention these matters now in order to impress upon this Association the importance of the single subject that

## Notes on "Civil Aviation"

has been raised. I think the recommendations are in excellent form and ought to be supported, but at the same time the consideration of the subject must go very much farther than the one question whether a man may fly from one state into another state or from this country into another country.

George C. Bogert, of Ithaca, N. Y. :

I rise to second the motion of Mr. Boston, that the committee recommendations be accepted. I do this as a member of the Bar Association Committee and also as Chairman of the Committee on Aviation of the Conference of Commissioners on Uniform State Laws. The Conference feels that there is a legitimate place for state legislation, as well as for federal laws. This attitude is entirely in harmony with that taken in Mr. Boston's report

It would be futile to attempt to argue here whether the federal government has power under the admiralty clause of the Constitution to take exclusive control of aviation. This body cannot, in the limited time at its disposal, enter into an extended discussion such as would be necessary to form any opinion on the constitutionality of exclusive federal legislation. The most that we can do is to call to the attention of Congress the important constitutional questions involved, and leave to that body the determination of the constitutionality of various measures proposed to it.

William V. Booker, of Indianapolis, Ind. :

Mr. Boston very graciously mentioned my name in connection with this work. At the Conference of Bar Association Delegates, held in Boston, 1919, I suggested that the jurisdiction over aerial communication would properly lie in admiralty. The matter was discussed then, and a resolution to that effect was adopted. I was made Chairman of a committee on that subject to pursue further investigation. My committee made its report to the conference of delegates at St. Louis, and we made that report . pursuant to the original resolution, passed at Boston, that this matter should ultimately come before the American Bar Association.

Now, I am opposed to these recommendations because they are wrong. This report is not constructive. It says that we need a constitutional amendment. In saying that, it says that we need from 10 to 20 years' delay on one of the most momentous questions engaging the attention of the American people. They say there is no authority for admiralty jurisdiction. I challenge that statement. I say that the right of the admiralty jurisdiction can be proven; it can be proven with biology; it can be proven with the philosophy of language.

There are bills pending in Congress to confer the admiralty jurisdiction. Those bills were written by men whose fidelity to the Constitution is as fixed as that of the men who wrote this report.

They tell you a great deal about that old maxim of the common law to the effect that the man who owns the surface has an ownership which extends from the middle of the earth way up to

## Notes on "Civil Aviation"

heaven. I want to tell you something about that. It is humiliating that the thing should be presented to an intelligent audience "the old doctrine of ownership in the air above us" as one of the old cardinal principals of the geocentric system of the universe.

This old doctrine of the geocentric theory of the universe was an invention of Ptolemy, an ancient Greek astronomer and geographer. It was first challenged by Copernicus, who said that it was not tenable because the earth was round. Yet, today, gentlemen come before this great American Bar Association, this body of intelligent men and ask that we adopt a resolution based on the proposition that the earth is flat!

So I say to you gentlemen, when you approach this question that you approach a domain that leads the sublime thought of the world. Neither the ocean nor the atmosphere is exposed to geometrical measurement. You cannot fix a cornerstone or a boundary line in the ocean or in the air. Neither the ocean nor the air is exposed to allocation. Hence, you cannot set off to any individual his part or portion of either the ocean or the air. Therefore you cannot establish a state in either the ocean or the atmosphere. It follows that both the ocean and the atmosphere are common funds for the use and benefit of all forms of life. Both the ocean and the atmosphere are exposed to astronomical measurements and both are controlled by astronomical influences; both are in motion while the soil of the earth is static.

I offer the following amendment of the motion which has been made, namely:

Resolved, That it is the sense of the American Bar Association that the jurisdiction of aerial communication would lie properly in admiralty, with such reservations in favor of the common law as the common law is competent to give.

Resolved further, that aerial communication, as contemplated herein, is defined to include transmission upon the atmosphere of all mechanical devices and of all forms of written and spoken words. It includes not only aerography but aerophony.

Resolved further, That a copy of this resolution be transmitted to the Congress of the United States, together with the tender of the services of this Association to the Congress in the preparation of suitable bills for the enactment of the sense of this resolution into law, and that a committee of fifteen be appointed by the President of the Association to give such assistance to the Congress as may be required in the premises.

There have been five bills introduced in Congress lodging the jurisdiction of cases arising under the law of the air in the admiralty courts of the United States. Those bills are going to pass. I say that advisedly. Why should we humiliate ourselves by telling Congress that they are going to do that which is constitutionally impossible? They are going to solve this problem, and if there is any error in their judgment, they are going to leave it to the Supreme Court of the United States.

I ask that we declare it to be our sense that this jurisdiction would properly lie in admiralty.

## Notes on "Civil Aviation"

At this point, George T. Page retired from the Chair and Frederick A. Brown, of Illinois, was requested to preside for the remainder of the session. Lee Combs, of North Dakota :

It seems to me that we are laboring under a misapprehension here. I think we will do a great injustice to this committee if we adopt this substitute and fail to adopt the resolution presented by the committee. I cannot agree with the distinguished gentleman from Indiana.

This report does not ask us to recommend that Congress enact any law either for or against the theory advanced by Mr. Booker. It simply asks us as a body of lawyers to request that when Congress does act upon the subject, it first inquire into the intricately involved matters clearly and shall specifically determine what kind of legislation is best to cover the situation.

Jefferson Davis, of San Diego, California :

The members of this Association, I am sure, are grateful to Mr. Boston and his associates on the Aviation Committee for the exhaustive collation of authorities on aviation law, and the air service of this country should be particularly indebted to this committee for its research in what is comparatively an uncharted field.

The achievements of American Aces in command of battle planes on the front have been followed, and are to be followed, by the achievements of the pen of those who under the guidance of men of vision, such as Mr. Boston, Mr. Booker, of Indianapolis, and other distinguished members of the Bar, are to write the charter for civil aviation, and are to guide and direct our federal government and the individual states on the question of sovereignty which they should and will exert over the air.

It is a matter of particular regret to me that I cannot agree with Mr. Boston's recommendation as to the form which legislation on this subject should take. The necessity of a constitutional amendment is opposed to the recommendation of the Committee of the Conference of Delegates from the state and local bar associations. It is opposed also to the report of the National Advisory Committee on Aeronautics, which has endorsed two bills, now pending in Congress, bringing federal legislation on this vital subject under the maritime clause of the Constitution.

I have the same affectionate regard for the Constitution which undoubtedly actuates the members of this committee, but on the other hand, I have at heart the interests of the air service, with which I have been connected as legal adviser, and I think I can foresee the disastrous consequences which will flow from ill-advised action on this subject. An extremely pessimistic view is taken by those who advocate the passage of a constitutional amendment. The theory of the necessity of such an amendment is founded solely upon the premise that the air is owned absolutely by the surface owner, and that all flight over such air space constitutes trespass. They go even further, and say that there can be no development of aerial transportation without a constitutional amendment under which the people of the states would give up their property rights

in space to some extent, and allow an easement of passage. This view of space ownership comes from too literal and narrow interpretation of the common law maxim, "cujus est solum ejus est usque ad coelum."

A careful examination of the authorities will show, however, that this is not law, but is merely a theory which has come down to us from mediaeval days. It is a maxim relating to tenancy, and not to sovereign rights. It is also a maxim relating to rules of conveyance and not to sovereignty.

Aviation is concerned only with the use of the atmosphere for navigation purposes, the right of navigation being only a right to use and not constituting a title in fee to the area affected. It is not a constitutional objection to the exercise by Congress of the right to regulate air navigation that the property or rights of individuals may be incidentally affected thereby.

The German Civil Code qualifies the common law by adding that the owner cannot prohibit interferences which take place at such height or depth that he has no interest in their exclusion.

What possible interest has the owner of land in the passage through the air space above his property of an airplane at an elevation of from say eight to ten thousand feet? In what way can he say that he is damaged by such passage?

I think it can be said that the only rights in space which the courts have seen fit to protect have been rights in space immediately adjacent to and connected with the surface. There are no authorities to the effect that it is a wrong against a landowner to interfere with the space over his land, when the passage is at such a height that the use of the surface is not affected in the slightest degree. The codes of all countries treat the landowner's property in the space above his land as subject to a right of passage by aircraft.

None of these codes require condemnation of an aerial right of way, and none provide that the mere flight through the space above shall constitute a trespass. To retain such a doctrine (usque ad coelum), in the opinion of the British Aerial Transport Committee (report of 1918) would be fatal to civil aeronautics.

In a report on the French Government Air Bill of 1913, M. Thierry, who presented the bill to the French Legislature, said that the commission which framed it, advised that the French law did not give the owner of the soil property in the space above not susceptible of private appropriation. Statutes similar to those enacted by Great Britain, France and Germany, also exist in the other countries commonly classed as the great powers.

America, from whose creative genius the airplane sprang, is asked to ignore the natural evolution of the law of the airplane, as developed by all other countries, and to turn its attention to retrogressive legislation, as a result of which the future of civil aviation would be hopelessly handicapped and retarded for years to come.

## Notes on "Civil Aviation"

In September, 1919, at Boston, the Conference of Bar Association Delegates, an organization affiliated with this Association, adopted a resolution to the effect, that it was the sense of the Conference that Aeronautics should properly lie within the admiralty jurisdiction of the United States. A committee, of which Mr. Hooker, of Indianapolis, was Chairman, was appointed, and two reports were submitted, in both of which federal aviation legislation under the admiralty power was strongly urged.

The National Advisory Committee on Aeronautics recommends that federal legislature should precede any action by the states, and in its last report recommends such federal legislation. Various bills are now pending in Congress, in which such portions of the air as are navigable by aircraft are declared to be within the admiralty jurisdiction of the federal courts. Two of these bills, the Hicks Bill and the Kahn Bill, have been approved by the National Advisory Committee on Aeronautics. To keep pace with what other nations have already done in a field where the first trails were blazed by American genius, we must not lag behind when laws are necessary for the development of a new industry, a new avenue of transportation ; we must not put obstacles in the way, but we must trust to American minds to find a practical solution of present needs, and not let mere theories defeat our progress.

There is a feeling in the minds of all thinking people at this time that the airplane and submarine have brought the doom of the capital ship. We are not concerned so much with legislation over the air during time of war, but the best preparation for the use of the airplane as a medium of defense in the event of war is the development of civil aviation at this time, as a preliminary to the use of the airplane as a medium of defense.

The airplane as a medium of inter-communication and transportation, however, cannot be used successfully at this time unless there is immediate uniform legislation on the subject, and civil aviation is freed immediately from the encroachments of states and municipalities in a field which is\* essentially one for federal control.

The subject of air navigation is national in its character to such an extent as to require uniformity of regulation affecting all states alike, and in such a case the power of Congress has been held by our Supreme Court to be exclusive when state enactments would clearly be repugnant to the exercise of authority by the United States Government.

And now ^ gentlemen ^ having to this extent criticized the report of our distinguished friend from New York, may I not offer as a constructive suggestion that the recommendation of Professor Bogert, an associate member of this committee, be followed by this Association. Professor Bogert, in a very excellent brief, on " Problems in Aviation Law," says :

The best step for the American Bar Association is to recommend to the Senate the ratification of the International Air Convention.

I heartily concur in that recommendation, and might also say that it is in line with an opinion on this subject which I have had

## Notes on "Civil Aviation"

the honor to render the air service. Primarily, of course, we should become signatory to the International Air Convention, and that will be the basis of laws on the subject of aviation. The convention should be ratified immediately, and that, in my judgment, should be our recommendation to Congress.

Illustrating the use of the air for navigation are those cases pertaining to the use of the air by migratory birds. Regulations concerning migratory birds do not fall within the power to regulate commerce, nor within any of the other powers of Congress. The first Migratory Bird Act was held unconstitutional (TJ, S. V8. Chauver, 221 Fed. 228.) Subsequently thereto a Migratory Bird Treaty was entered into with Great Britain, and a second act passed in conformity thereto. The legislation has since been upheld upon the ground that it is within the power of Congress to carry into effect the moral obligation assumed by the nation in the treaty by appropriate legislation. (U. S. vs. Selkirk, 268 Fed. 775.)

The federal government has exclusive power to make treaties with foreign governments, and the case of State vs. Holland, 40 Sup. Ct. B. 382 (1920) decided that where the execution of such a treaty requires federal legislation, such legislation will be upheld, even though it interferes with the internal affairs of a state, but not otherwise subject to national control.

In this case a federal law for the protection of migratory birds, enacted in fulfillment of a treaty with Great Britain, was sustained, though it interfered with state control of birds, and although a previous act of the same purport, but not enacted under a treaty, had been held unconstitutional on the ground that it interfered with the state's reserved rights. (Bogert, Problems in Aviation Law.)

If there be any doubt therefore as to whether the federal government has jurisdiction over the airspace, any doubt would be instantly dissipated by the ratification of the International Air Navigation Convention, and the passage of legislation pursuant to the terms of the treaty.

Harry S. McCartney, of Illinois :

The report is a very valuable contribution to the aviation literature of the day, and particularly towards showing the absolute necessity of uniform regulation of aviation, that is, of national legislation on the subject. It also outlines, perhaps fully, all features of the law that should be covered by such national legislation.

A minor criticism is the space the report devotes, to combating the so-called 'common law rule' that the owner of a lot or tract owns from the center of the earth to the heavens. That rule has been so long exploded that it is not worth serious attack.

I do not interpret the report as some of the gentlemen here

## Notes on "Civil Aviation"

have done. I do not think it advises the constitutional amendment that Major Johnson recommended.

The chief fallacy of the report is in its recommendation that the whole country be put to the loss of time and the overwhelming cost of procuring an amendment to the National Constitution, when it is obvious that such an amendment might ultimately be held to have been absolutely unnecessary. The conclusion that such national amendment may be necessary is based upon the fact that the committee assumes that there is real doubt upon the question and that it is better to "remove all doubt" by having passed an act of Congress and having an early judicial test in the U. S. Supreme Court of the constitutionality of such act. "Doubts" and "all doubt" upon a question are frequently removed by full argument and a little hard work in a test case; and a test case is much cheaper than a constitutional amendment.

The drafting of concrete legislation should logically precede work on the constitutional question at all events, and the actual drafting of such legislation might of itself greatly help to "remove all doubt" in any lawyer's mind as to its constitutionality.

In this connection we are fain to observe that there are probably not five members of this entire Association who are thoroughly qualified to draft national legislation on this highly scientific and mechanically technical subject without the aid of practical aviators or that of general experts in the science of aeronautics. The whole question, in other words, is scientific as well as legal. I do not know of a national association in aeronautics or aviation which is as definitely prominent in its own peculiar sphere as is this Association in the realm of law; but if there be such, the subject would be worthy of the joint consideration and work of both such a body and the American Bar Association. The call to service to both such bodies is equally clear and the privilege to undertake the work is equally the logical right of both.

I have a resolution which it may not be parliamentary at this time to present, since there is one substitute already before the house, but if that be voted down, then I would like an opportunity to present a resolution.

Resolved, That the report of the Special Committee on the Law of Aviation be received and ordered placed among the permanent records of this Association with the thanks of this body to the committee for its preparation.

Resolved, Second, That the President of the Association appoint a new committee of five members and that he also invite from any clubs or societies interested in the subject of Aviation, the appointment of a similar committee of five members of practical experience in aviation or in the science of aeronautics, such two committees to compose a joint committee with power to select an eleventh member thereof to act as chairman of said joint committee, said joint committee to make a report as to what national legislation is needed on the subject of aviation and present a draft of bills for introduction in Congress appropriate to subserve such purpose.

Resolved, Third, That when said report shall have been made the

## Notes on "Civil Aviation"

Executive Committee of this Association mail a copy of the same to each member of the Association.

Charles V. Inlay, of Washington, D. C. :

The proposition advanced by Mr. Booker that control over aviation is part of the admiralty jurisdiction, and the proposition of Major Davis that Congress can legislate on the ground that it has plenary jurisdiction would offer more or less consolation if they were adopted. If we were to assume that the Supreme Court would finally say that this was a matter of admiralty jurisdiction, or if we assume that the Supreme Court would overrule us, and say that Congress had plenary jurisdiction over the entire subject matter, interstate and intrastate alike, then the solution would be easy. But a careful reading of this report and a careful reading of the excellent article of Professor Bogert on the subject "because, in addition to drafting a tentative act in the Conference of Commissioners on Uniform State Laws, he has written a most illuminating article on the subject" a careful reading of all of those documents convinces me that this report must be taken to be the most practical in its offered solution of any that has been suggested. It plants its feet upon propositions that are demonstrable. We all know that the fundamental theory of the Constitution is that the powers not delegated to the United States are reserved to the states. We know, therefore, that as regards those matters that have been delegated to the nation, interstate commerce, the post-office, and such matters, Congress can legislate. We know, likewise, that as regards those matters that are reserved to the states, the states can legislate. These are axioms. If we proceed upon these axioms, if we ask Congress now to legislate upon those matters that are clearly within its delegated powers, and if we ask the states to legislate upon those matters which are clearly within their reserved powers, as in the law that Professor Bogert has drafted, then we are proceeding upon something that we are sure of. And if, in the process the Supreme Court were to say that the national government had plenary jurisdiction, I am sure Mr. Boston would bow to that and we would all say whatever may be the merits or the demerits of that solution as a constitutional proposition, it would furnish a way out.

I think we should adopt this report. If we reject it, we throw away the only basis of getting immediate progress.

Henry H. Glassie, of the District of Columbia :

I understand, Mr. Chairman, that the question before the house is on the substitute offered by the gentleman from Indiana, and, if I am correct, that substitute takes the definite position here on the question of constitutional law that the control of aviation is essentially, for scientific reasons, within the admiralty jurisdiction.

Now, upon that point, I think it will clarify our minds if we remember a remark of Mr. Justice Holmes "and it is for the purpose of reminding you of that remark that I arose" on a question not exactly the same, but sufficiently analogous. He made this wise observation :

## Notes on "Civil Aviation"

On a point like this a page of history is worth a volume of logic.

There is not a lawyer within the sound of my voice that does not know that when you come to deal with the jurisdiction of admiralty your starting point is bound to be historical and does not also know that there isn't the faintest likelihood of any court, supreme or otherwise, departing upon purely scientific analogy from the historic doctrine that admiralty means admiralty's navigation that was understood by the human race at the time that those words were put into the instrument.

I submit that to discuss this particular point upon any other basis is simply to embark ourselves for the realm of pure fancy, which may relieve the wearisomeness of this weather, but it can lead the Association to no result.

William P. McCracken, of Illinois:

There is no question that Mr. Boston has done the major portion of the work of this committee, and I have the utmost confidence in his ability to defend the report. But I cannot refrain from making one or two remarks before he closes regarding the arguments which have been advanced and the criticisms which have been made of the report.

In the first place, the questions presented by Mr. Booker in his substitute motion are questions which cannot be fully determined at a meeting of this kind, and I am satisfied that this gathering without a brief pro and con on that question would not attempt to commit itself to recommendations to the Congress. In the second place, the Air Convention, which Major Davis has suggested should be ratified by Congress and in which opinion I may say I concur should not be made a matter of action by this Association, because of the fact that it is so connected with the League of Nations and the Treaty of Versailles that to do so would be taking political action. Hence, that was left out of the report.

I agree heartily with Major Davis' desire for action in this matter. I, too, was a part of the air service of this country, a pilot and a flying instructor during the war, and, as I stand here before this meeting, I say that the air service of the United States Army is in need of a guardian ad litem.

And the lawyers of this country owe it to the profession and to our welfare, to the national defense, to see to it that it gets such a guardian. The recommendation of this report that I particularly want to call attention to is the first one. That states, in effect, that there are legal questions involved in connection with aeronautics, and that those questions must be solved before we can hope to have a satisfactory commercial development of aeronautics in this country. We cannot build up a national air force for defense unless it has the active support of commercial aviation. Therefore, we cannot shirk the double problem. First, the commercial one, and secondly, the patriotic one. We cannot shirk either of them when we give our time and our attention to the proper solution of this new question. I earnestly urge the defeat of the substitute and the adoption of the report presented by the committee.

## Notes on "Civil Aviation"

The Chairman:

Is there any further discussion? If not, Mr. Boston will close the debate.

Mr. Boston:

This was a new subject. The members of the committee sought information from every available source. They listened to every expression of legal view. They have themselves agreed upon none. It is obvious to me that those who have discussed this report have overlooked two things. In the first place, the footnote at the bottom of the first page, viz. :

So much that is controversial or open to future determination by the courts or otherwise is involved in the following report, that its conclusions are not to be taken as positive statements, but only as expressions of view tentatively advanced by members of the committee, subject to possible modification upon further consideration.

The committee has not been given credit for the slightest caution. Now, we have not asked the American Bar Association to express any opinion upon any subject. I think it would be a mistake to adopt this substitute proposed by the gentleman from Indiana. It does the very thing which this committee has carefully sought to avoid. It is scarcely necessary for me to say that when this conference was held in Paris and when the League of Nations was formed, and when the Air Convention was provided for by the commissioners attending the conference, no thought entered the mind of any man then ^ present that it could be asserted that the air was an ocean subject to international jurisdiction.

They conceded the contrary. You will find that so far as air navigation is concerned they not only conceded, but they provided for national regulation. They have gone so far, as I stated in presenting this report, as to provide that the craft from other nations of the earth cannot fly across their borders except under special and temporary permission unless they sign that convention.

The committee was bound to give you information. It was bound to suggest some solution ^ or some possible solution ^ of certain of the most intricate problems. If you will read with care you will find that the committee in the main fails to express any opinion, but merely points out the dangers and the suggestions that should be studied so that our action shall not be hasty and the Association shall not be improvidently committed to a false position.

What is called for by the substitute is something that will commit the Association beyond any possibility of retreat to a theory based upon the explanation that has been made here this afternoon ^ an explanation which caused laughter, and did not receive the careful consideration with respect to its fallacy that any other situation would have demanded.

We have four propositions here, and they are all tentative. Even to that extent, two of the members of the committee have found

## Notes on "Civil Aviation"

it advisable to qualify further the views that are expressed there, for fear that somebody might misunderstand the report, as certain of the speakers here have.

So far as the facts in the report are concerned, they are statements of fact which have been ascertained by the committee, and they are just simply laid before you. As far as the opinions in the report are concerned, they are tentatively advanced by each member of the committee.

You have heard Mr. Davis, and you have heard Mr. Bogert, and, if I interpret their remarks aright, they are diametrically opposed in their opinions as to the extent of the power of the Congress of the United States. We do not think this is the proper tribunal to solve such a difference of opinion. We have no desire to insist upon either the third or the fourth recommendation. I leave that to the good judgment of this Association, but I call attention to the fact that it is the expression of a hope on the part of the American Bar Association that those who are charged with the investigation of these bills which are to be laid before Congress by interests "no interest is represented now before you, but interests have laid things before Congress, and Congress should be safeguarded by having its attention called to the fact that there are these questions. All that we say as a body is, that because of these serious questions we hope they will be carefully looked into and considered.

The substitute motion of Mr. Booker was then put and lost.

Homer Albers of Boston Mass. :

While I have the greatest respect for my friend, Mr. Boston,

I think there are some matters in this report which should be

corrected; and, therefore, I offer this substitute :

That the American Bar Association urges upon Congress to enact promptly such laws as to regulate aeronautics and communication through the air as are within its Constitutional powers.

The substitute was seconded.

Mr. Boston :

I see no inconsistency between what Mr. Albers is pleased to call a substitute and the recommendations of our committee. But I suggest to him, that we ought first to consider the original resolution, in its several parts, to determine whether the report shall be used as a document for information or not.

The substitute motion of Mr. Albers was then put and lost.

The Chairman:

The question now recurs upon the adoption of the report as originally made together with the resolutions and recommendations. All in favor of their adoption will say aye; opposed, no.

## Notes on "Civil Aviation"

The ayes seem to have it, the ayes have it, and they are adopted.  
(For Report, see Appendix, page Jt98.)

Mr! Cahill, of Michigan :

I desire to offer the following brief resolution :

Resolved, That it is the opinion of the members of the American Bar Association, in convention assembled in the City of Cincinnati at its Forty-Fourth Annual Meeting that the Forty-Fifth Annual Meeting and succeeding annual meetings of the Association be held in some city or cities with either a higher altitude or with a latitude and longitude more closely approximating that of the so-called north or magnetic pole, and that the Secretary of the Association be and he is hereby directed to transmit a copy of this resolution to the Executive Committee at its mid-winter meeting.

The Chairman :

Under Article III of our By-Laws that resolution will be referred to the Executive Committee.

### REPORT

#### OF THE

#### SPECIAL COMMITTEE ON THE LAW OF AVIATION/

To the Executive Committee of the American Bar Association:  
Recommendation.

We recommend, if the Executive Committee approve :

1. That the members of the American Bar Association be requested to give their attention to the fundamental problems of jurisprudence and especially of constitutional law, involved in the proper solution of the demands of aeronautics.
2. That a copy of this report, as the report of this committee, be placed in the hands of the President and each member of Congress, and each member of the National Advisory Committee for Aeronautics, and in the Library of Congress and of the Smithsonian Institution, and that two copies be given to each of the Commissioners on Uniform State Laws, and that one thousand additional copies be made available for distribution to those especially interested in the subject, to the end that its subject matter may be duly considered in the enactment of any legislation.
3. That the American Bar Association at the annual meeting express its hope that in the enactment of any legislation by Congress the most careful preliminary consideration be given to the constitutional features of any proposed legislation, to the end that it may be determined whether the proper development and regulation of aeronautics does not require a constitutional amendment conferring complete jurisdiction over aeronautics upon the United States through its appropriate departments, instead of attempting to adopt devices of questionable constitutionality to make existing national powers apply to this new branch of human activity; and that meanwhile all national legislation studiously

## Notes on "Civil Aviation"

observe the existing constitutional limitations, and preserve without assault the existing division of powers between the United States and the states of the union; and that all constitutional state legislation involving matters not purely of local interest and application shall be studiously made uniform.

\* So much that is controversial, or open to future determination by the courts or otherwise is involved in the following report that its conclusions are not to be taken as positive statements but only as expressions of view tentatively advanced by members of the committee, subject to possible modification upon further consideration. 4. That the committee be continued as a special committee of the Association.

Introduction.

This committee, designated as the Special Committee on the Law of Aviation, was appointed, pursuant to the action of the Executive Committee, at its meeting in St. Louis, immediately following the annual meeting of the Association in 1920.

The Committee's Preliminary Report.

The committee made a preliminary report to the Executive Committee at its meeting in New Orleans in January, 1921. That report was chiefly valuable for the bibliography which was annexed, containing lists of published articles upon the law of aeronautics and the sources from which the information was obtained. Copies of the report have been in demand from many public libraries, and officials and individuals interested in the subject matter, and the chairman of the committee has had much correspondence.

As this final report for the current first year of the existence of this committee is likely to have a still wider circulation, we repeat some of the information in the preliminary report.

Other Committees.

The Conference of Commissioners on Uniform State Laws in August, 1920, adopted the following resolution under which a committee has been appointed :

The whole world has come to a realization of the fact that aviation is practical and not a mere art or fad for pleasure and profit in exhibition flying, for many states in the union now have scores of aviators constantly flying from state to state carrying commerce between the states, which aviation needs regulation, so your committee recommends the appointment of a special committee to investigate this subject and report as soon as practical a uniform aviation law.

Since our preliminary report the New York State Bar Association and the New York County Lawyers have each appointed a committee to consider and deal with the law of aeronautics. The Aero Club of America, as the direct result of the action of the Executive Committee of the American Bar Association in providing for our committee, appointed a committee of lawyers to cooperate, which is composed of lawyers with especial experience either as actual fliers or as counsel for those who have been

commercially interested in the development of the art.

The Inobiasing Public Interest and the Impoetant

PtJNDAMBNTAL PbOBLEM OF JURISDICTION.

Not to mention the numerous commercial interests involved and the various periodicals devoted to the subject, the increasing interest is illustrated by the following list of aero clubs in the United States and Cuba, which has been furnished to us through the Aero Club of America:

Aero Club of Oregon, Portland, Ore.

Yolo Fliers Club, Woodland, California.

Aero Club of Lincoln, Lincoln, Nebraska.

Aero Club of Texas, Houston, Texas.

Aerial Club of Indiana, Terre Haute, Indiana.

Washington Aviators' Club, Washington, D. C.

Aero Club of Omaha, Omaha, Nebraska.

Aero Club of New England, Boston, Mass.

Aero Club of Ohio, Canton, Ohio.

Aero Club of St. Louis, St. Louis, Mo.

Aero Club of Buffalo, Buffalo, N. Y.

Aero Club of Pittsfield, Pittsfield, Mass.

Aero Club of Dayton, Dayton, Ohio.

Kansas City Aero Club, Kansas City, Mo.

Harvard Aeronautical Society, Harvard University, Cambridge, Mass.

Aero Club of Illinois, Chicago, Ul.

Aircraft Club of Peoria, Peoria, 111.

Aero Club of Michigan, Detroit, Michigan.

Milwaukee Aero Club, Milwaukee, Wis.

Western Aero Association, Topeka, Kansas.

Pacific Aero Club, San Francisco, California.

Aero Club of Rochester, Rochester, N. Y.

Aero Club of Penn ^ Ivania, Philadelphia, Pa.

Aero Club de Cuba, Havana, Cuba.

Queen City Aero Club, Cincinnati, Ohio.

Wichita Aero Club, Wichita, Kansas.

Aero Club of the Northwest, Seattle, Wash.

Aero Club of Iowa, Grinnell, Iowa.

Colorado Aero Club ^ Denver, Colo.

Aero Club of Hawaii, Honolulu, H. I.

Aero Club of the Philippines, Manila, P. I.

Aero Club of Southern California, Los Angeles, Cal.

Aero Club of Massachusetts, Boston, Mass.

American Flying Club of Virginia, Richmond, Va.

American Flying Club of Baltimore, Baltimore, Md.

Aviation Country Club of Detroit, Detroit, Michigan.

No one can examine the list of publications annexed to our former preliminary report (to which we now direct attention without reprinting it) without an appreciation of the vast importance of a comprehensive view of the problem in jurisprudence which is presented. This is peculiarly true in the United States on account of the division of power between the national government and the states.

Many persons interested in the practical development of flight through the air have no conception of the existence, at the threshold, of a constitutional problem arising from this division of power; they are impatient of our apparent inaction; and practically with one accord they appear to look to the national government for relief; they see other governments active with international conventions and national laws, and cannot and do not care to comprehend why anyone hesitates to believe that the powerful government of the United States has not every power which any other government exercises to promote and to regulate air flight.

These people ^ anxious for immediate results ^ are not impressed that there ought to be any embarrassment or any hesitation in determining what government should legislate or that it has complete and unlimited power, howsoever there may be doubt as to the precise terms of any law or as to the place where or the organization under which proper development or proper regulation should proceed and be maintained.

For example, the recent ordinance of the City of New York (approved February 23, 1921, No. 31, "An ordinance in relation to the operation of aircraft over the City of New York" ^), to secure the safety of its people against improper flying over the city, appears to concede without doubt or question the ple-

nary power of Congress to regulate local flight, by providing that it shall be in force until Congress legislates, " at which time the provisions of this ordinance shall automatically cease and become void ^"; thus apparently exhibiting impatience that Congress has not already acted, and providing that the life of the ordinance shall expire with Congressional action. This illustrates the mood of those who are impatient for commercial results and for commercial opportunities and who are unconcerned for constitutional problems, or constitutional limitations, and who are indifferent to the preservation of the reserved rights of the states or their people. They see that the problem of flight is peculiarly a problem of uniform law, and they naturally look to a unitary source for a uniform law. They cannot conceive that one national government and 48 state governments can legislate efficiently for the one subject matter, flight and its incidents. And when it comes to local ordinances regulating overhead flight, it can readily be perceived that any people who are so organized as to permit or to compel regulation of air flight by local ordinance, are headed for a confusion which will retard the development of the art. They reason that unity of fundamental control is obviously essential and that any nation which is so organized as to preclude this, or to admit of confusing interference of rule, cannot properly compete in the race of aeronautical development. They urge that the United States is a nation and should have the essential powers for the complete regulation of air flight, since such flight must develop internationally along national lines, and thus far has so developed. But having stated their point and made their argument apparently upon a base of economic truth, they concede and indeed insist as a matter of economic necessity and essential reality that the United States has the power, instead of merely urging that it should have the power. Constitutional problems and fundamental theories respecting an indestructible union of indestructible states, each operating within its own sphere of sovereignty, with the national government a government of delegated powers and all other powers reserved to the states or the people, make no appeal to those who are impatient to see the actual commercial development of air flight and who recognize, or think they recognize, its possibilities ; and who also recognize that the economic barriers now existing to such development are barriers whose foundation is law, or uncertainty of law, or absence of law.

Military or postal flight and the military or postal development of flight (at least theoretically) present no substantial problems of constitutional law; though there are wide differences of opinion respecting the problem of organization, illustrated by the many projects before Congress, concerning methods of organization, whether of a single and separate department, or several bureaus in different departments, or a single bureau under a single department.

But, though pending bills before Congress, existing and pending state legislation, and existing municipal ordinances, all essay to regulate civil flight, as if each legislative body had control of the subject with which it deals, there is, of course, in the field of jurisprudence, a fundamental and serious problem, arising out of the inherent nature of our dual organization of government into national and state, with the former a government of dele-

gated powers and the latter or the people, not only presumptively, but explicitly (10th amendment to U. S. Constitution) still possessed of all of the powers not delegated to the United States " by the Constitution nor prohibited by it to the states/

The Constitution neither expressly delegates to the United States powers over air flight as such nor prohibits them to the states; presumptively, therefore, they still reside either with the states or the people, but they do not reside with the United States nor with Congress.

If the United States or its Congress as a legislative body has the power, it must be because in a specific case air flight falls within the scope of some other power ; such powers are obviously the power to make treaties, to maintain international relations, to control interstate commerce, to raise revenue. In the exercise of any of these powers, or as incidents to their exercise, Congress might legislate more or less effectively, yet not without an extension of the power, or a judicial stretch of the imagination respecting the legitimate scope of the power, could complete control of air flight be exercised by the national government or any of its functionaries.

There are those who maintain that air flight is comprehended within the admiralty and maritime jurisdiction of the United States (Constitution ^ Art. III, sec. 2). Without discussion the Conference of Delegates from State and Local Bar Associations at Boston on September 2, 1919 ^ adopted a resolution to appoint a committee to investigate the subject further, but expressed the sense of the Conference that aeronautics and aerographj "should Ue within the admiralty jurisdiction of the United States and should be entertained accordingly. ^ ' But it would seem that the Constitution recognizes admiralty and maritime jurisdiction as something existing, not something to be created, and extends the judicM power to it. We are not unmindful that the judicial concept of what admiralty and maritime jurisdiction is has broadened in the United States to include all navigable waters. (The Propeller Qenessee Chief vs. Fitzhugh, 12 How. 443, 13 L. Ed. 1058) ; nor are we unmindful that Congress, besides its enumerated powers, has general power (Constitution, Art. I, sec. 8) to make all laws for carrying into execution "all other powers vested by this Constitution in the government of the United States, or in any department OT o&cer thereof ." We have seen a gradually expanding assertion or exercise by Congressional legislation of power over matters which are\* not expressly stated by the Constitution to be within the powers delegated to the United States, the most noteworthy of which, perhaps, is the regulation of the prescription of habit-forming drugs by medicaJ practitioners, under the guise of revenue legislation (Harrison pure food and drug law) ; and we have seen a corresponding willingness in the judicial authorities to recognize this tendency to expand as a constitutional exercise of power. So that no one, though he be sworn to uphold the Constitution (Art. VI) (including, we assume, its tenth amendment declaratory of the reservation of powers to the states or to the people), can with assurance predict the fate of an Act of Congress asserting or assuming that air flight is within the admiralty or maritime jurisdiction. Yet there are obvious arguments against it, which we need not repeat.

Those advocates of this view who base it upon the analogy of air navigation to ocean navigation, and of the atmosphere to the high seas, appear to overlook the current international recognition of sovereignty over the air above the land. The complete analogy of the air to the high seas having failed to receive international recognition, it would seem unlikely that such analogy could be successfully utilized to support a claim of admiralty or maritime jurisdiction over the air.

There would, too, be embarrassments in the recognition of such jurisdiction with its present limitations. Abundant illustrations of these limitations are collated in the Air Service Information Circular of February 26, 1921, pp. 15-18, and in Professor Bogerts' article on Problems in Aviation Law, pp. 34-35, both hereinafter mentioned. Hydroaeroplanes have, however, already, while afloat in water, or as capable of such flotation, been treated as within the maritime jurisdiction. (*Libel in S. D. of N. Y.*—verbally reported by Mayer, D. J., to chairman of this committee.) But aeroplanes have been judicially determined not to be. (*The Crawford Bros.*, No. 2, 216 Fed. R. 269. See 28 Harv. Law R. 200, 3 Cal. L. R. 143, 49 Am. L. R. 599.)

It appears to us that it would be undesirable for the development of the art of civil flight through the air to assume that jurisdiction over it rests within the constitutional extension of the judicial power of the United States to admiralty and maritime jurisdiction, with the constitutional general grant of power to Congress to make laws for carrying into execution the powers vested by the Constitution in the government of the United States or any of its departments or officers.

While we also recognize that as incidental to the power to lay taxes, or to regulate interstate or foreign commerce, or to pass laws to carry out the provisions of treaties, or in the exercise of other specific powers, Congress may legislate respecting air flight, we also recognize that without an unprecedented extension of the claims of the exercise of constitutional power, and unprecedented judicial recognition of an unprecedented claim, there can be no complete control of the subject matter by national legislation.

From the purely theoretical standpoint of the dual division of sovereign powers, there is no reason why the respective spheres should not be left within the present constitutional limitations, with attempted legislation, judicial decision, and actual experience to shape their ultimate configuration. But any such method, in our judgment, overlooks the immediate and practical demands of the situation.

So far as our investigations or information indicates, while there is a practical demand that Congress shall legislate promptly and comprehensively, there is no similar demand that the Constitution shall be so amended as to make such assertion of power unquestionably constitutional. It seems to us that this is because the economic demands are known only to those who are untrained along the lines of jurisprudence and constitutional law, and those who know these aspects of the problem are unaware of the economic demands.

## Notes on "Civil Aviation"

When representatives of this committee have conferred with those who are practically interested in the commercial development and have suggested the advisability of a constitutional amendment to put into effect a power which they have universally declared to be an economic necessity, those interested commercially have expressed a preference for the immediate exercise of the existing powers of Congress, with the possible result of unconstitutional legislation, over the more certain method of constitutional amendment to extend the powers of Congress. They seem to think that the necessities of the situation, eked out by specious arguments from such powers as Congress has, and by the claim of complete control in consequence, will practically be more efficacious than any effort to awake the people and their legislatures to that degree of enthusiasm which will carry through a constitutional amendment. We have found no disagreement among them that the exercise of the national power is imperative and that the conflicting exercise of state and local power will be destructive of the progress of the art and its commercial development.

It appears to us that neither the public nor the legal profession is alive to the demands of the situation. There is a prevalent tendency to regard the problem as primarily if not exclusively a military problem; whereas in fact it is primarily a commercial and economic problem, with grave incidental features which lie in the domain of jurisprudence and law, and demand the aid of jurists and lawyers. The necessity is the problem of those interested in the art; the method is a joint problem of these and the legal profession. And in our judgment the unquestionable method is a constitutional amendment conferring the power on Congress to legislate respecting aeronautics and aerography. Any other method will be the method of indirection, subterfuge and consequent conflict; and such indirect methods, though they appear to have been the methods of national growth in our body politic, are fraught with the danger, which is constantly manifest, of practical repeal by aggression and in an unconstitutional way of those constitutional limitations, which are our fundamental bill of rights—the main feature of that monument of our institutions, the Constitution.

We would emphasize, therefore, as the two fundamental juristic problems of aeronautics in this country :

Whether control should be exerted by the national government; and

Whether the power of such control should be conferred by constitutional amendment, or seized under the claim of the exercise of existing powers. The members of this committee having been severally sworn as a condition to admission to the practice of law, to support the Constitution of the United States, and having an affectionate regard for that instrument with its bill of rights, are unanimously of the opinion that if complete control over aeronautics is to be lodged in the national government for exercise to the extent which may from time to time be deemed expedient, the power should be conferred by constitutional amendment and should not be seized in the guise of the exercise of existing powers. Every exercise of existing powers which goes beyond the obvious or necessarily implicit extent of these powers is fraught not only

with the visible danger of attack on the ground of unconstitutionality and of invasion of the essential or reserved powers of the states ^ but with the more insidious danger of a further weakening of constitutional limitations deliberately incorporated in the bill of rights which is the very groundwork of the Constitution and its earlier amendments.

Since ^ so far as we are advised, it appears to be the unanimous judgment of those practically interested in the development of the art of flying, that the demands of progress require a uniform law operative throughout the country, and emanating from a single source of power; and that the national government is obviously this single source ; and that no uniform law, uniformly interpreted and uniformly administered, can be expected from the joint or similar action of one national legislature and the federal courts and of 48 state legislatures and the state courts; it necessarily follows that if this judgment is to be followed the national government should be vested with the power, to be exercised, as we have already said, from time to time as may be deemed expedient. It may appear expedient in the early stages of the art, and until otherwise demonstrated by experience, that many features of regulation of peculiarly local interest shall be suffered to be locally regulated; a method which finds analogy and illustration in the early history of the cautious exercise of the Congressional power to regulate interstate commerce.

#### The Practical Bearing of Law on Aeronautics.

To those who are unfamiliar with the problems inherent in the development of the art, it may seem that the problem of jurisdiction (which we have made paramount) and the problem of law are good enough things for lawyers to wrangle about, but that they have no practical bearing upon the success of the art or its commercial progress.

As the result of such information as has come to us from practical sources, we are impressed that at present the legal problem is the most serious one which exists. And the reason for this lies in the fact that while already the mechanical problems have been fairly well mastered for the early stages of an art which has been developed in these features with marvelous rapidity, the law has, in this country at least, been entirely undeveloped, and behind this fact lies substantially the whole problem of successful commercial development, as we shall later indicate.

But we shall pause to invite attention as an illustration of the extent of the mechanical development, to the six annual reports of the National Advisory Committee for Aeronautics (Washington, Government Printing Office, 1915-1920), and to the amazingly large bibliography of the subject from July 1, 1909, to December 31, 1916, containing 1493 pages, and lists of approximately 40,000 publications, compiled by Paul Brockett and issued from the Government Printing Office, 1921, pursuant to act of Congress, July 1, 1918. Of course the possibilities of military use received abundant verification during the war; while the current use for postal purposes and the few Unes already established for pleasure flight demonstrate larger possibilities.

Regular commercial flight has now been established between London and Paris, and has been much patronized by Americans travelling between the two cities. From time to time the newspapers have contained reports of other lines established over parts of the continent of Europe. So far as we are advised only a very few, if any, regular commercial lines, and these purely for pleasure flight, have been established in this country, and the backwardness of our commercial development has been the subject of unfavorable comment. Wherever we have inquired as to the cause of this we have been met with the same answer: the fault is with the law.

So that, so far is the law from being merely a matter of speculative amusement for theoretical lawyers, our inquiries have led us to believe that the law respecting aeronautics is the one fundamental vital problem of the actual commercial development of the art at the present time. And the reasons are wholly commercial and the result of hard headed though conservative business sense. The utter uncertainty of the law makes the risk incalculable, and accordingly dissuades the investment of capital. Without capital readily available, the adequate development of commercial flight is practically impossible. Capital may be and has been persuaded to embark in manufacturing, but capital must be induced to embark in purchase and operation. Closely linked with capital is insurance, for capital, except of the most speculative kind, cannot be induced without that distribution of risk which insurance permits. Yet insurance is dissuaded very largely because of the uncertainty and conflict of laws, whose application is beyond the power of prediction; actuarial acumen may calculate the risks of flight within some sort of limits from available experience, but no actuarial acumen can imagine the incidental risks of altogether uncertain law.

The insurance interests have been alert. In July, 1920, the National Aircraft Underwriters Association was formed with headquarters in New York, and we have been in communication with their representatives.

So far as we are advised, the embarrassments arising from the state of the law may be conveniently attributed to the following specific difficulties in law :

The uncertainty as to what the law is governing any particular datum.

The lack of any uniform law.

The conflict of laws.

The insufficiency of law.

The hazard of unregulated flight.

The hazard of undefined responsibility.

The hazard of personnel in unlicensed or unequipped or inadequately equipped pilots.

The hazard of deficient air worthiness of aircraft.

The bugaboo in the legal or supposed legal maxim, "Cujus est solum, ejtts est usqtLe ad coelum"

Together these make up a bunch of uncertainties and a bunch of embarrassments, which make the proper conduct of the business of air craft insurance extremely difficult if not impossible. New York has by statute authorized the formation of such companies and insurance against loss occasioned by and to aeroplanes (Laws 1919, ch. 391-393). As for the licensing of pilots, so far as we are advised, this has been done hitherto in this country (save in Massachusetts, Law 1913, ch. 663; 1919, ch. 306; Connecticut, Acts 1911, c. 86, Gen. Stats. 1918, c. 176, sees. 3107-3117, and Oregon, 1921, c. 45, where statutory provision for licensing is now made) by a private membership corporation of New York, the Aero-Club of America, which has thus far granted 6806 licenses :

4973 aviation  
764 hydroaeroplanes  
931 spherical balloons  
138 dirigibles

6806

Its licenses, we understand, have been recognized in international sport by reason of its affiliation with the Fédération Aéronautique Internationale, which it represents in the United States. This federation, founded in 1905, issues its "Statuts et Règlements Généraux." It has held numerous conferences in different cities of Europe and has affiliated clubs in 18 countries. But now the licensing of pilots has, since the international conventions on aeronautics (as a result of the work of the International Commission dealing with aerial navigation and appointed as a sub-commission of the Peace Conference), become a matter of serious international import. This fact, illustrated by the recent attitude (as appears in the newspapers) of the Canadian Government, under the terms of the international convention to which it is a party, in intimating a purpose and a duty to exclude fliers from the United States who are unlicensed under a law; a situation which, as we are advised, has been somewhat mitigated by a temporary arrangement, the necessity for which is a sufficient commentary alike upon the inadequacy and the rudimentary condition of our laws and our legal concepts concerning aeronautics.

We are advised also that the Air Board of Canada has signified a willingness, within its powers, to manifest a liberal spirit in the encouragement of international flight between the United States and Canada. But at the time of framing this report we have been unable to get full information of the actual present conditions.

The British

1. *Air Navigation Act(s)*,
2. *Air Navigation Regulations*, and
3. *Air Navigation Directions*

afford an example of the extent to which complete legal regulation has gone elsewhere, and are in striking contrast to our legal inactivity.

1. Air Navigation Act 1911, 1 and 2 Geo. V, c. 4;
2. Air Navigation Act 1913, 2 and 3 Geo. V, c. 22;

## Notes on "Civil Aviation"

3. Air Navigation Act 1919, 9 Geo. V, c. 3;
4. Air Navigation Act 1920, 10 and 11 Geo. V, c. 80;
5. Air Force (Constitution) Act 1917, 7 and 8 Geo. V, c. 51;
6. Air Navigation Regulations 1919, No. 625;
7. Air Navigation Directions 1, 1919.

In our first preliminary report to the Executive Committee (January 3, 1921) we mentioned that certain (sporadic and incomplete and inexhaustive) laws or ordinances had been enacted in the United States, which we now enumerate more definitely :

In Connecticut, to regulate operation, June 8, 1911 (now Gen. Stats. 1918, ch. 176, chs. 3107-3117).

In Massachusetts, to regulate operation, July 12, 1919 (Gen. Acts, ch. 306, superseding Act 1913, c. 663).

In Hawaii, to prohibit unlicensed operation. Laws 1917, Act 107.

In California, to prohibit use in hunting, 1919, ch. ZOO.

In Michigan, to prohibit use in hunting. Pub. Acts 1919, No. 82.

In Texas, to authorize construction, etc., corporations 1919, ch. 9.

In Washington, to provide for maintenance of facilities by local governments, 1919, c. 48.

In Wisconsin, to provide county stations for aircraft, 1919, c. 613.

In New York, 1919, chs. 391-393, to permit insurance.

In Los Angeles, Cal., local ordinances.

Newark, N. J local ordinances.

Atlantic City N. J local ordinances.

Nutley, N. J., local ordinances. and

Kissimmee, Fla., local ordinances.

Since that time our attention has been called to the ordinance of February 23, 1921, regulating flight over New York (City, and to the comprehensive law of Oregon, 1921, c. 46, for a board of aircraft examiners and the regulation of flying and registering of aviators.

In our said preliminary report we enumerated the bills and resolutions pending before Congress consisting of list of matters pending before Congress relating to aviation, not including matters relating to specific plants, specific inventions, particular projects and the like :

Senate: No's.

2093, Mr. New, July 31, 1919, to create a Department of Aeronautics, etc. Referred to Committee on Naval Affairs.

4478, Mr. Keyes, June 1, 1920, to create a Bureau of Aeronautics in the department of the navy. February 2, 1921, reported without amendment.

Joint resolution 56, October 21, 1919, to enable United States to participate in the work of the International Aircraft Standards Commission. Passed the Senate.

House of Representatives: No. 4409, Mr. Kahn, June 2, 1919, authorizing the President to make regulations, etc., covering participation by the United States in the work of the International Aircraft Standards Commission.

No. 7925. Mr. Curry (California), July 28, 1919, to establish a Department of Aeronautics, etc.

No. 9804, Mr. Curry (California), October 8, 1919, to create a Department of Aeronautics, etc.

No. 10108, Mr. Kahn, October 22, 1919, to establish an aeronautical experimental, development and engineering plant for the air service.

## Notes on "Civil Aviation"

No. 10252, Mr. Kahn, October 29, 1919, to provide for the assistance of service aviators in distress, etc.

No. 13803, Mr. Kahn, April 27, 1920, to make more effectual provision for the aerial defense of the United States, etc.

No. 12134, Mr. Hull (Iowa), January 29, 1920, to create a Department of Aeronautics, etc.

No. 14061, Mr. Kahn, May 13, 1920, to regulate air navigation within the United States and its dependencies, and between the United States or any of its dependencies or any foreign country or its dependencies.

No. 14137, Mr. Hicks, May 19, 1920, to create a Bureau of Aeronautics in the Department of Commerce, etc.

H. R. 1428, Mr. Tilson, for the protection of aircraft industry from unfair foreign competition.

Since that time the following have been introduced and are, so far as we are advised, still pending :

Senate 656, Mr. Keyes, to create a Bureau of Aeronautics in the Department of the Navy.

H. R. 16151, Mr. Curry, February 24, 1921, to create a Department of Aeronautics, defining the powers and duties of the secretary thereof, providing for the organization, disposition, and administration of a United States air force, and providing for the development of civil and commercial aviation, the regulation of air navigation and for other purposes.

H. R. 201, Mr. Kahn, April 11, 1921, to regulate air navigation within the United States and its dependencies, and between the United States and any of its dependencies and any foreign country or its dependencies.

H. R. 202, Mr. Kahn, April 11, 1921, to make more effectual provision for the aerial defense of the United States and to provide for the concentration of the national air strength.

H. R. 271, Mr. Hicks, April 11, 1921, to regulate air navigation within the United States and its dependencies, and between the United States or any of its dependencies and any foreign country or its dependencies.

H. R. 273, Mr. Hicks, April 11, 1921, to create a Bureau of Aeronautics in the department of the navy.

H. R. 281, Mr. Hicks, April 11, 1921, to create a Bureau of Aeronautics in the Department of Commerce, and providing for the organization and administration thereof.

H. R. 4395, Mr. Curry, April 19, 1921, to create a Department of Aeronautics, defining the powers and duties of the secretary thereof, providing for the organization, disposition and administration of a United States air force, and providing for the development of civil and commercial aviation, the regulation of air navigation, and for other purposes.

H. R. 5219, Mr. Hicks, April 26, 1921, to create a Bureau of Aeronautics in the Department of the Navy.

The practical problem of the form and extent of the necessary legislation involves so much technical detail and has received and is receiving so much discussion before Congressional committees and otherwise that we do not feel that it behooves either this committee or the American Bar Association to become the advocates or the framers of any specific bill or form.

This Committee's Function.

It seems to us that this committee's function may properly

be limited, for the present at least, to the gathering and reporting of appropriate information, and indicating in a very general way the fundamental problems of jurisprudence and of law. This we have endeavored to do, without suggesting the character of the legislation.

#### Private Ownership of the Air.

There is one prepossession which we have mentioned: the bugaboo in the legal or supposed legal maxim, "Cujus est solum, ejus est usque ad caelum" Since this maxim and its possible application offer one of the most substantial grounds for the apprehension of embarrassment in the adequate encouragement of commercial air flight, we think that it behooves jurists to consider the history and limitations of the maxim, to the end that its correct limitations may be well understood. And without undertaking to brief the subject we venture the suggestion that the proper fundamental limitations of the application of the maxim will possibly be found in the development and application as a just and proper corrective, of a less well-known principle, which was, however, it appears, applied as a matter of public and common right in the early history of the law of roads, in which the element of passage or going, or the journey was the controlling concept of right to which the private right of ownership adjacent to or even underlying the road was made subordinate in case of necessity. The right to go was (in the terms of this principle) deemed a right dominant over the right of adjacent ownership, and hence, if a highway was blocked, it was a part of the public right of which a traveller by the highway might avail himself as matter of individual right, to use the adjoining private property even if necessary to the extent of trampling down the growing crop, in order to persist in the journey; and so, in a legal sense, the road is the journey, and not merely a fixed location within definite boundaries. And so ^ it was

recognized as a principle of English law that when the journey required, the private right was subordinate to the common right (see the thought in Norman French, Rollers Abridgement, p. 392, A. D. 1668, quoting from case in Trinity Term 10 Charles I; Year Book 2 Edw. IV, p. 9; Viner's Abridgement (1791), vol. 4, p. 503; 2 Sheppard's Abridgement (1676), p. 206). We suggest that in this principle, if further investigated, lies perhaps, the existing and recognized, but little utilized ground, upon which the private right may, be limited without violence to the existing law of private property. In making the suggestion we are not unaware that if the analogy of the law of roads is followed, there would be the troublesome assumption (Bacon's Abridgement-Highways) that outside of the four ancient "highways" of England {quattuor chemini ^ Watling Strete, Ikenilde Strete, Fosse, Erming Strete), the other roads {chemini minor es ^ county roads ^ and viae vicinales ^ local roads) are supposed to have been made through private persons' grounds on writ of ad quod damnum (Bacon's Abridgement ^ Title Highways). But we wish to direct the attention of the profession and of legislators to the possible channels in which will be found material for combating the contention that in its practical application the private landowner has it within his legal power, through the operation of the maxim "Cujus est solum, ejus est usque ad coelum" to embarrass if not to kill the reasonable development of

flight for commercial if not for military purposes, though we confess that the maxim itself does not in terms at least admit of the invasion of private right in time of peace for military reasons. We recur below to this same subject in discussing a recent publication.

While our first preliminary report above mentioned shows an extensive bibliography of publications upon the law of the air, two notable reviews of the legal questions involved have since

appeared: "Problems in Aviation Law" in the Cornell Law Quarterly (vol. VI, p. 271), by George Gleason Bogert, professor of law in the Cornell University College of Law and a member of this committee and of the Committee on Aviation of the Conference of Commissioners of Uniform State Laws; and the Air Service Information Circular (vol. II, No. 181, February 26, 1921) on aviation, published by the Chief of Air Service, Washington, D. C., containing "Legal Questions Affecting Federal Control of the Air," consisting of : " Discussion of Legal Questions Affecting Federal Control of the Air " and Briefs on " Admiralty and Maritime Jurisdiction," " Limitation of Judicial Power of United States." " Force and Effect of Treaties as the Law of the Land/" " Taking Property for Public Use/" " The Use of the Interstate Commerce Provision of the Constitution/" and "Bibliography of Legal Aeronautics/" (Washington, Government Printing Office, 1921.) These two discussions are probably the most exhaustive, as they are the latest treatment of the legal and constitutional problems involved in the effective regulation of aeronautics in the United States. The Travelers Insurance Company and the Travelers Indemnity Company of Hartford, Conn., have jointly issued a monograph entitled " Airplanes and Safety," which emphasizes the necessity for uniform and stringent laws governing the licensing of pilots, the construction and use of aircraft, and the conduct of air-navigation generally.

#### The Air Service Information Circular and its Briefs

In the "Air Service Information Circular" Major Elza C. Johnson, of the United States Army, legal adviser to the air service, in discussing the legal questions recognizes that no more can be done by the federal government than the Constitution especially delegates (a proposition which, though undoubtedly true from the standpoint of any student of constitutional law, appears to have received scant consideration or scant respect from those who are impatient for results) . Major Johnson closes his discussion with a recommendation, as we have already done above, for a constitutional amendment granting control to the national government. And he bases his recommendation not only upon his recognition of the primary principle of constitutional law above mentioned, but upon the proposition of practical expediency that now the people are willing to grant the power, but later the claims of property owners may become so prominent that every power will be invoked to make users of the air pay tribute for the privilege. His closing paragraph and his specific recommendation for a constitutional amendment are as follows :

" It would appear, therefore, wise to study well the rights of the individual, who, after all, is the sovereign power, and, knowing these rights, exercise an effort to establish by popular grant, to the state and to the federal government, the right to control

the traffic of the air.

" In my opinion this can be done by bringing to the foreground the issue : the use of the air for transportation of mail, freight, and passengers, and the need of universal understanding as to codes and signals and landing field regulations for the safety of the operators, the passengers, and the owners of the earth.

It would, in my opinion, be disastrous to raise the question of the value of private ownership at all, either in the courts or in a campaign for constitutional grants. The grant should, I believe, be by constitutional amendment in something like the following:

" \* Congress shall have power to provide for regulating the use for air travel of all air space over the earth and within the borders of the United States and its territories, and all countries over which the United States has jurisdiction, including the 3-mile limit on the sea; and to provide for regulations of landing fields, a fixed code of signals, and signs for the navigation of the air and the landing of aircraft. Congress shall have further power to provide for the enforcement of said regulations and establish air admiralty courts, or grant to the existing courts the jurisdiction of the admiralty law of the air, which jurisdiction shall include the punishment of all crimes committed on aircraft, whether in the air or in port at landing field, and over all civil cases over which admiralty courts now, or hereafter, generally have jurisdiction, which have their source in air travel.' "

In our judgment, while we believe that recourse to a constitutional amendment is desirable, the greatest care should be taken to make it amply comprehensive. It should be remembered that the art is in its infancy and its incidents as we now know them may soon become antiquated; therefore the constitutional power should not be so phrased as to prove restrictive instead of adequate in its operation. A conscientious endeavor should be made to adapt any constitutional amendment to the possibilities of the art.

The briefs annexed to the Air Service Information Circular establish or tend to establish the following propositions, and they are valuable collations of the pertinent authorities (the matter in brackets being the observations of this committee) :

Admiralty and maritime jurisdiction, though granted in this broad phrase, is subject to many limitations, adjudged by the courts in defining what such jurisdiction includes.

[We are prompted to suggest that these limitations make it desirable that the power to be exercised over aeronautics by the federal government ought, possibly, not to be similarly limited, and that the analogy of admiralty and maritime jurisdiction should not be too closely followed.]

The judicial power of the United States under the Constitution is so limited that cases must arise either from a constitutional right, or from a law of the United States or a treaty, or from a controversy involving land under certain grants.

[This suggests the advisability of carefully considering the appropriate judicial power when formulating any amendment to the Constitution.]

Federal control over the air may be extended in enforcement of treaties relating to air navigation.

[This suggests the reflection that treaties could scarcely be expected so to cover the entire subject matter that complete control of air regulation would be a necessary incident of their enforcement.]

The doctrine of private ownership of the space above the earth and the mass under the earth gives to the private owner of land an unlimited ceiling for his domain ^ and the conversion of any of that space for air travel can only be effected by the exercise of eminent domain ^ with adequate compensation.

[There is no more serious embarrassment to the development of air navigation than the acceptance of this doctrine as thus stated. We are not satisfied that it correctly states the actual condition of the law. We have already called attention to the modifying principle, which, in early times, the English courts seem to have found no difficulty in applying to the law of the right of travel by highway. We shall later mention Professor Bogert's observations upon the limited extent to which the commonly accepted maxim has been applied by the courts in litigation. We feel that this crucial proposition deserves the most careful consideration, and that the right of private property in the air so as to effect exclusive ownership, to the extent of making the flier a trespasser in flight, and to require the exercise of eminent domain to establish air routes should not be so readily conceded. It seems to us that it should rather be incumbent upon the private owner to demonstrate the extent of private ownership, and that, since the convenient maxim which we have already quoted h ^ as never been applied to mere flight at ^reat heights, it should be viewed as an unprecedented question involving rights which have never been asserted or enjoyed as an incident of such ownership; and there is no substantial reason for utilizing the maxim to extend private rights, never heretofore actually enjoyed, to the exclusion of the common right. We submit that it should be the law that it is not an invasion of private right to utilize the air over land for passage by flight, if such flight is accomplished without jeopardizing any right heretofore usually beneficially enjoyed in the ownership of land; and that the rights of ownership are those benefits which have hitherto been commonly recognized as incident to such ownership. Yfe feel that this committee can do no more beneficial service to the public and the common interests of all of our people than to challenge the proposition that it is an invasion of the rights of private ownership of property to utilize air for purposes of flight

Incidentally, we mention that Mr. Spaight in his book, " Aircraft in Peace and the Law" (p. 54), attributes this maxim, which threatens such dread results to the law and art of air navigation, to a note of Accursius a Glossator at Paris in 1519.

yf ^ feel that the essential interests of air flight demand that jurists and lawyers should not be led into any supine concession that our law already vests in private ownership the private right to exclude fliers from the dr. It scarcely behooves us at this time

to prepare a brief upon this proposition, citing the limitations of actual enjoyment hitherto of private ownership as illustrated by various interferences with rights in the air. But we not only direct attention to the ancient principle in the law of roads which we have mentioned above as a limitation of the owners' right, but also to the limitation of the ownership below the surface implied in the ancient doctrine of the ownership of minerals under the surface (27 Cyc. 541), as well as in the modern doctrine of the ownership of a vein under another man's land through ownership of its apex (Costigan on Mining Law, p. 138) and the public easement of the use of navigable stream though the landowner owns the soil beneath them.

In this connection we also call attention to the fact that the Statute of Winchester, A. D. 1285 (Stubbs's Select Charters, p. 469), required the abatement of dykes, trees and bushes within two hundred feet on each side of highways leading from one market town to another, and prescribed that the lord who would not so abate should be answerable for the felony of robbery if it should be done by persons lurking behind the same; and if murder should be caused by them the lord should make a fine at the King's pleasure, thus imposing a duty upon the owner of the adjacent soil in support of the safety of the highway. The recent rent legislation in New York (whose constitutionality has been sustained), in the exercise of the police power in the regulation of excessive rents may also afford an analogy under which the right of the private owner may be subordinated to the public interest. Other illustrations might also be suggested, but we do not multiply them.]

The modern development of the power of Congress to regulate commerce has been brought into question as encroaching upon the powers of the state and individual rights.

[We have become familiar with extension of the regulations by Congressional authority into fields commonly governed by state law, under the application of the principle of non-interference with interstate commerce by casting an undue burden upon it through forcing it to contribute to the cost of intra-state traffic by means of the state regulation of rates. The controversial possibilities of this contention have received recent illustration, especially in the pending controversy over the conflict between the orders of the Interstate Commerce Commission permitting a three-cent per mile fare in interstate traffic and the law of New York requiring a two-cent rate, applied to intrastate traffic between New York City and Buffalo.

The extent to which the regulation of intrastate air traffic might be effected by national authority under the guise of protecting interstate flight is matter for argument, but the controversies which it would certainly provoke bode no good to the development of the art. They but point the more forcefully the desirability of avoiding such conflict through extending the national authority by constitutional amendment.]

The brief which we are considering points out the similarity of air navigation to river navigation and says :

The private ownership of the bed of the stream will be similar to the private ownership of the space above the land. The easement to the

public for navigation and commerce on rivers is very much like the easement that must be eventually granted to the government for the navigation of the air. It will be the use of private property for public travel.

[We do not think that it should be so readily conceded that such an easement must lie in grant, or that the use for public travel is necessarily an invasion of private right. (The laws of Edward the Confessor confirmed by William the Conqueror under the title *De Pace Regis* in taking the waters of rivers under the protection of "The King's Peace" provided for the destruction of obstructions in such waters — Lombard, *Archainomia sive de prisci Anglorum legibus libri*, 1568.) We cannot too often urge that the extent of private ownership in the air space so as to embarrass public travel through the air is itself a new question in jurisprudence not to be passed over by concession or properly solved by indifferently yielding to claims of private ownership which are not a necessary consequence of principles already recognized in the law of private property.]

The publication which we have been discussing contains a valuable bibliography of legal aeronautics, though it does not discuss the views of the writers. With slight exceptions it confines its discussions to Constitution, statutes, and judicial decisions in the United States.

[We submit that in this new branch of jurisprudence those affected by the subject matter should not be contented to follow in the groove of judicial precedent without that broadness of vision which comes from the study of the fundamental concepts of right as expressed by philosophical writers and thinkers, both of our own and of other nations.

The specific questions of individual right and of particular circumstances which these publications suggest are too numerous for discussion in a report of this character, but illustrations of their scope are afforded by some of the titles, for instance: "Births, deaths and marriages in aircraft during flight"; "Ex-territoriality in aerial locomotion"; "Force Majeure and its effects on civil obligations connected with aeronautics"; "Ownership of the ground and freedom of the atmosphere"; "La loi des contrées désertées et des pointes inaccessibles"; "L'aviation sur les eaux territoriales"; "Avions sanitaires et conventions de la croix-rouge"; "L'air: un nouveau domaine juridique"; "La responsabilità penale dei reati commessi nello spazio aereo e la giurisdizione internazionale"; "L'assurance sur la vie et l'aviation"; "Liability for accidents in aerial navigation"; "Air Sovereignty"; "Mortgages and liens upon aircraft"; "The right of property in the air"; "Domicile in connection with aircraft damage"; "Applicability of rules of maritime law to the air space"; "Delicts and quasi-delicts in the air"; "Guarantees of capacity of aviators"; "Guarantees of capacity of constructors"; "Ownership of the ground and the freedom of the atmosphere"; "the right of circulation and of landing"; "Paper on insurance"; "Licenses and industrial property"; "Policing of Aerodromes and aerial meetings"; "Rendering of assistance to aircraft."

The enumeration of these selected titles, which are only a few in the bibliography of the subject will serve to illustrate to the

average lawyer or judge who has given no consideration to the matter, what a tremendous field of jurisprudence is opened by these air problems ^ and how imperative it is that they should be solved with a breadth of vision which will not suffer the development of the art to be hampered within the petty meshes of a misconceived slavery to the analogies of judicial precedents, which were devised without any concept of their application in this new sphere.

Altogether this Air Service Information Circular upon legal questions affecting federal control of the air is doubtless the most exhaustive contribution to the subject from the standpoint of federal law, though it appears to concede without challenge, discussion, or doubt, the principle of absolute and exclusive private property in the atmospheric space ; a proposition which in our opinion should not be supinely yielded, but in the common interest should be challenged, discussed, debated, and yielded only to the extent that the private owner may demonstrate according to the accepted and tested principles of jurisprudence that the claim is an essential part of his right of private property. We deem this unchallenged concession to be the most dangerous element which can threaten the most useful development of air navigation, and advise that it should be combated upon every reasonable ground of jurisprudence, history, legal principle and common right, without, however, impairing the right of private property as it has developed in actual recognized beneficial enjoyment.]

The other of the two recent reviews of the law of aeronautics which we have mentioned is that of Professor Bogert, a member of this committee, upon "Problems in Aviation Law."\*\* He points out that except for legislation in two states it cannot be said with positiveness whether an aviator is a trespasser against the owner of the underlying land, under what circumstances an aviator is liable for damage from a falling machine, or where the constitutional authority of regulation lies. He says : " Nor is there any general law, except the law of self-preservation, which forbids an inexperienced and incompetent pilot from flying anywhere in a defective machine/^ He notes that ^' the more important European countries have adopted air codes, but America lags behind. ^ ^ He also expresses his opinion that the expedient of local ordinances, forced by the inactivity of states and nation, is undesirable and is productive of much confusion, and practically impossible of enforcement. In respect to the necessary statute law, he says :

" If these statutes are to be harmonious, complete, scientific and well-drafted, the several legislatures and the bar generally must be informed of the experience of other countries, must have clearly in mind the fundamental legal problems involved in aerial navigation, and must study carefully the constitutional limitations of the state and federal legislatures."

He states that the development of peace time international air law was long retarded by a conflict of views among jurists upon the fundamental question of the relation of a state to the space over its territory, but the view which has definitely prevailed is that of territorial sovereignty over the air. The guiding

principles of an International Air Navigation Convention were established by the commission to study air questions, instituted in March, 1919, by a decision of the Supreme Council of the Paris Peace Conference. Upon this commission the United States had two representatives. These principles included the recognition of sovereignty over the air above territories and territorial waters, with freedom of international navigation, so far as consistent with security of the state, without discrimination on the ground of nationality; the nationality and registration of aircraft; regulations for safety, including certificates of airworthiness, licenses for personnel, international recognition, rules of the air for signals, lights and the prevention of collision, rules for landing and ground rules. The convention, with reservations, was signed in behalf of the United States on May 31, 1920, but has not been ratified by the Senate, hence it is still not binding on the United States. The convention provides for an International Commission for Air Navigation and contains specific provisions concerning marking aircraft, certificates of airworthiness, log books, rules as to lights, signals and methods of flight, qualifications of pilots, aeronautic maps and ground marking, the collection and dissemination of meteorological information, and customs. The convention links the commission with the League of Nations. Such treaties of peace as have been effected in European nations have contained clauses relating to the international law of aviation, which is thus on the point of assuming definite form. The Convention contains no provision granting extraterritorial jurisdiction, but allows the rights and duties of aviators to be controlled by the law of the state over which they are flying and leaves each such state to determine for itself the question of liability for injuries to person or property by aircraft; it concerns flying by foreign and not by domestic craft. Professor Bogert points out the effect of Article 5 of the Convention is prohibiting flight within a state of craft not possessing the nationality of a contracting state, except by a special and temporary authorization. (It is, we understand, by reason of this clause, that difficulty has recently arisen respecting flight by American aviators in Canada. No more forcible illustration than this is required of the difference between air navigation and navigation of the high seas. Not only does the Convention recognize sovereignty of the air, but it thus provides for the necessary exclusion from flight, save by special and temporary authorization, of all aircraft not possessing the nationality of a contracting state.) Mr. Bogert shows that the British Air Navigation Act of 1920 ratifies the International Air Navigation Convention of 1919 and provides in detail various measures for carrying it into effect. It denies any right of action for trespass or nuisance on account of reasonable flight, but allows recovery from the owner for actual damage, without proof of negligence or intent or other cause of action, except in case of contributory negligence; the owner to have a right of action over against another wrongdoer causing the damage, with the right to cause him to be brought into the initial action; the owner to be exonerated and the liability borne instead by anyone hiring the craft for over fourteen days. The act imposes severe penalties for unnecessarily dangerous flight, and applies the law of wreck and salvage to aircraft over or on the sea or tidal waters; provision is made for giving security for patent infringement. Provisions of other laws are described by Professor Bogert, including the Indian, Canadian, French, German, Dutch, Swiss, Serbian and

Italian laws. He speaks of the early interest in the subject of the Honorable Simeon E. Baldwin, of Connecticut, a former president of this Association, and the resolution introduced by him, which was referred to the Committee on Jurisprudence and Law Reform in 1911, and unfavorably reported by it because it was not a subject of general interest about which there could be no reasonable doubt as to the necessity for legislation. The report of the committee said :

"The navigation of the air has not become so general as to. permit of. uniform legislation so as to fix with legal certainty rules for its government."

The committee, however, expressed the forward-looking opinion that the aviator should not be held to any greater liability than the modern common carrier, and added :

" Unlen liability springs out of some contract, or arises out of some tort, the carrier should not be mulcted in damages, whether the carrier be by land, sea, or air."

Gfovernor Baldwin then turned to the legislature of his own state, Connecticut, and on his recommendation the Connecticut Act of 1911 was passed, the first measure regulating aviation adopted in America. This act provided for registration, licensing and marking, and adopted the rule of absolute responsibility for damage by an aeronaut and his eniployer. Professor Bogert states the leading characteristics of the subsequent acts of Massachusetts in 1913 and 1919, Hawaii 1917, California 1919, Michigan 1919, New York 1919, Texas 1919, Washington 1919, Wisconsin 1919. These laws are diverse and fragmentary. It is curious to note thait in the absence of comprehensive law the unofficial regulation of aviation has for some years past been a function exercised by the Aero Club of America, a membership corporation of New York. Professor Bogert shows that hydro-aeroplanes have been classed as vessels by the Department of Commerce and so subjected to the federal water navigation laws. (Opinionâ€ Solicitor, Department of ConMuerce, February 17, 1914; Order, Assistant Secretary of Treasury Peters, Pebnl-ary 21, 1916.) We are advised that a libel has been filed in the Southern District of New York against a hydroaeroplane and process issued thereon. Tlie National Advisory Committee for Aeronautics (instituted under the Naval Appropriation Act of 1915; Act of Congress March 3, 1915; Public No. 273) has expressed the view that state legislation should follow and be in accordance with national legislation, and that consequently the states should withhold independent action. This, oi course, is essentially wise, if any uniformity is to be expected in the absence of a federal constitutional amendment. Professor Bogert analyzes the bills pending before Congress, and states their distinctive features ; that introduced by Senator Sherman recognizee the ownership of the air space by the private landowner, and would authorize him to forbid flight under penalty of damages with the right to an injunction ; it is characteristic of many, if not all of these bills, that they assume the power of Congress over flight. One or two of the bills specifically declare the navigable air and navigation of the air to be within the admiralty jurisdiction of the federal courts. We submit that Congress can-

not create a power by declaring it to exist, and behind any declaration of Congress lie the limitations of the Constitution.

Mr. Bogert observes : It will thus be readily seen that there is no uniformity in state legislation in the United States and that such federal bills as have been presented proceed upon radically different theories as to the basis for federal legislation and the extent to which it may go.

We would add that the time has certainly come when it can no longer be said, in the language of the Committee of Jurisprudence and Law Reform in 1911, that this is not a subject of general interest, or about which there can be any doubt as to the necessity for legislation. The present uncertainty and confusion can lead to but one result, the discouragement and retardation of the development of the great possibilities in commercial air flight.

Professor Bogert's article treats in detail of the following as principal problems : Sovereignty over air space ; private property in air space ; basis of the aviator's liability for damage ; regulations to protect the public; and whether legislation shall be state or federal or both. Upon the question of private property over air space, he shows that in practical adjudication in the courts the application of the accepted maxim of the extent of ownership to the space not immediately adjacent to the soil and the structures thereon is wanting. In treating the question of state or federal legislation he considers and rejects admiralty jurisdiction as including aviation law, truthfully saying :

Nor can Congress by calling aviation law "admiralty" make it so. If the federal legislature could by torturing the words of the federal constitution into wholly unnatural meanings fix the bounds of federal control, there would be no limit to the powers of our national government.

He considers the contention that the war power confers on the federal government exclusive authority over civil aviation, a theory entertained by some members of Congress, but adds :

The same argument would apply equally well to other industries necessary to the support of an army, as, for example, the business of manufacturing and growing food. There would be no limit to the war power if it were construed to have this effect.

In considering whether the power to make treaties grants exclusive authority to the federal government to control aviation (another constitutional power which some advocates assert could be made the basis of exclusive federal control), he points out that you must first have your treaty, and then, so far as existing conventions go, they concern themselves with foreign aviators and international aviation and are not exhaustive. He says :

But the conditions upon which interstate and intrastate flight are to be allowed may well be entirely different from those governing international aviation, so long as certain discriminations against foreign aviators are avoided.

In considering the interstate commerce clause as authority for federal control, he expresses the view that thereunder a federal act regulating international and interstate aviation only would undoubtedly be constitutional.

## Notes on "Civil Aviation"

He points to the obvious advantages of a uniform state aviation law. He concludes that the regulation of interstate and international aviation by the federal government and the control of intrastate aerial navigation by the states (preferably through a uniform act) are the only constitutional methods of action at present. He says :

The uniform state bill might well include .... a statement of the landowner's property in the space above his land, subject to an easement of passage ....

He indicates that the power to regulate intrastate flight as an incident of interstate flight is a principle which should be sparingly applied, adding :

Liberally construed, such a doctrine means the destruction of all state rights.

He concludes :

Perhaps an all-powerful national air board and an all-inclusive national air code would be a desideratum if we were starting de novo, but under our peculiar dual form of government, with a national government of delegated powers, it is difficult to see how such results can be accomplished without ignoring the federal constitution.

In the conclusions of Professor Bogert as above recited the other members of this committee concur, but they serve to show, in our opinion, the desirability of an adequate amendment to the federal constitution conferring more delegated power, rather than either to confuse the subject and embarrass the art by legislation of the character which he deems constitutional, or to stretch the constitutional powers to grasp excessive authority in disregard of the essential limitations in the explicit terms of the Constitution itself.

President Harding's Message on Aeronautics and Its Accompanying Bill.

The subject of aeronautics was called to the attention of Congress in a special message of President Harding on April 19, 1921, transmitting a special report of the National Advisory Committee for Aeronautics prepared at his request and dealing with federal regulation of air navigation, air routes to cover the whole United States, and cooperation among the various departments of the government concerned with aviation. He approved the committee's statement of general considerations on a national aviation policy, and its recommendations for legislative action. This report seems to conceive no power in the state governments. It states :

" It is a pressing duty of the federal government to regulate air navigation; otherwise independent and conflicting legislation by the various states will be enacted and hamper the development of aviation."

While we are in entire accord with the view that independent and conflicting state legislation will hamper the development of

aviation, we see in this no constitutional excuse for assuming unconstitutional powers or for making unconstitutional use of existing powers. In our judgment it points to the necessity of constitutional amendment.

In harmony with its tenet, the report recommends the adoption of a bill which it appends, whose title appears to be indicative of no doubt in the minds of its sponsors of the plenary power of the federal government. It is entitled, " A bill to regulate air navigation within the United States and its dependencies, and between the United States and any of its dependencies and any foreign country or its dependencies."\* We have italicized the word " within" to indicate the unlimited scope of the bill. The bill proposes the formulation of rules and regulations by the commissioner of air navigation, for whom it provides, and their approval by the Secretary of Commerce, and makes them binding and enforceable from the date of promulgation. It apparently contemplates the most complete and exclusive control within the United States of the entire subject of air navigation, including aircraft, personnel, management ^ airdromes, landing fields, aerial routes. It prohibits the use or operation of aircraft within the United States without a license from the commissioner of air navigation (subject to certain exemption by treaty or convention) ; it restricts the ownership of aircraft, provides for annual licenses, and gives inquisitorial powers to the commissioner. It prohibits the operation of airdromes except under similar license and similarly restricts the ownership of airdromes. It authorizes the commissioner to fix the license fees subject to the approval of the Secretary of Commerce (thus, we assume, avoiding the contention that this can be justified as tax legislation) ; it imposes severe penalties for violation and confers jurisdiction upon the federal courts. It declares such portions of the air as are navigable by aircraft and all aircraft navigating the air to be within the admiralty jurisdiction of the federal courts (thus apparently claiming by Congressional action the power to establish a jurisdiction not conferred by the Constitution, by declaring the subject matter to be within a jurisdiction which was constitutionally conferred). It confers jurisdiction upon the district courts, of all cases involving air navigation and aircraft ; it saves to suitors a common law remedy where the common law is competent to give it (not, however, otherwise indicating where or in what courts the common law remedy is to be enforced). It extends the maritime law and laws relating to watercraft and water navigation to aircraft and air navigation so far as applicable (thus creating a fruitful field for controversial litigation and a degree of legal uncertainty until after an event), and except (among other exceptions ) as modified by the rules and regulations (thus apparently conferring or attempting to confer upon an administrative officer the power to modify a law) . It contemplates its own partial invalidity by saving the parts not held to be invalid.

It recognizes the continued existence of the states by authorizing the Commissioner of Air Navigation to cooperate with the various states, cities and municipalities for the purpose of setting aside and establishing airdromes and landing fields to be used in common by federal, state, municipal, commercial, and private aircraft, but under the rules and regulations to be pro-

mulgated by the commissioner.

While the members of this committee share the common view that the best interests of aeronautics demand that the power of the federal government shall be extended (but by constitutional amendment) to this subject matter, they do not regard the existence of the subject matter as sufficient excuse for ignoring either the Constitution or the states; nor do they consider that a new subject matter is within a constitutional category because it suits somebody to put it there. The bill itself tacitly acknowledges that the subject matter is not within the admiralty jurisdiction conferred by the Constitution when it naively provides that the maritime law shall be held to govern so far as applicable and except as modified (among other methods) by the rules and regulations promulgated by the Secretary of Commerce.

The Constitution says: "The judicial power shall extend .... to all cases of admiralty and maritime jurisdiction ^" (Art. III, s. 2). The bill declares that navigable air and aircraft navigating the air are within the admiralty jurisdiction of the federal courts, but that maritime law shall be held to govern aircraft and air navigation only in so far as applicable thereto and as not modified (among other things) by the Secretary of Commerce. This provokes the inquiry whether it does not attempt to impair the constitutional judicial power by grasping the subject matter as vnthin the category, and then m ^ ing the law of the category in part inapplicable.

It does not seem to us that these problems of fundamental constitutional importance should be viewed with indifference either by the members of the American Bar Association or the public. The interests of aeronautics demand adequate legislation, but they do not demand the ignoring of constitutional limitations, nor the impairment, except by proper constitutional amendment, of the powers of the states.

We have thus analyzed this bill (which also prospectively contemplates that it may be utilized to enforce a treaty or convention, not yet entered into) because it is advocated by the National Advisory Committee for Aeronautics, and is approved by the President in a special message of transmission to Congress. Other bills are pending, but this one is selected for this analysis and cominent because it forcibly illustrates the constitutional problems involved, and has the distinction mentioned. It seems to us that it cannot without inevitable litigation be deemed of sufficient constitutional validity to promote substantially the art which it is designed to foster, by removing the uncertainties of law which cause capital and insurance to hesitate. It cannot be a very substantial advance to remove a controverted subject from the domain of silent uncertainty to the domain of constitutional uncertainty, with the general proviso that all valid parts of a law shall stand, though its invalid parts disappear, that maritime laws shall govern where applicable except as modified by tlle Secretary of Commerce, and that common law remedies shall be saved where the common law is competent to give a remedy. The rules and regulations may tend to safety of navigation when observed, but the law itself suggests uncertainty of the most fundamental character.

## Notes on "Civil Aviation"

It is scarcely to be hoped that states which have already enacted laws and offenders and litigants will acquiesce in the view that the interests of the art demand that constitutional objections shall be smothered, or that the unconstitutional features of the bill will not be emphasized in litigation, though we are not unmindful that when, in the throes of the revolutionary war, the Continental Congress chartered the National Bank of North America as a financial aid, and its power was assailed, the legislature of New York generously also chartered the same organization and gave it for a time the monopoly of the banking privilege in New York (N. Y. Laws 1782, c. 35) ; nor that when Congress enacted the Interstate Commerce Act the state of Virginia substantially reenacted its appropriate provisions as applicable to intrastate traffic (Laws of Va. 1902-3-4, p. 968, c. 3; Commonwealth vs. Norfolk & W. R. R. Co., 111 Va. 59, 68 S. E. B. 351).

These examples afford a suggestion that the unconstitutional shreds of the approved bill, if enacted and if an unconstitutional grasp of power and invasion of state rights, might be supplemented by state legislation making its main purpose of properly regulating aeronautics by law, effectual.

The administrative questions, whose conflicting aspects are illustrated by the bills and resolutions now before Congress, are matters chiefly of internal governmental organization upon which we do not comment, though it is contended by the advocates of different views that they respectively are of vital importance. The accepted terminology of the subject is, we think, a matter which we should bring to the attention of the Executive Committee, since we are admonished that even the name of our committee is in the light of this terminology unnecessarily and even unwisely restricted. We are styled the Committee on the

Law of Aviation, whereas a more comprehensive title would indicate a wider duty. The law is the law of aeronautics, aviation forming but a limited branch, though we assume that the incident of aerography is implicitly embraced within the term aeronautics.

The terminology of which we are advised is as follows :

Aeronautics, "General term covering whole Science and art of aerial locomotion.

I. Aerostation "lighter than air.

1. Aerostat "balloon.

(A) Free:

(a) Passenger.

(b) Pilot, or soimding.

(c) Propaganda.

(B) Captive:

(a) Spherical, or ovoid.

## Notes on "Civil Aviation"

(b) itite, "sausage," "drachen," "saucisc," or other

tfpe observation balloon.

2. Aeronat-\*a dirigible balloon; an airship.

(A) Rigid.

(B) Semirigid.

(C) Nonrigid.

II. Aviationâ€" gasless, heavier than air. All these kinds of apparati are known as aeronefs:

1. Airplanes, either tractor or pusher, land or water.

(A) Monoplane.

(B) Biplane.

(C) Triplane.

(D) Quadroplane, etc.

2. Omithopter â€" a beating-wing machine. None of this t3 ^ e has to date been successful at flight.

3. Helicopterâ€" a direct-lift machine. Only successful experimen- tally as yet.

4. Kites.

5. Gliders.

The Committeeb's Collection op Pbbtinknt MateriajL

The committee has collected much printed matter which it will transmit when and if directed by tiie Executive Committee with a copy of this report for deposit with the custodian of the Association's books (By-Law V).

The committee deems the preservation of this material by the Association as a part of the historical literature of the subject desirable. This material includes newspaper clippings of current interest.

Because of its especial interest to Americans, we invite attention to the form of the Air Board Act of Canada â€" 9-10 Geo V, Ch. II â€" June 6, 1919, the Air Regulations, 1920, issued there- under and in effect January 17, 1920, together wiili the explana- tory description of the Air Administration, approved by the Chairman of the Air Board and published in Canadian news- papers in December, 1919.

The Hydrographic OfIBce of the United States under the

authority of the Secretary of the Navy has begun a monthly publication entitled " Notice to Aviators,\*\* the first number appearing under date November 1, 1920. In the April, 1921, number, it is announced that certain designated customs air ports have been established in Canada for planes from the United States, and that the Canadian Air Regulations have been modified to prohibit " stunts " in civil flying (except when a pilot is alone), in order to prevent accidents and to induce a realization that civil flying does not involve or require the taking of risks.

Since January 1, 1920, the Federation Aéro Nautique Internationale (founded in 1905) has published a quarterly bulletin of interest to aviators.

In *Boyd vs. United States*, 116 U. S. 635, the Supreme Court of the United States announced it to be the duty of the courts to avoid encroachments on the Constitution.

In *Scranton vs. Wheeler*, 179 U. S. 141, it was said that the right to improve navigation is paramount to the riparian owner's right of access to the stream.

On June 21, 1920, Venezuela put into effect Laws of Aviation (April, 1921, Journal issued by the American Bar Association, p. 194).

Congress has already legislated for the establishment of an Air Service in the Army (Act June 4, 1920, C. 227) and (Act June 5, 1920, C. 240) respecting the division of the control of aerial operations from land bases, and those attached to a fleet, including shore stations, between the Army and Navy, and concerning claims for damages not exceeding \$250 (committed we assume by aircraft belonging to the national government) and (Act July 11, 1919, C. 8, 51) concerning instruction of enlisted or appointed flying cadets in flying schools, under the authority of the Secretary of War. Its earlier legislation on the subject included provision (Barnes Federal Code, Sec. 10147, Act March 3, 1915, C. 83) for the establishment of an advisory committee for Aeronautics, an Aircraft Board (Barnes Federal Code, sec. 10148, Act Oct. 1, 1917, C. 61, ss. 1-6) ; provision for aircraft production corporations, under the authorization of the Director of Aircraft Production, to be dissolved, however, in proceedings

to be begun within one year from the signing of the treaty of peace with the Imperial German Government (Barnes Federal Code, sec. 10149, Act July 19, 1918, C. 143, XVI, ss. 1-5) ; provision by appropriation for the acquisition of patent rights necessary to the manufacture and development of aircraft in the United States and its dependencies for governmental and civil purposes under regulations prescribed by the Secretary of War and the Secretary of the Navy (Barnes Federal Code, sec. 10150, Act March 4, 1917, C. 180) ; to authorize the President to establish an executive agency to exercise jurisdiction and control over the production of aeroplanes, aeroplane engines and aircraft equipment; the act to remain in force for six months after the proclamation of peace or earlier designation by the President (Act May 20, 1918, C. 78) ; for an experimental aeroplane mail service (Barnes Federal Code, sec. 6814, Act March 3, 1917, C.

## Notes on "Civil Aviation"

162; July 2, 1918, C. 117) ; to authorize the President to sell war materials used in the construction of airplanes (Barnes Federal Code, sec. 1647) ; penalizing espionage by means of aircraft (Barnes Federal Code, sec. 9725, Act June 15, 1917, C. 30, title I, S. 1) ; to authorize the Secretary of the Navy to adjust claims for damage from naval aircraft operation (Act July 1, 1918, C. 114, S. 1). In at least one Congressional act aircraft were included in the word "ship" (Barnes Federal Code, sec 10153). Congress has also legislated respecting army aviation (Barnes Federal Code, Sees. 1531, 1637, 1587) including the organization of an aviation section in the Signal Corps (ibid., s. 1537), gratuities on deaths in the Navy or Marine Corps resulting from aviation accidents (ibid., S. 2360) ; the acquisition of land for the United States for aviation purposes (ibid., s. 1538), and the devotion of government property or land thereto (Act July 9, 1918, C. 143) ; the establishment of aviation stations for life saving and of an aviation school for members of the coast guard ; the performance of aviation duty by officers and men of the Coast Guard (Barnes Federal Code, ss. 7820, 7821) ; the organization of a Naval Reserve Flying Corps (ibid., S. 2458) ; the pay of naval aviators (ibid., S. 2313). Our recommendations are stated at the beginning of this report.

Charles A. Boston, New York,  
William P. Bynum, North Carolina,  
George G. Bogert, New York.

While I agree with the general conclusions reached in the foregoing report as to the proper and best methods of procedure, I have not yet reached any positive conclusion as to the authority and power of the federal government to enact aviation laws under the present provisions of our Constitution; but in view of the present wording of the Constitution as construed by the Courts, I strongly concur in the conclusion reached in the report, that in order to remove all doubt on the question it would be wise to have a Constitutional Amendment to the Federal Constitution that would fully cover the subject and leave no doubt as to the authority of the Government in this regard.

Orbin N. Caetbr, Illinois.

I concur in Judge Carter's views.

William P. MacCrackbn, Jr., Illinois

In July, 1920, the US National Aircraft Underwriters Association was formed with headquarters in New York, and we have been in communication with their representatives.

July 1920 : CIVIL SERVICE COMMISSION OF CANADA - POSITIONS VACANT List No. 48

The Civil Service Commission of Canada hereby give public notice that applications will be received from persons qualified to All the following positions in the Civil Service of Canada :-

### **AIR CERTIFICATE EXAMINER**

Reference # 1291

Two Air Certificate Examiner for the Air Board at an Initial salary of \$2,940 per annum,

## Notes on "Civil Aviation"

which will be increased upon recommendation for efficient service at the rate of \$180 per annum, until a maximum of \$3,300 has been reached .

This initial salary will be supplemented by whatever bonus is provided by law.

If board, lodging or ordinary clothing is supplied, the value thereof shall be deducted from time above compensation .

### Duties:-

Under the direction of the Controller of Civil Aviation, **Air Board**, :

1. to examine, approve, and recommend the issue of licenses to **Air** pilots, navigators, and **Engineers** ;
2. to examine, approve, and recommend the issue of certificates of airworthiness of flying machines ;
3. to examine, approve and recommend the issue of licenses to aerodromes ;
4. to assist in the selection of, and make recommendations in connection with air routes ;
5. to conduct examinations in the theory and practice of air pilotage and air navigation ; and
6. to perform other related work as required .

### Qualifications:-

1. Education equivalent to graduation from a university of recognised standing ;
2. 2 years of experience in flying various types of flying machines-
3. commercial air pilot's and air navigator's certificates ;
4. extensive knowledge of:
  - A. theory of flight
  - B. piloting iwd
  - C. design of flying machines,
  - D. construction
  - E. rigging, and
  - F. overhauling of all types of flying machines, and of the
  - G. construction and maintenance of aerodromes ;
  - H. ability to conduct examinations in the theory and practice of air pilotage and air navigation and
  - I. ability to make thorough inspections and investigations into the proper construction and rigging of aeroplanes and engines ;
  - J. and ability to supervise such work .

Examination : Subjects and weights as follows :

1. Education, 4
2. Training, 4
3. Experience, 4 ;
4. Oral Interview, if necessary in the opinion of the Commission, 1 .

AUGUST 6 1921 : CIVIL SERVICE COMMISSION OF CANADA (Gazette pg 543 1921)

CIVIL SERVICE OF CANADA - POSITIONS VACANT List No. 109

The Civil Service Commission of Canada hereby give public notice that applications will be received from persons qualified to All the following positions in the Civil Service of Canada :-

### **Air Certificate Examiner, Western Provinces**

Reference # 2806 .

An Air Certificate Examiner, Commercial Aviation Branch, Air Board, Western Provinces,

Initial salary of \$2,940 per annum,

which will be increased upon recommendation for efficient service at the rate of \$180 per annum, until a maximum of 18,800 has been reached .

This initial salary will be supplemented by whatever bonus is provided by law.

If board, lodging or ordinary clothing is supplied, the value thereof shall be deducted from time above compensation .

### Duties:-

Under the direction of the Controller of Civil Aviation, **Air Board**, :

1. to examine, approve, and recommend the issue of licenses to **Air** pilots, navigators, and **Engineers** ;
2. to examine, approve, and recommend the issue of certificates of airworthiness of flying machines ;
3. to examine, approve and recommend the issue of licenses to aerodromes ;
4. to assist in the selection of, and make recommendations in connection with air routes ;

## Notes on "Civil Aviation"

5. to conduct examinations in the theory and practice of air pilotage and air navigation ; and
6. to perform other related work as required .

### Qualifications:-

1. Education equivalent to graduation from a university of recognised standing ;
2. 2 years of experience in flying various types of flying machines-
3. commercial air pilot's and air navigator's certificates ;
4. extensive knowledge of:
  - A. theory of flight
  - B. piloting and
  - C. design of flying machines, of the
  - D. construction
  - E. rigging, and
  - F. overhauling of all types of flying machines, and of the
  - G. construction and maintenance of aerodromes ;
  - H. ability to conduct examinations in the theory and practice of air pilotage and air navigation and
  - I. ability to make thorough inspections and investigations into the proper construction and rigging of aeroplanes and engines ; and ability to supervise such work .

While a definite age limit has not been fixed for this competition, age may be a determining factor when making a selection . A rating on "Education and Experience" will be given from the sworn statements submitted by applicants on their application forms.

To those who qualify, an oral examination may be given if necessary,

## AIR ENGINEER

- Certificate ? License ? reference ..

While references are found that detail the requirement for "Air Foremen" and other Air Board officials to hold an Air Engineer's license, NO references can be found within the official record of the Government of Canada related to hiring for this position or to the testing for licenses issued..

17 October 1921 : "It is distressing to think of the probable language of a ground engineer faced with the task of giving this engine a "top overhaul." Comment made by the author of Air Age Weekly in the description of the 1,000 H.p Rumpler engine - interesting and ingenious. But it is very doubtful whether 28 cylinders, together with 112 valves,' and with the necessary accessories for operating the said valves, for illuminating the 56 plugs, and for carburetting for 7 inlet manifolds can be justified even for 1,000 h.p source : **AERIAL ACE** WEEKLY, October 17, 1921 131

15 November 1921 : Handley Page Type O/400 en-route from Paris to Croydon suffers a catastrophic engine failure and propeller loss resulting in a forced landing at Lympne, damaging the undercarriage.

## Notes on “Civil Aviation”

21 November 1921 : King George VI authorises, and the Government adopts, the new coat of arms<sup>180</sup> for the Dominion of Canada. Three considerations were kept in view in determining the “achievement of arms,” being the combination of arms, crest, supporters, and motto. These three considerations were:

1. That Canadians stand to their King in as close a relation as do any of his subjects elsewhere;
2. That Canada, an integral part of the British Empire, has emerged from the war a member of the League of Nations;
3. That Canada was founded by the men of four different races—French, English, Scottish and Irish— and as such, Canadians inherit the language, laws, literature and arms of all four mother countries.

Four of the “arms” displayed on the shield date from ancient times, with a “difference” to mark them as Canadian:

1. The 3 Lions on Red, blazonet of the Plantagenet Kings of England,
2. The Red Lion rampant, with blue tongue and claws of King William the Lion of Scotland,
3. The silver stringed golden harp on blue of Edward I Bruce, King of Ireland,
4. The Royal Fleur-de-Lis of Louis IX, King of France,
5. The “Difference” is “a sprig of maple leaves on silver” on the lower third of the shield.

The crest on the top of the shield is a lion holding in its paw a red maple leaf, a symbol of sacrifice.

The supporters of the shield are, with some slight distinctions:

- I. the lion of the Royal Arms, upholding the Union Jack (cross of St. George, cross of St. Andrew and the cross of St. Patrick)
- II. the unicorn of the Royal Arms. Upholding the ancient banner of France, encircled by golden chain.

The motto beneath the shield is new—“*A mari usque ad mare*”—“From sea to sea”, being extract from the authorized Latin version of verse 8 of the 72<sup>nd</sup> Psalm: “*Et dominabitur a mari usque ad mare, et a flumine usque ad terminos orbis terrarum.*” “He shall have dominion also from sea to sea, and from the river unto the ends of the earth.” Canadian tradition is that the Fathers of Confederation derived the designation “Dominion” from this verse.

This crest printed in black on the cover of the publications of the government of the Dominion of Canada, including the cover of the Air Regulations and the top of the Air Engineer Application form.

<sup>180</sup> The Arms of Canada [http://www65.statcan.gc.ca/acyb07/acyb07\\_2018-eng.htm](http://www65.statcan.gc.ca/acyb07/acyb07_2018-eng.htm)

## Notes on "Civil Aviation"

Britain's air ministry decided in 1921 to reinstitute the training of NCO pilots.

Candidates were drawn from the ranks of mechanics and skilled tradesmen. They were to possess "pluck, reliability, alertness, keenness and energy".

Initially, it was expected that, having served five years as pilots, they would revert to their original ground trades, but this wasteful attitude to experience and acquired skills was soon abandoned.

In Canada, the Royal Canadian Air Force authorized NCO pilot training in November 1926; NCO pilot candidates had to have attained at least leading aircraftman (LAC) rank and be not more than 25 years old.

Canada's NCO pilot training program was suspended as an economy measure in the Great Cut of 1931.

All Canadian pilots (officers and NCOs) spent much time flying on Civil Government Air Operations, namely forestry patrols, anti-smuggling operations and aerial photography. The pattern followed was that commanding officers at bases across Canada annually nominated one or two promising tradesmen for pilot training.

Those chosen were usually the men with considerable earlier experience.

George V. Miscampbell, a former taxi driver, had been in the RCAF more than five years as a vehicle and aero engine mechanic when he was chosen from Station Winnipeg's Other Ranks in the autumn of 1928.

Asa J. Horner had almost four years service as a mechanic, mostly at Ottawa Air Station, before being singled out for pilot training. James E. Doan had been 30 months a labourer and aero engine mechanic when selected at Camp Borden.

Doan's classmate, Arthur Fleming, also had 30 months of RCAF service as an aero engine mechanic at Winnipeg.

Joseph Mirabelli was eight years an aero engine mechanic before being chosen for pilot training.

An exception to the "long experience" practice was Robert I. Thomas, a rigger at Vancouver with only 18 months' RCAF service when he was recommended in the fall of 1928.

The career of one NCO pilot demonstrates how careers were shaped.

G.V. Miscampbell, having been selected as a pilot candidate, went to Camp Borden which was then the RCAF's sole initial air training centre. His course lasted from October 1928 to February 1929. During this time he flew 18 hours, 15 minutes with his instructor and 56 hours solo, all on Avro 504N aircraft. The course included a climb to 10,000 feet, then landing within 50 yards of a designated point. He also had to execute three landings with the engine stopped, completing the landing roll within 150 yards.

Miscampbell also made cross-country flights between Camp Borden and Toronto.

His ground courses included navigation, map reading, parachute packing and signalling with lamp, semaphore and radio. Significantly, he received no instruction in armament or army co-operation tactics—subjects featured in a PPO's curriculum. Winter months were spent on courses, including refresher flying, photography and engine maintenance.

## Notes on "Civil Aviation"

Sgt. R.W. Pike was killed in May 1930 while delivering a Reid Rambler to Ottawa. Aircraft components had not been properly secured by a contractor and Pike lost elevator control before crashing.

Flt. Sgt. A. Anderson, a member of the first NCO pilot course, was killed in the crash of a De Havilland Puss Moth at Ottawa in March 1932. He had been on a test flight when his left mainplane disintegrated and the machine spun into the ground.

*Six NCO pilots gave up flying to return permanently to technical work.*

Four more (Bowker, Hunter, Small, Winney) left the RCAF for civilian jobs.

Hunter became an executive with Trans-Canada Airlines. Small and Winney rejoined the RCAF in 1939.

34 surviving RCAF NCO pilots were commissioned in November 1939 and four more were commissioned within a year.

**Those who had reverted to technical duties had to wait longer to be granted officer status** - See more at: <https://legionmagazine.com/en/2005/09/the-nco-pilots/#sthash.kpQ7EauU.dpuf>

November 1921 : Canadian Air Board - Air Engineer licenses to date<sup>181</sup>

- A. No. in force : 34
- B. No. suspended: 1
- C. No. cancelled: 1
- D. No. applications received: 72
- E. No. in abeyance: 2
- F. No. temporary issued : 70
- G. No. permanent issued : 35

06 December 1921 : RAeS Associate Fellowship Examinations : At a meeting of the Candidates' Committee, a letter from the Honorary Secretary of the Students' Section was discussed and the following recommendations to Council were made<sup>182</sup>.

1. That it be agreed that Students admitted for the regular engineering course in a college of university standard shall generally be regarded as exempt from Part I. of the examination for Associate Fellowship.

2. It is not to be understood from the note to the Rule given on page 2 of the Rules for Election to Fellowship and Associate Fellowship that attendance throughout an approved course of Aeronautics will necessarily be counted as equivalent to one year's experience of the science of aeronautics.

The flying **or technical service** during the war of any applicant for Associate Fellowship **must be considered** by the Candidates' Committee on its individual merits. This does not make any specific distinction between flying service during the war and at any other period.

3. It is recommended that the Diploma of East London College in Aeronautics and Aeroplane Design be accepted as exempting from the paper in Aerodynamics under the Rules of the examination for Associate Fellowship of the Society.

The recommendations were subsequently considered by the Council and adopted in toto.

<sup>182</sup> RAeS - THE AERONAUTICAL JOURNAL - THE REQUIREMENTS AND DIFFICULTIES OF AIR TRANSPORT : January 1922 pg 2

**CANADIAN AVIATION - 1922**

*During the season of 1922*, the Canadian Parliament passed a bill entitled "The National Defence Act, 1922" creating the Department of National Defence, through the amalgamation of the Departments of Militia and Defence and the Naval Service and the Air Board. It was provided that "the Act should come into effect upon a date to be announced by proclamation"; and His Excellency the Governor General in Council subsequently issued a "*proclamation*" which brought the National Defence Act *into effect* from January 1, 1923.

Minister of National Defence : Hon. E. M. Macdonald, K.C., LL.B.

Minister's Private Secretary : Major T. W. MacDowell, V.C., D.S.O.

Deputy Minister : G. J. Desbarats, Esq., C.M.G.

**Canadian Defence Council**

President : The Hon. the Minister of National Defence : E. M. Macdonald, K.C., LL.B.

Vice President : The Deputy Minister of National Defence : G. J. Desbarats, Esq., C.M.G.

Members:

1. The Chief of Staff,
2. The Director of the Naval Service.

Associate Members:

1. The Adjutant General,
2. The Quartermaster-General,
3. The Director of the "Canadian" Air Force.

Secretary—A. B. Goldwyer-Lewis, Esq., B.A.

**Military and Naval Branches**

Chief of Staff : Major Gen. J. H. MacBrien, C.B., C.M.G., D.S.O.

Director of the Naval Service : Commodore W. Hose, C.B.E., A.D.C.

Quartermaster-General : Major Gen. E. C. Ashton, C.M.G., V.D.

Adjutant General : Major Gen. H. A. Panet, C.B., C.M.G., D.S.O.

Director of the Royal Canadian Air Force: Group Captain J. S. Scott, M.C., A.F.C., A.D.C.

**Civilian Branches**

Asst. Deputy Minister: H. W. Brown, Esq.

Secretary of Department : Lt.-Col. (Temporary) C. L. Panet.

Chief Accountant : R. P. Brown, Esq.

Director of Contracts : J. A. McCann, Esq.

Judge Advocate General—Bt. Major (temp.Col.) R. J. Orde.

Chief of the Printing and Stationery Branch, F. J. Boyle, Esq.

Chief Registration Clerk—A. E. Watterson, Esq.

**Branch of the General Staff**

Chief of Staff (National Defence)—Major-General

J. H. MacBrien, C.B., C.M.G., D.S.O., p.s.c.

Deputy Chief of the General Staff, and Director of Training and Staff Duties—Colonel A. G. L. McNaughton, temp. Col.-on-the-Staff (Hon. Brig.-Gen.), C.M.G., D.S.O., p.s.c.

Director of Military Training—Lieut.-Col. & Bt. Col. T. V. Anderson, D.S.O., R.C.E.

Director Military Operations and Intelligence— Bt. Col. (temp. Col.) J. S. Brown, C.M.G. D.S.O., p.s.c. (R.C.R.).

Director of Physical Training and Cadet Services— Lieut. Col. (temp. Col.) S. H. Hill, V.D., (m.s.c.) (s.m.h.) (s.s.).

Director of Historical Section—Major (temp. Col.) A. F. Duguid, D.S.O., (R.C.A.).

Staff Officer, Artillery Duties.—Colonel L. A. G. O. Roy, (R.C.A.).

Commandant Canadian Small Arms School— Lieut. Col. W. K. Walker, D.S.O., M.C.

Assistant Director Signals—Major (Brev. & temp. Lieut. Col.) E. Forde, D.S.O., (s.s.h.) (R.C.C. of S.).

Assistant Director Military Intelligence—Bt. Lt. Col. (Temp. Lieut. Col.) H. H. Matthews, C.M.G., D.S.O., (L.S.H., R.C.).

**Branch of the Adjutant-General**

Adjutant-General—Major-General H. A. Panet, C.B., C.M.G., D.S.O.

Director General of Medical Services—Bt. Col. H. M. Jacques, D.S.O. (R.C.A.M.C.).

## Notes on "Civil Aviation"

Director of Organisation and Personal Services— Lt. Col. (temp. Col.) C. H. Hill, D.S.O., A.D.C. (R.C.R.).  
Director of Pay Services—Colonel A. O. Lambert, (R.C.A.P.C.).  
Director of Records—Bt. Lieut.-Col. (temp. Col.) F. L. Armstrong, O.B.E.  
Deputy Director General of Medical Services—Lt.- Col. Brev. Col., A. E. Snell, C.M.G., D.S.O., (R.C.A.M.C.)  
Assistant Director of Organization—(Bt. Lt.-Col. (temp. Lt.-Col.) H. J. Coghill, (P.P.C.L.I.)  
Assistant Director of Personal Services—Bt. Lt. Col. (temp. Lt.-Col.) D. McNiven, R.C.R.  
Assistant Director of Pay Services—Major H. T. Goodeve, R.C.A.P.C.

### Branch of the Quartermaster-General

Quartermaster-General—Major-General E. C. Ashton,  
C.M.G., V.D.  
Director of Engineer Services—Colonel A. C. Caldwell,  
(R.C.E.).  
Director of Supply and Transport—Lt. Col. (temp.  
Col.) H. C. Greer (R.C.A.S.C.)  
Director of Equipment and Ordnance Services—  
Bt. Lieut.-Col. (temp. Col.) M. C. Gillin, (R.-  
C.O.C.).  
Officer Administering Canadian Veterinary Services—  
Lieut.-Col. (Bt. Colonel) M. A. Piche, V.D.  
(R.C.A.V.C.)  
Assistant Director of Engineer Services—Bt. Col.  
(temp. Lt.-Col) S. H. Osier, C.M.G., D.S.O.,  
R.C.E.  
Assistant Director of Supplies and Transport—  
Major E. H. Spearing, R.C.A.S.C., (acting).

### MILITARY SERVICE

1. The Canadian Militia is composed of the Active Militia and Reserve.
2. The Active Militia consists of the Canadian Permanent Force and the Units of the Active Militia of the several branches of the Service which are organized and perform annual training.
3. The Reserve Militia consists of Reserve Units and of all able bodied citizens between the ages of 18 and 60 with the following exemptions:
  1. Members of the King's Privy Council of Canada;
  2. Judges of all Courts of Justice;
  3. Members of the executive Councils of Provinces;
  4. Deputy Ministers of the Federal and Provincial Governments;
  5. Clergy and Ministers of all denominations;
  6. Telegraph clerks in actual employment;
  7. Officers and clerks regularly employed in the collection of revenue;
  8. Wardens and officers of all public prisons and lunatic asylums;
  9. Members of the Naval Militia;
  10. Members of the police force and fire brigade permanently employed in incorporated cities, towns and villages;
  11. Professors in colleges and universities and teachers in religious orders;
  12. Persons disabled by bodily or mental infirmity;
  13. The only son of a widow, being her only support;
  14. Pilots and apprentice pilots during the season of navigation;
  15. Persons who, from the doctrines of their religion, are averse to bearing arms or rendering personal military service, under such conditions as are prescribed.
4. The Reserve Formations of the Active Militia, as distinguished from the Reserve Militia mentioned in paragraph 3, comprise:—
  - (a) Reserve units of City & Rural Corps.
  - (b) Reserve Depots as may be provided for in the establishments laid down for the Canadian Militia.
  - (c) The Reserve of Officers.
5. The Permanent Force is a small body of all Arms. Its duties are mainly to provide training depots and schools for the Non-Permanent Active Militia and the staffs necessary at Defence Headquarters and the Military Districts.

## Notes on "Civil Aviation"

6. The Non-Permanent Active Militia is a force consisting of all branches of the service, its total authorized strength at present being 10,458 officers and 111,461 other ranks.

(b) In addition to the above, authority exists for the formation of further units but their actual organization and recruiting of personnel is not to be proceeded with at present.

(c) Roughly speaking, all branches and active units are organized upon the British Army system.

Terms of Enlistment:

7. (a) Permanent and Non-Permanent Active Militia for a period of 3 years.

(b) Reserve Militia, for such period as is prescribed (namely, to age limit for various ranks).

(c) The Permanent Active Militia is available at all times for general service.

(d) The Governor-General in Council may place the Militia, or any part thereof, on active service anywhere in Canada, and also beyond Canada, for the defence thereof, at any time when it appears advisable so to do by reason of emergency.

7 Jan 1922. Canada Gazette : Air Board Notice regarding use of ensign.

Hereby notice is given that for purposes connected with the conduct of Civil Aviation the ensign used to distinguish property and premises owned or occupied by the Air Board is as hereunder described: "*Light blue, in the dexter canton the Union and in the centre of the fly of the flag on a red shield edged with white, an albatross, white, with wings extended over three maple leaves conjoined on one stem, proper.*" - J.A. Wilson, Secretary Air Board, 30 Dec 1921.

January 1922 : Colonel Frank Searle (retired) CBE, DSO, MIME - Director of Daimler Air Hire and Daimler Airway publishes "THE REQUIREMENTS AND DIFFICULTIES OF AIR TRANSPORT" in THE AERONAUTICAL JOURNAL : Jan 1922 pg 3-10

Our three years' experience of civil flying since the war...

It must be borne in mind that at the beginning of the war the science of aviation was so young and the necessity for aircraft so great that both the management and the technical staffs of aircraft manufacturers were intensive productions, and from the beginning of the war to the end of it, were fostered on expensive lines; whilst at the same time the managements and technical staffs of other and more slowly-developed industries were all fully occupied and necessary in their own particular sphere.

Another very great factor was that these intensive staffs were reared in an' atmosphere of forced production with very little regard for economy either in personnel or material.

It is not very surprising, therefore, that when they made their momentous decision to go into aerial transport they went ahead on what to them was their ordinary business methods, namely, of extravagance in men and material, and, instead of enlisting new men and material, carried on with what existed at the moment...

*The operation and maintenance of their machines was carried on with lamentable lack of knowledge.*

For instance, whilst they employed a vast number of machines for the services which were maintained - and on which the overhead charges went on daily, there was a very serious shortage of spare parts and spare engines, and, in consequence, machines were lying idle whilst their engines were being repaired, which meant that they were not only losing their earning capacity but that the overheads of about '4 per day per machine were going on for two or three weeks.

*Again, little or no equipment was provided for doing repairs and inspections expeditiously, whereas a small capital outlay in this direction would have saved hundreds of pounds in labour.*

*Again, none of the executive heads of the concerns held ground engineers' tickets as granted by the Air Ministry.*

*"These (ground engineers') tickets were all held by mechanics, so the decision as to fitness or otherwise of a machine was in the hands of the workmen, whose word was final..."*

## Notes on "Civil Aviation"

It should, of course, have been imperative that those in charge held the necessary qualifications required by the Air Ministry<sup>183</sup>...The position of the Air Ministry in air transport is a most important question, and one which ought to be cleared up at once<sup>184</sup>...

At the present moment it combines the equivalents of Municipal Authorities, Trinity House, the Board of Trade and Lloyd's, and I will deal with the analogous functions in this order...

In regard to the Air Ministry acting as the equivalent of the Board of Trade and Lloyd's in marine matters, I have no objection to their doing the former's equivalent duties, but with regard to the latter I do feel that the time is here for owners, builders and underwriters to get together and form some sort of Lloyd's Committee so as to keep the Air Ministry advised of their requirements<sup>185</sup>.

The question is one of the utmost importance.

The Air Ministry has not yet the complete confidence of business men, and it is necessary for them to have some reliable source of information as to what regulations are necessary for the protection of all their Interests.

There are some very brilliant young men at the Air Ministry who are most thorough and conscientious in their work ; but when one deducts their negative commercial and economic experience of the war, one finds that experience with them cannot be expected.

And in a few cases, after deducting their negative war experience, they could not have had more than the meagre engineering or technical training of an apprentice or pupil...

These men in many cases have the power to dictate as to design and details of operation, and companies have no appeal from their considered opinions which are invariably based upon war experience and R.A.F. training.

*"Every official in the technical branches of the Air Ministry should be an engineer of good training and undoubted experience - excluding his war service".*

I should also like to mention the examinations for ground engineers.

*These are verbal examinations, and are therefore the most difficult to organise, and from what I have seen, they have a tendency to follow that unsound policy adopted temporarily years ago in some of the Board of Trade examinations for the marine engineers' tickets—it is that of trying to "catch" the applicant by trick questions (comprehensive questions?) instead of thoroughly ascertaining his education, experience and knowledge.*

*An example seen in the Air Ministry was a "stretching screw"—or turnbuckle— which had both ends screwed (threaded) to the same hand (direction); and the applicant was asked to examine it and state where it was faulty.*

I suggest that such "catches" are not a reasonable test either for education, experience or knowledge, which all goes to indicate that the examiners do not quite realise the essential qualifications of the holder of such a ticket, and I consider that the examination papers for the applicants for these tickets should be laid down by the committee to which I have referred...

The continued use of the pneumatic tyre surprises me... I feel sure that a solid-tyred wheel can be designed which will transmit safely all the shocks and forces to the undercarriage damping gear, and yet not be too heavy. The Germans used wooden tyres during the latter part of the war.

---

<sup>183</sup> RAeS - THE AERONAUTICAL JOURNAL - Colonel Frank Searle CBE, DSO, MIME - Director of Daimler Air Hire and Daimler Airway : THE REQUIREMENTS AND DIFFICULTIES OF AIR TRANSPORT : Jan 1922 pg 3-10

<sup>184</sup> RAeS - THE AERONAUTICAL JOURNAL - Colonel Frank Searle CBE, DSO, MIME - Director of Daimler Air Hire and Daimler Airway : THE REQUIREMENTS AND DIFFICULTIES OF AIR TRANSPORT : Jan 1922 pg 3-10

<sup>185</sup> RAeS - THE AERONAUTICAL JOURNAL - Colonel Frank Searle CBE, DSO, MIME - Director of Daimler Air Hire and Daimler Airway : THE REQUIREMENTS AND DIFFICULTIES OF AIR TRANSPORT : Jan 1922 pg 3-10

## Notes on "Civil Aviation"

My critics will now tell me that they soon changed to pneumatics whenever they could get them. This is true, but one must bear in mind that the *German undercarriages are not as shock absorbing as ours, and the fact remains that the German wheels stood up very well.*<sup>186</sup>

February 1922 : Aerial Transportation Notes <sup>187</sup>

Plans for an air service between London, Eng., and Cork, Ireland, are reported as being made. The service will, it is said, be arranged in connection with trans-Atlantic steamships, and it is claimed that a day could be saved on the trip from London to New York by the use of such a service.

Major Cotton, who made an abortive attempt to establish a mail service between Newfoundland and Nova Scotia on Dec. 10, 1921, is reported to have arrived at Botwood, Nfld., Jan. 16, to arrange for another attempt. The proposed route is from Botwood to Halifax, with a possible stop at Sydney.

The special ensign to be flown over the Canada Air Board's properties is described as follows:—Light blue, in the dexter canton the Union and, in the center of the fly of the flag, on a red shield edged with white, an albatross, white, with wings extended over three maple leaves conjoined on one stem, proper.

The Canada Air Board is about to appoint an Air Wireless Inspector for the Operations Branch at High River, Alta., at an initial salary of \$2,340, and an air photographer for the operations branch at an initial salary of \$1,800 a year. Applications will be received by the Civil Service Commission at Ottawa to Feb. 9.

The Canada Air Board has added the following to the Air Regulations 1920:

"No person shall enter or attempt to enter any aircraft in flight; or leave or attempt to leave any aircraft in flight, except for the purposes of making a parachute descent; or give, upon any aircraft in (light, any gymnastic or other like exhibition."

March 1922 : Aerial Transportation Notes. as above pg 135.

R. H. Nisbet is reported to have said in speaking at Quebec recently that while the aeroplane is the photographer par excellence in most of the work undertaken in surveys in Canada, it is of little service for survey work with the present mechanical devices at its disposal, and that co-operation with ground surveyors is essential to its success.

Captain Maxwell and a pilot are reported to have completed a round aerial trip carrying mail, from Cochrane to Moose Factory, Ont., Feb. 6. The northward trip was made Feb. 4, the distance being covered in two hours and 10 minutes, and the return trip was made on Feb. 6. On the latter date several stops were made in the vicinity of the Abitibi River to test the machine on different kinds of snow.

A successful test of an experimental helicopter is reported to have been made at Farnborough, Eng., Feb. 9. The machine, which weighed over a ton, and carried a pilot and over 250 lbs. of excess weight, together with a large supply of gasoline, is said to have risen from the ground, to have hovered in the air for some minutes and then landed practically on the spot from which it rose.

A mechanical air pilot is reported to have been given a successful test at London, Eng., recently. The aeroplane is fitted with twin engines, and the piloting device is placed between them. It is said that at the test the plane, carrying 12 persons, ascended to a height of over 1,000 feet, and that the pilot then put his hands in his pockets and let the mechanical device take charge. The test lasted for half an hour, the plane travelling at 80 miles an hour.

June 1922 : The Newfoundland Government is reported to have made a contract with the Aerial Survey Co., for the carrying of mail from St. John's round the Fogo district. as above pg 302.

---

## Notes on "Civil Aviation"

A fortnightly aeroplane service is in operation from Cairo, Egypt, to Baghdad.

Irak, for all classes of mail, except parcels, and accelerates letter transportation 14 days or more to Baghdad and northern Persia, down to about 3 days in the case of places as far south as Bushire.

July 1922 : Aerial Transportation Notes.

Five hydroplanes will, it is reported, be employed during the summer in Northern

Manitoba for patrol purposes, and for paying treaty money to the wandering bands of Indians. The

planes will have their Victoria Beach, on Lake Winnipeg. The Canadian Aerial Service is reported to have made a proposition to

the Prince Edward Island Government for the establishment of an aerial mail service between the Island and Montreal.

N.B. Provincial aid is asked, and it is also proposed to ask the Dominion Government to contribute. A rate war is reported to be in progress among transportation lines between London, England, and Paris, France.

Imperial Airways announced a cut in rates for huge parcels of approximately 50%, reducing it from 5 shillings to 2 shillings 6 pence. This was in response to reduction from 10 shillings to 5 shillings. A French company operating over the same route is reported to have arranged a new schedule of freight charges on a scale wholly lower than the land rates.

October 1922 : Aerial Transportation Notes.

The Aerial Survey Co. is reported to have received 3 new aeroplanes at Bolton, England, from England for survey, mail transportation, and general transport work.

Giuseppe Pagliacci, who is spoken of as having been a celebrated Italian during the war, is reported to be working as a freight handler in the G.T.R. at Depot Harbor, Ontario.

Broome sailed from Victoria, B.C. Aug. 10, for Japan, to prepare the Kamchatka Peninsula and the Aleutian Islands for the Blake aeroplane flight round the world, which is since reported to have been abandoned.

*A London, England, cablegram states that the Civil Aviation Advisory Board on Imperial mail service suggests that the Imperial Government should grant a considerable measure of financial assistance to efficient civil attempts to keep open the Empire's airways.*

Major E. MacLaurin, in charge of the Dominion Government aeroplane station at Vancouver, B.C., was drowned Sept. 11, when a seaplane which he was piloting plunged into shallow water on the Point Grey shore of English Bay. A passenger sustained a broken leg, and the mechanic was injured in the back.

The Laurentide Airship Co., which is carrying on forestry survey and patrol operations from Grand Mere, Quebec, had one of its hydroplanes wrecked on the Saguenay River, near Tadoussac, Aug. 5. The plane had made a landing in the river, and was about to rise again, when it came in contact with a submerged log, which ripped out a large part of the bottom of the machine.

A London, England, cable states that arrangements are projected to operate a mail and passenger airship service between London, England, and Bombay, India, the airships to have a capacity of 5,000,000 cu. ft., to be capable of flying 80 miles an hour, and to carry 200 passengers, the trip is to be made in three days, and the fares to be charged \$300 for 1st. class accommodation, and \$175 for 2nd. class.

The Canadian Forestry Association has issued a pamphlet, in which it is stated that nearly 3,000 forest fires have been reported since the beginning of 1922, and that airplanes and seaplanes have been used to great advantage in locating fires and in reducing losses. Excellent work has been done in British Columbia, where 1,400 fires were reported, and in Central Quebec, which passed through its worst forest fire experience for many years.

The Dominion Government aeroplane station staff at Jericho Beach, B.C., according to a press report, has made 997 flights in about two years to July 21, flying 43,851 miles and carrying 1,700 passengers, the total passenger mileage being 436,084. The work done includes forestry reconnaissance, photography and patrol; photographic survey, exploration, communication, demonstration and transportation, geodetic survey work and customs patrol.

## Notes on "Civil Aviation"

Radio stations have been established at the Victoria Beach and Norway House aeroplane stations, in Manitoba, for use in connection with the Dominion Forestry Service. The distance between the two stations is approximately 300 miles. As an illustration of the value of the radio adjunct to the service, a forest fire was located in the vicinity of the Norway House station, on the morning of July 29, and within a few hours the available forces of the service were fighting the fires, which were got under control by night.

The Aerial Survey Co., which is making surveys at Hawkes Bay, Nfld., had a difference with its employees, recently, as to wages. Major Cotton, went to Hawkes Bay to effect a settlement, but the men refused to accept it, and struck.

About 150 of the men assembled at Hawkes Bay, and on Sept. 5, boarded the Reid Newfoundland Co's s.s. Home, and were to be taken to St. John's. On their demand being refused they took charge of the ship and it is reported they carried out their object; being subsequently taken to St. John's by train.

January 1922 : Air Service Between Newfoundland and Canada.

An experimental mail air service has been inaugurated between Newfoundland and Halifax, N.S. The first flight was to be made from Botwood, Nfld., to St. John's. Major Cotton had charge of the aeroplane, which, however, developed engine trouble and had to descend near Deer Lake, Nfld., after completing about 200 miles of the trip, which was apparently then abandoned. The Canadian Postmaster General authorized the carrying of mail from Halifax to Newfoundland, by the route, but declined to take any risk in connection with letters, dispatched by the mail. Such letters were in addition to being prepaid at the regular rate of 4c. an ounce, to have an additional 30c. worth of stamps affixed, and were to be handed in to the post offices. and not to be mailed in the regular way.

1922 : British civilian pilots win the Schneider Trophy. *CANADIAN RAILWAY AND MARINE WORLD* , pg 67 February 1922 - Twenty-fifth Annual Volume from January to December, 1922 - ACTON BURROWS, PROPRIETOR 70 BOND STREET, TORONTO. CANADA

1922 : Canadian Air Board - CAF officer Lt. W. Templeton killed when his HS-2L flying boat plunges into the water off Point Grey, BC and overturns on the beach, drowning him.

1922 : London, England. The Navigation of the Air is now governed by the Air Navigation Act, 1920 and Regulations of 1922 made thereunder.

By sections 1, 2, 3 and 4 of this Act power is given for Orders in Council to be made for licensing of aircraft, aerodromes, and pilots, and generally for the regulation and registration of air traffic and aircraft.

By sections 6 and 8 power is given to the Air Council [established by the Air Force (Constitution) Act, 1917] and to local authorities to establish aerodromes and to purchase land therefor. By section 20 the earlier air navigation Acts are repealed, but *certificates and licences issued thereunder are to continue in force.*

By para. 26 of the Air Navigation Regulations (p. 438, post) the Secretary of State may issue directions. The wording of this paragraph should be noted ; plainly the power to make regulations and impose fresh restrictions and liabilities on the public cannot be delegated to the Secretary of State. Detailed Directions, dated 11th July, 1922, and numbered A.N.D. 3 have been issued. These directions deal with: Registration, approval and inspection of aircraft ; Type aircraft ; Subsequent aircraft ; Modifications of aircraft ; Licensing of ground engineers ; Instruments [...]

### **AIR NAVIGATION ORDER, 1922.**

3. (1) *An aircraft shall not fly unless the following general conditions are General complied with :*

#### General conditions

- (i) The aircraft shall be registered and bear the prescribed nationality and of flying, registration marks and the name and residence of the owner affixed or painted on the aircraft in the prescribed manner ;
  - (ii) The aircraft shall be certified as airworthy in the prescribed manner, and any terms or conditions on or subject to which the certificate of airworthiness was granted shall be duly complied with ;
  - (iii) The personnel of the aircraft shall be provided with the prescribed certificates of competency and licences ;
  - (iv) There shall be carried in the aircraft the prescribed documents and the prescribed log books kept up to date in the prescribed form and manner :
- Provided that :

## Notes on "Civil Aviation"

(a) Conditions (i), (ii) and (iv) shall not apply to aircraft flown for the purpose of experiment or test only, within 3 miles of an aerodrome or aircraft factory, or in accordance with such directions (if any) as may be given by the Secretary of State ; and (b) Condition (iii) shall not apply in the case of candidates undergoing official tests for the purpose of obtaining a licence, or within 3 miles of an aerodrome in the case of personnel under instruction.

(c) Condition (ii) shall not apply before the first day of January, 1923, except in the case of passenger aircraft when carrying passengers, and aircraft engaged in international navigation.

(2) In this article "prescribed," in relation to aircraft other than British aircraft registered in the British Islands, means prescribed by the law of the State on whose register the aircraft is entered and in relation to British aircraft, registered in the British Islands has the meaning assigned to it by article 27 of this Order.

*The provisions in Schedules I to VIII inclusive to this Order shall have effect as part of this Order, and shall be duly observed by all persons concerned in the cases to which they relate, that is to say:*

BY CARROL ROMER, M.A.,

OF THE INNER TEMPLE AND SOUTH-EASTERN CIRCUIT, - Barrister-at-Law.

1922 : Controller of Canadian Civil Aviation : Air Chief Marshal [note 1] Lloyd Samuel Breadner, CB, DSC (July 14, 1894 – March 14, 1952) was a Canadian military pilot and Chief of the Air Staff during World War II.

### Early career

Breadner obtained his pilot's certificate at Wright Flying School and was commissioned in the British Royal Naval Air Service on December 28, 1915. During World War I he served on the Western Front as a fighter pilot in the No. 3 (Naval) Squadron. He was promoted to Flight Lieutenant (RNAS) on 31 December 1916. He was awarded the Distinguished Service Cross on May 23, 1917. The citation read:

For conspicuous gallantry and skill in leading his patrol against hostile formations. He has himself brought down three hostile machines and forced several others to land. On the 6th April, 1917, he drove down a hostile machine which was wrecked while attempting to land in a ploughed field. On the morning of the 11th April, 1917, he destroyed a hostile machine which fell in flames, brought down another in a spinning nose dive with one wing folded up, and forced a third to land.

— London Gazette[1]

He was released from the RAF [note 2] with the rank of major[note 3] in March 1919.

### Command

He was commissioned promoted to Squadron Leader in 1920 and transferred to the Royal Canadian Air Force (RCAF) on its formation in 1924. He became Controller of Civil Aviation in 1922, and later commanded Camp Borden from January 15, 1924 to September 23, 1925. He was promoted to Wing Commander on April 1, 1924. After attending RAF Staff College, he was the Director of the RCAF from February 15, 1928 to April 29, 1932. From 1932 until 1935 he commanded Trenton and then attended the Imperial Defence College. He was promoted to Group Captain on February 1, 1936 and to Air Commodore on August 4, 1938. He became Chief of Air Staff on May 29, 1940 and having been promoted to Air Marshal on November 19, 1941, became Air Officer Commanding-in-Chief RCAF Overseas in January 1944. Breadner was promoted on his retirement on November 25, 1945 to Air Chief Marshal, the first Canadian to hold this rank.

On November 30, 1944, while he was Chief of Air Staff, his son, Flying Officer Donald Lloyd Breadner, was killed after an air gunnery exercise, while flying a de Havilland Mosquito from RCAF Station Debert, in Nova Scotia. He was the only son of Breadner and his wife, Mary Evelyn. They also had three daughters.[2]

### Awards

- May 23, 1917: Distinguished Service Cross
- January 1, 1943: Companion, Order of the Bath
- October 25, 1943: Military Cross, First Class (Belgium)
- August 25, 1944: Grand Officers Cross of Polonia Restituta (Poland)
- October 5, 1946: Order of the White Lion, Class II (Czechoslovakia)
- December 20, 1946: Legion of Merit (Degree of Commander)
- September 12, 1947: Commander of the Legion of Honour (France)
- June 12, 1948: King Haakon VII's Cross of Liberty (Norway)

### References and notes

#### Notes

## Notes on “Civil Aviation”

1 This rank was used by the 20th century Royal Canadian Air Force and replaced with the rank of General in 1968 with the unification of the Canadian Forces, a rank which has been retained in the 21st century Royal Canadian Air Force. See Category:Canadian Forces Air Command generals Royal Canadian Air Force generals for such officers. Breadner was one of only two Canadian Air Chief Marshals, the other being Frank Robert Miller.

2 The RNAS had been joined with the Royal Flying Corps in 1918

3 The RAF used Army-style ranks until mid-1919.

1922 : overall responsibility for UK air defence was transferred from the War Office to the Air Ministry.

14 January 1922 : “Martynside” Aeroplane on Quidi Vidi Lake flight from Botwood to Halifax - aborted due to oil loss - Major F.S. Cotton & Capt. V.S. Bennett land on the ice landing on ice on Quidi Vidi on flat skids in St. John’s after a 2 hour flight. The Martynside is a plane similar to that which Mr. Raynham had at Pleasantville for the contemplated trans-Atlantic flight, which did not materialize owing to hard luck on each occasion that the flight was attempted. <sup>188</sup>

January 1922 : the UK Air Ministry orders two prototypes of an all duralumin two-seat fighter sea plane from Shorts Bros. the Air Ministry, satisfied with the Silver Streak test results, believes all-metal aircraft construction is sound.

1922 –1923 ex-Royal Navy officer Charles Dennistoun Burney proposes Imperial Airship Service. in 1924 after an extensive political tug-of-war by Ramsay MacDonald’s first ever Labour government in Britain. The man behind the "scheme" (Programme) was the new Labour Secretary of State for Air, Lord Thomson of Cardington.

03 April 1922 : English aviation company Daimler Hire commences operations with DH.18A Ser.No.04 “G-EAWO”. Frank Searle - Managing Director. Managing the aircraft as Daimler Hire managed their cars – each to be used a minimum of 20,000 miles a year – Searle and George E Woods Humphery, (Major Woods Humphery, an engineer and a former RFC pilot and general manager of Handley-Page Transport) set a standard of 1,000 hours per year per aircraft. This and “other control of overhead expenses” let Daimler Hire run much more efficiently than its competitors. Daimler Hire ordered 9, but operated a total of 6 (of 12 built) 10 passenger de Havilland DH.34 single-engined cabin biplanes between Croydon and Paris. . G-EBBQ - DeH’s prototype, G-EBBT, G-EBBX Ser. no 35 - certificate of airworthiness issued on 19 September 1922, G-EBBS,

07 April 1922 : “Daimler Hire” DH.18A “G-EAWO” bound for Le Bourget collides with Farman F.60 Goliath “F-GEAD” operated by Cie des Grands Express Aérien in drizzle and fog at an altitude of 150 m (492 ft - losing a wing and its tail then plummeting to earth. F-GEAD crashes shortly thereafter. This is the first-ever mid-air collision between airliners, killing all 7 onboard.

Both pilots were using the same railway line in order to navigate. French airline Compagnie des Grands Express Aériens (F-CGEA) left the Paris airdrome at Le Bourget for London at noon today, carrying three passengers, a pilot and a mechanic collided at about 2 o’clock with an English Daimler Airway DH.18A biplane airplane coming from London, (G-EAWO) with just one pilot on board, Lieutenant R. E. Duke, as well as a young steward, a Mr. Hesterman carrying mail and who survived the crash but succumbed to his injuries a short while later , but no passengers. Awhile later, just after the noon bell struck, a Farman F.60 Goliath (F-GEAD) took off from Le Bourget enroute to Croydon, flown by its pilot, M. Mire, with a mechanic on board as well. Three passengers had purchased tickets on the Goliath, a Frenchman named M. Bouriez and two Americans, a new husband and wife in France for their honeymoon, Mr. and Mrs. Christopher B. Yule, who were flying to London, from which they intended to take a train (probably to Portsmouth) for ship passage back to New York All but one person on board both machines were killed. The catastrophe took place in a fog near Grandvilliers in the Oise Department. The machines burst into flames in the air. At the time, an informal practice existed that one should offset from navigational landmarks based on the rules of the road, thus, a French pilot would fly up a roadway, offset to the right side and looking down on the road to the left. Opposing traffic therefore would pass also on the left. The same informal practice was done in England, though few considered the potential international conflict based on English roadway rules, cars had right hand drive and drove on the left side of the roads! Thus, the British pilot of the Daimler Airway flight naturally offset to the left, not to the right.

In London, following the French model pioneered by CGEA, a new airline had just been formed from the remnants of an earlier failed venture. This was the new Daimler Airway (note, not Airways, as often misreported in modern history documents). In February 1921, the former air branch of Daimler Hire was put into new ownership, though it would take some time before aircraft

---

<sup>188</sup> THE CANADIAN AEROPHILATELIST September 2014, Page 11 - 1922 – Major Cotton arrives in St John’s - Bill Beaudoin

were acquired and the working components of an airline were in place. In April 1922, just a few days before the events described here, the airline had started its service with newly acquired de Havilland DH.18A aircraft, a single-engined biplane with a cabin for passengers. The first flights were under contract to deliver the mail to Paris, starting just days before on April 2, 1922.

CGEA's Farman F.60 Goliath, the world's first true airliner, had been carrying out regularly scheduled flights between Paris and London since 1919. By 1922, approximately 20 to 40 passengers per day flew between London and Paris. Among the various airlines plying the route, a total of six daily flights could be counted. Two years later, nearly to the day on April 1, 1924, Daimler Airway would be merged with Handley Page Transport, Instone Air Line and British Marine Air Navigation. Together, they would form the new Imperial Airways which itself set a new and higher standard for air travel in the passenger industry.

"In my own name and that of the (British) Air Council, I offer you my deep sympathy on the fatal air collision which occurred yesterday, the only accident of this kind in the history of air transport between Great Britain and France" – Frederick Guest, Secretary of State for Air.

Following the accident, a meeting was held at Croydon Airport<sup>189</sup> by representatives of Compagnie des Grands Express Aériens, Compagnie des Messageries Aériennes, Daimler Airway, Handley Page Transport, Instone Air Line and KLM, as well as two representatives from the Air Ministry and various pilots employed by the companies. Amongst the resolutions passed at the meeting were:

- a) that "keep to the right" was to become the universal rule of the air,
- b) new airliners should provide a clear view ahead for the pilot, and
- c) that all airliners should be equipped with radio.
- d) Clearly defined air routes were to be introduced in Belgium, France, the Netherlands and the United Kingdom

## Notes on "Civil Aviation"

June 1922 : the UK Air Ministry cancels orders for the two two-seat fighter sea plane prototypes citing "Financial concerns". the Short Springbok evolves from the Silver Streak, and its construction techniques are employed in future aircraft. ("The Olympia 1920 Aero Show" *Flight* (22 July 1920) "Air Ministry Acquire Short 'Silver Streak'" *Flight* (24 February 1921) "Short Bros. and Metal Construction" *Flight* (11 December 1924)

22 June 1922 : RAF short Service Commissions : Short Service Commissions in the Royal Air Force

THE Air Ministry announces that vacancies exist for suitable candidates between the ages of 18 and 25 for shortservice commissions for flying duties in the Royal Air Force. Applicants are interviewed by a Selection Committee at the Air Ministry, and those selected and found medically fit are gazetted as Pilot Officers (on probation). The probationary period is six months, after which, subject to satisfactory progress, officers are confirmed in rank.

Short-service commissions are granted for four years' service on the active list, which may be extended by one year in the case of officers desirous and recommended. On completion of service on the active list, officers normally pass to the Reserve and receive a gratuity of £75 for each completed year's service : thus, if an officer completes four years and does not extend his service, he would receive a gratuity of ^ 300 on passing to the Reserve.

Officers in the Reserve receive retaining fees and are required to undergo short periods of training each year. For all purposes of pay, allowances and promotion, short-service officers receive equal treatment with officers holding permanent commissions. All officers entered under this scheme are taught to fly, and facilities are afforded, when possible, to specialise in certain other subjects. Candidates desirous of consideration under this scheme should apply by letter to the Secretary, Air Ministry (S. 7), Kingsway, W.C. 2.

11 July 1922 : I.C.A.N comes into effect.

July 1922 : the UK Air Ministry reports that it has tested the Silver Streak to destruction.<sup>190</sup>

- a) No corrosion issues were encounter with the duralumin used in its construction.
- b) the wing failed just above its calculated ultimate stress level when the Steel tube spar buckled during "loading" tests,
- c) Even with the buckled spar, the wing still possessed enough structural integrity for "normal" flight.
- d) The tail and rudder are separately tested and fail under a load far in excess of what a wooden tail and rudder can withstand.
- e) The fuselage survives a 2,000 lb-ft (2,712 N•m) torsion test with no visible distortion.
- f) The fuselage was subjected to 100 hours of vibration tests which revealed no signs of cracks or loose rivets.

23 April 1922: Flight Lieutenant H.L. Holland killed in Airco DH.4 crash near Brantford, Ont. First Canadian Air Force officer lost in (civil post-war) operations.

28 June 1922 : PM King disbands the Canadian Air Board - folds Canadian Air Board responsibilities into the new DND. The Air Board Civil Air "Operations Branch" is merged with the CAF. *Effectively all "Board Stations" become CAF Air Stations, and all Civilian members of the civil service receive temporary comissions in the CAF.* Civilian and Service (Military) aircraft safety and accident investigation becomes the responsibility of the Directorate of Flight Safety of the DND.

### June 1922 : International Air Congress, London

June 1922 : British Empire's "Civilian Aviation Operations Branch, Canada" consolidated with the Canadian Air Force into a single organization.

1922 : Canadian Air Board operates surplus WW1 Felixtow F3 flying boats

1922 Laurentide Air Service (Elwood Wilson and Stuart Graham) begins operation with Curtiss HS2-L flying boat, Loening Air Yacht, Vickers Viking, Westland Limousine, de Havilland DH.9. They employ 10 pilots & 8-10 Air Engineers.

14 March 1922 : Percy Hanford receives "Qualified Air Engineer" Certificate #209. His rate of pay = 1 dollar per flying hour of all machines flown, with a minimum of \$100 per month - Edm. Flying Club.

---

<sup>190</sup> ("The Olympia 1920 Aero Show" *Flight* (22 July 1920) "Air Ministry Acquire Short 'Silver Streak'" *Flight* (24 February 1921) "Short Bros. and Metal Construction" *Flight* (11 December 1924)

## Notes on "Civil Aviation"

1922 : Canadian Government Air operations employed 270 persons. The machines used are obsolescent war type machines, many of which require replacement by modern machines, with better performance, specially designed for the work to be undertaken and the natural conditions in the various localities in which they are employed. Proposals for replacement of the existing types are under consideration.

31 August 1922 : THE scheme suggested by Admiral Mark Kerr, to which reference is made above, is as follows :—

The Air Ministry shall consist of :—

Secretary of State ; Air Secretary.

Air Council, consisting of : War C.O.S., with Deputy C.O.S., R.N.A.S., and Deputy C.O.S., R.F.C. ; Navy Member ; Army Member ; Finance Member ; Personnel Member ; Experimental Member ; Training Member ; Civil COS., with Deputy C.O.S. for Lighter-than-Air and Deputy C.O.S. for Heavier-than-Air.

1. There shall be an Air Member on the Board of Admiralty and one on the Army Council.

2. All experimenting work, training, building and contracting shall be done by the Air Council, Ministry and Air Force.

3. All the personnel will be entered and trained by the Royal Air Force under the direction of the Air Council.

There will be both Naval and Military Air Classes of Instruction, in which the instructors are taken from the Air Service for which his class is being trained. The first term of instruction shall consist of general knowledge classes, and at the end of it pupils will be divided into the Naval and Military classes. Pupils will have the right of selection, but it will not be guaranteed that they shall join the branch that they select, as regard will always be paid to the qualifications and temperament of the individual in appointing him to any particular branch of the Service. If, in the course of training, a pupil be found to be more suitable for some other branch than that which he has been working for, he will be changed to . that line for which he is most suited.

4. The Navy and Army will indent on the Air Ministry for their requirements in personnel and material for the Royal Naval Air Service and Royal Flying Corps respectively. When such supplies have taken place, they will become part of the Service, R.N.A.S. or R.F.C., and be under the complete control of the Admiralty or War Office, as the case may be.

5. Records of the officers and men of the R.N.A.S. and R.F.C. are to be rendered to the Air Ministry, and all information as to performance of machines, etc., by the Admiralty and War Office. The Air Ministry will reciprocate in these matters with regard to the officers from the R.N.A.S. and R.F.C., who are serving under the orders of the Air Ministry.

6. The personnel of the Air Ministry and Royal Air Force shall be drawn from the R.N.A.S. and R.F.C.

7. In the case of disagreement on any subject of policy or other cause which the Secretaries of State and First Lord of Admiralty cannot agree on, the matter shall be referred to the Cabinet.

8. The Air Ministry's Estimates shall only be made out for the personnel and departments and the administration for which it is responsible, and which is actually under its orders. The personnel of the R.N.A.S. and the building of all aircraft hangars, etc., which the Air Ministry orders or builds for the Navy or Army shall be charged to the Naval and Military

## Notes on "Civil Aviation"

Estimates, as the case may be.

9. The Air Ministry shall have its own Medical Department, especially trained for the Air Services, and they shall provide specialists for aerodromes and squadrons as necessary, as well as for the Air Hospitals. src flight pg 492 aug 1922

## CANADIAN AVIATION - 1923

01 January 1923 : National Defence Act - Canada, Comes into force

Mr. G.J Dsbarats C.M.G is Deputy Min of the Naval Service and will continue in that capacity until 28 Feb 1923. Under the National Defence Act, 1923 which comes into effect this day, the Dept. of the Militia, the Dept. of the Naval Service and the Air Board are amalgamated as "The Dept. of Nat'l Defence" Mr. Dsbarats is to be the comptroller and has been appointed as "Acting Deputy Minister - Nat'l Defence. The actual Deputy Minister Maj.-Gen. Sir Eugene Fiset, being on a year's leave of absence.

10 January 1923 : Airco DH.16 G-EALM operated by the De Havilland Aeroplane Hire Service crashes at Stanmore, killing the pilot and 1 passenger, three other passengers are injured.

1923 : UK Air Ministry introduces the "approved firm" system. Select firms are approved by the Air Ministry for conducting their own inspection of aircraft during construction, under A.I.D. supervision. ( Flight - March 1939 page 227 - Airworthiness and the ARB)

1923 : Hambling Committee (UK) concludes that any "existing British Air Lines should be amalgamated into a state run company"

**1 January 1923** : Civil Air Board ceases to exist in Canada. Air Board duties re-assigned to the DND.

1 January 1923 : National Defence Act (Canada) comes into force Canadian Parliament makes Canadian Minister of National Defence responsible for:

1. Department of the Defence
  - (a) assumes responsibility for all government "Service" flying operations
  - (b) assumes responsibility for the control of "Civilian" aviation.
2. Department of the Naval Service
3. Department of the Air Board
4. Department of the Militia

**1 January 1923. the Canadian Military controls all government flying operations and civil aviation.** The former Air Board, predominantly civilian in nature, now came under the control of the chief of the general staff, DND.

5 January 1923 : application for "Royal" designation made to the Secretary of State for External Affairs.

6 February 1923 : the Air Board issues disposal instructions for Airship and Balloons received as part of the Imperial Gift.

15 February 1923 : Formal reply re "Royal" designation of the CAF received from the United Kingdom Secretary of State for the Colonies in England received.

### Air Navigation Act, 1920 provisions governed in Schedules I to VIII inclusive to the AIR NAVIGATION ORDER, 1922

Schedule	Subject matter
I	Registration and marking of aircraft.
II	1. Certificates of airworthiness for aircraft 2. periodical overhaul and examination 3. detention of unairworthy aircraft.
III	Log books.
IV	Rules as to lights and signals and rules of the air.
V	Licensing of personnel.

## Notes on “Civil Aviation”

Air Navigation Act, 1920 provisions governed in Schedules I to VIII inclusive to the AIR NAVIGATION ORDER, 1922	
VI	Fees.
VII	Prohibited areas.
VIII	Customs rules as to aircraft arriving in or departing from the United Kingdom. :

12 March 1923 : Canadian Air Force Weekly Order No. 21/23 promulgates the new title “Royal Canadian Air Force”.

29 March 1923 : there are 817 British Civil aeroplanes on the register, 200 having been built since the beginning of 1919<sup>191</sup>.

19 March 1923 : In Parliament: Mr. Hugh Morrison asks the Secretary of State for Air the following questions:

- if he will cause inquiries to be made into the system of training **officers and N.C.Os.** as air-pilots at the flying school, Netheravon ;
- if such inquiries will state the number of times each individual student officer and non-commissioned officer of the present classes under instructions has been taken up in the Bristol fighters ;
- whether the system in vogue enables the non-commissioned officer student to obtain the same amount of training in the air as that given to the officer ; and, if not,
- whether steps will be taken to ensure such training for the non-commissioned officer, that there shall be no danger of failure at examination through an alleged lack of facilities.

In response Sir S. Hoare replied : I am obliged to my hon. friend for drawing my attention to this matter:

- It had lately appeared that the arrangements for the instruction of airmen at Netheravon were not satisfactory in respect of the amount of actual flying training which was being received. Orders were accordingly issued which will remove any deficiencies in that respect.
- I am to add that in the new class of officers and airman pilots which began on December 15 last, the airmen up to date have averaged 740 hours' flying and the officers 640 hours.

22 May 1923 : Wright Bros. wing warping patent expired.

23 May 1923 : Belgian airline Société Anonyme Belge d'Exploitation Aérienne “SABENA” is established as the Belgian national flag carrier, succeeding SNETA. The inaugural flight on the day of SABENAs foundation was by “O-BIEN” a WW1 surplus Airco D.H.9 bomber with a load of freight and mail went from Haren, Brussels via Ostend to Lympne, England. O-BIEN was re-registered OO-IEN in 1929.<sup>192</sup>

1923 : The Canadian Air Force consists of 49 officers and 262 men in “other ranks”.

Bristol Cherub Engine - Flight international

1923 : Price Brothers and Company ceases air operations.

1923 : Canadian federal government's Post Office department begins considering the use of airplanes to carry mail to remote places.

August 1923 : Squadron Leader Ambrose B. Shearer pilots an HS2L flying boat from Charlottetown to Grindstone Harbour on the Îles-de-la-Madeleine (Magdalen Islands) as part of the Post Office's investigative process. On his first attempt he has to return to base because of

<sup>191</sup> Secretary of State for Air Sir S. Hoare in response to question by Commander Bellairs in Parliament.

<sup>192</sup> [http://www.icao.int/secretariat/PostalHistory/iata\\_international\\_air\\_transport\\_association.htm](http://www.icao.int/secretariat/PostalHistory/iata_international_air_transport_association.htm)

## Notes on "Civil Aviation"

fog. His second flight was successful. Scheduled airmail service to the Magdalen Islands begins in 1928, when Canadian Trans-continental Airway initiates service<sup>193</sup>.

"British Air power must include a Home Defence Air Force of sufficient strength adequately to protect us against air attack by the strongest air force within striking distance of this country" - Prime Minister Stanley Baldwin, June 1923

1923-24 : UK- Britain eventually announcing, as an initial contribution towards the projected 52-squadron scheme, the Auxiliary Air Force and the Special

Reserve, each of which was constituted quite separately, so I now need to backtrack ten or fifteen years. While Trenchard's 1919 Memorandum had made some mention of auxiliaries, it was 1922 before firm proposals began to emerge, the Air Estimates for 1923-24 eventually announcing, as an initial contribution towards the projected 52-squadron scheme, the formation (over the next few years) of an additional fifteen regular squadrons plus five auxiliary squadrons.

This represented something of a change of heart as some influential figures (including Mr Churchill) had previously been of the opinion that it would be impossible for non-regulars to attain the levels of skill and efficiency that would be required. the Auxiliary Air Force and the Special Reserve, each of which was constituted quite separately, so I now need to backtrack ten or fifteen years.

While Trenchard's 1919 Memorandum had made some mention of auxiliaries, it was 1922 before firm proposals began to emerge, the Air Estimates for 1923-24 eventually announcing, as an initial contribution towards the projected 52-squadron scheme, the formation (over the next few years) of an additional fifteen regular squadrons plus five auxiliary squadrons. This represented something of a change of heart as some influential figures (including Mr Churchill) had previously been of the opinion that it would be impossible for non-regulars to attain the levels of skill and efficiency that would be required. It should be clearly understood, however, that, while they might have had 'auxiliary' status in terms of availability and readiness, these squadrons were not 'extras'; they were to constitute an integral element of the 52-squadron plan.

While the Air Force (Constitution) Act of 1917 had made provision for regulations relating to the Territorial Army to be applied to the projected air auxiliaries, this rather ad hoc arrangement was hardly satisfactory so the first thing that needed to be done was to provide the air force with something a little more specific. The result was the Auxiliary Air Force and Air Force Reserve Bill which was laid before the House in March 1924. 1930, this time sponsored by the Establishments Committee. The relevant facts were that one of the key distinctions between the SR and AAF units, whether or not their pilots were qualified on enlistment, had become blurred, because the SR was now accepting trained pilots while the AAF had started to provide in-house ab initio flying training. More importantly, however, recruiting of airmen for the Special Reserve had proved to be less straightforward than had been anticipated, because men had been reluctant to enlist in trades for which they were already qualified.

On reflection, it was perhaps understandable that a skilled metalworker, for instance, might well feel that he had had more than enough exposure to tin-bashing during the week and if he was going to sign on to work at weekends he wanted to do it as a 'chippy' or an electrician. This was not what the air force had had in mind, of course, but in order to get anywhere near the recruiting targets, many SR airmen had been accepted on these terms and to provide the necessary cross-training COs

had been obliged to mix their reservists with their regular personnel throughout the squadron. As a result, neither flight was exclusively manned by regulars, which more or less nullified the cadre concept. In effect, the SR units were tending to function as AAF squadrons but with

## Notes on “Civil Aviation”

a much higher proportion of, expensive, full-time personnel – which was, no doubt, what had attracted the attention of the establishers. As a highly technical service the RAF depended on the outputs of the public and other secondary schools for most of its manpower and the RAFVR was to be no exception. Short Service Commission and specified attendance at either public or other secondary schools with achievement approximately up to the standard required for the School Certificate of the Oxford and Cambridge Examination Board. In practice, the term secondary school proved to be a catch-all which included not only the familiar grammar school but also a great variety of places where men could get themselves up to the required standards by part-time or evening study – for example in what were known as continuation schools and the night schools run by technical colleges. The reserve was to be taken to the men by making it as easy as possible for them to train whilst living at home and pursuing their normal civilian occupations. In 1923 the first edition of AP938, the regulations governing reserve service, was published and, perhaps as a result of the thinking exercises that its drafting had involved, questions had been raised over the need for reserve observer officers. AMP, Oliver Swann, recommended that 100 ex-wartime observers should be recruited into the reserve and, a little surprisingly, Trenchard actually agreed. They were to be assigned to Class B, however, which categorised them, not as aviators, but as technical officers with an annual refresher training commitment, although CAS had made it crystal clear that the air force could not actually afford to provide observers with any training at all! No change there then, and, it is hardly surprising that nothing like the required 100 ex-observer officers were prepared to sign up for a second dose of ritual humiliation. The RAFO Section of the Air Force List for March 1926, for instance, includes about forty. (ROYAL AIR FORCE RESERVE AND AUXILIARY FORCES - ROYAL AIR FORCE HISTORICAL SOCIETY.

27 August 1923 : Farman F.60 “Goliath” F-AECB operated by Air Union of France suffers an engine failure and crashes at East Malling, Kent killing 1 passenger. Contributing to the accident was passengers misunderstanding an “instruction to move aft” by the pilot, altering the aircraft’s centre of gravity.

September 1923 : Frank Whittle, aged 16 yrs, joins the September 1923 apprentice class, R.A.F Halton. During Whittle’s three years there, he was trained as a metal aircraft rigger. Probably because of the aircraft engineering aptitude he displayed building a large powered model aircraft in off-duty hours at the Model Aircraft Society, Whittle was one of five from his 600-man apprentice class selected for flight cadet training at the R. A. F. College, Cranwell. In his two years at Cranwell, Whittle learned to fly (surviving an engine failure in flight and the total loss of an airplane he flew into a tree on a foggy go-around), and he began thinking about how to achieve high-speed, long-range, high-altitude flight. His thesis was the starting point for his subsequent work on jet propulsion: “Future Developments in Aircraft Design. ” His flying instructor’s final comments in Whittle’s flight log included these words in red ink “inclined to perform to gallery and flies too low. ” Frank loved aerobatics. after four years with a permanent commission, to select a specialist course of advanced training, Whittle chose engineering. In August 1932 he was posted to the officers’ engineering course at Henlow, where he completed the twenty-four-month course in eighteen months.

The Air Ministry had by then discontinued its practice of sending one or two officers from Henlow on to Cambridge University for the Mechanical Sciences Tripos (an honors course named after the three-legged stool one sat on to take the oral examination).

Whittle persisted again and got the ministry to make an exception, so in July 1934 after being promoted to flight lieutenant, he was attached to the Cambridge University Air Squadron. In two years instead of the usual three, he took first-class honors and was then well grounded in the aerodynamic and material sciences he would need to succeed with his jet engine invention. While qualifying to be a flight instructor at the Central Flying School in 1929, ONE OF THE twentieth century’s best “hands on” engineers, Sir Frank Whittle, will be remembered as the earliest inventor of the aircraft turbojet engine, and for his persistence in demonstrating its feasibility in the face of initial rejection and despite later bureaucratic roadblocks thrown in his path by the British government.

## Notes on "Civil Aviation"

14 September 1923 : DH.34 "G-EBBS" operated by Daimler Airway makes a forced landing and crashes near the Ivinghoe beacon, Buckinghamshire in bad weather killing all five on board (2 pilots and 3 passengers). This is the first fatal accident on an "internal scheduled air service" in England / UK.

1923 The Government of Ontario purchases 13 "hydro-aeroplanes" at the cost of \$5,000.00 each <sup>194</sup> in 1924 it erects a hangar facility at Sault-Ste. Marie : 30' ceiling, dope room, machine shop, concrete floor above the dope room and machine shop (sound deadening) ... "will you explain to the Cmtee the necessity for centralising your aircraft in an extensive building of this kind for the winter? Why couldn't they be left in their stations all over the province?" A: Every machine has to be taken apart and the engines taken out and completely overhauled and the hulls have to be repaired just the same as the hull of a vessel" Mr. Finlayson: anyone who was in the ARMY knows something about that, but there are some laymen here who do not understand the necessity of absolute perfection in aircraft." The hulls are strong but delicate; the material is thin and they are covered over with canvas that has to be thoroughly waterproof, and any damage done has to be repaired during the winter, and you have to have a warm, comfortable place to carry it out, because there is the paint to go on and three or four coats of shellac on the canvas, and so on.

Q. And by centralizing them all you were able to keep your men employed for the winter?

A. Oh, yes. It had to be done somewhere. And then during the summer months all the engines are overhauled there. An engine operates eighty hours and is taken out, no matter how it is working and is sent back to the shop to be taken apart and overhauled and sent out again.

Q. In other words, you have surplus engines, and surplus stock is constantly being overhauled.

A. Exactly,

MR. WIDDIFIELD: What is a dope-room?

MR. FINLAYSON: Not what you think Mr. Widdifield.

A. It is a room used for mixing the dope they put on the machines and the canvas covering, a special waterproof composition, and has to be handled in a certain way.

THE CHAIRMAN: It is a term inherited from the army<sup>195</sup>.

HON. MR. LYONS- I think we have the only dope-room on the continent where men can work for ten hours at a time.

MR. FINLAYSON: In other words, the dope is applied to the craft and not the person.

MR. CLARKE: In other words, it is 4-4; it does not affect them.

MR. FINLAYSON: Not even invigorating or refreshing. Can you tell me

Mr. Lyons, how this aerodrome compares with other similar hangars on the continent.

A. As a matter of fact I never saw one myself, but I have been told by some American officers and by one or two people from the Old Country that it is the finest hangar they have ever seen anywhere.

If Q. Hangar is a synonymous term for aerodrome?

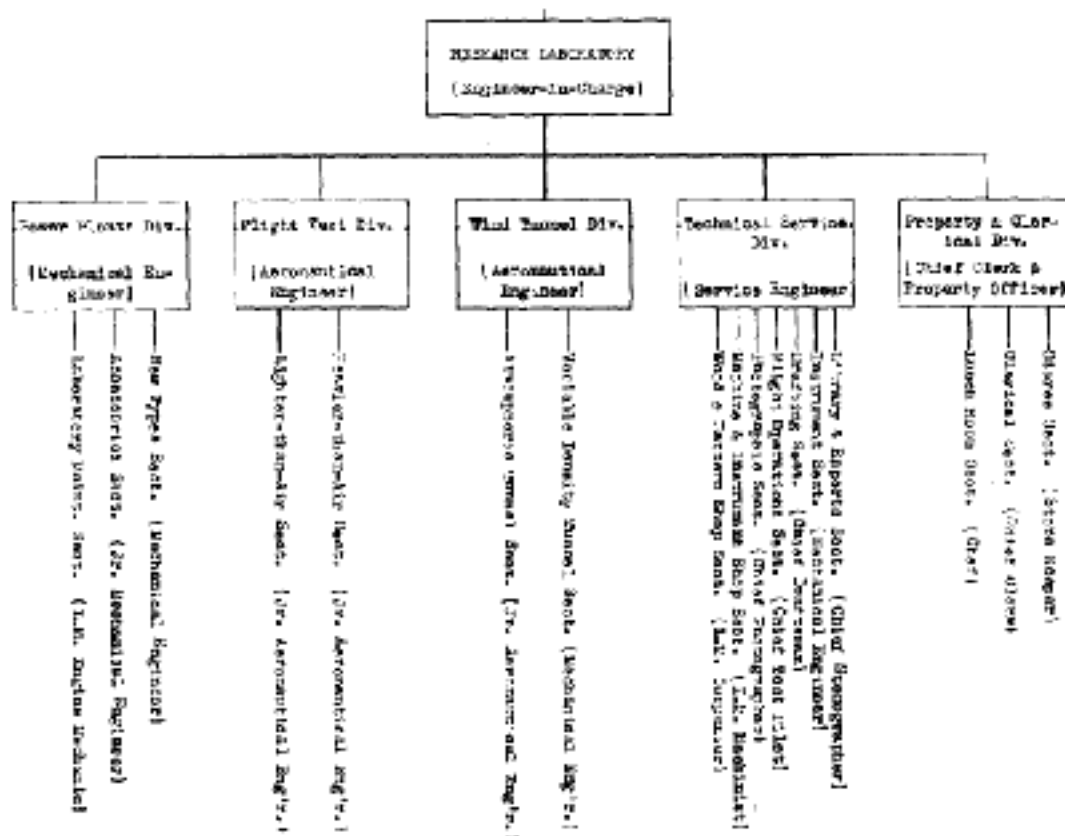

A. Yes.

October 1923 : The second Langley organization chart in

---

<sup>194</sup> <https://archive.org/stream/journalsoflegisl6oontauoft#page/118/mode/2up/search/aircraft>

<sup>195</sup> <https://archive.org/details/journalsoflegisl6oontauoft?q=Air+Engineers%27>

A statistical comparison of 1923 with 1924 shows that in 1923 there were 69 licensed aircraft and 44 pilots and pilot-air engineers as against only 24 aircraft and 31 pilots in the following year. The amount of flying however goes up from 2,830 hr. in 1923 to 4,389 hr. in 1924 and the number of passengers carried goes up from 5,324 to 9090. The number of air engineers went down from 186 to 170. These figures are of great interest as showing the increased efficiency of modern equipment and better organization.

CANADIAN AVIATION - 1924

15 January 1924 : Government House : Ottawa, Canada : AT THE GOVERNMENT HOUSE AT OTTAWA (pg 2621 of the THE CANADA GAZETTE published 02 Feb 1924)

HIS EXCELLENCY THE GOVERNOR GENERAL IN COUNCIL

WHEREAS certain changes in the *International Convention for Air Navigation and its Annexes* have been found necessary and have been agreed to by the contracting states to this Convention in the interests of the better regulation of Air Navigation ; And whereas experience in the control of Civil Aviation in Canada has necessitated certain amendments to the Regulations for the Canadian Air Force, 1920

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of National Defence, is pleased to approve and doth hereby approve the amendments and additions to said Regulations, shown on the attached schedule.

E. J. LEMAIRE - Clerk of the Privy Council .

Schedule of amendments AND ADDITIONS AIR Regulations CANADA, 1920

In accordance with the provisions of the National Defence Act, 1971, all reference to " The Air Banrd " in the Air Iteguhations shall ho cancelled and term " Minister of National Defence " substituted therefor Theae amendments and additions to the Air Iteguhations 1920 shall come into force forthwith upon their publication In the Canada (aatb, but no proceedings shall be commenced against any person founded upon any breach thereof committed within sixty days after the date of such publication except with the written consent of the Minister of National Defence .

The following sub-paragraph shall be iaaerted stta' pare . 2 subsection U, Part 1 .

V. " Contraotiog date " mans any state wh(eh it, for the time being, a party W the International Convention relating to Air Navigation, and those Regulations shall apply to aircraft pomeasing the nationality of a atate in nepeot of whioh state a derogation to His Malaty in the right of the Dominion of Canada has been granted under the protoool, as they apply to aircraft ponossing the nationality of a ontraotiog state.

The following sub-paragraph shai l . be inserted after pars. 3, Part II :

U) This paragraph does not apply to airantt duly registered in some other state or a foreign country with which Canada has made a Convention relating to interstate flying.

The following paratrapphs alull be substituted for paru. 8 and 9, Part 11 : 8.

(1) Upon every registration in Canada the Minister of National Defence aha11 aasipt to the registered aircraft a registration mark and shall grant a certificate of registration for which there alull be payable a fee of 16.

(2) In the event of any change in the ownership of an aircraft rogistered in Canada, then

(a) The registered owner shall forthwith notify the Department of National Defence, and

(b) The registration and certificate thereof shall lapse as from the date of such change of ownership .

9. When a registered aircraft has been de stroyed or permanently withdrawn from use, the registered owner shall as soon as possible notify the Department of National Defence aawrdingly, and the registration and the certificate thereof shalt lapse as from the data of such notification .

(2) Certificates of registration shall not remain valid unless endorsed by the Minister of National Defence at intervals not exceeding twelve enloodar months.

The following paragraphs shall be substituted for pat. 12, l'art 11 :

12, (1) No aircraft registered in Canada shall fly beyond Canada *unless it has been certified as airworthy by the Department of National Defence* .

## Notes on "Civil Aviation"

(2) Except private aircraft flying wholly within Canada, all aircraft registered in Canada shall be certified as airworthy by the *Department of National Defence* .

(9) Every aircraft entering Canada from abroad shall be in possession of a certificate of airworthiness issued by the proper authority of the foreign country or of the Dominion, Colony or Possession of Her Majesty in which it is registered .

The following sub-paragraph shall be inserted after para. 13, Part II :

(2) Certificate of airworthiness shall not remain valid unless endorsed by the Minister of National Defence at intervals not exceeding twelve months.

(3) Aircraft, in respect of which a certificate of airworthiness has been issued, under these regulations, may be inspected at any time by an authorised representative of the Minister of National Defence, and the Minister of National

Defence may, as a result of such inspection, annul or suspend the certificate of airworthiness of any aircraft deemed to be unsafe.

(4) Any certificate relating to the airworthiness of an aircraft may be cancelled or withdrawn at any time by the Minister of *National Defence* for cause.

The following sub-paragraph shall be inserted after para. 27, Part III :

27. (2) All state aircraft shall have at all reasonable times, the right of access to any licensed air harbour, subject to the conditions of the license.

The following paragraph shall be substituted for para. 30, Part III :

30. At every aerodrome and seaplane station, if an aircraft about to land or leave finds it necessary to make a circuit or partial circuit, such circuit or partial circuit shall, except in case of distress, be left handed (anticlockwise)

The following paragraph shall be substituted for para. 33 (2) (b) :

(b) To pilots, navigators and engineers of aircraft registered in another country, or a foreign country with which Canada has made a convention relating to Interstate flying, who hold licences authorising them to do so, issued by the proper authority in the country of registration or foreign country in which the aircraft is registered .

The following sub-paragraph shall be inserted after para. 48, Part IV .

48. (2) Licenses issued by the competent authority within His Majesty's Dominion, Colonies or Possessions, to a pilot, navigator or engineer shall for the purpose of these regulations have the same validity and effect as if they had been issued under these Regulations .

The following paragraphs shall be substituted for para. 98, Part X :

98. (1) No foreign aircraft flying between two points within Canada and no aircraft proceeding to or entering Canada from abroad shall carry any explosives or any arms or munitions of war.

(2) No aircraft shall enter or leave Canada having any secret or disguised place adapted for concealing goods.

The following paragraphs shall be substituted for para. 114, Part XI :

114. No commercial aircraft shall fly on any day unless it has previously been inspected by an Air Engineer on that day, or, in the case of a flight commencing not later than eight o'clock in the morning at some time between noon of the previous day, or the termination of the last flight made by the aircraft on the previous day, whichever is the later, and the commencement of the flight in question, and until such Air Engineer has signed certificates of the fitness of the flying machine to fly and the certificates

have been countersigned by the pilot . A certificate shall be entered in the log book of the aircraft and the log book of each engine and duplicates thereof may be delivered to the owner of the aircraft .

(2) If the Minister of National Defence has reason to believe, on complaint or otherwise, that a commercial aircraft within Canada is intended or is about to proceed on any flight in contravention to these regulations or while in a condition unfit for flight, he may give such directions and take such steps, by way of provisional detention of the aircraft, or otherwise in relation thereto, as may be necessary for the purpose of causing the circumstances relating to the flight to be investigated, or the aircraft to be inspected by authorised representatives of the Minister of National Defence, and may, upon the result of such investigation or inspection,

## Notes on "Civil Aviation"

cause the aircraft to be detained until he is satisfied that the regulations are being complied with, or until such alterations or repairs as he may consider necessary to render the aircraft fit for flight have been made.

(3) No person acting as, or carried in an aircraft for the purpose of acting as, pilot, navigator, Engineer, or operative member of the crew thereof, shall, while so acting or carried, be in a state of intoxication, or in a state in which, by reason of his having taken or used any sedative, narcotic or stimulant drug or preparation, his capacity to so act is impaired.

The following paragraph shall be substituted for para. 118, part XI :

118. Every aircraft in flight shall have on board its certificate of registration, the certificate of airworthiness, if any, the licenses of all the members of the crew requiring licenses, the authority and license for the equipment and working of the wireless installation, if any, and a journey log book containing the following particulars:-

(n) The category to which the aircraft belongs ; its nationality and registration marks ; the full name, nationality and residence of the owner ; the name of the maker, the description and the carrying capacity of the aircraft .

(b) In addition, for each journey :

(I) A record of all signals and wireless communications and observations concerning navigation ;

(II) The names, nationality and residences of the pilot and of each of the members of the crew ;

(III) The place, date and hour of departure, the route followed, and all incidents of the journey, including alightings .

The following shall be substituted for lines 1 and 2 of para . 111), part X 1 : 119,

There shall also be kept for every commercial aircraft .

The following paragraphs shall be substituted for para . 124, part XI :

124. No aircraft of a Nation with which Canada has not concluded a convention relating to international flying and no foreign military aircraft shall fly over or alight in Canada except with the express written permission of the Minister of National Defence .

(2) No aircraft shall engage in the carriage of persons or goods for hire between places in Canada, or carry out any operation for remuneration or reward over Canadian territory, unless it is registered as a commercial aircraft in Canada or in some other of His Majesty's dominions, colonies or possessions .

(3) In these Regulations references to passengers carried for hire or reward include references to persons carried in aircraft for the purposes of instruction in flying for which payment is made .

The following sub-paragraph shall be inserted after para . 129, part XI :

129 (2) In the case of an aircraft registered in Canada being damaged to such an extent that repairs other than ordinary running repairs or replacements are necessary, the owner or pilot thereof shall notify the Department of National Defence forthwith, giving particulars of such damage .

March 1924 : United Kingdom government creates (incorporates) "Imperial Airways" as a "State Owned Company". Imperial Airways Limited was formed from -

- British Marine Air Navigation Co (three flying boats)
- Daimler Airway (five aircraft)
- Handley Page Transport (three aircraft)
- Instone Air Line (two aircraft).

The board of the new company consisted of:

- Sir Eric Geddes (Chairman).
- Lieut-Colonel Frank Searle. (Managing Director).
- Major Humphrey (Manager).

Government representatives:

- Sir George Beharrell.
- Lieut-Colonel Frank Searle.
- Lieut-Colonel J. Barrett-Lennard.
- Sir Samuel Instone.
- Sir Herbert Hambling.

## Notes on "Civil Aviation"

- Major J. W. Hills

Great Britain had such a scheme, the Imperial Airship Scheme, put forward in 1924 after an extensive political tug-of-war by Ramsay MacDonald's first ever Labour government in Britain. The man behind the "scheme" (Programme) was the new Labour Secretary of State for Air, Lord Thomson of Cardington. The original idea for the "scheme" (Programme) had, in fact, come from proposals put forward in 1922–1923 by an ex-Royal Navy officer, Charles Dennistoun Burney. 1924 "scheme" (Programme) was to include both research programs and the manufacture of two very large rigid airships, the largest in the world at the time. These airships would be the R.100, designed and built by a private company, the Airship Guarantee Company, a subsidiary of Vickers headed by Burney, at Howden; and the R.101, designed and built by the Royal Airship Works, a government concern controlled by the Air Ministry, at Cardington. Two airships R-100 the Capitalist airship." and R-101 the Socialist airship," were identical, the R.100 and the R.101 were significantly different.

chief designer at the Airship Guarantee Company, the now-famous Barnes Wallis chief calculator was none other than Nevil Shute Norway. workmanship on the R.101, as well its general appearance, was clearly superior; unfortunately, the same could not always be said of the materials used. The airship was also full of untried gadgets and ideas. R.101 first flight, on 14 October 1929, proved without a shadow of a doubt that it was both seriously overweight and underpowered. In late June 1930, in order to give still more lift for the long and arduous trip to India, the R.101 went back into a shed at Cardington to be lengthened by almost fourteen metres. This process was only completed in late September 1930. On 16 December 1929, seven weeks after the R.101's first flight, the R.100 was gingerly taken out of its shed at Howden by four hundred soldiers; the first flight was a great success. It very quickly proved its superiority as a flying machine over its rival, the R.101. 100 m<sup>3</sup> of hydrogen can lift a mass of 109 kg. Accommodation for the 100 passengers was on two levels, in 14 two-berth and 18 four-berth cabins, just above the crew's quarters.

The 56-seat dining room, by far the largest room in the ship, was found on the lower level. On either side were cabins and a passageway leading to a balcony promenade from which the passengers could see the view below. The upper level included a gallery overlooking the dining room and, on either side, more blocks of cabins, a passageway and a smaller balcony promenade. A double set of staircases connected the two levels of the passenger coach

1924 : the UK Air Pilot , UK Air Ministry loose-leaf manual of flight regulations.

01 April 1924 : Imperial Airways (IAL) is created thru the merger of Daimler Airway, Handley Page Transport, Instone Air Line and British Marine Air Navigation. Frank Searle is appointed Imperial Airways' Managing Director. Woods Humphery is appointed General Manager. Searle and Woods Humphery raise Daimler Airway's standard of 1,000 hours of paid operations per year per aircraft to 2000 hours a year/aircraft for Imperial Airways and introduce new levels of interior comfort and lavishness to "rival that of the steam and air-ships of the era".

1 April 1924 : Royal Canadian Air Force created pursuant to an Order in Council passed under the authority of the Canadian Air Board Act, effectively reversing the 30 May 1919 Cabinet decision that Canada did not need and could not afford a post-war air force. The Order in Council provides that *discipline would be maintained in accordance with the British Air Force Act*, except where it was inconsistent with the applicable Order in Council. The Royal Canadian Air Force was originally made up of three branches: a Permanent Active Air Force, a Non-permanent Active Air Force and a Reserve Air Force. The original establishment for the RCAF was set at 62 officers and 262 airmen. This early RCAF was unique amongst world air forces as the majority of its work was non-military in nature. It performed the duties that today are often performed by civil agencies: photo-survey, casualty evacuation, air mail delivery, fisheries and border patrol, utility transport for government officials, etc. The RCAF assumed control of the original six stations of the Civil Operations Branch of the Air Board at Camp Borden, Winnipeg, Vancouver, High River (Alta), Ottawa and Dartmouth, and the headquarters was established in Ottawa. By 1927 there was strong opposition to the military performing these civil operations. Therefore, the Directorate of Civil Government Air Operations was created to administer and control all air operations carried out by state aircraft, except for exclusively military operations. DCGAO was supposed to be a civilian organization, but in reality it was commanded, administered and staffed by RCAF personnel who were seconded to or attached to this new directorate. By 1927-28 the RCAF had been reduced to two air stations (Camp Borden and Vancouver) and a headquarters, the other stations being transferred to DCGAO. As money was scarce and DCGAO had assumed most of the flying

## Notes on "Civil Aviation"

operations in Canada, this RCAF organization was essentially a paper force. The RCAF was essentially training personnel for DCGAO. source reference ; DND - RCAF News Article / The Royal Canadian Air Force Journal : "A return to the Royal Canadian Air Force ranks: A historical examination" Lieutenant-Colonel John Alexander, September 26, 2014

1 April 1924 : the *King's Regulations and Orders for the RCAF* come into effect.

King's Regulations and Orders (KR&O) for the RCAF were completed after two years of staff work largely based on the Royal Air Force and the United Kingdom Force Act, the enlisted ranks were adjusted to the following: warrant officer 1st class (WO1), warrant officer 2nd class (WO2), flight sergeant (FS), corporal (Cpl), leading aircraftman (LAC), aircraftman 1st class (AC1) and aircraftman 2nd class (AC2). the titles, "in many instances, originated with the Royal Naval Air Service and later were adopted by the Royal Flying Corps, which in turn became the RAF in 1918 - Deputy Chief of Personnel memorandum to the RCAF Senior Advisory Group, February 1965. source reference ; DND - RCAF News Article "A return to the Royal Canadian Air Force ranks: A historical examination" Lieutenant-Colonel John Alexander, September 26, 2014

No significant changes were made to officer ranks with the exception of adding air marshal and air chief marshal. Canada automatically adopted the Royal Air Force ranks for use in the RCAF when it based the RCAF KR&O upon the Royal Air Force KR&O and the United Kingdom Force Act. These ranks would remain in effect in the RCAF until unification in 1968. Principal among the arguments was that the ranks in use by the RCAF were no longer indicative of the officer's function as it was 40 years previously when the ranks were created. Other arguments included the lack of one-word ranks, thus leading to confusion among the public.

RCAF ranks also did not easily translate into French whereas the Canadian Army ranks did. Lastly, in 1965 it was considered advantageous to adopt the Canadian Army rank structure as it was similar to the rank structures used by the other members of the United Nations and the North Atlantic Treaty Organization with whom the RCAF could be expected work alongside on operations. The recommendation of this report was to retain the rank insignia but adopt the Canadian Army rank titles as this result would be "the best of both choices."

Prior to unification in 1968, the Canadian Army and the RCN had developed aviation and air arms of their own, which did not belong to the RCAF. source reference ; DND - RCAF News Article "A return to the Royal Canadian Air Force ranks: A historical examination" Lieutenant-Colonel John Alexander, September 26, 2014

The RCAF staff of 1924:

- a) Permanent Active Air Force : 62 officers (similar to today's Regular Force)
- b) Non-Permanent Active Air Force : 4 officers (similar to the Reserve Force)
- c) Non-commissioned members : 262.

In 1932, after seeing gradual growth, the RCAF was slashed by one-fifth, releasing 78 officers and 100 airmen because of the world wide depression at the time. This left the total strength at 103 officers and 591 airmen. For three years the RCAF was barely able to survive, but in 1935 the situation began to gradually improve. This time period also heralded a major change to the concept of operations. For years the RCAF had been engrossed in civil aviation; now it was about to become a military air force.

03 April 1924 : FLIGHT - NICKNAMED at its inception the " Million Pound Monopoly Company," and referred to in the agreement made by the Air Ministry with the British, Foreign, and Colonial Corporation, Ltd., as the Imperial Air Transport Co., Ltd., the new combine which took over, on Tuesday of this week, the services hitherto operated by four separate companies will be known, in future, as Imperial Airways, Ltd. This is certainly a less cumbersome imperial title suggested in the agreement, and, doubtless, the company will speedily adopt and be known by the initial letters " I.A.L."

Incidentally, it may be noted that, by coincidence or otherwise, these letters are the same as the initial letters of the Instone Air Line.

The new company, it may be recalled, has been formed with a capital of £1,000,000, while the Government is committed to another million spread over ten years, the new company is now a fait accompli, with the following board of Directors:—

Sir Eric Geddes (Chairman), Lord Invernairn, Sir George Beharrell, Sir Herbert Hambling and Major J. W. Hills (representing the Air Ministry), Colonel F. Searle (Managing Director), Colonel Barrett-Lennard, Sir Samuel Instone, and Mr. Hubert Scott-Paine. presumably the first three gentlemen represent the financial side, Sir Herbert Hambling (whose committee advocated the formation of the company) and Major Hills are to look after the Air Ministry's interests, the former probably on the financial and the latter on the technical and operational side. The four last named, of course, represent the four absorbed companies—Daimler Airways,

## Notes on "Civil Aviation"

Handley Page, Ltd., the Instone Air Line, and the British Marine Air Navigation Co., Ltd., respectively. It will be noted that no constructional firm is represented on the board of directors. It is laid down that the new company is not to undertake the manufacture of machines or engines, except with the consent of the President of the Air Council.

Sir Samuel Instone praised Col. Bristow, of Messrs. Ogilvie and Partners, who had been the guiding spirit of their technical staff; and to Major Greer and Mr. Eskill on the commercial side. Major Greer (general manager - Instone Air Line) said that the principle laid

down by the Instone Air Line was that safety should come before everything. In his opinion, the status of commercial pilots was bound to rise, rather than fall, as longer routes were operated and faster machines became available. Greater skill would be required, and he thought the Directors were right in regarding pilots not as aerial chauffeurs,<sup>1</sup> but as officers holding high responsibility.

### IN PARLIAMENT - Air Ministry and Ex-Service Men

LIEUT.-COL. MOORE-BRABAZON on March 28 asked the Under-Secretary of State for Air what are the names and categories of all ex-Service men dismissed from the Department of Civil Aviation or transferred from that department to other sections of the Ministry within the last 12 months; and why such officers were dispensed with while an officer with practically no ex-Service qualifications is still retained? Mr. Leach: In answer to the first part of the question, the appointments of Brigadier-General Festing, Controller of Aerodromes and Licensing, and Lieut.-Commander Bernard, Senior Assistant, were terminated on abolition of their posts, and no other suitable appointments could be offered to them; Mr. Ransom, Junior Assistant, was transferred on reduction of Civil Aviation establishment to the educational staff; and Mr. Lilley, Junior Assistant, whose appointment in the same directorate was terminated on reorganisation, has been offered a post in the Aeronautical Inspection Department. As regards the second part of the question, the officer referred to is filling a post for which he was considered to be more suitable than three of the officers named above, while the fourth (General Festing) could hardly be regarded as a candidate for it.

Lieut.-Colonel Moore-Brabazon asked the Under-Secretary of State for Air (1) whether, in view of the fact that competent ex-Service men at present in the directorate of contracts are not to be discharged from the Air Ministry, he will give an undertaking as to the minimum length of time that such men shall be retained, in order that they may not work under the constant anxiety of knowing that they may be discharged at any moment to make room for the promotion of permanent civil servants; (2) whether it is his intention to replace the ex-Service men who have been employed in the engine and supply sections since the inception of the Air Ministry by non-technical permanent civil servants; and whether, in view of the undesirability of transferring such important work as the purchase of technical equipment for the whole of the Air Force to non-technical non-flying permanent civil servants, and of the hardship involved in discharging ex-Service men who have devoted 10 years of their lives to Army and Government service, he will find some other way by which avenues of promotion can be opened to permanent civil servants already in employment.

Mr. Leach: As regards the first question, I regret that I am unable to give the undertaking suggested, which would be contrary to the policy of the public service in regard to unestablished staff. As regards the second question, I would refer the hon. and gallant member to my reply to Mr. Hogge on March 6.

### 03 April 1924 : FLIGHT - A New Canadian Aerodynamics Laboratory

A NEW aerodynamic laboratory, including a 4-ft. wind channel, has just recently been opened at the Toronto University. Hitherto the laboratory had been installed in the Mechanical Building of the University, but last year, owing to necessary expansions in other directions, it was found to be impossible to continue the wind channel work in this building. The Department of National Defence, recognising the importance of maintaining the laboratory, granted to the University five thousand dollars towards the erection of a new building, the additional cost being borne by the University.

## 03 April 1924 : FLIGHT : ROYAL AERONAUTICAL SOCIETY Official Notices Lecture.—The next lecture will take place

at 5.30 p.m. on April 3, at the Royal Society of Arts, when Colonel the Master of Sempill, A.F.C., Associate Fellow, will read a paper on "The British Aviation Mission to the Imperial Japanese Navy." Wilbur Wright Lecture.—Lieut.-Col. H. T. Tizard, A.F.C., Fellow, has accepted the Council's invitation to deliver the Wilbur Wright Memorial Lecture, which will take place at 8.30 p.m., on May 29, at the Royal Society of Arts, the subject being "Fuel Economy in Flight." This will be the twelfth lecture delivered in memory of Wilbur Wright, who died on May 30, 1912. under the auspices of the Society and the Trustees of the Wilbur Wright Memorial Lecture Fund. The full list of previous lectures is as follows :—

- 1913 : Sir Horace Darwin, F.R.S. : "Scientific Instruments : Their Design and Use in Aeronautics."
- 1914 : Sir R. T. Glazebrook, F.R.S. : "The Development of the Aeroplane."
- 1915 : Professor G. H. Bryan, F.R.S. : "The Rigid Dynamics of Circling Flight."
- 1916 : Mr. Griffith Brewer : "The Life and Work of Wilbur Wright."
- 1917 : Lieut.-Col. M. O'Gorman, C.B. : "Looking Ahead."
- 1918 : Dr. W. F. Durand : "Some Outstanding Problems in Aeronautics."
- 1919 : Prof. L. Bairstow, F.R.S. : "Progress of Aviation in the War Period."
- 1920 : Commander J. C. Hunsaker, U.S.N. : "Naval Architecture in Aeronautics."
- 1921 : Mr. G. I. Taylor, F.R.S. : "Scientific Methods in Aeronautics."
- 1922 : Lieut.-Col. A. Ogilvie, C.B.E. : "Some Aspects of Aeronautical Research."
- 1923 : Prof. J. S. Ames : "The Relation between Aeronautic Research and Aircraft Design."

RAeS Associate Fellowship Qualifications. 03 April 1924 : In view of misapprehensions which appear to exist as to the necessity for taking the Society's examination for Associate Fellowship, attention is drawn to Clause IX of the Regulations, which read as follows:—

### "IX.—EXEMPTIONS"

From the whole of the Examination : Any of the following qualifications will exempt a candidate from the whole of the examination :

- a) Any engineering degree, with advanced mathematics, of any University in the United Kingdom or in the British Dominions overseas. BUT - If the degree be without advanced mathematics, a further qualification of equivalent value will be required, or the candidate be required to take the Mathematics Section of the Examination of the Society.
- b) A diploma in aeronautics obtained at the Imperial College of Science and Technology, or
- c) A Cambridge University College B.A. in aeronautics.
- d) The Whitworth Scholarships.
- e) *The engineering diplomas of the Imperial College of Science and Technology, and of other Schools of Technology under the conditions relating to (a).*

### **From Part I.**

- a) Matriculation [Graduation] at a University or equivalent examination ;
- b) a science degree from any university of the United Kingdom or the British Dominions ; or
- c) having obtained a Whitworth Exhibition ; or
- d) having passed into R.N. College, Osborne ; R.N.E. College, R.M.A., R.M.C., or R.A.F. College, Cranwell.

Other forms of Exemptions:

The Royal Aeronautical Society Council will consider, on its merits, any other:

- 1- degree,
- 2 - diploma or

## Notes on "Civil Aviation"

3 - certificate of equivalent standing to those enumerated above which may have been obtained by a candidate *from any University or College in the United Kingdom or abroad.*"  
per W. LOCKWOOD MARSH, Secretary RAeS.

On 1 November 1936 the Department of Transport was created, and this relieved the burden of civil aviation from the RCAF. The RCAF returned to many of the air stations that had been civil in nature for so many years and formed military type squadrons (bomber, fighter and torpedo). In addition, RCAF Station Trenton, Ontario, was constructed at this time. As the RCAF saw real expansion, it was realized that the infrastructure to control this vast organization was stretched to its limit and it was time to decentralize. Four new regional commands were set up to report to RCAF HQ in Ottawa. These new commands were: Eastern Air Command in Halifax, Nova Scotia, with operational command of all units in Nova Scotia, Prince Edward Island, and New Brunswick (Newfoundland was still a British colony at the time)

Central Air Command in Winnipeg, Manitoba, with operational command of all units in Manitoba, Saskatchewan, and northern Ontario

Western Air Command in Vancouver, British Columbia, with operational command of units in British Columbia, and Alberta, and

Air Training Command in Toronto, Ontario, with control of all basic aircrew and groundcrew training and responsibility for Camp Borden and Trenton

RCAF HQ in Ottawa exercised command over all units in Ontario (except the north west) and Quebec. With the growing concern over a conflict in Europe, funding now became available for expansion and as a result of its reorganization, the RCAF was fairly well prepared for the coming war.

24 April 1924 : Fokker F.III "H-NABS" operated by KLM departs Lympe for Rotterdam and Amsterdam and is never heard of again, presumed to have crashed into the sea killing the pilot and both passengers.

1924 : the "Air Service" (RCAF) is almost fully occupied with Canadian government "civil flying" operations.

1924 : Jericho, BC - first Royal Canadian Air Force Base in BC, Jericho Beach Flying Boat Station

1924 : Wop May and Harry Adair form "Edmonton Grande Prairie Aircraft Company" using Curtiss "Jenny"

1924: RCAF discontinues flying services that could be provided by private companies. Government of Ontario forms Ontario Provincial Air Service (OPAS) with 13 Curtiss HS-2L flying boats (G-CAOR, G-CAOJ, G-CAO?, )

07 April 1924 : Canada - Inst. of Canadian Engineers : Ottawa Branch : A graphic description of the progress of the airplane and other forms of air mastery by man was given in a lecture before the Ottawa Branch, in the Victoria Museum on the evening of April 7th, by Wing Commander E. W. Stedman, O.B.E, M.E.I.C, late of the technical staff of the Royal Naval Air Service, afterwards technical director of the Handley Page Company, and now with the Air Board, (R.C.A.F.).<sup>196</sup>

July 1924, Henlow is selected as the permanent home of the School of Aeronautical Engineering 197. Although variously

renamed, this course functioned almost to the 1970s. In those days, students of the Officers' Engineering Course, who were nearly all ex-wartime pilots, spent two years learning basic engineering theory and the management of workshops. Squadron Leader Bailey and his staff of four were founding the forerunner of the RAF Technical College. Outstanding students on the course were sent to Cambridge University to read for a degree. In 1935, the Home Aircraft Depot, at Henlow was transferred to Technical Training Command. However, Henlow's dual role remained the same: training skilled engineers, and equipping operational squadrons with the latest aircraft. In 1938 an Air Ministry directive outlining policy for the training of a number of direct entrant officers who had varying degrees of engineering experience in civil life "to be initiated into the general demeanour, bearing, and duties of RAF Officers...." during WW2 To meet ever increasing demands, and the requirement to train more RAF technicians in the art of aircraft repair, the old Training Wing was reorganised and renamed No 14 School of Technical Training. The role of the RAF School of Aeronautical Engineering remained similar to that which it carried out pre-war, but officers transferred from other branches were soon outnumbered by commissioned civilians and from ex-airmen

commissioned for the duration of the war. Training of technical officers continued throughout the war but the course was reduced in both content and depth. 1961 the Secretary of State for Air announced the merger of the RAF Technical College and the RAF College at Cranwell in order to bring together the two main branches of the RAF, the flying and technical branches, so that the

officers of each would clearly understand the responsibilities

of the other. - see also Air Publication 938: Regulations for the Royal Air Force Reserve, Including the Reserve of the Air Force Officers and Men of the Royal Air Force Reserve, 1923

**1924 - BRITISH EMPIRE - THE KING'S ENGINEERS - THE ROYAL ARMY'S ENGINEER SERVICE**

The corps of Royal Engineers demands attention ; but it is by no means easy to bring the work of the sappers within the scope of this volume, as, in addition to their purely military duty, it is difficult to name a civilian job, from wireless telegraphy to the making of a window-sash, which is not handled by men of the corps. But sapping and mining, entrenching and escalading, bridging and pontooning, are more the kind of thing the public associates with the Royal Engineers. Subterranean warfare is so ancient that it was well understood and often practised centuries before the introduction of gunpowder. A favourite method was to undermine a wall or bastion, and replace the earth with wooden props, which were destroyed by burning when the mine was "fired," thus bringing the unsupported masonry tumbling down by its own weight. an officer of Royal Engineers stationed in India invented the "Bangalore torpedo. Bridge-building is quite a Royal Engineer speciality. Marines attacked a modern trench, and this brings us to another phase of Royal Engineer work. To bombard that trench effectively a gunner officer would have to arrange for frontal fire, enfilade fire, and oblique fire, at one and the same time, and even then he would find his "scheme" (Programme)spoilt by ingenious arrangements within the trench designed on purpose to localize the effect of a shell bursting among the defenders.

the Royal Engineers, it must be pointed out that the Corps controls the nerve centres of the Army, those wonderful field telegraphs, telephones, and wireless which keep a

## Notes on "Civil Aviation"

General in constant touch with troops scattered as only the requirements of modern war can distribute men.

intrepid airmen follow the sappers as a matter of course, as the Royal Flying Corps is a direct offshoot of the Royal Engineers. This branch of the Service has proved to be of such value in the field that an army does its best to get out of sight of the "bird-man."

The following schools are maintained by the Government of GREAT BRITAIN:

Royal Staff College, for the education of general staff officers ;

Royal Military Academy ;

Royal Military College ;

Ordnance College ;

Cavalry School ;

Camel Corps School ;

School of Gunnery ;

School of Military

Engineering;

Central Flying School;

School of Musketry; Schools of Electric Lighting;

Army Signal School;

A. S. C. training establishment;

Royal Army War College ;

Army Veterinary School ;

Royal Military School of Music;

Duke of York's Royal Military School;

Queen Victoria School

### METHODS OF ENTERING THE REGULAR ARMY ROYAL MILITARY COLLEGE, SANDHURST.

Methods of entry. There are two methods of obtaining admission to the Royal Military College :

1. By successful competition at an army entrance examination.

(a) The following enter without competition, provided they qualify in the obligatory subjects at an army entrance examination: King's Cadets; Honorary King's Cadets (10 annually) ; King's Indian Cadets (20 annually) ; Honorary King's Indian Cadets (3 annually) ; Pages of Honor.

2. On the nomination of the army council.

General qualification. Candidates must be unmarried, and will not be accepted unless, in the opinion of the army council, in every way suitable to hold a commission.

All successful and nominated candidates must pass a medical examination.

Age. Candidates must have attained the age of 17 and must not have attained the age of 19 ^ (the half year being reckoned by calendar

## Notes on "Civil Aviation"

months) on the 1st of June and 1st of December, respectively, for admission to the college at the commencement of the ensuing spring

and autumn terms.

Candidates of the West India Regiment may compete if under 21 years of age on the above dates.

### ARMY ENTRANCE EXAMINATION.

General outline of the army entrance examination. The army entrance examination is both qualifying and competitive, i. e., a candidate to be considered successful must obtain a qualifying minimum of marks in certain obligatory subjects and must, in addition, gain a sufficiently high place on the list to entitle him to one of the cadetships offered.

Certificates required. The candidate, when called upon to do so, will be required to furnish the following :

1. An extract from the register of his birth; or, if this can not be obtained, a certificate of his baptism, or other documentary evidence accompanied by a statutory declaration made by one of his parents or guardians before a magistrate, giving the exact date of birth.
2. If the candidate holds a commission in the special reserve of officers, militia, or territorial force, a recommendation from the commanding officer of the regiment.
3. On Form A the names of two responsible referees (not tutors, relatives, or near connections), who having known him during the four years previous to the examination will furnish a certificate as to character.

Subjects :

Class I

Obligatory

English.

English history and geography.

Mathematics A (elementary).

French or German.

Class II

Optional

German or French.

Latin.

Greek.

Science (physics and chemistry).

Mathematics B (intermediate).

Mathematics C (higher).

All subjects in Class I must be taken up, and a qualifying minimum of 33 per cent of the maximum marks must be obtained in each.

Only two of the subjects in Class II may be taken up, and if one of these is a modern language it must be different to the modern language selected in Class I.

In addition, free-hand drawing, to which 400 marks are allotted, may be taken up.

Certificate A, obtained in a unit of the officers' training corps, will entitle the holder to receive 200 marks.

### NOMINATION TO CADETSHIP BY THE ARMY COUNCIL.

Conditions. A certain number of suitable candidates, recommended by the headmasters of schools recognized for the purpose, are nominated to cadetships by the army council each half year.

To be eligible to recommendation by the headmaster a candidate must

1. Have attended continuously for at least three years one or more approved schools and remain in residence at the school until the end of the term immediately preceding the nomination.
2. Be within the prescribed limits of age.
3. Be an efficient member of the school contingent of the officers' training corps.

#### PRIZE CADETSHIPS.

A certain number of prize cadetships are awarded to successful competitors (other than candidates for commissions in the West India Regiment) in order of merit at each half-yearly army entrance examination. Emoluments varying in value up to a maximum of 255 may be attached to a prize cadetship.

#### ROYAL MILITARY ACADEMY, WOOLWICH.

Method of entry. Admission to the Royal Military Academy can only be gained by successful competition at an army entrance examination.

General qualifications. Candidates must be unmarried, and will not be accepted unless, in the opinion of the army council, in every way suitable to hold a commission.

All successful candidates must pass a medical examination.

Age. Candidates must have attained the age of 16½, and must not have attained the age of 19 (the half year being reckoned by calendar months) on the 1st of June for the summer and on the 1st of December for the winter army entrance examination.

#### ARMY ENTRANCE EXAMINATION.

General outline of army entrance examination. Same as for the Royal Military College.

Certificates required. Same as for the Royal Military College.

Subjects :

Class I Obligatory

English.

English history and geography.

Mathematics, A (elementary).

French or German.

Science (physics and chemistry).

Mathematics, B (intermediate).

Class II

Optional

German, French, Latin, or Greek.

Mathematics, C (higher).

All subjects in Class I must be taken up. Only one of the subjects in Class II may be taken up, and if it is a modern language it must be different to the modern language selected in Class I.

In addition, free-hand drawing, to which 400 marks are allotted, may be taken up.

Certificate A, obtained in the officers' training corps, will entitle the holder to receive 200 marks.

A candidate may, if eligible in respect to age, compete for both Royal Military Academy and Royal Military College at the same examination by taking up the subjects which are obligatory for the Royal Military Academy.

Medical examination. Same as for the Royal Military College.

Prize cadetships. A certain number of prize cadetships are awarded to successful competitors in order of merit at each half-yearly army entrance examination. Emoluments varying in value

## Notes on "Civil Aviation"

up to a maximum of 255 may be attached to a prize cadetship.

### ROYAL MILITARY COLLEGE, KINGSTON, CANADA.

General qualifications.

The college has a wider scope than the English military colleges, as, besides military subjects, it teaches civil engineering, surveying, etc.

Seven commissions in His Majesty's Regular Army are granted annually to the students:

Royal Engineers x1 ;  
Royal Artillery, x1 ;  
Cavalry, x1 ;  
Infantry, x1 ;  
Indian Army, x1 ;  
Army Service Corps x2.

Candidates must be British subjects, and they or their parents must have resided in Canada for two years immediately preceding the examination; short periods of absence in Europe for purposes of education to be included as residence.

Age. Between 16 and 20 on January 1st, preceding the examination.

General outline of tests which must be passed. Admission by competitive examination COMPETITIVE EXAMINATION.

Papers and certificates required with application.

- (1) Certified abstract from birth register in duplicate, or if not procurable, a declaration made before a magistrate;
- (2) a certificate of good character.

Subjects studied.

- (1) Mathematics;
- (2) grammar and composition, English or French;
- (3) geography;
- (4) history, British and Canadian;
- (5) French;
- (6) Latin;
- (7) geometrical drawing;
- (8) chemistry;
- (9) free-hand drawing.

Medical examination : The candidate must be medically examined before admission to the competitive examination.

### MILITARY FORCES OF THE SELF-GOVERNING DOMINIONS AND CROWN COLONIES.

General qualifications. A certain number of commissions are granted each half year to candidates from the self-governing dominions and Crown Colonies.

Candidates who fulfill the following conditions may be nominated by the governor general of a dominion or by the secretary of state for the colonies in the case of Crown Colonies. A candidate must:

- (a) Be unmarried.
- (5) Have attained the age of 20 and not have attained the age of 25 on April 1st if nominated in January, or on October 1st if nominated in July.
- (c) Have qualified at any army entrance examination, or have passed one of the examinations accepted in lieu thereof.
- (d) Have served as an officer in the local forces of the dominion or colony from which he is nominated, and have attended two annual trainings (each in a distinct year), or have seen active service in the field. A candidate for a commission in the Royal Artillery must be an officer of the artillery.
- (e) Have been attached to a British regular unit or to a unit of the permanent military force of the dominion or colony for two consecutive months at any time after the completion of his first training, and have obtained a satisfactory report.

### ARMY ENTRANCE EXAMINATION.

To whom to apply and date of application. A candidate must apply to his commanding officer at such date as will allow of the application reaching the war office not later than April 1st or September 1st for a June or November examination, respectively. Subjects. Same as for candidates from the special reserve, militia, or territorial force.

## Notes on "Civil Aviation"

General qualifications. A candidate for a commission from the ranks:

- (1) Must be specially recommended by his commanding officer;
- (2) must not be of lower rank than corporal;
- (3) must have two years' service;
- (4) must have a first-class certificate of education;
- (5) must have a clear regimental conduct sheet;
- (6) must be unmarried. Age. Must be under 26 years of age.

Medical examination. A certificate from a medical officer as to fitness for service, at home and abroad must be attached to the recommendation of the commanding officer.

General outline of tests which must be passed.

After the candidate's name has been approved by the Secretary of State he must pass in subject (a) as laid down in the King's Regulations.

He is then duly gazetted, and granted an outfit allowance.

(Source Ref : IE RECRUITMENT OF OFFICERS IN TIME OF PEACE IN THE PRINCIPAL ARMIES OF EUROPE - US ARMY WAR COLLEGE : WASHINGTON NOVEMBER, 1915)

### "SAPPER" RECRUITS - 1869

are enlisted from the age of eighteen to twenty-five years:

1st. By External Measurement ^ that is, they must be in height five feet six inches and upwards (one inch higher than is required for the line), and from thirty-three to thirty-five inches (according to their height ^s above the standard) round their chests.

2nd. By Internal Measurement, namely, they must be men of good character, able to read and write ; and lastly, by actual trial in the trades to which they profess to have been brought up or apprenticed, their qualifications must be scrupulously and accurately tested.

The attraction of intelligent recruits to the Corps of Royal Engineers, is precisely that which attracts to the London police, to the Irish constabulary, and indeed to all trades and professions, men of superior attainments,—namely, liberal remuneration, as follows:

a - In addition to their regular military pay, noncommissioned officers and sappers receive working pay according to their classification as workmen or artificers, for those days on which they are actually employed on the public works.

This classification depends on their skill and attention, and they are raised from one Rate to another, on the recommendations of the Captains.

### HALLS OF STUDY FOR Engineer OFFICERS.

Each newly-appointed officer while at the Royal Engineer Establishment is required to go through six distinct courses, for which the following periods are allotted.

Courses and duration in Months.

1. Drill and military duties . . . . . 3
2. Survey course . . . . . 6
3. Field-works and military bridges . . . 4
4. Architectural course . . . . . 0
5. Chemistry . . . , . . . . . 0
6. Telegraphy and submarine mining . . 1

Total months education in this course, exclusive of leave . . . . 21

The working hours of the Corps, as fixed by the Engineer Code, are as follows :—

From 1st March to 30th September, 9h. 50m

From 1st October to 31st October, 0h. 0m.

From 1st November to 30th November, 8h. 0m.

## Notes on "Civil Aviation"

From 1st December to 12th January, 7h. 15m.  
From 13th January to 13th February, 8h. Om.  
From 14th February to 28th February 9h. Om.

The time allowed to the men for dinner is one hour, viz., from 12 to 1 o'clock throughout the year.  
Before leaving the establishment each officer is examined:  
1st, in his military duties, as already stated, by a Board of Field Officers, no one of them an Engineer, and,  
2ndly, in writing, in the six different courses he has studied.

The written examination paper of each officer, after due consideration, is then forwarded to H.R.H. Commanding-in-Chief, by the Director, with a confidential report describing his general qualifications, and also stating—as a useful practical record—whether he has shown particular aptitude for any special branch of his profession.

Young officers, although gifted with temporary commissions, are not permanently gazetted to the Corps until they have completed their course of instruction at the Royal Engineer Establishment; and accordingly, if through indolence they exceed the time allotted, their permanent commissions may at the discretion of the Commander-in-Chief be antedated to a date subsequent to that upon which they were gazetted to temporary rank.

By this act they would lose the intermediate service, and with it, possibly, one or more steps in their Corps which, as the promotion is by seniority, would be, literally speaking, a life-long punishment.

All Officers of Engineers are required to go through the "Course of Instruction for Officers in General AND Special Surveying, Reconnaissance, Astronomy, Demolition, Survey for Determining Lines of Communication by Roads, Railways, and Canals" for which six months, or 156 working days, are allowed.

As the young officers advance in the different branches of military science, in which they are here instructed, in order to test their progress, they are required to compose plans and designs, with a report in writing thereon of various descriptions.

In reconnaissance the young officers (who at the Royal Military Academy had been well grounded in the preliminary principles of sketching) are here required to make a reconnaissance or military sketch on a scale of six inches to a mile, founded upon a base and system of triangulation, showing the position of towns, villages, churches, detached houses of importance, roads, streams, fords, bridges, &c., accompanied by a report in writing describing among other details whether the surrounding country is closely intersected with fences, and favourable or the contrary to the movement of the troops of an army. Whether with respect to any road included in their sketches there is any point where communication by it could be easily destroyed, either permanently, or by hasty demolition. What number of troops or horses could be sheltered at a given position on an emergency, or for continuance, and the number and description of carriages and carts that could be provided. Whether the country is well adapted for defence, especially noting any position that is capable of being rendered defensible speedily—whether each town or village in the sketch is close, open, surrounded by walled gardens, or other buildings which could readily be made defensible.

Whether there is any ground suitable for an encampment, either for a permanent, or for troops on the march, or any spot particularly adapted for a defensive position.

Which of the roads designated on the plan are capable of bearing continuous heavy traffic, and what means are at hand for their repair. Whether

the information reported has been obtained from the officer's personal observation, or derived only from report.

Lastly, all proper names are required to be in italics, in characters sufficiently large to be easily legible to a man on horseback.

It is unjust to the subaltern of the Hne, and unnecessary to the subaltern of Engineers to institute between them an invidious comparison which really should be made not between two individuals possibly brothers, but between two antagonistic national systems—the one scientific, the other unscientific. Under the one system, the mind not only of the young officer, but the minds of all his noncommissioned officers and men, are 1st, instructed in all sorts of mechanical contrivances, and 2ndly, are required and encouraged to execute for the benefit of the army all descriptions of work, in all weathers, and under all circumstances, with their own hands.

The other system I at present decline to describe. The inevitable result of the one system is that the subaltern of a single section of Royal Engineer Train A or B Troop is in fact a young general, having under him in his non-commissioned officers, and even in his men, an intelligent, well-educated staff, thoroughly competent to execute scientifically, either in his presence or in lonely detached localities, his orders and his wishes. Under this reasonable system, the sapper, laying aside his theodolite, throws off his coat, and (in obedience to orders) readily helps the driver to clean his horses and harness. In like manner, the drivers of the four leading horses of Pontoon A Troop, and also of those of B Troop, at the word of command, unhook, and having, purposely, breeched to their harness, and a joint in their long traces, at once harness themselves to carts.

Again, drivers, non-commissioned officers—several decorated—and even trumpeters, without prejudice, hook on their lassos, and for the benefit of the service work together the instant they are required, as drivers..

The Engineer-in-Chief.

The Engineer-in-Chief (the head of the Corps of Royal Engineers is directly responsible to His Excellency the Commander-in-Chief.

The Engineer-in-Chief is not a Staff Officer, but the technical adviser of the Commander-in-Chief on all military engineering matters,

## Notes on "Civil Aviation"

responsible for:

- (1) Engineer operations and engineer services during war and peace.
- (2) The preparedness for war of the engineering services.
- (3) The supply of engineer stores during war and peace.
- (4) The execution and maintenance of all military works.
- (5) The constructional efficiency, accuracy and economy of all projects and designs submitted by him.

subaltern - an officer in the British army below the rank of captain, especially a second lieutenant. term for a junior officer. Literally meaning "subordinate", subaltern is used to describe commissioned officers below the rank of captain. can also mean "someone who has been marginalized or oppressed"

A commission as second lieutenant in the Royal Engineers may be given:-

To a cadet who has passed through a course of instruction at the Royal Military Academy, Woolwich, or to a cadet of the Royal Military College, Kingston, Canada.

To a warrant officer or noncommissioned officer.

A commission as second lieutenant in the army service corps may be given:-

To a qualified officer of the regular army, of the royal marines, with not less than one year's commissioned service.

To a cadet who has passed through a course of instruction at the Royal Military College, Sandhurst, or to a cadet of the Royal Military College, Kingston, Canada.

To an officer of the special reserve of officers, militia, or territorial force.

To an officer of the local military forces of the colonies.

To a candidate from a university.

By open competition.

To a warrant officer or noncommissioned officer.

Before final appointment to the army reserve corps, all candidates shall be required to pass a probationary period of one year from the date of joining. When it is desirable in the interests of the service, the probationary period may be terminated earlier.

A commission as lieutenant on the list of district officers of the Royal Artillery, or in the coast battalion of the Royal Engineers, may be given to a quartermaster or a ridingmaster, or to a warrant officer or noncommissioned officer of the Royal Artillery or Royal Engineers, not over 40 years of age. The above limit of age may be extended in a case of promotion for service in the field.

General qualifications. To be eligible to attend a competitive examination, a candidate must fulfill the following conditions:

(a) He must be unmarried, and will not be accepted unless, in the opinion of the army council, he is in all respects suitable to hold a commission in the regular army.

(b) He must attain the age of 20 and not attain the age of 25 on the 1st of April for a March examination, or on the 1st of October for an examination in that month.

(c) He must have qualified at an army entrance examination or passed some other examination accepted in lieu thereof.

(d) He must serve for 18 months in the branch of the service to which he belongs.

NOTE. Certificates A and B obtained in the officers' training corps entitle a candidate to reductions in the period of total service and attachment mentioned above.

An officer of the special reserve of officers must have completed his probationary training and been confirmed in his appointment.

before leaving the establishment, every officer is examined in his military duties (exactly as if he held a commission in the line.

All Officers

on first joining the Royal Engineer establishment at Chatham, are to be placed under the orders of the Field Officer for Military Discipline

year- long apprenticeship of sorts permitted the new officer to learn and practice leadership,

b) The Organisation.

The Engineer organisation of the Army consists of two main branches,

- 1) the " Sappers and Miners " and " Pioneers " and
- 2) the Military Engineer Services.

The personnel of the Corps consists of

Royal Engineer officers,  
officers holding commission,  
a certain number of non-commissioned officers,  
and other ranks.

Field Troops are mounted units, trained to accompany cavalry, and are equipped to carry out hasty work.

Field companies are trained to accompany infantry.

Divisional headquarters' companies are small units containing highly qualified " tradesmen " and are trained to carry out technical work in connection with field workshops.

Typical Squadron Establishment.

The establishment of officers in a squadron consists of six officers in the headquarters and fifteen officers allotted to flying duties. This allows a reserve of one officer for each of the operative flights.

(h) The Aircraft Depot.

The Aircraft Depot may conveniently be described as the wholesale store and provision department of the Royal Air Force. Technical stores from the United Kingdom are received and, in the first instance, held in the Aircraft Depot. It is also the main workshop and repair shop of the Force, where all engine repairs, mechanical transport repairs, and aircraft repairs of any magnitude are carried out.

The Aircraft Park.

Relatively to the Aircraft Depot, the Aircraft Park may be described as a central retail establishment, intermediate between the squadrons and the Aircraft Depot. It receives stores from the depot and distributes them to the squadron. The stocks held in the park are, usually limited to items necessary at short notice for operations, and the quantities held are kept as low as distance from the depot and local conditions will admit. In war, the Aircraft Park is intended to be a mobile formation. In peace, the Aircraft Park is located at Lahore. New aeroplanes, received from the United Kingdom, are erected there, but no major repairs are undertaken.

## Notes on "Civil Aviation"

Composition of Establishments.

The personnel of the Royal Air Force consist of officers, non-commissioned officers and airmen, and artificers and mechanics belonging to the technical section.

The officers of the Royal Air Force are employed on: administrative, flying and technical duties;

All Officers of the Royal Air Force are required to be capable of flying an aeroplane.

The personnel of the technical section are employed entirely at the Depot and Park on technical trades, and consist of carpenters, fitters, fabric workers, instrument repairers, machinists, etc.

24 December 1924 : Imperial Airways de Havilland DH.34 "G-EBBX" operating a scheduled international flight to Paris, France was flying low over Purley, Surrey, United Kingdom before nosediving to the ground and overturning, followed by an explosion and fire which killed all eight people on board. Imperial Airways first fatal accident, it led to the first public inquiry into a civil aviation accident in the United Kingdom under the Air Navigation (Investigation of Accidents) Act, 1920, as amended.

1926 : US Department of Commerce - Aeronautics Branch is established. comprised of existing offices already engaged in aviation activities, was formed to oversee the implementation of the new law. Nine district offices of the Regulatory Division of the Aeronautics Branch were established to conduct inspections and checks of aircraft, pilots, mechanics, and facilities. They share licensing and certification responsibilities with the Washington, DC office<sup>199</sup>

Aviation Week 1925-06-29 VOL. XVIII. NO. 26 1925  
Civil Aviation in Canada

Canadian Report on Civil Aviation Shows that Aircraft Are Used Very Extensively

The Department of National Defence of the Dominion of Canada puts out each year a report on Civil Aviation and also on the civil operations of the Royal Canadian Air Force.

Those who get out this report are certainly to be congratulated. The contents gives a very complete birdseye view of what has been going on in the Dominion and the text is well illustrated with pictures and maps. The report for 1924 starts with a general introduction on the various phases through which aviation in general has passed, it then gives a summary of the year's progress abroad and at home. There is a brief sketch of the relations of Canada to the International Commission for Air Navigation followed by a much more detailed report on the control of civilian flying in Canada. The report then takes up commercial flying, flying done by the Provinces and finally the flying done by the R.C.A.F. for various other branches of the government. It will be seen that the report is very comprehensive and besides being useful to those who have only a general knowledge of aviation, it still contains much valuable information for the specialist in aeronautics.

### Report Lengthy

The report is too long to be summarized in detail but a brief review of a few of the salient features is made below for those who have not the time to read the full report. The Development in Canada has followed along rather different lines than those in the United States. Commercial flying by individuals and small companies which forms the backbone of commercial flying in the United States started out with a scattered population and the long winter this has been gradually dying out until now there are only a few individuals engaged in it. On the other hand the Canadian government has greatly encouraged the development of aircraft for special protection of fisheries etc. As early as 1919 the Canadian Air Board made a study of how aviation could be used by the various departments of the government. Although the Air Board has been reorganized and air work has been put under the department of National Defense the policy of the

## Notes on "Civil Aviation"

government to encourage in every way possible the use of aircraft by other government departments has continued. It is held that : "civilian operations are a great asset to the Air Force; apart from the direct value of training under varied conditions work of this kind strengthens the initiative and the resources of the officers and men in a way that no program of routine training can possibly do."

The dominion government at first loaned out their planes to the various provinces but having demonstrated the value of aircraft the central government decided to withdraw from this field and leave it open to commercial companies. This and during the past two years the energies of the Royal Canadian Air Force have been confined almost wholly to work with other Dominion Government services.

The development of the commercial companies which were to do the flying for the provincial governments does not seem to have been as successful as was hoped. The first company in the field was the Laurentide Co. one of the largest pulp and paper companies. Experimental work was done in 1919 using HS2Ls and later the Laurentide Air Services, Ltd. was organized to carry on the work. This company besides doing timber cruising and photographic work for the paper company entered into contracts with the Provincial Government of Ontario for the preparation of reconnaissance maps showing forest types in Northern Ontario and Quebec. The were acquired until the spring of 1924 when the Government of Ontario decided to establish their own air service and purchased the major part of the Laurentide equipment. The company retained one Vickers Vicking Napier Lion enrined amphibian and three HS2Ls for their own use. During 1924 they employed five pilots who flew 933 hr. or approximately 66,000 mi. The most important development of the season was their opening of an air mail passenger and freight service from Haileybury, Ontario into the Rouyn gold fields.

This is the first regular line of its kind to be establish -d in Canada. 890 pay passengers were carried, besides 78,0(10 lb. of freight and 15,000 letters and telegrams. The distribution of the companies flying time was freight, mail and passenger service 516 hr. test and instruction 12 hr. cross country 220 hr. survey and reconnaisauce 127 hr. photographic survey 55 hr. misc. 3 hr. No accident occurred involving injury to

One of the Fairchild Aerial Surveys Co. (of Canada) ships, a Huff-Daland seaplane The Dominion Aerial Exploration Co. using two HS2Le and two Norman Thompson flying boats flew 140 hr. on fire patrol, 180 on sketching and reconnaissance and 26 on photography. Reconnaissance and sketching was carried out over an area of approximately 24,000 sq. mi. The Fairchild Aerial Surveys Co. (of Canada) which is associated with the Fairchild Aerial Camera Corp. of New York continued its operations using an especially designed Huff Daland plane and a Curtiss Standard. Mosaic maps were made of 1,425 sq. mi. of property during 232 hr. of flying. The work was done in connection with a water storage project and also for the laying out of a new railroad.

The Alaska Airways, Ltd. which operates an international mail service between Seattle, Wash, and Victoria, B. C. flew 18,816 mi. in 242 hr. and carried 44,800 lb. of mail.

### Provincial Service

which has gone into operations on a considerable scale on its own account. During 1924 they purchased fourteen HS2ls and one Loening Airyacht. With this equipment 2,595 hr. were flown of which 1,547 was in fire protection work. 410 in sketching and photography, 85 in transportation and 66 in instruction. Five hundred and ninety-seven fires were located and 1,500 sq. mi. were mapped or sketched.

As has been stated before it is the policy of the R.C.A.F. to encourage flying by the provinces and commercial companies, and to limit themselves to cooperation with the various bureaus of the central government, such as the Department of the Interior, Department of Indian Affairs, Department of Marine and Fisheries and the Department of Customs. There is not space here to describe in detail this work but briefly 2,471 hr. or 163,988 mi. were flown of which 398 were service flying, 508 aerial survey, 1,366 forest patrol and 357 miscellaneous flying. The steady progress of this work and the growing cooperation of the other government departments is a hopeful sign and Americans would do well to become more familiar with the details of this government air work in Canada.

The government flying work during 1924 was greatly facilitated by the use of eight Vickers Vicking amphibians. Si:, of these worked in Manitoba where over 940 hr. of flying was done for fire protection. These ships are large enough so that they can carry fire fighting forces as well as locate the fires. In the case of small fires discovered before they gci underway the fire ranger and the crew of the plane put out the fire. If the fire had gained headway the plane flew be k to the base for men, pnmpps, hose and other fire fighting

## Notes on "Civil Aviation"

\* P The photographic work covered some 40,000 sq. mi. and required 450 hr. of flying. Canada with vast wildernesses and In: ;c areas dotted with lakes is particularly adapted for aerial mapping. Much of the work done however is in the far north where the sunlight hours are short and there is considerable rain. Much of the work is done in country which is practically unexplored and special methods have been devised of covering large areas with comparatively little living.

Until 1923 there was no regular airplane factory in Canada. During 1923 Canadian Vickers Ltd. obtained a contract for eight Vickers Vicking amphibians, during 1924 the firm built an experimental flying boat for forest patrol work which has proved very successful and has been recently fitted with a Wright Whirlwind engine. They also constructed and re-, modeled several Avros.

A statistical comparison of 1923 with 1924 shows that in 1923 there were 69 licensed aircraft and 44 pilots and pilot-air engineers as against only 24 aircraft and 31 pilots in the following year. The amount of flying however goes up from 2,830 hr. in 1923 to 4,389 hr. in 1924 and the number of passengers carried goes up from 5,324 to 9090. The number of air engineers went down from 186 to 170. These figures are of great interest as showing the increased efficiency of modern equipment and better organization.

**CANADIAN AVIATION - 1925**

DEPARTMENT OF NATIONAL DEFENCE - Canada

*During the season of 1922*, Parliament passed a bill entitled "The National Defence Act, 1922" creating the Department of National Defence, through the amalgamation of the Departments of Militia and Defence and the Naval Service and the Air Board. It was provided that "the Act should come into effect upon a date to be announced by proclamation"; and His Excellency the Governor General in Council subsequently issued a "*proclamation*" which brought the National Defence Act *into effect* from January 1, 1923.

Minister of National Defence : Hon. E. M. Macdonald, K.C., LL.B.

Minister's Private Secretary : Major T. W. MacDowell, V.C., D.S.O.

Deputy Minister : G. J. Desbarats, Esq., C.M.G.

**Canadian Defence Council**

President : The Hon. the Minister of National Defence : E. M. Macdonald, K.C., LL.B.

Vice President : The Deputy Minister of National Defence : G. J. Desbarats, Esq., C.M.G.

Members:

1. The Chief of Staff,
2. The Director of the Naval Service.

Associate Members:

1. The Adjutant General,
2. The Quartermaster-General,
3. The Director of the "Canadian" Air Force.

Secretary—A. B. Goldwyer-Lewis, Esq., B.A.

**Military and Naval Branches**

Chief of Staff : Major Gen. J. H. MacBrien, C.B., C.M.G., D.S.O.

Director of the Naval Service : Commodore W. Hose, C.B.E., A.D.C.

Quartermaster-General : Major Gen. E. C. Ashton, C.M.G., V.D.

Adjutant General : Major Gen. H. A. Panet, C.B., C.M.G., D.S.O.

Director of the Royal Canadian Air Force: Group Captain J. S. Scott, M.C., A.F.C., A.D.C.

**Civilian Branches**

Asst. Deputy Minister: H. W. Brown, Esq.

Secretary of Department : Lt.-Col. (Temporary) C. L. Panet.

Chief Accountant : R. P. Brown, Esq.

Director of Contracts : J. A. McCann, Esq.

Judge Advocate General—Bt. Major (temp.Col.) R. J. Orde.

Chief of the Printing and Stationery Branch, F. J. Boyle, Esq.

Chief Registration Clerk—A. E. Watterson, Esq.

**Branch of the General Staff**

Chief of Staff (National Defence)—Major-General

J. H. MacBrien, C.B., C.M.G., D.S.O., p.s.c.

Deputy Chief of the General Staff, and Director of Training and Staff Duties—Colonel A. G. L. McNaughton, temp. Col.-on-the-Staff (Hon. Brig.-Gen.), C.M.G., D.S.O., p.s.c.

Director of Military Training—Lieut.-Col. & Bt. Col. T. V. Anderson, D.S.O., R.C.E.

Director Military Operations and Intelligence— Bt. Col. (temp. Col.) J. S. Brown, C.M.G. D.S.O., p.s.c. (R.C.R.).

Director of Physical Training and Cadet Services— Lieut. Col. (temp. Col.) S. H. Hill, V.D., (m.s.c.) (s.m.h.) (s.s.).

Director of Historical Section—Major (temp. Col.) A. F. Duguid, D.S.O., (R.C.A.).

Staff Officer, Artillery Duties.—Colonel L. A. G. O. Roy, (R.C.A.).

Commandant Canadian Small Arms School— Lieut. Col. W. K. Walker, D.S.O., M.C.

Assistant Director Signals—Major (Brev. & temp. Lieut. Col.) E. Forde, D.S.O., (s.s.h.) (R.C.C. of S.).

Assistant Director Military Intelligence—Bt. Lt. Col. (Temp. Lieut. Col.) H. H. Matthews, C.M.G., D.S.O., (L.S.H., R.C.).

**Branch of the Adjutant-General**

Adjutant-General—Major-General H. A. Panet, C.B., C.M.G., D.S.O.

## Notes on "Civil Aviation"

Director General of Medical Services—Bt. Col. H. M. Jacques, D.S.O. (R.C.A.M.C.).  
Director of Organisation and Personal Services— Lt. Col. (temp. Col.) C. H. Hill, D.S.O., A.D.C. (R.C.R.).  
Director of Pay Services—Colonel A. O. Lambert, (R.C.A.P.C.).  
Director of Records—Bt. Lieut.-Col. (temp. Col.) F. L. Armstrong, O.B.E.  
Deputy Director General of Medical Services—Lt.- Col. Brev. Col., A. E. Snell, C.M.G., D.S.O., (R.C.A.M.C.)  
Assistant Director of Organization—(Bt. Lt.-Col. (temp. Lt.-Col.) H. J. Coghill, (P.P.C.L.I.)  
Assistant Director of Personal Services—Bt. Lt. Col. (temp. Lt.-Col.) D. McNiven, R.C.R.  
Assistant Director of Pay Services—Major H. T. Goodeve, R.C.A.P.C.

### Branch of the Quartermaster-General

Quartermaster-General—Major-General E. C. Ashton,  
C.M.G., V.D.  
Director of Engineer Services—Colonel A. C. Caldwell,  
(R.C.E.).  
Director of Supply and Transport—Lt. Col. (temp.  
Col.) H. C. Greer (R.C.A.S.C.)  
Director of Equipment and Ordnance Services—  
Bt. Lieut.-Col. (temp. Col.) M. C. Gillin, (R.-  
C.O.C.).  
Officer Administering Canadian Veterinary Services—  
Lieut.-Col. (Bt. Colonel) M. A. Piche, V.D.  
(R.C.A.V.C.)  
Assistant Director of Engineer Services—Bt. Col.  
(temp. Lt.-Col) S. H. Osier, C.M.G., D.S.O.,  
R.C.E.  
Assistant Director of Supplies and Transport—  
Major E. H. Spearing, R.C.A.S.C., (acting).

### MILITARY SERVICE

1. The Canadian Militia is composed of the Active Militia and Reserve.
2. The Active Militia consists of the Canadian Permanent Force and the Units of the Active Militia of the several branches of the Service which are organized and perform annual training.
3. The Reserve Militia consists of Reserve Units and of all able bodied citizens between the ages of 18 and 60 with the following exemptions:
  1. Members of the King's Privy Council of Canada;
  2. Judges of all Courts of Justice;
  3. Members of the executive Councils of Provinces;
  4. Deputy Ministers of the Federal and Provincial Governments;
  5. Clergy and Ministers of all denominations;
  6. Telegraph clerks in actual employment;
  7. Officers and clerks regularly employed in the collection of revenue;
  8. Wardens and officers of all public prisons and lunatic asylums;
  9. Members of the Naval Militia;
  10. Members of the police force and fire brigade permanently employed in incorporated cities, towns and villages;
  11. Professors in colleges and universities and teachers in religious orders;
  12. Persons disabled by bodily or mental infirmity;
  13. The only son of a widow, being her only support;
  14. Pilots and apprentice pilots during the season of navigation;
  15. Persons who, from the doctrines of their religion, are averse to bearing arms or rendering personal military service, under such conditions as are prescribed.
4. The Reserve Formations of the Active Militia, as distinguished from the Reserve Militia mentioned in paragraph 3, comprise:—
  - (a) Reserve units of City & Rural Corps.
  - (b) Reserve Depots as may be provided for in the establishments laid down for the Canadian Militia.
  - (c) The Reserve of Officers.
5. The Permanent Force is a small body of all Arms. Its duties are mainly to provide training depots and schools for the Non-Permanent Active Militia and the staffs necessary at Defence Headquarters and the Military Districts.

## Notes on "Civil Aviation"

6. The Non-Permanent Active Militia is a force consisting of all branches of the service, its total authorized strength at present being 10,458 officers and 111,461 other ranks.

(b) In addition to the above, authority exists for the formation of further units but their actual organization and recruiting of personnel is not to be proceeded with at present.

(c) Roughly speaking, all branches and active units are organized upon the British Army system.

Terms of Enlistment:

7. (a) Permanent and Non-Permanent Active Militia for a period of 3 years.

(b) Reserve Militia, for such period as is prescribed (namely, to age limit for various ranks).

(c) The Permanent Active Militia is available at all times for general service.

(d) The Governor-General in Council may place the Militia, or any part thereof, on active service anywhere in Canada, and also beyond Canada, for the defence thereof, at any time when it appears advisable so to do by reason of emergency.

THE Canadian AIR SERVICE - 1925 review:

Under the Act creating the Department of National Defence, the powers, duties and functions, vested in the Air Board by the Air Board Act, Statutes of 1919, are administered under the direction of the Minister of National Defence.

The Air Services have been *incorporated in the Department of National Defence* since the passing of that Act in 1922.

The "*Air Service*" has three functions:

(1) the air defence of the country.

(2) the conduct of flying operations for the civil services of the Government.

(3) the control of civil aviation.

*All three functions are administered by the Director of the Royal Canadian Air Force*, Group Captain J. S. Scott, [M.C., A.F.C., A.D.C.], who is responsible to the Chief of Staff for the execution of these duties.

The Royal Canadian Air Force (1925)

Director : Group Captain J.S Scott, M.C, A.F.C, A.D.C

The *Headquarters organization* divided into three branches:—

1. Assistant Director - Air Staff and Personnel:

Staff Officer - Operations:

Staff Officer - Training:

Staff Officer - Personnel:

Staff Officer - Administration:

Staff Officer - Intelligence:

2. Assistant Director - Supply & Research:

Air Supply Officer :

Staff Officer - Research:

Aircraft Inspection Officer:

Stores Inspection Officer:

Stores Officer - Supply:

3. Assistant Director & Secretary (Civil) : J.A Wilson

Controller of Civil Aviation: Flt.-Lt., A.T.N Cowley

Liason Officer - London, U.K: Sqn Ldr., G.M Croil

RCAF - Formation & Units

Headquarters at Ottawa, and Units as follows:—

The *Headquarters organization* divided into three branches:—

1. Assistant Director, Operations, Training, Staff Duties—Wing Commander J. L. Gordon, D.F.C.

2. Assistant Director, Technical and Equipment, — Wing Commander E. W. Stedman, O.B.E.

3. Assistant Director and Secretary—Mr. J. A. Wilson, Civil Aviation and other civil duties.

The "*flying organization*" divided into six (6) Units / squadrons

1. Vancouver, B.C.—Officer Commanding—Squadron Leader J. H. Tudhope, M.C.

## Notes on "Civil Aviation"

2. High River, Alta.—Officer Commanding—Squadron Leader A. L. Cuffe .
3. Winnipeg, Man.—Officer Commanding—Squadron Leader G. O. Johnson, M.C.
4. Camp Borden, Ont.—Officer Commanding—Wing Commander L. S. Breadner, D.S.C.
5. Ottawa, Ont.—Officer Commanding—Squadron Leader A. B. Shearer.
6. Dartmouth, N. S.—Officer Commanding—Flying Officer T. A. Lawrence.

The Royal Canadian Air Force consists of Headquarters at Ottawa, and Units as follows:—

The *Headquarters organization* divided into three branches:—

1. Assistant Director, Operations, Training, Staff Duties—Wing Commander J. L. Gordon, D.F.C.
2. Assistant Director, Technical and Equipment, — Wing Commander E. W. Stedman, O.B.E.
3. Assistant Director and Secretary—Mr. J. A. Wilson, Civil Aviation and other civil duties.

The *"flying organization"* divided into six (6) Units / squadrons

1. Vancouver, B.C.—Officer Commanding—Squadron Leader J. H. Tudhope, M.C.
2. High River, Alta.—Officer Commanding—Squadron Leader A. L. Cuffe .
3. Winnipeg, Man.—Officer Commanding—Squadron Leader G. O. Johnson, M.C.
4. Camp Borden, Ont.—Officer Commanding—Wing Commander L. S. Breadner, D.S.C.
5. Ottawa, Ont.—Officer Commanding—Squadron Leader A. B. Shearer.
6. Dartmouth, N. S.—Officer Commanding—Flying Officer T. A. Lawrence.

Camp Borden, Ont. is the main training station;

The technical depot, including workshops and central stores, is at Ottawa.

The units at Vancouver, High River, Winnipeg, Ottawa and Dartmouth, in addition to Air Force duties, have undertaken large programmes of civil operations, principally for the forestry and survey services of the Dominion Government.

The total personnel employed number 84 officers, 360 men, and 16 civilians.

The control of civil aviation in Canada is *under the direction of an officer of "the Permanent Air Force"*, who is appointed as *Acting Controller of Civil Aviation* and is *responsible for the technical work involved in the inspection, registration and licensing of aircraft* and air harbours; and *the examination and licensing of commercial pilots and air engineers*; and "other duties" as called for in the Air Regulations.

08 February 1925 : England : A Farman F.60 "Goliath" F-GEAB operated by Air Union on a cargo flight en-route Paris to Croyden suffers an engine failure over the Channel and crashes whilst attempting to land at Lympne.

1925 : Frank Searle is forced out his position as general manager of Imperial Airways. Searle is replaced by Mr. Woods Humphrey.

1925 : England : University Air Squadrons (UAS) were set up at Cambridge and Oxford, to promote 'air mindedness' and to stimulate an interest in, and research into, "matters aeronautical".

*"It will be a great means of enabling the spirit of aviation to spread .... It will give the brains of the country a chance of being used for aeronautical purposes which will be an important factor in home defence"* - Sir Hugh Trenchard

Although the UASs were staffed and funded by the Air Ministry, membership involved no "Service obligations" whatsoever. UAS members were not subject to the Air Force Act and they did not wear a military uniform.<sup>200</sup>

19 May 1925 : Canadian Parliament authorises the establishment for the RCAF that provided for service squadrons to fulfill operational requirements of "various government departments and agencies".

RCAF Headquarters - Ottawa, Ontario

No. 1 Flying Training Station - Camp Borden, Ontario

No. 1 (Operations) Wing - Winnipeg, Manitoba

---

<sup>200</sup> UNIVERSITY AIR SQUADRONS IN WW II - Wing Commander Gerry Margiotta

## Notes on "Civil Aviation"

- No. 1 (Operations) Squadron - Vancouver, British Columbia
- No. 2 (Operations) Squadron - High River, Alberta
- No. 3 (Operations) Squadron - Ottawa, Ontario
- No. 4 (Operations) Squadron - Dartmouth, Nova Scotia

1925 : RCAF deeply involved in civil government air operations (members often thought of themselves as "bush pilots in uniform.") air force flying time in 1925 was almost equally divided between "service" flying (2,593 hours) and "aid to the civil power" (2,519 hours).

1925: OPAS operates Loening M23 'Air Yacht' flying boat G-CAOO 19 May 1925 :

1925 : Laurentide Air Service Ltd. ceases its' operation

1925 -Patricia Airways and Exploration Ltd begins operation, Northern Air Service Ltd begins operation w/ Curtiss JN-4 (first ski flying, first airmail, first aerial survey, and first flight across the Canadian Rockies)

6 February 1923 : RCAF issues destruction orders for all remaining "Lighter-than-Air" materials.

27 October - 06 November 1925 : 1st International Conference on Private Air Law, Paris : Forty-four States officially represented, with observers from the United States, Japan and Hungary. At the conclusion of the Conference,

1. a draft convention on the liability of carriers in international transport was approved by the delegates and
2. a resolution was adopted setting up a "**committee of experts**", to be known as **CITEJA**, which was to continue the work of the Conference. The first questions for study by CITEJA were:

1. **Damage caused by aircraft to goods and persons on the ground**
2. **Compulsory insurance**
3. **Establishment of aeronautical registers, ownership of aircraft, vested rights and mortgages**
4. **Seizure**
5. **Renting of aircraft**
6. **Aerial collisions**
7. **Legal status of aircraft commander**
8. **Bill of lading (air consignment note)**
9. **Uniform rules for the determination of the nationality of an aircraft**

The proposed committee was to be a purely advisory and completely independent organization both in its methods of work and its operation. This was to ensure the preservation of each State's "complete sovereignty in all matters affecting possible change in internal legislation.

8 December 1925 : United States : S. 41, introduced - provided for a Bureau of Aeronautics within the Department of Commerce through which the secretary of commerce would establish rules and regulations for the control and encouragement of civil aviation in the United States. five months later it became the United States Air Commerce Act of 1926.

1925 : First flight of the De Havilland DH.60 "Moth" light weight, two-place, single-engine biplane:

- fuselage covered with plywood
- wings and tail surfaces covered with fabric.
- 23 feet, 11 inches (7.290 meters) long
- wingspan of 30 feet (9.144 meters)
- overall height of 8 feet, 9.5 inches (2.680 meters).
- Empty weight of 920 pounds (417 kilograms)
- loaded weight of 1,650 pounds (748 kilograms)
- powered by an 60 Hp "Cirrus" inline 4-cylinder direct-drive engine manufactured by the A.D.C. Aircraft Ltd.
- two-bladed wooden propeller
- cruise speed of 85 miles per hour (137 kilometers per hour)
- maximum speed of 102 miles per hour (164 kilometers per hour).
- Range for the standard aircraft is 320 miles (515 kilometers).
- service ceiling is 14,500 feet (4,420 meters)

De Havilland built 8 pre-production and 31 production DH.60 Moths.

595 DH.60s of all variants were built by De Havilland at Stag Lane.

A total of 2112 DH 60s were built between 1925 and 1934.

## Notes on "Civil Aviation"

Entry into the DH.60 is not very easy, especially to the front seat, for which it is necessary to climb over – or seemingly through – a flying wire.

Throughout this exercise care must be taken to step only on the narrow strengthened walkway on the lower wing, which is on different sides on different variants; any error of judgement here leads to a foot going through the fabric and close of play for the day.

The hinged flaps on the DH.60 cockpit sides to ease entry and exit was introduced in 1930.

Solo flying of the DH.60 is done from the rear cockpit. The front seat of the DH.60 is on the centre of gravity - this was done so that there was no trim change for the pupil (student pilot) when the instructor got out.

Putting the front seat on the centre of gravity was common practice for almost all tandem two-seat training aircraft of the day, reversed only with the introduction of the DHC-1 Chipmunk in 1950.

The early DH.60 had a "very hard undercarriage" with a straight-through axle and large thin wheels and high pressure (40 lbs/sq in) tires. On later Moths a more tolerant "split" unit with wheels of smaller diameter and lower tyre pressure was introduced. The early Moths bounced impressively on poor landings.

09 June 1925 : H.S. Quigley takes over operations of Dominion Aerial Explorations Ltd. and Canadian Airways Ltd was created.

**CANADIAN AVIATION - 1926**

1926 : Canadian Almanac :

DEPARTMENT OF NATIONAL DEFENCE - Canada

*During 1922*, the Canadian Parliament passed a bill entitled "The National Defence Act, 1922" creating the *Department of National Defence*. This was accomplished through the amalgamation of:

1. Department of Defence
2. Department of the Militia
3. Department of the Naval Service
4. the Air Board

It was provided that "the Act should come into effect upon a date to be announced by proclamation" in order to the National Defence Act *into effect* from January 1, 1923. His Excellency the Governor General (in Council) subsequently issued that "*proclamation*" which brought the National Defence Act *into effect*.

1926 Canadian Minister of National Defence : Hon. E. M. Macdonald, K.C., LL.B.

Minister of Defence's "Private Secretary" : Major T. W. MacDowell, V.C., D.S.O.

Deputy Minister of Defence : G. J. Desbarats, Esq., C.M.G.

**1926 Canadian Defence Council**

President : The Hon. the Minister of National Defence : E. M. Macdonald, K.C., LL.B.

Vice President : The Deputy Minister of National Defence : G. J. Desbarats, Esq., C.M.G.

**Members:**

The Chief of Staff,  
The Director of the Naval Service.

**Associate Members:**

The Adjutant General,  
The Quartermaster-General,  
The Director of the "Canadian" Air Force.

Secretary—A. B. Goldwyer-Lewis, Esq., B.A.

**Military and Naval Branch Members:**

Chief of Staff : Major Gen. J. H. MacBrien, C.B., C.M.G., D.S.O.

Director of the Naval Service : Commodore W. Hose, C.B.E., A.D.C.

Quartermaster-General : Major Gen. E. C. Ashton, C.M.G., V.D.

Adjutant General : Major Gen. H. A. Panet, C.B., C.M.G., D.S.O.

Director of the Royal Canadian Air Force: Group Captain J. S. Scott, M.C., A.F.C., A.D.C.

**Civilian Branch Members:**

Asst. Deputy Minister: H. W. Brown, Esq.

Secretary of Department : Lt.-Col. (Temporary) C. L. Panet.

Chief Accountant : R. P. Brown, Esq.

Director of Contracts : J. A. McCann, Esq.

Judge Advocate General—Bt. Major (temp.Col.) R. J. Orde.

Chief of the Printing and Stationery Branch, F. J. Boyle, Esq.

Chief Registration Clerk—A. E. Watterson, Esq.

**Branch of the General Staff - Members:**

Chief of Staff (National Defence)—Major-General

J. H. MacBrien, C.B., C.M.G., D.S.O., p.s.c.

Deputy Chief of the General Staff, and Director of Training and Staff Duties—Colonel A. G. L. McNaughton, temp.

Col.-on-the-Staff (Hon. Brig.-Gen.), C.M.G., D.S.O., p.s.c.

Director of Military Training—Lieut.-Col. & Bt. Col. T. V. Anderson, D.S.O., R.C.E.

Director Military Operations and Intelligence— Bt. Col. (temp. Col.) J. S. Brown, C.M.G. D.S.O., p.s.c. (R.C.R.).

Director of Physical Training and Cadet Services— Lieut. Col. (temp. Col.) S. H. Hill, V.D., (m.s.c.) (s.m.h.) (s.s.).

## Notes on "Civil Aviation"

Director of Historical Section—Major (temp. Col.) A. F. Duguid, D.S.O., (R.C.A.).  
Staff Officer, Artillery Duties.—Colonel L. A. G. O. Roy, (R.C.A.).  
Commandant Canadian Small Arms School— Lieut. Col. W. K. Walker, D.S.O., M.C.  
Assistant Director Signals—Major (Brev. & temp. Lieut. Col.) E. Forde, D.S.O., (s.s.h.) (R.C.C. of S.).  
Assistant Director Military Intelligence—Bt. Lt. Col. (Temp. Lieut. Col.) H. H. Matthews, C.M.G., D.S.O., (L.S.H., R.C.).

### Branch of the Adjutant-General, Members:

Adjutant-General—Major-General H. A. Panet, C.B., C.M.G., D.S.O.  
Director General of Medical Services—Bt. Col. H. M. Jacques, D.S.O. (R.C.A.M.C.).  
Director of Organisation and Personal Services— Lt. Col. (temp. Col.) C. H. Hill, D.S.O., A.D.C. (R.C.R.).  
Director of Pay Services—Colonel A. O. Lambert, (R.C.A.P.C.).  
Director of Records—Bt. Lieut.-Col. (temp. Col.) F. L. Armstrong, O.B.E.  
Deputy Director General of Medical Services—Lt.- Col. Brev. Col., A. E. Snell, C.M.G., D.S.O., (R.C.A.M.C.)  
Assistant Director of Organization—(Bt. Lt.-Col. (temp. Lt.-Col.) H. J. Coghill, (P.P.C.L.I.)  
Assistant Director of Personal Services—Bt. Lt. Col. (temp. Lt.-Col.) D. McNiven, R.C.R.  
Assistant Director of Pay Services—Major H. T. Goodeve, R.C.A.P.C.

### Branch of the Quartermaster-General, Members:

Quartermaster-General—Major-General E. C. Ashton, C.M.G., V.D.  
Director of Engineer Services—Colonel A. C. Caldwell, (R.C.E.).  
Director of Supply and Transport—Lt. Col. (temp. Col.) H. C. Greer (R.C.A.S.C.)  
Director of Equipment and Ordnance Services— Bt. Lieut.-Col. (temp. Col.) M. C. Gillin, (R.-C.O.C.).  
Officer Administering Canadian Veterinary Services— Lieut.-Col. (Bt. Colonel) M. A. Piche, V.D. (R.C.A.V.C.)  
Assistant Director of Engineer Services—Bt. Col. (temp. Lt.-Col) S. H. Osier, C.M.G., D.S.O., R.C.E.  
Assistant Director of Supplies and Transport— Major E. H. Spearing, R.C.A.S.C., (acting).

1926 Canadian "Military Service"

The Canadian Militia is composed of:

- a) the Active Militia, and
- b) the Reserve.

The Active Militia consists of the Canadian Permanent Force and the Units of the Active Militia of the "several branches" of the Service which are organized and perform annual training.

The Reserve Militia consists of Reserve Units and of all able bodied citizens between the ages of 18 and 60 with the following exemptions:

1. Members of the King's Privy Council of Canada;
2. Judges of all Courts of Justice;
3. Members of the executive Councils of Provinces;
4. Deputy Ministers of the Federal and Provincial Governments;
5. Clergy and Ministers of all denominations;
6. Telegraph clerks in actual employment;
7. Officers and clerks regularly employed in the collection of revenue;
8. Wardens and officers of all public prisons and lunatic asylums;
9. Members of the Naval Militia;
10. Members of the police force and fire brigade permanently employed in incorporated cities, towns and villages;
11. Professors in colleges and universities and teachers in religious orders;
12. Persons disabled by bodily or mental infirmity;

## Notes on "Civil Aviation"

13. The only son of a widow, being her only support;
  14. *Pilots and apprentice pilots during the season of navigation;*
  15. Persons who, from the doctrines of their religion, are averse to bearing arms or rendering personal military service, under such conditions as are prescribed.
4. The Reserve Formations of the Active Militia, as distinguished from the Reserve Militia mentioned in paragraph 3, comprise:—
- (a) Reserve units of City & Rural Corps.
  - (b) Reserve Depots as may be provided for in the establishments laid down for the Canadian Militia.
  - (c) The Reserve of Officers.
5. The Permanent Force is a small body of all Arms. The duties of the "Permanent Force" are mainly to provide:
1. training depots and schools for the Non-Permanent Active Militia and
  2. the staffs (personnel) necessary at Defence Headquarters and the Military Districts.
6. The Non-Permanent Active Militia is a force *consisting of all branches of the service*, its total authorized strength in 1926 being 10,458 officers and 111,461 other ranks.

(b) In addition to the above, *authority exists for the formation of further units* but their actual organization and recruiting of personnel is not to be proceeded with at present.

Roughly speaking, *all branches and active units are organized upon the British Army system.*

Terms of Enlistment:

Permanent and Non-Permanent Active Militia enlist for a period of 3 years.

The Reserve Militia enlist for the period as is prescribed (namely, to age limit for various ranks).

The Permanent Active Militia *is available at all times* for general service.

The Governor-General in Council may place the Militia, *or any part thereof*, on active service anywhere in Canada, and also beyond Canada, for the defence thereof, at any time when it appears advisable so to do by reason of emergency.

### The Canadian AIR Service - 1925 review:

Under the Act creating the Department of National Defence, the powers, duties and functions, vested in the Air Board by the Air Board Act, Statutes of 1919, are administered under the direction of the Minister of National Defence.

The Air Services have been *incorporated in the Department of National Defence* since 1922.

The "Air Service" has three functions:

- (1) the air defence of the country.
- (2) the conduct of flying operations for the civil services of the Government.
- (3) the control of civil aviation.

*All three functions are administered by the Director of the Royal Canadian Air Force*, Group Captain J. S. Scott, [M.C., A.F.C., A.D.C., who is responsible to the Chief of Staff for the execution of these duties.

The Royal Canadian Air Force (1926)

Director : Group Captain J.S Scott, M.C, A.F.C, A.D.C

The *Headquarters organization* divided into three branches:—

1. Assistant Director - Air Staff and Personnel:

Staff Officer - Operations:

Staff Officer - Training:

Staff Officer - Personnel:

Staff Officer - Administration:

Staff Officer - Intelligence:

2. Assistant Director - Supply & Research:

Air Supply Officer :

Staff Officer - Research:

Aircraft Inspection Officer:

Stores Inspection Officer:

Stores Officer - Supply:

3. Assistant Director & Secretary (Civil) : J.A Wilson

## Notes on "Civil Aviation"

Controller of Civil Aviation: Flt.-Lt., A.T.N Cowley

Liason Officer - London, U.K: Sqn Ldr., G.M Croil

### RCAF - Formation & Units

Headquarters at Ottawa, and Units as follows:—

The *Headquarters organization* divided into three branches:—

1. Assistant Director, Operations, Training, Staff Duties—Wing Commander J. L. Gordon, D.F.C.
2. Assistant Director, Technical and Equipment, — Wing Commander E. W. Stedman, O.B.E.
3. Assistant Director and Secretary—Mr. J. A. Wilson, Civil Aviation and other civil duties.

The "*flying organization*" divided into six (6) Units / squadrons

1. Vancouver, B.C.—Officer Commanding—Squadron Leader J. H. Tudhope, M.C.
2. High River, Alta.—Officer Commanding—Squadron Leader A. L. Cuffe .
3. Winnipeg, Man.—Officer Commanding—Squadron Leader G. O. Johnson, M.C.
4. Camp Borden, Ont.—Officer Commanding—Wing Commander L. S. Breadner, D.S.C.
5. Ottawa, Ont.—Officer Commanding—Squadron Leader A. B. Shearer.
6. Dartmouth, N. S.—Officer Commanding—Flying Officer T. A. Lawrence.

Camp Borden, Ont. is the main training station;

The technical depot, including workshops and central stores, is at Ottawa.

The units at Vancouver, High River, Winnipeg, Ottawa and Dartmouth, in addition to Air Force duties, have undertaken large programmes of civil operations, principally for the forestry and survey services of the Dominion Government.

The total personnel employed number 84 officers, 360 men, and 16 civilians.

The control of civil aviation in Canada is *under the direction of an officer of "the Permanent Air Force"*, who is appointed as *Acting Controller of Civil Aviation* and is *responsible for the technical work involved in the inspection, registration and licensing of aircraft* and air harbours; and *the examination and licensing of commercial pilots and air engineers*; and "other duties" as called for in the Air Regulations.

On September 30th, 1925, there were in force, certificates and licenses as follows:

- A. Private Air Pilot's Certificates : 7
- B. Commercial Air Pilot's Certificates : 29
- C. Air Engineer's Certificates : 86
- D. Registration of Aircraft Certificates : 36
- E. Air Harbour Licenses : 24

As there has been little development of aviation as a means for the transportation of mails, supplies or passengers, the work of operating companies has largely been in connection with forest patrol and survey work for the Provincial Governments, lumber and pulp companies. Aerial photography is also beginning to play an important part in such work.

### 1926 : Great Britain: THE BRITISH GOVERNMENT

There were few changes in the Baldwin Ministry in 1925. At the General Election on October 29, 1924, the Conservatives had been returned with a decisive majority over the Labor and Liberal parties combined.

The figures were:—

Conservatives, 412;

Labour 152;

Liberals 42;

Constitutionalists, 3;

others 6.

During the year the Conservatives suffered several reverses at bye-elections, but not sufficient to affect their command of the House of Commons.

Only four women were elected in October 1924, as compared with eight in the previous Parliament.

As in the administration of Ramsay Macdonald, one woman was included in the Ministry. As yet no woman has enjoyed Cabinet rank in England.

## Notes on "Civil Aviation"

The large majority of the Conservatives did not accurately reflect the politics of the voters. The Conservatives had 412 members of Parliament for a popular vote of 8,000,000. The Labour Party had 187 Members with a popular vote of 5,500,000; and the Liberals 42 Members with a popular vote of 3,000,000.

The Conservatives thus secured one member for every 20,000 Conservative votes.

The Labour Party one Member for each 36,000; and the Liberals had to secure 76,000 votes for each Member elected.

The House of Commons, as now constituted, has 615 members, as compared with 707 in that elected in December, 1918, and 670 the number before the passing of the Representation of the People Act of 1918, the Act which besides increasing the number of members, gave the vote, under certain restrictions, to women.

The Irish representation is now only 13 (all from Northern Ireland), instead of 105: owing to the erection of the Irish Free State which embraces the three Southern Provinces and which sends no members to the British House of Commons.

The House of Commons has never been able to seat all its members.

On the floor of the House there are 346 seats and the side gallery, set apart for Members, seats 82—making a total of 450 seats for 615 members.

The Strangers' Galleries will seat in all 209 persons, but if a member occupies a seat in them he is debarred from speaking.

The House of Lords, in 1924 had 738 members, of whom 104 held peerages created since 1916.

26 peerages were held by women, whom the House of Lords has so far excluded from membership. The 28 peers, elected by the Irish peers for life, were not affected by the Government of Ireland Act of 1922. The composition of the House of Lords is as follows:—Hereditary peers, 661; Irish elected life peers, 28; Scottish peers, elected for each new parliament by the Scottish House of Lords, which comes together at Holyrood, solely for this purpose, 16; Archbishops, 2; Bishops, 24; Lords of Appeal—(life peers created to act as Law Lords), 6. In 1925 there were 121 peers, including several minors, who had not taken their seats.

No title attaches to office in Cabinet or Administration. The title Right Honourable is given to all Privy Councillors. These are appointed for life, and every member of the Cabinet, who is not already of the Privy Council, is made a Privy Councillor.

The title Honourable is given to every member of the House of Commons.

### THE OFFICE OF PRIME MINISTER - UK

Prime Minister—Rt. Hon. Stanley Baldwin

*Until 1894 the office of the Prime Minister was officially unknown.*

The office of "Prime Minister" developed as a consequence of the establishment of responsible government under a party leader, but the Prime-Minister, as such, had no official rank and no precedence.

The first official recognition of "Prime Minister" was in the form of a mention in the Court Circular, and it was 1905 before, by Royal Warrant, that the Prime Minister was given precedence next after the Archbishop of York.

There is no salary attached to the office of Prime Minister, but the holder usually combines some other office which carries a salary.

Mr. Baldwin is First Lord of the Treasury, an office usually held by the Prime Minister.

Mr. Ramsay MacDonald was also Secretary of State for Foreign Affairs, but accepted only one salary for the two offices.

In precedence, the Prime Minister now has his place between the Archbishop of York and the Lord Chancellor of Ireland, and precedence over every member of his Government except the Lord Chancellor.

### THE GOVERNMENT DEPARTMENTS

#### THE TREASURY

Chancellor of the Exchequer—Rt. Hon. Winston Churchill.

First Lord of the Treasury—Rt. Hon. Stanley Baldwin

Financial Secretary to the Treasury—Walter Guinness

Parliamentary Secretary to the Treasury— Rt. Hon. B. M. Eyres-Monsell, (£2,000)

Lords Commissioners of the Treasury—Whips, £1,000 each.

1. Major G. Hennessy;
2. Major W. Cope;
3. F. C. Thomson, K.C.;
4. Capt. Viscount Curzon, (unpaid);
5. Viscount Stanley, (unpaid)

Assistant Gov. Whip (unpaid), Capt. H. D. R. Margesson.

The Treasury, of which the Chancellor of the Exchequer is the political head, provides the means for meeting the charges for the military, naval, and civil services.

The Parliamentary heads of each of the spending and administrative departments of the Government are responsible

## Notes on "Civil Aviation"

for the estimates for their respective departments ; but it is the duty of the Chancellor of the Exchequer, with the permanent Secretary of the Treasury, to check all these estimates before they are submitted to the House of Commons in Committee of Supply.

The Cabinet becomes responsible for estimates which have been submitted to Parliament, and the rejection or reduction of an estimate by the House of Commons is tantamount to a defeat of the Government.

The duties which bring the Chancellor of the Exchequer most prominently before the country, are those in connection with the Budget.

The first Lord of the Treasury is one of its Parliamentary heads ; but the duties of the First Lord are little more than nominal, and the office is usually held by the Leader of the House of Commons.

The Parliamentary Secretary to the Treasury is the official title of the Government whip in the House of Commons. The Junior Lords are his assistants.

The Financial Secretary represents the Treasury in the House of Commons.

### THE HOME OFFICE

Secretary of State for Home Affairs: —Rt. Hon. Sir William Joynson-Hicks.

Under Secretary of State for Home Affairs: —Godfrey Locker-Lamson, (£1,500)

The Home Department has the control of:

1. the London police force, and also
2. the oversight of the police forces in the counties and municipal boroughs ;
3. responsible for the administration of the factory code, and the laws relating to mining.
4. and, generally speaking, the Department is responsible for the internal peace of the country.

Within the purview of the Home Office fall:

1. Prisons,
2. convict establishments,
3. criminal lunatic asylums,
4. execution
5. s, and
6. *all matters connected with the post-judicial execution of the criminal law.*

### The AIR Ministry

Secretary of State for Air—Rt. Hon. Sir Samuel J. G. Hoare.

Under Secretary—Major Sir. Philip Sassoon.

*At the close of the war the Air Ministry was made part of the War Department.*

So much objection was raised to this arrangement that in 1921 the Air Ministry was again erected into a separate Department. In 1923, when the first Baldwin Cabinet was formed, the Air Ministry was included in the Cabinet.

The Air Ministry was also included in both the Labour and Conservative Cabinets of 1924.

### THE FOREIGN OFFICE

Secretary of State for Foreign Affairs—Rt. Hon. J. Austen Chamberlain.

Under Secretary—Rt. Hon. Ronald McNeill, (£1,500)

All diplomatic intercourse is conducted by the Secretary of State for Foreign Affairs, who is usually of the House of Lords. The office is next in rank and importance to that of Premier, and is sometimes held in conjunction with that office. Ambassadors and consuls receive their instructions from the Foreign Office.

Foreign ambassadors in London have their audiences with the Secretary of State, and he also conducts the negotiations for international treaties. The Under Secretary represents the Department in the House of Commons.

### THE COLONIAL OFFICE

Secretary of State for the Colonies and Dominion Affairs—Rt. Hon. Lt.-Col. L. C. M. S. Amery.

Under Secretary—Hon. W. G. Ormsby-Gore, (£1,500)

The Colonial Office dates back to 1660, when a Committee of the Privy Council was appointed for the Plantations, as the Colonies were then called. This Council was continued until 1768, when colonial affairs were placed under the control of a Secretary of State.

When the United States secured their independence in 1783, the office of Colonial Secretary was abolished, and colonial affairs were managed from the Home Office.

From 1794 to 1854 the colonies were under the War Department.

In 1854 a separate Secretaryship of State for the Colonies was created.

## Notes on "Civil Aviation"

In August, 1907, the Colonial Office was organized in 3 departments;

- (1) Dominion Department, concerned exclusively with the self-governing colonies
- (2) Crown Department concerned with Crown Colonies; and
- (3) Department having charge of legal and financial business.

In 1925, the premier announced that the Colonial Office no longer correspond to the actual constitutional position within the Empire, and that the conduct of affairs for the Dominions would henceforth be under a separate new Secretaryship of State for Dominion Affairs, but that for convenience the new Secretaryship would be vested in the person of the Secretary of State for the Colonies.

### THE ADMIRALTY

First Lord of the Admiralty—Rt. Hon. Wm. C. Bridgeman.

Civil Lord of the Admiralty—Earl Stanhope, (£1,000)

Parliamentary and Financial Secretary to the Admiralty—  
J. C. C. Davidson.

The Admiralty, which has charge of the Royal Navy, is administered by Lords Commissioners. The head of the Department, who is always of the Cabinet, is known as the First Lord of the Admiralty. The other Lords Commissioners or Junior Lords are officers without seats in Parliament, and are respectively at the heads of the departments into which the Admiralty is divided. The foreign movements of ships are at the instance of the Cabinet, the Foreign Office, and the Colonial Office, and it is from these authorities that the Lords of the Admiralty receive their orders. In time of war the orders go from the Cabinet. At other times the movements of vessels are directed by the Foreign Office and the Colonial Office.

### THE BOARD OF TRADE

President of the Board of Trade—Rt. Hon. Sir Philip Cunliffe-Lister.

Parliamentary Secretaries to the Board of Trade—  
Overseas Trade Department, Arthur Michael Samuel,  
(£1,200)

Mines Department, Lt.-Col. G. R. Lane-Fox.

The Board of Trade is in charge of the administration of the laws relating to limited liability companies, and bankruptcy; and it also has the oversight of all matters connected with the mercantile marine, harbours, canals, railways, and street car lines and electric lighting. The importance and range of work of the Board of Trade have been greatly increased since the War.

In 1921, it took over the duties of the Ministries of Food and Shipping.

### THE MINISTRY OF TRANSPORT

Minister—Lt.-Col. Rt. Hon. Wilfred Ashley.

Parliamentary Secretary—Lt.-Col. J. T. C. Moore-Brabazon.

The Ministry of Transport, created during the War to oversee the transportation of war materials and food, has proved of more permanent usefulness than was anticipated. It is proposed to turn over its duties to the Board of Trade, but this has not yet been done.

### LAW OFFICERS OF THE CROWN

Attorney General—Rt. Hon. Sir Douglas McG. Hogg,  
(£7,000 and Fees)

Solicitor General—Sir Thomas Inskip, K.C., (£6,000 and Fees)

## Notes on "Civil Aviation"

### OFFICERS OF THE HOUSE OF COMMONS

Speaker—Rt. Hon. J.H. Whitley, (£10,000).

Deputy Speaker and Chairman of Committee of Ways and Means—James Fitzalan Hope, (£2,500).

Clerk of the House—Sir T. Lonsdale Webster, (£1,800).

Serjeant at Arms—Admiral Sir Colin Keppel, (£1,000).

Chaplain to the Speaker—Rev. Canon Carnegie.

Librarian—Austin Smythe.

Rt. Hon. J. H. Whitley, Speaker of the House of Commons, was first elected to his high office in April, 1921, on the retirement of Speaker Lowther. The holder of the office is strictly non-partisan, and is customarily re-elected irrespective of changes of party majorities in the House. A pension (£4,000 a year) is usually voted to a retiring Speaker and he is raised to the House of Lords.

November 1926 : Canadian Prime Minister William Lyon Mackenzie King pledges Canada's assistance in the Imperial Airship "scheme" (Programme) at the Imperial Conference.

Of all the Dominions only Canada and South Africa show any inclination toward the Airship Scheme;

Australia, New Zealand and Ireland were not convinced by the British Air Ministry's well-rehearsed presentation.

Despite problems at the House of Commons, money was set aside for the construction of an airship base, airport and mooring mast in eastern Canada.

1926 Imperial Conference attendees:

King George V

Monroe (Newfoundland)

Coates (New Zealand)

Bruce (Australia), Hertzog (Union of South Africa)

Cosgrave (Irish Free State)

Baldwin (United Kingdom)

William Lyon Mackenzie King (Canada)

15 November 1926 : The Balfour Declaration (1926) is issued by the 1926 Imperial Conference of British Empire leaders in London, First proposed by South African Prime Minister J. B. M. Hertzog and Prime Minister William Lyon Mackenzie King of Canada the declaration was named for President of the Council (and former Prime Minister of the United Kingdom) Lord Arthur Balfour who drafted the document.

It declared the United Kingdom and the Dominions to be:

- I. autonomous Communities within the British Empire,
- II. equal in status,
- III. in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and
- IV. freely associated as members of the British Commonwealth of Nations. ...

The Inter-Imperial Relations Committee, chaired by Balfour, drew up the document preparatory to its unanimous approval by the imperial premiers on 15 November 1926.

The Declaration accepted the growing political and diplomatic independence of the Dominions in the years after World War I. It also recommended that the governors-general, the representatives of the King who acted for the Crown as de facto head of

## Notes on "Civil Aviation"

state in each dominion, should no longer also serve automatically as the representative of the British government in diplomatic relations between the countries.

In following years, High Commissioners were gradually appointed, whose duties were soon recognised to be virtually identical to those of an ambassador.[citation needed] The first such British High Commissioner was appointed to Ottawa in 1928.

The conclusions of the imperial premiers conference of 1926 were restated by the 1930 conference and incorporated in the Statute of Westminster of December 1931, by which the British parliament renounced any legislative authority over dominion affairs, except as specifically provided in law.

British experts came over in May 1927 to choose a site; they visited a number of locations in Ontario, Quebec and Atlantic Canada, finally settling on a piece of land on the south shore of Montreal, at St Hubert, and officially announcing this decision in August 1927.

Work on the airfield began almost immediately and St Hubert's first airmail delivery took place in November 1927.

summer of 1927 that the British Air Ministry decides to send the R.100 to Canada, and the R.101 to India. The R.100 made a successful, and very fast, mooring at St Hubert shortly after sunrise on the morning of 1 August 1930; the flight had taken almost seventy-nine hours. Thanks to a tail wind, the return transatlantic flight took only fifty-six and a half hours; safe return to England, on 16 August, the R.100 went straight into a shed at Cardington to be thoroughly examined, repaired and overhauled in preparation for other long-distance flights...

R.101 departed the mooring mast at Cardington on the evening of 4 October 1930 for India under a temporary certificate of airworthiness in bad weather. fifty-four people including Lord Thomson, the Director of Civil Aviation and the Director of Airship Development on board. After seven and a half hours in the air, the R.101 had covered only 355 km; an engine had failed temporarily and the weather was worsening. At approximately 02:10, near Beauvais, France, a large tear appeared in the outer cover, near the nose, exposing the gas cells to severe chaffing and buffeting.

As hydrogen gas poured out of the enormous gash, lift decreased and the R.101 went into a steep dive, from which it recovered; it dove a second time and gently made contact with a small hill.

Suddenly, the R.101 burst into flames; it was all over in a matter of minutes.

Only eight people managed to walk away from the wreckage, two of them dying the following day. the feeling of impending doom hovering over the entire scheme.

With the gradual closure of the Howden airship base, the engineers at the Airship Guarantee Company found themselves unemployed. A public enquiry was held, but its 1931 report could not pinpoint the exact cause of the accident.

It did say, however, that public policy decisions had played a part in the early departure, and subsequent crash, of the R.101. the R.101 disaster signalled the end of the Imperial Airship Scheme, and of all work on rigid airships in Great Britain. As in all cases before, the British government decided to terminate its airship activities without any prior consultation with the Dominions; Canada, like the others, was simply told that it was all over. As a result, the R.100 was broken up between December 1931 and February 1932; the structure was dismantled, flattened with a steamroller and sold at scrap value.

Empire Airship R.100 / R.101 specifications 1929)

R.100

Overall length 719 ft 9-1/2 in (219.38 m)

Maximum diameter 133 ft 4 in (40.64 m)

Hydrogen capacity 5,156,000 cu ft (146 000 m<sup>3</sup>)

Number of gas cells 15

Gross lift 350,610 lb (159 040 kg)

Weight, empty 236,365 lb (107 215 kg)

Disposable load 114,245 lb (51 820 kg)

including water ballast and crew 40,325 lb (18 290 kg)

fuel, oil and payload 73,920 lb (33 530 kg)

Powerplant 6 Rolls Royce Condor 12 cylinder engines

## Notes on "Civil Aviation"

Total power 3,900 hp  
Speed, maximum 81.5 mph (131 km/h)  
Speed, cruising 64 mph (103 km/h)  
Still air range with payload of 6,720 lb (3 050 kg) 4,095 mi (6 590 km)  
Endurance 64 hrs

R.101

12 cylinder 8 cylinder  
Total power 3,900 hp 2,600 hp  
Speed, maximum 81.5 mph (131 km/h) 70 mph (112.6 km/h)  
Speed, cruising 64 mph (103 km/h) 61.5 mph (99 km/h)  
Still air range with payload  
of 6,720 lb (3 050 kg) 4,095 mi (6 590 km) 2,585 mi (4 160 km)  
Endurance 64 hrs 42 hrs

1926 : Pacific Airways - operates Curtiss HS-2L flying boat G-CAFH.

1926 - Canadian Annual year book : CONSTITUTION OF THE MILITARY FORCES . GENERAL. The Military Forces of Canada are constituted under the Militia Act of 1906, which, except for minor amendments, is still in force. The forces consist of an Active Militia (permanent and non-permanent) and a Reserve Militia. All male inhabitants of the age of 18 years and upwards, and under 60, not exempt or disqualified by law, and who are British subjects, are liable for service in the Militia in the event of a levee en masse. The Militia is liable for service in Canada and beyond Canada for the defence of the Dominion. **In time of war and when being exercised, its members become subject to the Army Act.** The Directorate of the Canadian Air Force forms a section of the Branch of the Chief of Staff, and is administered by a Director under the immediate supervision of the Chief of Staff. The Chief of the General Staff is responsible for co-ordinating the Staff work at Militia Headquarters, and the Deputy Minister for all dealings with private individuals or other Government Departments.

Under the provisions of the National Defence Act, 1922, the powers, duties and functions given the Air Board under the Air Board Act of 1919 are vested in the Minister of National Defence. The executive duties previously carried out by the Air Board are now performed by the Royal Canadian Air Force. The Air Force includes a directorate in the Chief of Staff's Branch of the Department of National Defence, headquarters at Ottawa. (b) **The control of commercial flying.**: This branch is charged with the inspection and licensing of aircraft for airworthiness; the examination of pilots, **air engineers** and air navigators for competency; the licensing of air harbours, and the supervision of commercial operations generally.

December 1926 : Winnipeg grain merchant James Richardson purchases an old HS-2L flying boat and a new Fokker Super Universal, begins freight operation as Western Canada Airways to Red lake Ontario.

1926 : Western Canada Airways (WCA) begins operation using the Fokker Universal Type : G-CAJD. The Fokker Standard Universal was designed / built in 1926. The fuselage and tail surfaces were made of welded tubular steel, covered with fabric. The wings were plywood with a Sitka spruce spar and the engine was the 200hp Wright J-4B (Win one for the Gipper!) The pilot sat in an open cockpit while the engineer travelled comfortably in the enclosed cargo section.

1926 : The Elliott Brothers of Sioux Lookout, Ontario design new skis to replace the Fokker designed skis. (Admiral Byrd uses the Elliot Brothers skis on his aircraft for all Antarctic expeditions)

## Notes on "Civil Aviation"

1926 : Beverley Shenstone meets ex-RFC (RAF) pilot Frank Wood at U of T. while employed by Wood as canoe guide.

1926 : United States adopts the German idea to use Radio for Communication as well as Direction finding.

18 August 1926 : Blériot 155 F-AIEB "Wilbur Wright" operated by Air Union with 1 pilot and 14 passengers suffers an engine failure and crashes attempting a forced landing at Hurst, Kent. The pilot and two of the 13 passengers are killed. Blériot 155 Four-engined airliner:

Crew: Two pilots plus one radio operator

Capacity: 17 passengers

Length: 14.75 m (48 ft 5 in)

Wingspan: 26.00 m (85 ft 3 in)

Height: 5.23 m (17 ft 2 in)

Wing area: 135.0 m<sup>2</sup> (1,452 ft<sup>2</sup>)

Empty weight: 3,650 kg (8,047 lb)

Gross weight: 6,350 kg (14,000 lb)

Powerplant: 4 × Renault 8Fg piston engines of 172 kW (230 hp) each. 2 above the top wing, 1 on either side of the fuselage.

Maximum speed: 175 km/h (109 mph)

Range: 500 km (302 miles)

Endurance: 3 hrs

Payload: 1500 kg

Service ceiling: 4,000 m (13,120 ft)

02 October 1926 : Blériot 155 F-AICQ "Clement Ader" operated by Air Union with 1 pilot and 6 passengers catches fire in the air and crashes at Leigh, Kent during a landing attempt at Penhurst airfield, there are no survivors. Only 2 of this aircraft type were built, the other aircraft of the type being F-AIEB. Air Union was a French airline established January 1, 1923 as the result of a merger between the airlines Compagnie des Messageries Aériennes and Compagnie des Grands Express Aériens. Air Union was merged with four other French airlines to become Air France on 7 October 1933.

November 1926 : DeHavilland 66 "HERCULES" is first flown: Fitted with three Bristol "Jupiter VI" engines, this type is intended for the Cairo-Karachi air route which is to come into operation early in 1927. The Secretary of State for Air, Sir Samuel Hoare, who will be accompanied by Lady Maud Hoare, will be one of the passengers in the first machine to fly out to the East.

A detailed description, with general arrangement drawings and sketches of constructional details, was published in FLIGHT June 10, 1926

## Notes on "Civil Aviation"

1926 : Mr. William Finlayson is Minister of Mines and Forests for Ontario -  
Director of the Forestry Branch Air Service: Captain W.R. Maxwell (1924) formerly with Laurentide Air Service

1926 : the OPAS & "the Briggs matter". Present :

Mr. William Finlayson

MR. RANEY:

Captain Maxwell

MR. LYONS -

Mr. Lawrence H. Briggs : 45 y.o in 1926. Learned the business (Engineering) when at 18 yrs of age took a 5 yr apprenticeship with the Daimler Motor Car Company of Coventry, England on automobile engines, learning to be an automobile engineer then to the Vulcan Motor Company, Southport for 2 yrs in charge of a department before coming to Canada aged 27 in 1909-1910 holding British Engineer's papers where he took up work as Foreman of the Vinot Motor Cab Company (Montreal) assembling shop for 14 mos.. Then the Toronto Taxicab Company on Jarvis Street in charge of the repairs, 1910 -1913, then to the Curtis Motor Company in Buffalo for bout a year as an as assembler in the shop,. when the war broke out in 1914 he enlisted [Regiment Number: ? ] with the division munition park of the C.E.F. as an automobile mechanic, went to France, was wounded in 1916 [lost part of one of his feet] and discharged as unfit for further service. Then came back to the Curtis Company school in Long Branch, Toronto for nine months. Then re-enlisted in the R.A.F. - the first man to enlist in Canada for the RAF.. Made department head in charge of **engine instruction** (about fifteen instructors) to the pilots of the RAF in Toronto University from January, 1917, when the R.A.F. was inaugurated Until August, 1918..

After that, released to take charge of the engine assembling tests of the Sunbeam engine at the Willy-Overland factory for the Government, in Toronto from August, 1918 after the war finished in November, kept on there six months when they went on the production of automobiles. Then re-enlisted in the Canadian Air Force in 1920 - 1922 and joined the Ontario Provincial Air Service, forestry ranging, in April, 1924 - September, 1925.

Q. Did you write a letter to the Hon. James Lyons, Minister of Lands and Forests, Toronto from Sault Ste. Marie, August 24th, 1925 after received notice of dismissal?

A. Yes.

Q. The letter reads as follows:

Dear Sir:

"I respectfully desire to call your attention to the very serious and costly mistakes in the overhaul and maintenance of 'Liberty' engines at the Sault Ste. Marie airdrome.

A change was made at the commencement of the season in the oiling system that has already resulted in a few engines being entirely written off and none with this alternative [alteration] has attained eighty hours of flying time."

"Resulting in tremendous monetary loss to engines and damage to machines, costly re-installing of engines in out-of-way places, and jeopardizing of the lives of the crews operating machines with these altered engines, and regardless of the results, engines are being shipped out in this way. Myself and others warned against this at the time the alteration was made, as perfect lubrication was impossible by this foolish system adopted. I have very strenuously opposed this and several other crude and dangerous methods of operation with the result that I am discharged by W. R. Maxwell at the instigation of S. A. Thompson.

Vast sums of money are needlessly wasted in these methods, and the above is only one of the many changes I wish to bring to your notice. Would you please see me personally here at the Sault or send a representative and go with me through the shops and verify the statements. Trusting these charges to be accepted in the spirit they are made, 'In the interest of the service,' and that I may be favoured with a reply per return, awaiting your instructions,

Yours very truly,

L. H. BRIGGS."

The reply to that letter is from the Department of Lands and Forests, Toronto, September 3rd, 1925.

It reads:

Dear Mr. Briggs:

"I may say in reply to your letter of August 24th, that I have forwarded copy to Captain Maxwell and to Mr. Zavitz, and have asked for a written report in connection with the matters referred to. As soon as I have their reply, I will, if necessary, take the matter up with you further.

"You state in the last paragraph of your letter that this is only one of the many charges that you desire to bring to my notice and with a view to getting all the facts in the case, I would appreciate it very much if you would let me have the additional information you possess so that I may give it my attention.

## Notes on "Civil Aviation"

"I am glad that you are writing in the interest of the service and apparently not dissatisfied because you have been discharged, and I believe that it would have been more in the interest of all concerned had you forwarded this information when it first came to your attention. Trusting that you will let me have the additional information you possess immediately so that I can give it prompt attention.

Yours very truly,

(Signed) JAMES LYONS (Minister)."

Q. Did you go to see Mr. Lyons by appointment?

A. Yes, I came to see him the minute I got back from the Sault to Toronto.

Q. In the meantime if I may take you over this letter of yours to Mr. Lyons: "I desire to call attention to the very serious and costly mistakes in the overhaul and maintenance of 'Liberty' engines at the Sault Ste. Marie airdrome." What was the matter referred to?

A. The oiling system in particular.

Q. Of the engines?

A. Yes.

Q. What is the type of engine that is used by the Government?

A. Liberty.

Q. Liberty engine?

A. Yes.

Q. Installed in what do you call the machines?

A. H.S. 2 L.

Q. That does not convey much?

A. That is the type of machine.

Q. What would you call it? Are they hydroplanes?

A. Flying boats.

Q. Are they hydroplanes?

A. They are hydro-airplanes.

Q. What is the difference between a flying boat and a hydroplane?

A. One is a flying boat pure and simple; what its name implies, a boat with wings to make it fly. The other is a flying plane with floats that skims over the water.

Q. When were they purchased, before or after you came to the service?

A. I think before I came.

Q. Were they at the Sault before you came?

A. No.

Q. They came afterwards?

A. I did not move to the Sault until the winter of 1924.

Q. When do you say you went into the service?

A. In April of 1924.

Q. Between April and the end of the year where were you?

A. On operations, forestry operations, at Timagami and Orient Bay.

Q. Were there flying machines there?

A. Yes, certainly.

Q. Were those flying machines now at the Sault there?

A. Yes.

Q. When did they come into the service?

A. I think when we were at Timagami; I was not turned on engines and I think they were flying at Orient Bay.

Q. How far is that from the Sault?

A. About 500 miles.

Q. You were at Timagami for the season of 1924?

A. We were changed from Timagami to Orient Bay about August.

Q. Were you in charge of a boat at Orient Bay?

A. Only one, one engine.

Q. And you were there for the remainder of that season?

A. Yes.

Q. When were the machines brought into the Sault?

A. I was on the first flown into the Sault, rather the second one, November,

## Notes on "Civil Aviation"

1924. That was the first of November.

Q. When was the aerodrome ready for occupation at the Sault?

A. Sometime in February or the first week in March, 1925.

Q. And where were the machines housed in the meantime?

A. They were anchored on the river.

Q. Before we proceed to inquire about these flying boats, you know where they came from originally? Were they new?

A. No they are not new. The H.S. 2 L's were built during the war. They were built by the United States Navy Department; they were built by different contractors.

Q. Had they been used before they were purchased by the Government?

A. I understand that the first nucleus

MR. FINLAYSON: Never mind if you only understand.

WITNESS: I am not guessing. I understand that the first machines we got at Sudbury were taken from the Laurentide Air Service.

MR. RANEY: How old were the machines to your knowledge when they came?

A. Well they were built in 1917, eight years then.

Q. What do you say as to the other machines? Are they modern machines, speaking in the sense of air service, or obsolete?

A. Obsolete.

Q. Are they building them now?

A. No.

Q. How long is it since they were built?

A. There has not been a flying boat constructed in the last three years.

CHAIRMAN: How long?

WITNESS : Three years.

MR. RANEY: How long is it since this particular type of flying boat was discontinued?

A. Not after 1917; not after the war.

Q. How many were built altogether?

A. About 5,000.

MR. FINLAYSON: Does he know what he is talking about because he is all wrong. Do you swear there was none built?

WITNESS: No H.S. 2 L's.

MR. FINLAYSON: You swear that?

WITNESS : Yes.

MR. FINLAYSON: Nowhere?

WITNESS: Certainly.

MR. RANEY: You will have a chance to cross-examine him. I see in the report of the Minister of Lands and Forests for 1923 that reference is made to the air patrol. Do you know the author of this part of the report?

A. I was not paying attention.

Q. I say in the report of the Minister of Lands and Forests for 1923, the section devoted to the air patrol, do you know who was the author of that report?

A. I think I have seen it. It is Mr. Johnson's report?

MR. FINLAYSON: What would a mechanic know of that?

WITNESS: I have seen it. It has been lying around.

MR. FINLAYSON: He understands it is by Mr. Johnson.

MR. RANEY: Have you papers as an automobile engineer for Canada?

WITNESS : As an air engineer.

MR. RANEY: I see at the top of page 179 of this air patrol report, whether by Mr. Johnson or someone else, section 5, he says a special type of machine should be designed for this class of work as the machines available at the present time are not entirely suitable in that operating cost is high and performance low. What do you say about that?

A. That is quite correct, but in justice to the Department they did not

## Notes on "Civil Aviation"

have any other machines available when they bought those. I don't want to say anything against them in that way.

Q. We are trying to deal with facts. Do you know, as an expert in this line, whether any H.S. 2 L's have been built during the past six or eight years?

A. I don't think any have been built since. There may have been one or two assembled from the parts lying around at different plants, but none actually built.

Q. What do you say as to the size of these machines?

A. Well they are very large machines but not larger than they ought to be to make them necessary to fly.

Q. For the weight of the machine?

A. For the machine the H.S. 2 L is a very capable machine.

Q. Is it suitable for this kind of flying?

A. It does the work, but it is not suitable.

Q. Why?

MR. FINLAYSON: This man is a mechanic.

MR. WIDDIFIELD : Then he ought to be competent to answer the question.

MR. RANEY: You can go ahead when I am through.

MR. FINLAYSON: Get an expert for expert evidence.

MR. RANEY: What do you say as to the suitability of these flying boats for fire patrolling?

A. I say that they could get a much more suitable machine.

Q. Of what type?

A. Seaplane.

Q. Larger or smaller?

A. Smaller.

Q. How much smaller?

A. Seventy-five per cent.

Q. What about the cost of operating these machines?

A. Well, how far do you mean Mr. Raney, do you mean

Q. Compare the cost of operating these flying boats and the smaller machines you refer to.

A. There is practically no comparison at all.

Q What is the consumption of gasoline per hour of your flying boats?

A. About thirty gallons an hour.

MR. FINLAYSON: Do you swear that? You had better make a note and be careful.

MR. RANEY: What is the cost, the number of gallons for a hydroplane, for the smaller machine?

A. Nine or ten.

MR. FINLAYSON: Do you say the H.S. 2 L takes thirty gallons an hour?

WITNESS: You must understand in that Mr. Finlayson, that there is quite a little consumption in w7arring up and getting away.

MR. FINLAYSON: You are talking about flying hours.

MR. RANEY: If you will leave him alone you will have full opportunity later. It has been said here Mr. Briggs that the cost per flying hour of the present service is \$46 without overhead and \$53 with the overhead?

MR. LYONS: Fifty-four dollars.

MR. RANEY: Forty-three dollars a flying hour without overhead and \$54 an hour with overhead. What do you say about that?

WITNESS: How many hours is that supposed to cover?

MR. RANEY: The whole season.

WITNESS: For 1924 with an average of 2,000 hours salaries alone would come to more than \$43 an hour.

Q. Have you calculated the actual cost per flying hour in the present service?

A. No, sir, I don't know what flying hours they have had.

Q. You say about 2,000 hours?

## Notes on "Civil Aviation"

A. On the average, yes.

Q. Can you give the Committee any information as to the cost per flying hour of the present service?

A. I have no idea of the overhead. I cannot do that.

Q. Leave out the overhead.

A. It is not possible at \$50 an hour.

Q. Leaving out the overhead and taking out everything else what in your opinion is the cost?

A. I should imagine

MR. FINLAYSON: Don't imagine.

WITNESS: I will say that with the salaries, gasoline and oil consumption and camp expenses, it would run nearer \$100 than \$50.

MR. FINLAYSON: Leave out the overhead.

MR. RANEY: Leave the witness alone. Tell me what is your estimate of the cost of flying service an hour leaving out the overhead?

A. I would not make an estimate. I am not in a position to do that. I will say that for 2,000 hours of flying service the salary cost would be more than \$50 an hour.

Q. Salaries are part of overhead?

A. I don't know anything about that. You can't fly a machine without anybody in it.

Q. Do you know what gasoline cost?

A. Not the contract price. I know it cost a lot to deliver.

Q. Why?

A. In many cases it is a long rail haul and then after taking it from the railroad it has a long way to go to the lakes.

Q. Motorboat haul?

A. Yes.

Q. What about the size of the aerodrome if the machines had been of the smaller type you speak of?

A. Well, the airdrome was built for the H.S. 2 L's.

Q. Then it would be four times too large?

A. Not four times.

CHAIRMAN: Mr. Raney is quite right. He said that the machines could have been reduced by 75 per cent., which means that it is four times as large.

MR. RANEY: If that is so the aerodrome is about four times as large as it need be for the protection of machines of the right type?

A. That is if you have only the same quantity of machines.

Q. Now come back to the specific thing you started out to tell Mr. Lyons about. "I respectfully desire to call attention to the very serious and costly mistakes in the overhaul and maintenance of Liberty engines at the Sault Ste. Marie aerodrome." What was the mistake you had in mind?

A. The mistake of oiling in the crankshaft.

Q. In the crankshaft there are holes on the left-hand side of the crankshaft, a number of holes drilled in for lubrication?

A. Just one for each bearing.

Q. And these holes were blocked up, you say, and other holes opened on the other side of the crankshaft?

A. Yes.

Q. When was that done?

A. Immediately we started to overhaul the machines for the coming season.

Q. What year?

A. The winter of 1924-25. I would like to say right here that Captain Maxwell at the time I told him about it said they had done two or three of the engines previously in the Laurentide Air Service, so he naturally thought it was a good improvement.

Q. What was the object sought to be attained in this change of the lubrifying

## Notes on "Civil Aviation"

system?

A. To keep the oil cleaner and prevent any carbon getting into the crankshaft.

Q. Did you register any opinion on it at the time?

A. I had registered my opinion. I spoke to the men about it.

Q. Who was the man in charge?

A. At that time, Gordon Hutt.

Q. Was this done at his instance or Captain Maxwell's?

A. I don't know.

Q. Did you speak to him Mr. Hutt?

A. Yes.

Q. What did you say?

A. I said it would not work.

Q. Then you warned him?

A. Yes.

Q. Of the change in the engines?

A. Yes.

Q. How many are there?

A. I could not say. About twenty.

Q. For how many machines?

A. Fourteen machines.

Q. That is to say you have spare engines?

A. Yes, so that when they are taken out to be reconditioned another one can be put into place.

Q. The engines require to be reconditioned about how often?

A. Every eighty hours of flying time.

Q. During the winter of 1924-25 were all the engines changed in that way?

A. Yes.

Q. Was a test made to see how the new plan would work?

A. They were not all changed. They were not all finished by the time the machines were going out.

Q. Nearly all?

A. A big percentage.

Q. Were any tests made to see how the change would work?

A. Not beyond a few minutes round on the block.

Q. Well, after all, or nearly all of the Liberty engines were changed what were they worth?

A. I could not tell.

Q. About how much?

A. About \$2,000 each.

MR. FINLAYSON: A mechanic knows a lot about this.

MR. RANEY: Don't worry; he ought to know something about it.

WITNESS: It depends on the cost of production. The cost originally was \$12,000 or more.

Q. Each engine?

A. Yes.

Q. Only a small production you mean?

A. There was quite a large one.

Q. What do I understand from that? What is the statement about the cost?

A. The engine is a war type engine and naturally they are down to old engines now and they can be bought quite reasonably.

Q. I suppose the Government can show what it paid for them. These engines having been changed in this way, what happened to them when the flying season started? When did it start?

A. I cannot say. I was in the shop at the time. I think the machines went to Sudbury first.

MR. FINLAYSON: This is all supposition.

MR. RANEY: In 1925?

## Notes on "Civil Aviation"

A. I was on the last machine to leave the shop to go to operations.

Q. What do you mean operations?

A. Forest patrol.

Q. How many men do these machines carry?

A. Four.

Q. How many usually go?

A. Three.

Q. The pilot the observer and

A. The engineer.

Q. And you go as the engineer. Can you drive a machine?

A. Yes. I am not a licensed pilot and not allowed to.

MR. FINLAYSON: This man is a mechanic.

MR. RANEY: Let him alone.

MR. FINLAYSON : You ask him if he has been driving machines many times?

MR. RANEY: Have you driven?

WITNESS: Not very often. I have relieved the pilot a little. It is a heavy job driving four or five hours in the air.

Q. What happened when the machines were altered and went into the air? What was the first thing that happened?

A. In my own particular case they burned out the bearings and smashed the connecting rod.

Q. Stay there, about the practice, who went with you?

A. Mr. Oakes, the pilot; Mr. Sanderson, the observer, and myself as engineer.

A. And you started from the Sault to go to?

A. Sault Lake.

Q. A distance of round about five or six hundred miles in round figures. What date?

A. I could not say for certain.

Q. Have you got the record?

A. Not here?

Q. In August?

A. No, July.

Q. Now what happened? Had the engine been in the air after the change?

A. Yes, about fifty hours of flying.

Q. What happened on the trip?

A. The reason we made the trip was because the engine was not satisfactory and they were having great difficulty to get off the water. We wasted an hour in one instance. They argued that it was the rigging and my argument was that it was the engine. Thompson ordered us to Sault Lookout to have the rigging changed. We left about two o'clock in the afternoon. We just got about sixty miles from the station at Orient Bay when without any warning the oil pressure went out, showing on the gauge and I asked Oakes to make for the lake.

Q. That was so that you could land?

A. Yes. Just as he turned the crash happened. The connecting rod broke, the oil had got so hot the engine was on fire.

Q. What did you do?

A. We could do nothing. We got the fire extinguisher out and extinguished the fire immediately we got to the water.

Q. You made the water, by gliding I suppose?

A. Yes. I was successful in getting the fire out without serious damage to the machine.

Q. The machine, was it repairable or destroyed?

A. The machine was not damaged.

Q. I mean the engine?

A. It was absolutely written off, only a little salvage on it.

Q. You had to send back to the Sault and have another engine brought up?

## Notes on "Civil Aviation"

A. Yes, sir. We were sixty miles from the base.

Q. From the Sault?

A. From Orient Bay.

Q. How far from the Sault?

A. It is 400 miles.

Q. Did you have to have the engine brought from Orient Bay or the Sault?

A. From the Sault.

Q. And you had to wait until it arrived?

A. Yes.

Q. Was that the first of these changed engines that had gone wrong?

A. I don't think so. I think Mr. Thompson had one.

Q. You were in the shops?

A. No I was out at Orient Bay.

Q. What was the next thing that happened?

A. We got another engine and got it installed and that was the time I was discharged.

Q. I see.

A. The engine arrived on the night train at Orient Bay and I went down and got it off at 10.30, put it on the boat, took it to the lake and stayed on the job until it was installed. Two days after I was coming out of the tent at five after eight in the morning and Thompson was outside with his watch and said, "We start work at eight." I had been working two nights previously and two days and Thompson said I would not be required after the end of the month. Naturally I felt very sore and told him what I thought. He wrote to Captain Maxwell and possibly explained the situation but I think he must have exaggerated.

Q. You were dismissed?

A. Yes.

Q. How many engines went bad?

A. I cannot say. When I got back I would say there were nine or ten.

Q. Out of business?

A. Yes.

Q. Do you know how many accidents occurred of the character of the one you have told us about?

A. I don't know how many. Thompson had one, a new engine I handled went somewhere.

MR. FINLAYSON: Do you know about this or is it hearsay?

WITNESS: Certainly, I was at the Sault when I left Orient Bay.

MR. RANEY: Don't be too nervous.

MR. FINLAYSON: I am not nervous,

MR. RANEY: He ought to know about it.

MR. FINLAYSON: Getting a discharged mechanic to give expert evidence; you know this man is guessing and talking and theorizing.

MR. RANEY: What happened to the engine you installed after the accident?

MR. FINLAYSON: Does he know of his own knowledge?

CHAIRMAN: Do you know?

WITNESS: Yes.

MR. RANEY: Answer the question.

WITNESS: That engine went the same way; the same accident exactly.

I don't know how many hours it flew. The wire came through, the engine was smashed.

MR. FINLAYSON: That shows he does not know of his own knowledge.

MR. RANEY: How many engines do you know of going in this way after the change.

MR. FINLAYSON: Of his own knowledge.

WITNESS: I could prove I know if I am allowed to ask a question.

MR. RANEY: Never mind Mr. Finlayson. How many engines were out

## Notes on "Civil Aviation"

of business?

A. I could not say how many. I know eight or nine at the Sault, including three at Orient Bay.

Q. Put out of business?

A. Yes.

Q. And how many of these engines were so badly injured that they were of no further use?

A. I cannot say.

Q. How many repairable?

A. All repairable to the extent that you could buy new parts.

Q. Practically, how many were repairable?

MR. FINLAYSON: All, he says.

WITNESS: If you bought new parts, which would include the crankcase.

CHAIRMAN: You are speaking of the one that went wrong?

WITNESS: That was in very bad shape, the salvage possibly only a few cylinders and valves and stuff like that.

MR. RANEY: Was your engine brought to the base?

WITNESS: Yes, I dismantled it at the Sault.

MR. FINLAYSON: It is in use again now.

MR. RANEY: They saved the parts that could be saved?

WITNESS: No parts could be saved that were broken.

MR. RANEY: What was done with respect to the other engines that had not been destroyed or injured in this way?

WITNESS: I don't get you.

MR. RANEY: We have the fact that the crankcase had been changed by blocking up the holes on one side and opening them on the other side.

MR. BLACK: You say the crankcase and he says the crankshaft?

MR. RANEY: I mean the crankshaft.

MR. BLACK: There is a vast difference.

MR. RANEY: What happened to those machines? They were all put back to the original condition?

A. Yes.

Q. All the holes that had been opened were blocked up and the old holes that had been blocked up were reopened?

A. Yes. I might explain right here that when the holes were drilled on the opposite side of the shaft when the engine got any speed it was impossible for the oil to come out, it does not matter what the pressure is, just as when you swing a bucket of water round the centrifugal force will keep it in in the same way.

Q. Did you argue that out with the man in charge?

A. I had had the same trouble with the Willys-Overland five years ago.

Q. You knew the crankshaft was properly made?

Yes.

MR. WIDDIFIELD: He was an expert engineer.

Q. Do you know what was the real reason for your dismissal?

A. No, sir, I do not.

Q. You were never told?

A. No.

Q. Did you ask anybody?

A. No, I believe I did say to Mr. Lyons when I was here in his office I really did not know what I was discharged for.

Q. What did he say?

A. Mr. Lyons did not say anything about it. He left it to Captain Maxwell, naturally, who should be taken on and who should not. I am not blaming Mr. Lyons.

Q. Were you the only man discharged?

A. Yes, sir.

Q. You say in your letter: "A change was made at the commencement of the season in the oiling system that has already resulted in a few engines being

## Notes on "Civil Aviation"

entirely written off and none with this alteration has attained eighty hours of flying time." Is that true?

A. Before I left the Sault Captain Maxwell said that some had attained eighty hours.

MR. FINLAYSON: We will give a list of the whole service if you like.

MR. RANEY: "Resulting in tremendous monetary loss." Let us see what the new parts cost. A crank case, I understand is \$800?

CHAIRMAN: In the letter I understand he said the change had resulted in a number of the machines being entirely written off. This evidence does not support that.

MR. RANEY: What do you say about that?

WITNESS: The particular engine I had was. There was very little salvage.

Q. What about parts for the Liberty engine, is there difficulty in getting them?

A. That I cannot say.

Q. How long is it since they were made?

A. There are none made, I think, by the original makers.

Q. "Resulting in tremendous monetary loss to engines and damage to machines in out-of-way places" I suppose that is a factor?

A. Mine was an out-of-the-way place, five or six hundred miles from the Sault.

Q. How many days would the crew be detained?

A. I was eight days before I got the engine.

Q. And were the pilot and observer there?

A. Yes.

Q. Kept there eight days?

A. Yes.

Q. "Jeopardising of the lives of the crews," was that true?

A. Certainly, with the engine breaking up like that. If we had had another half-mile to go we could not have made the water.

Q. What would have happened?

A. We should have landed in the bush.

Q. What would have happened then?

MR. FINLAYSON: They would have injured some branches and trees.

MR. RANEY: You would not have wanted to be on the machine?

A. Not if we could have helped it. I may say that nobody gets away from the water unless it is absolutely necessary. We always keep to the watercourse.

Q. "Myself and others warned against this at the time the alteration was made, as perfect lubrication was made impossible by this foolish system adopted. I have very strenuously opposed this and other crude and dangerous methods of operation with the result that I am discharged."

A. I might say, Mr. Raney, that when I saw Hon. Mr. Lyons he was very nice to me and said that he could say not anything until he got the written report.

Q. Did you ever hear of a written report afterwards?

A. No.

MR. RANEY: Have you one?

MR. FINLAYSON: We will give our evidence.

MR. RANEY: If you decline to give it now probably I will have to recall the witness.

MR. FINLAYSON: He is here for causing trouble; he will be available.

MR. RANEY: How many machines were out of commission at one time at Orient Bay?

A. There was only one when I left; I know there were three afterwards.

CHAIRMAN: Do I understand that you were discharged almost immediately after the machines which had been changed went into the service. After these machines which had the oiling system changed, how long after that was it before you were discharged?

WITNESS: Quite a long time. I was discharged on the fifth of August.

## Notes on "Civil Aviation"

MR. RANEY: When did your service come to an end?

A. On the fifth of September.

Q. How many machines were put out of business before you left in September?

A. I cannot say how many.

Q. How many do you know of?

A. I know of three at Orient ^ Bay.

Q. How many more?

A. I don't know where they were; one or two in different places. Captain Maxwell will bear me out in that. We were working night and day getting the engines out.

Q. What do you say about co-operation between the Air Service and the Fire Ranging staff?

A. Always a little at loggerheads.

Q. Take Timagami station for instance. What about it?

A. I will have to explain that right from the beginning.

Q. Do you know the facts?

A. Yes.

Q. Go ahead by way of illustration.

MR. FINLAYSON: Is the Service to be brought into question? No doubt there are occasional differences between a novel and an old established branch. Is that to be brought into question and policy discussed by a mechanic before the Committee?

MR. RANEY: Go on witness, please.

MR. FINLAYSON: I leave it to the Committee. It seems to me a waste of time and bad for any service. It is just as if we got an office boy from your office to discuss friction between you and someone.

MR. RANEY: This gentleman is not an office boy.

MR. FINLAYSON: That is the relationship exactly. He is a mechanic working on the ground. What does he know?

MR. RANEY: Let us get on. Were you at Timagami? I should like you to denote what was the failure of co-ordination of these two services and the general efficiency or inefficiency.

MR. FINLAYSON: The result of the forest protection service for the past two years is simply marvellous and I didn't think it should be called into question by some discharged mechanic.

MR. RANEY: You raised the question yourself in your examination of Mr. Lyons. If you had not done so I would not now.

MR. FINLAYSON: On this point?

MR. RANEY: You introduced the whole question.

MR. FINLAYSON: You are bringing a discharged mechanic, with animus no doubt

MR. RANEY: Go on, discredit him.

MR. FINLAYSON: Those are the facts. Any man may be unfortunate and incapable and get discharged.

MR. RANEY: Pardon me. You say that being incapable he was discharged. That was never suggested Mr. Chairman, he says

MR. FINLAYSON: I don't care a rap what he says; when it gets down to suggesting that two branches of the Service are not co-ordinated I think it should be obtained from someone who might know something about it.

CHAIRMAN: Unless it has some direct bearing on the inquiry

MR. RANEY: I would not bring it unless I thought it had some bearing.

MR. WIDDIFIELD: I am a member of this Committee. I want to hear the evidence.

CHAIRMAN: There is no need to get excited. We are not going to close off anything relevant.

MR. WIDDIFIELD: Mr. Finlayson talks about him being a discharged mechanic. The fact that he is discharged is opportune perhaps to bringing out

## Notes on "Civil Aviation"

the evidence and that is what the Committee wants to know. I object to three or four talking at once. I want to hear the evidence and I think the interrogator and the witness should be left alone for the time being.

MR. FINLAYSON: Mr. Widdifield, I am not

MR. RANEY: When Mr. Finlayson was examining witnesses I have not interrupted.

CHAIRMAN: I don't think he did.

MR. RANEY: Ever since this examination started there has been an attempt to injure this witness, calling him names, a mere mechanic, a discharged mechanic.

MR. FINLAYSON: I never said a mere mechanic.

MR. RANEY: I ask you to rule, Mr. Chairman, that Mr. Finlayson must leave him alone and examine him when his turn comes.

MR. FINLAYSON: Sit down for a minute and let me get a word in. I only wanted to point out to the Committee that if we are going into the question of co-ordinating the service there is a proper way of doing it.

CHAIRMAN: It seems to me that we should not prevent Mr. Raney pursuing this line of investigation if he thinks it is relative to the subject he has brought forward. I was going to say that Mr. Widdifield is getting on dangerous ground when he says what he wants to do as a member of the Committee. We are not dealing with it in that way.

MR. CALLAN: What in your opinion caused the failure at Sault Lookout?

WITNESS: Lack of lubrication.

MR. CALLAN: Could you give me a sketch of how the lubrication system works?

WITNESS: Yes.

MR. RANEY: Let him do it now. It is an important matter. It had caused the loss of \$50,000.

CHAIRMAN: Of course, Mr. Briggs could not give an estimate of that.

WITNESS: I don't think I should give evidence against people in the force.

CHAIRMAN: I think you are trying to give what you know.

MR. RANEY: Will you explain for Mr. Callan?

CHAIRMAN: May I suggest drawing a large plan of the crankshaft and piston rods connecting.

(Diagram is drawn.)

MR. RANEY: Stand up and tell the Committee.

(Witness explains diagram.) He points out where holes are drilled so that oil can be forced by pressure through the shaft.

CHAIRMAN: The same as an automobile.

MR. CALLAN: Inside the shaft?

WITNESS: Yes, and then up the pipe to the cam shaft. When the engine gets up speed, 2,000 revolutions, not quite, 1,400 revolutions per minute, when it gets up that speed and the hole is drilled on the other side the centrifugal force would keep it in.

MR. RANEY: You must have the oil working with the centrifugal force and not against it?

WITNESS: It was a good idea to have the holes on the other side because it would prevent a lot of carbon getting in and keep the shaft cleaner.

MR. CALLAN: What is the size of the hole?

WITNESS: About one-eighth outlet; the hole through the shaft is about a quarter.

MR. CALLAN: What diameter is the pipe that holds the oil?

WITNESS: Every time this goes to the hole it shoots through.

MR. CALLAN: Is there not a possibility of that pipe becoming clogged?

WITNESS: No, because the oil is filtered before it is turned into circulation. It goes through a screen.

MR. CALLAN: There is no solid matter. Is there not a possibility regardless of which side of the shaft that oil was placed that there might be a possibility

## Notes on "Civil Aviation"

>f that hole becoming blocked up?

WITNESS : It has grown very hot on occasions and burned out the bearings.

MR. CALLAN: What is the shaft made of?

WITNESS: Steel.

MR. CALLAN: What are the bearings made of?

WITNESS: White metal; babbitt metal.

MR. CALLAN: Is there a possibility that the babbitt metal may get into hole and restrict it?

WITNESS : It is a possibility overcome by the pressure of the feed of the oil.

MR. CALLAN : Regardless of what side the oil goes is there that possibility?

WITNESS: Yes, the babbitt can get into the hole but not sufficient to stop oil circulation.

MR. RANEY: It means that you must keep examining.

WITNESS: After every eighty hours of flying.

MR. CALLAN: That's all.

CHAIRMAN: It is the same system on most of the automobiles for oiling.

MR. RANEY: To avoid further friction I will not pursue the subject of Timagami. There is another thing I want to touch on with this witness. The statement is that in 1923 two million acres of the wooded wealth of Ontario was destroyed and that last year, 1925, only 10,154, and the improvement is startling and staggering and so on. Was there any difference between the seasons 1923 and 1925?

WITNESS: Yes.

Q. What is the difference?

A. One was dry and two were wet.

Q. 1924 and 1925 were wet?

A. Yes.

Q. Take 1925, when did your machines first leave the water?

A. I could not be exact to the day In May.

Q. When they first left the water for fire patrol?

A. Right on then.

Q. Was it 1924 that was wetter than 1925?

A. I don't think there was very much difference.

Q. What was the extent of the fire patrol in 1924 and 1925 as compared with 1923? Was it as large in those two years?

A. I don't know what was the time in 1923. It was common talk it was a dry season.

Q. What about the necessity for an air patrol in 1924 and 1925?

A. There is always a necessity for an air patrol. You can't get away from that. It is the only system for spotting fires.

Q. But compared with a dry season was there as much or not?

A. I think that for eight weeks we never flew at all.

Q. That is what I am trying to get at. In what year?

A. In 1925.

Q. Why was that?

A. It was a wet season.

Q. Wet woods. What months would that be?

A. The months would be May, June and July.

Q. You hardly flew at all in July?

A. The pilot I was with did quite a bit of flying. I think we had the record up to that time. But we were doing quite a bit of surveying and photographing.

Q. Not fires?

A. We had some fires because we had a large district.

Q. But very little for May, June and July of 1925?

A. Very little.

MEMBER: Is that an examination to show why the Department makes a good showing.

## Notes on "Civil Aviation"

MR. RANEY: Take the witness, Mr. Finlayson.

MEMBER : We have to take the questions for what they are worth. Supposing a man is dismissed has he a right to come before the Committee like this? Is every man discharged by Captain Maxwell to come here and try and destroy the system altogether?

MR. LYONS: I have no objection to Mr. Briggs or anyone giving his views. All I ask is an opportunity to present the facts which will make him look so ridiculous it will make him wish he never appeared here.

MR. FINLAYSON: I suppose gentlemen, there is this view: This is not the army. Those who were in the army know that this kind of thing would not be entertained. We are a public body and I think we should allow reasonable

latitude for a discharged man's feelings, and I fancy that the Committee and the public generally will know what is to be expected

MR. RANEY: Go ahead; don't abuse the witness.

MR. FINLAYSON: You have ordered me several times and you ordered Mr. Graves. I hesitate to order.

MEMBER: I object to wasting my time here.

MR. FINLAYSON: You have to take these things as they come.

Mr. Briggs examined by Mr. Finlayson.

Q. Mr. Briggs, when did you enter the Government service?

A. In April, 1924, I think it was April, March 20th the letter was dated.

Q. Never mind, April will do. Before that I was not here when you gave the first part of your evidence you served in France?

A. Yes.

Q. As mechanic?

A. As mechanic in the Divisional Ammunition Park.

Q. You were in the D.A.C.?

A. The A.S.C.

Q. You were not in the Flying Corps?

A. No, sir.

Q. And when did you start this? When did you get into this branch?

Were you ever in the air service?

CHAIRMAN: After he was discharged he lost part of his foot and came back he came to Canada and joined in 1917 in the R.A.F. as a mechanic and was with them in various capacities for the balance of the war.

Q. Your service was in the Army Service Corps?

A. Yes.

Q. And you came back here. You had other experience and qualified as a mechanic?

A. Yes.

Q. You went into the Department service in April, 1924?

A. Yes, in the Forestry Branch.

Q. You were there as a mechanic?

A. Yes.

Q. And the duty of a mechanic is to keep the machines in order?

A. Yes.

Q. And it is limited to that?

A. Except at the time when we are assembling in the shops.

Q. Your work is mechanical?

A. Yes.

Q. Pure and simple, and you don't profess to be a forestry expert?

A. No, sir.

Q. Nor to have any knowledge of that branch of the service?

A. No.

Q. What were we wasting time about?

A. We all have a general knowledge.

Q. I know we all have opinions.

A. Not opinions. I mean we all know a little about the rest of the service.

## Notes on "Civil Aviation"

We don't interfere with it and have nothing to do with it.

Q. So you don't have opinions of value on anything but mechanical duties?

A. Yes.

Q. Since you left the service, you were organizing something?

A. I was endeavouring to organize a company to construct machines in Canada.

Q. That fell through, I believe.

A. No.

Q. You formed one?

A. It did not fall through.

Q. It has never gone through?

A. It may do.

CHAIRMAN: It may?

WITNESS: Yes.

Q. You are trying to organize a company to sell to the Forestry Branch?

A. No.

Q. Have you not tried to sell them a flying service?

A. No, sir.

Q. I have the correspondence here on that. Were you not negotiating with the president of the Curtis Company, or the vice-president, for a flying service?

A. To supply machines.

Q. And also a flying service?

A. Not for the Forestry Branch.

Q. Any branch?

A. Yes, the Federal Government.

Q. And you were trying to sell a flying service to them?

A. Yes.

Q. And you were telling the officers of the Curtis Company, you would get a flying service?

A. No, that was not gone into.

Q. Just for a minute now. Never mind the correspondence. You can hand that over if you like.

A. That was as far as it went.

Q. Did you tell one of the officers you could sell the Ontario Government a flying service per hour?

A. No, I said we might do eventually.

Q. That is one of your purposes now?

A. Not now. That is all washed out for the present.

Q. But you have still hopes of a flying service at so much per hour?

A. I am out of that now.

Q. What are you in?

A. As a matter of fact I have entered negotiations to go into business on my own.

Q. You have been negotiating ever since you left?

A. Every man has something to do. I have to live.

Q. And living involves negotiating and you have been negotiating ever since you left and one of the negotiations looked to the selling of a Curtis service to the Government?

A. Selling the machines.

Q. And also supplying a flying service?

A. That could not be done.

Q. You hoped it could?

I talked of the possibility.

Q. It just happened that you were introduced to Mr. Raney and these matters are before the Committee; otherwise you have done nothing. All right. Now your work at the Sault was work in the winter. You had been

## Notes on "Civil Aviation"

working in the shop?

I

A. Yes.

Q. Grinding valves and so on?

A. Yes. That is I was most of the time grinding valves.

CHAIRMAN: That is the principal part of the overhauling.

Q. I see; grinding valves, that was your job. Did you do anything else?

A. All kinds of work.

Q. There are experts' jobs around the shop, you did not do them?

A. I did a little.

Q. Is it not true that your work was physical work the grinding of valves?

A. Not all the time.

Q. Nearly all the time?

A. I did welding work and overhauling motors, once with a man named Sam McCaulay.

Q. But apart from that one occasion you were engaged in the grinding of valves?

A. I was not engaged in grinding valves.

Q. You were working at grinding valves? That was your occupation.

I believe you helped the carpenter a little?

A. I might have.

Q. I suppose they used men according to their ability?

A. Not according to ability.

Q. Not according to your ability.

MR. RANEY: Did you not hear him say that he was at Toronto University, and that all the flying men passed through his hands.

MR. FINLAYSON: Who were you under?

A. Gordon Hutt.

Q. Who was superintendent of the shop?

A. Mr. Thompson. Hutt was sub-foreman and Thompson, superintendent.

Q. And he put you to the work he thought you could do?

A. What he thought I should do.

Q. And he thought that you should grind valves and that other men should do the delicate work?

A. Yes.

Q. Now, you say you were offering some observations on the machines, on the Liberty engines?

A. Yes.

Q. Are they not the result of all the mechanical skill of North America?

A. Yes.

Q. And produced in enormous quantities?

A. Yes.

Q. They are the finest thing produced by the combined American shops?

A. By the combined engineers of the world.

Q. And the result of study of

A. All conditions.

Q. If you will listen for a minute, of all the American scientists who were directed to this work by the American government?

A. Yes.

Q. And is considered one of the finest machines in the world?

A. It was.

Q. And is still in use all over the world?

A. Yes.

Q. And it was produced in such quantities that there are still some in stock?

A. I don't know of any stocks. I believe they are hard to get.

Q. Hard to get?

## Notes on "Civil Aviation"

I think so.

Q. Don't you know that there are many still uncrated and being used for other devices?

A. They are all used stuff and, pardon me

Q. There are Liberty engines never uncrated

MR. RANEY: Let him give his evidence.

Q. And it is possible to replace engines?

A. Yes.

MEMBER: Is that new or overhauled?

WITNESS : Overhauled .

MR. FINLAYSON: New engines, never touched.

MR. RANEY: Witness says different.

WITNESS: We have not had any new ones.

MR. FINLAYSON: You don't know from general information. Liberty engines are being used all over the world?

WITNESS: No, sir.

Q. You say it is not?

A. It may be, but not to any general extent.

Q. The flying world?

A. They have got the engines and have to use them up.

Q. Do you know what the Liberty engine is worth new?

A. What they are supplied for I don't know.

Q. Supplied new?

A. Around \$12,000 or \$14,000.

MEMBER: Are you guessing at the prices?

WITNESS: Those engines were made in tremendous quantities.

Q. Have you any proof? You would not swear?

A. No, sir.

MEMBER: Then why do you say?

MR. FINLAYSON: As a matter of fact, he is miles out.

WITNESS : That is the price ruling to-day.

Q. Do you want to swear to production prices?

A. No.

Q. Let us test the man. You said \$12,000. Now do you swear to that?

A. I didn't swear. I said I imagined they cost about \$12,000.

Q. \$18,000 is the exact price.

A. Well then, if they cost that, \$12,000 is a reasonable price to-day.

CHAIRMAN: Just a minute. Don't get making mistakes in the evidence.

The evidence you gave to Mr. Finlayson was that they cost so much under mass production, about \$12,000, and used engines about \$2,000.

WITNESS: That is what I did say and you remind me I should not say, "I understand."

MR. GRAVES: I should like to ask this question. Is this an investigation make inquiries concerning supposed irregularities of a Minister who resigned or is it an investigation into the inefficiency of some particular man or department. At this rate, we will be here for ever. I thought this was an investigation of a Minister who resigned.

CHAIRMAN: Mr. Graves, that is not quite correct. It was an inquiry Mr. Lyons asked. This is a man Mr. Raney brought before the Committee, with a couple of witnesses we called, and we were not told what they were going to be

MR. RANEY: I said, I was going to confine myself to matters before the Committee, but Mr. Finlayson took Mr. Lyons over the air service and a lot of other branches and in consequence of what Mr. Lyons said about flying cost being forty odd dollars and as the witness said he told about the change in the oiling system I thought he was entitled to tell the Committee.

MR. FINLAYSON: Mr. Raney has made a statement absolutely misleading. He knows his questions put on the order paper in Mr. Kemp's name were directed

## Notes on "Civil Aviation"

on the aerodrome contract. You said that was what you wanted to investigate and questions were directed at the "enormous" expense and it was necessary to say something in explanation of why that investment was made and Mr. Lyons went into the aerial patrol work to show the enormous saving and the cutting down of operating expense.

MR. RANEY: For goodness sake, go on with the cross-examination.

MR. FINLAYSON: Are you going to withdraw?

MR. RANEY: No, go on.

MR. FINLAYSON: You said that \$11,000 was the cost of the Liberty engine?

A. Yes.

Q. Is that wild guess?

A. Not exactly wild.

Q. When the total was \$18,000?

A. \$12,000 was my suspicion.

CHAIRMAN: Your estimate?

WITNESS: Yes.

Q. You are only out the difference between \$12,000 and \$18,000. You went on to say something about \$5,500

A. I never said \$5,500.

Q. Did you not say that overhauled engines were \$5,500?

A. I said around \$2,000.

CHAIRMAN: That is right.

Q. Was the \$2,000 a guess?

A. On the Liberty engine?

Q. On the value now. That is the particular engine in the service?

A. Yes.

Q. Do you think they could be bought for \$5,000?

A. No, I said the engines we got.

CHAIRMAN: These were the kind we got.

WITNESS: Not purchased new.

MR. FINLAYSON: What does your \$2,000 mean, second-hand engines?

A. Yes.

Q. What would you say a new Liberty engine could be bought for?

A. I would not say.

Q. Of course. Perhaps you are wise. You say a Liberty engine is not suitable for this purpose?

A. I didn't say that.

Q. You agree it is?

A. It is a suitable engine for this particular body.

Q. And those particular bodies are not suitable?

A. Those particular bodies give good service for what they are.

Q. You said a four times smaller size was required?

A. I said they could get a machine more suitable for forestry patrol.

Q. What kind do you suggest?

A. I suggest a small type of seaplane.

Q. Such as what?

Q. Had you had experience with the H.S. 2 L's, Liberty engines?

A. Certainly.

Q. Where?

A. In the Canadian Air Force.

Q. Where was the station?

A. At Camp Borden.

Q. Flying boats with Liberty engines?

A. I was doing the same work there.

Q. Were you ever operating H.S. 2 L's with Liberty engines?

A. I was in the repair shop.

Q. You formed some novel theories there and did you tell Captain Maxwell

## Notes on "Civil Aviation"

this was not right?

A. He would not give me the opportunity.

Q. You could parade to the O.C.?

A. He would not see me.

Q. When did you try?

A. When I got to the Sault.

Q. After the trouble?

A. Yes.

Q. But when the work started, Captain Maxwell would see you?

A. Yes. And previously, I saw Hutt to make an appointment, and you yourself told me to see him at Toronto and I didn't see you and

Q. Briggs. You started a moment ago to try and say something, that you could never see Captain Maxwell; that is not right?

A. I tried to see him.

Q. You stated a moment ago that you tried to see him after your discharge and he would not see you. That is not right.

A. I stated that I tried several times and never saw him and sent a letter to the Minister.

Q. When you had this theory about the Laurentide people and the people at the aerodrome being all wrong and a mechanic right, who did you tell?

A. It was talk all over the shop.

Q. Who did you tell?

A. I said to Thompson that it would never work.

Q. How long had it been working before that?

A. On two machines that collapsed the same way.

Q. Do you know this or are you only guessing?

A. One collapsed in the bush.

Q. Do you know this?

A. Certainly, I saw the engine.

Q. The engine may have collapsed from a thousand causes. You were not on it? I am told it was valve trouble. You thought they were making a mistake and still think so?

A. I don't think so. I am sure.

MR. RANEY: Were not the crankshafts all changed back?

MR. FINLAYSON: No.

WITNESS: They were being changed when I was at the Sault.

MR. FINLAYSON: You state, "A change was made at the commencement of the season in the oiling system, that has already resulted in a few engines being entirely written off." Is that correct?

A. Yes.

Q. You say "entirely written off." Will you swear to that?

A. Yes. There was a little salvage on the engine.

Q. Which engine?

A. The one I had.

Q. The one they said you let get dirty?

A. No the one that crashed.

CHAIRMAN : He means the engine of which the connecting rod

Q. The whole engine gone?

A. With a little salvage.

Q. What do you mean little?

A. A few cylinders would be saved.

Q. How many cylinders are there?

A. Twelve.

Q. How many destroyed?

A. Three.

Q. Nine saved out of twelve, 75 per cent.?

A. No, they were not all good.

Q. You said three gone?

## Notes on "Civil Aviation"

A. Three gone and several others warped with the heat.  
Q. What did they do with them?  
A. I don't know.  
Q. That is the trouble; you don't know.  
CHAIRMAN: You say they were warped so as to be unfit to use?  
A. I was in the shop when they put the test guage on them. They were badly split.  
MR. FINLAYSON: What was the trouble?  
A. What trouble?  
Q. The engine trouble?  
A. The trouble was that the oil ceased to flow and the bearings seized.  
Q. How would the heat warp the cylinder?  
A. That is just what would warp it.  
Q. We will let your mechanic's opinion go against my legal opinion.  
How many other engines were written off?  
A. That was not written off? There was a little salvage. Three cylinders went and the crankshaft.  
Q. The cylinders are only a small item, the bearings, the crankcase how much are they worth?  
A. I don't know.  
Q. The crankcase, anything else?  
A. Lots of nuts, connecting rods.  
Q. They are not very heavy items?  
A. One hundred dollars, I guess. Am I right Captain?  
MR. FINLAYSON: He says you are nowhere near it.  
WITNESS: I am not speaking of prices. I said the engine was written off with the exception of a little salvage.  
Q. And you are not quite right. You don't know the prices of the parts, that is not your business?  
A. I have quite a knowledge of prices.  
Q. Well what are they?  
A. Bearings would cost \$8 each ; seven of those.  
Q. Where are the rest of the many engines written off?  
A. In the Sault.  
Q. How many?  
A. Five in the Sault when I got there.  
Q. What do you know about them?  
A. I saw them all.  
Q. What about them?  
A. Bearings gone; most of the crankshafts damaged.  
Q. "None with this alteration has attained eighty hours of flying time." That is false?  
A. No.  
Q. Let us examine it. Do you want to swear that none with this alteration attained eighty hours of flying time?  
A. I stated that to Captain Maxwell and he said that four or five had attained eighty hours.  
Q. Then it is false?  
A. He did not prove it to me. I saw the engines.  
Q. Your word as a mechanic would be confined to what you saw in the shops?  
A. And what I saw  
Q. When you were grinding valves you didn't see much?  
A. I was not grinding on this occasion.  
Q. Do you know Number 1791 engine?  
A. I cannot remember the number right off.  
MR. RANEY: Let me see the report made. You are not using it now.  
MR. FINLAYSON: I am using it. Engine 1791; do you remember that?

## Notes on "Civil Aviation"

WITNESS: I cannot say I do.

MR. CALLAN: Is that the serial number?

MR. FINLAYSON: Yes. It did ninety-two hours and thirty-five minutes.

What do you say as to that?

WITNESS: I don't know the engine.

Q. You say none did eighty hours? What about 4188?

A. I don't know the numbers.

Q. That did 100 hours and five minutes.

A. What machine was that?

Q. That was machine "M."

A. Those engines are not supposed to do more than eighty.

Q. You say none of them did it?

A. You say you have reached 100? I am entitled to ask a question.

They should not stay out that long in the service.

Q. Suppose they did. You say they should not. You told the Minister that none of the altered engines did eighty hours. Just a minute. I am pointing out here one that did 100.

A. Maybe they had a good engineer.

Q. I suppose some men can grind valves better than others? Some become experts?

A. Yes.

Q. Some day you may attain to that?

MR. RANEY: I don't think Mr. Finlayson need be so insulting. Witness has done magnificent service for this country and there is no reason why, if he comes here, he should not be treated as a gentleman.

MR. FINLAYSON: Here is a man who made a statement to the Minister in a letter which apparently started the trouble. He made a testament there and he swore to it and I want to examine him.

MR. CALLAN: What date was the letter?

WITNESS: August 24th, 1925.

MR. CALLAN: What date of the record would that be?

MR. FINLAYSON: September, 1925.

CHAIRMAN: I think it is obnoxious to all the members of the Committee, we have got several important inquiries and we have wasted a whole morning on the witness and I don't think any member would say that there is anything in the whole thing.

MR. FINLAYSON: I want to see how honest the man is.

MR. RANEY: I asked Mr. Finlayson to let me see the Government report and he would not, so I may have to recall him.

CHAIRMAN: I understand Mr. Raney asked a moment ago.

MR. FINLAYSON: Come and look at it.

CHAIRMAN: I suggest in connection with that, I don't want to criticize, and we have not stopped the bringing of witnesses, I think a member who summonses witnesses should make sure there is something in what a man will say.

MR. RANEY: Indeed there is something in what this man says.

MR. FINLAYSON: Let us finish it then. Now do you still want to swear to this statement, "None with this alteration has attained eighty hours flying time"?

A. I do wish to substantiate all that letter except there might have been two

CHAIRMAN: Mr. Briggs, look, be reasonably fair. Don't get into something

WITNESS: When I was in the shop after coming from Orient Bay nine engines were shown, me smashed up the same way.

MR. FINLAYSON: Let us get this statement. You still want to swear that none of these machines with this alteration attained eighty hours?

WITNESS: Yes.

## Notes on "Civil Aviation"

Q. You swear that?

A. With the exception of

Q. No, no.

CHAIRMAN: Do you know?

WITNESS: No.

MR. FINLAYSON: Then why do you swear?

MR. RANEY: He is not satisfied he is mistaken.

MR. CALLAN: I am sitting here and want to get the facts. This man, I understand, has made a statement to the Minister that none of the engines went over eighty hours of flying time. Now what proof have you that none of them did outside the engine you went on?

WITNESS: I just admitted there may be an exception.

CHAIRMAN: He admitted he does not know.

MR. CALLAN: What proof have you?

WITNESS: I was on one machine myself.

MR. CALLAN: What about the others?

WITNESS: The other machines, I saw the engines in the shop. I saw the engines personally.

MR. CALLAN: My question is not answered.

WITNESS: I said none had attained eighty hours of flying.

MR. CALLAN: Who keeps this record? Is it the mechanic on the machine?

WITNESS: Yes, on the machine.

MR. CALLAN: But you were only on one? More than...

WITNESS: On two.

MR. CALLAN: It is on the word of the mechanics running the other machines? They told you?

WITNESS: Yes.

MR. FINLAYSON: I have given 1791 Machine K which attained 92.35 hours; 4188, Machine M, 100.05 wrong in that?

WITNESS: That is two.

Q. You were wrong in those?

A. I won't swear I am wrong.

Q. Why did you make the statement to the Minister?

A. Why did you make the report?

MR. LYONS: I am satisfied to let this remain until we bring the records from the Sault as this man's statements are ridiculous and I am not going to stand for these wild, bombastic statements, if in doing it it takes a whole week.

MR. CALLAN: In this connection does every pilot of every machine file with the head of the Department a record of the flying hours?

MR. FINLAYSON: Yes.

MR. CALLAN: Is that kept on record.

CAPTAIN MAXWELL: Yes. There are records of the pilot, the superintendent and the director since the first of these machines flew for the Government.

MR. CALLAN: Have you that record?

CAPTAIN MAXWELL: Yes.

MR. CALLAN: Can it be brought?

CAPTAIN MAXWELL: Yes, sir.

WITNESS: There is also an engineer's record on each boat and there is a copy kept on file in Captain Maxwell's office.

MR. FINLAYSON: Take engine 222, Machine I, which flew ninety-six hours after this alteration?

WITNESS: You are wrong there no. Yes.

MR. FINLAYSON: Number 380, Machine E, 89.5 hours after the alteration? That is four?

WITNESS: Yes.

MR. FINLAYSON: Number 2662, Machine F, 95.25 hours?

WITNESS: Yes.

## Notes on "Civil Aviation"

MR. CALLAN: I understand that you are not getting witness to say he knows those specific numbers?

MR. FINLAYSON: He knows how they are kept.

MR. CALLAN: It would be impossible to remember those numbers.

CHAIRMAN: It is a record of the director of a number of flying cases after the alteration. They can be verified by oath.

WITNESS: It depends on the next engine whether I can remember right or not.

MR. FINLAYSON: Engine 2662, Machine F, 95.25 hours?

WITNESS: Yes.

Q. Engine 471, Machine A, 93.33 hours?

A. Well, nine engines I saw.

Q. Have you reason to doubt this statement?

A. Yes, I have. I saw nine engines out in the shop and they (end of sentence lost, through noise).

MR. RA.NEY: They were what?

WITNESS: All smashed up. Here Mr. Finlayson says there are six installed machines did over eighty hours. We didn't have that many machines in operation.

MR. FINLAYSON: What do you mean smashed up?

WITNESS: Bearings burned up.

Q. How many lost last year?

A. I saw nine.

Q. The truth is they only lost four. Do you know the difference between a major and minor accident?

A. Yes.

Q. When you say there were nine major breaks you are wrong?

A. No.

Q. All right. Engine 101, Machine J, eighty-six hours and five minutes; 2674, Machine L, eighty hours and ten minutes; 2901, Machine S, eighty hours and twenty-five minutes; 151, Machine R, seventy-seven hours and twenty-five minutes; 2194, Machine A, seventy-four hours and five minutes; 181, Machine N, seventy-seven hours and five minutes; 1791, K, ninety-two hours and thirtyfive minutes; 2264, Machine G, fifty-three hours fifty minutes.

WITNESS: At the end of those fifty hours, what happened to them?

MR. FINLAYSON: It was removed to replace for heavy gears, and seventyseven and seventy-four removed because of shortage of work in the reconditioning shop. Eighty hours is considered good normal flying service?

A. Yes.

Q. Under normal conditions at the end of eighty hours it should be turned in for repairs?

A. For reconditioning.

Q. Whether there has been an accident or not?

A. Yes.

Q. It depends on the exigencies of the service, some may be out longer and some have to come in?

A. They endeavour to take them out at the end of eighty hours.

Q. They ran seventy-seven to 100?

A. My engine did not run seventy-seven.

Q. I am trying to test your statement: none attained eighty hours of flying service.

MR. CALLAN : Do I understand the record is of the maximum flying hours?

MR. FINLAYSON: Not the maximum. Every one is supposed to go in at the end of eighty hours.

MR. CALLAN: Are those the ones that attained the maximum?

MR. FINLAYSON: Those are the whole lot.

MR. CALLAN: In the service?

MR. FINLAYSON: That cover his description.

## Notes on "Civil Aviation"

MR. RANEY: How many machines are there?

MR. FINLAYSON: Fourteen.

MR. RANEY: There were nine you say, wrecked?

MR. FINLAYSON: He says that.

WITNESS: I didn't say they were wrecked.

MR. FINLAYSON: He is just talking.

WITNESS: I am not just talking.

MR. FINLAYSON: Is it not true your statement is all wrong?

A. No.

Q. You still stick to it?

A. These machines were brought in for conditioning

Q. You are not entirely stupid. Try and get away from that. Compose your mind for a minute and listen. Here you state that none with this alteration has attained eighty hours of flying service?

A. That was August 24th.

Q. And this report is the following week. Do you still stick to that?

A. Yes.

Q. And you state this report is false?

A. I have not seen it.

Q. I will show it to you.

A. Mr. Finlayson, on that date, August 24th, when I wrote that letter, were there machines that had attained eighty hours?

Q. Those are the hours.

MR. RANEY: At that date?

MR. FINLAYSON: Yes. September 4th. Your letter was at the end of August and this refers to the beginning of September. The Minister was trying to find out if the letter was reliable or not.

WITNESS: I was on the O.G. machine.

CAPTAIN MAXWELL: What year?

WITNESS: Last year, at Orient Bay. It was not removed for heavy gears. It was smashed up.

CAPTAIN MAXWELL: This record is taken from the engine record of competent air engineers.

MR. CALLAN: This witness is on oath and is twenty-one years of age. He has come here and I want to hear his evidence.

MR. FINLAYSON: Do you still want to swear to that?

WITNESS : I have the record of that.

MR. RANEY: You have the record at your house?

WITNESS: Downtown.

MR. RANEY: And it does not accord with the report?

MR. FINLAYSON: The engine he mentions did not fly eighty hours. We don't contend it did.

WITNESS: That engine is shown as taken out for heavy gears. It crashed from want of oil. O.G., that is my machine.

MR. FINLAYSON: There are thirteen machines from seventy-seven to 100 hours and I am asking you if you swear this is false? Answer the question.

A. I cannot answer the question. The first machine

Q. Never mind that. The question ignores the first machine.

A. Then you mean ignore the whole report?

Q. Please answer this question. Ignore the first machine, which did not do anything like that.

A. It crashed and

Q. You will answer the question if I have to get an order from the House.

Ignore the first machine. I say there are twelve others which did from seventyseven to 100 hours, all of which, I am told, had this alteration.

A. Yes.

Q. Do you contradict that?

A. That they all had the alteration?

## Notes on "Civil Aviation"

Q. No. I did not ask you that. Listen. Ignore the first machine. I say there are twelve others which, having this alteration, did from seventy-seven to 100 hours of flying service.

Yes. Not all over eighty.

Q. Do you contradict that?

A. No.

Q. Then your statement is wrong?

A. No.

CHAIRMAN: You don't realize the significance. You state to the Minister that none of these machines, changed in this manner, had eighty hours of flying service. In view of this report, which you accept, do you want to swear to that?

WITNESS: In view of that report I didn't then say so

MR. RANEY: If the report is true you are wrong? You impugn the report?

WITNESS: I take back what I put in that letter.

MR. RANEY: Let us see what the report says about the engine that crashed

WITNESS : That was taken out to change heavy gears.

MR. RANEY: Was that true?

WITNESS : No.

MR. RANEY: 2264, G.C.A.O.G., that was your engine?

WITNESS: Yes.

MR. CALLAN: Was that your engine?

WITNESS: Yes. That was the number. It was not removed to replace heavy gears though.

MR. RANEY: If this is false, perhaps-others are.

MR. FINLAYSON: Do you know the number of your engine?

WITNESS: No. I know the number G, flown by George Oakes at Orient Bay.

MR. FINLAYSON: This report was prepared from records at the Sault and you want to withdraw?

WITNESS: I want to withdraw it in parts of the report only.

MR. KEITH: You have no doubt about its correctness?

WITNESS: That simply shows the machine I was in

MR. FINLAYSON: The hours of twelve flying machines ran from seventyseven to 100 hours. You don't doubt that, Mr. Keith says?

WITNESS: I will grant you that.

MR. CALLAN: Had all those machines the changed oiling system?

MR. FINLAYSON: Yes, all.

WITNESS: Some crashed from that cause.

MR. FINLAYSON: You may have that opinion. You said none of them did eighty hours?

WITNESS: You make the difference between one and some of them.

MR. FINLAYSON: I suppose this is true: When you were wrong in that your information was not more reliable on the rest of your statements?

WITNESS: My information, Mr. Finlayson, is what I saw.

MR. FINLAYSON: You did not see them all, yet you state: None with :his alteration achieved eighty hours of flying service.

WITNESS! I have already disposed of that.

MR. FINLAYSON: Well, I have not.

WITNESS : I want to withdraw to this extent only that you want to point >ut that none of the engines crashed instead of a few.

MR. CALLAN: You say there is a possibility that the official report of the Department may be wrong?

WITNESS: Yes.

MR. FINLAYSON: There is a possibility. There always is.

MR. CALLAN: I believe there is.

MR. KEITH: In answer to my question he said he did not doubt the correctness.

## Notes on "Civil Aviation"

WITNESS: It is incorrect.

MR. KEITH: About the twelve machines?

MR. RANEY: How long are we going to sit?

CHAIRMAN: I was hoping we were going to clear up this matter. What about another session to-day?

MR. FINLAYSON: This witness can be recalled again but. Captain Maxwell wants to get away and Mr. Squire is leaving at 5 o'clock.

MR. RANEY: I have to be in the House.

MR. FINLAYSON: I should like Captain Maxwell to get away.

William Roy Maxwell sworn. Examined by Mr. Finlayson.

Q. What is your position?

A. Director of the Ontario Government Air Service.

Q. How long have you been flying?

A. Since 1916.

Q. In the?

A. In the R.F.C., in the R.A.F. and in the R.C.A.F. and merchant.

Q. In four branches?

A. In four branches.

Q. Have you covered all branches of the service?

MR. RANEY: Everybody knows his qualifications.

CHAIRMAN : I think he is an acknowledged expert.

MR. FINLAYSON: Get down to your own service and this man's complaint.

He was under Thompson?

A. Yes, Thompson is the general superintendent.

Q. He was under him?

A. Yes.

Q. What branch?

A. He is in charge of the re-conditioning at Sault Ste. Marie.

Q. Mechanical repair?

A. Yes.

Q. Is he a capable man?

A. He is a very competent, capable man, I understand, in mechanics and theory in so far as aircraft and engines are concerned.

Q. In 1924 there was some trouble with Briggs?

MR. RANEY: Cannot you refer to Mr. Briggs?

A. He came to me with an application for work respecting the H.S. 2 L's and showed his credentials. I saw he had an excellent war record and I was favourably impressed. I took him on ; in fact an advance was made as I understood he was up against it, to carry him through until he started work. The first mishap with Briggs happened when Kelly damaged the bottom of his boat so that it leaked. The machine was brought on the shore to repair the bottom. Briggs, who I will say did not have a large experience on active flying operations in the shops, yes, but operations, no carelessly left his coat on the flying wires and when the engine was started it was sucked into the propeller and destroyed the propeller. A report came in but, as I said before, I felt Briggs had ability and he was not a young fellow, and I thought we should not jump at conclusions. I went personally to the lake, put on the propellor and flew the machine and Briggs back to Sudbury. That apparently started the trouble with Thompson.

Q. When was that?

A. In the season of 1924.

MR. RANEY: With whom?

WITNESS: With Major Thompson. Major Thompson will not tolerate carelessness. I think it is possible that is where the trouble started.

MR. FINLAYSON: Is that what he discharged him for?

A. Not that time. Thompson classified that as carelessness. During that season I received a confidential report from him and so on. I even had Briggs in mind as shop foreman in 1924. I went through the season and in October I wrote for a report off the man Rouse and asked him to give me in

## Notes on "Civil Aviation"

writing his personal report of all the air engineers we had in the service. That is the first letter on file.

MR. CALLAN: Who is Rouse?

A. Rouse is the man in charge of the Sudbury station, a mechanic, and really in charge of the mechanical work in so far as the engines are concerned of the Provincial Air Service. He did not measure up and was reduced. He could not handle men. He is a very good mechanic.

MR. FINLAYSON: We don't want to reflect on other people. \Ve don't want to introduce names that may give a left-handed swipe on someone else. I am not referring to this man, who has presented himself.

WITNESS: It went on until I had a report from Thompson that Brigg's machine was in a filthy condition the machine, not the engine. It was in a filthy, oily condition and a machine like that does not function as well as it should. In other words, if it is plastered with oil and grease it cannot climb, it cannot perform.

MR. CALLAN: When was that?

WITNESS: In the fall of 1924.

CHAIRMAN: It is part of the duty of the mechanic to keep the machine as well as the engine clean?

WITNESS: The machine is that apart from the power. The engine is the engine. The duty of the mechanic is to keep the machine air-worthy. We have classified them as air engineers instead of mechanics because they have passed examinations presented to, and approved by, the Controller of Civil Aviation at Ottawa. It is in connection with engines and aircraft and they must know how to draw up and rig a machine; know the chief aeronautical terms, and so on. The air engineer keeps the engine ready for flight and the machine ready for flight. Thompson on inspection of his machine found it was terribly dirty. He communicated with me and I said it might not be his fault and that his time had been devoted to something else which would not permit him to take care of the boat, and I believe that inquiry showed this was the case. Briggs had been discharged, but I asked Thompson to reinstate him and he did. Then in 1925 I had several complaints, verbal complaints, from Thompson about Mr. Briggs and it blew up at Orient Bay when I got a series of telegrams about the condition of affairs there with regard to engines and Briggs' refusal to comply with instructions of the general superintendent. If I place a superintendent in a position I have faith in him and naturally what he says should mean something. Briggs refused to come out at the correct time for operations and Thompson dismissed him and I backed Thompson up. That is the story.

MR. FINLAYSON: That is the personal end. What about his complaint of the change made in the oiling system?

WITNESS: If I may, I will be as brief as I can. Mr. Briggs said that if these holes were blocked on the outside no oil would go to the bearings. But even after two years' service in the Laurentide Air Service where this condition

was maintained on every engine in the service he says the engines would seize up

MR. FINLAYSON: Did the Laurentide service adopt this?

WITNESS: It was the idea of Vauchon, an air engineer. His theory, I am not an air engineer so I quote the consensus of opinion in the air service, was that if the holes in the crankshaft were put in the other side the sediment would not be thrown to the bearings thus causing additional friction. Now this system was used in the Laurentide and in 1924 by the Provincial Air Service, this system of oiling.

MR. CALLAN: In that connection Mr. Briggs stated that that oil was filtered and there would be no solid matter. You make the statement that it would throw sediment.

WITNESS: It is true it is filtered but regardless of that there is a certain amount of sediment collects after it has come through the strainer. As previously stated, I am not an air engineer and it is an air engineer's duty the overhaul and reconditioning.

## Notes on "Civil Aviation"

MR. FINLAYSON: As I understand the Laurentide had made this change?

WITNESS: And I had flown machines with the change.

Q. With no trouble?

A. With no trouble.

Q. It was not entirely new?

A. Oh no. Machines were delivered to the Provincial Air Service with this change.

MR. CALLAN: That had been in operation?

WITNESS: Yes, from the point of delivery to Sudbury. They were new engines.

MR. CALLAN: How far is that?

WITNESS: About 400 or 500 miles.

CHAIRMAN: Some were delivered with this system in operation?

WITNESS: Yes.

MR. CALLAN: How long is a flight of 400 or 500 miles?

WITNESS: It depends on the weather. I would say that average time runs at seventy to seventy-five miles per hour.

MR. FINLAYSON: He made no complaint in the spring about the work?

A. No complaint was made to me.

Q. Is his statement to the Minister correct: the change was made at the commencement of the season?

A. Does he refer to 1924 or 1925?

MR. RANEY: In between the two seasons.

A. We carried on the same oiling conditions.

MR. FINLAYSON: In 1924 and 1925 the same?

WITNESS: Yes, some of the engines from the Laurentide came to us in that condition.

CHAIRMAN: It was not a radical departure in the air service?

WITNESS: No. It was a change recommended by the Laurentide Air engineer, Vauchon.

MR. FINLAYSON: This statement that none of the engines attained eighty hours of flying service?

WITNESS: That is entirely untrue. I am satisfied that the engines in the report flew more.

Q. The twelve machines that I read to him?

Yes.

Q. They achieved from seventy-seven to 100 hours of flying service?

A. Yes, sir.

Q. And all had been altered?

A. All had been altered. I saw the man who supplied the list of numbers and actual flying times of the engines which had been modified to furnish the statement in connection with Mr. Briggs' letter.

Q. He says that himself and others warned against this?

A. I will read a statement about that: "Meeting held in the office of W. R. Maxwell at Sault Ste. Marie at 11.30 A.M., Monday, August 31st.

"The following air engineers were present: T. Woodside, G. R. Hutt, A. E. Hutt, W. G. Chapman, S. McCauley, W. J. Gill, W. G. Thompson, J. C. Rouse and R. H. Eraser.

"The following questions and answers were put to the above-mentioned air engineers:

"Did you hear Mr. Briggs warn against certain alterations being made to engines?

"Answer: Everybody answered, 'No.'

"Did he oppose this and other dangerous methods of change?

"Answer: Everybody answered, 'No.'

"Did he warn against this alteration (oiling system) at the time it was made?

"Answer: Everybody answered, 'No.'

"Did any of you boys hear Mr. Briggs remarks that G. A. Thompson

## Notes on "Civil Aviation"

stated that unless he (Briggs) was fired, he would resign.

"Answer: Yes, George Doan."

Those are the questions I applied to these air engineers after this trouble.

MR. CALLAN: After the previous witness was discharged?

WITNESS: Yes.

MR. CALLAN: Don't you think there is a possibility in connection with calling these other employees in connection with an investigation that they would be prompted not to tell for fear it would be detrimental to themselves?

WITNESS: I would not say so. The boys of the Provincial Air Service are a very honourable lot, and our success so far may be attributed to an outspoken statement of conditions and facts.

CHAIRMAN: In your system of organization you welcome suggestions from the air engineers?

WITNESS: Absolutely. That is what we ask.

MR. CALLAN: I am not a legal man. Assuming that some of the men at the investigation had given answers contrary to that and assuming, on the strength of that, that you had discharged them, is the field very wide for employment in that same class of service in Canada?

WITNESS: As far as air engineers are concerned?

MR. CALLAN: Yes.

WITNESS: Right now, yes. Possibly not so great then. I say they all love the Service and aim to build up the Service in the Province. They were never nervous about overtime. They would be on the job from seven to twelve every night and

MR. RANEY: Mr. Callan, you will notice I am not objecting to the reading of this letter. I am not making a technical objection, but I want to ask who was there to investigate?

WITNESS: I was at the Sault.

MR. RANEY: And you called the engineers into a conference to investigate?

WITNESS: When I received a copy of the letter I called the man in to investigate.

MR. RANEY: Mr. Briggs was there at the time this conference was called?

WITNESS: I don't know.

MR. RANEY: Yes. He did not leave until September. He was in the aerodrome, working in the shop, working out his month. Did you call him in?

WITNESS: I don't recollect him.

MR. RANEY: Did you ask him anything about this matter? Did you ask him anything about the inquiry?

WITNESS: No, he had made a statement to the Minister.

MR. RANEY: You were conducting an inquiry?

WITNESS: I was asking questions.

MR. RANEY: You did not ask him in front of the other men?

WITNESS : No.

MR. RANEY: You worked in his absence?

WITNESS: Certainly I did.

MR. RANEY: From one answer you discovered that Thompson had a strong feeling against him: "Did any of you boys hear Mr. Briggs remark that G. A. Thompson stated that unless he (Briggs) was fired, he would resign?"

WITNESS: I asked the question and George Doan answered "Yes."

MR. RANEY: If that statement was made there was indication of strong feeling by Thompson against Briggs?

WITNESS: I was trying to find out if there was prejudice.

MR. RANEY: That would indicate prejudice?

WITNESS : I would not say.

MR. RANEY: Unless Briggs was discharged he would resign that would indicate prejudice against Briggs by Major Thompson?

CHAIRMAN: I would not say so.

CHAIRMAN: In connection with that, I understand from the evidence

## Notes on "Civil Aviation"

brought out that Mr. Thompson had taken strong ground that Briggs should be discharged.

MR. RANEY: Quite so. Thompson had recommended Briggs for discharge the previous year on account of the coat incident. You had used superior authority to keep Briggs in place?

WITNESS: In view of the facts of the case.

MR. RANEY: You have heard to-day an explanation that Briggs gave and what happened on the morning that he was notified of his discharge. He had been working two nights before and was five minutes late in turning out for operations and because of that he was told he was discharged.

A. That is Briggs' story. Thompson has a different story.

Q. Assuming Briggs' story is true would that be a reasonable ground for Thompson to take?

A. Certainly not, if he had worked overtime all night; that would not be fair.

Q. I quite agree you must work on the report of the superintendent, unless you find there are reasons to doubt him and it is a difficult thing to override a superintendent when he recommends a man for discharge. He knows he is being over-ridden. But if the facts were as stated Thompson was doing Briggs an injustice?

A. As Briggs states it he was.

Q. As he had previously on the other machine, you came to that conclusion? Over the telephone.

Q. Let me ask you, did you know Briggs at all before this time?

A. The first time was when he applied for a position.

Q. You knew that he had been in charge of engine instruction at the University over all the men?

A. Captain Fisher was in charge and Mr. Briggs was an N.C.O. under his instruction.

Q. He was in charge practically, is that it?

MR. FINLAYSON: No; one was an N.C.O. and the other the officer in charge.

CHAIRMAN: We are not wanting to deprecate Mr. Briggs' knowledge, but there was an officer in charge in all these cases. I would like that to go on record unless we have official evidence to the contrary. He was only nominally in charge.

MR. RANEY: Officially in charge?

MR. FINLAYSON: The officer was officially in charge.

CHAIRMAN: It is like having a superintendent and under him a foreman.

MR. RANEY: You had no doubt as to his capability?

WITNESS: No.

Q. You knew he had done important service over here in connection with the air service?

A. It was shown to me in writing from his recommendations.

Q. And from the age of eighteen until the time you took him, when he was past forty-two or forty-three his whole life had been devoted to gasoline engines?

A. He told me that.

Q. I suppose he gave a record of his experience?

A. He did. I had it with me in the office before we started.

Q. Can you think of a more thorough record to qualify a man for this kind of work in regard to assuming he was a man for these engines?

A. It should be a necessary inference.

Q. Eminently so?

A. Yes.

Q. Now coming down to the conference had it not occurred to you that you ought to see Briggs at that time?

A. No. He had written to the Minister making statements which were

## Notes on "Civil Aviation"

false and I was immediately planning my defence.

Q. Was it really that?

A. I was supplying a true report.

Q. Were you looking at it from the view that he had gone over your head to the Minister? "We will see about that," was your point of view?

A. No. I did not mind that. It has been done before.

MR. CALLAN: The date of Mr. Briggs' letter and the date of this investigation how do they correspond?

MR. RANEY: The date of the letter from Briggs was 24th August. Just a week later. Come back to the changes on the machines. You are not disputing the fact that the oiling system in these Liberty engines not already changed were changed during the winter of 1924-25 at the airdrome at the Sault?

A. Yes, we changed them. The Laurentide started the change and those Inot

changed were changed

Q. How many did the Laurentide change?

A. I would not like to say.

Q. Maybe only two or three? How many were changed at the Sault?

A. I cannot say.

Q. The holes on the left-hand side were blocked and new holes opened on the right-hand side?

A. From the throw side to the inside.

Q. That would weaken the crankshaft?

A. No.

Q. Were all the engines at the Sault changed in that way the old holes blocked and new ones made?

A. I would necessarily have to consult the engine log books.

Q. Do you understand they were changed?

A. I understand all were to be changed.

Q. The evidence is that all were changed. Now how many of the engines changed in that way crashed?

A. If I may refer to ships as crashing and engines as major breaks, four in the season of 1924.

Q. You knew of four. Were these breakdowns brought on by the change in the oiling system?

A. That cannot be absolutely proved. It was thought from the condition of certain bearings when the machines came in for overhaul after eighty hours that the system employed was faulty.

Q. It was found that there had been a mistake in making these changes?

A. No, because they had the same trouble with the oil with the holes on the other side.

Q. Not the same trouble?

A. Absolutely.

Q. How many cases?

A. There are many cases in commercial flying.

Q. Was the change made back and the new holes blocked up?

A. We went back to the old system.

Q. When?

A. Long before Mr. Briggs ever reported to Sault Ste. Marie for dismissal.

Q. When?

A. In August.

Q. Before or after his notice of dismissal?

A. Before his notice of dismissal.

Q. The 5th of August. When did you decide to go back? Before the 5th of August?

A. I would not say until I see the record.

Q. I am not going to hold you so strictly as Mr. Finlayson did with Mr. Briggs because we all make statements that we afterwards have to qualify.

## Notes on "Civil Aviation"

I think even Mr. Finlayson will admit that.

MR. FINLAYSON: I don't make statements of oath more deliberately than without them.

MR. RANEY: We sometimes speak too quickly. I often do.

MR. FINLAYSON: I will shake hands on that and say we do frequently.

MR. RANEY: Open confession is good for the soul. About the time of the dismissal of Mr. Briggs you did come to the conclusion that this had been a mistake?

WITNESS: I don't swear to that. It is the consensus of opinion. I am not an air engineer.

Q. On the advice of the engineers?

Yes.

Q. At all events the views of the engineers were after the event; it was after this experience they thought they had made a mistake and had better get back?

CHAIRMAN: When you say that you worked on the consensus of opinion of air engineers you are applying that to your own engineers or generally?

WITNESS: That is relative strictly to our own air service.

MR. RANEY: Then you returned to the old system. Any trouble since?

WITNESS: Yes.

Q. Not as much though?

A. That is September, October, only two months' operation.

Q. Of course, Captain Maxwell, we all know that men in the Service, even superintendents make mistakes and act unjustly at times and get prejudiced.

Did you know that Captain Thompson had been one of the men who went through the instruction of Mr. Briggs while Briggs was at the University?

A. Major Thompson is an Englishman, having learned all his aircraft knowledge in England.

Q. He was passed got his papers through Mr. Briggs?

A. No, sir.

Q. You knew Briggs had papers as an air engineer from England?

A. I knew he had papers from England.

Q. You have no reason to doubt his qualifications?

A. No.

Q. Would you think it odd for a man with his qualifications to be cleaning and grinding valves?

A. I only go from the expression of opinion I received from the man in charge, written in October, 1924. That is at the top of the list. If you will refer to the letter.

Q. That has nothing to do

A. It says his ability was not such that he could be entrusted with fine work.

Q. Whose report was that?

A. From the shop foreman.

Q. Mr. Thompson?

A. No.

Q. From Mr. Thompson to you?

A. The signature will tell you from.

Q. Is not Thompson the man responsible?

A. Thompson was at operations in the field at that time. T. B. Kelly was acting superintendent.

MR. CALLAN: Did Mr. Thompson have charge of the department at that time?

WITNESS: At this time T. B. Kelly was acting superintendent and the report was sent by Rouse, the mechanical foreman.

CHAIRMAN: Was he under Thompson's orders?

WITNESS: Yes, but Thompson was in the field.

MR. RANEY: I see: "In reply to your letter, am enclosing report from Mr.

## Notes on "Civil Aviation"

Rouse on different members of the staff." Rouse was one of the engineers?

A. Shop foreman. Rouse has equal qualifications with Briggs. He was ten years with the Napier works in England.

Q. I see, "Briggs has made mistakes and I would not feel inclined to entrust him with particular work." He did not indicate the nature of the mistakes?

No. That is just his own opinion.

Q. And Rouse was one of the engineers who attended the conference?

A. If his name is down there.

Q. At that time was he an ordinary mechanic?

A. Air engineer in charge of the electrical equipment.

Q. What was that?

A. He was a step higher than an air engineer. He had charge of the electrical equipment.

Q. Is that his position still?

A. Yes, sir.

Q. No superiority over Mr. Briggs, but a little higher different qualifications on account of electrical experience?

A. Chief inspector.

Q. So that all these machines where the new holes had been drilled were brought back to the plan upon which they had been originally built. The old holes were re-opened and the new holes blocked?

A. We have even gone so far as to leave two holes in on each side.

Q. For experiment?

A. Yes, for experiment.

Q. You have opened up the holes you blocked?

A. And blocked up the holes we opened.

Q. Would that justify the attitude to Briggs?

A. Briggs comes back to the shop after these changes have been made and attempts to take credit for them.

Q. He made a warning?

A. He made no warning; no man made a warning.

Q. Just a minute, Captain Maxwell. Thompson was in charge of the shop?

A. He is the general superintendent.

Q. Thompson was inimical to Briggs. You knew that?

A. Well, he says not in the correspondence.

Q. You know he twice recommended dismissal without cause

MR. FINLAYSON: Not without cause.

MR. RANEY: Did you discuss the matter with Thompson?

MR. BRIGGS: I had three weeks argument with Thompson when Thompson came to Orient Bay.

MR. RANEY: Before the change was made did you warn Thompson against making this change?

MR. BRIGGS: I told him it would not work.

MR. RANEY: So it was Thompson who recommended the change?

CAPTAIN MAXWELL: No, sir. It was an air engineer named Vauchon.

MR. RANEY: He made the recommendation?

CAPTAIN MAXWELL: Absolutely.

MR. RANEY: And you took the responsibility of ordering it to be done on these machines?

CAPTAIN MAXWELL: Certainly not. They came to the Service like that.

MR. RANEY: But those which were changed at the Sault. Who gave instructions for those to be changed?

A. The air engineer in charge Gordon Hutt.

Q. You knew of the change?

A. Naturally.

MR. RANEY (To Mr. Briggs): Did you talk of the change with Hutt?

MR. BRIGGS: Yes.

MR. RANEY: And told him it would not work?

## Notes on "Civil Aviation"

MR. BRIGGS: Yes.  
MR. RANEY: And Thompson?  
MR. BRIGGS: Yes.  
MR. RANEY: Did you know Hutt was recommending the change?  
MR. BRIGGS: I knew he had Vauchon's idea.  
MR. RANEY: So Hutt approved?  
MR. BRIGGS: I didn't think he approved.  
Captain Maxwell re-examined by Mr. Finlayson.  
Q. Thompson is a competent, capable man?  
A. Absolutely.  
Q. He is in charge of this branch of the Service and you act on his recommendations?  
A.- When he suggested dismissal I backed my general superintendent up after the three causes for dismissal.  
MR. RANEY: After three recommendations for dismissal.  
CHAIRMAN : The facts speak for themselves.  
Q. Had the change anything to do with Briggs?  
A. Absolutely no.  
MR. CALLAN: This oil I understand is forced into the bearings, into the shaft. You understand that? What is the power used to force it in there? Is it motor driven?  
WITNESS : Yes, a disc with flanges.  
MR. CALLAN: Are there any indicators to show the pressure on the pipe from the pump to the bearings?  
WITNESS: Absolutely. And that is why the air engineer travels with the pilot. He has to keep an eye on the instruments. If you have trouble  
MR. CALLAN: Just a minute. Is the pulsation indicated?  
WITNESS : An instrument records the pressure, another records the temperature. If the temperature of the oil runs high  
MR. CALLAN: Where is the temperature taken from?  
MR. BRIGGS: From the end of the shaft.  
MR. CALLAN: Would that go dead?  
MR. BRIGGS: Yes.  
MR. CALLAN: You could not close off the engine then?  
MR. BRIGGS: We do, to glide.  
End of examination.  
CHAIRMAN: I understand Mr. Squire wants to get away.  
MR. SQUIRE: Perhaps Mr. G. Hogarth, who is Deputy-Minister of Public Works, would do or the chief engineer of our department?  
MR. RANEY: Very well.  
CHAIRMAN: In connection with that is there anything you want to tell the Committee?  
MR. SQUIRE: I think the whole story could be told in a two minutes.  
MR. RANEY: Then go ahead.  
CHAIRMAN : He did not say he wanted to tell it. The meeting is adjourned then until to-morrow.

CANADIAN AVIATION - 1927
--------------------------

## "AIR ENGINEER RANKS"

Province of Ontario ref - provincial parliament returns

## Notes on "Civil Aviation"

1927 : British Air Ministry forms the "High Speed" Flight formed for research into speed and performance and to fly a specially built seaplane in the 1927 Schneider Trophy race in Venice. RAF's Napier engined Supermarine S.5 monoplane wins the 1927 Trophy at a speed of 281.65 mph

January 1927 : Work of the Lloyds Register - Aviation Department is dropped because of a lack of outside financial support. However, the work was carried forward by the British Corporation for Shipping which was approved to compile an International

This map shows how widespread are Great Britain's internal air activities.

Register of Commercial Aircraft in January 1927.

1927 : UK Air Ministry records indicate that "reconditioning" equated to 70% of the cost of a new aircraft between 1927 - 1931.

## Notes on "Civil Aviation"

UK : State owned "Civil Air Service" provider "Imperial Airways" purchases only UK designed and built aircraft, usually in small numbers of each type operated. (Douglas Co. USA estimated that the DC2 required a production run of 75 airframes to break even) UK-Air Ministry policy shifts to demand metal airframes about this period , and by mid '30s all airframes to be metal.

1927 : Last flight made from Seattle to Victoria by Eddie Hubbard in B-1 Seaplane. The B-1 covered 350,000 miles (563,000 kilometers) and required 6 engine changes between 1919 and 1927. B-1 currently on display at the Museum of History and Industry, Lake Union, Washington.

29 June 1927 : The Turnbull variable-pitch propeller tested on an Avro 504, Camp Borden, Ontario.

1927 : Beverley Shenstone travels to England on vacation, spends a few weeks placement (via Prof. John Parkin U. of T.) at the Science Museum, Kensington with a student group of an Air Ministry Laboratory. During this time he obtains student membership in Royal Aeronautical Society.

29 March 1927 : United States Dept. of Commerce - Aeronautics Branch issues first "Airworthiness - Type Certificate" : Buhl Airster CA-3.

06 April 1927 : individual "US States" issued pilots licenses made invalid. United States Dept. of Commerce - Aeronautics Branch issues first pilot's License in the USA. (was offered to Orville Wright, he declined)

May 1927 : Charles Lindbergh flies the *Spirit of St. Louis* on a successful 33.5 hr trans-atlantic crossing NY-Paris.

July 1927 : United States Dept. of Commerce - Aeronautics Branch issues first "Aircraft Mechanic License" in the United States.

2 July 1927 : Invited to celebrate Canada's 60th birthday by Canadian envoy to Washington, Vincent Massey, Charles Lindbergh arrives at Ottawa's Hunt Club Airfield and then flies the *Spirit of St. Louis over Canada's Parliament Buildings* accompanied by 12 USAAC Curtiss P-1 Hawk biplane fighters and three Royal Canadian Air Force aircraft.. 2 US aircraft collide during the landing - Lieutenant John Thaddeus Johnson, is killed when he jumps from less than 100 feet and tries to use his parachute. While the crash was regretful, the fly-over moved the Government of Canada to begin the Flying Club "scheme" (Programme) to ensure controlled and regulated flight instruction.

1927 : Department of Defence technical training "scheme" (Programme) officially started to supply skilled tradesmen to the Canadian Air Force.

1927 : Opposition to the RCAF carrying out civil air operation comes to a head in Parliament.

08 June 1927: variable-pitch propeller designed by Rupert Turnbull is tested at camp Borden, Ontario on an Avro 504 by Royal Canadian Air Force.

July 1927 : Directorate of Civil Government Air Operations (DCGAO) created to administer and control all Non-Military air operations carried out by government aircraft.

22 August 1927 : Fokker F.VIII "H-NADU" operated by KLM suffers an in-flight failure of the vertical tail control on a flight from Croydon to Amsterdam and crashes at Underriver, Kent killing one of the eleven people on board.

1927 : RCAF reorganised, Directorate of Civil Government Air Operations (DCGAO) created to:

1. Administer all non-military air operations carried out by government aircraft.
2. Control all non-military air operations carried out by government aircraft.
3. Administer units, detachments and formations of the RCAF placed under its control.
4. Control units, detachments and formations of the RCAF placed under its control.

The DCGAO organizational structure:

1. "nominally" a civil organization (means "other than civilians" actually ran the organization)
2. reports to the Deputy Minister of National Defence.
3. staffed primarily by RCAF personnel
4. reorganization produced considerable shuffling of offices and appointments

## Notes on "Civil Aviation"

5. effect on flying operations was more apparent than real.
6. RCAF made the military branch under the Minister of Defence
7. Civil Government Air operations fall under deputy Minister (this branch later absorbed into RCAF in 1936)

September 1927 : Canadian Department of National Defence policy *"The Department will issue to any duly incorporated club or association approved by the Minister of National Defence for this purpose, two light aeroplanes free of charge. The club or association will be required to make proper provision for the housing, maintenance and repair of the aeroplanes, to arrange for the use of a flying field (or a seaplane base) and the services of a qualified instructor to be approved by this Department to supervise the flying, and a licensed air engineer for the maintenance of the aircraft in an airworthy condition [...]"*

1927 - His Excellency the Right Honourable Freeman Viscount Willingdon, G.C.S.I. . G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief of the Dominion of Canada.

# GIPSY AERO ENGINES

1927 : Frank Victor Burton joins the Edmonton and Northern Alberta Aero Club.

1. Obtains his pilot's license and
2. Obtains his air engineer's license.
3. one of the first holders of all air engineer license categories A, B, C, and D in Canada.

1939 : Frank Burton becomes chief engineer at No. 16 Elementary Flying Training School in Edmonton. (No. 16 Elementary Flying Training School - Edmonton later becomes No. 32 EFTS - Bowden)

1943 : Frank Burton becomes the manager No. 32 Elementary Flying Training School

## Notes on "Civil Aviation"

1955 -1957, retired, Frank Burton works for Bradley Air Service<sup>201</sup> <sup>202</sup>

### CANADIAN AVIATION - 1928

1928 : AIR SERVICES IN CANADA : the Canadian Quarterly Review by Group Captain J. S. Cott, M.C., A.F.C., p.s.a., R.C.A.F.

THE air services of Canada, which form part of the Department of National Defences, consist of:

The Directorate of Civil Government Air Operations.

The Controller of Civil Aviation.

The Aeronautical Engineering Division.

The Royal Canadian Air Force.

The Directorate of Civil Government Air Operations

The Directorate of Civil Government Air Operations

administers and controls all air operations carried out by State aircraft other than operations of a military nature.

Under the Director are :—

Officer i/c Civil Air Operations.

Officer i/c Aircraft Equipment and Stores.

Officer i/c Administration, Organization, Personnel.

Services, with subordinate officers.

There are air stations at High River, Alta, Winnipeg,

Man., Ottawa, Ont., and Dartmouth, N.S., with a depot and

photographic section at Ottawa, and sub-stations or detachments

at various points in Saskatchewan and Manitoba.

There are also eight photographic departments for all the

<sup>201</sup> Edmonton Journal, 31 July 1972. City of Edmonton Archives.

Aeronautical Engineering Division ^

The Aeronautical Engineering Division is required to act in a consultant capacity respecting all technical and engineering matters pertaining to the Air Services and the carrying out of the duties prescribed by the Air Board Act and regulations thereunder. The division is in charge of the Chief Aeronautical Engineer and is divided into three main sections as under.

(i) Research. —The Research Section is mainly responsible for the preparation of specifications for new types of aircraft and aircraft accessories, the supervision of type trials for new types of aircraft and of the trials of aircraft which have been modified ; the reduction of these results to standard conditions for comparison purposes ; the issuance of modifications found desirable either for the purpose of airworthiness or to meet certain service conditions ; the design of special pieces of equipment, such as camera mounts, skis, etc., the collection and dissemination of technical information, including the issuance of information circulars.

(ii) Airworthiness.—Air Regulations, 1920, require that before an aircraft can be operated commercially in Canada or a private aircraft can be operated across the international boundary, the aircraft must be certified as airworthy. The Airworthiness Section is devoted entirely to checking the strength of commercial, private and Air Service aircraft.

(Hi) Inspection.—The inspection of aircraft during construction is carried out by the Aeronautical Inspection Department, by means of small detachments of officers and

## Notes on "Civil Aviation"

N.C.O.'s stationed permanently at the works of the various manufacturers. The administration of these detachments is carried out from headquarters, and all instructions are issued from headquarters. The work of the Inspection Section at headquarters consists in issuing instructions to inspectors, particularly instructions with regard to new processes and new materials; carrying on correspondence upon queries that arise in the course of inspection ; testing materials submitted by contractors to see that they meet the necessary specifications; correspondence through the Intelligence Officer with the Air Ministry upon the subject of new specifications and materials ; the study of new processes in manufacture ; the correspondence relating to the allocation of inspection duties, particularly the decision as to whether parts shall be inspected at source or on receipt.

The Royal Canadian Air Force

The Royal Canadian Air Force administers and controls all military air operations. The policy of the Royal Canadian Air Force is as follows :—

- (a) To develop and maintain air power in Canada.
- (b) To provide adequate training facilities for all Government air services.
- (c) To provide a nucleus Air Force round which service units can be formed in the event of war.
- (d) To build up a reserve of pilots and mechanics.

In order to provide effectively for the carrying out of these duties and to ensure that too great a variation in procedure does not exist between the R.C.A.F. and the R.A.F., the more established procedure of the R.A.F. in respect to administration, stores and equipment, is being adhered to as closely as conditions permit. The R.C.A.F. is, therefore, profiting by the experience of the older and larger service, the R.A.F., and in the case of emergency a closer understanding and co-operation will be existent between the two forces.

Organisation.—The R.C.A.F., as the strictly military branch of the air services, comes under the Chief of the General Staff. The R.C.A.F. headquarters at Ottawa consists of a director, an assistant director and six staff officers, the duties being divided under the heads of:— Organisation and staff ; Training ; Operations and intelligence ; Regulations, Personnel ; Equipment.

The principal station is at Camp Borden, Ontario, with another station at Vancouver and a communication flight

R.C.A.F. Station, Camp Borden

- No. 1 (ab-initio training) Squadron : 24 x Lynx powered Avro 504 (including 6 in reserve)
- No. 2 (advanced training) Squadron : 8 x D.H Moths or Couriers (including 2 in reserve)
- No. 3 (service) Squadron : 14 Siskin, Atlas, Fairchild (including 4 in reserve)

There are also a ground instructional school, workshops, and stores depot.

R.C.A.F. Station, Vancouver

- No. 4 (training) Squadron : 3 x Avro 504, 1 x Courier.
- No. 5 (service) Squadron : 2 x Fairey III-F .

R.C.A.F. Communication Flight, Ottawa

Communication flight at Ottawa : 1 x Avro, 1 x Vedette, 1 x Corsair.

## Notes on "Civil Aviation"

R.C.A.F. Liaison Office, London, England.—The R.C.A.F. Liaison Office is in charge of an officer, permanent R.C.A.F., with an under-staff of civil employees, and is maintained as part of the office of the High Commissioner for Canada, but is housed in the Air Ministry, London, England.

The duties which devolve on this officer and his staff consist of the collection and transmission of intelligence of all kinds between the R.A.F. and the R.C.A.F. By reason of his location, the Liaison officer has ample opportunity to permit his keeping in touch with the latest developments in aviation in Great Britain and Europe for communication in Canada.

Selection of Personnel.—The nature of the equipment used in the R.C.A.F. requires a high standard of technical knowledge on the part of all ranks in the service.

It is the policy of the R.C.A.F. to secure officers and airmen from the following sources :

Officers.—From gentlemen cadets who have graduated from the Royal Military College and from students of recognised universities who have attained their degree in applied science of engineering.

Airmen:- From the ranks of the skilled artisans of industry and from the graduates of certain technical schools where they receive special training.

Training.—To fit the personnel of the R.C.A.F. to carry out their varied duties efficiently, almost endless training is necessary. The greater part of this training is carried out at Camp Borden, though personnel are also trained at Vancouver, at commercial plants, at universities, and in the Royal Air Force. An outline of some of the training is as follows :

(i) Ab initio Flying Training :—Ab initio flying training is given to provisional pilot officers and N.C.O.'s selected for training as pilots. In accordance with the stated policy for the selection of officers for the R.C.A.F., to obtain young men having a sound education, with special qualifications on the technical side, arrangements have been made with recognised universities to obtain a number of students of applied science and engineering faculties and train them at Camp Borden during the summer vacation. A number of gentlemen cadets from the Royal Military College are accepted each year in the same way. During training they are granted the temporary rank of provisional pilot officers.

The course of training consists of three terms, each of three to three and a-half months' duration (approximately May 15 to September 1) in three consecutive years.

On completion of the Provisional Pilot Officers' Course, successful candidates are eligible for :—

(a) Appointment as pilot officers in the Permanent R.C.A.F.

(b) Appointment as pilot officers in the Non-Permanent R.C.A.F.

(c) Transfer to the Reserve of Officers.

(d) Employment in the flying capacity in civil aviation

This scheme of training has been in force since 1923 and while the numbers selected each year have been limited, gratifying results have been obtained.

The training of N.C.O. pilots was authorised in November, 1926. During the winter 1926-1927 four N.C.O.'s qualified for their wings. At present there are six N.C.O.'s undergoing ab initio training and should qualify for wings in the near future.

(ii) Advanced Flying Training : —When a pupil qualifies for pilot's wings he is far from being a fully trained pilot; it is proposed, therefore, during the present year to give 10 to 15 officers advanced training at Camp Borden. This course will include flying on the latest training and service types and advanced instruction on service subjects, such as

## Notes on "Civil Aviation"

Army Co-operation, Armament, Air Pilotage, etc. The majority of these officers will be P.P.O.'s who qualified for wings during the summer of 1927.

(iii) Service Flying Training : —Up-to-date service aircraft will be available this year for the first time in R.C.A.F.

history. It is proposed to organise a Service Squadron at Camp Borden consisting of one Flight of fighting aircraft, one Flight of Army co-operation aircraft, and one Flight of photographic aircraft. Training will commence as soon as possible, and will continue until the personnel of the squadron have attained a high degree of efficiency in their respective work. The methods of training adopted in the R.A.F. will be followed as closely as possible.

(iv) Refresher Flying Training : —Refresher training is carried out periodically at Camp Borden for the personnel of the R.C.A.F. and the Directorate of Civil Government Air Operations, to improve the standard and to permit personnel employed on other duties to become familiar with the latest developments and methods in the varied lines and subjects required of Air Force personnel.

In addition to service personnel, a large number of commercial pilots have been given refresher courses at Camp Borden during the last four years.

(v) Unit Winter Training: —During the winter when ab initio flying training and operational flying is not being carried out, officers and airmen, not attending courses, are given instruction at their units, on service subjects. These courses are arranged to interfere as little as possible with routine duties.

(vi) Technical Training for Boys :—With the expansion of the Air Services there arose an important factor in respect to the supply of young and semi-trained airmen. Technical schools throughout Canada have been asked to train boys in aeronautical subjects with a view to enlistment in the R.C.A.F. when of age. This training is being carried out along the following lines :

The technical school course for boys is usually of three years' duration, the first year being the same for all courses. In the second year, boys who have completed their second year at technical school, and are considered suitable for the particular trade specified in the quota, are enlisted in the non-permanent R.C.A.F. They are enlisted as " Boys " if between the ages of 16½ and 18 years, or as " Aircraftmen, 2nd class " if between the ages of 18 and 24 years, and are attached to an R.C.A.F. unit for instruction during the summer vacation. Having successfully completed their technical school training they are enlisted in the permanent R.C.A.F. after having passed the necessary trade tests. The first course, consisting of 19 boys, started on July 1, 1927. and 16 boys successfully passed the first period of training. In order to foster and further the co-operation of technical schools, a bond of \$100 is to be given to schools from which airmen have qualified and been enlisted in the permanent R.C.A.F.

(vii) Civilian Flying Training : —On the recommendation of the Controller of Civil Aviation, a limited number of pilots from commercial companies, the Ontario Government Air Service, and Flying Clubs, are given refresher training and training for flying instructors.

(viii) Special Courses : —Numerous courses have been arranged for by the R.C.A.F. for the different branches of the Air Service in 1928. These include :—  
For the Civil Government Air Operations Branch :—

## Notes on "Civil Aviation"

Specialist training on enlistment (7 months) Storekeeping (1 month), Training Pool (1 year), Seaplane training (2 months), Advanced training in Navigation, Cloud Flying and Photography (5 months), Airmen Pilots ab initio (6 months), Advanced training for ab initio pilots (1 year) (Reserve).

For the Controller of Civil Aviation Branch :—

Commercial Pilots (1 month), Flying Instructor's Course ^ or Commercial Pilots (1 month), Flying Club Instructors (1 month).

For the R.C.A.F. :—

Service Training Squadron (1 year). Specialist Training on enlistment (7 months), Army Co-operation (1 month), Storekeeping (1 month), Training Pool (1 year), P.P.O. training (3 months), Boys' technical training (2 months), Staff College Preparatory, Kingston (3 months), Artillery co-operation (Army) (15 days), Auxiliary (Borden) (1 month), Auxiliary (local) (14 days), Miscellaneous (Wood Technical, parachutes, etc.) (as long as necessary).

These courses provide for the training of 268 officers, commercial pilots and flying club instructors, and 264 N.C.Ob., airmen and boys.

Selected officers of the K.C.A.I., also attend courses in England as under :—

Imperial Defence College (1 year), R.A.I". Staff College (1 year), Royal Naval Staff College (1 year), Army Co-operation (3 months), Armament (6 months), Flying Instructors (3 months), Air Pilotage (3 months), Aeronautical Engineering (10 months), Storekeeping (1 year), Wireless (7 months).

Exchange of Officers. —An exchange of officers with the Royal Air Force for a period of two years is being carried out under the following categories :—

1 seaplane pilot.

1 stores officer.

1 Engineer officer on aircraft inspection work.

These officers of the R.C.A.F. are employed as regular officers of the R.A.F. and at the conclusion of their period of attachment return to Canada with a knowledge which can be embodied in the R.C.A.F. procedure, and will doubtless prove of extreme value. At the same time the R.A.F.

officers return to England with first-hand information of Canadian conditions and the spirit of co-operation within the Empire is further developed.

The famous Armstrong Siddeley Jaguar engine in its standard and supercharged form, and the Genet 80/88 h.p. light aircraft engine, are also being used extensively, as is the Armstrong Whitworth "Atlas" type of general-purpose aircraft. The Armstrong-Siddeley "Lynx" engine is, as previously recorded, employed extensively in aircraft such as the Avro Lynx, the Vickers "Vedette" and the Vickers Varuna," while up till now the "Genet" engine has done most of its work in the "Genet-Moths" of the Royal Canadian Air Force the Royal Canadian Air Force have standardised the Siskin all-steel single-seater aircraft for the fighter units and Armstrong Siddeley radial air-cooled engines are now in extensive use across Canada. To give the utmost, quickest and best possible service, ARMSTRONG SIDDELEY MOTORS, Limited, the allied company of Sir W. G. Armstrong Whitworth Aircraft, Limited UK, have, in conjunction with the Ottawa Car Company, established a service station at Ottawa, where the engines in use in Canada may, when necessary, be sent for complete overhaul by highly-skilled Armstrong Siddeley engineers. The Ottawa Car Manufacturing Co., also has an arrangement with the Consolidated Aircraft Co., of Buffalo, N.Y., for the assembly of their machines in Canada. The Wright Aeronautical Corporation of Patterson, N.J., have formed a branch company in Montreal for the assembly and service of Weight engines

the de Havilland Aircraft of Canada, with headquarters at 1001, Federal Buildings, 85, Richmond Street West, Toronto, was established in February of this year and put under the very able management of Mr. R. A. Loader, who was a familiar and popular figure at Stag Lane until his appointment to the new post in Canada. the Canadian market would not be large enough to support a mass-production factory such as that which has grown up at Stag Lane. The policy was therefore adopted of manufacturing the components in England and shipping them to Canada for erection there, at the new workshops at Mount Dennis. where workshops were constructed to deal with erection repairs and overhauls and incorporating a service station carrying a large stock of all spares. already some 100 "Moths" are in operation in Canada. In addition to the de Havilland "Moths" owned by clubs and private individuals, the Canadian Government has 50 of these machines. The Ontario Provincial Government has 10 of these machines, and the "Moth" is also used by the Laurentide Air Service, Montreal ; by Western

## Notes on "Civil Aviation"

Canadian Airways, Winnipeg; by Dominion Airways, Vancouver ; by the Canadian Ministry of Marine, and by some business houses with sufficient initiative to realise the great advantages of air transport. Sir Charles Wakefield presented two " Moths " to Canada : a landplane to the Toronto Flying Club and a seaplane to Major-General J. H. MacBrien for his personal use on behalf of aviation in Canada. General MacBrien has for some time been president of the Aviation League of Canada, and was until recently Chief of the Canadian General Staff. Another distinguished owner of a " Moth " is Mr. J. A. Wilson, Director of Civil Aviation in Canada, an *indefatigable worker in the cause of aviation*, regularly uses his " Moth " for every duty connected with his office . The D.H.61, specially built for colonial conditions, is finding increasing favour in Canada. Fitted either with the geared or ungeared Bristol " Jupiter " engine, this machine, which carries eight passengers, cruises at about 110 m.p.h. One of these machines, with interchangeable land and float undercarriages, has recently been supplied to the Ontario Provincial Air Service, Canadian Vickers, whose machine is a seaplane, and the London Air Transport Company of Ontario, who own a landplane variant.

ambitious light 'plane attempt upon the Atlantic from Newfoundland to Ireland in a Gipsy-Moth. Lieut.-Com. H. C. MacDonald, D.S.C., is the pilot. His Gipsy-Moth was shipped to St. John's, Newfoundland, from Liverpool on September 18. Should conditions at the time be against the venture he might then possibly and wisely turn his intentions to a flying tour of America or Canada.

The distance from St. John's, Newfoundland, to Clifden, Ireland, is 1,890 miles.

The Gipsy-Moth will be standard in all respects except for the modifications for the greater fuel capacity. The front cockpit will be fitted with the extra tank and the total amount of fuel carried will be about 100 gallons, which will allow for a flight of 3,500 miles at an average cruising speed of 100 m.p.h., that is, a duration of 35 hours. For the purpose of making a very limited comparison it might be recalled that Capt. H. Broad remained in the air for 24 hours on the Gipsy-Moth in his recent duration flight and had sufficient fuel for another 4 hours, but of course he was throttled back to the minimum cruising speed. He took off for that flight easily with a load of 80 gallons of fuel.

Commander MacDonald, D.S.C., is on the Emergency List of the Royal Navy,.

REPORT OF THE DEPARTMENT OF NATIONAL DEFENCE, CANADA (Militia and Air Services) FOR THE FISCAL YEAR ENDING MARCH 31, 1927 - REPORT OF THE CHIEF OF STAFF : the several branches and directorates of the General Staff appended hereto have been subdivided as follows:— (a) Militia Service

- (1) Military Operations and Intelligence
- (2) Military Training and Staff Duties
- (3) Artillery
- (4) Signals
- (5) Small Arms School
- (6) Physical Training and Cadet Services

## Notes on "Civil Aviation"

(7) Historical Section.

(b) Royal Canadian Air Force

(1) Military Operations and Intelligence

### Operations

Canadian defence problems and military policy have received the close attention of this directorate throughout the year.

Matters emanating from the League of Nations and forwarded to this department have received attention.

The question of Disarmament has been thoroughly studied.

Defence questions to be considered at the Imperial Conference were referred to this directorate for consideration and reports. Military Intelligence

The Military Intelligence Service at National Defence Headquarters and in the Military Districts has now reached a very fair degree of efficiency. The process of collection, collation and distribution of military intelligence has gone on in the normal way, and the Intelligence Service would function smoothly with the rest of the staffs in case of emergency.

The Assistant Director of Military Intelligence continues as Chairman of the Editorial and Managing Committee of the Canadian Defence Quarterly, a duty which requires a great deal of time and concentrated attention. The directorate, as a whole, has given wholehearted assistance towards its publication.

The Assistant Director of Military Intelligence also continues to carry out the duties previously performed by the Staff Officer to the Inspector General. NATIONAL DEFENCE (MILITIA AND AIR SERVICES)

Close liaison has been maintained with other departments of the Federal Government and other organizations that are of particular interest to this directorate. The officers of this directorate have given many lectures to the Non-

Permanent Militia, at the Royal Military College and to other organizations

which are interested in military or Empire problems. Staff

There have been no changes in the personnel of this directorate during the fiscal year. All ranks have worked loyally and the efficiency has increased. With the exception of two females in the General Staff and Departmental Library and one in the Intelligence Service ^ all the personnel of this directorate are male. About half the personnel of the directorate are military and the other half civil servants and most of the civil servants are ex-service men.

(b) The Royal Canadian Air Force

The direction and control of aeronautics in Canada, both civil and military, come under the jurisdiction of the Department of National Defence. The powers and duties involved are exercised, under the direction of the Minister, by the Chief of Staff, through the Director of the Royal Canadian Air Force.

The Royal Canadian Air Force has the following composition: —

(a) The Active Air Force.

(5) The Reserve Air Force.

(a) The Active Air Force. '

The establishment of the Permanent Active Air Force of Canada consists of 95 officers and 375 airmen permanently embodied for continuous service, and available for general service, including training and operations for civil government departments. The strength of the Royal Canadian Air Force was up to full establishment on March 31, 1927.

The Non-Permanent Active Air Force is comprised of such units or detachments and other formations as are from time to time named by the Governor in Council. At present there are authorized 67 officers and 130 airmen.

(b) The Reserve Air Force.

The constitution and regulations for the Reserve Air Force are now in course of preparation. The Reserve Air Force will consist of qualified officers and airmen who will be liable to be called out for such training as, may be prescribed.

The period of service in time of peace for the Royal Canadian Air Force is as under: —

(a) For the Active Air Force — Three years.

(6) For the Reserve Air Force — Such a period as may be prescribed by the Governor in Council.

No Non-Permanent Active Air Force units have as yet been formed, due to financial limitations.

King's Regulations and Orders for the Royal Canadian Air Force, 1924, as approved by His Excellency the Governor in Council, on January 15, 1924, with such amendments as have been since that time approved, are in operation for the

#### 40 NATIONAL DEFENCE (MILITIA AND AIR SERVICES)

direction of the Royal Canadian Air Force, and other subsidiary regulations (with exception of dress) as approved and put into operation on April 1, 1924, are, with minor amendments, still in effect. Dress Regulations were entirely redrafted and approved in 1925, and issued in 1926.

A report, covering Civil Aviation and Operations of the Royal Canadian Air Force for civil government departments during the year 1926 is being published (copies of this report may be obtained upon application to the Secretary, Department of National Defence, Ottawa). In this report (Civil Aviation, 1926) full details as to civil aviation in the country are dealt with, including operations of commercial aviation firms and the activities of the R.C.A.F., undertaken in conjunction with other departments of the Government for the better protection of forests from fire, aerial surveying, exploratory work; transportation in remote parts of the country; fishery protection, customs patrols, etc. These phases of the work will, therefore, not be dealt with in this report, which is confined entirely to Air Force duties.

R.C.A.F. Organization.

## Notes on "Civil Aviation"

The R.C.A.F. is divided into three sections, as follows: —  
Director, R.C.A.F.

(1) Assistant Director, Air Staff and Personnel.

(2) Assistant Director, Supply and Research.

(3) The Secretary.

(1) The Branch of the Assistant Director, Air Staff and Personnel, is divided into five sections, —

(a) Personnel,

(b) Training,

(c) Civil Operations,

(d) Intelligence Duties,

(e) Administration,  
each under its own, Staff Officer.

(a) The Staff Officer, Personnel, deals with appointments promotions, transfers, courts of inquiry, pay, and other similar matters.

(b) The Staff Officer, Training, is responsible for the training of the R.C.A.F., including Provisional Pilot Officers' Training; combined operations with the Military and Naval Forces ; courses of instruction, and all other matters connected with Air Force training and operations.

(c) The Staff Officer, Civil Operations, deals entirely with the operations undertaken, in conjunction with civil branches of the Government service, and includes such work as forestry and fisheries ^ patrols; aerial survey; photography; transportation; preventive patrols, etc.

(d) The Staff Officer, Intelligence, is responsible for the collection, recording, and dissemination of all Air Force Intelligence. He works in collaboration with the Military and Naval Intelligence Staffs and is, at all times, in the closest touch with their work, so that the other Services may be fully informed on Air Force Intelligence matters, and that duplication, of effort in the collection of defence information may be avoided.

(e) The Staff Officer, Administration, is responsible for the revision and promulgation of all Air Force Regulations.

(2) The Branch of the Assistant Director of Supply and Research is divided into two sections: —

(a) Technical and Research.

(6) Equipment and Supply.

### NATIONAL DEFENCE (MILITIA AND AIR SERVICES) 41

(a) The Technical and Research section deals with technical development of aeronautics; the design and construction of aircraft, engines, and accessories;

## Notes on "Civil Aviation"

air maintenance; questions of airworthiness of service aircraft, and any other aeronautical engineering questions arising.

(6) The Equipment and Supply Branch deals with all matters pertaining to the supply of equipment; storekeeping duties; storage depots; the disposal of surplus equipment; and other duties of a like nature. It is responsible for all indents made on the Contracts Branch; for the purchase of supplies, so that adequate stocks of all classes of material may be maintained at all times for the proper execution of the various duties of the Air Force.

(3) The Secretary's Branch is responsible for the control of Civil Aviation, including the licensing of Pilots and Air Engineers; the registration, inspection for airworthiness, and marking of Commercial aircraft, inspection and licensing of Air Harbours, and the control of Commercial aviation operations generally. This branch is also responsible for the preparation of the Air Force estimates and a report on the work of the Air Force, and control of civil staff and other civilian duties. The control of Civil Aviation is carried out by the Controller of Civil Aviation, an officer of the Permanent Air Force, appointed to this Branch for these duties.

### R.C.A.F. Units

No. 1 Squadron (Operations), Vancouver, B.C. — Established in the summer of 1920 at Jericho Beach, on English Bay, just outside the city of Vancouver, this unit has been in continuous operation. Operations were carried out at this unit under the Air Board and Canadian Air Force up to April 1, 1924, when the unit came under its present designation in the R.C.A.F., and since that time has been functioning as an Air Force unit.

The unit is well equipped in regard to hangars, shops and slipways. Barrack accommodation and housing of the personnel are required. The provision of more modern aircraft, giving greater efficiency in both service and civil operations, is an urgent necessity.

The duties allotted to No. 1 Squadron are as follows: —

(a) R.C.A.F. duties:—

- (1) Seaplane training for officers (ab initio).
  - (2) Winter training — Officers and airmen.
  - (3) Combined operations and training with Naval and Military Forces.
  - (6) Forest fire protection work for the Federal and Provincial Governments.
- (c) Aerial photography.
- (d) Fishery protection.
- (e) Customs preventive patrols.
- (/) Blister Rust control and Spruce Bud- Worm investigation.

During 1926, ab initio seaplane training was carried out, at which nine officers attended, all of whom qualified as seaplane pilots.

One Commercial Pilot received a Refresher Training Course at this Station

during the year under review.

Winter training for all officers and airmen was carried out during the winter of 1926, training which was instituted with the object of a thorough grounding for officers and airmen in subjects pertaining to Air Force Law and Discipline; Air Pilotage; Airmanship; Aeronautical Engineering; Interior Economy; Physical Training, and Drill, etc. This training had most satisfactory results.

No. 2 Squadron (Operations), High River, Alta. — The High River unit, which has been situated at High River since the spring of 1921, has, since

#### 42 NATIONAL DEFENCE (MILITIA AND AIR SERVICES)

April 1, 1924, been operating under the Royal Canadian Air Force. Prior to April 1, 1924, the unit was operated by the Air Board and the Canadian Air Force, and, since its establishment in the fall of 1920, has been located at Morley and High River. During the years it has been in operation, hangars, shops, wireless stations and storehouses have been provided and in these respects the station is well equipped. Barrack accommodation for the housing of officers and men is still required. Modern aircraft specially designed are being built to meet the dangerous conditions existent in the foothill region. During 1926, detached photographic operations were carried out from different bases in Alberta and Saskatchewan under the supervision of the Officer Commanding the High River Unit. Winter flying tests to determine the effect of extreme low temperature on the operation of two Siddeley Siskin aircraft were carried out at Edmonton, Alta., by personnel of this unit.

The operations carried out at the High River unit during 1926 were as follows: —

(a) R.C.A.F. duties—

- (1) Winter training for officers and airmen.
- (2) Parachute riggers' training.
- (3) Combined operations and training with Military Forces.
- (4) Winter flying tests.

(b) Forest fire protection.

(c) Aerial surveys.

(d) Aerial photography.

During the fiscal year 1926-27, a very comprehensive scheme of winter training, for officers and airmen, was carried out at the High River unit. The syllabus of this course covered training on subjects such as Air Force Law and Discipline; Air Pilotage; Airmanship, Aeronautical engineering; Interior Economy; Physical Training; Drill, etc.

Two Parachute Riggers' Courses were given during this period, at which three officers and four other ranks attended for instruction.

## Notes on "Civil Aviation"

No. 1 Wing, Winnipeg, Man. — Headquarters for No. 1 Wing, Winnipeg, is now located at 797 Notre Dame street, having moved from Fort Osborne Barracks, where they have been located since 1922. Previous to that the Headquarters was situated at Victoria Beach, on Lake Winnipeg, during the summer season, and in rented premises in Winnipeg during the winter, where the overhaul of aircraft and equipment, used in forestry patrol and aerial survey work, was carried out. On the reorganization of the Unit on an Air Force basis, it was deemed essential to provide a better base for its headquarters. Fortunately, accommodation for the personnel was available at Fort Osborne Barracks, and, in 1922, the adjacent tract of land, suitable for aerodrome purposes, was purchased. In 1925 a further parcel of land was added to the purchase of 1922.

Up to the present, funds have not permitted, however, of the erection of hangars and workshops on the aerodrome site.

During 1926 sub-bases at Lac du Bonnet, Norway House, and Cormorant Lake were operated. The sub-bases were closed in the fall of 1926, and the personnel and equipment withdrawn to Winnipeg where they are employed on the overhaul of aircraft, engines, and other equipment. Air Force training, and courses of instruction.

The operations carried out at No. 1 Wing are as follows: —

(a) R.C.A.F. duties—

(1) Winter training — ^ Officers and airmen.

(2) Combined operations and training with the Military Forces.

### NATIONAL DEFENCE (MILITIA AND AIR SERVICES) 43

(6) Forest fire protection.

(c) Aerial surveys.

(d) Aerial Photography.

(e) Transportation for the Department of Indian Affairs, Mines, Mounted Police, and other services.

The present Avro Viper fire detection, patrol aircraft should be replaced by more efficient types and a larger weight carrying flying boat should be provided for fire suppression duties. The substations at Lac du Bonnet and Cormorant Lake still require more ground equipment and ground facilities for the housing of the personnel and the carrying on of the summer operations.

Winter training courses for officers and airmen covered such subjects as already outlined in the Vancouver and High River training of a similar nature.

A Refresher Course in Seaplane Flying was given to one Commercial Pilot during the year.

No. 1 Flying Training Station, Camp Borden, Ont,

The Air Station at Camp Borden, at present in, use, is that which was built

during the war by the Imperial Munitions Board as a Training Station for the R.A.F. Units recruited in Canada. The Station, though admirably suitable for flying operations on a large scale, is too large for the present establishment of the R.C.A.F. Maintenance charges in general are altogether disproportionate to the present strength of the R.C.A.F. The Camp is, as well, isolated and difficult of access. For these reasons it is hoped that accommodation, on a more suitable scale, involving smaller maintenance charges, may be made available at an early date for the training of the R.C.A.F.

(a) Refresher Flying Courses were given to seven Permanent and three

Non-Permanent officers of the R.C.A.F.

(h) Training for Provisional Pilot Officers. Eleven Provisional Pilot Officers underwent their first term of ab initio flying training, nine of whom successfully passed their examinations at the completion of the term. Sixteen Provisional Pilot Officers attended for the second term of ab initio flying training, fifteen of them successfully completing their second term.

Nine third term Provisional Pilot Officers attended, seven of whom successfully passed their examinations upon the completion of the course, and qualified as pilots. Three of the successful candidates were given further flying instruction, and granted commissions in the Non-Permanent R.C.A.F.

(c) Nine Commercial Pilots received flying training at Camp Borden.

(d) An N.C.O. Pilots' Course was given, six airmen attending. This course was not completed at the end of the 1926-27 fiscal year.

(e) A Radio Training and W. T. Course, extending over a period of two weeks, was given, and was attended by nine officers and one N.C.O.

(f) An Artillery Co-operation course, extending over a period of three weeks, and attended by one Naval, seven Army, and four Air Force officers, was given.

(g) A Parachute Course, extending over a period of four weeks, and attended by two officers and five airmen, all of whom successfully passed their examination at the completion of the course, was given.

(h) A Flying Instructors' Course, covering a period of three weeks, was attended by seven officers of the Permanent Active Air Force. The officers were classified, or, in the case of former instructors, reclassified, at the completion of the course.

#### 44 NATIONAL DEFENCE (MILITIA AND AIR SERVICES)

(i) An N.C.O.'s Drill Course, extending over a period of one month and attended by N.C.O.'s from different R.C.A.F. Units was completed.

(j) Two Storekeeping Courses for Airmen were given, each course extending over a period of one month. The first course was attended by twelve N.C.O.'s, and the second by nineteen airmen.

A refresher flying course for Non-Permanent R.C.A.F. officers, and

## Notes on "Civil Aviation"

Refresher Flying and Ground Instruction for Officers and Airmen of the Hudson Straits Expedition was started, but was not completed during this period.

No. 3 Squadron (Operations), Shirley's Bay, Ottawa. — This unit is situated on Shirley's bay, on lake Deschenes, some nine miles west of Ottawa. At the close of the operating season, aircraft and engines, and other equipment, are withdrawn to No. 1 Depot, Ottawa, for overhaul, part of the personnel being posted to the Depot to assist in this work, the remainder carrying on with routine Stores work in a temporary squadron office and stores in the Labelle building, Ottawa. Here also, barrack buildings for the housing of the personnel employed are urgently required.

The duties carried out at this unit are as follows: —

(a) R.C.A.F. duties.-

(6) Combined training and operations with military units.

(c) Experimental flights for development purposes.

(d) Aerial surveys.

(e) Aerial photography.

(/) Transportation.

No. 4 Squadron (Operations) Dartmouth, N.S. — Funds were not available for the operation of this Unit during the fiscal year 1926-27.

No. 1 Depot, Ottawa. — No. 1 Depot, inaugurated as the Central Repair Depot of the R.C.A.F., is situated on Victoria island, Ottawa. The Depot is composed of two very important units, the Main Workshops and the Central Stores Depot of the R.C.A.F.

The duties carried out at this unit are: —

(a) R.C.A.F. duties.

(6) Repair of all aeronautical equipment which cannot be undertaken at

other Air Force units,

(c) A.I.D. inspection duties.

(d) Issue of stores and Equipment to all other Air Force units.

### R.C.A.F. Training

R.C.A.F. Training may be divided into two categories: training for officers and for airmen.

The training for officers and airmen at R.C.A.F. units during the year has been dealt with under the respective units.

Arrangements have been made with the authorities of other services for the attachment for duty of R.C.A.F. officers to courses of instruction at the Royal Military College, and elsewhere throughout the country. Special courses of instruction in various subjects were carried out at other various units.

Officers of the Royal Canadian Air Force attended the following courses with the Royal Air Force in England: —

## Notes on "Civil Aviation"

- (a) R.A.F. Staff College, Andover— Attended by two R.C.A.F. Officers.
- (t>) Flying Instructors' Course, Central Flying School, Upavon — Attended by one R.C.A.F. Officer.

### NATIONAL DEFENCE (MILITIA AND AIR SERVICES) 45

- (c) Navigation Course at the R.A.F. School of Air Pilotage, Calshot — ■  
Attended by one officer of the R.C.A.F.

- (d) Army Co-operation at the R.A.F. Army Co-operation School, Old Sarum — Attended by one R.C.A.F. Officer.

- (e) Armament Course, Eastchurch ^ — Attended by one R.C.A.F. Officer.
- (/) War Staff Course at the Royal Naval Staff College, Greenwich —

Attended by one R.C.A.F. Officer.

- (g) Aeronautical Engineering Course at the Imperial College of Science,

London — Attended by one officer of the R.C.A.F.

None of the above Courses had been completed at the end of the fiscal year 1926-27.

### Provisional Pilot Officers' Training

The idea underlying the present scheme of the R.C.A.F. Provisional Pilot Officers' training is to obtain, with the minimum expense, a class of young officer having, in addition to his knowledge of flying, a thorough all-round education with special qualifications on the technical side. With this in view, arrangements have been made with the Canadian Universities to accept for Air Force training, a number of students in their first year from the Applied Science and Engineering faculties, and train them at Camp Borden during the summer vacations each year of their university course. A gratifying response is being received and sufficient numbers of volunteers are forthcoming already to ensure the success of the scheme. A number of Gentlemen Cadets from the Royal Military College are accepted each year in the same way. The scheme of training is as follows: —

The course of training consists of three terms, each of two and a half to three and a half months' duration (approximately May 15 to September 1) in three consecutive years. To be eligible for selection, a candidate must be attending a Canadian University or the Royal Military College of Canada. If the former, it is required that the candidate: —

- (a) Be a member of the Canadian Officers' Training Corps, and have performed the requisite qualifying service, and passed the practical examination for certificate " A " C.O.T.C.

- (6) Be following a course of study as an undergraduate, leading to a degree in applied science.

- (c) Be physically fit for Air Force service as a Pilot.

- (d) Be unmarried.

- (e) Be under 21 years of age upon the coimmencement of the course.

(/) Be recommended by the Military Committee of the University as

likely to become an efficient Air Force officer.

(g) Give an understanding to complete the whole course.

Before attending the Second Term, the candidate is required to be in possession of a certificate "A" C.O.T.C. Candidates who are Gentlemen Cadets attending the Royal Military College are required to: —

(a) Be first year students who are recommended by the Commandant as likely to become efficient Air Force officers, or, if second year students of the R.M.C. undertake to continue Air Force training after graduating from the Royal Military College, and who are recommended by the Commandant as likely to become efficient Air Force officers.

(6) Be physically fit for Air Force service as a Pilot.

(c) Be over 17 years of age on January 1 of the year of the commencement of the course.

(d) Give an understanding to complete the whole course.

#### 46 NATIONAL DEFENCE (MILITIA AND AIR SERVICES)

District Officers Commanding the several Military Districts throughout Canada are responsible for the distribution of information covering Provisional Air Force commissions to Universities within their respective districts, and the forwarding of applications to the Department of National Defence.

Status. — ^ While in attendance at the Royal Canadian Air Force Training Station, candidates are granted temporary commissions as Provisional Pilot Officers, and receive Pay and Allowances in accordance with Pay and Allowance Regulations for the Royal Canadian Air Force. The rates are as follows: —

Pay. — During the first term, \$3 per day; during the second term, \$3.50 per day; during the third term, \$4 per day.

Allowances. — While travelling to and from the Royal Canadian Air Force Training Station, candidates receive free transportation and a travelling allowance of \$5 per day.

Messing. — Candidates are required to live in the officers' mess, while at the Royal Canadian Air Force Training Station. The mess draws a free ration on behalf of each candidate, but, in addition, the candidate is required to pay a mess bill of approximately 75 cents per diem, to cover the additional cost of messing.

Quarters, Uniform, and Medical Attendance. — ^ While under training, candidates are provided with uniform, camp equipment and quarters, medical and hospital services being provided as necessary without charge.

Qualifications. — On completion of the course, candidates will be eligible for: —

## Notes on "Civil Aviation"

(a) Appointment as Pilot Officer in the Royal Canadian Air Force for permanent duty (the number of vacancies for such appointments will, in all probability, be very limited).

(b) Appointment as Pilot Officer in the Royal Canadian Air Force for active duty twenty-eight days in every two years, and in emergency.

(c) Transfer to the reserve of officers, in which case they will not be liable for further service, except in time of emergency.

### Training for Airmen

Funds have not been available for the establishment of any regular training for boys up to the present. Airmen have, therefore, been entered direct from, civil life and their training has proceeded at the unit to which they are attached for duty. Special courses for recruits have been held at Camp Borden and elsewhere, so as to give as thorough a preliminary training as the circumstances permit. As far as possible, trained mechanics are enlisted to fill the technical ranks. Training for airmen, however, cannot be considered complete until some suitable establishment can be provided whereby young mechanics may be thoroughly trained in Air Force duties, preparatory to joining a unit for actual service.

### Military COURSES IN CANADA : Staff College Preparatory Course src ref : 1928 Annual Dept reports - NATIONAL DEFENCE (MILITIA AND AIR SERVICES) pg 17

A course for officers preparing for the examination for admission to the Staff Colleges at Camberley and Quetta was held at the Royal Military College, Kingston, from October 1, 1928, to February 28, 1929.

This course was attended by five officers, all of whom competed at the examination for the three vacancies allotted to Canada. In addition one officer of the Royal Canadian Air Force attended for instruction until the end of September, 1928.

### Long Course

This course is held at the Royal Military College, Kingston, and is designed to qualify officers of the Non-Permanent Active Militia for commissions in the permanent Force. One candidate qualified at the course which commenced in February, 1928, and concluded in June, 1928. Two candidates attended the course which commenced in February, 1929.

### Hudson Straits Expedition.

A detachment, consisting of one officer and three non-commissioned officers accompanied the Hudson Straits Expedition, which went north in July, 1927, the purpose of supervising the installation and maintenance of air craft radio sets and the operation of the ground reception sets. Three stations were established by the expedition, one at Cape Burwell, one at Wakeham Bay and

3 at Nottingham Island. The headquarters of the expedition at Wakeham Bay - \*Range of Aircraft sets 1928 : : Telephony, 100 miles. Telegraphy, 300 miles.

### Hudson Strait Expedition, 1927-28

In January, 1927, a decision was reached by the Government to complete Hudson Bay railway and terminals, and to send an expedition to Hudson Bay. The expedition was under the direction of the Department of Marine, and transportation to the bases, erection of the buildings, etc., was carried out under their supervision and direction. The object of the expedition to Hudson Bay was to obtain by air photography and reconnaissance accurate information in regard to ice conditions and to study requirements necessary to ensure safe navigation. The expedition left Halifax on July 17, 1927, arrived at Port Burwell on July 27, 1927, where Base "A" was established. Base "B" was established at Nottingham Island, and Base "C" at Wakeham Bay. The general equipment of the three bases was practically the same and comprised the following: Two Fokker aircraft complete with floats, skis and wheels

## Notes on "Civil Aviation"

^ r landing and all necessary accessories including spare engines. One 30-foot  
i)tor launch, one Fordson tractor, radio apparatus consisting of two gasolene  
tgenes to generate power, with two 150-foot steel masts, gasolene, oil, coal,  
Si)ves, bedding, one skiff, guns, rifles and ammunition. Seven buildings, com-  
l'Sing officers' and mens' dwellings, radio house, storehouse, blubber house,  
id two hangars, were erected at each base. The expedition consisted of 44  
i| ranks. The Department of Marine and Fisheries provided for personnel  
(.iiprising doctors, wireless engineers and operators (for ground commiunica-  
"ns only) storekeepers and cooks. The Royal Canadian Corps of Signals  
'IS responsible for wireless communications and equipment, and provided  
< ^ ^ officer and three other ranks for this purpose. The Royal Canadian Air  
Tce received the major portion of responsibilities in the organization, and  
ljOvided\*6 officers and 12 airmen. The Royal Canadian Mounted Police  
(tailed one member for duty at each base.

(b) The Royal Canadian Air Force

The direction and control of aeronautics in Canada, both civil (Civillian) and military (Service) come under the jurisdiction of the Department of National Defence.

The powers and duties involved are exercised under the direction of the Minister by four separate branches of the Air Services, namely, the Directorate of Civil Government Air Operations, the Controller of Civil Aviation, the Aeronauticaj Engineering Division, and the Royal Canadian Air Force.

The first three of these branches are responsible directly to the Deputy Minister, and information regarding them may be found in the " Civil Aviation section" of this report, and also in the separate " Report on Civil Aviation, 1928, which can be obtained by application to the Secretary, Department of National Defence, Ottawa".

The Royal Canadian Air Force

***The Royal Canadian Air Force is the Military Branch of the Air Service***

The Chief of the General Staff, through the Director, R.C.A.F., administers and controls all military air operations.

The Royal Canadian Air Force has the following composition:

(a) The Active Air Force.

(b) The Reserve.

The Active Air Force

The establishment of the Permanent Active Air Force of Canada consists 176 officers and 641 Airmen permanently embodied for continuous service, and failable for general service, including training and operations for civil government departments.

The strength of the Royal Canadian Air Force was 131 officers and 590 Airmen on March 31, 1929.

Out of this total about half were attached for duty with the other branches of the Air Services.

The Non-Permanent Active Air Force is comprised of such units or detachments and other formations as are from time to time named by the Governor in Council

At present there are authorized 67 Officers and 130 Airmen.

The strength of the Non-Permanent Active Air Force is 46 Officers. These personnel are included in the strength of the Royal Canadian Air Force, shown above

The Reserve

The policy of the department is to create a large reserve list consisting of personnel qualified in the several branches of Air Force duties.

The Reserve will be inactive except for such special courses as may be authorized 'by the Honourable the Minister, though personnel on the Reserve will be liable to call for duty with the Active Air Force.

Headquarters, R.C.A.F.

R.C.A.F. Headquarters is organized as follows:

Director, R.C.A.F.

Assistant Director, R.C.A.F.

Staff Officer Personnel.

## Notes on "Civil Aviation"

Staff Officer Equipment.  
Staff Officer Organization.  
Staff Officer Training.  
Staff Officer Operations and Intelligence.  
Staff Officer Regulations.

R.C.A.F. Station, Vancouver

R.C.A.F. Station, Vancouver, B.C.—The station is well equipped in regard to hangars, shops, and slipways. Barrack accommodation and housing for the personnel are required.

R.C.A.F. duties:—

' (1) Seaplane flying training for personnel of the R.C.A.F., and Civil Government Air Services (ab initio).

(2) Winter training - Officers and Airmen.

(3) Combined operations and training with Naval and Military Forces.

During 1928 ab initio seaplane training was carried out, at which 41 Officers and 15 N.C.O.'s attended, all of whom qualified as seaplane pilots.

R.C.A.F. Station, Camp Borden

The Air Station at Camp Borden carries out training of personnel for *all 16 branches of the Air Service*. During the fiscal year 1928-29 training was carried out as follows:

(a) Refresher flying courses were given to 6 Permanent Officers and N.C.O. Pilots, and 29 Non-Permanent Officers.

, (6) Training for Provisional Pilot Officers—Forty-three Provisional Pilot Officers underwent their first term ab initio flying training, thirty-two of whom passed their examinations at the completion of the term.

Eleven Provisional Pilot Officers attended for the second term of ab initio flying training, all of them successfully completing their second term.

Eight third term Provisional Pilot Officers attended, 7 of whom successfully passed their examinations upon the completion of the course and qualified pilots.

Four of the successful candidates were given further flying instruction and granted Non-Permanent Commissions in the R.C.A.F.

It is expected that about three more of this term will be given commissions in the near future.

(c) Eight Commercial Pilots received flying training and they all passed their tests.

(d) An N.C.O. Pilots' Course was given, fourteen Airmen attending, of whom qualified as N.C.O. Pilots (ab initio).

(e) A Parachute Course was given, at which nineteen Officers and Airmen attended. All qualified.

(f) A Flying Instructors' Course was given, at which 15 Officers attended.

These Officers were classified, or, in the case of former Instructors, reclassified at the completion of the course.

ig)

A Technical Training Course for boys was carried out, and 22 boys attended, all of whom qualified.

(h) Thirty-two Flying Club Instructors received a Flying Instruction Course, twenty-six of whom qualified.

R.C.A.F. Training—Generally

R.C.A.F. training may be divided into two categories: training for Officers and for Airmen. ,

The training for Officers and Airmen at Vancouver and Camp Borden during the year has been most successful, both as regards service personnel and those attached to other Government Air Services.

R.C.A.F. Officers have been attached for courses of instruction at the Royal Military College, Kingston, and elsewhere throughout the country.

Officers of the Royal Canadian Air Force attached for training with the Royal Air Force in England:

Officers Attending {

(a) Royal Air Force Staff College, Andover 2

(b) Flying Instructors' Course— Central Flying School, Wittering 1

(c) Navigation, at Royal Air Force School of Air Pilotage I

(d) Army Co-operation, at Old Sarum, Salisbury 1

(e) Armament Course, Eastchurch 1

(f) Aeronautical Engineering, Imperial College of Science 1

(g) War Staff Course— Royal Naval Staff College, Greenwich 1

Provisional Pilot Officers' Training

## Notes on "Civil Aviation"

The idea underlying the present scheme of the R.C.A.F. Provisional Pilot Officers' training is to obtain, with the minimum of expense, a class of young officer having, in addition to his knowledge of flying, a thorough all-round education, with special qualifications on the technical side.

With this in view, arrangements have been made with the Canadian universities to accept for air force training a number of students in their first year from the Applied Science at Engineering faculties, and train them at Camp Borden during the summer vacations each year of their university course.

A satisfactory response has been made; and numbers greatly in excess of the vacancies apply each year.

A number of Gentlemen Cadets from the Royal Military College are accepted each year in the same way.

The scheme of training is shown in a pamphlet issued on the subject, which can be obtained by application to the Secretary, Department National Defence, Ottawa.

### Training for Airmen

Technical Training of Boys and Airmen at Camp Borden.

This scheme of training was approved on November 5, 1925, and was inaugurated on July 4, 1927.

During the fiscal year 1928-29, 22 boys from several parts of Canada reported at R.C.A.F. Station, Camp Borden, for two months training.

*In order to make available a supply of well-trained air mechanics for Civil Aviation it is intended to increase the numbers attending this course.*

A pamphlet containing information regarding the plan of training for airmen is available and can be obtained on application to the Secretary, Department of National Defence, Ottawa.

### the Combined Operations with the Naval and Military Forces

Seven operations were carried out in conjunction with the military forces, insisting of reconnaissance flights, transportation, and tactical exercises, with total of 126 hours' flying time. One operation of twenty-three hours' duration was carried out in conjunction with H.M.C.S. Vancouver.

During 1928 all phases of Civil Aviation greatly increased.

The Dominion and Provincial Governments extended the range and variety of their operations.

The year has seen a notable increase in the number and quality of commercial aircraft. The result has been a great increase in flying time, particularly in Western and Northern Canada. Three new and important developments have taken place: the inauguration of regular air mail services; the development of flying clubs throughout the country; and the construction of a Mooring Mast, and Airship Base at St. Hubert, P.Q.

### Civil Government Air Operations

The Director of Civil Government Air Operations is charged (under the deputy minister) with the carrying out of all air operations required by any department of the Government.

During 1928 the following departments used aircraft for a wide and varied range of services: Department of the Interior, Marine and Fisheries, Railway and Canals, Agriculture, Indian Affairs, Mines, Public Works, and Post Office Units under the control of the Directorate of Civil Government Air Operations during 1928 were:

- (a) Headquarters, Ottawa, Ont. •
- (b) High River, Alta.
- (c) Winnipeg, Man.
- (d) Ottawa, Ont.
- (e) Dartmouth, N.S.

Forest fire detection operations were carried out for the Department of the Interior, Forestry Branch, over an area comprising 64,534,563 acres of forest land in Manitoba, Saskatchewan, and Alberta. During the fire-hazard season 229 fires were detected and suppression action taken on 160 fires.

## Notes on "Civil Aviation"

All air photographic and air survey operations were carried out in co-operation with the Topographical Survey, Department of the Interior, who receive requests for work, issue the necessary technical instructions and prepare the resultant maps. Close co-operation is also maintained with the survey service of the provincial governments. Eight self-contained photographic detachments were engaged in air photography in various parts of the country. They were controlled by Headquarters, Ottawa, but were attached to the nearest station for stores and accounting purposes.

During 1928 an extensive program of air photography was carried out to meet the demands of the different Government departments. Ninety-eight thousand photographs were obtained during the year of which 17,500 were taken with a camera held obliquely, the resulting oblique views covering an area of 33,800 square miles; and 70,500 with the camera axis vertical, the vertical views covering an area totalling 31,400 square miles. The total flying time for the season, on all operations, was 9,002 hours 28 minutes.

### Ottawa Air Station

The base at Shirley's Bay for summer operations was active from April 1 to December 9, 1928.

The establishment consisted of 12 officers and 45 airmen. 13 aircraft were used. About 1,000 square miles of vertical and 200 square miles of oblique photography were done from this station in the vicinity of Ottawa.

These were more in the nature of training for personnel who had only a limited experience in air photography. Flying was carried out for the purpose of transportation, practice and instructional flying.

Type tests and trials of aircraft instruments, wireless, aerial cameras and photographic films.

Experimental air dusting for the prevention of spruce budworm in the vicinity of western Ontario were carried out under the direct supervision of the officer in charge of forest insect investigation, Department of Agriculture.

Air route investigation flights under the direction of the Controller of Civil Aviation were carried out between Ottawa and Minaki; Ottawa-Halifax; Montreal-Toronto; and Toronto-Buffalo.

### Air Photography

No. 1 Photographic Detachment carried out oblique and vertical photography in British Columbia. Two Fairchild F.C.2.W. aircraft were operated. The total flying time was 211 hours 05 minutes.

No. 2. Photographic Detachment carried out vertical photography in northern and eastern Manitoba and northern Ontario. Two Fairchild F.C.2.W. aircraft were operated. The total flying time was 447 hours 18 minutes.

No. 3. Photographic Detachment carried out oblique and vertical photography in western Ontario, northern Saskatchewan and Manitoba. Two Vickers Vedette flying boats were operated. The total flying time was 327 hours 45 minutes.

No. 4. Photographic Detachment carried out oblique photographic operations in western Ontario, northern Alberta, northern Saskatchewan and northern and central Manitoba. Two Vickers Viking Amphibian flying boats were operated. The total flying time was 359 hours 40 minutes.

No. 5. Photographic Detachment carried out vertical and oblique photography in eastern Ontario and Quebec. Two Vedette aircraft were operated. The total flying time was 325 hours 50 minutes.

### Winnipeg Air Station

The activities of this station were considerably increased during 1928. New aircraft were provided and bases improved by the addition of better buildings, runways, hangars, repair shops and store houses. The operations during the season were carried out successfully. Aircraft were used for the following purposes: fire detection patrols; suppression action on fires located; air photography for surveys; forest sketching; transportation of Indian Department officials; obtaining information regarding the distribution of wheat rust spores; listing growing wheat to prevent rust; transportation and reconnaissance flights for various Government officials and urgent work. The establishment consisted of 25 officers and 72 airmen. Twenty-six aircraft were used. The organization of this station for 1928 was as follows:

Headquarters, with stores and workshops at Winnipeg, and sub-stations at:  
a) Lac du Bonnet; (b) Norway House; (c) Cormorant Lake; (d) Ladder

## Notes on "Civil Aviation"

ake; and detachments as follows: (a) Winnipegosis; (h) Ile-a-la-Crosse; c) Fort Churchill; (d) Wheat dusting detachment.

All bases were equipped with radio, which provided adequate means of communication between the units and headquarters at Winnipeg. The total area of forest patrolled by aircraft was approximately 61,237,737 acres, and during the fire-hazard season 179 fires were detected and suppression action taken as required. A total of 567 flights were made and approximately 162,955 miles were flown. The flying time on forest protection was 2,670 hours 15 minutes. The fire-hazard was high all summer, the season being the worst experienced since the introduction of air patrols.

The Fort Churchill Detachment was formed primarily for the Department of Railways and Canals to transport their personnel into Churchill, and also to make coastal ice patrols on the western coast of Hudson bay, between Nelson and Churchill. The personnel consisted of two officers and seven airmen. Two Fairchild aircraft were used. The total flying time was 554 hours.

The Wheat Dusting Detachment consisted of one Keystone Puffer aircraft, which was used for carrying out experiments for the Department of Agriculture by dusting wheat areas in Manitoba infected by black stem rust, with chemicals. The personnel consisted of one officer and two airmen. The total flying time was 40 hours 20 minutes.

In addition transportation was supplied to the Departments of Railways and Canals, Mines, Indian Affairs, Water Power and Reclamation, and the Royal Canadian Mounted Police.

### High River Air Station ,

High River Air Station was active from March 17, 1928, to December 31, 1928, during which period flying to the amount of 801 hours 52 minutes was carried out. The establishment consisted of 4 officers and 19 airmen; 6 Fairchild Moth landplanes were used. Forest fire protection patrols were carried out over the Bow River, Crowsnest, and Clearwater Forest Reserves, comprising 3,260,822 acres of forest land. Sub-bases were established at Rocky Mountain House and Inver Creek. Aircraft were fitted with radio transmitters and in conjunction with the Royal Canadian Corps of Signals reliable voice communication was maintained from aircraft in flight to the base, up to a distance of 200 miles, during the year an experimental service was started for the protection of a large area of forest land in the Peace River district. Aircraft on this duty operated from a temporary base at Grande Prairie. Eight fires were observed and reported during the season.

No. 6. Photographic Detachment carried out vertical and oblique photography in central and eastern Ontario, and western Quebec. Two Fairchild aircraft were operated. The total flying time was 367 hours 15 minutes.

No. 7. Photographic Detachment carried out vertical photography in Eastern Quebec. Two Fairchild aircraft were operated. The total flying time was 367 hours 53 minutes.

No. 8. Photographic Detachment carried out vertical photography in the Maritime Provinces. Two Fairchild aircraft were operated. The total flying time was 326 hours 25 minutes.

### Flying Operations.

A system of routine and special patrols, for all three bases, was drawn up and approved. The patrols commenced from Port Burwell, October 3, 1927; Nottingham Island, October 11, 1927; and Wakeham Bay, September 1927. Flying was done on pontoons until the first ice appeared in the strait. Flying was carried out whenever the weather was favourable. Fog and strong winds hampered operations and on three occasions aircraft were lost or forced down.

## Notes on "Civil Aviation"

by bad weather. Operation/s continued until August 3, 1928, when navigation conditions rendered further air observations unnecessary. The expedition returned to Halifax, arriving there in October, 1928. The results of the land patrols observing ice conditions has been compiled by the Department of National Defence, together with maps, tables, figures, etc., and the whole transferred to the Department of Marine for information, and with a view to further action by that department. Two hundred and twenty-seven flights were carried out during the period, the total flying time being 369 hours and 10 minutes. Two thousand two hundred and eighty-five photographs were taken.

### Civil Aviation Division

The Controller of Civil Aviation is responsible to the Deputy Minister of National Defence for the administration of the Air Regulations, and for the control of commercial and private flying in Canada; the location and equipment of airways, the construction of airship bases and the oversight of flying clubs. The branch has three divisions. Air Regulations, Airways, and Information.

### Statistics

There were in Canada 54 commercial aircraft operating firms, 264 licensed civil aircraft, 259 licensed pilots, 200 licensed air engineers, and 44 licensed air harbours. The number of flights made in 1928 has increased more than 50 per cent over 1927, the figures being: 1927, 16,748, and 1928, 75,285. Hours flown have risen from 12,070 to 43,071, an increase of over 250 per cent. The increase in passengers carried is particularly encouraging, showing a greater public confidence in air travel. The figures are: 1927, 18,932 passengers; 1928, 74,669 passengers; 1927, passenger miles, 1,424,031; 1928, 2,883,722 passenger miles. In the same way freight traffic has increased from 1,098,400 pounds in 1927 to 2,404,682 pounds in 1928. Mail carried: 1927, 14,610 pounds; 1928, 316,631 pounds.

\

### Ontario Provincial Air Service

In Ontario the provincial Government maintains its own air service as a part of the Forestry Branch of the Department of Lands and Forests. This service owned and operated 22 aircraft, and employed 20 pilots and 20 junior engineers. Its main base is at Sault Ste. Marie. The flying operations in this district lying north and west of the Ottawa river, Lake Nipissing and French river were greatly extended in the west part of the province, embracing territory from Port Hope to the Manitoba boundary and extending north to the Berens river. Forest fire detection and suppression patrols, forest type mapping by air photography, sketching for inventory work, and transportation to the outlying parts of this district were carried out in 1928. The main operating bases are at Sudbury, Sioux Lookout, and Orient Bay. The total flying time for the year was 6,227 hours; 4,300 square miles of territory was sketched from the air; 4,800 square miles photographed, and 85 forest fires detected.

### Commercial Companies

In Quebec, the Provincial Forest Service carry out similar work by contract with commercial aviation firms. Their fire patrol system is not on the same scale as in Ontario, but a large amount of forest type mapping has been done. Contracts were let to the Compagnie Aérienne Franco-Canadienne for aerial photography in the Gaspé peninsula, covering an area of 7,550 square miles. Air photography was carried out under contract by Canadian Airways Limited, covering an area of some 2,350 square miles. The Fairchild Aviation Company of Grand'Mère, P.Q., also carried out contracts for industrial companies. In Quebec, nine firms were engaged in mail, express and passenger carrying, instruction, exhibition flying, etc.

In Ontario twenty-five firms were engaged in aviation. A large amount of flying was carried out covering mail, express and passenger carrying, air photography,

## Notes on "Civil Aviation"

exhibition flying and instruction.

In Manitoba, Saskatchewan and Alberta, fourteen companies operated aircraft in passenger, mail and freight transportation, instruction and exhibition flying.

In British Columbia, two companies have done a good amount of flying under contract with the provincial Government, British Columbia Forestry Branch, comprising fishery patrols along the Pacific coast, from Vancouver to Prince Rupert, and forest sketching, air photography and exploration. About 10 square miles of territory was patrolled during the season.

In the Yukon Territories, two companies operated in passenger, express and mail carrying

### St. Hubert Airport and Airship Base

The construction of an airship base and aerodrome at St. Hubert followed the decision of the Dominion to participate in Empire air communications, a triangular site containing 792 arpents was purchased at St. Hubert, some 30 miles east of Montreal. A mooring tower has been erected and equipped with the most efficient machinery obtainable, and construction on the airship base has been proceeding for the reception of the British Airship R.101, which is expected to make its first transatlantic passage in the fall of 1929. Hangar, flood lights, tower obstruction lights and a flashing beacon have been installed. A radio and meteorological observation station have been erected. Progress has been made on the grading, drainage, roads, water supply, etc., on the aerodrome.

A number of commercial aircraft operating companies use St. Hubert for passenger, freight and mail services. A school of flying is conducted and the Montreal Light Aeroplane Club have rented space for their operations. It is the terminal for the International Air Services between New York and Montreal. Landing fees, storage charges and terms on which land may be leased by commercial operators have been drawn up. It

### Light Aeroplane Clubs

To stimulate airmindedness, to promote the knowledge and use of aviation among the rising generation, and to encourage the provision of flying fields, the Dominion Government has lent assistance in the formation of light aeroplane clubs in the chief centres of population. Two light aeroplanes, complete with engines, are issued to each club approved by the Honourable the Minister of National Defence. Each club receives a grant of \$100 for each pupil trained by the club. Each club must provide its own flying field, arrange for the services of an instructor and air engineer and have at least thirty members ready to qualify as pilots, and have not less than ten members already qualified. In the spring of 1928 sixteen clubs were approved and received the grant. Fifteen clubs were active during the year. These clubs have a membership of 3,400. During the first year of operations nearly 10,000 hours were flown. There were 260 absolute soloists; 142 private licenses and 43 commercial licenses have been obtained by members. Provision has been made in the estimates for eight further clubs which will be active early in 1929. It

### Aeronautical Engineering Division

The Chief Aeronautical Engineer is responsible to the Deputy Minister of National Defence for all technical and engineering matters pertaining to the Air Services, and prescribed by the Air Board Act and Regulations thereunder. The whole function of the Aeronautical Engineering Division is to act

as

a consulting capacity for the other branches of the Air Services upon purely technical matters. This division is now organized in three main branches: Research, Airworthiness, and Inspection.

Research

### Research

The most important items during the past year have been the experiment

## Notes on "Civil Aviation"

flights carried out on the "Vista" aircraft, which is a single seater all metal flying boat, with "Genet" engine. This aircraft has shown that it is possible to construct a small metal boat without any serious handicaps due to weight but it has also indicated that a boat of this small size is only suitable for use in sheltered waters, because moderate waves are proportionately very large. These experiments should assist in the production of a small sporting boat when the demand for an aircraft of this type arises.

aircraft, which has been extensively used for photographic work. Following the twin engined "Varuna" it was decided to experiment upon a duralumin hull for a flying boat of this size, and the preliminary work upon the design of such a boat has been carried out with Messrs. Canadian Vickers, who are now designing the "Vancouver" aircraft, which is a twin tractor flying boat with a duralumin hull, equipped with "Lynx" engines. Some work has been done upon the production of the combined ski and wheel, and alternatively upon a combined ski and float. These problems, however, depend largely upon the demand being sufficient to warrant the cost of experimental work.

Airworthiness

The Airworthiness Branch has carried out a large number of regulations to test the airworthiness of aircraft of different types for the Civil Aviation Branch, and this work, although of a routine nature, occupies a considerable portion of the work of the Engineering Branch and is likely to grow with the growth of the industry.

By an agreement with the United States, airworthiness certificates issued by the United States Department of Commerce for aircraft built in the United States, are now recognized for acceptance in Canada, and on the other hand Canadian certificates for aircraft built in Canada are recognized for acceptance in the United States.

This exchange has necessitated a good deal of investigation work upon the methods used by the United States Department of Commerce and those previously used in Canada.

### Inspection

With the growth of the aircraft industry in Canada, the inspection of aircraft during construction for the purpose of granting certificates, has been created.

Aircraft Inspection Detachments are now stationed at Montreal and in the Ottawa district, and provision is being made for the establishment of another detachment in the Winnipeg district.

It has not been the policy of the department to carry out detailed inspection of aircraft under construction, except in the case of new aircraft manufacturing companies, but the inspection has been limited to periodical inspection during the course of manufacture, relying upon the inspection carried out by the manufacturing companies themselves for all detailed inspection.

The Chief Aeronautical Engineer represents the department upon the Canadian Engineering Standards Association and the Associate Air Research Committee, which is one of the committees of the National Research Council.

The Air Research Committee have carried out a number of interesting researches during the past year, including the commencement of the determination of the complete stability of a flying boat type of aircraft. This work is being done under the direction of Professor Parkin at Toronto University, and would be completed during the coming year. In the summer of the past year a visit was made to Europe for the purpose of studying the aircraft industries in various countries and for the purpose of obtaining the latest information that might be employed in Canada.

A great deal of information was obtained that can be used to good advantage, particularly upon the construction of metal aircraft. This division supplied a representative for the International Convention on Civil Aviation held at Washington at the end of the year, when a number of interesting questions were considered.

*Amongst them was the proposal from the Canadian delegation that a real international standard for airworthiness should be set up, or at any rate that the preliminary discussions towards this should be commenced. (is this what was not introduced in 1938-39 ...)*

In the field of lighter-than-air aviation, this division has acted in a consulting capacity to the Civil Aviation Branch and to the Public Works Department upon the construction of the mooring tower and facilities for handling airships at St. Hubert Airport.

## Notes on "Civil Aviation"

These questions were investigated not only in Europe, but also by visit by the Airship Station at Lakehurst during the landing of the Graf Zeppelin, and investigating the facilities provided by the United States authorities on that occasion.

### The Aircraft Industry

The program of construction for 1928 of Messrs. Canadian Vickers included twelve Avro aeroplanes, four new hulls for Viking Amphibians, nine Vedette three-seater observation and photographic flying boats for forest patrol for the Department of National Defence, and other contracts to commercial companies. The Government experimental patrol machine Vigil, intended for the Rocky mountain region, was completed and tested. Thirteen Fairchild five-seater monoplanes were constructed under license during the year. This firm increased the use of metal in aircraft construction.

The DeHavilland Aircraft of Canada Limited established a plant at Malton, Ontario, for the service and assembly of their aircraft. During the year they delivered 62 aircraft to users in Canada. The Moth was extensively used by light aeroplane clubs, and was the type selected by the Government. The Curtis-Reid Aircraft Co., Limited, established an airport at Cartierville, P.Q. Their first product is the Reid Rambler, a two-seater light aeroplane, manufactured entirely of metal and covered with fabric.

The Ottawa Car Company Limited have done considerable reconditioning work for the Government and commercial operators. They have arranged with the A. V. Roe and the Consolidated Aircraft Company of Buffalo for service assembly and distribution of their products.

The Armstrong-Siddeley Motors Limited, Canadian Wright Limited, and the Canadian Pratt and Whitney Aircraft Company, Limited, have established branches for the assembly, service and distribution of their aero engines. During the year 264 aircraft were operated by civil organizations, and 1,000 by the Directorate of Civil Government Air Operations, making a total of 1,264 aircraft used in civil operations. A large number of these are of British and United States manufacture, but there has been a marked increase in Canadian manufactured aircraft.

### REPORT OF THE JUDGE ADVOCATE-GENERAL

#### Courts-Martial

During the fiscal year ending March 31, 1929, fifty-seven District Courts-martial were convened and held, this being a decrease of eighteen compared with the number of such courts held in the preceding year.

Of these courts 51 were for the trial of military personnel and two for the trial of personnel of the Royal Canadian Air Force.

Thirty-five courts dealt with charges of desertion and in thirty-one of these a further charge of losing arms, clothing and equipment was laid.

In one instance the finding and sentence of a court-martial, which had been confirmed, was quashed on the advice of the Judge Advocate-General, and in two other instances it was necessary to quash the conviction on one of several charges which had been laid.

It is evident from a review of the proceedings of all courts-martial held during the last fiscal year, that there has been an endeavour on the part of all officers concerned to improve their knowledge of military law and court-martial procedure, and the number of errors and irregularities which occurred was.

never very great and nor were they of a particularly serious nature. Nevertheless, it is apparent that there should be established a more comprehensive method of instruction in military law and court-martial procedure, together with improved facilities for the dissemination of advice on technical points connected therewith.

## Notes on "Civil Aviation"

In addition to the requisitions prepared at Headquarters, about 8,000 requisitions made out at the different stations, in which units of the Permanent Naval, Military, and Air Forces are located, were also received.

These requisitions

covered supplies purchased or services carried out at outside points.

It may be mentioned that, during the financial year, ninety-five aircraft of different types for use in forestry patrol, photographing, training, and other purposes, were purchased. The engines for a large number of these aircraft were purchased as complete equipment with each machine. In addition separate orders were placed for 21 aeroplane engines.

All supplies purchased, either in England or in United States, for delivery to Ottawa, have to be cleared from customs on their arrival here. During the financial year 872 customs entries were passed.

In effecting purchases competitive tenders were invited in practically every instance, thus affording the trade every opportunity to secure the business and at the same time enabling the department to obtain the supplies required to the best possible advantage. The policy of purchasing stores manufactured in Canada from Canadian material was strictly adhered to and was departed from only when certain stores required were not procurable in Canada - When it was necessary to purchase goods of foreign manufacture preference was given as far as possible to supplies manufactured in Great Britain.

All stores delivered at Ottawa were subjected to a rigid inspection by the departmental inspectors who were guided in their work by sealed patterns, specifications and drawings. In the case of provisions, fuel, and forage, purchased for delivery to points throughout the country, the inspection was carried out under the supervision and direction of the Officer Commanding the Military District, the Naval Store Officers at Halifax and Esquimalt Dockyards, and the Officers Commanding the different Air Stations throughout the country.

1928 : Lloyd Samuel Breadner - Director of the RCAF 1928 – 1932.

1928 : Women over 21 gain the right to vote in England [British Empire ?].

1928 : First flight of the De Havilland 60G "Gipsy Moth" light weight, two-place, single-engine biplane:

- fuselage covered with plywood
- wings and tail surfaces covered with fabric.
- 23 feet, 11 inches (7.290 meters) long
- wingspan of 30 feet (9.144 meters)
- overall height of 8 feet, 9.5 inches (2.680 meters).
- Empty weight of 920 pounds (417 kilograms)
- loaded weight of 1,650 pounds (748 kilograms)
- powered by a 318.09-cubic-inch-displacement (5.212 liter) air-cooled de Havilland Gipsy I inline 4-cylinder direct-drive engine, producing 130 horsepower, de-rated to 100 horsepower at 2,100 r.p.m.
- two-bladed wooden propeller
- cruise speed of 85 miles per hour (137 kilometers per hour)
- maximum speed of 102 miles per hour (164 kilometers per hour).
- Range for the standard aircraft is 320 miles (515 kilometers).
- service ceiling is 14,500 feet (4,420 meters)

The De Havilland 60G "Gipsy Moth" has its roots in the 1912 BE design of Geoffrey deHavilland first shown at the Military Aeroplane competition.

## Notes on "Civil Aviation"

1928 : Cambridge and Oxford in 1925. At this stage the aim of the game was to promote 'air mindedness' and to stimulate an interest in, and research into, matters aeronautical.

Although the UASs were staffed and funded by the Air Ministry, membership involved no Service obligations whatsoever; members were not subject to the Air Force Act and they did not wear uniform.

"Practical aviation" was not seriously addressed by Air Squadrons at British Universities until 1928.

1928 : "Ground Engineers" recognised by the Department of University Extension, University of Toronto - "opportunities for technically trained men. Necessarily an important feature" Source : Bulletin of the Department of Extension and Extension Course Bulletins, September, Opportunities for Graduates in Applied Science and Engineering 1928.

1928 : 10 Canadian flying clubs organized and approved. Canadian air force - an enthusiastic sponsor. each club was issued two training aircraft (DeHavilland DH-60 MOTHS) from RCAF stocks and subsequently received technical advice. The clubs in turn became the nuclei of Auxiliary Air Force squadrons after 1934.

1928 : DND begins flying training courses for flight instructors at camp Borden.

April 1928 : BC Airways purchases a Bill Stout designed 3 engined AT-4 "Tin Goose" in Detroit, Michigan. The AT-4 would carry 12 passengers for the Vancouver-Victoria-Seattle run. registered in Canada as G-CATX (Henry Ford would later purchase Bill Stout's company and build / market the aircraft as the Ford Tri-Motor). The aircraft is collected and arrives via the US on August 7, 1928 (Vancouver Mayor L.D Taylor walks into one of the rotating propellers as he dis-embarks and is rushed to hospital). G-CATX is the first multi-engine all metal monoplane on the register in Canada. Pilot Walker took G-CATX off on August 25th with 5 passengers and flew into a fog bank near Port Townsend Washington. It was seen to turn violently (near the water??), clip a wingtip on the water and cartwheel on August 25th with 5 passengers for unknown reasons while crossing the Juan de fuca straight. 2 bodies and some wicker chars washed ashore, the wreckage was not located or recovered. Henry Ford cabled (the DND) to advise that his AC had "perfected a system to keep an aircraft above the water"... The BOI recommended that amphibious aircraft subsequently be used on the route. United Sates operator Transcontinental Air Transport lost 3 AT-4's in the next 5 months.

1928 : Western Canada Airways begins regular passenger operations.

8 March 1928 : Air Engineer Percy Handford "wished to upgrade his skills to overhaul De Havilland Moths and Cirrus engines at Camp Borden, but was directed to directly contact R.A. Loader at De Havilland in Toronto. Cowley noted that the De Havilland company was "very anxious that the club engineers should be thoroughly familiar with their aircraft...." Squadron Leader Cowley indicated the following situation regarding air engineers' instructional courses in 1928:

- I. *"The only course in mechanics in the Royal Canadian Air Force is the service training given to recruits.*
- II. *It will be necessary, therefore, for your two young men to enlist in the Royal Canadian Air Force for a period of three years....*
- III. *In regard to your mechanic spending a few days at High River, I am to advise that he will be perfectly free to do so but the messing accommodations there are very limited and it will probably be necessary for him to make his own arrangements for living in the town of High River, which is about 1 1/2 miles away from the aerodrome.... The actual date at which your aircraft can be delivered from High River will depend upon the success of your instructor at Camp Borden [i.e. Burton] but the aircraft are at present at High River where they will be erected and test flown. It would, therefore, be in order for your mechanic to report at High River at any time"*

13 March 1928 : First Canadian woman to be issued a Pilot's License : Mrs. J.M Miller

29 March 1928 : Standard Conditions for Light Aeroplane Clubs and Associations Canada specify that<sup>203</sup>:

- A. the club provide:
  - A. a flying field which filled the requirements of the Air Regulations [1920];
  - B. storage for the aircraft and equipment from the Department of National Defence;
  - C. arrange for an air instructor and licensed air engineer;
  - D. have a roll of at least thirty members prepared to qualify as pilots, and
  - E. at least ten members who have already qualified and were "desirous of continuing to fly".
- B. The Department of National Defence would then provide:
  - A. two aircraft and additional necessary equipment;

---

<sup>203</sup> Order in Council 24 September 1927 P.C. # 1878

## Notes on "Civil Aviation"

- B. a \$100 grant for each student who qualified for a pilot's license;
- C. periodical inspection of aircraft;
- D. a board of inquiry to investigate any accidents.

25 April 1928 : Charles Lindberg delivers pneumonia serum to US aviator Floyd Bennett in Quebec City, landing on the plains of Abraham.

1928 : Six Avro 504K aircraft decommissioned and sold from RCAF for civilian use.

1928 : Beverley Shenstone joins the RCAF Engineering Student Flying cadet program while at University of Toronto. Becomes Provisional Pilot Officer (PPO) at Camp Borden. Instructed in flying by RCAF officers Ingram and Stafford. Upon graduation Shenston offered a permanent RCAF commission by Sqn Ldr. Shearer. Shenston solos after 9 hrs 4 minutes on an Avro 504N with a Bristol engine. Shortly thereafter Shenston experienced an engine failure : the mechanic replacing a troublesome fuel cock had reversed the position so that on was off and off was on...

1928 : Beverley Shenstone meets J.T "Jack" Dymont at University of Toronto (school of Engineering?)

1928 : Beverley Shenstone graduates University of Toronto school of Engineering (B.Eng ?)

1928 : Beverley Shenston views Curtis HS2L in operation at Temagami, subsequently offered post-graduate scholarship by U of T Professor John H. Parkin (Parkin established Canada's first wind tunnel at U of T) - research into flying boat stability : digest and comprehend the established and latest works on flying boat design using Vickers Vedette at U of T wind tunnel for RCAF Engineering Branch under Wing Co. E.W Stedman. Shenston employs calculus and "Actual Flow" analysis using smoke and tuft testing. culminates in Shenstone's thesis "Certain aspects of the Stability of a Flying Boat". (Shenstone combined aero-dynamics with hydro-dynamics - early work on virtual flow dynamics)

1928 : UK, another important step was taken, which shifted still more responsibility on to the shoulders of the constructors of the aircraft<sup>204</sup>.

1928 : the system of approved designing firms was introduced. The approved designing firm was considered able to make its own design investigations under the general supervision of the Airworthiness Department of the Air Ministry<sup>205</sup>.

13 July 1928 : 13 July – Vickers Vulcan G-EBLB operated by Imperial Airways with a pilot and five passengers crashes near Purley, Surrey while undergoing a test flight from Croydon Airport. As a result, Imperial Airways curtails staff "joy riding" on test flights.

09 August 1928 : Aircraft Accident : G-CARN, a Leoning Cabin Amphibian stalls during a turn, Beaumaris Ontario, Killing 2 passengers, injuring 5.

1928 : Hugh Trenchard resigns as as Chief of Air Staff, his resignation is not accepted<sup>206</sup>.

1928 : First Canadian woman to parachute from an aircraft in Canada (a JN-4) : Mrs. J.M Miller.

20 September 1928 : THE history of flying in Canada is quite unique. It might be described as a mixture of socialism and natural development. The Dominion Government has led the way, but when it has not taken action itself it has granted no subsidies to private operators. It has initiated no mail and transport services by air. There is no clear-cut line between the development of the Royal Canadian Air Force and that of civil flying. Their fortunes have been bound up together ; though now they show a tendency to diverge. So far, aircraft have been used less in Canada for the usual purpose for which other countries have used it, namely for rapid transport on regular lines ; and more for other varieties of purposes which have been less sought after elsewhere. In fact, in the first few years after the Armistice, it may be said that the quality in aircraft which was least esteemed in Canada was its speed; that which was held in the highest regard was its long range of vision.

Another point of interesting peculiarity was that whereas ; most other countries made a start with landplanes, in Canada the great majority of the early work was done with boat seaplanes. In fact,

## Notes on "Civil Aviation"

Canada showed an originality of outlook not to be found anywhere else in the world. The unusual course of development of flying in Canada was not due to any desire for eccentricity. It was the outcome of a just appreciation of the conditions, needs, and capacity of the country. It was eminently sane. The Dominion Government never denied that air lines might be advantageous to the country, but it realised that in the early days there was no popular demand for them and that the country could well get on without them. The most productive and populous belt of Canada runs east and west between the Atlantic and the Pacific, and the main demands of this belt are catered for by an excellent system of railways. In this respect the conditions were utterly unlike those in Australia. Other countries started air lines, subsidised by the Government and some started them prematurely — that is to say before the public mind was ready for them. Consequently they were of very small commercial value, though the expenditure was justified on the grounds that it kept alive the flying movement and the aircraft industry, and it provided a full-scale experiment by which it was gradually learnt how an air line ought to be managed. On the whole, these reasons, as applied to France, Great Britain and Germany, may be passed as adequate ; but they did not apply to Canada. There was at first no aircraft industry there to be protected, and there was no compelling need for the Dominion to spend public money on such an experiment. The Government decided that organised air routes were for the time being a luxury which the country could not afford. Yet it must have cost some searchings of heart and some stern self-repression to arrive at this conclusion and put it into practice. Canadian pilots had joined the Royal Air Force in large numbers and had played an especially gallant and distinguished part in the fighting in France. Wherever the initials " V.C. " are known and understood the names of Wing Commander W. G. Barker and Col. W. A. Bishop are famous. All these war pilots returned to Canada anxious to keep on flying. Aeroplanes were cheap, and the public was interested in the novelty. A number of " joy-riding " companies were formed, but once the first interest and curiosity were satisfied the demand waned, and most of the companies had to go out of business. The years of depression followed, but from the flying point of view they were "not so acute in Canada as elsewhere. There was, for one thing, a shorter period in which flying was uncontrolled. Canada led the

way in regard to regulation of air traffic, and was the first country to enact a complete set of air regulations, namely in 1920, and these proved satisfactory from the first in main principles, though details were amended as experience demanded.

There never was in Canada a period when the Government did nothing to keep civil flying alive, while no one else could afford to do anything. Aircraft and equipment to the value of about \$5,000,000 had been presented to the Dominion by the Government of Great Britain and a number of flying boats used by the Royal Canadian Naval Air Service were available. Even before the Armistice had been signed Canadians had perceived that aircraft offered a new and vastly improved method of patrolling the forest to observe outbreaks of fire, and no time was lost in making use of it. An Air Board was formed and in 1919 it was authorised to institute a central civil flying service to supply flying to any other service which required it. This was the novel and unique idea round which practically all flying in Canada has grown up.

The air station was at High River, on the eastern side of the Rockies some 40 miles south of Calgary, in Alberta, was the only one to use landplanes. In all others, seaplanes were the normal aircraft in use, and flying-boats in particular. It was equipped with D.H.4 landplanes with Eagle VIII engines. The other stations, in the early years, were :—

' British Columbia, Vancouver, station at Jericho Beach, English Bay.

Manitoba, Winnipeg, station at Victoria Beach on southern shore of Lake Winnipeg, with subsidiary bases at Norway House, on the north of the lake, and Le Pas, on the Saskatchewan river.

Ontario, Ottawa, station at Victoria Island in winter, and Rockcliffe in summer.

Nova Scotia, Dartmouth.

Quebec, Robertval.

These were all seaplane stations, and in the early days, the American flying-boat H.S.2.L. was largely in use by them. The growth of aircraft in popularity is interesting to trace

in the annual reports on civil flying in Canada. On the one hand there was a body of air enthusiasts ; on the other hand, officials who had to be converted, and seemed dubious as to whether aircraft was not just an ingenious toy.

Intensity of enthusiasm over a novelty sometimes in itself creates suspicion

—most people are apt to shudder when the enthusiast mounts his hobby horse. But aircraft themselves proved the best apostles, and conversion of the doubters was rapid. In 1922, the Forest authorities of the Dominion laid it down that :—

" The essential justification of the use of aircraft in forestry work lies not in any possible economy which may be effected, but in securing a greater degree of efficiency than can be obtained in any other manner. In fire protection, nothing

short of an organisation adequate for all emergencies is worth while as a permanent proposition. The reason for this is that inefficient fire protection is no fire protection at all when it is most needed. A properly functioning organisation is therefore not an ideal, but a necessity. . . . Any method, therefore, within the economic means of this country, which can be utilised to conserve our forest resources from destruction, should and must be adopted. Under the conditions existing in the great northern forest, which forms the northern parts of the Prairie Provinces, the use of aircraft seems to offer the only possible and practicable solution of the problem of fire protection. These forest areas are, in general, uninhabited, isolated from settlement, inaccessible, and at the same time subject to dangerous fire hazard. Distances to be traversed are enormous, no lookout system is possible of development, and in addition, no labour supply is available for fire-fighting."

The fire detection aircraft used by the Dominion Government are the Avro-Lynx (both landplane and seaplane) carrying pilot and passenger, and the Vickers Vedette boat (Lynx) carrying pilot and two passengers. Moths have recently been added to the detection fleet. Detection aircraft are now always fitted with wireless, and by this means still more time is saved in reporting the position and extent of a fire which has been discovered. Previously, of course, the aeroplane had to reconnoitre the outbreak and then fly back to its base and report—which was then an immense saving of time on the old canoe methods. The fire suppression types in use are the Vedette, the Viking-Eagle 9 (pilot and three passengers), and the Vickers Varuna with twin Lynxes which carries pilot and six passengers. These boats hurry parties of fire-fighters up to the neighbourhood of the outbreak and land with them on the nearest suitable lake. The official in charge is then flown over the fire so as to be able to observe its extent and direction of travel, from which he can form his plan of campaign. The next task for the boats is to bring up supplies, both fire-fighting appliances and also tents and food for the men. The whole organisation is like a magical transformation from the old methods. It is not in the least surprising to read that last year there were fewer forest fires in Canada than ever before. surrounding forest aflame. The Winnipeg station operated five summer bases last year. These were : 1. Lac du Ponnet, 70 miles north-east of Winnipeg, for flying over the forests between Lake Winnipeg and the provincial boundary as far north as the Berens river. The flying time was 371 hours. 2. Norway House, on Forestry Island in the Nelson river, about 35 miles from Lake Winnipeg to the north-east. Its flying time was 327 hours. 3. Cormorant Lake, on the Hudson Bay railway to the north of Lake Winnipeg. Its flying time was 322 hours. 4. Ladder Lake, 100 miles north-west of Prince Albert. Its flying time

was 293 hours. 5. Winnipegosis Detachment on an island in the lake of that name. It put in 29 hours, but the fire hazard was found to be low, so the aircraft were transferred to Ladder Lake. Organisation

The forest fire work was at first the most important work undertaken by aircraft in Canada, and therefore it has been dealt with first. Before proceeding to deal with other flying activities, some account should be given of the flying organisation and its growth.

After the war the Canadian Air Force (now the Royal Canadian Air Force) was organised on a militia basis. Camp Borden was the air force training base. The idea of a permanent full-time air force engaged in training for war was not approved. On the other hand, no subsidies were paid to any commercial flying company. Therefore an ingenious compromise was evolved, whereby the officers of the air force when not undergoing training should be employed as civil servants in the Civil Operations Branch under the Air Board to provide flying services to any government department which required it. When the pilots went to Camp Borden for training or refresher courses, they were granted leave from their civil duties. In this arrangement, as in others, the history of flying in Canada is unique.

The Air Board Act was passed in 1919, and the first system was that the Board's functions were performed by three directorates : (1) the control of civil aviation, dealing with the air regulations and all which concerned them ; (2) the conduct of Civil Government operations, e.g., forest fire protection; and (3) the administration of the Canadian Air Force. This dual administration of the same set of pilots was found to have disadvantages. Both the C.A.F. and the Civil Operations Branch had establishments at Camp Borden. The shops and stores were on a civil basis, while the training was under Air Force discipline and direction. It was also found that the Air Force training and administration could not be carried out with maximum efficiency by a nonpermanent staff.

In June, 1922, a change was made. The Director of the C.A.F. was made responsible for Air Force training and organisation as well as Civil Government operations. The pilots and mechanics engaged in the forest fire patrols and work for other departments were no longer regarded as civil servants ; they thenceforth carried out their civil work in their capacity as officers and airmen of the Air Force.

A parallel to this arrangement would be difficult to find in modern times. It was as if all public works in Great Britain were carried out by the Royal Engineers. The system has, however, proved elastic. So far from stifling private enterprise, as some may have feared that it might do, it actually kept flying alive in Canada when nothing else could have done so. It provided proof, first to all official circles, and then to the public in general, that aircraft could perform wonderful services to the public. It bridged over the period of depression and suspicion. Finally, as the time grew ripe for civil commercial bodies to take over the work, the Royal Canadian Air Force has been ready to withdraw in their favour.

The present position is that in the Prairie Provinces—namely, Manitoba, Saskatchewan, and Alberta—which are naturally the least developed, the natural resources of the forests, etc., are still protected by the Dominion Government through the Royal Canadian Air Force. Ontario, Quebec, and British Columbia all pay for their own provincial flying services. The two latter used to employ the R.C.A.F. to carry out most of their flying work on a repayment basis.

Ontario maintains its own provincial flying service. All three contract out some of the work to civil firms. The situation created by the Government's demand for flying services was naturally an incentive which brought commercial flying companies into existence. The success of the Government civil operations likewise encouraged lumber firms and pulp firms to make their own arrangements for air surveys and air supply services. They sometimes established their own flying branches, but more usually contracted out the work to an established flying concern. Thus a natural and healthy growth is the result of the lead given by the Dominion Government. Last year there were 20 civil concerns [private operators] operating in Canada with more or less success.

#### The Smuggler and the Seaplane

There is no better subject for a boys' story than a tale of smugglers. But for sheer romance the tale of the Smuggler and the Seaplane is not equalled even by the supernatural horror of "The Smuggler's Leap" in The Ingoldsby Legends, when

"Down they went—o'er that terrible fall—  
"Horses, Exciseman, Smuggler, and all ! ! !"

The smuggling which takes place at Vancouver is not of barrels of rum, but of packets of opium and cocaine brought on steamers from China, and in great demand in the opium dens along the Pacific coast. The lascars and others who bring it are similar in greed but different in methods to the redoubtable Smuggler Bill of the Legend, while the "Exciseman Gill" is mounted, not on a terrible Dun horse with smoking nostrils and blazing eyes, lent by the Devil, but on a flying-boat from Jericho Beach. Truth has truly been said to be stranger than fiction.

#### Dusting Crops

The use of aircraft for dusting crops in order to destroy pests is rather a recent development. It promises very well, but more experience in carrying it out is required. Last year, two important experiments were carried out by the R.C.A.F. on behalf of the Department of Agriculture. The pests which were attacked were the spruce budworm and the wheat stem rust.

A few years previously, an outbreak of spruce budworm in Quebec and the Maritime Provinces (New Brunswick, Nova Scotia, and Prince Edward Island) killed a very large part of the fir and red spruce, and was described as probably the most destructive infestation of the sort which has ever occurred. It seems that in any sort of difficulty nowadays in Canada, the department concerned calls in the R.C.A.F. The most hopeful method of dealing with the pest was by dusting areas with poison dust distributed from an aeroplane. Experimental plots were chosen, and a Keystone Puffer aeroplane fitted with a hopper was sent down. Several difficulties had to be faced. The budworm feeds by boring into the buds before they have

opened fully, and so is largely protected from the dust. However, the tests were carried out, and useful lessons were learnt as to the method of operation. The machine flew at 95 m.p.h., and it was found that it had to keep very low above the tree tops. Quite windless weather was also necessary, or else the poison was spread too widely to be effective. Wheat dusting with sulphur to destroy stem rust was also tried in northern Manitoba, also with a Puffer aeroplane, and again good results are hoped for when the method of operation has been elaborated as a result of the experiments.

#### Hudson's Strait Expedition

(See Map on page 8)

Last year, the Dominion Government, having decided to complete the Hudson's Bay Railway, despatched an expedition to Hudson's Strait to make an aerial study of the ice conditions and movements. Three flying bases were established in the strait, each equipped with two Fokker Universal aeroplanes, with wheels, floats, or skis, as required. The air force officer in command was Sdn.-Ldr. T. A. Lawrence, and the Air Force personnel numbered about 20. The expedition assembled at Halifax, and on July 17, 1927, sailed for the strait in the ice-breaker "Stanley," accompanied by the freighter "Larch." A Moth seaplane was carried on the deck of the "Stanley" to assist in finding the bases which Base "A" was at Port Burwell, on the promontory east of Ungava Bay. Base "B" at Nottingham Island, at the western end of the Strait, and Base "C" at Wakeham Bay, on the southern shore, about half-way between the other two. Regular flying patrols commenced on September 20. Before that time, it was known that there was no ice in the Strait. On November 16, floe ice was first reported off Nottingham Island. It was found that the ice forms first at the west end of the Strait and works eastward. In all, 42 flights were made. Fog prevented flying on a number of days. The Moth proved invaluable for reconnaissance work, but was, unfortunately, wrecked by a sudden storm when moored out in Wakeham Bay. One Fokker was also lost. It was being flown by F/O. A. Lewis, with a Flight-Sergeant and an Eskimo guide known as One-eyed Bobby, when it was forced to land on ice floes in the Labrador current. The crew had to abandon the machine, but after a fortnight's hard struggle they got back to safety. The five remaining Fokkers are to fly back to Ottawa in formation, some time in September, from Ungava Bay across northern Quebec to James Bay and Moose Factory and down the Ottawa river, a flight of 1,200 miles. The results of their survey are understood to have been quite satisfactory.

#### Air Mail Experiments

For some years past the Canadian Post Office has authorised

the carriage of mails by air, without taking any initiative in the matter. The first such service was one between Haileybury in Ontario to the Rouyn goldfields. This was carried out by a Vickers Viking. Other early services of a similar description were between Sioux Lookout and Red Lake, Whitehorse and Keno in Yukon, Carcross in Yukon and Atlin, B.C. Despite the difficulty of the conditions these services were carried out very successfully without any Government support. By dint of experience, Canadian pilots and mechanics are now experts at keeping their engines running, however low the temperature. It is now held possible, though not a simple matter, to run air mails all the year round in Canada.

Occasional services to outlying parts such as the Yukon and Mackenzie river basin are considered very desirable.

Frequent bad weather must be expected, but even an irregular air mail which is dependent on the weather. Four such mail contracts were granted last year. These were :—(1) The Canadian Transcontinental Airways of Quebec received a contract to carry mails up to 1,500 lbs. weekly between Murray Bay and Seven Islands (260 miles) on the northern shore of the estuary of the St. Lawrence river, with an extension once a month from Seven Islands to Port Menier in the large island of Anticosti (90 miles). This service started last December. Fairchild monoplanes with Wasp engines were used.

(2) Moncton, in New Brunswick, to Magdalen Islands, in the Gulf of St. Lawrence. The same firm secured the contract for this service, and the same type of aircraft is used. The distance is 120 miles. The service opened last winter, and never before had the islanders received mails in the winter.

(3) Leamington to Pelee Island. This is a short service of 22 miles. Pelee Island on Lake Erie is the southernmost point of Canada. Ice often interrupts communications with the mainland. The contracting firm is the London Air Transport. The type of aircraft used is the Waco 9, with Curtiss OX5 engine. Four trips a week are made.

(4) Rolling Portage to Red Lake. This service provides for a round trip of 300 miles connecting Red Lake, to the east of Lake Winnipeg in Manitoba to Rolling Portage and Woman Lake. The contractors are Western Canada Airways, Ltd., of Winnipeg, a firm which has been operating in that district with great energy and efficiency for the past 18 months.

Regular schedule services between large towns are considered more difficult to organise, on account of the extreme difference of conditions in Canada in winter and in summer. A summer service would be easy, especially in the central parts of the country. The crossing of the Rockies is a problem, though not an insuperable one ; while fog, the worst

drawback of all, is prevalent on both coasts. As far west as the Ontario-Manitoba boundary seaplanes could be used in summer and ski-planes (if we may coin that word) in winter. In spring and autumn (the "fall"), however, only landplanes are possible, and their use implies an elaborate ground organisation, and the preparation of numerous aerodromes and landing grounds. Here again, while the matter would be an easy one so far as the Prairie Provinces are concerned, the mountains present a new set of problems. It has been decided not to rush impetuously at a trans-Canada air mail, but to build up by degrees. A start has accordingly been made with an experimental service to speed up the mails between Great Britain and Montreal. An aeroplane has been making a connection at Father Point in Rimouski, P.Q., on the southern shore of the estuary of the St. Lawrence river, with incoming and outgoing steamers. Though seaplanes were used on the first flights, the conditions on the estuary are not suitable for that type, and a series of aerodromes has been established so that landplanes can be used. Some of these flights shortened the time of delivery of the mails by as much as four days. Consideration has also been given to services between Winnipeg and Calgary (a most ambitious mileage), Montreal and Winnipeg, Montreal and Halifax. It is to be noted that a mail contract does not include a subsidy. In connection with air mails it should be mentioned that a mooring tower for airships is being erected at the St. Hubert aerodrome outside Montreal. The intention is that R.100 shall make a trip to Montreal next summer.

Civil Operating Companies

There are over a dozen major flying companies in Canada, and some brief mention may be made of the following :—

(1) Canadian Airways, Ltd.—This firm has its headquarters at Three Rivers, P.Q., and has carried out several contracts

for Quebec Province. It carried out the experimental mail nights between Montreal and Father Point for the Post Office.

(2) Canadian Transcontinental Airways, as mentioned above, holds two of the current mail contracts.

(3) Fairchild Aviation, Ltd., has its main base at Grand Mere, P.Q., and its main work is aerial survey and photography. It carried the mail from Haileybury to Rouyn

before the railway reached the latter town. It has carried out fire patrols for a paper company. It uses various types of aircraft, among others Aeromarine and Curtiss flying-boats, the Huff-Daland float-plane, the Yickers Vedette, and the Fairchild monoplane.

(4) Brock and Weymouth, of Canada, is a branch of a Philadelphia firm, which specialises in stereoscopic air photography.

(5) Patricia Airways and Exploration Co., Ltd., has been

operating a service to the Red Lake mining area from Haileybury and Sioux Lookout, using a Lark aeroplane and two Stinson seaplanes.

(6) London Air Transport, Ltd., as mentioned above, operates the air mail from Leamington to Pelee Island.

(7) J. V. Elliot Air Service does mixed flying work with 10 aircraft in Western Ontario. During last year the machines of the company photographed 4,200 sq. miles. Flying instruction

is given, and exhibition flying is also part of the programme.

(8) Canadian Air Services, Ltd., has a very popular and successful flying school at Peterborough in Ontario, and also does some air photography.

(9) Western Canada Airways, Ltd., in addition to carrying the air mail between Rolling Portage and Red Lake, does extensive air transport in northern Ontario, Manitoba, and Saskatchewan. The Western Canada Airways, Ltd., was incorporated under Dominion charter, in December, 1926, for the purpose of engaging in an entirely, and at that time, little known, venture in Canada, namely, commercial aviation.

One Fokker Universal four-passenger monoplane (Wright "Whirlwind") was purchased and flown from New York to Hudson, Ontario, a northland outpost and arrived there on Christmas Day, 1926. There, at Hudson, a temporary base was established. Three men were in charge : Capt. H. A. Oaks, formerly R.A.F. and Canada's premier commercial pilot ; S. A. Cheesman, aero engineer, and J. A. MacDougall, secretary-treasurer of what is now the country's largest commercial air service.

A service was immediately inaugurated between Hudson and the active gold-mining areas in the Red Lake district, and daily trips were made when weather was not too severe and visibility permitted flying. This winter flying was accomplished on skis, made of tempered wood which proved very effective.

So successful were the Airways in the development of skis for winter flying that Bernt Balchen, Floyd Bennett and the crew of Commander Richard E. Byrd's tri-motored Ford plane flew to Winnipeg last April to secure a set of winter undergear and to test it in northern Canada winter conditions.

The Byrd plane, at that time, was being tested for its projected flight to the South Pole regions this autumn.

Instant success then greeted the first small efforts of the Airways at their one base, Hudson, Ontario. It soon became apparent that one machine could not cope with the rapidly increasing demand for the aeroplane, and in February, 1927, two additional Fokker Universals were purchased and flown from New York to Hudson.

In March, 1927, at the urgent request of the Government's department of Railways and Canals, a contract was entered

into for the transportation of eight tons of material and equipment and 14 men from Cache Lake on the Hudson's Bay railway, under construction, into Fort Churchill, which contract was to be completed before the spring break-up. The transportation of this material and these men was effected in record time and under unprecedented conditions, the severity of the winter weather leaving its mark on personnel and machines. The country over which it was necessary to fly—about 1,000 miles from point to point—was uninhabited and landing places were few and hazardous. Notwithstanding these difficulties, however, success accompanied the fulfilment of the exacting contract, and the Western Canada Airways was established in official and public esteem as a reliable, swift, and sure means of communication with areas in Canada ordinarily reached from civilization only by the slow, painful progress of dog team and sled—a means of transportation which takes months to reach areas served in a few hours by the aeroplane. While the Churchill contract was being filled, a machine left at Hudson for zone work was keeping up regular service between civilization and the mines, taking in mining engineers, equipment and, in several cases, heavy machinery for emergency repairs. Between the break-up period (when the ice leaves the open water) and the opening of navigation all machines were converted from ski landing gear to floats for summer work which is carried out on water. On June 1st, 1927, the Airways enlarged the scope of their operations by opening a base at Lac Du Bonnet, gateway to the mining belt of Central Manitoba, and not far from Winnipeg. The base was for the express service of prospectors, mining men and the companies operating in this territory. Machinery, supplies and mail were carried in on regular schedule, saving much time for the companies involved. A mining deal of great importance to the development of the Northern Manitoba properties was put through during the summer of 1927, affecting copper zinc and gold areas at Cold Lake, in the far north, and in this connection the company was approached by the Sherritt-Gordon Mines Limited as to transportation of the necessary equipment and men to carry out the contract which consisted of transporting by air 35 tons, including petrol, diamond drills, supplies, and 40 men. This was completed in record time. In one case a large diamond drill defied, for a time, the efforts of one machine to take it in to the mines. It was taken apart, however, and the one machine, making three trips, finally completed the task of delivering it to its destination. ~ The company now has about 30 machines, including two Fairchild monoplanes, six Avro Avians, and a fleet of Fokkers.

Two de Havilland " Moths " are used at the training school while the Fairchild's are kept for communication purposes and inspection trips by officers. Twelve Fokker super-Universal monoplanes (Pratt and Whitney " Wasp " 400 h.p.) twelve Universal Fokker's (Wright "Whirlwind" 200 h.p.) and one tri-motored Fokker monoplane (three " Wright Radials " 200 h.p.) make up the operating fleet. Quite recently this

firm is stated to have bought up Pacific Airways Ltd., of British Columbia, and to be intending to run a triangular service between Vancouver, Victoria, and Seattle, using nine aeroplanes for the work of one round trip daily. This firm is full of enterprise and is an excellent example of success unsupported by a Government subsidy.

(10) Pacific Airways, Ltd., whose incorporation with Western Canada Airways has recently been announced, has done good work with one H.S.2L boat on contract for the Department of Marine and Fisheries, and also for the B.C. Forest service. (11) Dominion Airways, Ltd., did wonderful work for the Forest Service of British Columbia with one Moth seaplane.

A penalty clause was inserted in the contract for failure to carry out the programme each day, but the Moth never failed. Twenty fires were detected during the season last year.

(12) Yukon Airways & Exploration Co. operated the services between Whitehorse and Keno as well as between Carcross and Atlin, which were mentioned above. The company was allowed to use its own mail stamps. A five-seater Ryan cabin machine was used, and flights were made with the temperature 50 deg. below zero.

THE air services of Canada, which form part of the Department of National Defences, consist of:  
The Directorate of Civil Government Air Operations.  
The Controller of Civil Aviation.  
The Aeronautical Engineering Division.  
The Royal Canadian Air Force.

The Directorate of Civil Government Air Operations  
The Directorate of Civil Government Air Operations  
administers and controls all air operations carried out by State aircraft other than operations of a military nature.

Under the Director are :—

Officer i/c Civil Air Operations.

Officer i/c Aircraft Equipment and Stores.

Officer i/c Administration, Organization, Personnel.

Services, with subordinate officers.

There are air stations at High River, Alta, Winnipeg, Man., Ottawa, Ont., and Dartmouth, N.S., with a depot and photographic section at Ottawa, and sub-stations or detachments

at various points in Saskatchewan and Manitoba.

There are also eight photographic departments for all the Provinces except B.C. and P.E.I.

#### Controller of Civil Aviation

The Controller of Civil Aviation is responsible for the administration of the Air Regulations, and such other duties as the Honourable the Minister may direct.

Under him are a Superintendent of Air Regulations and a Superintendent of Airways Examination of Personnel and Inspection of Aircraft. — Air Regulations require that all pilots, air engineers, aircraft and air harbours in Canada shall be licensed by the Controller, of Civil Aviation, and, under instruction, by approved examiners from Air Force stations

#### Aeronautical Engineering Division<sup>A</sup>

The Aeronautical Engineering Division is required to act in a consultant capacity respecting all technical and engineering matters pertaining to the Air Services and the carrying out of the duties prescribed by the Air Board Act and regulations thereunder. The division is in charge of the Chief Aeronautical Engineer and is divided into three main sections as under.

(i) Research.—The Research Section is mainly responsible for the preparation of specifications for new types of aircraft and aircraft accessories, the supervision of type trials for new types of aircraft and of the trials of aircraft which have been modified ; the reduction of these results to standard conditions for comparison purposes ; the issuance of modifications found desirable either for the purpose of airworthiness or to meet certain service conditions ; the design of special pieces of equipment, such as camera mounts, skis, etc., the collection and dissemination of technical information, including the issuance of information circulars.

(ii) Airworthiness.—Air Regulations, 1920, require that before an aircraft can be operated commercially in Canada or a private aircraft can be operated across the international boundary, the aircraft must be certified as airworthy. The Airworthiness Section is devoted entirely to checking the strength of commercial, private and Air Service aircraft.

(Hi) Inspection.—The inspection of aircraft during construction is carried out by the Aeronautical Inspection Department, by means of small detachments of officers and N.C.O.'s stationed permanently at the works of the various manufacturers. The administration of these detachments is carried out from headquarters, and all instructions are issued from headquarters. The work of the Inspection Section at headquarters consists in issuing instructions to inspectors, particularly instructions with regard to new processes and new materials; carrying on correspondence upon queries that arise in the course of inspection ; testing materials submitted by contractors to see that they meet the necessary

specifications; correspondence through the Intelligence Officer with the Air Ministry upon the subject of new specifications and materials ; the study of new processes in manufacture ; the correspondence relating to the allocation of inspection duties, particularly the decision as to whether parts shall be inspected at source or on receipt.

The Royal Canadian Air Force

The Royal Canadian Air Force administers and controls all military air operations. The policy of the Royal Canadian Air Force is as follows :—

- (a) To develop and maintain air power in Canada.
- (b) To provide adequate training facilities for all Government air services.
- (c) To provide a nucleus Air Force round which service units can be formed in the event of war.
- (d) To build up a reserve of pilots and mechanics.

In order to provide effectively for the carrying out of these duties and to ensure that too great a variation in procedure does not exist between the R.C.A.F. and the R.A.F., the more established procedure of the R.A.F. in respect to administration, stores and equipment, is being adhered to as closely as conditions permit. The R.C.A.F. is, therefore, profiting by the experience of the older and larger service, the R.A.F., and in the case of emergency a closer understanding and co-operation will be existent between the two forces.

Organisation.—The R.C.A.F., as the strictly military branch of the air services, comes under the Chief of the General Staff. The R.C.A.F. headquarters at Ottawa consists of a director, an assistant director and six staff officers, the duties being divided under the heads of:— Organisation and staff ; Training ; Operations and intelligence ; Regulations, Personnel ; Equipment.

The principal station is at Camp Borden, Ontario, with another station at Vancouver and a communication flight at Ottawa

R.C.A.F. Liaison Office, London, England.—The R.C.A.F. Liaison Office is in charge of an officer, permanent R.C.A.F., with an under-staff of civil employees, and is maintained as part of the office of the High Commissioner for Canada, but is housed in the Air Ministry, London, England.

The duties which devolve on this officer and his staff consist of the collection and transmission of intelligence of all kinds between the R.A.F. and the R.C.A.F. By reason of his location, the Liaison officer has ample opportunity to permit his keeping 'in touch with the latest developments in aviation in Great Britain and Europe for communication in Canada.

Selection of Personnel.—The nature of the equipment used in the R.C.A.F. requires a high standard of technical knowledge on the part of all ranks in the service. It is the policy of the R.C.A.F. to secure officers and airmen from the following sources :—

Officers.—From gentlemen cadets who have graduated from the Royal Military College and from students of recognised universities who have attained their degree in applied science of engineering.

Airmen.—From the ranks of the skilled artisans of industry

and from the graduates of certain technical schools where they receive special training.

Training.—To fit the personnel of the R.C.A.F. to carry out their varied duties efficiently, almost endless training is necessary. The greater part of this training is carried out at Camp Borden, though personnel are also trained at Vancouver, at commercial plants, at universities, and in the Royal Air Force. An outline of some of the training is as follows :—

(i) *Ab initio* Flying Training :—*Ab initio* flying training is given to provisional pilot officers and N.C.O.'s selected for training as pilots. In accordance with the stated policy for the selection of officers for the R.C.A.F., to obtain young men having a sound education, with special qualifications on the

technical side, arrangements have been made with recognised universities to obtain a number of students of applied science and engineering faculties and train them at Camp Borden during the summer vacation. A number of gentlemen cadets from the Royal Military College are accepted each year in the same way. During training they are granted the temporary rank of provisional pilot officers.

The course of training consists of three terms, each of three to three and a-half months' duration (approximately May 15

to September 1) in three consecutive years.

On completion of the Provisional Pilot Officers' Course, successful candidates are eligible for :—

- (a) Appointment as pilot officers in the Permanent R.C.A.F.
- (b) Appointment as pilot officers in the Non-Permanent R.C.A.F.
- (c) Transfer to the Reserve of Officers.
- (d) Employment in the flying capacity in civil aviation.

This scheme of training has been in force since 1923 and while the numbers selected each year have been limited, gratifying results have been obtained.

The training of N.C.O. pilots was authorised in November, 1926. During the winter 1926-1927 four N.C.O.'s qualified for their wings. At present there are six N.C.O.'s undergoing *ab initio* training and should qualify for wings in the near future.

(ii) *Advanced Flying Training* :—When a pupil qualifies for pilot's wings he is far from being a fully trained pilot; it is proposed, therefore, during the present year to give 10 to 15 officers advanced training at Camp Borden. This course will include flying on the latest training and service types and advanced instruction on service subjects, such as Army Co-operation, Armament, Air Pilotage, etc. The majority of these officers will be P.P.O.'s who qualified for wings during the summer of 1927.

(iii) *Service Flying Training* :—Up-to-date service aircraft will be available this year for the first time in R.C.A.F.

history. It is proposed to organise a Service Squadron at Camp Borden consisting of one Flight of fighting aircraft,

one Flight of Army co-operation aircraft, and one Flight of photographic aircraft. Training will commence as soon as possible, and will continue until the personnel of the squadron have attained a high degree of efficiency in their respective work. The methods of training adopted in the R.A.F. will be followed as closely as possible.

(iv) Refresher Flying Training : — Refresher training is carried out periodically at Camp Borden for the personnel of the R.C.A.F. and the Directorate of Civil Government Air

Operations, to improve the standard and to permit personnel employed on other duties to become familiar with the latest developments and methods in the varied lines and subjects required of Air Force personnel.

In addition to service personnel, a large number of commercial pilots have been given refresher courses at Camp Borden during the last four years.

(v) Unit Winter Training: — During the winter when ab initio flying training and operational flying is not being carried out, officers and airmen, not attending courses, are given instruction at their units, on service subjects. These courses are arranged to interfere as little as possible with routine duties.

(vi) Technical Training for Boys : — With the expansion of the Air Services there arose an important factor in respect to the supply of young and semi-trained airmen. Technical schools throughout Canada have been asked to train boys in aeronautical subjects with a view to enlistment in the R.C.A.F. when of age. This training is being carried out along the following lines :

The technical school course for boys is usually of three years' duration, the first year being the same for all courses.

In the second year, boys who have completed their second year at technical school, and are considered suitable for the particular trade specified in the quota, are enlisted in the non-permanent R.C.A.F. They are enlisted as " Boys " if

between the ages of 16 and 18 years, or as " Aircraftmen 2nd class " if between the ages of 18 and 24 years, and are

attached to an R.C.A.F. unit for instruction during the summer vacation. Having successfully completed their technical school training they are enlisted in the permanent R.C.A.F. after having passed the necessary trade tests. The first course, consisting of 19 boys, started on July 1, 1927. and 16 boys successfully passed the first period of training.

In order to foster and further the co-operation of technical schools, a bond of \$100 is to be given to schools from which airmen have qualified and been enlisted in the permanent R.C.A.F.

(vii) Civilian Flying Training : —On the recommendation of the Controller of Civil Aviation, a limited number of pilots from commercial companies, the Ontario Government Air Service, and Flying Clubs, are given refresher training and training for flying instructors.

(viii) Special Courses : —rNumerous courses have been arranged lor by the K.C.A.F. lor the different branches of

the Air Service in 1928. These include :—

For the Civil Government Air Operations Branch :—

Specialist training on enlistment (7 months) Storekeeping (1 month), Training Pool (1 year), Seaplane training (2 months), Advanced training in Navigation, Cloud Flying and Photography (5 months), Airmen Pilots ab initio (6 months),

Advanced training for ab initio pilots (1 year) (Reserve).

For the Controller of Civil Aviation Branch :—

Commercial Pilots (1 month), Flying Instructor's Course ^or Commercial Pilots (1 month), Flying Club Instructors

(1 month). For the R.C.A.F. :—

Service Training Squadron (1 year). Specialist Training on enlistment (7 months), Army Co-operation (1 month), Storekeeping (1 month), Training Pool (1 year), P.P.O. training (3 months), Boys' technical training (2 months), Staff College Preparatory, Kingston (3 months), Artillery co-operation (Army) (15 days), Auxiliary (Borden) (1 month), Auxiliary (local) (14 days), Miscellaneous (Wood Technical, parachutes, etc.) (as long as necessary).

These courses provide for the training of 268 officers, commercial pilots and flying club instructors, and 264 N.C.Ob., airmen and boys.

Selected officers of the K.C.A.I', also attend courses in England as under :—

Imperial Defence College (1 year), R.A.I". Staff College (1 year), Royal Naval Staff College (1 year), Army Co-operation (3 months), Armament (6 months), Flying Instructors (3 months), Air Pilotage (3 months), Aeronautical Engineering (10 months), Storekeeping (1 year), Wireless (7 months).

Exchange of Officers. —An exchange of officers with the Royal Air Force for a period of two years is being carried out under the following categories :—

1 seaplane pilot.

1 stores officer.

1 Engineer officer on aircraft inspection work

These officers of the R.C.A.F. are employed as regular officers of the R.A.F. and at the conclusion of their period of attachment return to Canada with a knowledge which can be embodied in the R.C.A.F. procedure, and will doubtless prove of extreme value. At the same time the R.A.F.

officers return to England with first-hand information of Canadian conditions and the spirit of co-operation within the

Empire is further developed.

H.E. Lord Willingdon, J.G.C.S.I., G.C.M.G., G.C.I.E., G.B.E., Governor-General.

The 15 " approved " clubs have already been formed, and  
several are now "going strong" turning' out pilots—as we  
have reported in previous issues of FLIGHT. The " fifteen"  
are located at the following centres :•—

Montreal.

Ottawa.

Toronto.

London, Ont.

Winnipeg.

Halifax.

Granby, P.O.

Hamilton.

Border Cities (Windsor).

Kegina.

Moose Jaw.

Saskatoon.

Edmonton.

Vancouver.

Victoria.

In addition to these approved clubs, others, as in the Mother Country, are being formed to the extent of a dozen or so, in various parts of the Dominion. One, for instance, has been formed in Ouebec City, but is, we understand, without an aerodrome ! Others have been formed at St. John, N.B., and Kingston, Ont. Anyway, the Club movement is progressing as rapidly as a Canadian forest fire, and private flying is, as a result, growing apace also. Needless to say, the D.H. " Moth "—which is used extensively by the Clubs—is breeding in large numbers, as is recorded elsewhere in this Canadian section of FLIGHT.

Although the " Moth " is so ably fulfilling the needs in Canada of the private owner, the club, the Air Force, and others who require a two-seater, it must not be imagined that the de Havilland Company does not cater for freight and transport carrying on a larger scale. The D.H.61, specially built for colonial conditions, is finding increasing favour in Canada. Fitted either with the geared or ungeared Bristol " Jupiter " engine, this machine, which carries eight passengers, cruises at about 110 m.p.h., and is thus able to maintain a fixed time table even in the face of strong headwinds. One of these machines, with interchangeable land and float undercarriages, has recently been supplied to the Ontario Provincial Air Service, and is in use, among other duties, for passenger and freight transport, fire suppression and crop dusting. The D.H.61 has been supplied to several wellknown companies in Canada, including Canadian Vickers, whose machine is a seaplane, and the London Air Transport Company of Ontario, who own a landplane.

It was in 1923 that the Royal Canadian Air Force decided to operate a civil service in Manitoba and called for tenders of Canadian-built machines suitable for the work. From several designs submitted, the Vickers " Viking, Mk. IV " amphibian was selected. Canadian Vickers, Ltd. therefore established at their Montreal plant an aircraft branch with the necessary equipment for the construction of aeroplanes and flying-boats. Later, however, it was found that a more suitable type of machine for the conditions was required, and specifications for suitable types of aircraft were drawn up. As a result, Canadian Vickers, Ltd., obtained the services of Mr. W. T. Reid and instituted a complete designing staff in June, 1924. Subsequently, Canadian Vickers, Ltd., designed several other types of aircraft, including the following :—  
The " Velos," a three-seater, twin-engined (Armstrong-Siddeley " Lynx ") pusher biplane—land or seaplane—designed for photographic work.  
The " Vista," a small single-engined (Armstrong-Siddeley

" Genet ") monoplane flying-boat for forest patrol and fire detection.

The " Verderer," a two-seater, single-engined (Armstrong-Siddeley supercharged " Lynx ") biplane, land or seaplane, for forestry patrol work over the foothills and mountains of the Western Alberta Mountains, where flying conditions are extremely severe. In addition to building eight Vickers " Vikings " and five " Avro" seaplanes ordered by the R.C.A.F., Canadian Vickers, Ltd., therefore set to work on an entirely new design, and in October, 1924, the first machine was launched. This was the Vickers " Vedette," a three-seater flying-boat fitted with a 200-h.p. Wright " Whirlwind" (or Armstrong-Siddeley "Lynx") engine, intended for forest patrol and photographic survey work. The " Vedette" proved to be a successful craft, and several more were built. It had a maximum speed of 95 m.p.h. carried a load of 665 lbs., climbed to 5,000 ft. in 9 mins., and had a ceiling of 13,000 ft.

They next got out the designs for a twin-engined flyingboat, known as the " Varuna " (fitted with similar type engines) equipped with fire-fighting apparatus and carrying a crew of seven. The performance of the " Varuna " also proved to be satisfactory. The " Vanessa," a four-passenger cabin tractor biplane, fitted with a single Armstrong-Siddeley " Lynx," or Wright " Whirlwind." It can be fitted with twin floats or wheel undercarriage.

The " Vigil," a two-seater, tractor fuselage biplane of metal construction, fitted with an Armstrong-Siddeley " Lynx," or Wright " Whirlwind," and designed for forestry patrol or training purposes.

We understand that other types are under consideration, including a twin-engined commercial flying-boat, accommodating eight passengers.

Canadian Vickers, Ltd., have also made an arrangement with the Fairchild Co., of New York, whereby each firm may build under licence the aircraft of each other's design. Fairchild cabin monoplanes have, therefore, been constructed at the Canadian Vickers plant.

## THE INDUSTRY IN GENERAL

BEFORE the war, there was only one constructor of aircraft in Canada on record, a Dr. Graham Bell, who built and successfully flew some aeroplanes at Baddeck, in Nova Scotia. After the war, operations were commenced with the stock of war aircraft; some of them gifts by the Government of Great Britain, and others purchased from the United States. The shortcomings of these war-type machines soon became apparent, in Canada as in Europe. In addition to this, special characteristics were soon found to be necessary to suit Canadian conditions. Canada was the first British Dominion to circularise the designing firms in Great Britain, laying down specifications of what was desirable for aircraft in Canada. One feature demanded was an air endurance of 10 hours, which proved impossible to satisfy in 1919-20

Still, this move was a very useful one, as it drew the attention of designers to the fact that what was suitable for northwestern Europe was not necessarily suitable for the whole of the British Empire.

The Ottawa Car Manufacturing Co., in addition to its arrangement with Messrs. Armstrong-Siddeley, has also an arrangement with the Consolidated Aircraft Co., of Buffalo, N.Y., for the assembly of their machines in Canada.

The Wright Aeronautical Corporation of Patterson, N.J., have formed a branch company in Montreal for the assembly and service of Wright engines.

Canada looks forward to the gradual building up of a local

## Notes on "Civil Aviation"

aircraft industry, which is rightly regarded as a necessity by a country which is already playing a leading part among the countries of the world in the development of civil flying. Already

three British firms have established Canadian branches and there is little doubt that, as Canada's needs increase, that number will be added to.

all of above : src ref : Flight - pg 798 SEPTEMBER 20, 1928

the Aeronautics and Communications Section - Bureau of Foreign and Domestic Commerce - AVIATION Weekly - 29 September .

1928 : <sup>Canada</sup> remains the principal market for airplanes, being the country of destination for 34 valued at \$401.- 143. with Argentina second ; the latter being the purchaser of 18 valued at \$120,950 as compared with 8 valued at \$190,111 during the whole of 1927. Canada was the destination for 26 valued at \$197,021 during 1927. In connection with Canada the following quotation from a recent report from Assistant Trade Commissioner A. H. Thiemans, attached to the office of the American Commercial Attache at Ottawa, will be of interest as an indication of why that country is so important as a market

"Flying in Canada has been used primarily as an improved method of observation, although of late more and more attention is being accorded air mail and passenger services. During 1927 commercial companies more than doubled their flying time, while civil operations for the Dominion Government increased proportionately. Aircraft was used for such varied purposes as observing for the sealing fleets off the Newfoundland coast, forest dusting in Cape Breton Island, forest fire protection and fisheries patrol in the far west, observation of ice conditions throughout the winter in Hudson Straits, transportation in the Yukon, and for air mail service.

"Recently a heavy demand for light air craft has been noted. The De Havilland 'Moth' has proved popular. and in 1927 the Ontario Provincial Air Service purchased

four seaplanes of this type for fire detection patrols in Northern Ontario. Since that time these planes have been purchased in larger quantities. The 1927 report on Civil Aviation in Canada states that more than 70 light planes are in use or on order for fire detection patrols, and light transportation in Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia, as well as for flying club and private use throughout the Dominion. The Department of National Defense has encouraged the formation of light airplane clubs and associations by furnishing such organizations with airplanes. There have been large imports from the United States of cabin monoplanes built around the Wright 'Whirlwind' engine. These planes are used for transportation purposes in the north country.

"Few individuals and firms operating aircraft in Canada carry insurance on either their planes or passengers, it was said at the office of the Canadian Air Board. Most firms are small and cannot afford the high insurance rates. Taking their own risks, some of these operators have been forced out of business by accidents.

## Notes on "Civil Aviation"

On the other hand, the larger firms carry insurance, and as aviation expands there may be a good opportunity here for American insurance companies.

"Several Canadian companies are engaged in the manufacture of aircraft. One of the most important of these is Canada Vickers, Ltd., whose output during the past year included 3 Varunas, a fire suppression flying boat; 7 Vedeties, a three-seater flying boat specially built for forest sketching, light transportation, and aerial photography; 12 Avro training machines; and 5 Viking hulls.

A great deal of repair and reconditioning work is done for commercial firms by the Canadian Vickers Company.

An arrangement also exists with an American manufacturer whereby each firm may build, under license, the aircraft of the other's design; and consequently a number of cabin monoplanes are being constructed by the Montreal company.

The De Havilland Company maintains a branch at Toronto for the construction of its planes, particularly the Moth which is in wide demand for flying clubs, patrol work, and the like. The Ottawa Car Manufacturing Co. at Ottawa has contracts for the reconditioning of standard Avro training machines and for the construction of floats and other aircraft parts in their shops. They also have a working arrangement with an American company for the assembly and service of the latter's products, and are the Canadian representatives, moreover, of Armstrong Siddeley Motors, Ltd."

September 1928 : AVIATION WEEKLY : Dominion Aircraft Operators Listed : The Province of Ontario has Now Listed 23 of 44 aviation Companies.

November 1928 : Canadian Air Board - Air Engineer licenses to date<sup>207</sup>

- A. in force : 34
- B. suspended: 1
- C. cancelled: 1
- D. applications received: 72
- E. in abeyance: 2
- F. temporary issued : 70
- G. permanent issued : 35

12 -14 December 1928 : International Conference on Civil Aviation is held in Washington, DC the Royal Aero Club is represented by Brig-General Lord Thomson, Chairman of the Club, and Captain R. J. Goodman Crouch, RAF

Ford Tri-motor seaplane is delivered to the Canadian Government for use in Central western Canada for dusting spruce trees, in the war on the spruce worm.

31 December 1928 : 199 Air Engineers were licensed in Canada - source pg 54 Aero Digest - Canadian Aviation Progress by James Montagnes March 1929 - ref <https://archive.org/stream/aerodigest1419unse#page/n461/mode/2up/search/Air+Engineers>

31 December 1928 : During the year a total of 199 persons were on record as holding Canadian Air Engineer Licenses. (Air Annual 1932-33 pg 17, Civil Aviation - Canada)

<sup>207</sup> [https://archive.org/details/Flight\\_International\\_Magazine\\_1921-01-27-pdf?q=Air+Engineers%27](https://archive.org/details/Flight_International_Magazine_1921-01-27-pdf?q=Air+Engineers%27)

**CANADIAN AVIATION - 1929**

18 January 1929 - London, UK : Transportation Committee :  
Aviation.

35. Witness is of opinion that, having regard to the rapid strides which are being made in civil aviation, incentives should be given to Local Authorities to provide municipal aerodromes with the necessary auxiliary services, particularly when they can be included - with schemes for parks, playing fields, and golf courses, for which large areas free from buildings are required. It is part of the activities of the Automobile Association to protect and advance the legitimate interests of aviators, and the demands on the Association's Aviation Department to-day clearly indicate the necessity for the provision of landing grounds in close proximity to the large centres of population. In this connection the Witness submits that a lesson may be learned from what has happened with regard to road improvement schemes.

Many of such schemes -undertaken before the war were on far too small a scale, and consequently wasteful. A much greater preserve of open space -will be required for aeroplane and airship development than was ever the case with roads, and Witness, therefore, submits that all regional planning schemes should be the joint concern of the Ministers of Health, Transport and Air'.

- The total number of workers employed in the various branches of the English Transportation industry is certainly not less than 1,000,000. The total number of insured workers employed on the construction and repair of motor vehicles, cycles and aircraft, was stated officially in the House of Commons to be 232,560. - Sir Arthur Stanley.

THIRTEENTH DAY.

Thursday, 14th February, 1929.

Present :

The Right Hon. Sir ARTHUR GRIFFITH-BOSCAWEN, P.C., in the Chair.

The Most Hon.

The marquis OF NORTHAMPTON, D.S.O.

The Right Hon. The EARL OF CLARENDON,  
D.L.

Major The Hon. J. J. ASTOR, M.P.

Sir MATTHEW G. WALLACE, Bart.

Sir WILLIAM G. LOBJOIT, O.B.E.

Major I. SALMON, C.B.E., M.P.

Major H. E. CRAWFURD, A.F.C., M.P.

Mr. WALTER R. SMITH, J.P.

Mr. R. H. TOLERTON, D.S.O., M.C.

(Secretary).

Mr. a. SPENCE, M.B.E.

(Assistant Secretary).

Mr. Mervyn O'Gorman, C.B., D.Sc., M.Inst.C.E., re-called and further examined.

Major H. E. CRAWFURD, A.F.C., M.P. - I gather from your Memorandum that you' main contention is that the .swift, secure and economic carriage of passengers and goods from one point to another, is the most important item in the economic life of the country ?

Mr. Mervyn O'Gorman, C.B., D.Sc., M.Inst.C.E : That is absolutely our contention. It has to be taken as a whole.

I am thinking at the moment of the method of taxation. Could the method be improved in order to help the motor trade t— ^T'es, but it is not an easy matter to say precisely in what way. That would mean that the taxation which is derived from this particular industry should be so arranged that it should in some way profit that industry. That is the intention of your question?

The intention of my question also is that it is alleged that the present method of taxation is a handicap to the industry ; that it is a handicap

to engine designers. Is that your view?—^Technically, I think not. Dealing with the engine alone, I think there is proof positive that the particular method of taxation adopted has not any deleterious effect on the engine itself, the proof being that the ratio of the bore to the stroke of a cylinder used in aircraft, where there is no taxation, is the same as that which applies on motor cars where there is taxation. As aircraft manufacturers are quite free to design their engines without the constrained limits of ratio between the bore and the stroke which applies in the case of the motor car engine, it seems clear that the technicians are satisfied with what they have evolved. With taxation it does not differ from what has been evolved apart from taxation.

4262. (Chairman) : You mean that aircraft manufacturers have adopted the principle of the small cylinder with the long stroke? Is that so?—Aircraft manufacturers have adopted practically the same stroke and cylinder ratios. It is not a very small cylinder, but the relation of bore to stroke in aircraft, and abroad for that matter, is substantially the same as in England under taxation restraints.

There is no doubt that every ingenious notion is being explored in the United States to ensure that new methods of transportation come under the co-ordination of the railways. Train-aeroplane-train services already exist providing for aeroplane travel by day, and railway sleeping car travel by night. These services have halved the time taken for journeys across the American continent. In the opinion of General Atterbury the practice of treating automobiles, ships, aircraft and railways as separate transportation agencies is wasteful and un-economical. They are not essentially competitors, for each functions best in its own field. Each supplements and is supplemented by, the rest, and in this fact is the key to the railway problem.

98. There is a general reception in the United States of the fundamental difference between the British and American railway problem. The geographical limitations of Great Britain make the railways extremely vulnerable to motor vehicle competition, while in the United States not only does a vast automobile industry supply the railways with over 9 per cent, of their total carload freight, but the huge extent of the country provides an assurance that railways will always remain the backbone of the nation's transportation services.

1929 : Canadian Flying Club crashes to date : 15 aircraft crashed, 5 aircraft written off.

23rd Feb 1929 : 23rd—Capt. George Haldeman, in a standard Bellanca CH monoplane, made the first non-stop flight from Canada to Cuba. He took off from Walkersville, Canada, and arrived at Havana 12 hours and 56 minutes later, having traveled a distance of 1,404 miles. - Aero Digest Dec 1929 issue

## Notes on "Civil Aviation"

29 February 1929 : Canadian DND is ordered to construct a chain of airports from coast to coast linked by revolving light beacons. These beacons are later linked by 35 Radio range stations. This is the start of the 3314 mile national "Trans-Canada" air-way from Toronto to Vancouver. Complete in 1939-1940 it connects 8 public airports, 11 municipal airports and 79 airfields. The Canadian Post Office (reluctantly) participates in the construction and insists that "*the mail be flown at night on the Post Office's schedule, no matter the weather*".

March 1929 : Canada Gazette : Curtiss Reid Flying Schools Ltd. letters patent issued under the Companies ACT.

21 March 1929 : FLIGHT : Air Minister on All-Metal Aircraft : SIR SAMUEL HOARE, speaking of aircraft at the "coming of-age" dinner of the Institute of Metals on March 13, said that all new metal machines which had been substituted for the older wooden ones, in the case of land machines were 15 percent, lighter, and in the case of flying-boats 25 per cent, lighter. One of his last flights was undertaken in a metal flying-boat, and he was told that the machine was almost a ton lighter than its wooden counterpart. Only three years ago the Air Ministry ordered in one year 392 wooden machines, against 21 metal ones. In 1928, on the other hand, they ordered 423 metal, against 63 wooden machines. By the end of this year they would have substituted metal for wooden machines almost entirely.

and

At the anniversary festival function of the Royal Caledonian Schools GENERAL SIR IAN HAMILTON reiterated that "our Imperial forces were being cut down to the bone, England having gone further in this direction than any other of the Allied Powers. "Taking things as they are," he said, "It may fairly be claimed that cutting down the estimates of the old Services and starving the new Air Force has not so far in any way damaged the true basis of our Imperial strength, the spirit of the officers and lower deck ratings of the Navy, or of the officers and rank and file in the Army. **Air binds an Empire even more closely than the sea, but we have only six squadrons associated with the Territorials ; we should have sixty."**

21 March 1929 : FLIGHT : IN PARLIAMENT : SIR. S. HOARE, in reply to Mr. Wellock, said the number of civil aircraft registered in Great Britain and Northern Ireland is 453, of which 361 have been granted certificates of airworthiness and may be regarded as in use or available for use ; the remaining 92 are aircraft in various states of construction or under examination for certificates of airworthiness.

21 March 1929 : FLIGHT - IN PARLIAMENT : re RAF Apprentices and Discharge Purchase : SIR S. HOARE, in reply to Mr. Broad, said "RAF apprentices, in common with other recruits, have the right to claim their discharge within three months of their enlistment on payment of £20. If they do not claim discharge within that period, they can only obtain it on very strong compassionate grounds, and the same rule applies to ex-apprentices who have not completed two years' service after leaving the training school. Ex-apprentices who have completed their two years since leaving school may be permitted, if it is possible without detriment to the service, to purchase their discharge by paying [pounds]100, reducible in certain cases at the discretion of the Air Council. These rules are necessary owing *to the heavy expense of training apprentices.*

1929 : England : Air Minister Samuel Hoare is "at the Air Ministry for 2 purposes":

1. to preach Trenchard's principles of air power, and, s
2. to establish civil air transport as a dependable means of quick communication in the Commonwealth and Empire

## Notes on “Civil Aviation”

1929 : Schneider Trophy race : a direct confrontation between the RAF's 1900 hp Rolls-Royce "R" engined Supermarine S.6A and the Italian Air Force's Macchi seaplane. (the only other major independent air force in the world) flying Macchi seaplanes anunder direct orders from Mussolini to provide a victory for his regime. The new Supermarine, the S.6A, now had the Rolls-Royce "R" engine developing 1900 hp. The race was won by RAF Flying Officer Waghorn at a speed of 328.63 mph.

19 May 1929 : Farman F.63bis Goliath F-GEAI operated by Air Union en-route Croydon to Paris crashes at Keylands Sidings near Paddock Wood railway station and is destroyed by fire; the pilot and mechanic escape with minor injuries.

17 June 1929 : Handley Page W.10 G-EBMT “City of Ottawa” operated by Imperial Airways crashes into the English Channel near Dungeness killing 7 of the 13 onboard

28 June 1929 : the British Aviation Insurance Group (BAIG) is given approval to deal with the general classification of aircraft, the inspection of light aircraft and recommendations for the renewal of certificates of airworthiness<sup>208</sup>.

The BAIG were given official standing by the AM and work previously handled by the government through its own officials is to be turned over, in some cases, to the insurance companies. In future, certain privately owned aeroplanes will be examined for airworthiness when their owners apply for a renewal of registration by inspectors in the employ of the BAIG. The fee paid by the owner of the aircraft will be received directly by the underwriters and it is hoped that the new plan shortly will result in economies permitting the reduction from the present charge of 5 guineas (US \$25.00) for each renewal of an airworthiness certificate. The offices from which this will be handled will be located in the building occupied by the Lloyds register of Shipping and co-operation between the aircraft and marine underwriters is "Probable". This approval was not extended to public transport aircraft. The British Corporation was given similar approval. The approval was not implemented by BAIG as Lloyds agreed to set up its own organisation. BAIG withdrew, and Lloyds was given approval in September 1929.

29 June 1929 - aviation weekly pg 2266 western canada airways of Winnipeg (est 1926 with 1x Fokker Super Universal at Hudson Ontario) By 20 Nov 1928 WCA operate 9x 4 seat, FSU's, 8x 6seat FSU's 1x Fairchild 4 seat monoplanes, 1 Fokker tri-motor 10 seater, 2x Boeing flying boats, 1x Vickers Vedette, 1x DH60 Moth, 4 Avro Avians (Cirrus engines), one of which is rented for \$30/hr for flight instruction - three of the FSU's are G-CASE, G-CASE, G-CAGD, G-CAIX . Post Nov 20, 1928 they add 2x more Boeing flying boats and 1x Junkers. The FSU's are powered by both Wright "Whirlwind" and the Pratt "Wasp" engines.

Also notable in 1929 are the “Elliot Brothers” of Sioux Lookout who supply skis for aircraft and who built the Skis for the Byrd expedition and supply skis to WCA.

The only hangars in the north are for the engines - to keep the rain out in the summer and to keep warm in the winter while performing maintenance.

31 July 1929 : Farman Goliath F-GEAB operated by the Compagnie des Grands Express Aériens en-route London to Paris carrying gold bullion is damaged in a forced landing near Smarden in Kent.

## Notes on "Civil Aviation"

Sept 1929 : USA - Government : NEW CHIEF APPOINTED  
IN COMMERCE SECTION

1/-ENNETH M. LANE, designer of the 1V Wright Apache airplane which last May broke the world's altitude record, has been appointed chief of the Commerce Department's Aeronautical Engineering Section, it was announced recently by Clarence M. Young, Director of Aeronautics. A graduate of Massachusetts Institute of Technology, Mr. Lane has had four years' aviation experience with the Government at McCook Field, two years with the Dayton- Wright Company at Dayton, Ohio, and six years with the Wright Aeronautical Corporation of Paterson, New Jersey. As chief calculator, chief designer, and chief airplane engineer for the Wright company, he designed the Wright Apache airplane with which Lieut C. C. Champion and Lieut. Apollo Soucek established new world altitude records.

The primary function of the engineering section of which Mr. Lane will have charge is to determine that aircraft, for which licenses are issued, are airworthy when they leave the factory at which they are built. This section examines in detail the specifications, stress analyses, structural designs, and drawings which are submitted by the manufacturer to the Department of Commerce. It inspects materials of construction, workmanship and fabrication methods used at the factories. It examines production aircraft to determine whether they are built in exact accordance with the submitted specifications and drawings, and it determines the maneuverability and general flying qualities of all aircraft on which approved type certificates are requested.

12 September 1929 : RAF Squadron Leader Orlebar raises the world absolute speed record to 357.7 mph in the Supermarine S. 6A.

1929 : C.H. Green - air engineer , F. Burton mechanic.

1929 : RCAF Camp Borden Avro 504's replaced by abt 20 De Havilland Gypsy Moths. (Note : Avro had oleo gear, Moth had rubber shock discs)

22 June 1929 : Shenston transitions from Avro 504 and subsequently crashes a D.H-60 Moth at Borden (due to the moth wanting to fly on the flare wheareas the Avro would drop her tail at the same speed - DH was a better aircraft with a more efficient airfoil). Shenstone noted that the fwd cabane wires were attached to the plywood skin and not to the fuselage frame.

17-19 July 1929 : Canada govt physics dept. Balloon Sonde. Exploration of the Upper Air with balloons carrying instruments, six ascents each from Goderich, Ontario, and from Calgary, Alta., ten instruments were recovered

1929 : National Research Council - Ottawa, Canada, assistant Dir. J.H Parkin convenes a committee on Aeronautical Research with the DND and the Canadian aviation industry : construction begins on the NRC aircraft engine laboratory and wind tunnel.

June 1929 : Beverley Shenstone graduates from the University of Toronto with the first Master's in the "applied Science of Aeronautical Engineering" and becomes Canada's first "Aeronautical Engineer". SEE / READ the U of T Extension Course outline for 1928-29.

Claudius Dornier lecture to RAeS on Flying Boats read by Shenstone, Stedman uses RAF contacts at Air Ministry to get Shenstone a placement under Dr. Hugo Junkers at Junkers factory, Dessau, Germany. Junkers was then the leading authority on "Nurflugel" or "flying wings". Junkers' was attempting to build the 107 ' wingspan 40 passenger (seats in the leading edge) G-38 "Nurflugel" bomber. Junkers' was forced to hand over his company and all designs and research in 1933/34 and was banished from his life's work. by 1936 Dr. Junkers was dead.

August? 1929 : "Pilot Officer" (provisional) Beverley Shenstone, resigns his RCAF commission when told he cannot travel abroad and train as an RCAF pilot at the same time.

## Notes on "Civil Aviation"

09 August 1929 : the Graf Zeppelin departs Lakehurst, NJ for a four-leg complete circumnavigation of the globe, terminating in

Lakehurst, NJ 21 days, 5 hours and 31 minutes later having covered 33,234 km (20,651 mi; 17,945 nmi) - the fastest circumnavigation of the globe to date.

26 September 1929 : Beverley Shenstone leaves Toronto for Montreal, boards Norwegian ship "Storburg" for Europe. Arrives Hamburg Germany 17 October 1929.

September 1929 : GREAT WEST AIRWAYS, LTD., is to be taken over by the Boeing Airplane Company of Canada, according to negotiations reported between the two concerns. Great West Airways is a bidder for the Calgary-Vancouver air mail contract. WESTERN Canada Airways, Ltd., has established a seaplane base at Prince George and daily flights are being made to the Ingenika mining country with a Fokker Super Universal

CHINESE citizens of Toronto are presenting their native country with six airplanes, which will be shipped from Toronto to the Orient. Four of the ships are destined for Nanking as training ships for commercial pilots, and the other two will go to Canton. The planes were paid for by voluntary subscriptions collected during the past year.

THIRTY-FIVE Canadian Aircraft representatives have formed the Canadian Aeronautical Chamber of Commerce to advance the aeronautical interests of the Dominion. When governmental approval is received, the organization will be incorporated. The purposes of the Canadian Aeronautical Chamber, as set forth in tentative by-laws drawn up, include the promotion of trade with Canadian aviation interests, the distribution of information concerning the industry, the advocacy of laws favorable to aeronautics, the adjustment of difficulties within the industry, and the acquisition of property.

THE Canadian Government is spending  
-1 about \$140,000 this year for the promotion  
of flying clubs. Most of this money  
will be spent on airplanes to be presented  
to the clubs. Flying club membership in the  
Dominion is now over 3,400 with 260 members  
flying solo. There are 142 private  
licenses among the club members and 45  
commercial tickets.

TPHE Winnipeg Flying Club, at its first  
-1 annual meeting reelected J. A. Sully as

## Notes on "Civil Aviation"

president. The club has experienced a very successful year and has had 1,760 hours of flying with no serious accidents. Because of this record it is the only club in Western Canada that can get crash insurance. There are plans for a new clubhouse and tennis court and a drive for a membership of 475, twice that of the present. It is expected that parachutes will be purchased for those members who wish to practice aerobatics.

TN preparation for the air mail service  
\* across Western Canada the Department of National Defense has sent out 'Major W. A. Steel of the Royal Canadian Signal Corps to establish radio beacons between Winnipeg and Banff, Alta. The present plans calls for night flying, leaving Winnipeg about 10 p. m. with mail, and arriving at Banff about 6 a. m., in time to catch the west-bound trains that carry the mail through the mountains to Vancouver. It is planned to establish radio stations at Cordova, Man., and 'Regina, Sask., this fall, and at Maple Creek, Sask., and Calgary, Alta., in the spring. At the time, plans are being made for emergency landing fields, and the establishment of visual beacons on the regular airports.

Canada imports 44 aircraft from the United States during the 1st 6 months of 1929. transcontinental air lines plans to establish passenger service between Qeveland and various points in Canada.

The Barling NB3 the only all-metal structured 3-place airplane available in the United States, Department of Commerce Type Certificate No. 174, manufactured by the Nicholas-Beazley Airplane Company, Inc., of Marshall, Mo. The plane, which is the only three-place ship to be licensed with a sixty horsepower engine, is one of the first to be approved under the new Department of Commerce requirements which went into effect July 1st. powered with a Le-Blond 60 horsepower engine, was used by Pilot Zimmerley recently on his flight from Brownsville, Texas, to Winnipeg, Canada, when he set a new non-stop long distance record for light planes. 16 hours—103 miles an hour. CANADIAN American Airways, Inc., recently began operations on its new line between the Twin Cities and Winnipeg, Canada. Braniff-Universal on July 25 also established direct airline connections between Oklahoma City and Winnipeg, Canada, through a connection with the Canadian- American Airways, 'tic, at St. Paul, Minn.

## Notes on "Civil Aviation"

Commodore F. G. Ericson - associated with the development of aviation since 1909 ; during the World War he represented the United States Air Board as well as the Imperial Munitions Board of Great Britain, in England and France. In the capacity of Chief Engineer, R. A. F., he directed the construction of the well known "Canuck Training Plane," thousands of which were used by the Royal Air Force and the U. S. Army Air Service. He was Chief Engineer of the Curtiss Airplanes & Motors Ltd., Toronto, and also assisted in the development of the F5L Flying Boat and directed the construction of a great number of these planes for the U. S. Navy. In 1918 Commodore Ericson was awarded a life fellowship in the Aeronautical Society of Great Britain. He is the possessor of the first F.I.A. Pilot's License, issued in Canada.

VJAJOR-GENERAL J. H. MACBRIEN, president of the Aviation League of Canada, is making a trip across Canada in his Gypsy Moth. After inspecting the various flying clubs in the east he flew on to Winnipeg, and thence to Regina, to attend the convention of western flying clubs. The plane is the standard Moth used by all flying clubs with the exception of an extra fuel tank which gives it a cruising range of about six hours. Proceeding on from Regina the general will visit at Calgary, and then fly across the mountains to the Pacific coast.

AIR mail service for Western Canada has been definitely assured and the entire contract for service between Winnipeg, Regina, Saskatoon, Edmonton and Calgary was allotted to the Western Canada Airways of Winnipeg. It is intended that this be all-night flying, but since the beacon, emergency landing fields, direction lights, etc., that are being prepared by the Department of National Defense, will not be ready until late in the fall, the Post Office Department has announced that there will be a daylight service, similar to that of last December, for a month before the night equipment is ready.

millions of dollars worth of timber. Aero-Digest pg 182 Sept 1929

WITH five new light aeroplane clubs throughout the country already operating this year, five others' are struggling to complete their organization and to claim the government grant of two machines each, but only three will get their equipment on this year's vote, it is stated by the Department of National Defence. At the present time, it is said, the three clubs most likely to receive their machines during the summer are those at Brandon, Man.; Brantford, Ont.; and Stratford, Ont.

ANOTHER very important victory was made by the airplane when it was announced that the aerial dusting of the forests against the spruce bud worm plague was found to be very successful. The government sent its big tri-motor plane into the Western Ontario district and the Dominion entomologist, Dr. J. M. Swaine, reported the dusting to be very effective and may save

October 1929 ANTHONY H. G. FOKKER'S newest single motor design, the Fokker F-14 Mail Plane, made its first public appearance at Cleveland Airport during the National Air Races. Orders for six of the new F-14s have been received from the Western Air Express and ten from Western Canada Airways, Ltd. It is a pay load ship,

with a high speed of 140 miles per hour, and of parasol construction for maximum visibility. Preliminary tests of this monoplane showed that it will lift a pay load of 1,600 pounds in 9 seconds.

The parasol wing construction is a departure from recent Fokker designs. The full cantilever type wing, entirely covered with wood veneer, is raised from the fuselage to give unobstructed vision to the pilot, whose cockpit is aft of the cabin.

The new F-14 is powered with either a Pratt and Whitney Hornet or a Wright Cyclone, both of which are 525 horsepower engines. It has an adjustable- pitch propeller, electric inertia starter and booster magneto. The ship has a high speed of 140 miles per hour, a cruising speed of 115 miles per hour, and a landing speed of 55 miles per hour. It climbs to 1,200 feet the first minute and has a service ceiling of 18,000 feet.

Its two gasoline tanks located between the wing spars have a total capacity of 180 gallons. Two King Seeley gasoline guages are located on the instrument board. It has an 18-gallon oil tank. The cruising range is 800 miles.

Its cockpit is of the open type, located behind the mail compartment, and contains a single pilot's seat with safety belt. The instrument board is illuminated and has a magnetic compass, altimeter, air speed indicator, tachometer, clock, bank and turn indicator, oil pressure gauge, rate of climb indicator, oil thermometer and magneto switch.

Like all Fokker planes, the fuselage, tail surfaces and landing gear are of tubular steel construction. The landing gear is of the divided type, with axles and axle bases hinged to the bottom longerons. It has oleo-pneumatic shock absorbers and wheels fitted with 36 by 8 inch tires and internally expanding brakes. The wheel has a 14 by 3 inch tire. Brake controls act independently on each wheel for aid in steering when taxiing, but both brakes may be set for parking or engine testing.

The nose cowls have adjustable shutters for departure control operated from the cockpit.

The sides and floor of the cabin are finished with corrugated aluminum. The cabin has non-shatterable side glass window\*- Although designed for mail transportation with no seats installed, the cabin may be fitted with six seats.

## Notes on "Civil Aviation"

### Specifications

Span 59 feet

Length overall 43 feet 4 inches

Height overall 12 feet 11 inches

Wing area 550 square feet

Gasoline capacity 180 gallons

Oil capacity 18 gallons

### Performances

High speed 140 miles per hour

Cruising speed 115 miles per hour

Landing speed 55 miles per hour

Climb 1,200 first minute

Service ceiling 18,000 feet

Cruising radius 800 miles

Aero-Digest pg 156 Oct 1929

October 1929 : US Government : AERONAUTICAL CHAMBER OF COMMERCE SECTION MEETINGS

DISCUSSIONS promoting the interests of the aeronautical industry as a whole, and proposals for the elimination of present evils in aviation were advanced in the meetings of the various groups of the Aeronautical Chamber of Commerce of America during the National Air Races and Exposition held in Cleveland, August 24 to September 2. Topics discussed at the meetings of the organization included the present airworthiness requirements of the Department of Commerce for the licensing of aircraft, the development of interest in air travel, the specifications and identification of aircraft fuels, sales organizations, servicing problems, and the problem of questionable and inadequately equipped flying schools.

Airworthiness Requirements Discussed : Commercial airplane manufacturers, meeting in one of the aeronautical industrial conferences arranged by the Aeronautical Chamber of Commerce of America, expressed general satisfaction with the present Airworthiness Requirements set up by the government to protect the American public.

The Airworthiness-Requirements, which is the engineering code followed by commercial airplane manufacturers to obtain government approval of their planes, was discussed and only minor modifications recommended.

Possible changes in the present spinning tests, and maximum engine speed requirements were considered and a committee of three manufacturers appointed to present these as well as other technical aeronautical problems to officials of the Department of Commerce. A code of procedure, governing the relations of aircraft manufacturers in the Aeronautical Chamber of Commerce with the Department of Commerce in the development of the Airworthiness Requirements, was approved by the manufacturers' section.

## Notes on "Civil Aviation"

The current US code provides for the publication of Airworthiness Requirements once each year, on January 1, and for a joint meeting of manufacturers with officials of the Department of Commerce to consider proposed changes in the requirements each September.

William P. MacCracken, Jr., praised the spirit of close cooperation that exists between manufacturers of aircraft and the government in regulation and licensing of planes for the protection of the American public. The manufacturers and government

officials agreed that changes in the requirements should be made according to a definite code of procedure, which should not work a hardship on the constructor or unnecessarily burden the Department of Commerce. It was proposed that changes in the Airworthiness Requirements be issued in loose leaf form and that additions to the requirements be issued at any time during the year. Changes or additions would be made optional for a period of several months from the date of issue. Optional changes or additions would apply only on new designs received by the Department of Commerce later than four months after the date of issue of a change. The joint meeting also considered methods of obtaining cooperative action on drafting changes or additions to the Airworthiness Requirements.

1929 : Aero Digest : The efficient regulations provided in the Air Commerce Act of 1926 stabilized the young industry both commercially and technically.... There are some excellent planes built in France, and some poor ones, as is true of every country, including the United States.

But in the United States, Department of Commerce regulations do not permit such ships to be used for commercial purposes. I have a great deal of respect for the intensive system of factory stress analytical and flight testing, and for the system of inspection employed by the Aeronautics Branch of the Department of Commerce.

I had the pleasure of having a long discussion with Major Clarence Young shortly after he had landed at Le Bourget with his Stearman biplane. I wondered at the time what he thought of the European inspection and licensing systems, and, of course, he was too polite to volunteer comment.

Who can say whether European technical development is of a higher order than American? Suffice it to say, however, efficient and airworthy planes are more general in America than in Europe, although a certain few European products stand out as being superior to certain American planes of the same class." October 1929 Aero Digest PP 259-260

04 - 12 October 1929 : 2nd International Conference on Private Air Law, Warsaw Poland.

### 1929 REGULATIONS FOR AIRCRAFT ENTERING CANADA

REGULATIONS governing the entry of American airplanes into Canada were recently made public by the Department of Commerce. According to the report the following regulations must be observed by pilots flying into the dominion

:

**The aircraft must be registered and passed as airworthy by the United States Department of Commerce, Aeronautics Branch,** and it must bear the registration markings allotted it by that branch, preceded by the letter "N."

The certificate of registration and airworthiness must be carried on board.

The pilot must be duly licensed by the United States Department of Commerce.

If the aircraft and pilot are licensed to carry passengers, they may do so internationally, but not between points in Canada, except in the case of through passengers making a landing en route.

American pilots may not engage in commercial aviation in Canada, nor may aircraft be employed on such work unless registered in Canada.

The pilot of the aircraft is required to notify the Collector of National Revenue at, or nearest to, the landing field at the point of destination, and such notification shall be given prior to taking off, in order that sufficient time may be afforded the collector to arrange for customs facilities.

## Notes on "Civil Aviation"

Should passengers be carried, the owner or pilot of the aircraft shall also make arrangements with the Department of Immigration for proper entry. Aero-Digest pg 192 Oct 1929

ENGLAND : A PROJECT to link the British West Indies, British Guiana, Venezuela and Canada by a seaplane fleet, competing with American airlines in South American traffic, has been announced by H. W. Garraway and George G. Black, London agents of the Atlantic Airways, Ltd. The plans call for three lines of seaplane service: From Trinidad to British Guiana and Trinidad to the Venezuelan oil fields ; Trinidad to the Barbadoes and Trinidad to Jamaica by way of the Leeward Islands ; and an extension of the service from Jamaica to Montreal by way of the Bahamas and Bermuda. Negotiations are progressing with the British government, the Colonial government and the Venezuelan government with the object of opening the first section of the service early in 1930, necessitating a subsidy of \$150,000. Aero-Digest pg 248 Oct 1929

FOREIGN NEWS IN BRIEF : Compiled from reports from AERO DIGESTS correspondents, the Aeronautics Trade Division. United States Bureau of Foreign and Domestic Commerce.

## Notes on "Civil Aviation"

HPHE first daily express service from A Canada, operating between Toronto, Hamilton, London and Windsor was inaugurated recently by the Canadian Pacific Express Company. A Fairchild cabin monoplane, piloted by Captain R. H. Bibby, took off from Canadian Airways field at Weston. The schedule of the new line is as follows: leave Toronto 1:45, arrive Hamilton 2:15; leave Hamilton 2:30, arrive London 3:15; leave London 3:30, arrive Windsor 4:30. On the return journey the plane will leave Windsor the next morning at 6:35, arrive London 7:40; leave London 7:50; arrive Hamilton 8:30; leave Hamilton 8:40; arrive Toronto 9:00.

RONNIE JOHANESSON, formerly of the Royal Air Force, has taken over the joint duties of instructor and business manager of the Winnipeg Flying Club.

Mr. Johanesson, a war time pilot, has over 600 hours of flying time. He received his training at the British Flying School in Egypt, and served two years as an instructor. HPHE Western Canada air mail service is practically complete, awaiting only the lighting to be placed on the intermediate fields. This work is now being done between Winnipeg and Regina. The contractors, Western Canada Airways, are now taking delivery of eight new special Fokker mail planes. The main route will connect Winnipeg, Regina, Moose Jaw, Calgary and Canmore.

HPHE Postmaster General has just announced a new air mail service between Ft. Murray, Alta., in the Peace River country, and Aklavik, North West Territories, near the mouth of the MacKenzie River on the Arctic Ocean. The service will begin in November. W. L. Brintnell of the Western Canada Airways, who took government officials over the route, made a nonstop flight of 860 miles from Aklavik to Dawson City, Alaska, in 6 hours 45 minutes in a Fokker Super Universal.

HPHE Niagara Falls division of Sky View Lines, Limited, has been making daily sightseeing trips over Niagara Falls during the summer, averaging about 100 passengers

Personnel of the Niagara Falls Division of Sky View Lines, Ltd.

## Notes on "Civil Aviation"

per day. Pilots of the division include Bob Thiebert, chief mechanic; Art Allman, pilot; Oscar McLeod, president ; Jerry Blackburn, purser ; and Harry Hublitz, chief pilot. Hp'HE Great Western Airways, Limited, of Canada, is an operating company formed recently by the merger of three airline operating companies for the purpose of competing for air mail contracts to the Prairie Provinces. Commercial Airways, Ltd., of Regina, Great Western Airways, Ltd., of Calgary, and Commercial Airways. Ltd., of Edmonton, participated in the merger. J. H. Tudhope, supervisor of airports and airways for the Dominion Government, will be general manager of the firm. Aero-Digest Oct 1929

13 October 1929 : The "Warsaw" Convention for the Unification of Certain Rules Relating to International Carriage by Air is signed at signed at Warsaw, Poland. It is written in only one "Official" language, French.

24 October 1929 : Beverley Shenstone meets British Air Attache, Gp. Captain M.C Christie @ British Embassy, Berlin. Advised by Christie that Junkers were good people, and "not to stay at Junkers for too short a time"and to say he was from "America" instead of Canada.

November 1929 : Beverley Shenstone arrives at Junkers, meets Bohm, Auger, Kohler, Wagner.

air tourists from the United States taking part in the Ford Motor Co. Ford Reliability Tour found such clubs in existence at Windsor,

Toronto, Ottawa and Montreal, all four of their stops north of the border. Right at the first stop, there at Windsor, the tourists came in touch with the Border Cities Flying Clubs, which were their hosts at luncheon. If it was worth something to the Canadians to see the forts -one planes from the States, it might well be profitable to the States to know more about the Canadian Light Plane Clubs. Their loyal officers and members were eager to explain the clubs to the tourists and tell all about them.

By this interesting plan, we were told, the Canadian government subsidizes civilian flying, for the double purpose of promoting commercial aviation and building up a reserve of fliers with an eye to the important part it might play in the national defense. Upon the organization of a private flying club, if it provides landing field and equipment, a competent instructor and air engineer, the government gives the club two planes. If the club buys a third plane, the government gives it a fourth. It further gives the club a cash bonus for the first thirty students trained

The movement really extends from coast to coast. In each club there are from a score to a hundred civilian fliers, including many of the best young men of Canada. A fine spirit evidently permeates the organizations, and they are having a great influence on the movement to get into the air, throughout the Dominion. Those fields on which they landed the tourists found called "air harbours" up there. Last year Canada had forty-four of them, duly licensed, and they are opening many this year. Fifty-three operating companies reported nearly 3,000,000 passenger miles flown last year. Airplanes transferred many men and much material to the

northern mining camps, which largely accounts for the item of 2,404,682 pounds of "freight" reported as carried in 1928. Those on the tour who were interested in supplying Canada's needs for planes and parts and placements found this opportunity of personal contact with the Canadian fliers one of the valuable features of the cruise. Aero-Digest November 1929.

06 November 1929 : Junkers G 31 reg. D-903 "Oberschlesien" on a scheduled flight operated by Luft Hansa en-route Croydon to Amsterdam crashes at Godstone, Surrey killing the pilot, crewman Prince Eugen of Schaumburg-Lippe and 4 of the 5 passengers.

12 November 1929 : Beverley Shenstone begins work at Junkers' (0700-16:30). Employed in the sheet metal department. In the first few weeks of his "Practicum" on the floor, Shenstone learns:

- a) Panel Beating,
- b) Riveting of Duralumin
- c) metal cutting,
- d) metal forming,

e) drawing to real life development of fittings etc.

Also present are other foreign students : Japanese, Egyptians, Finns. Shenstone moves to building cowlings for J-48. The engines were "License Built" copies of the Gnome-Rhone, but the spark plugs were in different locations than the drawings). Shenstone stayed at Junkers' long enough to see the introduction of the wing root fillet (first used on the Junkers' Junior) and the first flights of the Ju52. Introduced to "Bahaus Design movement and Ideas"

late 1920's: Zinc Chromate was first used as an anti-corrosive barrier primer; it could be described as a sort of painted-on galvanizing. It had been developed by Ford Motor Company by the late 1920s, subsequently adopted in commercial aviation and later by the US Military. Official USAAC notes mention successful application of Zinc Chromate primer starting from 1933, but it had not been adopted as standard until 1936

12-17 November 1929 : Canada govt physics dept. Balloon Sonde. Exploration of the Upper Air with balloons carrying instruments, six ascents each from Goderich, Ontario, and from Calgary, Alta., instruments were recovered (seven). The greatest height reached in the Goderich ascents was 8-1 miles on the 17th November, when a temperature of 68 F. below zero was recorded. The highest ascent at Calgary' occurred on the 16th November, and a temperature of 60 F. below zero was registered.

1929: Canadian Pacific Railroad (CPR) and the Canadian National Railroad (CNR) create the Aviation Corporation of Canada to represent their flying interests.

1929: Colonial Western Airways Inc., Toronto, Ont., operates Sikorsky S-38 flying boat.

1929 : 960 acres of farmland near Trenton were purchased by the federal government to establish a Royal Canadian Air Force station to be called RCAF Station Trenton

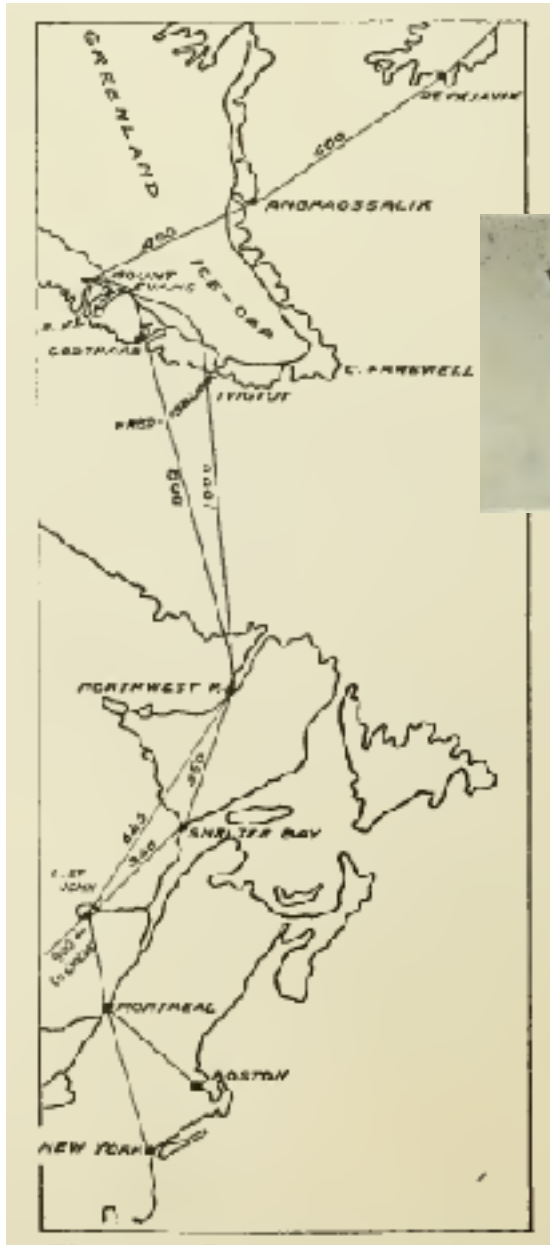

1929 : Air Ministry "Airworthiness Handbook for Civil Aircraft - AP1208" first published. Incorporates the "In-Force" Air Navigation Order. (When compared to the current UK-ANO, it is apparent that there has been little change)

November 1929 - Aero Digest : the more prosperous bootleggers have used airplanes to smuggle liquor into the country from Canada has at least been suspected. The Prohibition unit in turn has used planes to take aerial photographs of roads along the Canadian border so that the much harrassed rum runner will have a more difficult time.

## Notes on "Civil Aviation"

The case for an aerial police force has been strengthened by recent incidents in which the airplane helped to render justice swift and sure. British Columbia pointed out how Indians of that locality who a few years back were using dog sleds are NOW flying airplanes to get from their villages to the trapping grounds. Several of the red men have their OWN planes, and air taxis are employed by others.

November 1929 : R101 Test flight at Cardington;

November 1929 : Aero Digest : **AIRPORT** facilities for both landplanes and seaplanes are practically completed at Saint John, N. B. A municipal landing field is located within the city limits and a seaplane station is three miles away at Millidgeville on the Kennebecasis River. Approximately \$100,000 has been expended on the development of the Saint John Airport. It is surrounded by broad open land air mail, commercial, private and student pilots are using the field. Sheltered water area is provided at the seaplane station. Equipment includes a landing stage, a slipway for drawing machines out of the water and arrangements for fueling planes. A good motor road enables travel to the center of Saint John within a few minutes.

The Summer's Aviation Activities in British Columbia  
[A. P. Roberts]

AFTER an unusually active summer season, British Columbia aviation is settling down to somewhat more restricted operations during the winter months. During the summer more planes flew in the province than ever before, chiefly on work connected with the development of natural resources.

Three machines—two Royal Canadian Air Force Fairchild cabin monoplanes and one Western Canada Airways Junkers—operated

on photographic surveys for the British Columbia government in the Peace River area. During the summer they photographed 12,000 square miles of territory, making their base at Prince George. All three were on floats. Four other machines were operated by Western Canada Airways in the

province—three Boeing flying boats on fishery patrol and contract work on the coast, and one Fokker Universal on freight carrying to the mining areas of central British Columbia out of Prince George. Dominion Airways, Ltd., of Vancouver had three planes in service, one DeHavilland Moth seaplane operating on forestry patrol out of Nelson and two others in constant use at the company's school in Vancouver. In addition to these the Aero Club of B. C., Vancouver, had two Moths and later two

## Notes on "Civil Aviation"

Eaglerocks in use at the city's temporary airport, and the Sprott-Shaw School of Aviation gave instruction in a Waco biplane. The summer was marked by numerous

aerial crossings of the Rockies—a flight attended with much more risk than that over the lighted and marked transcontinental route in the United States. There are neither emergency landing fields nor air beacons to guide the flyer through the Canadian Rockies.

The southern B. C. route through the Crow's Nest Pass was used by all planes. First, Mr. L. M. Lockhart's tri-motored Fokker flew in almost a straight line from Vancouver to Calgary over the mountains at 14,000 feet in four hours and 35 minutes. A month later Mr. and Mrs. Hal Hart flew from High River to Vancouver, with a stop at Grand Forks, in their Waco Taper-Wing.

Then a few days later a Western Canada Airways trimotor Fokker piloted by W. L. Brintnell made a flight from Winnipeg. Premier John Bracken was one of the passengers. The machine made the return trip over the same route. Capt. J. D. Parkinson of Montreal, holder of the Canadian altitude record, recently completed a trans-Canadian flight in his Curtiss Robin, flying from High River to Vancouver with stops at Grand Forks and Princeton. Other features of the summer's activity in Vancouver included the establishment of the Boeing Airplane Company's only branch factory, formation of a glider camp for next summer, and organization of a model aircraft league for boys. Plans for Vancouver's permanent airport on Sea Island, for which ratepayers voted \$300,000 purchase money in the spring, were advanced during the summer and actual construction work will be well under way by the middle of the winter.

### Schlee-Brock Aircraft Corp. Acquires Canadian-American Airline

"PHE Schlee-Brock Aircraft Corporation of Detroit has acquired the Canadian-American Airlines, Inc., operating between St. Paul and Winnipeg, Canada, and has inaugurated increased passenger service on the line. The Schlee-Brock company has also purchased a field at Minneapolis which will be developed into a terminal from which planes of the Canadian-American line will be operated next spring. The Schlee-Brock corporation also operates the Arrowhead Air Lines between Duluth and Port Arthur.

The Canadian-American Airlines operated for several months before the Schlee-Brock corporation acquired control. A Travel-Air six-place monoplane was operated by the company on a schedule of three round trips a week. Under the supervision of the Schlee-Brock company the Canadian-American airline will supplant a rail service of fifteen hours each way from the Twin Cities to Winnipeg, making a four-hour flight with four stops. The terminals which will be used are located at St. Paul municipal field, Wold-Chamberlin field, the municipal fields at St. Cloud, Fargo and Grand Forks, and Stevenson Field at Winnipeg. Lockheed cabin monoplanes will be used and connections will be made later with the Arrowhead Air Lines.

The Canadian-American Airlines and the Arrowhead Air Lines will be operated throughout the winter, and planes will be equipped with skis for landings and takeoff. The officers of the Canadian-American

Airline\*, Inc., are as follows: William S. Brock, president. Col. Ralph W. Webb, E.

## Notes on "Civil Aviation"

F. Schlee, H. D. Putnam, vice presidents  
J. F. Gould, secretary A. G. Schlee, treasurer,  
and F. D. Blair, assistant secretary  
and treasurer.  
The Schlee-Brock Corporation is agent  
for the Bach Aircraft Company of Los  
Angeles, Lockheed Aircraft Company of  
Los Angeles and the New Standard Aircraft  
Company of Paterson, N. J. Headquarters  
are located on the municipal airport  
at Detroit.

### 1929 : AIRWORTHINESS CERTIFICATES FOR EXPORT - TpHE participation of American aero-

\* nautical export trade in foreign markets  
is limited to a degree as the result of the  
International Aerial Navigation Conference  
which was held at Paris in 1919. While the  
effect of this conference is still felt, the  
limitation on American aircraft exports  
prevails only in the European and Australian  
markets. Exports to South America and the  
Orient were in no way influenced by the  
conference, and airplane licenses are issued  
according to the regulations of the South  
American or Far Eastern countries. Exports  
to Canada are regulated by a reciprocal  
agreement concerning airworthiness  
certificates, Canada being the only country  
with which such an arrangement for the  
export of aeronautical products has been  
made by the United States.  
It is in the European and Australian  
fields that the American export trade has  
approached a limitation that is MORE or  
less marked as a result of the International  
conference. The signatory nations at the  
conference undertook to prohibit the importation  
of aircraft unaccompanied by a  
certificate of airworthiness issued or indorsed  
by a state which was a party to the  
convention. The United States was not a  
signatory nation to the conference, and was  
included in the embargo placed on nonsignatory  
nations. American aircraft are  
limited, but not wholly excluded, as a result. There has been a movement in the United  
States to rewrite the Paris convention and  
establish a new international code governing  
airplane manufacture and certificates of  
airworthiness. With the United States as  
a signatory nation to the code, aeronautical  
exports to Europe and Australia would not  
be limited by the embargo which resulted  
from the Paris conference.  
With such a change effected the United  
States would probably extend the reciprocal  
agreement in operation with the Canadian  
Government to other nations. The procedure  
in effect under this reciprocal agreement  
requires manufacturers of aircraft to submit  
an application for certificate of airworthiness  
for export in triplicate form to  
the Aeronautics branch of the Department  
of Commerce. Three-view general assembly  
drawings must also be submitted in triplicate.  
An airplane which is being exported to  
Canada may be inspected either in the ordinary  
routine of factory inspection, or by  
a field inspector, and an inspection report  
submitted. The application and inspection  
report are checked for completeness and a  
Certificate of Airworthiness is made out in  
triplicate. The original certificate is returned  
to the applicant and must accompany  
the aircraft to be exported. A copy is forwarded  
to the Comptroller of Civil Aviation  
in Canada and the second copy is retained  
by the Aeronautics Branch.

#### Export Sales of Ryan Planea

THIRTY Ryan Broughams have been  
shipped to foreign countries over a  
period of 18 months by the Ryan Aircraft  
Corporation of St. Louis, according to a report

## Notes on "Civil Aviation"

of company officials. Nine planes were shipped to China and nine to Mexico; three planes went to Guatemala and three to Canada and one plane each was exported to Italy, England, Japan, Australia, Argentina and New Guinea. The planes, with spare parts, had a total valuation of \$390,000.

December 1929 : Aero Digest : New Canadian Air Mail Lines

rjpwO new air mail lines were recently inaugurated in Canada, according to an official communique from the Postmaster-General of Canada. The two lines are Winnipeg to Calgary, via Regina, Moose Jaw and Medicine Hat. Regina and Edmonton, via Saskatoon and North Battleford.

No technical information concerning the type of airplane used or the schedules offered is available.

**COLONIAL WESTERN AIRWAYS**, operating between Albany and Toronto, established a new record for their traffic in October, when 12,557 pounds of mail were carried. This is a daily average of 465 pounds.

A report has also been current that the Colonial Air Transport has ordered five icewarning indicators for the use of its nightflying planes on C. A. M. No. 1, the Boston-New York route. These instruments, manufactured by the Moto-Meter Gauge and Equipment Corporation of Long Island City, New York, are installed on the struts of the planes and connected to a dial in the cockpit, which serves to warn the pilot of the dangerous air strata in which ice may form on the wings of the craft and force it down.

December 1929 : TWO International Lines Consolidate

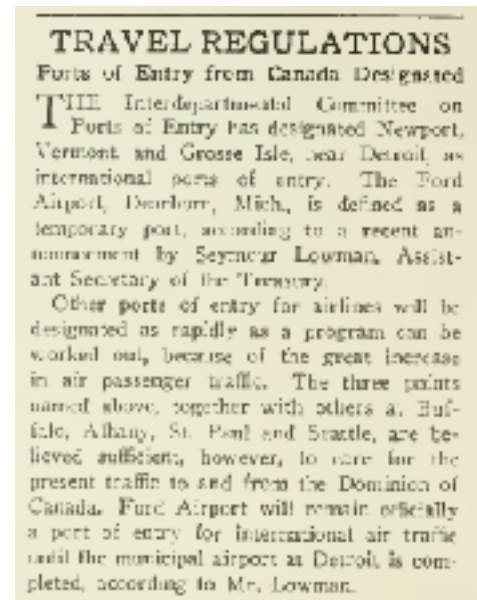

**THE** Arrowhead International Airlines, operating between Duluth, Minn., and Port Arthur, Canada, has been combined with the Canadian-American Airlines, Inc., of Minneapolis-St. Paul, under the name of the latter company. William S. Brock, vicepresident of the Schlee-Brock Aircraft Corporation of Detroit, is president of the combined lines.

A new field has been added to the holdings of the combined company at Minneapolis, 15 minutes from the center of the city and directly north. It lies along the West River road and is of ample size for use as a passenger terminal and a school, which is contemplated. The consolidation of the two international lines and the purchase of the field are steps in the expansion of the Schlee-Brock Corporation, which plans wide development of all its facilities in the near future.

## Notes on "Civil Aviation"

Practically all of the planes built in France are of wood construction and are monoplanes. In asking an engineer in a well-known aircraft factory why so much wood was used, I was informed that wood was preferred because it is cheaper and lighter than metal and because the replacement of broken parts is easier. It is also a fact that in France some of the larger aircraft factories use wood construction exclusively in building their larger planes for military and commercial use. The spruce used for longerons and spars in most instances comes from the northwest of America and Canada. Although much spruce grows in northern and eastern Europe, American spruce is of a better quality and has in many cases proved actually cheaper to ship from America than to handle by freight from European points.

The United States exports a total of 62 aircraft to Canada valued at \$685,712 43 engines valued at \$177, 946 and \$540,215 in aircraft parts and pieces during 1928. During the first 6 months of 1929 the US exports 64 aircraft valued at \$631, 172 , 21 engines valued at \$90, 641 and \$688,930 in parts. (US Dollars) "Canada, which was the leading market in 1928, was led by Mexico and Chile in the valuation of complete airplanes purchased during the first nine months. This may be explained in part by the increased activity in assembling United States aircraft in Canadian factories." Canada was replaced by Germany as the principal market for aircraft engines, the latter country taking 48 engines valued at \$315,576. "It is gratifying that all of the countries purchasing aircraft are stocking spare parts in order to maintain operation of the equipment. Soviet Russia in Europe, it is noted, is the second market of importance, while Canada, with about 90 per cent of its aviation equipment of American origin, is the most important market." (Aero Digest december 1929)

1929 : Non-stop flight made from Cranwell, England to Karachi in a Fairey Long Range monoplane.

1929 : Statistics Accidents 33, Pilots killed: 17, Pilots injured: 12, passengers killed: 17.

October 1929 : UK : In my research I have been told that "Canada has long worked with the USA in matters dealing with Airworthiness and Aircraft Operations"..... Here is a little gem from THE DEPARTMENT OF NATIONAL REVENUE REVIEW Vol. III No. 1 October 1929 Issued under the Authority of The Minister of National Revenue The Hon W. D. Euler, P.C., M.P. "The first aeroplane purchased by "The Yukon Airway's Company" was named "Queen of the Yukon, and arrived at Whitehorse in October 1927. Queen of the Yukon operated between Whitehorse and Dawson and Mayo most of the winter with indifferent success, having been forced down twice during cold weather on account of engine trouble. The aeroplane was wrecked on May 5, 1928, in making a landing at Whitehorse. The engine was salvaged and sent back to the factory to be overhauled. The engine was later installed in a new biplane, with a cruising radius of 500 miles. This aircraft flew from Colorado Springs to Vancouver and from Vancouver to Whitehorse by way of Kamloops, Prince George, Hazelton, Telegraph Creek and Atlin.

Question : "there appears to be no regulation covering the flying for pleasure of foreign owned aeroplanes in Canada, what would be the status of a foreign aeroplane, privately owned and not operated for commercial purposes, properly equipped, having the required certificates as to airworthiness, etc., with licensed pilot, when entering Canada and reporting to Customs and Immigration authorities.

(Dept' of Nat'l Defence) Check and Double Check : Answer : It will be seen from the Dominion Customs regulations that a Customs officer can at all times check all that has happened to such aircraft from the time of registration or manufacture. The Civil Aviation Branch controls all aircraft in Canada as to manufacture and airworthiness, licence and rigging specification, so that a double check is maintained at all times on all aircraft in use in Canada. Repairs made on a Canadian registered plane while in the United States are dutiable both as to parts and labour foreign-made aircraft and flown back to Canada. Duty is charged on such aircraft, less engine, if proof of export and identification is made of engine on return to Canada.

late 1920s : UK : Air Ministry - AID assumes inspection responsibility for rigid ships, R.100 and R.101 which were then being built.

1929: Amy Johnson obtains her Ground Engineer's "C" licence. The first British woman to do so.. On 5 May, 1930 22 year old Amy would fly the fourth 1928 model DH.60G Gipsy Moth built ser. no. 804 G-AAAH solo from London England to Darwin Australia, arriving May 24, 1930. For this feat she was awarded a £10,000 prize from the *Daily Mail* newspaper, issued with Australian civil

## Notes on "Civil Aviation"

pilot's licence No. 1 - issued under Air Navigation Regulations, 1921. She was also made "Commander of the Most Excellent Order of the British Empire" (CBE). G-AAAH was originally red and silver and was purchased with **long range tanks - giving a range of 13 hours flying time** - by RAF Captain Walter Hope as a **single seat long range variant** to obtain photographs of the British Royal family in Kenya for the Daily Mirror. Afterwards the aircraft logged 35,000 miles with Air Taxi's LTD.

Captain Hope sold G-AAAH to Amy for 600 Pounds. She borrowed 300 Pounds from Lord Wakefield and 300 Pounds from her father to make the purchase and G-AAAH was re-registered in her name on April 30th 1930.

The engine was then overhauled by "Jack" Humphries, and given a new a new coat of green and silver dope.

The name "Jason" was a contraction of "Johnson" and was also the trade mark of the Johnson family's fish trawling business in Hull. Jason had the front cockpit faired over, a cross axle u/c and it carried the spare prop.

There is a photo on page 131 of the DH 60 Moth (S McKay).

All DH 60 Moths were fitted with the inverted Vee front cabane struts.

1929 : American Moths :Licence-built in the USA by the MOTH AIRCRAFT CORPORATION at Lowell, Massachusetts in 1929,  
Licence-built in the USA D.H.60M Metal Moth. c/n. 118 registration was NC.917M (later owned as VP-AAM by Paul Mantz)

## Notes on "Civil Aviation"

December 1929 : NEGOTIATIONS for the distribution in Canada of Nicholas-Beazley parts and supplies and the Barling NB-3 monoplane have been completed with the Aeronautical Corporation of Canada, Ltd., recently organized at Winnipeg, according to W. F. Potter, export manager of the Nicholas-Beazley Airplane Co., Inc., of Marshall, Mo., manufacturers of the Barling plane.

A contract calling for 20 aircraft was placed by the Canadian concern, which has recently accepted delivery on the first two ships.

The Aeronautical Corporation of Canada was recently organized for the distribution of aircraft and aircraft supplies in Canada.

J. A. Sully, president of the Winnipeg Flying Club, is president of the company.

C. O. Borker, formerly purchasing agent for the Canadian Western Air Express, is the purchasing agent. According to officials of the new organization, branches will be established in the near future which will be located so as to offer immediate parts and supplies service to Canadian airlines and other operators. - aero digest

Canadian Aeronautic Figures, 1928 totals:

1. Government - subsidised Flying Clubs : 16
  1. Calgary Aero Club : 1,050 members
  2. Saskatoon Aero Club : 521
  3. Winnipeg Aero Club
2. Flying Club members : 2,403
3. Hours flown by club members : 8,124
  1. Calgary Aero Club :
  2. Saskatoon Aero Club :
  3. Winnipeg Aero Club
4. Private air pilots :
5. Commercial air pilots :
6. Air engineers :
7. Number of registered aircraft :
8. Licensed air harbours :
9. Number of airline operators :

Canadian Aeronautic Figures, 1929 totals:

1. Government - subsidised Flying Clubs : 16
  1. Calgary Aero Club : 1,050 members
  2. Saskatoon Aero Club : 521
  3. Winnipeg Aero Club :
  4. Toronto :
  5. Regina :
  - 6.
2. Flying Club members : 4,650 - end of September
  1. ab initio soloists : 325
  2. commercial licenses issued to flying club members : 32
3. Hours flown by club members : +13,000 - end of September
  1. Calgary Aero Club : 1,018 hours
  2. Saskatoon Aero Club :
  3. Winnipeg Aero Club : 1,202 hours, an increase of 200 hours over 1928..
  4. Toronto Aero Club : 912 hours
  5. Regina Aero Club : 835 hours
  - 6.
4. total Private air pilots licensed in Canada: 313 - an increase of 159 over 1928
5. total Commercial air pilots licensed in Canada: 296, an increase of 103
6. total Air Engineers licensed in Canada : 279, an increase of 80.
7. Number of registered aircraft : 397
8. Licensed air harbours / Airports: 61, an increase of 17.
9. Number of airline operators : 61
10. Imports from the United States during the first eight months of 1929:
  1. 58 airplanes valued at \$593,772,

## Notes on "Civil Aviation"

2. 19 engines valued at \$72,733, and
  3. Assorted airplane parts valued at \$629,551.
  4. total value of the eight months' imports from the United States : \$1,296,056.
11. Commercial flying in the Dominion.
1. 233 planes registered in 1928
  2. 64 planes registered in 1927,
  3. 397 planes registered and licensed in 1929

Based on the increase in aircraft, air mail poundage, flying club members, commercial pilots, air harbours, and miles flown, civil aviation authorities at Ottawa predict that Canadian aviation will more than double its activities in every line before the year is out.

The increase in Flying club memberships is due to membership drives, especially in the western cities, where private flying has gone ahead rapidly, and has taken the lead from the eastern centers.

**1929 : Total of 279 registered Air Engineers in Canada to date. Who are they?**

**1929 : 80 Air Engineers registered this year. - Who are they?**

1929 : Air-way operators : decreased from 53 to 45 during the first quarter of 1929, due to amalgamations of companies.

The total number of air operators now stands at 61.

Airplanes used by these operators are for the most part of American manufacture, English planes sold in Canada chiefly for private flying.

1928 : 277,184 pounds of air-mail were carried on contract routes.

The first six months of 1929 show 245,749 pounds carried.

New air-mail routes have been opened this year.

international traffic between Montreal and Albany has increased.

Two new points of international air mail clearance have been established at Buffalo and Detroit, daily services leaving Toronto for these points.

"Boat mail" now carried by air has added considerably to the amount of mail being carried by Canadian ships sailing from Montreal.

The time gained with carrying "Boat Mail" offsets the advantages of faster ships sailing from New York, by which much of the overseas mail from Canada was formerly sent.

Commercial operations of airway operators have increased both in the southern part of Canada and in the northern expanses. Planes are flying far north this year on scheduled routes, especially along the Mackenzie River basin, taking prospectors and fur traders between the various trading posts of the region.

One company reports a taxi service at Aklavik, 150 miles north of the Arctic Circle.

Aerial photography by commercial operators has increased, there being more operators employed in this work this year than ever before. Large sections of the Gaspé Peninsula in Quebec have been recently photographed, as well as other sections of Northern Quebec, Northern Ontario and British Columbia.

One firm completed two thousand square miles of photography during the second quarter of the year in Northern Quebec.

**1929 CANADA - USA RECIPROCAL ARRANGEMENT REGARDING AIRCRAFT : Reciprocal Arrangement Regarding Aircraft Income Tax Revenue**

Canada and United States regulations

Canada and the United States have recently concluded a reciprocal arrangement relating to the privileges which may be accorded to the aircraft of the one country within the territory of the other. In view of the annually increasing volume of

## Notes on "Civil Aviation"

"international air traffic" between these two countries, the arrangement, which is reprinted hereunder as it appeared in the "U.S. Treasury Decisions of 20th February, 1930":

- (1) All State aircraft other than military, naval, customs and police aircraft, shall be treated as civil aircraft and as such shall be subject to the requirements hereafter provided for civil aircraft.
- (2) Subject to the conditions and limitations hereinafter contained and set forth, Canadian civil aircraft shall be permitted to operate in the United States and, in like manner civil aircraft of the United States shall be permitted to operate in the Dominion of Canada.
- (3) Canadian aircraft, before entering the United States, must be registered and passed as airworthy by the Canadian Department of National Defence and must bear the registration markings allotted to it by Canadian Department of National Defence.
- (4) Aircraft of the United States, before entering Canada, must be registered and passed as airworthy by the United States Department of Commerce, and must bear the registration markings allotted to it by United States Department of Commerce, preceded by the letter " N " placed on it in accordance with the Air Commerce Regulations of the (United States) Department of Commerce.
- (5) Canadian aircraft making flights into the United States must carry aircraft, engine and journey logbooks, and the certificates of registration and airworthiness, issued by the Canadian Department of National Defence.
- (6) Certificates of airworthiness for export issued in connection with aircraft built in Canada imported into the United States from Canada as "merchandise" will be accepted by the Department of Commerce of the United States if the aircraft possesses a Certificate of Airworthiness issued by the Department of National Defence of the Dominion of Canada in accordance with its requirements as to airworthiness. Certificates of airworthiness for export issued in connection with aircraft built in the United States imported into Canada from the United States as merchandise will, in like manner, be accepted by the Department of National Defence of Canada, if issued by the Department of Commerce of the United States in accordance with its (Department of Commerce) requirements as to airworthiness. (Source The National Revenue Review - Issued Every Month by the Department of National Revenue J. Sydney Roe, Editor -Vol. III OTTAWA, MAY, 1930 No. 8)

### 28 December 1929 : USA Airworthiness - Trusting the Trustworthy <sup>209</sup>

N THE THIRD SECTION of the Air Commerce Act of 1926, which put the Federal Government into the business of aircraft regulation, there is a paragraph that has had but little notice from the Aeronautics Branch during the first two years of its existence, or from the general aeronautical public at any time. It reads : "As a basis for rating [of airworthiness of aircraft] the Secretary of Commerce may in his discretion accept in full or in part the reports of properly qualified persons employed by the manufacturers or owners of aircraft. The Secretary may accept any such examination and report by qualified persons in lieu of examination by the employees of the Department of Commerce. The qualifications of any person for the purposes of this section shall be demonstrated in a man specified by and satisfactory to the Secretary." These provisions were not slid into the law by its authors for mere love of complicating the language. They were inserted, upon presumably expert advice, with the expectation that they would be very definitely useful. It is gratifying to see an increasing tendency to make use of them. Most conspicuous of recent examples is the announced plan of approving repair shops competent to service and rebuild airplanes of specified types. An earlier and less spectacular example was furnished by the approval and rating of flying schools. The Aeronautics Branch is increasingly adopting the policy of investigating the qualifications of the man who does the work, be it welding of fuselages or teaching of students to fly, instead of confining itself to examination of the finished product.

---

<sup>209</sup> [https://archive.org/details/Aviation\\_Week\\_1929-12-28?q=Air+Engineers%27](https://archive.org/details/Aviation_Week_1929-12-28?q=Air+Engineers%27)

## Notes on "Civil Aviation"

Emphatically a move in the right direction. The next step, already approached in a small and hesitant way, will be to accept as sufficient the verdict of the approved organizations. The graduate of a reputable medical school does not have to pass an exacting governmental examination upon his professional qualifications before being admitted to practice. The fact of graduation from a Class A institution is evidence of competence. The standard maintained by reputable flying schools receiving the approval of the Department should be high enough so that the ability of the students whom they graduate to pass any sort of test should be taken for granted. Still more clearly, the quality of the work done in an approved shop or factory ought to be so far beyond question as to make any inspection, except an occasional surprise check, quite redundant. The reputable organization that expects to stay in business cannot afford to turn out incompetent graduates or unsafe work. We have not yet attained the point of being able to sweep away detailed inspection, but we should be moving in the direction of decreasing its burden. The Department's latest proposal is of the sort that will make relaxation of inspection possible without increased hazard. We await further progress. Aviation - The OLDEST AMERICAN AERONAUTICAL MAGAZINE  
EDWARD P. WARNER, Editor. December 28, 1929

The Steamboat Inspection Service and the Bureau of Navigation have activities corresponding to the work of regulation of aeronautics, and they are estimated to receive together a total of \$1,770,655. or about 45 per cent more than is to be devoted to the regulation of aircraft.

The inspection force and the official staff in Washington are to be substantially increased under the new estimate.

During the fiscal year 1929 there had been on duty an average of 124 employees in Washington and 96 in the field (not including any of those engaged upon airway development work). The appropriation bill for the present year permitted changing those numbers to 129 and 92, leaving the total staff practically unaltered. For 1931, however, increases to 157 and 121, respectively, are proposed. The changes in Washington will be primarily clerical, and the most important increase in staff is in the field-inspection force, the number of aeronautical inspectors, senior and junior, being raised from 52 this year to 81 next. Four aeronautical engineers are to be added to the present force of eight. Of the total budget for aircraft in commerce \$748,500 will be allotted to salaries of employees

EDWARD P. WARNER, Editor. December 28, 1929 pg 1255

aircraft Owner Liability UNDER THE Law By Hazleton Mirkil : That PART of the Uniform State Law for Aeronautics which is likely to affect most intimately the owner of commercial aircraft of whatever type, is the section which provides that the owner of every aircraft is absolutely liable for injuries to persons or property caused by the ascent, descent or flight of the aircraft, whether such owner was negligent or not. This

law has already been adopted by the legislatures of a dozen or more states and, in the natural course of events, is likely to find its way into the statutes of others in the near future.

To the owner, or to one who has leased a plane, for he, too, is made liable with the owner, this section of the Uniform State Law is of decided importance, because it offers him no escape from the payment of damages caused by his plane, even though they result entirely through the fault, no matter how great, of someone else, provided, of course, that that someone is not the person injured or the owner of the property which is harmed. It may be some consolation to the owner to be able to obtain an insurance policy to cover these damages but, after all, that is begging the question and, in any event, the stringency of this provision of the law would be reflected in the premium which he would be obliged to pay.

When a lawyer speaks of "negligence" as a branch of the law he refers to the body of the law covering civil, as opposed to criminal, liability for injuries caused to persons or property through wrongful acts, be they intentional or merely the result of failure to observe ordinary reasonable care.

An almost universal feature of the law of negligence is the requirement that there can be no liability without a corresponding fault, although to this general rule there are exceptions. One of these—perhaps the outstanding one—is that which provides that where the use of a particular instrumentality is attended with such extraordinary risk that it is, in itself, to be classed as inherently dangerous, the only care in its use which may be regarded as sufficient, is such care as shall operate to prevent injury.

In other words the user of such an instrumentality is made, under the law, an insurer against damage however caused. Is this exception to the general rule which has been incorporated in the law governing the ownership and operation of aircraft of those states which have accepted the Uniform State Law and, by this legislation, aircraft in those states have been put in a class of property more dangerous to own than explosives, corrosive acids, lethal gases or any of the numerous things popularly regarded as dangerous but the ownership and use of which, as far as the law of negligence is concerned, must be controlled, at most, only by the employment of all known means in practical use to prevent injuries to others.

The Uniform State Law was adopted in the first instance in 1923, and it is not to be doubted that, as far as the section providing for the responsibility for damage is concerned, those who drafted it were influenced by the Air Navigation Act adopted in England in 1920. The corresponding section of the English law is somewhat similar but with this very important difference, that by its provisions, damages are recoverable from the owner without proof of negligence by the one injured. In the opinion of two of the best known commentators on English law in relation to aircraft, this establishes the

rule of *res ipsa loquitur*—a thing speaks for itself—and, if so, the English law simply shifts the burden of proof from the one injured to the one causing the injury and makes it necessary for the owner to show to the satisfaction of the court or jury, as the case may be, that he was not to blame. This is a far different matter from fastening liability upon him regardless of his fault or even when the true cause of the damage is one of those occurrences or chains of circumstances so far beyond the control of anyone that they are known to the law as "acts of God."

When the authors of the Uniform State Law approached the subject of damages, it is probable that they had before them also, the decision in a very early case affecting balloons decided in New York in 1822. No doubt they were familiar too with a case adjudicated in Belgium in 1909. In the former case an aeronaut descended in a garden in the presence of some two hundred spectators who broke through fences and trampled down the vegetables and flowers. The balloon, in descending, did some small damage itself and the owner admitted his liability for that, but the court held that he must pay for all the damage done by the crowd as well. A German case went so far as to hold a balloonist liable for damages caused by a crowd to flowers trampled by them in rushing the better to see a balloon which was far beyond the garden.

The Belgian case of all cases concerning any feature of the law of aeronautics is, perhaps, the most remarkable in its facts. There a balloon began to descend near a small town by reason of loss of gas. The pilot, foreseeing a forced landing, chose a small open space beyond the town limits. As he was blown just above the roofs of the houses, with his ropes dragging in the streets, the townspeople, thinking that he wished to be drawn down, seized them, and in spite of his efforts to communicate his desire to be released, he was pulled toward the ground. In an effort to facilitate matters, he valved a quantity of gas. In the second story of a house a man was smoking: his cigarette ignited the escaping gas and the resulting explosion killed and injured a number of persons and destroyed property in the vicinity. The unfortunate aeronaut was obliged to pay for it all. The report of the case does not disclose the circumstances under which he escaped what would doubtless be considered the worse fate of his undesired ground crew.

EDWARD P. WARNER, Editor. December 28, 1929 pg 1260

Quebec Safety League  
Forms Aviation Branch  
MONTREAL (que.)—

An Aviation Safety Committee has recently been organized by the Province of Quebec Safety League. The purpose of this committee will be "to promote safety principles of aviation by fostering a sense of responsibility among airplane manufacturers and pilots, and to create by investigating and explaining to the public the causes of accidents that Officers of the group are as follows:

Maurice J. Quedrue, managing director of the Compagnie Aerienne Franco- Canadienne;

## Notes on "Civil Aviation"

Maj. Eric E. G. Adams, late of the Royal Flying Corps and Royal Air Force ;  
Capt. Arnold H. Sandwell, late of the Royal Naval Air Service and Royal Air Force, and Aviation Editor of the Montreal Daily Star;  
Capt. George K. Trim, late of the Royal Flying Corps, Royal Air Force and Royal Canadian Air Force;  
Dr. George Milette, medical examiner of pilots and himself the holder of a private pilot's license;  
Adelard Raymond, late Lieut. R.F.C., and R.A.F. ; and  
Arthur Gaboury, secretary general of the Province of Quebec Safety League.  
Miss Claudine Brais, business manager of the Compagnie Aerienne Franco- Canadienne and herself an aviatrix, is the secretary.  
Hon. Nonore Mercier, Minister of Lands and Forests of the Province of Quebec, is the honorary president, with  
Mr. A. J. Wilson, Director of Civil Aviation in the Dominion of Canada as honorary vice-president, and  
Col. Wilfred Bovey, Director of Extra-Mural Relations at McGill University, Montreal, as honorary vice-president.

New Bellanca  
Dominion Corporation  
NEW CASTLE (del.) — Information  
received from Montreal by the Bellanca  
Aircraft Corp., here, states that a company  
known as the Bellanca Aircraft of  
Canada, Ltd., has been formed This  
new organization succeeds and takes  
over in its entirety Bellanca Aircraft of  
Canada, Reg., which was organized in  
August, 1929, for the purpose of acting  
as representative in the Canadian territory  
for Bellanca Aircraft Corp., New  
Castle, Del. R. B. C. Noorduyn, assistant  
to the president, represented Bellanca  
Aircraft Corp., in the negotiations  
in Canada.  
The Canadian organization has been  
formed by Canadian men and is financed  
by Canadian capital. It is not a subsidiary  
of the Bellanca Aircraft Corp.,  
but has contracted with the American  
company for the exclusive right to distribute  
and service Bellancas in Canada.  
Bellanca Aircraft of Canada, Ltd., is  
capitalized at 6,000 shares of no par  
value, of which 3,000 are issued. At  
a recent meeting of the stockholders the  
following officers were elected: D. M.  
Martin, president and general manager  
H. S. Day, vice-president and treasurer  
J. O. Rae, sales manager; and John  
Ball, secretary. The board of directors  
includes D. M. Martin, H. S. Day,  
J. O. Rae, T. H. P. Molson, and F. R.  
Whittal. .number of Bellanca planes of both  
land and pontoon equipped types have  
been sold and placed in service in  
Canada. One purchase was that of  
three convertible land and seaplanes  
by Commercial Airways, Ltd., of Edmonton,  
Alberta, to be operated over  
an air mail route of about 1,800 mi.  
down the Mackenzie River from Fort  
McMurray to Aklavik on the Arctic

Ocean.

"As soon as conditions warrant, we plan to establish a Canadian factory for Bellanca planes under our agreement with the Bellanca Aircraft Corporation so that we can produce airplanes by and for Canadians free from annoyances and expense involved in importation, said Pres. Martin.

OTTAWA (ont.)—Work has started on the huge tank being built here by the National Research Council which is to be used for testing new designs in seaplane floats. The tank is to be 400 ft. long, 6 ft. deep, and 8 ft. wide and it is planned to draw the models through the basin at a 30 ft. per second speed. This device, the first of its kind in this country, will become part of a laboratory for making aerodynamic experiments, to be undertaken by the aeronautical research branch of the division of physics and engineering. Several men under the direction of Prof. J. D. Parkin, formerly of Toronto University, will comprise the staff. Other projects will include a wind tunnel, 9 ft. in diameter, equipped with a 600 hp. engine and capable of developing an air stream with a velocity of 150 m.p.h.

DURING the next generation no material factor will modify our civilization more effectively than aviation," declared J. A. Wilson, Controller of Civil Aviation for Canada, "Civil aviation in Canada dates back to the close of the Great War. Many of our pilots returned eager to take up peace-time flying, but they found no market for their ability. It was not until the early summer of 1919 that plans for the use of aircraft in forestry reconnaissance were ordered near Quebec.

"The people of Canada bent on doubling at least the productive areas of the Dominion, set themselves the task of rolling back their Northern frontier. Naturally, better means of transportation was the first need. Using the then sole means of transport, the canoe, the pack train and in winter the dog team, the covering of hundreds of thousands of square miles was a physical impossibility. A few men who had traversed the region knew something about it, but our maps had many areas, which for lack of definite information were either marked unexplored or left blank.

"The successive Governments, both Provincial and Dominion, were quick to see the possibilities of aircraft as an aid in solving the problem of Northern exploration and development. They lent their aid by the organization of such activities as would facilitate travel, observation and transport. Of course, the progress was slow for the first two or three years. War craft were not suitable for commercial endeavors. The first interest in flying was slight, pleasure planes and stunt flyers were making no money. Only those interested in the administration of the Northern areas and their exploration and development strongly supported the flying services in their endeavor to adapt this new form of transportation to the very different conditions existing in the North. Although an Air Board Act had been passed and the first Air Board formed, in 1923 there were important changes in the organization of the flying services. The Air Board became part of the newly formed Department of National Defence. The Civil Operations Branch was merged with the Royal Canadian Air Force and continued as a part of that Branch until July, 1927, when it was again separated from distinctly military work. The Air Board was quick to see the value of the airplane in dealing with forest fires. Perhaps only those who have lived in Northern and Western Canada appreciate fully the need for adequate fire protection in the forest and on the prairie.

"A few months after the Armistice was signed, plans were perfected for trials of flying boats over the Northern forest. The Dominion Government, the Forest Service of the Province of Quebec, and one of the large pulp and paper companies shared the expense. These experimental flights made in 1919 were so successful that they led to the establishment in 1920 and 1921 of air stations at Jericho Beach, Vancouver, at Morely and later at High River and Roberval. the Provincial Governments

## Notes on "Civil Aviation"

of Quebec, Ontario, Manitoba and British Columbia lending generous aid and co-operating in every way they could to insure the success of this new forest reconnaissance. By the end of 1923 the provinces took over the organization of their own flying operations. The Dominion Government has since concentrated its efforts in the building up of an efficient air organization to meet its own requirements. Permanent bases for the repairing and maintenance of aircraft, the laying of gasoline caches through all the territory served, the establishment of radio stations to improve communication, and the design and construction of new types of aircraft especially that of the Canadian division, have all come under its supervision. From a few improvised bases from which were operated the scanty fleet of H. S. 2L and F3's, the service has now grown so that it covers all Northern Canada and serves not only for its forest protection, but a great variety of other useful work as well.

"The Civil Government Operations Branch under the Department of National Defence now maintains:

No. of Officers 74

" " Airmen 249

" " Aircraft 86

" " Central Depot 1

" " Main Stations 3

" Sub-Bases 11

" " Caches 120

" " Wireless Stations 15

" " Photographic Detachments 8

Flying is an every-day business in Canada.

Many of the pilots have records, which if made in the full glare of publicity would have made them famous.

In the North they are part of the day's work and excite no public attention. These men are fitting successors to Frobisher, Hudson and Davis. In the many thousands of hours of flying done during the past six years in the far North, not one single accident involving death or serious injury has occurred. Considering the unusual conditions under which this work has been done, this record stands as a remarkable testimony to the skill of the flying personnel.

It hits flying service, though it cannot in the circumstances return an actual cash dividend to the Government for services rendered, is self-sustaining in every sense of the word since it is maintained because of the services that use it and find it efficient and cannot well do without it. "The Provincial Air Service of Ontario, which was formed in 1923 as a branch of the Department of Lands and Forests, now has functions similar to those of the Dominion Civil Government Air Operations Service, and do a great variety of useful work all through the Northern districts of Ontario. They maintain 4 service stations and 10 sub-bases. 30 commercial pilots. 27 air engineers and 25 aircraft.

Canadian aviation has grown without subsidy because it has filled an economic need. It is to the credit of the air pioneers that they have been able to operate wholly on their own revenue, furthermore, under conditions

## Notes on "Civil Aviation"

which are often strenuous. Some aircraft go out from their bases, and like the birds, stay out without shelter during the whole season. Between overhauls they never see a hangar. An improvised base on the bank of a lake or river is all the home they have. So far it is only at the main bases that machine shops and slipways have been provided. The inventiveness of the pilots has many times resulted in characteristic Canadian aeronautical equipment which is quite unique but nevertheless effective.

**CANADIAN AVIATION - 1930**

1930 : The board of Directors of Imperial Airways elevate Woods Humphrey to the position of Managing Director.

28 Feb 1930 : FLIGHT : EDITORIAL COMMENT : There are three systems under which air services are helped by Governments in the British Empire:

1. by the grant of a subsidy [adopted by His Majesty's Governments in Great Britain, in Australia, and in South Africa]
2. by the grant of a mail contract by the Post Office [favoured in Canada]
3. the operation of an airway by the Government itself. [occurs only in India, though in 1925 the South African Government ran an experimental air service between Capetown and Durban for three months]

28 February 1930 : FLIGHT : THE H ALTON AERO CLUB have several lectures arranged

1 during March, the first of which will be Wind Tunnel Application to Slotted Wings by Mr. C. D. Russell of Handley Page, Ltd., The Application of Diesel Engines to Aircraft by A. Chorlton, and Metal Construction of Aircraft by A. A. Jacobs. A separate Gliding section has been formed and will be affiliated to the British Gliding Association (B.G.A.). An excursion was arranged to the Gliding lecture given by Dr. Georgii before the R.Ae.S. on February 19. The Sparrow is being reconditioned with the help of A.A. volunteers, by Mr. Gamon. Mr. F. J. Sanger has been elected Assistant ; Hon. Secretary. A silver and a gold medal ; will be awarded annually for the best lectures ! by A.A.'s Announcement of the latest Supermarine flying boat, the Air Yacht with three Armstrong-Siddeley geared "Jaguar" engines mounted direct on the wing.

De Havilland Aircraft of Canada, Ltd. ACCORDING to the first annual statement, covering 13 months, the De Havilland Aircraft of Canada, Ltd., earned trading profits, after providing for depreciation but before provision for Federal income tax in the period ended September 30, 1929, of \$85,238. From this amount \$7,500 was taken for discount on sale of shares, \$297 for organisation expenses, \$6,873 was reserved for Dominion income tax and \$10,170 for dividends, and the balance carried forward was \$60,067. Mr. R. A. Loader, general manager, in addressing the shareholders, expressed satisfaction at the results achieved.

During the year 130 Moth aircraft were delivered, mostly of the new metal fuselage type, with the company's own

Gipsy " engine as a power plant. A considerable proportion were seaplanes, and 95 per cent, were fitted with Handley Page slot gear. Among the chief orders executed were 34 land 'planes for the Dominion Government and six seaplanes for the re-equipment of the Royal Canadian Air Force ; quantity of seaplanes for the civil government, equipped with radio communication, as well as 'planes for the Ontario Provincial Air Service, numerous clubs, for private use, and flying schools, operating concerns and prospecting companies. Use of 'planes for northern exploration was a notable development.

1930-31 - air regulations Canada :

1. All aircraft in Canada are governed by the air regulations.
2. pilots must keep a log book covering commercial aircraft
3. pilots must keep a journey log book recording the trip just finished,
4. the log book covering commercial aircraft must show:
  1. category to which aircraft belongs,
  2. nationality and
  3. registration marks,
  4. Owners' full name, nationality and residence
  5. name of aircraft builder
  6. carrying capacity,
  7. type and series numbers of engine, and maker's name
  8. type and series numbers of propeller, pitch, diameter and maker's name,
  9. type of wireless apparatus fitted,
  10. table showing rigging data,
  11. detailed engineering record of :

Convened at Headquarters, Montreal, Montreal, January 23rd, 1930 and adjourned to the Chateau Laurier, Ottawa, Ontario, February 12th, 1930.

### Report of the Committee on Engineering Education

The President remarked that Eraser S. Keith, m.e.i.c, (the chairman of the committee on Engineering Education) who was unfortunately unable to be present, had hoped that there would be discussion on the recommendations of that committee, and he asked the Secretary to read the report containing them.

In regard to these recommendations, E. M. Proctor, m.e.i.c, drew attention to the committee's fourth recommendation, that immediate steps be taken to confer with university heads with a view to adopting a six-year course for engineers.

This course Mr. Proctor thought inadvisable, if it contemplated a "six-year" college course, although he believed that two years of practical experience at the end of a four-year course would be a satisfactory arrangement. He then moved that suggestion number four be referred back to the committee, and his motion, being seconded by J. B. Carswell, m.e.i.c, was carried unanimously. Discussion followed, in which A. F. Baird, m.e.i.c, commented on the fifth

## Notes on "Civil Aviation"

recommendation, namely that the universities be urged to give consideration to the inclusion of public speaking and literature in the curricula of their engineering courses. He felt that if the whole of the college training of an engineer had to be covered in four years, it would be impossible to give additional time to such a subject, and was doubtful whether it would be desirable to adopt this recommendation, though he would not press this point to a motion. Messrs. J. W. Whyte, M.E.I.C, George R. MacLeod, m.e.i.c, O. O. Lefebvre, m.e.i.c and J. A. McCrory, m.e.i.c, took part in further discussion on this report.

### Report of the Committee on Publicity

The report of the Committee on Publicity, of which Mr. Keith was also chairman, was next given consideration. In Mr. Keith's absence, it was presented by W. C. Adams, m.e.i.c, who pointed out that the benefits arising from well-managed publicity had been illustrated by the very successful activities of the Ottawa Branch in connection with the present meeting. Mr. Adams drew attention to the fact that the various recommendations of the Committee on Publicity were difficult if not impossible to carry out in the present state of the finances of The Institute, and the discussion was continued by F. P. Shearwood, m.e.i.c, and others. The President suggested that in view of the amount of business before the meeting it would perhaps be desirable to take together those reports upon which comparatively little comment would be expected. Among these he would name the reports of the Library and House Committee, the Board of Examiners and Education and the Service Bureau Committee. The reports were, however, open for discussion. There being no further comment, W. G. Mitchell, M.E.I.C, moved that the following reports be received and adopted: the Reports of Council, Finance Committee, Library and House Committee, Legislation Committee, Board of Examiners and Education, Service Bureau Committee, Canadian National Committee of the International Electrotechnical Commission, Committee on International Co-operation, the report of The Institute's members on the Main Committee of the Canadian Engineering Standards Association, and those of the Honour Roll and War Trophies Committee and the Committee on Publicity. This motion was seconded by George R MacLeod, m.e.i.c, and being put was carried unanimously.

### Report of the Committee on the Relations of The Institute with the Provincial Associations of Professional Engineers

On the suggestion of S. G. Porter, m.e.i.c, the chairman of the committee, the Secretary outlined the leading features of its report, and stated its final conclusions, after which Mr. Porter, in a striking address, gave his views on the present situation. He remarked that if the scheme proposed by his committee were carried to its conclusion, with the support of the associations, the election of the Council of The Engineering Institute of Canada would be in the hands of men who would all be members of one or other of the provincial organizations. The Institute thus becoming a co-ordinating body.

Mr. Porter then commented on the seven recommendations of his committee, and said that in his opinion a system similar to that outlined by his committee afforded the only way in which the engineering profession in Canada could reach real consolidation and solidarity. The profession would then form one Dominion-wide body of engineers and would attain a position which would give it a strength and influence which it had never yet possessed in Canada. If there were a Dominion-wide organization, embracing all the engineers in Canada, into which only those would be admitted who had received proper education and training, engineering could properly take its place along with the other professions.

The public would then be able to rest assured that when an engineer belonged to this Dominion-wide body and was also registered in his province as being able to practise engineering, he must have received proper training and experience; this would give the engineer a definite standing, with a resulting increase in the confidence felt by the public in the engineering profession. Such a development would take time, but by deciding on a common high standard and living up to it, the whole body of engineers would be in a position far superior to that held to-day. Further, such action would do much to discourage the practice of going outside of Canada to get engineering work done, and the engineering profession would be more favourably known to the Canadian people and to the industries and governments of Canada. Mr. Porter believed that upon an analysis of the problem it would be found to be one which could be solved if we had the will to solve it, and he hoped that his committee's report would convince the meeting that this was the case.

The President pointed out that the report had already been received and adopted by the 1929 Plenary Meeting of Council, after prolonged discussion, but that Council properly felt reluctant to embark on a policy of this kind until it had been endorsed by the Annual Meeting. He would ask Mr. Porter to move the reception and adoption of this report so that the opinion of the meeting might be taken. It was accordingly moved by S. G. Porter, m.e.i.c, seconded by George R. MacLeod, m.e.i.c, that the report of the Committee on the Relations of The Institute with

## Notes on "Civil Aviation"

Provincial Associations of Professional Engineers be received and adopted.

The discussion was opened by P. B. Motley, m.e.i.c., who stated that in his opinion the Provincial Associations were now in somewhat the same position as the Canadian provinces at the time of Confederation, and the policy advocated by Mr. Porter's committee, if put in effect, would have the same beneficial results as Confederation had for the Dominion. He thought that the benefits of such a policy had been strikingly shown by the progress made by the Canadian National Railways since the various roads constituting that organization had been brought together and consolidated. He hoped that the committee's report would be endorsed and that the committee would be placed in a position to continue and develop its work.

He was followed by J. I. Busfield, m.e.i.c., who was unable to agree with Mr. Porter or Mr. Motley, and considered that the policy recommended in the committee's report was undesirable from the point of view of The Institute. He felt that the distinction between the real purposes of the Professional Associations and those of The Engineering Institute of Canada had not been sufficiently emphasized. While he was himself quite in accord with the committee's sixth recommendation, he could not approve of the seventh, feeling that if membership or registration in a Professional Association were made a requirement for admission to corporate membership in The Institute, this would exclude from The Institute hundreds of men who ought to be members, having regard to the fact that one of the principal objects of The Institute is educational. If recommendation number seven were acted upon. The Institute would practically be handed over to the Professional Associations, and he would deprecate putting The Engineering Institute of Canada under the control of any group of associations with such diversified constitutions and powers. If the action contemplated in the seventh suggestion were to be postponed until the associations had themselves attained uniformity, this would involve a long period of waiting, and to his mind the possibility of standardizing the various provincial acts was very remote. The provincial legislatures, in passing these acts, had done so for the purpose of protecting the public, not for the protection of the engineers, and he felt that the difficulty of obtaining uniformity in provincial legislation was almost insuperable. He further believed that even if the provincial associations were co-ordinated so as to form a coherent body, the objects and purposes of that body would certainly not be identical with those of The Engineering Institute of Canada, and he did not see that The Institute could function as such an organization. Mr. Busfield pointed out that two policies appeared open to The Institute at the present time, on the one hand that of confederation with the Professional Associations, a course which was admittedly beset with great difficulties, and on the other hand there was the course of independent growth which he considered far safer and more promising, as it would permit The Institute to develop along its own lines independently of the provincial associations. After expressing appreciation of the great amount of work accomplished by Mr. Porter and his committee, P. L. Pratley, m.e.i.c. observed that the committee's report had not convinced him that the objects of The Institute were "in many respects identical" with those of the Professional Associations. In his opinion educational effort and legislative functions should be divorced. He felt that the committee, before making a proposal for co-ordination, integration or confederation, should have studied the various duties of the associations on one hand and The Institute on the other to see whether such action would be possible. Mr. Pratley pointed out that at the time when the professional associations were formed there was a natural desire to protect the engineer, and this was, in fact, the motive which prompted the action then taken.

The provincial legislatures, however, would not accept that point of view, being concerned with the protection of the public, and this had led to many changes in the provincial acts. He believed that the work of the committee should be the study of co-ordination of the associations rather than endeavouring to combine The Institute with these various bodies. If the differences in the functions of the associations and of The Institute were clearly realized, it would be seen that there must necessarily be a difference in the qualifications for membership. Mr. Pratley was quite opposed to the fifth recommendation of the committee, contemplating the adoption of uniform requirements and qualifications for admission as between the associations and The Institute. He thought it quite right that there should be a standard requirement for all the associations for registration purposes, but did not think that The Institute should adopt the same requirements or necessarily have the same membership as the associations. Many hundreds of men interested in the engineering profession and employed in the technical offices of large corporations should have a place in The Institute, which could offer them educational advantages and the information and experience of senior members. These men in the offices of large companies had no intention of practising engineering as a profession, and did not need licenses to practise, since they carried on their engineering work under the guidance of those who were in responsible positions. In his opinion there was no need for many of these junior members to belong to any professional association, but they certainly should belong to The Institute. Accordingly, he thought it would be wrong on the part of The Institute to exclude them from its membership simply because of the special requirements for membership which might properly be insisted upon by the associations. Mr. Pratley felt that the committee's report had failed to distinguish clearly between the functions of the various organizations and had come to the wrong conclusion.

as to the necessity for uniform requirements for admission.

H. N. Mason, a. m.e.i.c, believed that although some of the professional associations were operating under acts which gave them but little power, it was wrong to continue to divorce The Institute from the professional associations. The Institute must co-operate with such associations so that engineers throughout the country could co-ordinate their efforts. D. W. McLachlan, m.e.i.c, continued the discussion, and was of the opinion that The Institute should accept the membership of those belonging to professional associations, but he saw no reason why there should not be a large number of additional members belonging to The Institute and not belonging to any association.

E. M. Proctor, m.e.i.c, drew attention to the suggestion in recommendation number seven that membership or registration in a professional association be a requirement for admission to The Institute, and enquired whether if this were put into effect difficulties would not arise in regard to engineers from the United States, Great Britain and elsewhere who desired to join The Institute. He hoped that the professional associations would aid in defraying the cost of the further investigations contemplated by Mr. Porter's committee.

C. G. Moon, A. M.E.I.C., did not think that amalgamation with the provincial associations would be a good thing for The Engineering Institute, and held that The Institute should go on its way as an educative body, taking in every man who was sincere in his desire to become an engineer and follow the engineering profession. This might involve a slight lowering of The Institute's present requirements for admission, but he believed that it would be in the true interests of the engineers of the country and of The Engineering Institute of Canada.

G. E. Bell, M.E.I.C, referred to the very large proportion of the membership of The Institute which consisted of employees of contracting manufacturing corporations, and pointed out that while these men were not interested in the question of registration for private practice, they were interested in belonging to a technical organization whose function was educational, and consisted in the exchange of professional experience and information. He thought that The Institute had a great deal to gain from the membership of such men, and feared that if the scheme contemplated by Mr. Porter's committee went into effect, a large number of them would resign from The Institute and possibly join other organizations.

A. F. Baird, m.e.i.c, fully endorsed the report of Mr. Porter's committee and believed that it would have the support and approval of the professional associations in New Brunswick and Nova Scotia. Professor Baird could assure those who doubted whether the associations really protected the public that in New Brunswick, where they had a rather strict act, several cases had occurred where the association had proved its value in this respect, and he would point out that effective acts existed in other provinces also. The discussion was continued by A. F. Macallum, m.e.i.c, J. B. Carswell, m.e.i.c, F. H. Peters, M.E.I.C, B. S. McKenzie, m.e.i.c, and A. J. Grant, m.e.i.c. J. L. Busfield, m.e.i.c, believed that sufficient differences of opinion had been expressed during the discussion to justify further consideration of the report, and he therefore moved as an amendment to the main motion that this meeting approve of the principle of The Engineering Institute of Canada helping the provincial associations of professional engineers to standardize their requirements, and co-ordinate their activities, but that we do not commit ourselves to definite action of combining with them until such time as it has been found possible to co-ordinate the professional associations.

J. P. Hodgson, M.E.I.C., read a telegram' which he had received from the registrar of the Association of Professional Engineers of the Province of British Columbia urging The Institute to encourage all its members to comply both in spirit and letter with the engineering acts of the various provinces since this course would aid the movement for confederation. Colonel H. J. Lamb, m.e.i.c., remarked that when the movement for closer relations between The Engineering Institute of Canada and the Provincial Associations was initiated, he was president of the Ontario Association, and at that time was impressed with the great difficulties attending the carrying out of such a scheme. Since that time, having served as a member of Mr. Porter's committee, he had entirely changed his mind and now believed that it would be in the interests of the engineering profession throughout the Dominion if the movement were successful. He was sure that The Institute would prosper and be better able to help engineers throughout the country if such relationship could be brought about. Colonel Lamb was strongly in favour of standardizing the requirements for admission to the professional associations and particularly those as regards admission by examination. He hoped that the meeting would give its support to the movement by approving the report of Mr. Porter's committee. After further discussion, the President pointed out that Mr. Busfield's amendment had not been seconded, and Mr. Pratley, in seconding it, remarked that while the majority seemed quite ready to help in furthering some form of co-operation between the various provincial associations, he believed there were quite a number who would hesitate in committing The Institute to the adoption of the fifth recommendation in the report. He felt that Mr. Porter's committee was to be commended, it had done a great deal of admirable work and should continue that work in the direction of persuading if possible the professional associations to get together and standardize their own attitude. He thought The Institute should await some such action on the part of the associations before committing itself to the approval of uniform regulations for admission.

Harold S. Johnson, m.e.i.c., observed that there were many members of the Association in Nova Scotia who were not members of The Engineering Institute of Canada and were not likely to become members. The present meeting was of course a general meeting of The Engineering Institute of Canada but could not be considered as being fully representative, as it could not bring expressions of opinion from each of The Institute's Branches. He did not think that a vote of this meeting could, therefore, be regarded as expressing the views of the whole membership.

The President pointed out that Mr. Porter's committee comprised representatives from all parts of the country, and that its report had been considered and approved by a Plenary Meeting of Council, at which Councillors from almost all the Branches were present. He believed that the Council had been satisfied that the Branches were generally in favour of the proposals. Council had, however, been reluctant, notwithstanding this general approval, to embark

## Notes on "Civil Aviation"

upon the proposal until it had been formally endorsed by the Annual General Meeting.

Mr. Busfield enquired whether it was the intention to put immediately into effect the suggestion in the seventh recommendation that amendments to The Institute's Bylaws should be secured so that membership or registration in a professional association be one of the requirements for admission to corporate membership in The Engineering Institute of Canada. The President replied that it was not the intention to take immediate action in this respect; Mr. Busfield then said that in such a case he would be willing, with the permission of his seconder, to withdraw his amendment. The President remarked that as recommendation number seven would not come into effect until numbers five and six had become operative, the necessity for Mr. Busfield's amendment was not so apparent. On Mr. Pratley's agreement, the amendment was then withdrawn. After further discussion, the main motion was put and carried, one member dissenting.

13 February 1930 : First Technical Session

On Thursday, February thirteenth, the technical sessions began, the papers presented being as follows: In the Assembly Hall, under the chairmanship of O. O. Lefebvre, m.e.i.c.,

### Rigid Airships

E. W. Stedman, M.E.I.C, Group Captain, R.C.A.F., Chief Aeronautical Engineer, Department of National Defence, Ottawa. Paper presented at the Annual General Meeting of The Engineering Institute of Canada at Ottawa, Ont.,

Discussion of Paper on Rigid Airships : Major-Gen. a. G. L. McNaughton, m.e.i.c. (Department of National Defence, Ottawa, Ont.) General McNaughton remarked that the information which the author had given to The Institute was particularly apt at the present time when the great experience in the lighter-than-air field which was initiated in Great Britain in 1924 had reached the point where the new airships were completed and were undergoing their air trials. To engineers this project would be of particular interest because it was an excellent example of the application of scientific methods to the solution of a major problem.

In hearing Group-Captain Stedman's paper he had been struck with the fact that the early development of the airship was rather haphazard and that experience had been bought at the cost of some rather tragic failures.

On reviewing the history of these failures it seemed evident that empirical methods of design had persisted long after the other branches of aeronautical engineering had been placed on a thoroughly sound scientific basis.

To the Air Ministry, acting on the advice of the Committee which had investigated the loss of the R.38, belonged the credit for changing all this. Fundamental research on air resistance, the distribution of the air loads and on the stresses induced in the various parts of the frame were undertaken, and, as a result, a design had been evolved in which the air resistance was less than half that of a ship of the same displacement built to the previous conventional form, while all redundant members were eliminated from the structure. This work was necessarily highly confidential and the first intimation received in Canada was from the advance copies of the documents prepared for the Imperial Conference of 1926.

All the Canadian officers who had the privilege of reading those reports were much impressed, perhaps not so much with the projected designs, which they were not in a position to appreciate, as with the thoroughly scientific manner in which the whole proposition had been developed, and also the fact that at last a type of design had been produced which was calculable in relation to the static stress in all members; also this design permitted the greater and far more important dynamic loads developed during manoeuvring to be predetermined with considerable accuracy.

## Notes on "Civil Aviation"

It was this that inspired confidence, and, with the able exposition at the Conference by the Secretary of State for Air, *led to the notable offer of support by the Prime Minister of Canada*. He said "*the Canadian Government will only too readily co-operate with the British Government ... by immediately taking steps to see that mooring masts to secure the landing places for airships in Canada are erected; also that the work of meteorological organization is commenced forthwith,*" and from that declaration, coming at a time when others hesitated, resulted the continuance of this great experiment and the satisfactory position in the matter which was evident to-day.

In fact, it had been stated by Air Ministry and other officials in London that without that promise of support from Canada, implemented as it had been by the construction of an airship mast at St. Hubert, near Montreal, and by the organization of our Meteorological Service, a matter of the highest importance to air navigation, the work would reluctantly have had to be placed in abeyance. Initial steps for the organization of the required meteorological service in Canada were taken within a few hours following the announcement of our Prime Minister in London, and the St. Hubert mooring mast was erected just as quickly as designs could be got out and the material fabricated.

Thus Canada had a particular interest and pride in the achievements of these new ships, and all were deeply indebted to Group-Captain Stedman for placing the facts before Canadian engineers so that the final stages of the experiment could be followed with intense interest in the results used to guide our future development.

J. A. Wilson, a.m.e.i.c.\* ^ ^ ^

Mr. Wilson had listened with a great deal of interest to Group-Captain Stedman's paper and the discussion contributed by General McNaughton. Following the decision of Canada to participate in the *experiment of developing airships for inter-Empire communications*. Major Scott, who had commanded the R.34 on her trans-Atlantic flights in 1919, had visited Canada and made a thorough examination of many sites for airship bases from the Atlantic coast to Western Ontario. The location finally chosen was at St. Hubert, near Montreal. Immediate steps were taken to purchase the site and prepare a base for the reception of rigid airships, by the installation of a mooring mast, a hydrogen plant and refuelling facilities.

*The work had been proceeding steadily for the past two years, and the engineering work has been in charge of members of The Engineering Institute of Canada in Ottawa and in Montreal.* He desired to place on record his appreciation of the assistance rendered by the members of the staff of the chief engineer. Department of Public Works, on this novel project. They had had most valuable assistance from the Air Ministry, who had placed freely at their disposal the experience gained, not only in Great Britain, but in other parts of the Empire. The United States Navy Department had also been most generous in contributing valuable information.

With the benefit of all this experience they had tried to incorporate the best features from each country, so that the installation at St. Hubert was probably the most advanced of its kind in the world. The whole work was practically complete and they were now looking forward to the first visit to Canada of the R.100 in May of this year.

The trials of the R.100 and R.101 had confounded their critics. Previous to their launching, there had been a great deal of adverse criticism, but the results of the two ships' experimental flights had shown that they had come fully up to their specifications and the expectations of their designers. There was every reason for confidence that the whole venture would be an unqualified success.

It should be kept in mind that these two ships were not designed for passenger carrying on the trans-Atlantic route. The intention of the British Government in building them was to construct two experimental ships to fly to Egypt and India, in which would be incorporated all the fruits of the patient and careful research carried out before they were built. The results of their trials had shown that they are a great advance over any rigid airships ever constructed. Their success indicated the wonderful future which lies in the development of rigid airship construction.

Another gratifying feature was that we had our own men now under training during the trials of the two ships. The reports received from them had been more than satisfactory. One of our officers accompanied R.100 on a 53 hour trip recently made, under most adverse weather conditions, with fog and storm. The ship returned safely to her base, after a trying journey, in good condition, and her crew showed no sign of distress after their experience. Mr. Wilson was of opinion that a great stride had already been made towards the solution of trans-Atlantic flying by airship.

Major-Gen. J. H. MacBrien (President, Aviation League of Canada.)

General MacBrien enquired whether any advance had been made in dealing with ice formation on the covers of airships, and had provision been made for travelling in tropical climates. Further was there any hope of these ships being equipped with

## Notes on "Civil Aviation"

Diesel engines ? The author had dealt with the design and construction of rigid airships in a most informative and interesting way.

J. H. Parkin, m.e.i.c. (Asst. Director in Division of Pure and Applied Physics, in charge of Aeronautical Research, Ottawa, Ont.) Mr. Parkin observed that up to the present time Canadians had had very little experience with regard to airships, and in view of the coming visit of R.100 to Canada this paper had been timely and would serve as a preparation for more intimate contact with aircraft of this type. One part of the paper which had impressed him was that relating to the design of the transverse frames used in the construction of these two modern ships, the R.100

### 14 February 1930 : The St. Hubert Airship Mooring Tower

R. de B. Corrirenu, M.E.I.C.,

Assistant Chief Engineer, Department of Public Works, Ottawa.

Paper presented at the Annual General Meeting of The Engineering Institute of Canada, at Ottawa, Ont., February 14th, 1930.

Canada's share in airship development, determined at the Imperial Conference, was to provide, as one of the overseas terminals, a mooring tower. The Montreal airport, at St. Hubert, on this side of the Atlantic, selected in 1927 by representatives of the Air Ministry and the Department of National Defence, was placed under the jurisdiction of the Department of Public Works for construction purposes.

The airport, 615 acres in area, is a triangular plot, 90 feet above sea level, bounded by the Canadian National Railway, the Chambly highway and La Savane road, situated on the south shore of the St. Lawrence, seven miles from Montreal, in open country, free from smoke and other flying hazards. The Canadian National Railway and the Victoria bridge, with the new South Shore bridge and improved highways, provide connecting routes with the city.

Provision has been made for railway siding, water, electric power, telephone, hydrogen gas and gasoline fuel supply service to airships and aeroplanes. The Department of National Defence has established radio, wireless and meteorological services.

Airships are built and housed in huge hangars. Several hundred men have to be kept on duty to walk the airship in and out of the hangar in favourable weather. This can be arranged at military bases only. The British were the first to develop the mooring tower, and the mast

—

so called—at Cardington is the type of structure which the Air Ministry desired to have duplicated in this country. Following the visit of Major G. H. Scott of the Airship Development Directorate, and Mr. A. R. Gibbs of the Directorate of Works and Buildings, we were supplied with complete plans of the Cardington mast, and the Air Ministry in co-operation with Messrs. Babcock and Wilcox, of London, further improved the design of the mooring head, which was later fabricated in England and shipped here for erection.

In adapting the plans for the steel structure, slightly

## Notes on "Civil Aviation"

heavier sections had to be used and certain changes were made to meet conditions in this country. [...] In carrying out the construction of the mooring tower and providing the services connected therewith, the Department of Public Works had the active co-operation of the Department of National Defence through Mr. J. A. Wilson, A.M.E.I.C., controller of civil aviation, and Group Captain E. W. Stedman, m.e.i.c, chief aeronautical engineer. Through the Department of National Defence, also, the necessary funds were provided, and consultation was had with the Air Ministry. Messrs. Babcock and Wilcox were represented by Mr. F. E. Williams, of their staff, on the erection of the mooring head by Canadian Vickers Limited.

1930 : Coastal Airways, BC operates Bellanca CH-300 Pacemaker CF-AND w/ 300 HP Wright Whirlwind engine.

1930 : UK Air Ministry requires "approved design firms" to guarantee the arithmetical accuracy of their calculations.RCN

Paper presented before the Annual General Meeting of The Engineering Institute of Canada, Ottawa, Ont.,  
February 13th, 1930.

### Canadian Air Mail System

The Canadian Transcontinental Air Mail system, upon which the Government is estabhshing complete aids to navigation, is laid out as follows. In summer the mail is taken from the steamers at Rimouski and transferred to aeroplanes flying to Montreal via Quebec and the St. Lawrence river. In winter the mail is picked up at Saint John, N.B., and taken by plane to Moncton where it is transferred to the transcontinental planes of Canadian Airways Ltd.

It is then flown to Quebec via Fredericton, Edmundston and Riviere du Loup. At Quebec it is transferred to the Montreal plane and delivered to St. Hubert aerodrome. From St. Hubert the mail goes via Toronto and London to Windsor and Detroit, at which point it is handed over to the United States Transcontinental Air Mail Service which takes it as far as Minneapolis.

Here it is again transferred to Canadian machines which take it to Stephenson field, Winnipeg.  
From Winnipeg the Western Canada Airways operate air mail planes to Calgary via Regina, Moose Jaw and Medicine Hat.

## Notes on "Civil Aviation"

At Calgary it is transferred to fast express trains for the trip through the mountains to Vancouver. In addition to this service there is an air mail route from Regina to Edmonton via Saskatoon and North Battleford. This circuit is operated in connection with the direct Winnipeg-Calgary route. It has not yet been decided which air route will be followed through the Rockies to Vancouver and, therefore, the final selection of the main transcontinental route cannot be made.

However, radio aids to air navigation are being installed on two sections of the system, namely, from Montreal to Windsor, and from Winnipeg to Calgary and Edmonton. [...] *The general policy of the Department, with regard to communication for our fighting aircraft, is to follow the lead given by the Air Ministry in Great Britain.*

Northern Explorations : "It should also be mentioned that modern pilots are usually first class aircraft mechanics and the mechanic in the plane is more an assistant to the pilot than an air engineer"

The Aeronautical Laboratories of the National  
Research Council of Canada

J. E. Parkin, M.E., F.R.Ae.S., M.E.I.C.,

Assistant Director in the Division of Pure and Applied Physics, in charge of Aeronautical Research, Ottawa.

Paper presented at the Annual General Meeting of The Engineering Institute of Canada, at Ottawa,

February 13th, 1930

The dependence of *national development and progress on transportation* is nowhere more marked than in Canada. The settlement and development of the Dominion first followed the natural *waterways*, later the *railways*, and may now be said to be following the *airways*.

Regions formerly regarded as inaccessible and doomed to remain forever undeveloped are now not only being explored but are actually in process of development practically wholly by means of aircraft. [...] To make fullest use of aircraft in the country, machines suited to Canadian requirements and conditions must be developed.

In developing aircraft suited to the special services and peculiar conditions, an aeronautical laboratory is essential. Recognizing this fact and *the national importance of aviation in Canada*, the National Research Council has undertaken, with the approval of *the Sub-committee of the Privy Council on Scientific and Industrial Research*, the establishment at Ottawa of completely equipped aeronautical laboratories. The laboratories planned will compare favourably in extent and capacity with the best in other countries.

### Scope and Nature of the Work of the Laboratories

While the whole field of aeronautical research embraces most branches of engineering activity as well as many other sciences, the three principal divisions are aerodynamics, hydrodynamics and power plant. Accordingly, the National Research Council is installing a wind tunnel for aerodynamic research, a test tank for the study of problems connected with floats and hulls and power plant equipment for the testing of aircraft engines, fuels, etc. [...]

### Power Plant Equipment - Airworthiness

*There are now, in Canada, three firms assembling aircraft engines* primarily to supply the Canadian demand, but already Canadian assembled engines are being exported.

*Under Air Regulations 1920, the Dominion Government is required* to carry out tests to establish the airworthiness of aircraft engines for export.

(ergo - *Under Air Regulations 1920, the Dominion Government is required* to carry out tests to establish the airworthiness of aircraft for export.)

### At the present time, there is no equipment in the country for this purpose.

The testing of engines for this purpose is very properly a function of the National Research Council and the Council is accordingly installing equipment for the performance testing of aircraft engines. The equipment, due to its flexibility and range will enable much research work to be carried on in connection with internal combustion engines. Being the only equipment of its type and size in the country, investigations of a character not otherwise possible may be made"

23 June 1930 : Interlake Airways Fokker Universal CF-ABL : Crashes while trying to land due to technical problem. Oshawa Ontario.

## Notes on "Civil Aviation"

1930: WCA & Aviation Corporation of Canada merge, forming Canadian Airways. Canadian Airways operate Junkers JU52 type aircraft (CF-ARM), Boeing B-1E flying boat CF-ABA or CF-ABB 'Pintail, Canadian Vickers HS-3L flying boat G-CARO, Canadian Vickers HS-3L flying boat G-CANZ.

1930 : Final year of Canadian built Avro 504N service with the RCAF.

02 June 1930 : Air accident : Western Canada Airways now known as Canadian Airways Ltd : Fokker Universal G-CASE, Allenwater Lake, Ontario. Pilot killed.

August 1930 : the Customs Air Harbour, St. Hubert, Quebec - a particularly busy month, 108 aeroplanes reporting:

1. foreign aeroplanes 43 inwards and 41 outwards.
2. Canadian aeroplanes inwards numbered 11, and outwards 13.
3. During the month 133 pieces of baggage were examined by P. E. Jensen, the Customs officer in charge.
4. Mail bags inwards totalled 555; outwards 189.
5. Passengers inward- were 104; outwards 95.
6. Eight aeroplanes were imported, the value for duty purposes being \$67,271.
7. The total value for duty of aircraft imported at St. Hubert from the opening of the Customs Air Harbour to the end of August was \$532,299.

August 1930 : R100 Airship : J. Fergus Grant (RMC Cadet # 1429) flies from Montreal to Cardington, England, in H.M. Airship, R-100 as aviation and marine correspondent of the Montreal Gazette.<sup>210</sup>

[also contributed an article to the August 1937 number of the Canadian Geographical Journal entitled "North to the Yukon by Air." He at present represents the Journal in the Province of Quebec, and in the number mentioned above there is the following note about him:- "He flew from Edmonton to Whitehorse on July 5th, 1937 when a weekly air mail service, over this route, was inaugurated. As aviation and marine correspondent of the Montreal Gazette for eleven years Mr. Fergus Grant travelled extensively throughout the world, and is familiar with the development of aviation in this country, during that period, particularly. He has flown over various sections of the transcontinental system, and accompanied the first consignment of letters sent by air from Eastern Canada to Calgary on February, 1931: service inaugurated from: Toronto, Detroit, Chicago, St. Paul-Minneapolis, Pembina and Winnipeg.]

1930 : Fleet Aircraft was set up in Canada by Reuben Fleet of the Consolidated Aircraft Corporation to get around import regulations. The Fleet Model 2 was a low powered trainer for the civilian and recreational market. Twelve were manufactured for the Canadian market before being succeeded by the Fleet Type 7. 600 Fleet Type 7's were produced as a military trainer. Total production in North America was 1,250.

23 September 1930 : Western Canada Airways now known as Canadian Airways Ltd : Boeing 40B-4 : CF-AIN : crashes at night in Southesk, Alberta, Pilot : killed, Passengers killed : 2

27 September 1930 : Western Canada Airways now known as Canadian Airways Ltd : Pitcairn PA-6 Mailwing : CF-ACT : overturns and crashes during take-off in Toronto in high wind.

OPAS sells Curtiss HS-2L- to Bermuda ? (required a mile to take off and climbed so slowly that it needed a lake or sea surface of 3 to 5 miles in length to achieve sufficient height to clear trees and hills. Its average speed was about 65 miles per hour (105 km/hr). The H-boat, as it was known, had an ambiguous safety record - it could land in rough water, but if it stalled and went into a spin, it was impossible to pull it out again.)

21 July 1930 : Beverley Shenstone obtains the coveted German soaring "C" badge, the first ever held by a Canadian, at the Wasserkuppe, Rhon Germany. Shenstone meets Geoffrey G.T R Hill and Robert Kronfeld, Dr. Alexander Martin Lippisch. 02 August 1930 Lippisch demonstrates his "Delta" (and "Fafnir") glider to Shenstone.

end 1930 : RCAF was so deeply involved in civil government air operations ( "bush pilots in uniform." ) air force flying time in 1930 was almost equally divided between service flying (13,996 hours) and "civil operations" (13,996 hours).

05 October 1930 : R.101 disaster ends airship design and construction in Britain, two senior members of the Air Ministry - A.I.D are killed.

Sept 1930 - The Canadian public's appetite for spectacular flying in the Arctic, whetted by the MacAlpine search, was gratified

---

<sup>210</sup> The RMC Review - DECEMBER, 1937 pg 78

## Notes on "Civil Aviation"

in September, 1930, by a dash to the Magnetic Pole. Until then most people were hardly aware of such a spot and confused it with the geographical North Pole—thirteen hundred miles farther north. The finding of relics of the 33-year-old Andree balloon tragedy at the same time, on White Island, northeast of Spitzbergen, combined to give the Magnetic Pole flight a great deal more publicity than its importance warranted. In a Fokker monoplane abandoned twelve months before on the Arctic coast by the MacAlpine people, and recommissioned at the last minute to replace a damaged plane originally scheduled for the work, Major L. T. Burwash, veteran Government explorer, and myself, with Walter Gilbert as pilot and Stanley Knight as engineer.<sup>211</sup>

14 November 1930 : FLIGHT : Canadian Rail and Air Combine : The Canadian Government issues an Order in Council enabling the Canadian National Railway (CNR) to participate with the Canadian Pacific Railway (CP Rail), the Western Canada Airways, Ltd. (WCA), and the Aviation Corporation of Canada (ACC), in the formation of a large company, to be known as "Canadian Airways, Ltd."

Each railway will subscribe L 50,000 as capital, and it is expected that they will increase their financial holdings later.

The president of Canadian Airways, Ltd is Mr. J. A. Richardson, a Winnipeg financier, and the joint vice-presidents are : Mr. E. W. Beatty representing the Canadian Pacific Railway, and Sir Henry Thornton, representing the Canadian National Railway, The air services will be complementary to the rail services.

11 Nov 1930 : FLIGHT : Control of (British) Aviation :  
COMDR. BELLAIRS, on November 11, asks the Prime Minister:

1. "whether he would appoint a public inquiry, such as was held in the United States of America under the chairmanship of Dr. Dwight Morrow, into the whole question of the Air Force, its military and civil associations, and
2. how our present system compared with the systems in America and Japan, where civil flying was under separate control and military flying was part of the Navy and Army respectively.

Mr. MacDonald responded : The answer is in the negative.

*His Majesty's Government have no intention of departing from the policy of successive Governments with regard to a separate air arm and Air Ministry, or as regards the control of civil aviation.*

In reply to the second part of the question,

*it is the (a) fact that in America and Japan air administration is divided between three separate departments, On the other hand, France and Italy, with the two largest Air Forces in the world, have adopted the British system.*

1930 : St. Hubert, Que.: Flying conditions at the Customs Air Harbour, St. Hubert, Quebec, were very bad during December, in fact they were the worst yet experienced.

Passenger service was not encouraged at any time during the month, and on many days was cancelled entirely.

12 December 1930 : Canadian Colonial Airways Ltd aircraft crashes in the United States on the way to Montreal.

24 December 1930 : Canadian Colonial Airways Ltd aircraft crashes in the United States on the way to Montreal.

These mishaps brought international traffic almost to a standstill. One of the planes lost was a duty-paid aircraft.

31 December 1930 : During the year a total of 370 (372) persons were on record as holding Canadian Air Engineer Licenses"

- a) 241 persons were licensed as "Air Engineer" only.
- b) 131 of these Air Engineers were also licensed as Pilots.
- c) a total of 164 "Unlicensed Engineers" were identified as holding only an "Air Mechanic" certificate.

(Air Annual 1932-33 pg 17, 19, Civil Aviation - Canada)

---

<sup>211</sup> Canada moves North..

**CANADIAN AVIATION - 1931**

1931 : Regular bi-weekly scheduled passenger service during the summer season between Germany and South America begins with airship Graf Zeppelin, This service continues until 1937. When it entered commercial service in 1928, Graf Zeppelin became the first commercial passenger transatlantic flight service in the world. Graf Zeppelin was named after the German pioneer of airships, Ferdinand von Zeppelin, who was a count (Graf) in the German nobility. During its operating life, the Graf Zeppelin made 590 flights covering more than 1.7 million kilometers (over 1 million miles). It was designed to be operated by a crew of 36 officers and men. Graf Zeppelin LZ 127 was the longest rigid airship at the time of its completion and was only surpassed by the USS Akron in 1931. It was scrapped to use the metal for fighter plane parts in 1940. First flight 18 September 1928, Retired 18 June 1937, Scrapped March 1940. operated by DELAG - Deutsche Zeppelin-Reederei. Sistership to LZ-126 had been delivered at NAS Lakehurst, New Jersey, in October 1924, where it was commissioned as the USS Los Angeles (ZR-3). The Graf Zeppelin had a total lift capacity of 87,000 kg (192,000 lb) with a usable payload of 15,000 kg (33,000 lb) on a 10,000 km (6,200 mi; 5,400 nmi) flight

1931 : The College of Aeronautical Engineering, Brooklands Aerodrome, Surrey, 1933. Paper Covers. Book Condition: Fair. Foreword is dated 1931. 48 pages; with a frontispiece and 34 plates (39 photos in all); plain grey-blue card covers, with college crest on front; front cover stained, bottom corners dog-eared, and some evidence of damp-staining internally - 2 plates are stuck together, and two others have been separated, with some loss, otherwise good. Full prospectus, including curriculum, of the college, which was based at Brooklands Aerodrome. The photographs depict aspects of the engineering work carried out, as well as the luxurious accommodation offered to student

College of Aeronautical Engineering : Cranfield 1930 :

1931 : Schneider Trophy race at Lee-on-Solent, FRAF light Lieutenant Boothman won at a speed of 340.6 mph in a Supermarine S. 6B.

04 May 1931 : Air Accident : Pays Plat Station, Ontario : Aircraft type - Curtiss HS-2L : Owner - OPAS : Pilot - Earl Hodgson - injured : Passenger - Air Engineer, J.L Mewburn - Killed by drowning. BOI : Pilot mis-judged the aircraft height compared to the obstacle the aircraft struck (telegraph wires beside RR track) and crashed into Lake Superior.

12 March 1931 : Air Accident : Rockcliffe, Ottawa, Fairchild KR-21 trainer: CF-AKR : Fatalities - Pilot : Maj. W.G "Billy" Barker, BOI by J.A Wilson : Pilot used to Camel with greater Hp and performance, trainer aircraft mis-handled, zoomed to 250-300 ft, stalled, tail slid, fell inverted onto it's back crashed immediately after take-off onto the ice of the ottawa river. Aircraft did not burn, was air-worthy. Pilot performed aerobatics at too low an alitude and lost control.

30 March 1931 : US Navy rejection of Fokker F-10A results in US Dept of Commerce - Aeronautics Branch issue notice grounding all US Fokker F-10A aircraft. The US dept of Commerce - Aeronautics Branch investigation into Fokker F10A aircraft type — revealed 1) manufacturer (USA Agent and investor General Motors?? or German OEM??) claimed the wing is safe so long as the plywood skin does not seperate from the wooden spar, 2) maintenance could not be performed on the wing without removing the plywood wing skin.

31 March 1931 : Air Accident : United States : Owner - Transcontinental & Western Air (TWA), Aircraft type - Fokker F-10A : Flight Kansas City - Los Angeles : Metal fuselage, wooden wing : Cause of crash - in flight failure of the wooden wing structure. Fatalities - 8. Pilot - Killed. Notable persons - 1) Knute Rockne, football coach for University of Notre Dame. 2) Jake Lingle - Stool pigen who fingered Al Capone. Upon arrival of accident investigators the day after, only the wings and the engines remained - no attempt to secure the scene, souvenir hunters stripped the aircraft overnight. Not enough remained to allow a detailed investigation, it was assumed that 1) ice formation on a prop hub had flown off and struck a prop - this caused a part of a propeller to come off and strike the wing. 2) the aircraft flew into a severe thinderstorm and the accident was an act of god - no storms were reported in the area. The US Dept of Commerce - Aeronautics Branch commences first detailed technical investigation into an aircraft accident - Findings 1) Cracks developed in the sealed plywood skin. 2) Plywood skin cracks allowed moisture - rain water -to enter the wing. 3) Moisture - water - had softened the plywood, dissolving the glue holding the wing structure together. Conclusion : Dry-Rot, prohibit all F-10A's to be used in passenger service. Anthony Fokker rebutted the finding blaming poor maintenance by the operator. American Airlines and Pan American Airlines removed the engines from their aircraft and burned the airframes. Canada contines to allow Fokker F-10A aircraft to operate, albiet for freight only operations.

## Notes on "Civil Aviation"

17 April 1931 : Flight : Air

Ministry Notices to Airmen have been sub-divided in a new manner, and are to be distributed in a different way than hitherto. In view of this distribution and of the increasing size of these notices, as well as those to Ground Engineers and to the increasing pressure on our space, we shall in future not publish these notices in full, but will summarise each notice as it appears. We feel that by so doing we shall be enabled to keep up to date with these, as issued, and readers will, from these summaries, immediately be able to see which notices interest them particularly, and if desired make application for copies to the Air Ministry.

14th August 1931, Lloyds spelled out their request to the Secretary of State for Air as follows:

1. "Inspection of all civil aircraft for renewal of Certificates of Airworthiness:
  - a. Inspection at Constructor's works of all aircraft and engines:
  - b. Issue of Airworthiness Certificates
2. Approval of Design of civil type aircraft
3. Approval of Design of civil type engines ,
4. inspection during construction:
5. Approval of modifications for civil aircraft:
6. Registration of civil aircraft:
7. Inspection, for foreign orders, of:
  - a. materials
  - b. equipment
  - c. aircraft
  - d. engines
5. Supervision of ground engineers.

According to Lloyds and BAIG, these roles were "devolved wholly from Government" until the Civil Aviation Authority formed in 1972.

September 1931 : September Flight Lieutenant Stainforth took the Supermarine S.6B and its Rolls-Royce engine, now boosted to 2600 hp, to a new speed record of 407.4 mph

June 14 1931 : Air Accident : CF-CAV - Millidgevill NB, - killing Mr. JK Sterling, Pilot, Mr. Rudyard Brayley, passenger. BOI determined Pilot was rough on controls and liked stunting, previously under suspension for 1 offence and fined for a 2nd. was impulsive and arrogant. fully intended to go stunting on the last flight)

15 June 1931 : Canadian Airways Fokker 14A flown from Winnipeg to Moose Jaw using radio beacons - Canada's first radio guided flight.

01 July 1931 : Canada Day Air Pageant - 1st Trans-Cnada Air Pageant : Hamilton Ontario : Aircraft type - Travelair SA-6000 CF-AIB. Pilot - H.M Stirling, Passengers - 4, all killed. BOI held July 9, 1931: Aircraft nose dived within 20 ft of ground, pilot opened throttle and "zoomed". as the aircraft changed altitude a ripple was seen thru the full LE of the RH wing. the fabric tore back in shreds, the aircraft proceeded to climb and turn - rolling to the right, the pilot reduced power to no avail. aircraft fell to ground on left wing. Aircraft was certified pre-flight by an Air Engineer, aircraft had single controls, weather was excellent, Pilot had not done any stunting previous to this flight on that day that would have imposed loads on the structure ( no mention of past records though), Controls were found locked - indicating in flight failure of the RH wing. No apparent evidence of breach of the air regulations. NRC investigation into angle of incidence, strength of the duralumin sheathing and measurement of air pressure distribution over the Travelair wing revealed that the leading edge ribs failed due to an upward load in flight, resulting in the metal leading edge skin becoming unsupported by the front spar tore thru the wing fabric of the right wing - destroying lift.

August 1931 : RCAF Station Trenton officially opens

25 September 1931 : FLIGHT : FLIGHT, SEPTEMBER 25, 1931 pg 970 : W E are indebted to the de Havilland Aircraft Co.,

Ltd., for the following information, gathered from the operational figures for the month of

Juty in respect to the Ontario Provincial Air

In addition to what are termed " Suppression and Transport aircraft," the Ontario Provincial Air Service operates 21 light aircraft, all on floats, of which 14 are " Moths." For purposes of administration, the field of operations is divided into two districts, known respectively as the Eastern District and Western District. In the Eastern District 10 machines are employed, of which eight are " Moths," the other two being HS.2L, while in the Western District six " Moths " are employed, in addition to three HS.2L and two " Hamiltons." During the month of July the Eastern District machines compiled a total of 1,232 hours, 1,061 hours 5 minutes of which were flown by the " Moths." In the Western District the total time was 960 hours 5 minutes, including 520 hours 20 minutes on " Moths."

The report gives details of each day's operations, and the letters NFR (no flying required) appear dotted about. By the frequency of the letters NFR appearing, it seems that there has been much more forestry patrol required in the Eastern District than in the Western District. Including both administrations, the greatest number of flying hours by any one machine was put in by one of the " Moths " operating in Eastern District at Sault Ste. Marie. This " Moth " compiled no less than 202 hours 45 minutes during the month. It flew on every day, the greatest time in a day being 10 hours 25 minutes on the 3rd, and the lowest 1 hour 10 minutes on the 28th. No mechanical trouble whatsoever was experienced with this machine, and it was flown throughout by one pilot. Reckoning flying time for machines in a descending scale, the first eight greatest times were put up by " Moths." The longest time in the air by any one machine in one day was 12 hours' flying, and this was done by the " Moth " with the second highest monthly total (191 hours 5 minutes), operating from the Bisco Base, which also flew on every day.

On the " Suppression and Transport aircraft" side, the air service operates various machines, including a threeyear-old D.H.61 on floats. This machine heads the list for usefulness in this class. During the month of July it made 160 flights, totalling 150 hours 10 minutes ; 51.1 tons of effective- load were carried, as against 37.73 by the next on the list. In addition, 277 passengers were carried, as against 174 by the machine referred to above.

30 September 1931 : FLIGHT [FLIGHT, JANUARY 15, 1932 : Air Transport : CIVIL AVIATION IN CANADA] : for the quarter ending September 30, 1931, issued by the Civil Aviation Branch of the Department of National Defence, Canada, are the following statistics concerning Air Mail services, etc. During the period July 1 to September 30 the licences issued were:—41 private, 39 commercial, and 41 air engineers; 39 aircraft were registered and 4 air ports licensed.

## Notes on “Civil Aviation”

This brings the total in force at September 30, 1931, to : — Private pilots, 271. Commercial pilots, 393. Air engineers, 406. Aircraft, 489. Air ports, 75.

1931 : Trenchard's University Air Squadron procedures had become sufficiently well defined to permit them to be turned into a set of formal regulations via the publication of the first edition of AP1401. University Air Squadron operated RAF aircraft in club guise. The new AP restricted membership to seventy-five per squadron, based on annual intakes of twenty-five for three-year courses. It also specified the content of the Proficiency Certificate. This required attendance at an annual camp, the accumulation of at least fifteen flying hours (three of them solo) and passing examinations in the theory of flight, rigging, engines, airmanship and air pilotage – what we could call navigation. As stated in AP140 stated “ the aims of the UASs were to encourage an interest in flying’, as well as promoting research into technical matters and to ‘assist those who might wish to join the RAF’.

Clearly, therefore, while it was still quite low-key, at least the idea of, recruiting had been tacked onto the agenda by 1931 and from 1937 onwards UAS members were being actively encouraged to join the RAF, the RAFO or the RAFVR, when they went down and a substantial proportion of them did just that. By this time there was a third UAS, London having opened one in 1935, and the standard trainer had become the Avro Tutor. while the stated aim of the wartime UASs was primarily to do with recruiting aircrew and/or providing them with pre-entry training, space was also found for undergraduate entrants who wished to join the Technical or A&SD Branches.

The Oxford and Cambridge squadrons were re-opened in October 1940 with others being established during 1941. In the context of today's seminar, it is probably worth observing that much of the spadework involved in this project was done by a prominent pre-war Auxiliary Air Force officer, Wg Cdr Lord Nigel Douglas-Hamilton who was instrumental in ensuring that there were eventually as many as twenty three wartime UASs the primary purpose of the wartime UASs was to provide pre-entry training for potential aircrew officers. What the wartime UASs specifically did not do, however, was to provide any form of flying training. Most the wartime UASs did own' a solitary Tiger Moth, even the odd Oxford, but these were for the benefit of the staff, not the students. Apart from a general soaking in the university atmosphere, all Short Course students were required to attend a specifically designed series of lectures covering mathematics and mechanics plus a secondary subject chosen from electricity and magnetism, engineering, meteorology or navigation. In practice, a university's ability to offer secondary subjects depended upon the capacity of its academic staff and a student's 'choice' could be limited, at Manchester, Edinburgh and Aberdeen, for instance, to Met. Beyond that, the aim of the game was to obtain a UAS Proficiency Certificate. This now covered mathematics, navigation, drill, physical training, signals, anti-gas procedures, armament, air force law, discipline, admin and org, hygiene, sanitation, aircraft recognition, general studies and the Link Trainer. In other words, the subjects

## Notes on "Civil Aviation"

covered by the ITW syllabus. UAS members wore the uniform of RAF airmen, these were embellished with ATC buttons and cap badges, not those of the RAF. This came about as a result of a major reappraisal of all aspects of pre-entry training in late 1940. The ATC was formally established by a Royal Warrant of 4 February 1941 which left no doubt as to the constitutional position of the

wartime UASs. It stated that 'there shall be established a Corps to be called the Air Training Corps' and that the Corps 'shall comprise squadrons formed at universities and university colleges to be known as university air squadrons.' In January 1931 (and again in January 1935) AP 1401 had stated that: 'The object of the University Air Squadrons generally is to encourage an interest in flying and to promote and maintain a liaison with the Universities in technical and research problems affecting aviation.'

The 1947 edition said that the 'purpose of University Air Squadrons is to provide training during their university career for members of the universities who wish to prepare themselves for commissioned service in the General Duties branch and the Technical branch of the regular or non-regular air forces...' Clearly, there had been a major shift in emphasis. Before the war the UASs had been about 'air mindedness'. Now they were about officer recruiting. In fact some 60% of the RAF's pilots now join via the UASs. As in 1947, all are still enlisted into the RAFVR, technically as airmen, but with the status of officer cadets, with a heavy emphasis being placed on the 'officer' aspect. The Technical Officer supervised all engineering matters on the squadron and station, assisted by auxiliary engineering and armaments specialists. Our establishment of some fifty RAF tradesmen provided essential continuity, covering the second line engineering task and training support. Manchester University Air Squadron. Last, but certainly not least, was our Honorary Air Commodore, Sir Roy Dobson CBE, the Chairman and Managing Director of Avro and a prominent figure in the Manchester scene. His approach was very much 'hands on' and he gave tremendous encouragement to the squadron as well as practical support. executives were invited to view and to participate in teamwork training, and much stress was placed on the benefits of leadership, teamwork, new technical skills and even first aid training which reservist employees brought back to their civilian workplace. During 1954/55 I was Chief Flying Instructor at Cambridge University Air Squadron. We were established for eleven Chipmunks and four Harvards to provide training for 100 pilots and, uniquely, two Ansons to cater for twenty navigators. In addition, there was a reserve commitment for members who had qualified as fighter controllers during their national service and, for training up to PFB standard, we had a number of technical cadets who, having completed their first year at Henlow, were reading for their engineering degrees. That they achieved their flying qualification was amply shown when they put up a four- Chipmunk formation over the West Country hamlet where one of their number was being married

1931 : Imperial Airways first mail flight from England en-route to Australia crashes in Timor.

- A. There are no way-points,
- B. There are no established times.
- C. The crew were left stranded.

1931 : Imperial Airways chairman Sir Eric Geddes writes the discussion paper, 'The Future of Civil Air Communications of the Empire'.

Geddes paper

- A. compromised aviation's competitive advantage of "Speed" against other transport forms.??
- B. Larger aircraft might carry the bigger volumes.
- C. Larger aircraft carry the bigger volumes more slowly.
- D. much bigger loads would 'enable the use of larger and therefore more economical aircraft.
- E. much bigger loads would 'spread the cost of the Company's comparatively large ground organisation over the greater volume of business and thus reduce the total cost per ton /mile.
- F. Geddes planning assumed a cruising speed of 186 km h (115 m.p.h.).
- G. The large Imperial Airways aircraft (may have been aircraft) of 1918 vintage or design
- H. Modern designs by non British manufacturers (not restricted by government) saw operating speeds of upwards of 322 kmh (200 m.p.h.)

January 1934 : Imperial Airways proposes that the airline should lift the empire's first-class mail by air. This discussion paper takes Geddes's general ideas into a more specific areas

- A. This was calculated to involve 1,676 tonnes (1,650 tons) per annum outbound from England, and 965 tonnes inbound (950 tons) to England.
- B. the largest single mail despatch was to and from Canada (which was not a viable destination for an air service)
- C. Imperial Airways calculated that only 5–10 per cent of the existing first-class market would stand a surcharge: if such a fee were
- D. applied,
- E. the outbound mail load to Africa would come to one ton;

## Notes on "Civil Aviation"

F. the outbound mail load to Australia would come to barely three-quarters of a ton.

October 1934 : British government unveils Empire Air Mail Scheme" (EAMS) in a 'Blue Paper'.

- A. all major operational decisions for EAMS have been made and imposed.
- B. raised the proposed operating speeds to 144 m.p.h.
- C. the various governments of the empire are expected to contribute to EAMS for 15 years.
- D. the various governments of the empire are expected to come up with a combined £287,000 per annum.
- E. governments throughout the empire are obliged to meet the costs of the ground organisation for EAMS,
- F. governments throughout the empire are obliged to subsidise it by waiving local taxes and charges.

govt of australia commissioned their own service QANTAS Empire Airways (QEA) to Singapore in late 1934, using de Havilland DH 86 biplanes. The DH 86 services from and within Australia were littered with fatal crashes, the cause of which the Australians had to solve because of British official insistence that there was nothing wrong with the machine. In an extraordinary approach to the operation of high-technology transport, the Air Ministry suggested that Australian conditions were to blame for the problems afflicting the DH 86, rather than the design itself.

29 September 1933 : NEW WORLD ALTITUDE RECORD of 44,819 feet / 13,661 metres is set using a POTEZ 50 B I P L A N E powered by an 800—1,000 H.P. GNOME - RHONE "MISTRAL-MAJOR" static radial engine supplied by Societe des Moteurs Gnome et Rhone 34, Rue de Lisbonne, Paris 8m

FOR THE BYRD ANTARCTIC EXPEDITION : The Curtiss-Wright "Condor," in which Admiral Richard E. Byrd will fly over the South Pole, flying over New York City. It is powered by two 700 h.p. Wright "Cyclone" engines, has a top speed of 170 miles an hour and a landing speed of 45 miles per hour.

'Safety Last" - FLIGHT, OCTOBER 26, 1933

AN interesting difference in the point of view of the Americans and the English, and one which accounts for difference in the way in which the transport aros of the two countries have developed, was given (" he other day. A well-known American pilot, ho has 1 considerable experience of transport work, said that ms country it was impossible to sell safety. People would willingly pay more

if there was the possibility of being able to boast afterwards that they had done journey in a few minutes less than their friends. That » why American operators do not mind sacrificing many PC'inds of pay-load if, by doing so, they can secure a 1 if more speed. Over here it is different. People who ravel by air set a higher value on comfort and safety they do on speed, and although the service must, of th-it\* be f a s t e r t n a n Y other form of transport, yet satv, tor undoubtedly takes second place to those of ' and comfort. The result has been Imperial Airways policy of providing aeroplanes with a larger payload than that of foreign aeroplanes, and also with much greater comfort. No one who has flown in the cabin of one of their H.P. 42-seaters, a cabin which is quieter than the coach of the ordinary express train, can deny that it is the most comfortable way of travelling, and one which is gaining new adherents by the hundred every week.

Nick Comper was one of Britain's most brilliant and influential aeronautical engineers of the early 1930s. He is best known for the design and manufacture of the Comper Swift light aircraft. The Swift enjoyed considerable success in the many flying competitions of the era, most notably the Kings Cup air race. In 1931 the plane broke the world record time for a flight from the UK to Australia. The aircraft was exported all over the world and several of them survive to the present day. Comper is regarded as one of the country's pioneers in the development of commercial light aircraft. - Born in April 1897 he was the son of the celebrated church architect, Sir Ninian Comper and grandson of John Comper, a highly prominent clergyman in the Scottish Episcopal Church. Nick was brought up with his five brothers and sisters in Beulah Hill, Upper Norwood in London. He was educated at Dulwich College, where he was a pupil from September 1911 until July 1914. At the outbreak of the first World War, Comper, at the age of seventeen, joined the aircraft manufacturer, de Havilland, to study aeronautics. He was working as a draughtsman for The Aircraft Manufacturing Company, who built Henry and Maurice Farman's airplanes and seaplanes in Hendon in London, when he was released by them to sign up with the Royal Flying Corps in April 1916 as a second lieutenant, special reserve. As a pilot he was stationed in France and there he undertook dangerous reconnaissance missions throughout the rest of the war. He left behind him a record of events in a series of letters written to his mother. After the war he remained in what in 1918 had become the RAF. In 1920 he spent a year at Jesus College, Cambridge University, reading aerodynamics.

From there he was stationed at Felixstowe to study and fly seaplanes and flying boats, then came the assignment as an engineering instructor at the Cranwell Academy, training cadets at the engineering laboratory.

One of his pupils there was Frank Whittle, the inventor of the jet engine. - While at Cranwell he and some staff and pupils formed the Cranwell Light Aeroplane Club (in 1923) and they produced four aircraft in what they named the CLA class (Cranwell Light Aeroplane). One of them, a so-called parasol monoplane, won the International reliability trials at Lympne near Folkestone and the following year in the plane's successor, the CLA-3, was second overall in the speed trials at the same event.

By then it had become evident that to pursue his gifts as an aeronautical engineer he would need to leave the RAF and enter the business world. - In March 1929 when Comper left the Royal Air Force he formed the Comper Aircraft Company and set up a manufacturing plant to build the Comper Swift, an aircraft he had designed and whose origins were in the work he's done at Cranwell.

The plant was based at Hooton Aerodrome in Cheshire.

The Prototype Swift (registered G-AARX) first made a public showing at Brooklands on 17 May 1930.

The aircraft was a small but graceful single-seat braced high-wing monoplane of wooden construction and was powered by a 40 hp (30 kW) A.B.C Scorpion piston engine.

After successful tests, seven more aircraft were built in 1930 powered by a 50 hp Salmson A.D.9 radial engine.

Trials with Pobjoy P radial engine for use in air racing resulted in all the subsequent aircraft being powered by the Pobjoy R.

## Notes on "Civil Aviation"

The last three aircraft (sometimes called the Gipsy Swift) were fitted with de Havilland Gipsy engines - two with 120 hp (89 kW) Gipsy Major III and one with a 130hp (97 kW) Gipsy Major.

Postwar, the surviving Comper "Swifts" continued to compete successfully in UK air races into the mid 1950's.

In fact, probably no other aircraft built in such small numbers has ever broken so many records and won so many prizes. Amongst these achievements one of the most outstanding was Charles Butler's record 9 days 2 hours.

"Licensing" Statistics for 1931:

Nation	Great Britain	Australia	Canada	New Zealand	South Africa	India	Total

1931 : The Aeronautics Case : Canada - Supreme Court of Canada - Aerial Navigation

The following questions are submitted to the Supreme Court of Canada for a "decision"

1. Has the Parliament of Canada "Exclusive" legislative and executive authority for "*performing the obligations of Canada, or any provinces thereof, under the convention relating to the Regulation of Aerial Navigation*" ? (ICAN).
2. Is the legislation of the Parliament of Canada providing, generally, for the regulation and control of flying, including flying operations carried on entirely within a province, necessary and proper for performing the obligations of Canada, or any province thereof, under the *under the convention relating to the Regulation of Aerial Navigation*?
3. Has the Parliament of Canada legislative authority to enact the provisions of Section 4 of the Aeronautics Act?
4. Has the Parliament of Canada legislative authority to enact and enforce certain regulations regarding personnel, aircraft and aerodromes?

Initially, the Supreme Court in its' opinion, held:

1. generally that:
  1. the land in, and the air over provinces,
  2. aircraft, and the use thereof on land and in the air,
 came primarily within provincial powers of legislation,
   
**BUT**

## Notes on "Civil Aviation"

2. that the Parliament of Canada had legislative power when aeronautics were used in connection with, and for, Dominion purposes such as:
  1. Defence,
  2. Postal service and also, in so far as necessary,
  3. to carry out Canada's treaty obligations.

The initial opinion of the Supreme Court was appealed (by the Air Board) to the Judicial Committee of the Privy Council.

As a Dominion of the British Empire, the Judicial Committee of the Canadian Privy Council was the final court of appeal in Canada. The Committee was a tribunal of senior English (British Empire) judges which advised the Privy Council on matters of law and they had the final say.

The right of appeal from the Supreme Court of Canada to the Privy Council was abolished in 1949 at which time the Supreme Court of Canada became the highest court in Canada.<sup>212</sup>

***The Privy Council reversed the decision of the Supreme Court*** on October 27, 1931 .

The Privy Council found that "***It was competent for the Parliament of Canada to pass the Act and authorise the Regulations in question, and that questions 1, 3 and 4 should be answered in the "Affirmative".***

31 December 1931 : During the year a total of 346 (370) persons were on record as holding Canadian Air Engineer Licenses"

- a) 236 persons were licensed as "Air Engineer" only.
- b) 134 of the Air Engineers were also licensed as Pilots.
- c) a total of 131 "Unlicensed Engineers" were identified as holding only an "Air Mechanic" certificate.

(Air Annual 1932-33 pg 17, 19, Civil Aviation - Canada)

CANADIAN AVIATION - 1932

January 1932 : FLIGHT : No. 1203. (Vol. XXIV. No. 3.) JANUARY 15, 1932:

A SECOND step towards the elimination of the short-service officer in the Royal Air Force has been taken. Not long ago the maximum age for acceptance as a short-service officer was reduced from 25 to 22 years of age.

It is now announced that the period of service " with the colours " ( as the Army has it ) is to be lengthened **from five to six years**. At the same time the lowest permissible age is now 18.

This new scheme is to be corn- Longer mended. The Service gains by getting Commissions m o r e tying out of an officer after it has gone to the trouble and expense of teaching him to fly and training him in all the duties of an officer. A year is allowed for this process, and during this year the officer will rank as Acting Pilot Officer on a standard rate of pay of 13s. a day (lis. 6d. p.d. at current rates), but at the end of 12 months' approved service he will be promoted to Pilot Officer and paid at a standard rate of 16s. a day (14s. 2d. at current rates).

The Service will then get five years of useful work out of him before he is transferred to the Reserve, instead of four years as under the previous scheme. As the officers will be kept longer, fewer recruits for short-service commissions will be required, and consequently fewer men will have to face the arduous prospect of obtaining civil employment when the time comes for them to transfer to the Reserve. As they may now start their service career at the age of 18, the average age of those who have to seek civil employment at that time will not be higher than it used to be, and may even be lower. At the same time, as there will be fewer short-service officers, a somewhat greater percentage of them will be able to obtain permanent commissions, and so find their career for life in the Royal Air Force.

The gratuity to be paid at the end of the six years' service has been raised from £375 to £500, which makes a nice little capital for a man who is starting his real career at the age of perhaps not more than 24. He may even sometimes be in better case than a University man who takes his degree at 22, but to whom no such gratuity is assured. It is rather interesting to compare the probable prospects of a young man who has to decide between four years at a University and six years in the Royal Air Force. Let us suppose that he has been educated at a public school. There has been much interesting discussion in the Press lately about the prospects of a public school boy (with or without a University degree) who enters on a business career.

The weight of argument and experience has gone to show that, though such a man does not start as a well-trained clerk, his general educational training hits him to rise to high posts in the world of commerce.

The young man who decides on six years in the Royal Air Force misses the additional training in general education which a University offers, but, on the other hand, he gains a specialist training in a mechanical subject in addition to a certain kind of training in businesslike ways. This is a mechanical age, and on the face of it a man with a good knowledge of internal-combustion engines should start with an advantage. Still, this knowledge is only a limited recommendation. At the moment the ability to fly helps only a very few men. In the future flying may be considered as generally desirable an accomplishment as riding was in pre-Victorian days; but that time is not yet. The R.A.F. reservist must rely for his bread and butter on his mechanical training rather than on his flying abilities. His other accomplishment is some knowledge of accounting and writing business letters, as those arts are practised in the fighting Services.

The business world despises Service methods; but, none the less, many an officer on demobilisation in 1919 found that his Army training did make a useful introduction to business methods. Finally, the R.A.F. reservist has £500 in his pocket, while the young graduate may have next to nothing. The experience of the R.A.F. Officers' Employment Association has been that employment can be found for most R.A.F. reservists. We doubt if this would be the case if the numbers of the reservists were as great as the numbers of men coming down each year from the Universities. The majority of the latter do not drift at once to the workhouse. They mostly find employment. Obviously, the University course opens up more opportunities.

We have not forgotten the fact that some men cannot afford a University, which means three or four years of spending; while the Royal Air Force means six 3'ears of earning, with £500 at the end. But the latter may be a dead end. The case we were considering was naturally that of a man who had an open choice. In that case the £500 stands in the same relation to the University degree as golden eggs stand to the goose which can lay them. It is obviously better to own such a goose than to be presented with some of the eggs. In fact, we consider the acceptance of a short-service commission as a very hazardous speculation for a young man who has to earn his living. This latest scheme of the Air Ministry is good because it has somewhat improved the prospects offered to the short-service officer, and also because it means more pilots of experience in the Royal Air Force, but chiefly because it still further reduces the number of men who will receive short-service commissions.

## Notes on "Civil Aviation"

January 1932 : FLIGHT : CANADIAN FLYING CLUBS Very satisfactory progress has, on the whole, been made by the Canadian flying clubs during the past year . An interesting summary of their activities for the period January 1 to September 30 of last year will be found in the accompanying table, recently issued by the Civil Aviation Branch of the Department of National Defence, Canada

CANADIAN LIGHT AEROPLANE CLUBS SUMMARY FOR NINE MONTHS ENDING SEPTEMBER 30, 1931 - FLIGHT, JANUARY 15, 1932							
Club	Members	A/C	Students	Soloists	Hours Flown	Licences obtained	
						Private	Commercial

15 January 1932 : FLIGHT : CORRESPONDENCE TUITION

""THOSE who intend to take a correspondence course in any branch of aeronautics should know in the case of the Technological Institute of Great Britain that its courses are based upon standard text-books written by accepted authorities in the aeronautical world. The subject is conveniently divided into a series of courses to suit students who wish to improve their knowledge in a particular direction, or, alternatively, cover the entire subject. All the necessary text-books are provided by the Institute without additional charges to the fees quoted for the courses, and they become the student's property. The address of this Institute is Temple Bar House, Fleet Street, London, E.C.4.

15 January 1932 : FLIGHT : DE HAVILLAND PROGRESS

THE ELEVENTH Annual General Meeting of the De Havilland Aircraft Co., Ltd., was held on December 31 at Stag Lane Aerodrome, Edgware. Mr. A. S. Butler, Chairman of the Company presided. He said that in spite of the unprecedented world depression the profit, before allowing for income tax, for the existing year was only £2,632 less than last year. Although the volume of business, he said, had been reduced by 10 per cent., the profits were reduced by only 6 per cent., the difference being made possible by careful economy in all departments and a reduction of 33-1/2 of the Director's fees. The bank account this year showed a credit of £37,497 instead of a debit of £32,588.

1932 : Canada issues regulations requiring Canadian aircraft to be fitted with landing lights or flares.

20 January 1932 : The first regular through air mail service between England and Cape Town started. A comfortable if sedate type, the H.P.42 operated reliably through the Sudan for five years, 1932-37

1932 : Chris "Limey" Green, mechanic to Grant McConachie (Fokker type) .

18/19 August 1932: First East -West Solo crossing of the Atlantic. deHavilland 80A "Puss Moth" G-ABXY from Portmarnock Ireland to Pennfield Ridge, NB, Canada.

1932 : Manitoba Government Air Service formed using Vickers Vedette and ex RCAF staff.

1932 : Air Ministry publication HP806 was revised and enlarged, published as A.P.970, bible of the designer of "Service" aircraft for a long time. Dr. Roxbee Cox - Flight March 1939 page 227)

By 1932, however, the differences between civil and military aircraft became recognised and a separate handbook for civil aircraft, known everywhere as A.P.1208, was produced. ( Flight - March 1939 page 227 - Airworthiness and the ARB)

1932 : Air Ministry publication HP806 / A.P.970, bible of the designer of "Service" aircraft for a long time. Dr. Roxbee Cox - Flight March 1939 page 227)

1932 : The differences between civil and service aircraft were recognised. UK Air Ministry publishes A.P.1208, Handbook for civil aircraft Airworthiness" .( Flight - March 1939 page 227 - Airworthiness and the ARB)

## Notes on "Civil Aviation"

November 1932 : Imperial Airways introduce the Handley Page H.P.42E G-AAGX "Hannibal" on their Cairo-Cape Town route.

1932 : DH Fox Moth designed in England as a light, economic transport, DH Fox Moth was built using as many Tiger Moth components as possible.

53 Fox Moths were produced in Canada after the Second World War mainly to keep the Canadian DH plant in production, but also to satisfy the increasing need for new bush aircraft.

All the Canadian modifications made to the Tiger Moth applied to the Fox Moth.

39 Fox Moths built in and remained in Canada, most of which were operated in float/ski configuration, and gave years of satisfactory service. The Fox Moth, though efficient, was a bit of an anachronism. A modern, moulded- plexiglas sliding cockpit-hood was attached to what was essentially a 1932 aircraft. Communication between the cockpit (located behind) and the passenger cabin was through a hole in the instrument panel. De Havilland designed a special stretcher for the Fox Moth, allowing the Fox Moth to operate as an air ambulance.

January 1932 : Ernest L. Janney was still selling himself as a businessman and aviation pioneer;

A. a Montreal newspaper described him as the "first Canadian to volunteer his services and be accepted as a war flier."

B. He then dropped from sight.

04 February 1932 : The Committee on Engineering Education meeting with university delegates at Toronto's Royal York Hotel.

1932 : Canadian Air Accident statistics :

- a) Accidents - 14,
- b) Pilots Killed - 6,
- c) Pilots injured - 7,
- d) passengers killed - 6,
- e) passengers injured - 5

### SELF-TAPPING SCREWS

BUCK & HICKMAN, LTD., of 2, Whitechapel Road, E.1, are the distributors in England for Parker-Kalon hardened self-tapping screws. These are offered as a quick and cheap method of joining sheet metal and making fastenings on to it from any gauge between 28 and 6. They cut a thread in the metal as they are screwed in, thus eliminating the cost of tapping, and are also satisfactory when the metal is too light to tap in the normal way. Due to the fact that they cut their own thread, they are also said to be much securer under vibration than a normal screw. For assembling small aluminium castings or articles made of Bakelite, hard rubber, fibre, and similar materials, these screws are equally useful.

1932 : McGill University <sup>213</sup> :

1. **DOES NOT** offer a "Degree" in Aeronautical Engineering. A "*course of lectures on Aeronautics and Aerodynamics*" is given within the Engineering Faculty.
2. The McGill University Aeroplane Club prepares students for the tests required by the "Dominion of Canada"
3. The dept. of Extra-mural Relations conducts "Ground School", which is free to undergraduates preparing for the "Dominion of Canada" examinations for "Pilots".

1932 : University of Toronto <sup>214</sup> :

1. There has been considerable demand amongst students of the University, *and others*, for a "Course in Aeronautics". However the undergraduate course is too crowded with fundamental sciences to provide more than a limited instruction in Aeronautics.
2. "Properly Qualified" graduates of the University will be assisted in "Post-Graduate Courses" in *the Principles and Application of the Science of Aeronautics*. The University will give an Advanced Degree after the satisfactory completion of a year's work. This will enable "well trained Engineers" to specialise in this branch and to carry out experimental work in the University's wind tunnel.

<sup>213</sup> The Study of Aeronautics at Universities : Air Annual of the British Empire 1932-33 : p 499 - 501. C.G Burg Editor, London, UK.

<sup>214</sup> The Study of Aeronautics at Universities : Air Annual of the British Empire 1932-33 : p 499 - 501. C.G Burg Editor, London, UK.

## Notes on "Civil Aviation"

3. Graduates of the University of Toronto *Faculty of Applied Science and Engineering* (with aeronautical courses) are eligible for **Permanent Commissions** in the Royal Canadian Air Force.
4. At present, a number of University of Toronto students are offering themselves for the "Cadet Course" conducted by the R.C.A.F at Camp Borden. The R.C.A.F's "Cadet Course" is designed for "University Men" (i.e those who have education, and in most cases come from the "Upper Crust of Canadian Society") and is conducted during the summer vacation. Instruction in "*Ground Engineering*", *Rigging, Engines, etc as well as "Practical Flying"* is given during the Cadet Course.
5. The University of Toronto possesses the "Original" wind tunnel constructed in Canada. (The National Research Laboratory was established in the Dominion of Canada in 1931 and its' wind tunnel is the 2nd wind tunnel in Canada.)

CANADIAN AVIATION - 1933

January 1933 :

February 1933 :

17 February 1933 : Dr. J. Clarence Webster, D.Sc., LL.D., F.R.S.C., presents to the Dominion Government, the "John C. Webster Memorial Trophy" in memory of his son. He accompanied the presentation by a statement setting forth the purposes of his gift, and in this statement occurred the following words:-

"I should like particularly to emphasize the great value of our Royal Military College at Kingston. Since Confederation Canada has invested many millions in various enterprises which have produced little return and have added very heavy burdens to the taxpayers. Our expenditures on this institution have proved an investment of constant stability and high return.

"I have been a teacher for more than 30 years in three great universities, Edinburgh, McGill and Chicago, and have had a wide experience of young men, and it is my firm conviction that the Royal Military College makes a higher proportionate contribution to the citizenship of the State - of men disciplined in mind, body and character, and with an esprit de corps of the highest order - than does any university."

The Webster Trophy Competition is open to any Canadian licensed pilot, either commercial or private, who is not flying professionally. The flying tests consist of two 35 minute periods of general flying under observation and a solo cross-country navigation test of 1 hour duration. Aircraft and judges are supplied by the R.C.A.F.

1933 : RAF Squadron Leader Gayford and Flight Lieutenant Nicholetts fly a Fairey Long Range monoplane from Cranwell, England to South West Africa - a distance of 5,430 miles in 57 hours, 25 minutes, a new world record.

12 October - 19 October 1933 : Avro "X" *Faith in Australia* registration VH-UXX flies from England to Australia in 6 days 18 hours fitted with three Wright J.6 "Whirlwind" engines using Stanavo petrol and Wakefield Castrol oil. . Once called the *Southern Moon*, the aircraft was considerably altered. The wing of wooden construction was widened, lengthened and strengthened, - Cellon dope on the machine's fabric the axles have been altered - Palmer tyres and wheels, and the fuselage strengthened.

The machine has been converted from a passenger machine into a long-range machine. 1,670 miles to Athens in one hop. *Faith in Australia* was to have been flown round the world, but unfortunately came to grief in Ireland, this little flight to Australia was just in the nature of recuperation, with the thought of some sterner work ahead. Crew: Aircraft captain & pilot- Flight Lieutenant C. T. ULM Pilot 2: Pilot 3: Engineer: Mr. Edwards?

## Notes on "Civil Aviation"

1933 : more than a million Canadians were on government-funded relief.

1933-1934 : UK : Gorell Committee on the control of Private Flying, 1933 to 1934 - will result in the formation of the A.R.B in 1937. The Gorell Committee members were Lord Gorell, Captain Harold Balfour, Mr E C Gordon England, Mr W Lindsay Everard, Lt.Col J T C Moore-Brabazon, Mr F Handley Page and Mr W A Workman. the views of the Gorell Committee may have been coloured to some degree by the thought that there could be merit in separating safety and politics. If so, that may help to explain why the development of aviation regulation in the UK followed a path largely different from the rest of the world in moving responsibility away from the direct control of politicians. The report includes an interesting analysis of the causes of accidents to civil aircraft on the Air Ministry Register for the period 1926 - 1933 which sets the background against which the report was written, made a total of 18 recommendations, the majority of which were accepted by the Air Council. Total number of Accidents 355, the majority are due to causes other than "airworthiness"

- a) 29 Engine failure followed by errors of airmanship,
- b) 31 Engine failure in circumstances likely to lead to accident,
- c) 9 Structural failure of aircraft,
- d) 2 Unsatisfactory aerodynamic qualities of machine,
- e) 9 Defective aero-controls,
- f) 2 Outbreak of fire in the air

"Entirely wrong values have been placed upon the relative importance of the pilot, the machine and operational activities, in arriving at the regulations to be imposed. The failure of the pilot is by far the most potential source of accidents in flying."

They made a number of recommendations on

- A. the need for certificates of airworthiness in certain cases,
- B. recommended that third party insurance should be compulsory,
- C. advised that towed gliders and gliders carrying passengers for hire and reward should hold certificates of airworthiness and
- D. that pilots of gliders and gliders carrying passengers for hire and reward should be licensed, considered
- E. that it was inappropriate to attempt to impose restrictions on Sunday flying, and recommended
- F. that the control of airworthiness of civil aircraft should be devolved to a statutory autonomous Board
- G. statutory autonomous Board to be formed from the Joint Aviation Advisory Committee of Lloyd's Register and the British Corporation Register.
- H. that the New Board Responsible For Airworthiness should be called the Air Registration Board,
- I. The members of the Air Registration Board will be responsible the Secretary Of State for Air for the maintenance of airworthiness all civil aircraft.

"We agree with the pronouncement in the Ross Committee report that 'the policy of control of private flying . . . cannot be settled in isolation; the future control of civil aviation in respect of all airworthiness matters must be considered as a whole.', " We feel there is substance in the representations of the SBAC and others . . . ", "without the good relations which exist between Air Ministry officials and firms, aircraft construction in present conditions would be almost impossible".

Sir Frederick Handley was chairman of the Committee created for the purpose of drafting a scheme. this was a blueprint for the Air Registration Board, and the ARB which came into operation in February 1937 (Journal of Aeronautical History Paper No. 2011/ 3 - SAFETY REGULATION - THE FIRST 100 YEARS - J. C. Chaplin C.B.E., F.R.Eng., F.R.Ae.S. formerly w/ Civil Aviation Authority)

## Notes on "Civil Aviation"

The main duties of the A.R.B (a Quasi-autonomous public body - similar to others, ICAN, ICAO, IATA etc may have been been short-sighted in relation to distributed public governance and may have significant implications for successful delivery of various Government's safety policies - In this context, sub-national and national quasi-autonomous actors frequently operate within the jurisdiction of an independent body operating beyond the nation state. For example, national independent banks operate within the jurisdiction of the European Central Bank. In essence, then, distributed public governance is less insular than traditional approaches to this field and emphasizes the evolution of different structures and models of multi-level governance existing at one removed from state structures. Within the British state there exist a great many bodies that are neither responsible nor directly responsive to the vote of the people. This is not a new phenomenon. The embryonic British state of the nineteenth century was largely based around independent appointed boards until concerns regarding accountability increased the popularity of the departmental model. However, in the late 1970s, a number of academics were beginning to express concerns regarding the ad hoc proliferation of these bodies (see Goldston 1977; Doig 1978, 1979; Chester 1979; Johnson 1979) powers of patronage were used to appoint supporters to key positions. delegation of functions to autonomous actors increases fragmentation and the number of potential veto points. vaunted belief in the 'depoliticization' of certain policy fields through delegation to independent bodies - mechanisms of distributed, or delegated, governance as a core element of its statecraft strategy - Source ref for ideas DISTRIBUTED PUBLIC GOVERNANCE IN BRITAIN by MATTHEW FLINDERS \*\*\* a clearer rationale and governance framework is needed \*\*\* ) are centred on the investigation of aircraft in relation to the issue and renewal of certificates of airworthiness. The Chairman Sir Maurice E. Denny, Mr T R Thomas, secretary

This investigation entails, inter alia (legal terminology : among other things):  
publication of standards for design, (Air Registration Board (ARB) Specification)  
publication of standards for construction  
publication of standards for maintenance; (Air Registration Board (ARB) Civil Aircraft Inspection procedure (CAIP) Leaflet) (<http://www.dhmothclub.co.uk/tns/tns33.htm>)  
approval of manufacturers' organizations,  
approval of engine types,  
approval of equipment,  
approval of modifications,  
approval of flight manuals  
approval of performance schedules;  
publication of notices to engineers,  
publication of inspection leaflets,  
publication of defect reports and  
publication of an aircraft register.  
responsibility for examining and licensing aircraft maintenance engineers  
holding of technical examinations for flight engineers and commercial pilots.

The A.R.B. represents the U.K. at international discussions on airworthiness matters and undertakes the work of investigating and reporting on aircraft for underwriters and others.

The A.R.B also assists Dominion, Colonial and foreign airworthiness authorities with duties similar to those of the UK-A.R.B. The Council of the Board, which formulates policies, consists of 18 persons (who are not paid for their services).

- A. Four must be representatives of the aircraft operators;
- B. four must be representatives of the aircraft manufacturers;
- C. four must be representatives of the insurance underwriters;
- D. four must be independent members.
- E. One member (appointed by the Ministry of Transport and Civil Aviation "M.T.C.A") must represent the public
- F. One member (also appointed by the M.T.C.A.) must represent the professional pilots.

The operators, manufacturers and underwriters appoint their own representatives and also appoint the four independent members. (as of 1955)

An advantage claimed for this organization of the council is that "no particular group wields a preponderating influence".

The staff of the Board numbers about 230, more than half of whom are technical staff, known as surveyors.

The chief executive is also secretary to the Council, the execution of whose policies is his responsibility. The Board has two main offices in London, 16 area offices in the United Kingdom and eight offices overseas.

## Notes on "Civil Aviation"

The Board's income comes from:

fees for issuing and renewing Certificates of Airworthiness, for approving firms, engines and equipment and for examining aircraft maintenance engineers and pilots.

Minor sources of income are from contracts with foreign governments for advice and from the publication of technical literature.

The technical organization of the A.R.B. is divided broadly into:

A. design department

B. inspection department

each having various sub-branches to deal with the Board's work in connection with the investigation of aircraft and associated equipment.

The Board policy on responsibility for airworthiness "as much as possible of the work and responsibility in airworthiness matters should be delegated to those actively engaged in the industry, thus obviating the need for a very large regulating authority"

This is accomplished by delegation :

to suitable constructors' design organizations so that they may certify that the design of the aircraft complies with the Board's standards,

to suitable inspection organizations so that they may certify that the aircraft, engines, equipment and materials conform to the appropriate drawings and specifications.

to suitably licensed aircraft (Ground) engineers to certify that aircraft are maintained to the required standards.

In each case the Board retains the right of supervision.

[See also "Airworthiness" article, page 318.]

CHAIRMAN, Lord Brabazon of Tara, P.C., C.B.E., M.C.,  
F.R.Ae.S.; SECRETARY AND CHIEF EXECUTIVE, R. E. Hardingham,  
C.M.C., O.B.E., F.R.Ae.S.; CHIEF TECHNICAL OFFICER, Walter Tye,  
O.B.E., B.Sc, F.R.Ae.S. ADDRESS : Brettenham House, Strand,  
London, W.C.2. (Flight March 1955)

1933 : Detailed requirements for Civil Aircraft airworthiness, structural strength etc established ( based on Wood, Steel Tube, Fabric and the introduction of aluminium). Design Leaflet F.1 of AP1208 requires that "Normal" category aircraft: a) must clear an obstacle 66 ft (20m) above the level of the aerodrome of departure without covering more than 546 yards (500m) in a horizontal direction. and b) Normal category aircraft must reach an altitude of 1378 feet (420m) above the level of the aerodrome of departure in less than 3 minutes.

July 1933 : Aviation Weekly - USA : Lo. the poor private pilot !

AS AN ALMOST universal rule, in almost every state and country, the automobile that is to carry passengers or freight for hire receives a distinctive type of license and bears a distinctive type of number-plate.

It, and its driver as well, must often meet special requirements going far beyond those imposed on purely private operation.

A motor boat that is to ply for hire is subject to special rules and to a particular type of government inspection.

But with aircraft no distinction is recognized.

The **NC license** that goes onto a private plane, never flown by anyone except the owner and never used for a commercial purpose, is exactly the same as the license that goes onto the machine that is kept in daily service in taxi work or in carrying sight-seeing passengers.

There is no difference between them in the requirements for relicensing.

There is no difference in the frequency of re-inspection that is legally exacted.

Seven years ago last month the US Department of Commerce was charged by law with the supervision of civil aviation.

The personnel of the new-born Aeronautics Branch undertook to make flying safe.

## Notes on "Civil Aviation"

They have had remarkable success, particularly in the transport field, where the co-operation of operators and government has brought the hazard very nearly to zero.

But now the time has come for reconsideration, in the light of seven years' experience, and for deciding how far the Federal Government's responsibility for the safety of every aircraft that flies should extend. We have been considering that question for some time. Now we propose a new rule.

We suggest that the government has four obligations in connection with safe flight:

- (1) to protect the general public on the ground;
- (2) to protect the passenger in a commercial plane;
- (3) to protect the careful pilot from the careless or reckless one; (
- (4) to protect everybody concerned, to a reasonable extent, from being exploited or defrauded.

Just those four. No more.

Under no one of the series is it possible to justify the present handling of private planes and private pilots.

ONCE each year, it now becomes the duty of every owner of a licensed airplane to get it to a Department of Commerce inspector for re-examination and re-licensing.

If the owner is a business man, and if he doesn't happen to be near an airport at which an inspector makes regular calls, he can either leave his business to take the plane to the inspector or he can hire a pilot to fly it to inspection headquarters. Both are inconvenient, and time-consuming, and expensive.

The public danger from an airplane with a bad wing spar is not one-tenth part of that which comes from an automobile with bad brakes, yet the airplane is subjected to a relicensing rule that no one ever thinks of imposing on the automobile. Aircraft have now reached the point where they ought to be put at least on a common footing with other vehicles that constitute a far greater menace to the innocent public.

In the one-year intervals between license renewals, every plane must be checked over by a licensed mechanic at least at seven-day intervals. Good practice, to be sure. A practice that most owners would no doubt observe of their own accord. But not, we suggest, a practice that the Aeronautics Branch as the guardian of public safety should be charged with forcing upon every owner.

Every time the plane is flown, even though no one but the owner ever flies it and he never flies any other machine, the fact must be recorded. It must, in fact, be recorded repeatedly, for regulations require that airplane, engine, and pilot each have a log-book.

In commercial operations, or for pilots who hold or who expect to seek commercial employment, all this paperwork is genuinely valuable. Exacted from the private owner-pilot, it isn't worth the trouble it makes. It doesn't seem to us any more the business of the government to make every pilot keep up his log-books than it would be to prescribe that every farmer should keep a Diary

EDITORIALS - Aviation : Edward P. Warner editor.

05 October 1933 : Flight : To Aid the Gorell Committee A MEETING was held at the Royal Aero Club on Thursday, October 5, in order to elect three persons from among those interested who can answer question concerning *the point of view* of those using private aircraft, before the Gorell Committee. Those elected were

1. Maj. H. J. Petre (R.Ae.C. nominee),
2. W. L. Runciman and
3. Mr. F. D. Bradbrooke.

12 October 1933 : Margaret Fane obtains PPL, works towards Air Engineer's certificate. CPL obtained 29 August 1935 (Joined C.P in YVR!)

30 October 1933 : the last Curtiss Aileron patent expires.

1933 Imperial Airways (UK) finally realises continuous service to the Cape Town, South Africa

1933: RCAF reorganisation as "military air service" continues.

## Notes on "Civil Aviation"

1933: Formation of 1st "service squadrons ". No. 4 (Flying Boat) Squadron RCAF - Vancouver, No. 5 (Flying Boat) Squadron RCAF - Dartmouth, No. 7 (General Purpose) RCAF - Ottawa and No. 8 (General Purpose) RCAF - Winnipeg.

1933 : Royal Air Force, Halton, upon the occasion of the Passing-Out of the 22nd (September, 1930) entry of Aircraft Apprentices.

Of the 550 boys originally attested :

69 were posted to the Electrical and Wireless School for training as Electricians and Wireless Operator Mechanics ;

8 were granted discharge by purchase ;

21 were discharged as " Unlikely to become efficient airmen " ;

9 were discharged on medical grounds ;

3 were remustered to Aircrafthand ;

4 died ;

12 were transferred to junior entries ; and

14 were transferred from senior entries,

leaving 438 to pass-out from Halton

These have 438 been trained as follows :

Fitters, Aero Engine, 237 ;

Metal Riggers, 172;

Fitters, Armourer, 15; and

Coppersmiths and Sheet Metal Workers, 14.

As a result of the final examinations :

69 Aircraft apprentices, have been classified as Leading Aircraftmen ;

323 have been classified as Aircraftmen, First Class ;

38 have been classified as Aircraftmen, Second Class ;

3 aircraft apprentices failed to qualify ; and

5 were not examined owing to sickness.

The number of apprentices of this entry who have been classified as either Leading Aircraftmen or Aircraftmen, First Class, is approximately 90 per cent; this is the highest percentage of any entry on passing-out.

The standard of cleanliness of barrack rooms and upkeep of kits and equipment is very satisfactory.

On the whole, the general behaviour of the entry has been excellent.

In games the entry has been above the average, particularly in swimming ;

6 apprentices of this entry have been selected to represent the Command, and

one was chosen to represent the Royal Air Force in the Inter-Services Swimming Championships.

Efforts have been made, with considerable success, to have every apprentice playing some, if not all forms of sport, the number taking part in no games at all being very small.

As a result of the final examination in educational subjects :

21 gained the distinction of obtaining 75 per cent, or more of the total number of marks ; in addition to these,

350 gained exemption from the educational test for reclassification to Leading Aircraftsman, by obtaining over 50 per cent, but under 75 per cent., while

67 failed to obtain 50 per cent, of the total number of marks.

### CANADIAN AVIATION - 1934

1934 : RAF still looks like a First World War force of wooden biplanes

Squadron Leader T. Stanhope Sprigg - Air Licenses published by Sir Isaac Pitman & Sons, London, 1934:

"The Air Ministry accepts no responsibility for the accuracy of the contents of this publication."

Contents.

Chapter headings:

1. Pilot's "A" Licence;

2. Pilot's "B" Licence;

## Notes on "Civil Aviation"

3. Master Pilot's Certificate;
4. Instructor's Certificate;
5. Navigators' Licences;
6. Ground Engineers' Licences;
  1. defined in the AND as "one who is licensed as a competent person for the inspection, maintenance, etc of aircraft and engines.
  2. essential to the operation of all British Civil Aircraft ( no machine may fly without prior inspection and the approval of the condition of the aircraft and engine.
  - 3.
7. Balloon Pilots' Licences;
8. Airship Pilots' Licences;
9. Wireless Operators' Licences;
10. Exhibition Parachutist's Licence;
11. Gliding Certificates;

### Appendices:

1. Syllabus of the Technical Examinations for Pilot's "A" and "B" Class Licences /
2. Syllabus of Examination for Navigator's Second-Class Licence /
3. List of Books for Study /
4. List of the Principal Civil Aeronautical Training Centres.

1934: Austin Air Service (Austin Airways) begins operation using Waco cabin biplanes.

1934 : the findings of the the Gorell Committee recommends that control off airworthiness of UK civil aircraft be handed over to an autonomous executive authority, to be composed of representatives of manufacturers, operators and under- writers. The Air Council accepted the recommendation in principle, but for the time being restricted the supervision of the the ARB to design and prototype inspection of aircraft up to 10,000 lb gross weight and fewer than 11 passengers. Dr. Roxbee Cox - Flight March 1939 page 227)

The Air Registration Board began this work in April 1937. ARB was responsible for the inspection of "subsequent" aircraft and for renewal of Certificates of Air-worthiness - irrespective of size (Dr. Roxbee Cox - Flight March 1939 page 227)

1934 : Prospect Point, BC - 11 Army Cooperation Sqn Royal Canadian Air Force operates float-equipped de Havilland DH 60M Cirrus Moth RCAF # 152?

1934 : The Commission Government of Newfoundland operate two aircraft.

1934 : The last Avro 504K aircraft in service was decommissioned. Thus ending the flying of "Imperial Gift" aircraft in Canada.

1934 : "British air power must include a Home Defence Air Force of sufficient strength adequately to protect us against air attack by the strongest air force within striking distance of this country" - Prime Minister Stanley Baldwin

FRIDAY, 27th April, 1934 - Ottawa : Parliament : With leave of the Senate, it was Ordered:-

That the said Report be placed on the Orders of the Day for consideration to-morrow. On motion of the Honourable Senator McDonald, it was Ordered, That an Order of the Senate do issue for a Return showing:

1. What assistance did the Government offer commercial aeroplane operators, if any, in 1933?
2. What further assistance, if any, is planned for commercial aeroplane operators in 1934?
3. What subsidy did the Government give the Flying Clubs in aeroplanes and cash in 1933?
4. Has this subsidy been increased for 1934? If so, why?
5. Do the commercial operators get the same subsidy for the same work done as the Flying Clubs? If not, why not?
6. Are airports in Canada being closed? If so, why?
7. Does the Government give any subsidy to encourage the airport operators?
8. What is the Government .doing to encourage the establishment of an inter-city passenger service?
9. Has the Government any definite policy as to the development of commercial aviation in Canada? If so, what is it?

## Notes on "Civil Aviation"

10. Is it the policy of the Government to operate air services in Canada as a Government undertaking or is the Government encouraging private enterprises along this line?
11. How much photography, mapping and survey flying was done in 1930, 1931, 1932 and 1933 by the Royal Canadian Air Force and what was the cost of same?
12. Could this work have been carried out by commercial operators? If so, why were commercial operators not used?
13. How much air mail flying was carried out by the Royal Canadian Air Force in 1930, 1931, 1932 and 1933 over a regular route and what was the cost of the same? Why was not this work done by commercial operators?
14. Would an independent committee made up in part of active commercial operators be of value to the country to investigate the aviation industry as a whole in Canada and bring in a recommendation to the Government?
15. To what extent has the Royal Canadian Corps of Signals taken over the radio service previously maintained by commercial Air Transport Firms in the Northwest Territories?
16. Are any extensions of this policy contemplated in the near future?

The Order is subsequently dated May 1, 1934. <sup>215</sup>

22 May 1934 : Ottawa : THE SENATE : The Honourable Senator Dennis, from the Special Committee appointed to consider the immense possibilities of the tourist traffic and to inquire as to the means adopted by the Government looking to its encouragement and expansion, presented their third Report : "of equal importance is the consideration of aviation in tourist travel.

Before the business recession a few years ago, this form of travel, both inter nationally and within Canada, was growing remarkably in volume and popularity; and the early future will witness a resumption of this growth. Therefore, the possibility of aerial transport should be explored in its relation to the tourist trade, and wherever possible, advantage should be taken of its utility and inducements" <sup>216</sup>

15 - 29 May 1933 : 3rd International Conference on Private Air Law, Rome.

July 1934 : Recognising that Adolf Hitler has plans on Europe, Britain initiates a program to expand the Royal Air Force.

02 August 1934 : England : Memorandum to "Short Service" Officers of the RAF :

*Short service officers* are reminded of the importance of *preparing* in good time *for return to civil life*.

Suggestions relating to educational preparation are contained in a memorandum which was issued to all commands in May, 1934.

*Copies of this document can be obtained* at any time *by application to station educational officers* and *will be issued by the latter without special application to all short service officers on posting from their flying training schools*.

*An important section of the memorandum deals with civil aviation*.

Certain commercial firms require candidates for posts as pilots to possess not only a commercial pilot's "B" Licence but (also) other licences such as:

1. the 2nd Class Navigator's Licence,
2. the Postmaster-General's W/T Air Operator's Licence, and
3. the "A" and "C" Ground Engineers' Licences.

*Short service officers* who contemplate seeking employment in *civil aviation* are *therefore strongly advised to obtain these licences before they leave the service*. Full particulars relating to the licences are contained in the memorandum. <sup>217</sup>

14 November 1934 : Hurricane prototype ordered by the RAF

1 December 1934 : Spitfire prototype ordered by the RAF

End 1934 : RCAF "bush pilots in uniform" remain involved in civil government air operations.

## Notes on “Civil Aviation”

1934 - Canadian Airways operate DH Rapide aircraft

**CANADIAN AVIATION - 1935**

November 1935 : prototype Hurricane first flight.

1935 : this organisation conducted a house-to-house ballot which involved people knocking on doors and asking folk to sign a pro-forma indicating that they supported the idea of all international problems being solved by peaceful means, with the League of Nations being promoted as the appropriate forum for settling such disputes, much as the UN is supposed to do today. The fact that this initiative succeeded in attracting some 11 1/2 million signatures was clearly something that the Air Ministry needed to take into account. After all, it appeared that a very substantial proportion of the population was saying that it did not wish to be associated with military solutions.

1935 : Canada - a plan for a national airline was being considered by Bennett's government. However, a fall election brought the Liberals back to power and Prime Minister William Lyon Mackenzie King put the transportation portfolio into the hands of Clarence Decatur Howe.

24 September 1935 : Meeting of the Imperial Committee on the "Trans-Atlantic Air Service" <sup>218</sup> classified as "Secret" wherein it is noted that within the Ottawa (Imperial) Conference with specific date of 16 August 1932, para 6A that "the Governments of the UK, Irish Free State, Canada and Newfoundland "should give every possible preference to the route".

- A. Great Britain:-
  - A. Sir William Clark, High Commissioner
  - B. Lieut.-Col. F.C. Shelmerdine, Dir. of Civil Aviation, British Empire ?
- B. Canada:-
  - A. H.Guthrie (Chairman)
  - B. Maj. Gen. A.G. McNaughton ( ?? ) with technical assistants from:
    - A. DND Rep.
    - B. Post Office Rep.
    - C. Dep. External Affairs
    - D. Dept. of Marine (and Fisheries)
- C. Newfoundland:-
  - A. Mr. Emerson
  - B. Mr. Hutchings
- D. Irish Free State :-
  - A. Mr. Lemass
  - B. Mr. Walshe

The key points submitted by the above committee <sup>219</sup> were:-

1. "The UK, Irish Free State, Canada and Newfoundland control the approaches to the most direct trans-Atlantic crossing"
2. The Aeronautical activities of foreign governments
3. It is imperative that steps be taken by the UK, Irish Free State, Canada and Newfoundland governments to safeguard their position relative to Trans-Atlantic Air Services.

the UK, Irish Free State, Canada and Newfoundland governments agreed to give precedence to the (London UK - Shannon? Ireland - Gander Newfoundland - Montreal, Canada) route and that

- v) they will not actively support the development of any other route
- vi) they will not give privileges to any foreign government of their nationals (corp's or citizens) in respect to
  - i) the operation of trans-Atlantic air services,
  - ii) the operation of trans-Atlantic steamer services,
  - iii) The establishment of Air Bases
  - iv) The establishment of air navigation facilities for such services
 without the full and prior consultation with each other.

<sup>218</sup> "Trans-Atlantic Air Service" British Cabinet Memorandum C.P 182 (1935) prepared by the Secretary of State for Air. Important to see also British Cabinet Memorandum C.P 164 (1935) and the minutes of the Imperial Conference 1932.

## Notes on “Civil Aviation”

1935 : A decision of undertaking is made by the British Air Ministry and the Canadian Government to invest into the construction of a major airport at Gander Newfoundland to support “Trans-Atlantic” air travel. “one the largest airports in the world to prepare for a war that hadn't started and to promote trans Atlantic air travel for land based aircraft that didn't exist.”  
<sup>220</sup> Newfoundland is still not part of Canada. The airport was to be the interior airport hub for an Imperial Airways air route.

1935: Canadian Airways Ltd operates Boeing A-213 'Totem' flying boat CF-ARF.

1935 Boeing designs Model 307 “Stratoliner” four-engined civilian airliner based on the Model 299 bomber. It combined the wings, tail, rudder, landing gear, and engines from their production B-17C with a new, circular cross-section fuselage of 138 in (351 cm) diameter, designed to allow pressurization. It wasn't long before commercial aircraft construction had ceased and entire new plants created to do one thing... build bombers. Only ten Stratoliners were built. and TWA sold back their five airframes to the Army when war was declared. They became known as the C-75 and were returned to TWA in 1944

1935 : British Gov't asks Canadian government to increase the annual quota of Canadian applicants to RAF to 25.

October 1935 : Conservative Richard Bedford Bennett defeated in the federal election

October 1935 : Liberal William Lyon Mackenzie King regains power.

October 1935 : Ian Alistair Mackenzie (veteran of the First World War) obtains the National Defence portfolio. Prime Minister King, concerned about the tensions prevailing worldwide, decided in

### CANADIAN AVIATION - 1936

March 1936 : prototype Spitfire first flight.

07 March 1936 : Ground forces of the German Reich enter and occupy the Rhineland, a designated “de-militarized zone” providing a buffer between Germany and her borders with Netherlands, Luxembourg, Belgium, and France in the 1920 Treaty of Versailles. This action also violated the 1925 Locarno Pact.

1936 : UK : Air Navigation Act 1936. The Secretary of State for Air delegates “certain of his functions” in respect of civil aircraft, previously undertaken by the Civil Aviation Department - A.I.D, to an Air Registration Board “A.R.B” (formally constituted in 1937).

The ir Registration Board comprised:

- A. four operators appointed by the trade interests (Companies not Trades-persons / Trades-men) concerned,
- B. four constructors / manufacturers' appointed by the trade interests concerned
- C. four insurers appointed by the trade interests concerned,
- D. a representative of the general public appointed by the Secretary of State
- E. a professional pilot with not less than five years' experience as a pilot of civil aircraft appointed by the Secretary of State,
- F. four independent members appointed by the Board.

The duties of the Board:

To advise the minister responsible for civil aviation on matters pertaining to the airworthiness of civil aircraft, eg the approval of modifications to aircraft, the renewal of certificates of airworthiness, daily inspection certificates, etc.

Following the government's acceptance of the recommendation of the Committee of Inquiry into Civil Air Transport, 1967 to 1969, that a new body should be made responsible for the economic, operational and technical regulation of civil aviation, a new Civil Aviation Authority was created under the Civil Aviation Act 1971 and the work of the Board was incorporated within it.

1936 : RAF Squadron Leader Swain - wearing a pressurisation suit - reaches a height of 49,944 feet in the Bristol 138 high altitude monoplane

1936? : The Grumman corporation “Goose” a name originally bestowed on the aircraft by the Royal Air Force.

1936 : The design code used for de Havilland civil aircraft was **AP1208**, 'Airworthiness Handbook for Civil Aircraft', but usually with **AP970** ('Handbook of Strength Calculations') mentioned as the source of methodology for derivation of load factors and **Practical Aircraft Stress Analysis**.

1936 : **Air Publication 1208** categorises 3 Categories of “Civil Flying Machines” and their airworthiness requirements:

- A. **Normal** - the requirements are quite clear,
- B. **Aerobatic** - the requirements are quite clear
- C. **Special** - "for aircraft in the Special category definite requirements are not specified as each individual aircraft will be treated on its merits".

1936 : UK Air Ministry Air Publication AP1208 - Airworthiness Handbook for Civil Aircraft

## Notes on "Civil Aviation"

1936 : UK Air Ministry Air Publication AP970 - Handbook of Strength Calculations.

1936 : Pitman's (UK) publishes Practical Aircraft Stress Analysis, by de Havilland Technical School lecturer D. R. Adams.

1936 : The National League of Airmen (NLA) interested in exploiting the flying club movement.

1936 : The Air League of the British Empire (ALBE) interested in exploiting the flying club movement.

1936 The National League of Airmen approaches the Air Ministry with a plan for "Business Houses Flying Clubs". The notion was that fifty business houses would each sponsor a flying club and that the men joining these clubs would be available for service in the event of an emergency. Coincidentally, this proposal was submitted to the Ministry just as it was considering the creation of the Volunteer Reserve - RAF.

1936? : SPITFIRE DESIGN aerodynamicist Beverley Shenstone MSc, HonFRAes, FAIAA,AFIAS, FCASI, HonOSTIV. As R.J. Mitchell's chief aerodynamicist, it was Beverley Shenstone who designed the Spitfire's wing - the wing that gave the Spitfire its crucial advantage in the Battle of Britain and beyond.

A quiet man, Shenstone never sought glory for his work, yet in recent years he has been credited as the man who persuaded Mitchell to adopt the ellipse - a modified ellipse that was unique in its shape and its combined use of two integrated aerofoil sections. **Shenstone's knife-edge shape reached far back into early aeronautics for its inspiration.** The other forgotten Spitfire design contributors : Mr Faddy, Mr Fear, Mr Fenner, Mr Shirvall, a Prof Howland and others.)

Beverley Shenstone had left his native Canada and early training as an RCAF pilot, to study at Junkers and then under the father of the delta wing - Alexander Lippisch in Germany in the early 1930s.

Beverley Shenstone became immersed in delta wings and flying wings under the father of the delta wing - Alexander Lippisch in Germany. He also became a glider pilot.

The story of how Beverley came to be in the right place at the right time is revealed for the first time. So too are the enigmatic tales of his involvement with the military, the intelligence world, Lord Beaverbrook, the USAF and Canadian aviation.

During the war Beverley Shenstone worked at the top secret Wright Patterson air force base and was involved with the UK Air Ministry and the pro-British movement in America when Beverley Shenstone worked for Air Chief Marshal Sir Wilfrid Freeman, the unsung hero behind British defence procurement.

Beverley Shenstone achieved high office - a President of the Royal Aeronautical Society, technical director at BOAC, chief engineer at BEA and a consultant to several aircraft makers.

Beverley Shenstone courted by Avro, de Havilland and Vickers, and was the force behind the renaissance of human-powered flight. Using exclusive access to his family documents, his unpublished autobiography and many notes and stories, as well as forensic research, this book details for the first time, a new twist to the Spitfire's story and the secrets of its advanced science. A tale of design and military intelligence reveals a story of a man whose name should be more widely known in the UK, Canada and the aviation world (Secrets of the Spitfire: The Story of Beverley Shenstone, the Man Who Perfected the Elliptical Wing (Hardback) Lance Cole Published by Pen Sword Books Ltd, United Kingdom (2012) ISBN 10: 184884896X ISBN 13: 9781848848962)

1936 : RCAF reorganised as a purely military organization.

1936, a serving Canadian in the RAF made a proposal that would eventually lead to the creation of the BCATP. Group Captain Robert Leckie, then Superintendent of the RAF Reserve, submitted a memorandum detailing the strategic advantages of creating an aviation training facility in Canada.

August 1936 : Air Commodore Arthur Tedder, then Director of RAF Training, and Lord Swinton, the British Secretary of State for Air, put forward the idea to the Canadian Minister of National Defence, Ian Mackenzie. Mackenzie was very anxious to cooperate in all such matters, and stated that personally, he would be "...only too glad to accede" to this proposal.<sup>6</sup> However, when he put forward the matter to the Prime Minister in September, Mackenzie King had a very different opinion. This was reflected succinctly in Cabinet's September decision that it would be "...inadvisable to have Canadian territory used by the British government for training school purposes for airmen. Canada's Minister of National Defence Ian Mackenzie was ready to concede to Britain's will. Only Prime Minister Mackenzie King prevented this from occurring.

1936 : Department of Transport (DOT) created to take over responsibility for civil aviation matters from DND.

1936 : RCAF authorised to form three military squadrons of two flights each.

## Notes on "Civil Aviation"

No. 2 (Army-Cooperation) Squadron, No. 6 (Torpedo Bomber) Squadron, No. 3 (Bomber) Squadron

Post 1936 : RCAF's involvement in Civil Air Service Operations was supposedly limited to aerial photography and search & rescue

Post 1936 : RCAF begins development as a military air force.

1936 : J.K. Lewis, certified as Canadian civilian Air Engineer

1936 : T. McLaughlin, certified as Canadian civilian Air Engineer

1936 : UK Air ministry conducts investigation into UK airframe manufacturers (Process and procedure, staff, skills etc).

1936 : Irish government establishes Aer Lingus, similar to TCA (Lieutenant Colonel Michael C. O'Malley - thesis)

28 May 1936 : Parliament - Ottawa. **Topic:** WAYS AND MEANS, **Subtopic:** DEPARTMENT OF NATIONAL DEFENCE  
Charles Grant MacNeil (Co-operative Commonwealth Federation C.C.F.):

The fact that \$4,130,000 has been voted for the Royal Canadian Air Force, an increase of 81,000,000 over last year's vote, and only \$1,262,000 odd for civil aviation, an increase of only \$511,406 over last year's vote, prompts me to make a few observations regarding what I consider a serious inconsistency <sup>221</sup>. I find that during the years of depression this parliament has voted various sums exceeding in total \$122,000,000, and it is interesting to contrast that with the contributions from the federal treasury for relief purposes, about which there has been so much criticism, amounting to \$160,000,000. In my opinion all we have now as a result of that enormous expenditure by the department is what the officers of the force themselves describe as a bow and arrow army and a teakettle navy. As regards the aviation branch, something which is in the initial stage of development in Canada, I suggest that as far as possible we should avoid the mistakes which have been made in the past and see to it that this branch is not cluttered up with the obsolete traditions from which the military and naval branches have suffered in the past. We are asked again this year to vote, apart from the item now under consideration, some \$25,000,000-and in that amount I include the votes for the various buildings and the votes made available for national defence through the supplementary estimates-all representing a substantial increase over the vote of last year. It seems to me that this should be subjected to the most rigid scrutiny. The minister has said that this appropriation is for purposes of defence, but I may say in this house-and my opinion is corroborated by many men with expert training in military matters-that this is simply a \$25,000,000 cardboard front as far as defence purposes are concerned, a cardboard front behind which there operates to a large extent a social patronage racket. When we come to aviation we find that civil aviation is sacrificed to the military branch, which is not competent to any degree to assume responsibility for the technical training of young men, and so far there has been no indication from the minister that the department is prepared to undertake technical training of the nature required. Surely any military expert will agree that under present conditions there is nothing more urgent than technical training, from the standpoint of defence, if the nation desires defence. Supply-Defence-Civil Aviation In the various aviation clubs across Canada we have a very efficient organization. The young men associated in these clubs, the minister will agree, are making a notable contribution to the development of aviation in Canada. Much of the important research work which is necessary is being conducted under the auspices of this organization, and as far as I can discover it is the one agency by means of which young men may find some opportunity to secure technical training and to keep abreast of developments in aviation in the world to-day. They are eagerly and enthusiastically taking advantage of that opportunity as far as they are permitted. From my personal experience the majority of the instructors attached to the flying clubs are rendering the country admirable service and doing whatever is possible, under the serious handicaps from which they suffer, to promote aviation in the way in which it should be promoted having regard to the development of our country. In connection with the purchase of equipment I wish to bring to the attention of the minister the fact that the general staff of the department who decide this matter are apparently palming off on our flying clubs equipment that is so obsolete that if they accept it at the present time, under the regulations, as I understand, for at least three years they cannot possibly secure access to modern equipment or obtain instruction in blind flying and in the latest aids to aerial navigation which are now being brought out. This is a policy radically different from that which has been sponsored by the British air ministry. Let me refer again to this particular purchase of equipment indicated in the return I mentioned previously. These planes are described in an article in the current issue of *Cavalcade*. The eight planes are Avro Avians with Genet-Major engines: A type of light aeroplane that has not been built in Canada since 1929. Their motors are five cylinder 100-110 horsepower. Their speed is only 100 m.p.h. Their carrying capacity is 458 pounds. Three years ago the last Mark IV Avians were washed out as obsolete by the Royal Canadian Air Force. This year the government of Canada has bought eight of the machines for issue to civilian flying clubs and paid \$3,498 apiece for them. The Ottawa Car Manufacturing Company was the vendor. No tenders were asked. The Hon. T. P. Ahearn, who contributed substantially to the victory of

<sup>221</sup> [http://www.lipad.ca/search/?q=airworthiness&pol=&par=&sd\\_year=1917&sd\\_month=1&sd\\_day=1&ed\\_year=1950&ed\\_month=12&ed\\_day=31&sb=on&so=on](http://www.lipad.ca/search/?q=airworthiness&pol=&par=&sd_year=1917&sd_month=1&sd_day=1&ed_year=1950&ed_month=12&ed_day=31&sb=on&so=on)

## Notes on "Civil Aviation"

Liberalism, is president of the Ottawa Car Manufacturing Company. I am not at the moment particularly interested in that angle, but I have before me an advertisement which appeared in the issue of March, 1933, of Canadian Aviation, and in which these same Avro Avians, I understand, were advertised at "a new low price record." The advertisement reads: The Avro Avian can now be purchased on the deferred payment plan and offers a saving to prospective aircraft owners never before equalled. Fifteen hundred dollars cash payment and you can own a new Avro Avian with Armstrong-Siddeley Genet-Major engine, 100110 h.p. The balance you "pay as you fly" in twelve monthly instalments of \$140 each. The advertisement goes on to say that these planes are "completely modified." In every respect the purchaser of an Avian is the owner of one of the most up to date, Canadian-built, light aeroplanes suitable for training, sport and commercial use. Write for further particulars. Sole Canadian manufacturing and selling rights, Ottawa Car Manufacturing Co. Ltd., Ottawa, Canada. The government paid the sum of \$3,498. That, I submit, is not giving civil aviation the encouragement it deserves, particularly in view of the splendid record established in this branch by young men attached to flying clubs in this country. I feel that the government made a decidedly bad bargain. These machines were listed at a lower price in 1933 and intervening years. Surely they have not appreciated in value since that time. It is unquestionable that they are hopelessly outdated for purposes of aviation instruction at the present time; that they are obsolete from every point of view for such uses. Furthermore, the safety factor enters in, for if these machines have been in the stock of the Ottawa Car Manufacturing Company for seven, eight or nine years, having been purchased in the boom years when it was anticipated that there would be a remarkable development of aviation, it stands to reason that the wooden struts and the fabric in these machines must have deteriorated, and not even the most rigid inspection under the auspices of government inspectors can guarantee that they are airworthy for purposes of instruction. After all, machines used for these purposes stand considerable rough usage. The point I particularly wish to stress is that these machines are obsolete, and in providing them for flying clubs-and there is no indication in the return tabled 'by the minister that anything but obsolete machines will be furnished to the flying clubs-the department is seriously handicapping this work. It is of little advantage to this country to vote large sums of money for the development of flying fields if the young men who are interested in the technical development of the industry are in this manner precluded from keeping abreast of modern technical requirements. Supply-Defence-Civil Aviation.

July 1936 : "Air Defence" of Great Britain is replaced by 4 functional commands:  
Fighter (including Army Cooperation and Observer Corps),  
Bomber,  
Coastal (responsible for all land-based maritime aircraft and flying boat stations)  
Training.

July 1936 : plans were made to re-equip the RAF: in addition to the new fighters already mentioned, shadow factory "scheme" (Programme) was inaugurated whereby the leading car-makers set up huge assembly plants for the production of aircraft and aero engines.

July 1936 : British Air Staff issue specification for a long-range heavy bomber resulting in the 4-engined heavies of Bomber Command during the Second World War.

July 1936 : England : against considerable opposition - three new commands were added to the RAF - Balloon, Maintenance and Reserve.

July - August 1936 : Prime Minister King decides RCAF to become Canada's first line of defence. RCAF is commanded by the chief of staff, Canadian Army.

1936 : Prime Minister King organises a Cabinet Defence Committee to co-ordinate and define government's policies.

- A. William Lyon Mackenzie King - Prime Minister;
- B. Ernest Lapointe - minister of Justice ?
- C. Ernest Lapointe - prime minister's Quebec lieutenant;
- D. Charles Dunning - Minister of Finance;
- E. Ian Mackenzie - Minister of National Defence..

August 1936 : Cabinet Defence Committee 1st meeting :

- A. Cabinet Defence Committee examines reports prepared by Canadian armed forces experts.

## Notes on "Civil Aviation"

- B. The news was bad and the deficiencies were many.
- C. Cabinet Defence Committee Cabinet therefore decided to embark on an aircraft and aviation equipment modernization program (was this civil or service?)
- D. Canada's financial resources extremely limited.
- E. Canadian government cannot afford to purchase as much equipment as the Department of National Defence (dnd) recommended,
- F. King thereupon began to take an increasing interest in the potential importance of the Royal Canadian Air Force (rcaf) for "the defence of the country".

September 1936 : Cabinet in Ottawa allocates approx \$75 million for a five-year rearmament program to build 23 RCAF squadrons. (twelve non-permanent squadrons equipped with advanced training aircraft and eleven permanent squadrons equipped with combat aircraft)

October 1936 : Canadian prime minister, William Lyon Mackenzie King meets with British Conservative prime minister, Stanley Baldwin. During this meeting PM Baldwin suggests PM King focus primarily upon military aviation for the future.

02 November 1936 : The "Department of Transport Act, 1936 item No. 5 is implemented in Canada. This results in the following changes to the structure of Canadian Civil Aviation regulation.

1. The Control and Supervision of the Civil Aviation Branch of the Canadian Department of National Defence is transferred from the Minister of National Defence to the Minister of Transport.
2. The Civil Aviation Branch of the Canadian Department of National Defence is transferred to the Canadian Department of Transport

The Air Regulations, 1938 Part I Short Title and Interpretation (p) contained the following definition of "Air Engineer": - "Air Engineer : means a person who is the holder of an Air Engineer's Certificate issued by the Minister authorising him to act as therein specified"

The "FORMS" section of the Air Regulations identify form no. 2400 as the "Application for an Air Engineer's Certificate".

## CANADIAN AVIATION - 1937

January 11937 : Aero Digest : CANADA

Airplanes are selling in larger numbers in Canada this year, according to the deHavilland Co., at Toronto, which reports early in

May the sale of 4 five-passenger Dragon Rapides to the Royal Canadian Mounted Police for patrol work on the Atlantic and Pacific

coasts, and 20 trainers to the Royal Canadian Air Force. The company now has twice the number of orders that it had during the similar period last year.

The Department of Transport has appointed 4 new assistant inspectors to the Civil Aviation Branch, bringing the total of inspectors and assistants to 22. The new appointees are K. F. Saunders, who will be stationed at Rimouski on the St. Lawrence; Donald Saunders, F. M. Carter, and G. C. Upson.

Figures just released by the Department of Transport show that Canada carried 1,159,834 lbs. of mail in 1936, a new record. This mail was carried on routes into regions served by no other mail transport, and a few intercity runs.

At the same time the Department reports that there were at the end of the year,

559 active private pilot licenses,

380 commercial pilot licenses,

65 limited commercial pilot licenses,

42 Air transport pilot licenses, and

533 air engineer certificates.

There were 43 private planes, 402 commercial planes, and 98 airports.

Airplane clubs during 1936 had a membership of 2492 and used 66 planes; 645 members were under instruction.

Club planes flew 17,324 hours and the 22 clubs trained 210 new private pilots and 34 commercial pilots, during the year.

Two new air mail routes were scheduled to start the end of May, the first from Prince George, B. C. to Takla Landing in northern British Columbia, and the second from Prince George to Fort Grahame, in the northeastern section of British Columbia.

These will be monthly flights to new mining camps and fur posts.

James Lytell Memorial Trophy, emblematic of the flying championship of the Montreal Light Aeroplane Club was presented to Dean Nesbitt by Air Vice-Marshal W. A. Bishop, V.C. Second prize was presented to Don Thompson by Dr. D. B. Mowry, president of the club, and third prize to Alec Graydon.

An aviation section at Halifax is being created in the Royal Canadian Mounted Police. Four planes are already available, each manned by a pilot and observer.

For some time the Mounted Police have been operating an air patrol on the Atlantic coast, but its personnel were officers and mechanics from the Royal Canadian Air Force. The new service will be administered and manned by the R. C. M. P. themselves.

A new flying service between Montreal and the northern Quebec mining fields, to be operated by Jack Moar to link this region with similar daily service to the mining areas of Ontario and Manitoba from Toronto and Winnipeg, is an expansion in operations of Skylines Express, Ltd., which is serving northern mining areas.

Five new twin-engined airliners will be used. The planes, now being built by Fairchild Aircraft, Ltd., will cruise about 180 mph. and will be especially designed for service in the territory over which they are to fly. Standard equipment will include floats, in summer and skis for winter flying, with wheels also optional. The aircraft will be equipped with two-way radio.

Total income of Mackenzie Air Service, Ltd. in 1936 improved to \$134,050 from \$109,784 in 1935, and \$118,734 in 1934.

Expenses were lowered and net income transferred to earned surplus after deduction of income taxes amounted to \$36,244

## Notes on "Civil Aviation"

against \$667 in 1935. Earnings equal 23.9 cents a share on the 151,500 shares of stock outstanding, before the recent public offering of 140,000 shares. On the basis of the 291,500 shares now outstanding, earnings would have equalled 12.4 cents a share. The company owns a joint interest in United Air Services, Ltd., along with Wings, Ltd. and General Airways', Ltd.  
Source \_ Aero Digest 1937 December

Canadian Airways recently took delivery of a Norduyn Norseman, Canadian-designed freight plane built at Montreal. The ship is being used on the Mackenzie River system, and is equipped with large doors to facilitate loading of bulky freight. When not used as a freighter, it carries eight passengers and two pilots.

Canadian Airways, Ltd., reports that 604,403 miles were flown from Sioux Lookout, Collins and Kenora from January 1 to freeze-up, during which period, 6912 passengers were carried as well as 4,876,899 lbs. of express. Pilots logged 6532 hours.

Mail service into remote northern British Columbia starts about January 10 between Ft. St. John via Gold Bar and Finlay Forks to Ft. Grahame, and from Ft. St. John to Nelson. Service will be operated by United Air Transport, Edmonton operator which will make 8 trips per year on the first route and 4 trips on the second. Formerly these outposts received mail once a year at best.

CANADIAN CAR & FOUNDRY COMPANY, LTD. MONTREAL, CANADA New York Office: 570 Lexington Avenue, N.Y.C.

After several years of expanding air mail services into the isolated northland, the Canadian Post Office Department announces that it has found it cheaper to use air mail than dog team mail services. Half the revenue from air mail services into the northland are profit for the government, being above the cost of air transportation. With similar loads of mail going by dog team, it is estimated the post office would be out \$100,000 more each year than the total revenue of the air mail service. A new high was established in air mail poundage in 1936, with 1,250,000 lbs. carried, according to preliminary figures. Nine new services were inaugurated during the year into the remote regions. Mining activity has been the principal reason for inauguration of new services and additional flights on existing routes.

Wings, Ltd., with a fleet of eleven planes, flew 770 tons of express and 6670 passengers in the first six months of 1936 as against 1000 tons of express and 7765 passengers in the entire previous year. The company showed a net profit of \$51,509 for the six months, as against a loss of \$11,309 in the previous year, M. E. Ashton, general manager stated. Stockholders approved a capital increase of 200,000 shares.

England's supply of Champion aircraft and automotive spark plugs will be filled by the output of a new \$500,000 factory located at Middlesex near London, England. The factory will be a one-story unit covering 33,000 sq. ft. of floor space and will meet the supply formerly filled from the Champion Canadian plant in Windsor, Ont.

TO CANADIANS ONLY: Commercial pilot, air engineer, 700 hours, desires position; or will buy suitable aircraft; or enter partnership, or what have you? Ed Fletcher, 52 Donald St., Winnipeg Canada

TRANS-CANADIAN AIRWAY - article by JAMES MONTAGNES : After building a chain of emergency landing fields in the un-inhabited bush regions of northern Ontario, Canada opens its much heralded northern trans-continental airway on July 1. Linking

Halifax with Vancouver in 16 to 18 hours, Europe- and Asia-bound mails will travel in new Douglas transports, six of which it is understood, have been ordered by the Canadian government for the new service. The new airway was designed not only to speed domestic mails but also as a vital link in the British Empire air service.

The Canadian government has gone to great detail in establishing a ground system of safety aids, which include a series of more than 25 four-way radio directional compasses, built and designed in the Dominion. These stations will give four bearings simultaneously, one in each sector, and neither pair of which need be direct opposites, thus giving four distinctly different bearings.

In the Rocky Mountain sector of the route, special radio beacons have been installed to overcome difficulties found to result from the surrounding high peaks. The mountain route is through Crow's Nest Pass, the lowest pass on the route to Vancouver among mountains more than 9000 ft. above sea level.

**Ground operations** of the airway **will** be carried out **by the Air Service Branch of the Dominion Department of Transport**, and includes (besides the radio beam stations) marker radio beacons, the latest in floodlighting, boundary lights, and searchlights on all main and emergency landing fields. A teletype weather service with hundreds of weather observation stations sending in data is ready to start operations.

Close to \$10,000,000 will have been invested by the government on the ground and safety system when the airway opens for mail traffic this summer.

The route will be from Halifax to St. John across the state of Maine, to Montreal, where the trans-Atlantic and United States routes connect. From Montreal via Ottawa, Elmsdale, Cobalt across northern Ontario to Winnipeg, Regina, Lethbridge, Cranbrook, Princeton to Vancouver. United States lines connect at Winnipeg and Vancouver. Arctic routes connect at Winnipeg and Lethbridge.

A difficulty on the route was the bridging of northern Ontario, where virgin forests, lakes and a trans-continental railway right of way are the only landmarks. This northern route (instead of the Lake Superior crossing) was chosen because it is comparatively free of fog. It required the clearing of 30 fields from virgin forest, dynamiting stumps, taking out rocks and boulders and filling in muskeg. Telephones now link these northern fields.

The airway will operate for the first year with mail and express.

Passengers are not expected to be carried for some time, but may be flown on limited sections. ***The airline will be a private company with railway and Canadian government financial interest.***

When the service gets under way, the transports will leave Montreal with mail about 6 p.m. and be in Vancouver in time for delivery of mail the next afternoon, Hon. J. C. Elliott, Post-master General told the House of Commons during consideration of post-office estimates.

The schedule will be so arranged that the 3000-mile route will be flown in the night, with the exception of the hop through the Rockies.

Canadian government's estimates for the year 1937-38 includes \$11,752,650 for aviation, a sizeable increase over 1936. Part of the increase is due to new defense expenditures, which include the purchase of 12 fighters, 3 army-cooperation, 7 flying boats, 24 bombers, 11 torpedo bombers, 18 coastal reconnaissance planes and 27 trainers. The R.C.A.F. is to be increased by 48 officers and 565 men, bringing the permanent force to about 1700. The non-permanent force is also to be increased to make a total of 1075.

Expenditures for civil aviation now come under the Department of Transport.

The Toronto Flying Club's new officers elected at the annual meet-

## Notes on "Civil Aviation"

ing early last month are: Sidney B. Cleverley, pres. ; W. M. Alexander, vice-pres. ; J. O. Shaughnessey, sec, and J. M. Burgess, R. E. H. Bowman, T. R. Loudon and H. R. Bertram, directors.

General Airways, Ltd., Wings Ltd., and Mackenzie Air Service, Ltd., are being amalgamated and will be known as United Air Services. These companies have all been active in flying passengers, freight and express to mining districts from eastern Quebec to the Pacific coast Combined they have 26 planes as well as radio stations, and they will continue under their present individual managements. The purpose of the amalgamation is to effect a saving by the joint purchase of planes, equipment and supplies.

deHavilland Aircraft Company of Canada, Ltd., in its statement for the fiscal year ending September 30, 1936, reports sales reduced from \$160,275 a year ago to \$155,942, a small reduction in gross profits from \$21,954 to \$21,247 and a decrease in the deficit carried forward from \$30,683 to \$28,000.

Relics of the earliest developments in Canadian aviation are now being preserved, and the story of Canada's part in the progress of aviation will be told in a collection now being assembled for the newly established aeronautical museum housed in the building of the National Research Council in Ottawa.

Fleet Aircraft Corp., Fort Erie, Ont., received an order for 20 training planes from Argentina. According to J. W. Sanderson, general manager, the planes will cost about \$100,000. This is the first order for training planes which the new Ontario Fleet plant received from a country in South America.

A three- to four-month trip to Central and South American countries has been undertaken by Lieut. Howard F. Klein who is piloting a Canadian Grumman two-place fighter on a good will and sales demonstration tour. Frank Ambrose is accompanying Lieut. Klein as co-pilot and radio operator.

The plane is the standard U. S. Navy carrier type recently released for export by the U. S. Government. However, Canadian Car & Foundry Co., Ltd., licensee in Canada, have installed flaps which are not included in the regular Navy job. Power is supplied by a 750 hp Wright Cyclone equipped with a Hamilton Standard controllable pitch propeller. Included in the equipment being carried by Lieut. Klein is a two- way radio, the Coffman cartridge type engine starter.

No speed records will be attempted during the trip, inasmuch as it is intended to give ample time to various government officials who desire to inspect and test the plane. Canadian Grumman fighter powered by a 750 hp Wright Cyclone

**Ocean Service :** As the result of negotiations with the Canadian Government, the final diplomatic obstacle to joint operation of a "Trans-Atlantic" air-line by British (Imperial Airways) and American (Pan-American Airlines) companies has been removed. ***A final proposal in connection with the location of terminals on this side of the Atlantic has been approved by the Canadian Government and an agreement has been reached by Canada, the United States and Great Britain which provides for reciprocal operation of aircraft involved over their respective territories as well as the reciprocal use of terminals,*** with New York the western terminus.

Bids will soon be considered by the "Post Office Department" for the transport of mail over the Atlantic, and, as a final preliminary to a service which calls for four trans-oceanic flights a week, the first test flights will be made.

The plan provides for alternate trans-atlantic mail service in the Winter months by way of Bermuda and the Azores. Pan-American Airways and Imperial Airways have obtained a concession ***for the next 25 years*** from Portugal for stations in the Azores and at Lisbon. Both Imperial Airways and Pan American plan to use this route in certain seasons until equipment has been perfected for all-weather sub-stratosphere flying over the northern route. (Quantas and Imperial Airways have a similar agreement with the USA and Canada for the Trans-Pacific mail service)

To provide Canada with trans-continental air mail, express and passenger service ***which will connect with the Trans-Atlantic air mail service*** , a "Trans-Canada" Air-Line ***will be organized by the Dominion Government*** with capitalization of \$5,000,000 divided into \$100 shares ( 50,000 shares) ***underwritten by the Canadian National Railway System.*** The proposed company, ***a private corporation,*** would be given exclusive contracts to carry mail, passengers and express. At first ***the company will be subsidized for two years,*** at the end of which time it is expected an efficient service will be operating.

## Notes on "Civil Aviation"

For purposes of organization of the "Trans-Canada" Air-Line, a number of officials of the Department of Transport are selected to act as "incorporators". They are:-

Col. V. I. Smart, Deputy Minister of Transport (C.D Howe is Minister of Transport);  
R. K. Smith, Director of the Marine Branch, Department of Transport;  
Commander C. P. Edwards, Director of the Department of Transport's "Air Service";  
E. B. Jost, General Superintendent of Canals ; and  
F. M. Mac-Lennan.

30 July 1937 : Trans-Canada flight of FC-CCT carrying DOT and CNR officials:

1. D.W Saunders
2. L. Parmenter, engineer
3. FI Banghart Airport Mgr.
4. W.H Hobbs Secretary of TCA and CNR
5. H.J Symington member TCA & CNR B.O.D
6. C.D Howe, Minister of Transport
7. Sqn.Ldr J.H Tudhope Chief Pilot
8. Lt.-Cmndr Charles Peter Edwards, RCN - chief of the D.O.T Air Service 1927 / Dept. of Marine and Fisheries 1925 / Deputy Minister of Transport 1941 - 1948 / Deputy minister for Air 1948 - (Naval Officer in the Royal Canadian Navy during the First World War - Was Director of the Canadian Government Radio Branch in 1921 - in 1939 He ordered all Ham Operators to dismantle and render inoperative all radio equipment.)
9. J.D Hunter, co-pilot
10. John A. Wilson Controller of Civil Aviation
11. George Wakeman divisional inspector, D.O.T Air Services
12. D.R MacLaren TCA

## Notes on "Civil Aviation"

Lancaster long range transport Lancaster XPP variant registered CF-CMT is first flown by E.H. Taylor on 9 September, 1943; went into service with Canadian Government Trans-Atlantic Air Service (CGTAS) for mail and VIP service between Dorval and Preswick. The Lancaster XPP carried ten passengers and crossed the Atlantic in about twelve and half-hours

May 1938 : Laurentian retains all but 1.54 acres of its' Uplands, Ottawa property - The airport is sold by Uplands Ltd to the Canadian Government for the sum of \$37,500 - the amount offered by Colonel V.I. Smart on March 15th. The Canadian Government was soon building 2x 200'x3000' runways with ground facilities which officially opened in August 1938.

Postal rates will be fixed from year to year on the basis that if there is a deficit the first year the rates will be increased the next year to an extent estimated to produce sufficient revenue to meet the deficit. If there is a surplus the rates will be reduced, providing they will not be lower than competitive rates.

1937 : Canadian Government Budget : Designed to encourage airplane production in Canada, the 1937- 38 budget of the Canadian government provides for a 60% drawback allowed on materials, including all parts, imported for use exclusively in the equipment

of aircraft. The same drawback is to apply to parts for the assembly in Canada of engines Formerly a drawback was allowed only for parts used in the manufacture of engines. The change allows their assembly in the Dominion, and the duty for the importation of complete airplanes remains.

In recognition of his contribution to the advancement of aeronautics during 1936, Matt Berry, pilot for Canadian Airways, Ltd., received the McKee Trophy which was presented by Air Vice-Marshal W. A. Bishop, V. C, at the annual convention of the Canadian Institute of Mining & Metallurgy.

A record round- trip flight of 1006 miles "from Rimouski n to Harrington Island on the north shore of the Gulf of St. Lawrence " was made in 8 hrs. and 5 min. by a Canadian Airways plane piloted by V. J. Hatton. More than 800 lbs. of mail and several passengers were flown on the trip. This marked the first time since the inauguration of mail flights along the north shore that the round-trip was made the same day.

United Air Transport, Ltd., of Edmonton has secured a temporary contract to carry ordinary first class mail (up to 600 lbs.) on one round-trip a week basis between Edmonton, Peace River and Grand Prairie, Alberta and Dawson Creek and Ft. St. John, B. C. The round-trip distance is about 1000 miles.

Canadian Car & Foundry, Ltd., Montreal, Canada has taken over the manufacturing rights to the Burnelli UB-14 twin-engined transport airplane, and are expected to prepare for its production in the near future. The Burnelli is adaptable for seaplane use being easily convertible for water operations and can be fitted out as a cargo carrier for operations in Canada where more freight is carried than in any other country.

THE BURNELLI type of transport "introducing new standards of efficiency and safety" will soon be available for **British Empire** service, following the acquisition of manufacturing rights **by this organization**. The lifting fuselage consolidates detached units and supports 25% of the gross weight. Greater safety is derived from the structural arrangement in which the cabin section is protected by approximately 60% of the total structure of the airplane, with powerplant forward. Additional advantages include the reduction of turning moment for single engine operation; accessibility of powerplant and landing gear in flight; large cargo space, and adaptability to seaplane conversion. Of sturdy yet simple construction, the Burnetii sells for less than comparative conventional types.

Canadian Car & Foundry also offers for export the famous Grumman two-seater fighter, now available as a convertible advanced trainer with pursuit performance; and the CCFN-I, sturdy primary trainer. CANADIAN CAR & FOUNDRY COMPANY, LTD. MONTREAL, CANADA

Non-stop 1 hr. 59 min. service is now offered between New York and Montreal, Canada, by Canadian-Colonial Airways. The new service is operated by American Airlines, Inc., under contract with the Canadian company and places in international operation 21 passenger Douglas Flagships.

## Notes on "Civil Aviation"

Lower Fares : Uniformity in US airline fares on coast-to-coast and inter-city service has been achieved. United Air Lines and American Airlines have reduced their fares between New York and Chicago and between both coasts, charges now being \$44.95 and \$149.95 respectively. TWA recently adjusted its fares to conform to the new rate structure

and in the USA : Aeronautical Engineering Degree - in 2 years : Become an Aeronautical Engineer. Tri-State College course given in 108 Weeks. Bachelor of Science degree. Graduates in Mechanical Engineering can complete aeronautical course in 2 terms (24 weeks). Thorough training in all fundamental engineering subjects. Equipped with wind-tunnel (see Illustration). Non-essentials eliminated. Courses designed to save student time and money. Flying school facilities available at nearby airports. Properly trained engineers in design, research, manufacture and sales work are in demand. Enter September, January, March, June. Courses are offered also in Civil, Electrical, Mechanical, Chemical, Radio Engineering ; Business Administration and Accounting. Living costs and tuition low. Those who lack high school may make up work. World famous for technical 2-year courses. Graduates successful. Write for catalog. 1017 COLLEGE AVE., ANGOLA, 1 N D. TRI-STATE COLLEGE

in 1936 \$581,919 worth of American aeronautical products were exported to Canada. The value of aeronautical products exported from the United States from 01 Jan 1936 through October 1936 was more than 50% ahead of that for the same 1935 period and almost 28% better than the full year 1935. During the first ten months of 1936, the USA exported: 403 aircraft valued at US \$8,786,326; 727 engines valued at US \$4,128,444 ; \$266,794 worth of parachutes, and \$5,089,513 worth of parts and accessories, bringing the total to \$18,271,077 not including exports to US non-contiguous territories which raised the total to \$18,551,361. This compares with \$12,221,302 for the first ten months of 1935.

February 1937 : London, UK : The Air Registration Board, set up - The Air Board:

1. is to undertake such functions in connection with
  1. design,
  2. construction and
  3. maintenance of civil aircraftas *may be delegated to it* by the Minister of Civil Aviation.
2. is responsible for the *issue* of Certificates of Airworthiness to all British civil aircraft.

23 February 1937 : Parliament, Ottawa **Topic:** DEPARTMENT OF NATIONAL DEFENCE - Supply-Defence-Air Force  
Abraham Albert Heaps Co-operative Commonwealth Federation (C.C.F.) : Would the minister tell the committee the number of machines the government has in service in the air defence of Canada?

Ian Alistair Mackenzie (Minister of National Defence) Liberal : At the present time the total in Canada is 182 aeroplanes. There are 8 fighter Siskins now obsolete; 18 army cooperation of which 15 Atlas, now practically obsolete, and 3 Avro No. 626 ; 4 Vancouver flying boats, which are obsolescent; 7 new torpedo bombing Blackburn "Sharks," only 4 of which have been delivered so far, but which are modern service planes; 105 various types of training planes, many obsolete, and 40 transportation planes of different types used on various government services, particularly civil government air operations, making a total of 182. The present estimate provides for an increase of 102 planes, as follows: 12 fighter planes, 3 army cooperation planes, 7 flying boats, 24 bomber planes, of which 18 are used Wapiti planes, and 6 new Avro No. 626, 11 torpedo bombing planes, 18 coastal reconnaissance planes, and 27 training planes.

Abraham Albert Heaps : How many aeroplanes has the minister purchased since assuming office?

Ian Alistair Mackenzie : Since April 1, 1934, the following were ordered: October 3, 1934, 10 Atlas airframes from the air ministry; on May 27, 1935, 10 Civet Fleet airframes; on November 18, 1935, 6 Wapiti airframes, from the air ministry; on November 28, 1936, 5 Stranraer aeroplanes, from Canadian Vickers; on September 22, 1936, 10 Fleet trainer airframes; on May 11, 1936, 1 Avro tudor aeroplane, from Armstrong Siddeley; on May 4, 1936, 7 Torpedo "Shark" aeroplanes, from the air ministry; on August 29, 1935, 3 Avro type "626" aeroplanes, from Armstrong Siddeley; on August 23, 1935, 3 Northrop Delta aeroplanes, from Canadian Vickers, for civil government air operations; on August 9, 1935, 2 super-71 Fairchild aeroplanes, from the Canadian Wright Company, and on January 11, 1937, 4 Northrop Delta aeroplanes for civil government operations.

Abraham Albert Heaps : How many of these machines are now being operated by the government?

## Notes on "Civil Aviation"

Ian Alistair Mackenzie : All the planes as required and suitable, namely 182 of them; but few are modern service planes

Abraham Albert Heaps : Are any under repair?

Ian Alistair Mackenzie : Inevitably there are always some under repair. [...] machines were pronounced airworthy by inspectors whose duty it is to inspect them.

Ian Alistair Mackenzie : With regard to service planes, *technical officers in the air service consult with officials of the air ministry in England* and endeavour, generally, to have the same type of machines as is recommended by those officials. *I have here the recommendations of the [British] air ministry with reference to all the modern service planes which recently have been ordered in Canada.*

Croyden - London UK airfield circa 1937

## Notes on "Civil Aviation"

1937 : RAF Flight Lieutenant Adam reaches a height of 53,937 feet in the Bristol 138 high altitude monoplane after modification and improvement to both aircraft and pressurization suit.

1937 : control of the Royal Navy Fleet Air Arm is transferred to the British Admiralty, laying the foundation for the mutually successful partnership between the Royal Navy and RAF Coastal Command during WW2.

12 March 1937 : Frank Whittle [incorporation in March 1936 of Power Jets, Limited - Power Jets placed orders with the B. T-H (British Thompson-Houston) Company to provide design drawings of an experimental engine based on requirements Whittle had laid down at Cambridge to manufacture parts, and to make facilities available for testing, all on a cost-plus basis. B. T-H had been selected because it had experience supplying industrial turbines and compressors. It soon became clear that this background was not relevant to aircraft engines. Whittle rejected B. T-H's first design and then gave B. T-H a preliminary design to use. Despite many procurement difficulties, and the fact that neither the turbine nor the compressor had been run as an individual component, the first run of the engine was self-sustaining on March 12, 1937. June 30, 1939, Power Jets demonstrated to the ministry's director of scientific research a twenty-minute engine run up to 94 percent of design speed. This one demonstration led the director to conclude they now had the basis for an aero-engine. The ministry agreed to pick up the costs of parts for the experimental engine and gave Power Jets a contract for a flight test engine that was subcontracted to B. T-H. The ministry also contracted with Gloster Aircraft for an experimental aircraft, the E. 28/29. The W. 1 experimental flight test engine powered the first British jet flight successfully on May 15, 1941. By the end of 1940, before the E. 28/29 had flown, the Air Ministry decided to have the W. 2, a higher thrust engine, developed and produced to power a twin-engine jet fighter, the F9/40 *Meteor*. In October 1941, the U. S. Army Air Corps delivered a W. 1x engine, the W. 2b drawings, and a team of three from Power Jets Ltd. to the General Electric Company. This was the beginning of turbojet development in the United States. Knited in 1948, At age seventy, Frank Whittle would still confound younger engineers, who were apt to solve their aerodynamics problems on multimillion-dollar computers, by quickly getting useful results on the back of an envelope using his 5-inch slide rule. He closed his colorful career in the position of research professor at the U. S. Naval Academy. His textbook on gas turbine aerodynamics was published in 1981. source : [Memorial Tributes: National Academy of Engineering, Volume 10 \(2002\) Chapter: Frank Whittle: https://www.nap.edu/read/10403/chapter/47#255](https://www.nap.edu/read/10403/chapter/47#255) The National Accademies of Sciencees / Engineering / Medicine 500 Fifth St. N.W. | Washington, D.C. 20001]

21 March 1937 : UK HC : AIR SUPPLEMENTARY ESTIMATE, 1937. HC Deb 21 March 1938 vol 333 cc863-950 "Mr. Wedgwood Benn I beg to move, to leave out "83,000" and to insert "82,900."

My object in moving the reduction is to raise a discussion on various points, several partly arising out of the last Debate and others partly new points, to which I hope the Under-Secretary and the Noble Lord will be able to give a reply.

I do not intend to speak in any party sense. I regard the present situation as much too serious to allow us to indulge in any tilting, which is such a delightful occupation in this House.

We have to make our speeches upon information received.

Some of us have more and some have less information in our possession.

My first point is on the question of training.

Lord Trenchard said that the Air Force consisted of:

1. Engineering and
2. Flying

it was laid down by him many years ago that

1. all serving officers in the Air Force, however high their rank might be, ought to "understand engineering"—not to mean "engaging in engineering".
2. all serving officers in the Air Force, however high their rank might be, ought to understand the practice of flying.

I am told:

1. that this rule has gradually fallen into disuse.

## Notes on "Civil Aviation"

2. that practical flying and a knowledge of the technical side of flying among the higher ranks of the Air Force to-day is not at all what it should be, or
3. that practical flying and a knowledge of the technical side of flying among the higher ranks of the Air Force to-day is not at all what was laid down by Lord Trenchard's dictum. &
4. "The officer's task will be impossible unless the Navy is kept abreast of:
  1. the scientific progress of the age.
  2. the intellectual progress of the age.
  3. the physical progress of the age.
5. It is they themselves "The office" who must keep it there."
6. "The executive officer has been taught but a small amount of engineering, although the ship on which he is serving is a huge box of engines."

My points are:

1. whether the dictum of Lord Trenchard, about the necessary combination to produce a good Air officer with a practical knowledge of engineering and flying, is still holding the field in the higher ranks of the Air Service."
2. the failure of the Government to take the action which is recommended by the Cadman Committee in relation especially to the member of the Air Council responsible for production.
3. that the Minister for the Co-ordination of Defence [in his speech the other night] tried to meet this point by saying that "the Cadman Report was a report on civil aviation", whereas the point that I am raising is concerned with military aviation.
4. I do not think that the Cadman Report bears out the argument which was put forward by the Minister for Co-ordination of Defence.

The Cadman Report says:

"In our view the problem of the air is :

1. two sides of a single coin—and
2. the military aspect of aviation cannot fundamentally be separated from the civil aspect."
3. in dealing with the case of production:
  1. the Member of [the Air] council responsible under the existing organisation is a military officer.
  2. the Member of [the Air] council responsible under the existing organisation is appointed for a short period
  3. however distinguished an individual officer may be, the problems of aircraft production on a large scale are, with modern processes, so specialised that it is contrary to all sense to expect a military officer without previous knowledge and experience of such matters, and holding office for a limited term, to deal effectively with the situation.

That is what the Cadman Report says on the point. As I hope to show later, the enormous developments which must take place in the production of aircraft make that recommendation far more weighty even than it was at the time it was made.

The covering Memorandum, and the Minister for Co-ordination of Defence in dealing with this matter when it was debated in Committee, rejected the recommendation of the Cadman Report.

I think he was wrong.

I do not think his authority could possibly be set against the authority of the Cadman Committee.

I would press the Noble Lord or the Under-Secretary of State to deal with the point, because we are face to face with a very serious task.

It is not only a question of producing the sort of aeroplanes or the number of aeroplanes that we have been producing in the past.

It is unfortunately a question of multiplying our programme very greatly.

It is not to be supposed that a military officer who has been appointed for a short term and has no experience of anything of this kind, can possibly carry the responsibility of the enormously increased production that will be required.

According to the Minister, [The argument has been used] if we do not put a military officer at the head of the production department, the people in the squadrons will not have confidence; they will say:

1. Some manufacturer has invented this, and
2. it is not safe to buy it," but that

## Notes on "Civil Aviation"

3. if a serving officer were at the head of the production department, that would inspire confidence among the airmen.

There is something in the argument provided that the Air Council includes a flying officer in touch with engineering and with flying experience;

but:

1. if my first point is right, and
2. if appointments have become
  1. more a question of seniority and
  2. what is called the power of command.
3. then the confidence of the men who have to fly the machines will be shaken.

I am not sure that [in the past] the flying officer had quite that respect for the higher command [the higher command officers having both engineering understanding and flying ability] in these matters that perhaps they should have had.

In connection with this subject and some remarks made by the hon. Member for Mossley (Mr. Hopkinson) in our last Debate on the Estimates, I would call attention to some sentences in the report of the tragic court-martial on the loss of a Blenheim in an accident.

The hon. Member for Huntingdon (Dr. Peters) was defending the unfortunate pilot. Speaking about the Blenheim he said that it was the machine in which the Germans have a special interest. I believe it is the type of machine for which Lord Rothermere was originally responsible. The report states that the bomber

1. was sent to Ireland on a practice flight.
2. It got into difficulties and
3. came to grief.

The hon. Member for Hunting:  
defended the pilot,

questioned Squadron Leader Freebody as to whether the weather conditions were too severe. He asked: "Do you not think it was unwise to risk this flight?" The answer to that question was: "I do not agree."

The report goes on: "Dr. PETERS: But there was anxiety with regard to these aeroplanes in difficult weather?—  
WITNESS: Well, yes."

"Dr. PETERS: Was the squadron down in flying time, and did headquarters expect more to be done?—

WITNESS: Not more than we could do. It was understood that we could not fly a lot as we had not many machines."

Later, on the second day of the trial, there was the speech of Flight-Lieutenant Somerhaugh, who was acting as prosecutor, and it contained this sentence from an order relating to flying under which the first charge against the accused was made: "No excuse will be taken for disobedience of this order."

"That order," he said, "was not published in the book for fun. The Blenheim, until certain modifications were made, in the opinion of the authorities was hardly suitable for promiscuous flying."

I hope that the Under-Secretary will be able to reassure us on the point, because a war will not wait for the weather. It is disquieting to hear that a machine in which much pride is felt has failed in these circumstances.

**Mr. Benn** - "Air machines are like the top brick of a pyramid.

1. You have machines in the air and
2. below them your ground organisation,
3. below them your steel and material, and below them
4. the taxable capacity of the people.

You have many things to consider, but the Government ought to give us some assurance that judged by any yardstick we care to take, this parity is going to be secured.

In order to examine air power, you have to go into many other matters, and it is for that purpose that I propose to consider the German standard in the wider sense which the Prime Minister indicated. "

## Notes on "Civil Aviation"

Mr. Hopkinson's response: -

So far as my experience goes with:

1. commanding officers,
2. senior officers,
3. right to the very top of "the fighting side" [air crew] of the Royal Air Force.

there is a thorough realisation of the truth of the points which I have put before the House.

There is no suggestion [by the fliers] that they [apprentices] must have the cream of the best public schools. [actually that is exactly what the pre-entrance exams laid down by Trenchard did do!]

That [cream of the crop] idea [mentality or point of view re the Engineers] just does not exist [amongst the pilots] . [See trenchard memorandum]

Any young fellow who goes into the Air Force and is lucky enough to get a commission, whether permanent or temporary, will be judged as he is judged now on merit [originally this was a concept of academic achievement and also skill and capability, but by the early 30's the meaning to the pilots was "is he is liked and is he a kiss ass"], and merit alone. [to the pilots, the concept of doing anything but fly was firmly entrenched]

with regard to commissions given to the aircraftmen trained at the great school at Halton (No.1 School of Technical Training (Apprentices)) .

1. Halton has been run by a series of [Trenchard ?] enthusiasts who are very able men indeed.
2. It is a magnificent school, and
  1. the education which the boys get there is as good as they get at any of the best public schools in the country.
  2. the training which the boys get there is as good as they get at any of the best public schools in the country
3. The result is that a considerable proportion of the boys who pass out of Halton are really qualified to take commissions, and
4. some of the senior officer strongly feel that Halton boys ought to have rather more commissions open to them than is the case at the present time.
5. After knocking about with members of the Air Force of all ranks for several years past, I can certainly bring my own testimony to bear.
6. I have come across a considerable number of those boys who are fit to have commissions and ought to be given better opportunities of obtaining them.
7. I know the present position [in not giving the apprentices commissions] is partly due to the fact that they cannot be spared from their present [technical] duties, [meaning that the pilots didnt want them anywhere but in the ranks as tradesmen.]
8. Halton itself must be enlarged in course of time, and I hope that it will be.

10 April 1937 : Trans-Canada Air-lines created as a subsidiary of the Canadian National Railway.

10 April 1937 : J.T "Jack Dymont joins TCA as "Chief Engineer", retiring in 1969. (Dymont also chaired IATA technical cmtee for a year)

April 1937 : UK Air Registration Board (ARB) begins work. ARB composed of representatives of manufacturers, operators and under- writers controls airworthiness of UK civil aircraft - supervision of the the ARB to design and prototype inspection of aircraft up to 10,000 lb gross weight and fewer than 11 passengers. ARB responsible for the inspection of "subsequent" aircraft and for renewal of Certificates of Air-worthiness - irrespective of size. (Dr. Roxbee Cox - Flight March 1939 page 227)

20 May 1937 : First flight of the DH.91 "Albatross" prototype G-AEUV. Civil air transport aircraft of wooden sandwich construction.

May 1937 : RCAF reorganisation continues.

No. 3 (Bomber) Squadron RCAF becomes a purely bomber unit with the fighter flight becoming No. 1 (Fighter) Squadron.

RCAF Headquarters - Ottawa, Ontario

RCAF Station Camp Borden (landplane training)

No. 1 (Ab Initio Training) Squadron

No. 2 (Advanced Training) Squadron

No. 3 (Service) Squadron

"A" Flight - Siskin Fighters

## Notes on "Civil Aviation"

"B" Flight - Atlas types

"C" Flight - Communications - Fairchild 71 and Bellanca types

RCAF Station Vancouver, British Columbia (seaplane training)

No. 4 (Training) Squadron

No. 5 (Service) Squadron

June 1937 : RCAF Station Trenton replaces Camp Borden as the primary RCAF training centre. Schools included the RCAF Central Flying School,  
No. 1 Air Navigation School (to 1942),  
No. 1 Flying Instructor School, and  
No. 1 Composite Training School (Gunners were usually given the rank of Sergeant upon completion of their training).

20 June 1937, a Soviet-built ANT-25 monoplane landed at Vancouver Washinton's Pearson Air Field, completing the first airplane flight from the Soviet Union to the United States across the North Pole. The aircraft, with long, red, albatross-like wings, passed over the field in preparation for an unscheduled and unexpected landing. And although the arrival at Pearson Field was a complete surprise, there was no mystery as to the aircraft's identity. People around the world have anxiously followed its progress as its crew sought to be the first to cross the North Pole from Moscow to San Francisco. The three Russian aviators had endured 63 hours and 16 minutes in their cramped and cold aircraft and covered 5,288 miles. Later examination would reveal that a mere eleven gallons of fuel remained in the aircraft's tanks.

01 December 1937 : "You don't hear much about the air engineers but they play a vital part in making Canadian aviation safe". What was the biggest safety factor? To me it was the airworthiness of the aircraft and engine; and my thoughts reverted to Air Engineer Paul Davis who, up with the dawn, had inspected the craft from propeller to rudder, and later had affixed his okay to the flight report, thereby personally assuming all responsibility for the fitness of the machine.

While all other conditions were unfavorable, I knew from experience and Government statistics that the chances of being let down by this engine or through structural faults were a thousand to one in my favor.

Duties of an Air Engineer

WHERE WOULD the safety record be without the air engineer?

Let's see what the Government does to ensure safety in air travel.

It is all set forth in a little pamphlet called "Air Regulations" a collection of rules and regulations with which every pilot and engineer must be conversant, particularly when they are being examined for their licenses.

Like most important rulings, it is brief and very much to the point.

"No commercial aircraft shall fly on any day unless it has been inspected by an Air Engineer on that day . . . and until such Air Engineer has signed certificates of fitness of the flying machine to fly and the certificates have been countersigned by the pilot."

In short, provide the pilot with a stout ship and make someone directly responsible for its condition.

The pilot may disregard advice regarding bad weather conditions. He may fly with or without radio, and even without certain instruments which today are considered indispensable. In ordinary commercial flying, the only regulation imposed on him is that "he shall be responsible that the load does not exceed that specified in the certificate of registration, and that it is properly secured."

The air engineer is the man responsible for the condition of the craft.  
He directs the work of the mechanics;  
He inspects the plane and he "signs it off" before it takes the air.  
The ruling that he must do so is strictly enforced.

To him is due the fact that Canadian flying is characterized by very few forced landings through engine failure or structural defects.

## Notes on "Civil Aviation"

No other engineer, whatever his designation, works under such bad weather conditions.

In summer there is the extreme heat and the flies, which in the North Country are unequalled for numbers, size and voracity.

In winter the engineer is lucky if he has a nose-hangar in which to work, sheltered from a temperature that often sinks to forty below zero, and piercing winds.

Despite these handicaps, repairs are generally carried out in the open.

Commercial aircraft seldom see the inside of a hangar.

Nature at times plays tricks. Rotten ice, wind storms and flood provide the engineer with trouble in plenty, particularly when misfortune strikes at some distant Northern post or on the shores of a lake, hundreds of miles maybe from any settlement. In such cases, he is lucky if there are trees to provide poles for salvage work.

Some of the parts were damaged, so these were removed to a temporary workshop.

The machine could not be moved shoreward as the ice was too thin, so the surrounding ice was flocked daily to build up thickness, and extra skis were fitted to spread the weight.

While working on and about the machine, the engineers were roped for safety.

Each day someone fell in and had to be thawed out of his clothes, for the temperature fell as low as twenty-four below zero.

When the engine was being checked and while the valves were being ground, the temperature dropped to sixty below.

Little wonder that all suffered from frostbite, particularly on hands and wrists.

Work of this kind is much more strenuous than routine work at a base where refuelling, minor adjustments and repairs keep the engineer constantly employed.

At break-up time, equipment must be changed from skis to floats, and vice versa at freeze-up. As it is at these two periods that vacations are generally arranged, work frequently has to be rushed through with a depleted staff.

There are few slack periods if machines are to be kept in tiptop condition.

There never can be any slackening of vigilance on the part of the man who has to put his okay on the daily reports.

### Keeping Up With Developments

IN RECENT years there have been revolutionary changes in the design and construction of airplanes and their engines.

New alloys have come into use, combining lightness with strength;

new fuels are being developed giving greater power per engine unit;

new mechanical processes have been introduced into the fabrication and assembly of components.

In all these technical advances, the engineer must keep thoroughly posted.

Then there are always new ideas to be developed and tried out.

At Kenora, Ont., and Lac du Bonnet, where Engineers W. Tall and S. Tomlinson are stationed, a machine can be made ready to fly on fifteen minutes notice, no matter how low the temperature.

The older, more experienced engineers possess an uncanny knack of spotting incipient trouble, a kind of sixth sense. That is why pilots prefer certain engineers to accompany them on long or hazardous flights.

### Air Engineers:

A. "Tommy" Gilmour, Manitoba born

Bill Kahre

Emile Patrault Labrador and Northern Quebec.

Louis Parmenter, was formerly employed by Short Brothers in pre-war days.

W. Sunderland on May 8, 1936 ft mcmurray

Bill Faulkner of bc

Examine any reports dealing with exploratory or other outstanding flights, and frequently there will be revealed, behind the pilot's story, another story regarding the initiative, ingenuity and courage of the air engineer.

### Training of an Air Engineer

THERE ARE many engineers in Canada who have received training as air-craft(s)men in the ranks of the Royal Canadian Air Force or the Royal Air Force.

On completion of their term of service, these men have obtained civil licenses and entered the employ of a commercial air transport company.

Other air engineers are recruited from the ranks of mechanics who have received mechanical training in factories, or who have gained an all-round experience in repair shops or at an operating base.

At least two years practical work on aircraft and engines is necessary before the aspiring mechanic will be considered as a candidate by the Government inspector.

If proof of character and experience be satisfactory he will be examined in practice and theory, and if successful will be licensed in one or more of four categories : A, B, C and D.

Licenses A and C are indispensable to the engineer working on flying services.

Possession of an A license qualifies an engineer to sign off aircraft before flight, while a C license applies to engines before flight.

But these licenses do not give blanket, coverage to sign off all types of aircraft or engines.

The Government's objective is safety,  
so all licenses are endorsed only for those types of craft or engine with which the engineer has had a close working acquaintanceship.

The engineer who has worked only on Flying Club Moths and Gypsy engines could not sign off a Fairchild or Stinson; neither could he sign off a ship equipped with a Wasp or Cyclone motor.

There are no exceptions to this ruling.  
A university degree or membership in an engineering society does not count.  
Even aircraft designers cannot sign off the ships they have designed.

This may appear unduly restrictive, and undoubtedly at times it proves inconvenient to the operating company; but there it is, a ruling imposed in the interest of safety.

Once a year each commercial airplane is thoroughly reconditioned.

The skeleton of the structure, if fabric covered, may have to be stripped and examined for corrosion, fractures or other signs of deterioration.

## Notes on "Civil Aviation"

The internals of the wings are inspected and repaired if necessary, and all other units—undercarriage, fin, rudder, tail plane and floats—receive similar treatment.

When work of this nature has been done, or when, on operation, major repairs have been effected, only an engineer having a B license can certify the aircraft as airworthy.

There are certain reservations even to this ruling.

Major repairs to engines are certified as okay by an engineer having a D license.

The technical knowledge and practical experience required to attain ranking in categories B and D pertain more to manufacturing processes.

The candidate must have a knowledge of  
the strength and testing of materials,  
fuels and lubricants, also of  
the heat treatment of metals.

It is not surprising, therefore, that there are comparatively few engineers assessing licenses endorsed for all four categories.

The youth whose aspirations lean to the engineering side of air-transport operations would be well advised to gain some practical experience in an engineering workshop before going as a mechanic on field operations.

Educationally, a high-school standing is desirable, and in addition an all-round knowledge of internal-combustion engines and allied subjects.

There are no institutions in Canada where intensive training is given to youths who wish to qualify as air engineers, nor are there any scholarships which open the way for boys to high executive posts such as those financed by the Society of British Aircraft Constructors.

The work of the air engineer is such a vital factor in promoting safety and efficiency in aircraft operation that the provision of adequate technical instruction is a matter of concern not only to the employers but to the public.

Facilities for giving advanced technical instruction other than that afforded by routine and practical work in the shops and at the bases, are not easily available, particularly in Western Canada.

During the winter 1935-36 the University of Manitoba, co-operating with the Aviation League of Manitoba, arranged a series of lectures and laboratory demonstrations under the direction of Professor A. E. Macdonald.

The subject matter and projects were arranged specifically to cover the requirements of candidates for B and D licenses.

This scheme is notable as being the first in Canada arranged to assist the air engineer, and much of the success attending the effort may be ascribed to the interest of

T. W. Siers, superintendent of maintenance, Canadian Airways Limited.

Flying instruction is subsidized by the Government,  
flying clubs receive grants for ab initio pilots, but  
heretofore the air engineer has had to bear the cost of apprenticeship, training, tools, etc., out of his own pocket.

### Air Transport's Future

WHAT DOES the future hold for the air engineer? What chance is there of promotion?

This may be answered partially by a reference to the "Annual Report on Civil Aviation," until recently published by the Department of Defense, Ottawa.

## Notes on "Civil Aviation"

It must be borne in mind that commercial aviation in Canada is little more than ten years old, so deductions must be tempered with an appreciation of the comparatively limited aerial activity of this period and what will indubitably be the greatly augmented activity of the era which lies ahead.

In 1926 : forty-four licensed aircraft in Canada;  
there were sixty-five air engineers, many of whom were licensed pilots.

In 1936 the number of licensed aircraft had risen to 450, and  
air engineers numbered 533.

Scanning the list of engineers of 1926, it is noticeable that about fifty per cent of their number are today holding executive positions.

Be it noted also that most of these men held the dual qualification. pilot / engineer - Less than ten are acting in a purely engineering capacity today.

However, the period under consideration was essentially a formative period, so that it is extremely difficult to prognosticate regarding the future of the more than 500 engineers who have qualified and maintained their status since 1926.

In many cases, the younger air engineers are today graduating as pilots, undoubtedly, with their intimate knowledge of operations, some will make the grade as executives.

Prospect of increased remuneration is the chief incentive for the change;  
more over, engineering executive opportunities are not numerous.  
After deducting the totals of the six largest commercial air fleets and excluding flying clubs and private craft, it is apparent that, with  
operating companies numbering 116, and  
those employing only 241 aircraft,  
the majority of firms are operating only one or two aircraft each, one-man propositions as regards engineer requirements.

This is the immediate outlook, but the great era of aerial activity has only commenced.

Canada's major project in air transport has yet to be organized and staffed.

For years to come, air transport will be indispensable to Northern development.

It is certain, therefore, that in the years ahead there will be a steady demand for the services of air engineers to maintain the augmented fleets of this Dominion.

Successful operation of scheduled services, necessitating night flying and flying in bad weather, will depend to an ever increasing degree on the competent application of those aids to navigation with which all air-line pilots are provided. These delicate instruments, mechanical and electrical in operation, will need constant care and expert maintenance.

Development of international and transoceanic routes, as yet in their experimental stages,  
will call for the use of craft even larger than the biggest now in use;  
craft having more powerful engine units, with greater combined output.

Throughout all this expansion, the prime concern will be that of safety.  
Speed, comfort, and regularity are as nothing if safety be not assured.

"Early and provident fear is the mother of safety," said Edmund Burke.

"Provident fear" is best evinced before a take-off, and  
the Government has decreed that the exercise of "provident fear" shall be the specific function and responsibility of the air engineer.

In view of the exacting nature of this duty, who can deny that the work of the air engineer, so often overlooked or forgotten, is the factor contributing most to safety in flight? - source ref : Forgotten Men of Flying - W. B. BURCHALL McLean's magazine - 01 December 1937

## Notes on "Civil Aviation"

1937/38 : Handley Page (UK) conceives and develops principle of "split construction", sub-dividing aircraft into "major" sections and "minor" sub-sections. Allows complex aircraft manufacture to be dispersed. Allows relatively unskilled persons trained for only one or two tasks to manufacture small sections at high pace. Smaller sections can later be assembled as a whole. during WW2 Peak production resulted in one Halifax being completed every hour. investigate "VRV" - re loss and repairs.

Q : by 1937 : The Empire Air Mail "scheme" (Programme): was the Air Ministry facing ground organisation costs which it had never contemplated? surrender was partly accomplished by politicians and officials who colluded with the Air Ministry to overturn the decisions of the Cabinet, by, among other things, undermining the credibility of technical experts.. EAMS ... the agreed budget did not hold because it contained economies to accommodate the Air Ministry's financial embarrassment, and these could not be sustained in practice

1937 : Canadian government (Mackenzie King) approves increase of annual quota of Canadian applicants to RAF to 25.

1937 : British government requests increase of annual quota of Canadian applicants to RAF to 120.

1937 : Frank Whittle, Royal Air Force (RAF) engineer officer. turbojet engine prototype first run.

1937 : Lockheed Model 10 Electra flown by Amelia Earhart disappears without trace.

1937: Aircraft produced in England :

- 1) Supermarine Stranraer long-range maritime reconnaissance flying boat;
- 2) Armstrong Whitworth Whitley medium bomber
- 3) Handley Page Harrow medium bomber
- 4) Bristol Blenheim light bomber
- 5) Fairey Battle light bomber
- 6) Vickers Wellesley light bomber
- 7) Gloster Gladiator enters service
- 8) Hawker Hurricane enters service.

1937-1938, Canada spends \$9,665,000 on RCAF projects. each involved a compromise:

1937 - 1938 : options available to the federal government for aircraft purchase:

Buy American aircraft and risk an embargo

Buy British and wait until after deliveries to RAF were completed so deliveries to RCAF can begin

Buy Canadian and wait months until industry can start to produce aircraft of foreign design.

1938 - 1939 : Air Commodore Croil's solution : production of RCAF aircraft / equipment in Canada.

Cabinet accepted his opinion. Consequently, the potential for industrial production in the field of aviation had to be established locally and as quickly as possible. There could be no other basis for the rcaf's rearmament program. By awarding the contracts, and hoped that Canadian manufacturers would have the opportunity to gain experience in the large-scale production of modern combat aircraft. In the event of a conflict, this experience could carry a great deal of weight.

Government stated policy (DND) for all branches of the military (the Canadian Army, rcn and rcaf):

Combat equipment should be identical to that used by the British armed forces.

Canada should fly aircraft of the same design as those in the RAF(However the maintenance policy differed - esp where aircraft were concerned)

Other factors contributed to this preference: for example, the close cultural, political and military links that united the Commonwealth, and the possibility of a transfer of rcaf units to Great Britain in the event of a conflict, as well as the power of the isolationist movement among the American people and in the U.S. Congress.

In practice, the decision on which aircraft would meet the RAF's and RCAF requirements was made by Air Ministry experts. It was generally not until after this decision was made that they indicated their preferred manufacturer. This is exactly how the rcaf operated in 1935 when it asked the Air Ministry to recommend a reliable and effective torpedo bomber.

The aircraft selected would have to be able to operate from isolated bases offering little protection against the rigours of the Canadian climate. The British considered the question and suggested that the rcaf adopt the Blackburn Shark.

## Notes on “Civil Aviation”

This large all-metal, open-cockpit, single engine biplane with fabric-covered folding wings was extremely reliable and easy to maintain.

Its conventional landing gear could easily be replaced with floats or skis.

Moreover, the manufacturer of its Tiger engine, Armstrong Siddeley Motors, had had a representative in the country, Ottawa Car Manufacturing, since 1927.

The rcac accepted the UK Air Ministry's suggestion. Its initial order was for seven Shark iis, 4 of 7 Blackburn Shark delivered to RCAF beginning 15 October 1936. The first aircraft was taken on strength on 15 October. The remaining 3 Shark iis arrived in Canada in the spring of 1937. All these aircraft were fitted with an enclosed cockpit and, most of the time, with floats. Apparently only one aircraft was fitted with skis, for trial flights. The history of the Blackburn Shark had begun in 1933. In that year the Air Ministry asked a few manufacturers to prepare plans and specifications for a torpedo bomber to be used in the squadrons of the British Fleet Air Arm (FAA), then under the control of the raf. Anxious not to lose its status to other aircraft makers, Blackburn Aeroplane & Motor submitted drawings, although it had not been invited to participate in this particular project. Its prototype made its maiden flight on 24 August 1933. Those conducting the official tests were so impressed by its performance that it won the competition. Blackburn produced no fewer than 253 Sharks between 1933 and 1938: 238 for the faa, including the prototype; nine for the rcac; and six for the Portuguese Naval Air Force, the Aeronautica Naval. Ultimately, the first RCAF Shark iii did not make its maiden flight until 21 July 1939, at Jericho Beach air station, near Vancouver. William James Holland, a pilot working for Ginger Coote Airways, a small air transport company from the region, was at the controls. Producing an aircraft as large as the Stranraer in Canada — as of that time, it was the heaviest aircraft ever made in this country — certainly could not be accomplished overnight. Preparations for its production were to continue for almost two years. The first Canadian Stranraer flew on 21 October 1938 and was taken on strength by an rcac squadron on 9 November.

In light of the everworsening international situation, the rcac chose to sign additional contracts for a further seven and later six aircraft, in November 1938 and August 1939, respectively. After Canada declared war in September 1939, the rcac ordered twelve more Stranraers, and then another twelve in 1941.

Bolingbroke - The rcac ordered eighteen aircraft in November 1937, and made an order for a further eleven in June 1939. Fairchild Aircraft immediately began preparations for production, although progress was to be slow. Bristol Aeroplane was already busy with numerous British and foreign orders, and needed a great deal of prompting.

A decisive step was taken in this long and difficult process on 14 September 1939 - the first Canadian Bolingbroke made its maiden flight - Longueuil Quebec.

The first rcac squadron to receive Bolingbrokes took them on strength in July 1940.

As early as 1938 or 1939, the rcac asked Fairchild Aircraft to prepare plans for a float equipped Bolingbroke that would be based along Canada's coasts. MacDonald Brothers Aircraft of Winnipeg, Manitoba, for the supply of floats. This company held the Canadian rights for the very successful American designed Edo floats (their name taken from the initials of the company's founder, Earl Dodge Osborn). Thus, MacDonald Brothers built a first set of floats for use on the prototype, designated Bolingbroke 1F (F standing for floats). If the trials proved satisfactory, the company was to build twenty-three more sets of floats.

Realizing that the performance of the Bolingbroke if might be insufficient, the rcac asked Fairchild Aircraft to equip the prototype with more powerful Bristol Mercury engines.

The aircraft was immediately given the new designation Bolingbroke iii. It made its first flight as a seaplane on 28 August 1940.

Its performance proved satisfactory but the rcac eventually decided not to order more float-equipped Bolingbrokes.

It is possible, however, that Fairchild Aircraft built a certain number of Bolingbrokes so that they could be fitted with floats in the future.

December 1937 : RMC - Kingston : 1538, Flt.-Lieut. D. H. MacCaul is in England attending a Torpedo Course at H.M.S. Vernon. He has recently completed an Engineering Course at the Royal Air Force School of Aeronautical Engineering, Henlow, England.<sup>222</sup>

### CANADIAN AVIATION - 1938

24 February 1938 : Parliament - Ottawa : **Topic:** DEPARTMENT OF TRANSPORT

Denton Massey (Conservative): Would the minister [Clarence Decatur Howe (Minister of Transport) Liberal] be good enough to inform the committee of the procedure followed in laying down regulations as to the airworthiness of our aircraft, the qualifications of pilots, and matters of that sort? I think it would be of great interest to know how these regulations are arrived at and determined.

Clarence Decatur Howe (Minister of Transport) Liberal : An international convention upon airworthiness and navigation governs both those points reasonably closely. We are just now completing our new regulations as to airworthiness and requirements for pilots. They will be out very shortly, and rather than give an amateurish explanation of what is in them, I shall be very glad to send a copy of them to my hon. friend

1938 : new single engined monoplane bomber, the Vickers Wellesley, flew non-stop from Upper Heyford to Darwin, Australia, a distance of 7,162 miles thus setting another international record

1938 : The Short Sunderland long-range maritime reconnaissance flying boat, the Handley Page Hampden and Vickers Wellington medium bombers, the Supermarine Spitfire fighter and the Westland Lysander enter service.

January 1938 : Fairchild 45-80 Sekani, a small twin-engine ten- to twelve-seat transport aircraft that made its maiden flight on 24 August 1937. shortly before trials with Mackenzie Air Service, Fairchild Aircraft produced only two of the aircraft, which were soon demolished,

During the rearmament period... the RCAF signed purchase agreements for approx 200 aircraft to be built or supplied by "Z Canadian manufacturers of UK origin".

These orders constituted the greatest effort undertaken by the Canadian aircraft industry during the interwar years. From these delays, which were already serious, further problems were to arise. Given its limited financial resources, the rcaf had no desire to take needless risks.

## Notes on "Civil Aviation"

fall 1938 : Canadian aviation policy problems are recognised in Ottawa : senior federal officials began to react  
Under Secretary of State for External Affairs Oscar Douglas Skelton  
Since 193x? (For some time now,) specialised media and Canadian newspapers had been fully aware that all was not well at dnd.  
RCAF modernization program

193? - 1939: UK : RAF avoids purchase of new aircraft designs or prototypes, sticks with tried and true (WHY? - unable to properly maintain them ? fast advances being made ? UK oversight says they are not able to do anything with newer types due to how the RAF is structured -technically ? )

1939 : UK, Germany, France etc and USA : aircraft and aviation technology undergoes rapid transformation in the 1930s.  
Increasingly, wood and tube biplanes disappeared, replaced by all-metal low-wing monoplanes.  
Unfortunate for the rcac and for Canada.

1939 : Most of the aircraft ordered by the RCAF to be built / assembled in Canada were obsolete (as a result of RAF policy ? ) when they entered service.

spring 1939 : The Winnipeg Free Press publishes a series of articles highlighting the deficiencies in Canadian federal aviation policy.

1939 : Canada : The Financial Post " Canadians have lost confidence in dnd's leadership"  
Numerous details of Canadian Government's aviation policy remain obscure  
explanations of Minister of National Defence Mackenzie are unsatisfactory.  
Occasional insulting remarks by Minister of National Defence Mackenzie certainly did not help the situation.

March 1939 :

"DND's difficulties stem largely from a minister whose competence,  
political weight and interest in his work were all too limited" <sup>223</sup>  
- British high commissioner to Canada

19 - 30 September 1938 : 4th International Conference on Private Air Law, Brussels. This conference marked the end of a series.  
CITEJA met once more in January 1939 before the outbreak of the Second World War interrupted its work on the gradual unification of regulations governing private air law.  
After WW2 the CITEJA commission ceased to exist. Their role was taken over by ICAO with creation of the ICAO Legal Committee.  
Since 1946 the Legal Committee of ICAO (an NGO) "deals with problems of both public and private air law" <sup>224</sup>

October 1939 : Prime Minister King transfers Mackenzie to minister of Pensions and National Health soon after the start of the Second World War.

1939 : On the eve of war, Canada was aeronautically ill-prepared. Poor government Policy, limited aeronautical engineering (and almost no interaction between the technicians and the technologists) a majority of unskilled tradesmen under the direct control of an educated but unskilled military officer cadre, relatively few skilled trades persons, even fewer aircraft safety inspectors and with a DND oversight group that ran the whole thing like a private flying club <sup>225</sup>

<sup>224</sup> McGill Law Journal : AN HISTORICAL SURVEY OF INTERNATIONAL AIR LAW BEFORE THE SECOND WORLD WAR - Peter H. Sand / Jorge de Sousa Freitas / Geoffrey N. Pratt - HISTORY OF AIR LAW, pg 41

<sup>225</sup> The Canadian dnd's policy had called for too little, too late and, as a result, the rcac had at most a few relatively modern combat aircraft — Canada was defenceless (Canada Aviation Museum : Photo Essays : " And Look After Our Coasts " The Royal Canadian Air Force and the Production of Coastal Defence Aircraft in Canada, 1936–1939 Ronald Fortier Curator, Aviation History Canada Aviation Museum)

## Notes on “Civil Aviation”

1938 : Mr. Leigh Brintnell, Aircraft Repair (Edmonton) *had two mechanics stationed at the Airport during all club flying. “Each evening the aircraft are inspected and signed out by their charge engineer for the following day. All repairs and replacements are carried out by Aircraft Repair Ltd. at their Workshop.*

1938 : H.W. Francis, Frank Burton - receives an Air Engineer License.

1938 J.K. Lewis joins TCA

March 1938 : Program to expand the Royal Air Force continues, the number of front-line aircraft deemed necessary for the defence of the British Isles rises from 1250 to approximately 2375

March 1938 : King government approves increase of annual quota of Canadian applicants to RAF to 120. Canadian Cabinet and the UK-Air Ministry prefer Canadian recruits be trained in Canada and to operate within RCAF squadrons.

May 1938 : British Prime Minister Neville Chamberlain sent a mission to Ottawa to assess the Canadian aircraft industry and its manufacturing potential.

The head of the British mission, industrialist J.G. Weir, was also instructed to put forward the “air training question” again.<sup>226</sup> The opportunity to do raise the “air training question” arose during a meeting between:

- a) J.G. Weir, head of the British mission
- b) Sir Frances Floud, British High Commissioner in Ottawa
- c) Mackenzie King, Prime Minister of Canada

At this meeting, Mackenzie King refused to accept the British training proposal.

A subsequent meeting only served to aggravate Mackenzie King.

**Mackenzie King’s stated main objection<sup>227</sup> to the British air training proposal**, as expressed to the House of Commons, rested in having “...

1. a British Imperial Government military station established in Canada, that is
2. owned by the British Imperial Government for British Imperial purposes,
3. maintained by the British Imperial Government for British Imperial purposes, and
4. operated by the British Imperial Government for British Imperial purposes”.

Mackenzie King saw **the British air training proposal** as distinctly different from:

1. having British pilots train in Canada,
2. having British pilots train Canadian facilities,
3. having British pilots train under Canadian control

Mackenzie King would not sign **an agreement that could be viewed as “committing Canada to a future European war on Britain’s side”.**

Such a decision at that time would not have been well received by the province of Quebec, which still harboured a great amount of resentment and discontent with respect to Canadian involvement, and, particularly, the conscription issue, during the First World War.

Mackenzie King cautions the British delegation not to disclose the content of the discussions publicly.

the information was subsequently leaked to the press (by King’s people), leading to embarrassing enquiries and governmental criticisms being raised

- A. in the Senate by Arthur Meighen, and,
- B. in the House of Commons by R.B. Bennett, the Leader of the Opposition.

Mackenzie King was forced to admit to their occurrence, and some very lively debates ensued.

The Prime Minister’s stance on the issue, and therefore that of the Canadian government, was pointedly stated:

“This government has never at any time said that it was not prepared to give, in our own establishments, the opportunity to British pilots to come over here and train.

<sup>226</sup> F.J. Hatch, *The Aerodrome of Democracy: Canada and the British Commonwealth Air Training Plan, 1939-1945* . Ottawa: Directorate of History, Department of National Defence, 1983, p. 8.

<sup>227</sup> J.L. Granatstein, *Canada’s War : The Politics of the Mackenzie King Government, 1939-1945* - Toronto: Oxford University Press, 1975, p. 44.

## Notes on "Civil Aviation"

But they will do it in our own establishments. Controlled by our own Minister of National Defence, who is responsible to this parliament.

This is an entirely different thing from having a branch of the British forces establish headquarters in this country, direct their own men here and be responsible, not to this parliament for what takes place in Canada as a consequence, but only to the British parliament and the British people” <sup>228</sup>

03 October 1938 : University of Toronto commences a two-year diploma course in Aerial Navigation - Source Department of University Extension, Extension Course Sheets, Applied Science and Engineering, Aeronautic Training, 1938

“The post ww2 Extension Course Program is similar to the extension course program in existence before the war, in which you simply enroll in a given course and study the lessons submitted along with the material included with them and finally solve the problems as a test to determine whether you have assimilated the instruction and received the training from the course you were supposed to receive [...] We found that a combination of the three programs provided the best method for training Reserve officerlawyers. The Volunteer Air Reserve Training Program is the principal one, supplemented by the Mobilization Assignment Program to prepare training materials and take care of those officers who reside near Air Force installations with activities within the field of their training and experience. The Extension Course Program is a by-product of the other two and takes care of those who reside neither near an Air Force installation nor a community large enough for a Volunteer Air Reserve Training Unit.” <sup>229</sup>

December 1938 : Imperial Airways (Australia) suffers 2 flying boats accidents. While the aircraft are lost due to operating overloaded, they were deemed “poorly designed” in the final report.

19 December 1938 : RCAF becomes an “autonomous service” with its own staff and its own leadership in Ottawa. Canadian Air Commodore George M. Croil is promoted to Air Vice-Marshal and becomes Chief of the Air Staff. As a result, the RCAF no longer reports to the “Chief of the General Staff, Canadian Army”. The RCAF now reports to Air Vice-Marshal Croil, who then reports directly to the Minister of National Defence.

1838 : The Royal Canadian Air Force orders 25 Airspeed Oxford Mk.I aircraft.

Taken from RAF stocks in the UK, the Oxford’s are shipped to Canada in 1940, assembled by Canadian Vickers at Montréal and issued to the Central Flying School.

1938 : Report of the Royal Commission on Transportation, Province of Ontario, <sup>230</sup>

Chair: The Honourable Mr. Justice Edgar Rodolphe Eugene Chevrier.

Commissioners: Clarence Richard Young, Edwin Roy Sayles

1.15—Hours, Wages and Benefits in Other Forms of Transport Than Motor Transport.

Findings.

(1) Railway Transport. In the railway service, the 8-hr. day and the 48-hr. week are standard, except for the shop trades. Passenger train crews work on an average from 7 to 8 hrs., while freight train crews average from 9 to 10 hrs. In the freight service, however, there are a substantial number of men on duty for periods of 13 to 14 hrs. and in some cases even as long as 20 hrs.

On the basis of a 60-hr. week, which is observed by many motor transport operators, railway engineers would earn approximately from \$46 to \$51.

---

<sup>228</sup> Wing Commander F.H. Hitchins, Air Board, Canadian Air Force and Royal Canadian Air Force, p. 355 - Ottawa: National Museums of Canada.

<sup>229</sup> JAG journal bulletin No.6, 1950

<sup>230</sup> <https://archive.org/stream/transportcommooonta#page/166/mode/2up/search/Air+Engineers'>

## Notes on "Civil Aviation"

Passenger baggagemen would earn about \$36, passenger brakemen about \$35, and freight brakeman about \$36.

To this amount should be added the dollar value of the substantial benefits other than actual pay derived in the railway service, although this could not be definitely evaluated by those giving evidence for the railways.

In transportation and station service, where the normal day is of 8 hrs., the pay adjusted to a 60-hr. week would amount to about \$30 for porters and truckers, \$34 for baggage, parcel-room and station attendants and \$39 for freight checkers. (Art. 6.11).

(2) Railway Express Service. In the railway express service, which is based on a normal 8-hr. day, the pay of vehiclemen or truck drivers would, on the basis of a 60-hr. week, amount to from \$31 to \$35, approximately.

Vehicle helpers would receive about \$29. To this, again, should be added the value of the special benefits received. (Art. 6.12).

(3) Marine Transport. In marine transport, assuming the standard day to be of 12 hrs., the pay of second mates for a 60-hr. week would ordinarily range from \$24 to \$27, approximately ; of third engineers from \$25 to \$27 ; of wheelmen and oilers, from \$16 to \$22; and of sailors or deckhands from \$14 to \$16. In these cases, the value of the free board has been included at one dollar per day. (Art. 6.13).

(4) Air Transport. In the air service the pay of an air engineer or aircraft mechanic is about \$115 per month; of an air engineer helper or aircraft mechanic helper, \$80; for chauffeurs, firemen and servicemen, \$80. (Art. 6.14).

### 1.16—Hours, Wages and Benefits in Motor Transport Compared With Those in Other Forms of Transport. Findings.

(1) Causes of Long Hours and Low Wages in Motor Transport. Irregular hours are inherent in the transport industry and occasions will arise when men must remain on duty for longer periods than are prescribed in the normal operating schedules. One of the chief factors permitting motor truck transport to compete successfully with the railways is the meeting of the wishes of the shipping public by accepting freight at almost any time and making deliveries at the earliest possible moment. The Commission does not believe that it is expedient to deprive the shipper of this class of service or the trucker from providing it, although the attendant circumstances undoubtedly add to the difficulty of maintaining reasonable hours of service for motor trucking employees. (Art. 6.1).-

While giving full recognition to the need for allowing some latitude in the matter of working hours in the motor trucking industry, the Commission finds that in many instances men have been asked or permitted to remain on duty for excessively long periods. In many cases wages have been out of proportion to the hours worked or to the responsibility of the driver for either the safety of the public or the value of the equipment and cargo in his care.

On the other hand, both in public commercial vehicle operations and in private trucking, many instances of fair and reasonable treatment were found, even in spite of adverse financial circumstances. (Art. 6.2).

Long hours and low wages in the motor trucking industry in Ontario have arisen from the overcrowding of the field by licensed operators, resulting in uneconomic competition for the available business; from the overstocking of the labour market, with inevitable competition for employment at almost any wages; and from the lure of a new industry that can be entered upon with

a minimum of capital and no specialized training or skill—an industry which to the man in the street, unacquainted with other than the most elementary aspects of the transport business, appears to be a very profitable one. Moreover, the compelling-urge to be constantly on the move gives to the driving of a truck a greater appeal irrespective of hours than does work on a farm or in a factory. (Art. 6.3).

The economic range of the truck has a particular relationship to the hours that the driver is able to drive and the time within which a return trip can be accomplished. Having regard to the monetary urge for operators to work their

## Notes on "Civil Aviation"

drivers up to the limit of their physical ability, and the more pardonable urge on the part of the men to earn as much as possible in the only way immediately open to them to do so, it is not surprising that working hours readily tend to become unduly long. (Art. 6.3).

A circumstance tending to long hours is the desire of drivers on "turnaround" runs to return to their home terminal at night or after a moderate amount of rest. Due to the frequent need of waiting for a cargo at the far terminal, a "badly split" day may result, involving eight or ten hours of driving in a spread of ten to thirteen hours. Where the driver is operating on a trip basis he may be held up a long time at his own expense due to breakdowns or to the necessity of waiting for the arrival of a connecting transport. (Art. 6.3).

In for-hire operations long hours and low wages were found by the Commission to follow in the wake of low haulage rates. Thus, many more examples of unsatisfactory working conditions for employees were found for Eastern Ontario, where rates are relatively low, than for Western Ontario where a higher rate level obtains. (Art. 6.3).

(2) Hours, Wages and Benefits in Public Commercial Vehicle Operation. Conditions complained of by employees of motor trucking operators arise with particular frequency in the case of Class "D" (contract) carriers, who are under no obligation to maintain a regular freight service. The twin evils of excessively long hours and low wages were also indicated in the operation of Class "E," milk and cream carriers, and Class "F" carriers of livestock, construction materials, coal and lumber. (Art. 6.4).

(a) Highway Drivers. The more stable public commercial vehicle operators grant a 60-hr. week to highway drivers without the incubus of the split day. For this they frequently pay from \$20 to \$25, and in some cases up to \$35. Many operators, while providing a 60-hr. week, are not able to pay more than \$12 to \$20 per week. Still others not only require very long hours of their drivers but pay low wages. Days of 11 to 14 working hours are comparatively common; 14 to 18 hrs. of duty have been found to occur with disconcerting frequency; duty periods of 18 hrs. and up to 24 hrs. have been reported in a sufficient number of cases to be noteworthy. Weeks of from 70 to 100 hrs. in the busy season are distressingly common and some were reported up to as much as 115 hrs. In many instances, badly-split days were disclosed, involving from 6 to 9 hrs. of work in a spread of from 12 to 15 hrs. and in other cases working periods of 10 to 14 hrs. in a spread of from 17 to 19 hrs.

In a substantial number of cases men were reported as working from 67½ to as long as 115 hrs. per week for wages ranging from \$9 to \$12. A wage of \$15 for a working week of from 60 to 84 hrs. was found to be very common. The percentage of cases involving extremely long hours appears to be definitely greater than the percentage of men working for correspondingly long

6.14— Working Conditions in Air Transport. No submissions were made to the Commission in the matter of hours, wages and benefits of men employed in connection with air transport.

According to the Canada Year Book, 1938, there were, in 1936, 548 persons employed in commercial aviation at an average salary or wage of \$1488 per annum. The flying clubs employed 67 persons at an average of \$1206 per annum.

From correspondence, the Commission learns that the minimum rates paid by a large air transport organization, for positions at all comparable to those in motor transport, are, per month:

\$200 for a second pilot,

\$200 for a chief mechanic or foreman,

\$175 for a crew chief or sub-foreman,

\$115 for an air engineer or aircraft mechanic,

\$80 for an air engineer helper or aircraft mechanic helper, and

\$80 for chauffeurs, firemen and servicemen.

The maximum monthly rates exceed the minimum by from 15 to 75 per cent.

## Notes on “Civil Aviation”

Except for positions in the lower grades, these amounts are somewhat greater than the average of salaries and wages paid by highway motor transport in Ontario as a whole for the same year. Excluding executives, it was \$1024.<sup>231</sup>

11.12 - Minimum Permissible Wages in Trucking Operation : (with ref to Ch. VI - HOURS, WAGES AND BENEFITS) Wage Levels in Other Forms of Transport. Attempts were made by witnesses to compare the relative demands on skill, endurance and dependability of drivers of commercial motor vehicles and employees in other forms of transport.

Obviously the truck driver and the locomotive engineer occupy positions that are not closely comparable. Mr. Fabian expressed the view that the express messenger constituted the nearest comparison with the motor truck driver. Here again, the comparison is imperfect in that the express messenger has *important clerical duties* and *assumes a considerable degree of financial responsibility*, but has no driving responsibilities.

In ground service connected with air transport, pg 166 of the Ontario report of the ROYAL COMMISSION ON TRANSPORTATION, 1938<sup>232</sup>

a crew chief or sub-foreman would receive about \$42 per week,  
an air engineer or aircraft mechanic about \$35,  
helpers to air engineers or aircraft mechanics about \$23, and  
chauffeurs, firemen and servicemen about the same.

---

<sup>231</sup> Brief of the Automotive Transport Association of Ontario, February 23, 1938, p. 16.

<sup>232</sup> <https://archive.org/details/transportcommooonta?q=Air+Engineers%27>

1939 : The RAF is “largely a force of all-metal monoplanes equipped with automatic pilot, retractable undercarriage, and variable pitch propeller”

February 1939 : First flight of the the Gregor Fighter/Dive Bomber “FDB” Mk.1 registered “CF-BMB” at Can.Car's factory in St. Hubert near Montreal.

painted in all over semi-gloss grey. CF-BMB was designed and built at Canadian Car and Foundry (Can-Car) in Fort William, Ontario.

Designed by Mikhail Leontyevich Grigorashvili (Michael Gregor) a 1921 Russian immigrant to the USA from Derbent on the Caspian Sea - aircraft designer and the owner of an impressive resumé with experience both in the Soviet Union and in the United States of America.. one of the first two aviators in Russia, he built a Blériot XI aircraft Russian nobleman de Seversky. (Seversky's son, Alexander built the massive American company Republic Aircraft) designed three aircraft types.

During the First World War, from 1915 to 1917, Gregor (Grigorashvili) worked as the chief designer at the aviation factory of R.F. Meltzer where managed design, testing and production of propellers of his own design. At the time, he and the Meltzer company were leaders in Russian propeller construction and manufacturing. Curtiss-Wright as a senior designer, then in 1928, he became Chief Designer at the Bird Aircraft Company (formerly Brunner-Winkle) of Glendale, New York for 4 years . (Brunner-Winkle Bird considered one of the safest aircraft to fly at the time.

The Brunner-Winkle Bird, designed by Michael Gregor (an American citizen by this time) was a lovely little aircraft in many respects.

The Model A (seen here) was powered by the Curtiss OX-5 in-line engine.

The Model A's ease of handling led to its entry into the 1929 Guggenheim Safety Airplane contest, where it was awarded the highest ratings for a standard production aircraft.

The model B was powered by the more reliable Kinner K-5 un-cowled radial ).

Gregor then worked as Deputy chief designer at Seversky Aircraft Corporation which was located at Roosevelt Field.

Gregor started up his own aircraft design company—the Gregor Aircraft Corporation. As President and Chief Designer, he designed and built two biplane aircraft—the GR-1 and the GR-2.

Gregor GR-1, also called the GR-1 *Continental* and the GR-1 *Sportplane*, was a biplane with a tail-wheel undercarriage and was intended to be a light, low cost, training aircraft for depression-era customers.

Gregor was based at Hangar B at Roosevelt Field in New York. As there was only one GR-1 aircraft built, this is the one seen parked at the Gregor Hangar at Roosevelt Field in a previous photo.

While at Gregor Aircraft Corporation, Gregor received US patent #1,747,001 in 1930 for a cockpit-controlled wing-tip aileron device to help overcome stalling, but there is no record of this ever showing up on any wing-tips.

FDB-1 :

robust interplane device combined with two other struts and

eliminated the use of wire braces completely.

Similar in size and dimensions to Grumman's F2F Navy fighter and also

designed to operate from aircraft carriers

designed as a dual fighter/bomber,

designed by Michael Gregor

empty weight of 2,880 lb and a

gross of 4,100 lb.

tail-wheel undercarriage

As in many other gull wing fighters, pilot's view while flying straight and level was excellent, but marginal when landing and extremely poor when looking downward during that critical phase.

Hydraulically operated landing gear

landing gear retracted flush into large wells on either side of fuselage, ahead of the lower wing.

Twenty-eight foot span top wing featured nearly full span slats measuring 10 ft (3 m) per side,

all-metal split flaps of 4 ft (1 m), 3 in per side, positioned between root and ailerons on top wing.

Bottom wing span of 23 ft (7 m), 10 in also incorporated longer split flaps of 7 ft (2 m), 9 in per side.

## Notes on "Civil Aviation"

Like many a Soviet and Polish contemporary that had preceded it, biplanes as well as high-wing monoplanes – the center section of the top wing on Gregor's trim fighter had a gull-wing configuration, gull-wing center section attached to the fuselage at right angles for less drag and to afford improved visibility - particularly straight ahead in level flight.

all-metal construction,  
monocoque construction. circular cross section, flush-riveted, stressed skin fuseage  
retractable undercarriage,  
flush riveting and  
gull wing shaped upper wing.

For a biplane, the Gregor was exceptionally sleek, yet robust. It had a modern monocoque shell construction.

Aluminum Ribs and fabric skinned wings.

The compact 21 ft (6 m), 8 in fuselage of the Model 10 FDB-I covered by flush-riveted, stressed skin.

Wings :

metal spars

metal ribs

wings fabric covered behind the fwd spar .

substantial faired "V" interlane struts.

Empennage

metal-framed control surfaces were also fabric covered.

An anticipated range of 985 miles (1,585 km) was based on 95 gallons of fuel carried in a pair of semicircular-shaped tanks mounted side-by-side in the fuselage, between the wheel wells.

The structure was extremely robust and capable of withstanding stress forces 60 percent above requirements.

A pair of fuselage-mounted .50 cal. machine guns, synchronized to fire through the Hamilton Standard's nine ft propeller arc,

armament was never installed.

Provision for two 116 lb bombs - one under each lower wing.

Streamlining on the FDB-1 was accentuated.

The engine was snugly faired into a NACA cowling reminiscent of earlier Seversky fighter designs, also heavily influenced by Gregor, who left that company early in 1937.

The rearward sliding center section of cockpit's canopy, spacious for such a small airframe, was a unique Gregor innovation.

The FDB-1 clean lines partly were accomplished by the attachment and support of wings via substantial faired "V" interlane struts.

Flying and landing wires and cables were replaced by a single faired strut running between the root of the top wing rear spar and the foot of the "V" strut where it joins the lower wing at its front spar.

Pushrod actuated flight control surfaces, except for the rudder

rudder was partially operated by cables.

The cockpit and the control ergonomics were designed around the six foot Adye, and proved to be difficult to use for shorter pilots who flew it.

huge perspex canopy gave a tremendous field of vision in all directions... save forward where the high mounted gull-style wing impeded view .

December 1938 roll-out in Fort William.

CF-BMB, the letters embossed in white over a high gloss metallic dark gray paint job, the dual purpose aircraft's only other markings were ten horizontal white bands on its rudder.

Early in 1938, in a spirit of Commonwealth cooperation, a wooden model of Gregor's new Model 10 fighter was sent to Hawker Aircraft's wind tunnel facility at Kingston upon Thames, England.

Manufacture of the prototype began at Thunder Bay, on the north shore of Lake Superior, shortly thereafter.

The aircraft, c/n 201, was completed by mid-December 1938.

first flight test on 17 December 1938. expressing enthusiasm over its maneuverability, Ayde warned that the controls were far too sensitive and the angles of the lowered flaps too great.

His assessment was correct; on a subsequent landing, the prototype flipped on its back. the upper gull wing was a major defect as on takeoff and landing, a pilot's vision was severely limited downward and forward.

Ted Smith who tested the FDB-1 in 1941 was more succinct when describing visibility over the gull wing, "blind as hell."

## Notes on "Civil Aviation"

Among the new devices incorporated within the FDB-1 was an anti-spin parachute in its tail cone. The pilot activated the parachute from the cockpit by a three-position switch. The first opened the cone, the second deployed the chute behind the aircraft, and the third released the connecting cable.

Recorded top speed was only 261 mph (420 km/h) at 13,100 ft (3,990 m), with the old P&W R-1535-72 engine of 700 hp, which had powered the Grumman F2F-1. But that aircraft, with a slightly lower empty weight, had only reached a top speed of 230 mph (370 km/h). With the installation of an improved P&W R-1535-SB4-G of 750 hp, top speed was expected to rise to 300 mph (500 km/h). Meanwhile, Gregor had already programmed his fighter to accept the 1200 hp. P&W R-1830 Twin Wasp then being installed in Grumman's new monoplane fighter, the XF4F-3; and with it, he fully anticipated a top speed of 365 mph (587 km/h). and aircraft was highly maneuverable. Initial rate of climb was an exceptional 3,500 ft (1,070 m). per min, compared to Grumman F2F's 2,050 ft (625 m) per min. with same engine. Service ceiling was estimated at 32,000 ft (9,800 m), 5,000 ft (1,520 m) higher than the F2F's. FDB-1 had a cruise of 205 mph (330 km/h), a low-speed capability of 72 mph (116 km/h) clean and, with flaps and slats open, 58 mph (93 km/h). All these figures were reached without armament, ammunition, armor plate and other military equipment including self-sealing fuel tanks.

Designed, built and tested in less than eight months, the FDB-1 Model 10 was sent to Saint-Hubert Air Base, near Montreal, for preliminary service testing with the Royal Canadian Air Force. After extensive trials, pilot evaluations complained of severe canopy vibration at speed and during strenuous aerobatics, and it was recommended that all testing be restricted until this bothersome defect had been remedied. Unfortunately for Gregor and Can-Car, further tests undertaken by the RCAF showed that his first projections were extremely optimistic and doubted further refinements would make a difference. Nevertheless, the FDB-1 did demonstrate amazing maneuverability;

below 15,000 ft (4,600 m), in spite of an adversary's superior speed, no contemporary single-seat, low-wing monoplane could successfully engage Gregor's design which climbed like a "homesick angel," an initial rate of climb 3,500 ft (1,070 m) per min, one third better than the new Hurricane and Spitfire.

Test pilot Ted Smith thought that the FDB-1 was intended for "mountain" fighting once he sampled its phenomenal climbing ability.

Sadly, like the Avro Arrow some twenty years later, it was a failure for reasons beyond its capabilities.

Canada's only successful indigenous fighter aircraft design was the big all weather interceptor known as the Cf-100 Canuck.

Can-Car entered the Model 10 in the January 1940 New York-to-Miami air race.

Shortly after takeoff, a lack of oil pressure forced the FDB-1 to land in New Jersey, thereby disqualifying it.

Two months later, during testing, its landing gear collapsed at Saint-Hubert.

Although Mexican authorities were interested in the aircraft, the Canadian government refused an export license and there were no other prospective customers for a biplane fighter in an age of monoplanes.

In a fit of pique, Gregor was quoted as saying: "They'll start this war with monoplanes, but they'll finish it with biplanes." He was wrong. Neither his prediction nor his aircraft were to survive the test of time.

After several years of sitting forlornly in storage, the Model 10 FDB-1 was destroyed in a hangar fire at Montreal's Cartierville Airport, and Michael Gregor swiftly followed it into obscurity.

1939 : Robert Hunter - receives Air Engineer certificate. (CPA, RCAF, US air services in Edmonton, and RCMP)

15 May 1939 : Monocoupe 90A fuel capacity expanded to 160 gallons, registration SE-AGM first aircraft to land at the airport from outside Newfoundland arrived at the Newfoundland /Gander Airport from Bangor, Maine. Pilot Charles Backman delivering the aircraft to owner Mr. Gunner in Leksand, Sweden. Backman in SE-AGM is the first attempt at a transatlantic crossing from Gander.. Charles Backman lies to Gander Airport officials about the nature of his flight in order to receive permission to take off. He departs Gander for Stockholm, Sweden via the Great Circle Route the next morning with no radio and a food supply consisting of a few sandwiches, a thermos of tea and is never heard of again. <sup>233</sup>

## Notes on "Civil Aviation"

RAF Officers on Mission or Seconded to Canada :

Principal Officer : H. A. Jones, M.C. (on Mission)

Senior Staff Officer : G. W. Dyke (on Mission)

Senior Accounts Officer : F. C. Fayers (on Mission)

General Duties Branch:

Squadron Leaders:

Kenneth James Mellor (Seconded 19.8.39)

Richard Evenor Dupont (Seconded 19.8.39)

Flight Lieutenants:

Desmond John McGlinn (Seconded 19.8.39)

Walter Samuel Leslie Smallman (Seconded 19.8.39)

Kenneth John McDonald (Seconded to Canada, 19.8.39)

Technical Branch:

Armament Officer : Thomas Joseph Albert Cresswell (Seconded 19.8.39)

Administrative - and Special Duties Branch (for Special Duties)

### AIR FORCES OF THE DOMINIONS

#### HEADQUARTERS AND LIAISON OFFICERS IN THE UNITED KINGDOM

Officers From CANADA 1940

Royal Canadian Air Force in Great Britain.

Address : 2, Cockspur St., S.W 1

Air Officer Commanding : Air Commodore G. V. Walsh, M.B.E., p.s.a.

Senior Air Staff Officer : Wing Commander A. P. Campbell, p.s.a.

Senior Air Staff:

Squadron Leader : W. I. Clements

Flying Officer : H. P. V. Massey

Technical Staff Officer : Flight Lieutenant . A. Easton.

Senior Personnel Staff Officer : not filled

Squadron Leader R. H. Foss.

Personnel Staff :

Squadron Leader R. H. Foss.

Flight Lieutenant W. H. Shroeder

Flying Officer T. H. Spear.

## Notes on "Civil Aviation"

Senior Equipment Staff Officer : Squadron Leader J. H. Ferguson.  
Equipment Staff : Flying Officer F. R. A. Girardot.  
Principal Medical Officer: Lieutenant-Colonel K. A Hunter.  
Medical Officer : Major E. J. Young.  
Command Dental Officer : Major F. R. Drewry.  
Officer i/c Records : Flight Lieutenant W. A. Dicks.  
Records Staff : Flying Officer C. J. McKenzie.  
Staff Officer : J. J. A. Crozier.

September 1939 : Ernest L. Janney reportedly sent a message to Ottawa: "Am still full of the old pep—let me know what I can do."

1939 : Amelia Earhart officially declared dead.

1939 : Government awards contracts to 17 civilian flying clubs to begin instructor preparation.

1939 : British Overseas Airways Corporation (BOAC) formed.

March 1939 : Description of the airworthiness system under the A.R.B. pertaining to a company designing and constructing civil aircraft. (Dr. Roxbee Cox)

- A. The firm would apply to the A.R.B. for approval of its design organisation.
  - A. Officers of the A.R.B. would inspect the firm's design organisation and recommend to the A.R.B. that approval be granted, possibly suggesting certain amendments of the design organisation first.
  - B. Approval of the firm's design organisation would mean that the firm's design organisation was considered competent to report the results of its design investigation.
  - C. The firm's design staff would be expected to discuss its design assumptions and methods with the A.R.B.
  - D. The firm's design staff would not expect the A.R.B. to check their calculations
- B. The firm would apply to the A.R.B. for approval of its inspection organisations.
  - A. Officers of the A.R.B. would inspect the firm's inspection organisations and recommend to the A.R.B. that approval be granted, possibly suggesting certain amendments of the inspection organisation first.
  - B. Approval of the firm's inspection organisation would mean that the firm's inspection organisation was considered competent to inspect construction under the general supervision of the Board's surveyors.
- C. The A.R.B. would expect the firm to supply a "type record." A "type record" is a reference document / set of documents which includes:
  - A. drawings,
  - B. calculations
  - C. tests,
  - D. describes the design,
  - E. indicates the reserve strengths of structural members,
  - F. and gives such other information as is necessary to prove that the design meets A.R.B. / Air Ministry requirements.
- D. While proceeding with a particular design, the firm would be expected to discuss assumptions and methods with A.R.B. officers
- E. While proceeding with a particular design, the firm would be expected to keep in touch with the A.R.B. during the progress of calculations and any tests which might be necessary.
- F. Construction would proceed under the supervision of A.R.B. surveyors.

In conclusion Dr. Roxbee Cox asked those present to express their views on any particular aspect of the flight trials which they might consider important, and asked if they were satisfied with the present spinning tests, in which recovery must be made in two turns after spinning four turns; Did they think that spinning tests should be made at all on aeroplanes in the "normal" category?

CAPT. F. DIGBY asked what the A.R.B. was doing about the question of ice formation in the carburetter. He thought it was time something was done.

## Notes on "Civil Aviation"

MR. J. LANKESTER PARKER - recently joined the G.A.P.A.N.— thought a great deal of unnecessary work was being done on spinning and stalling, and asked what "stalling" meant.

MR. R. A. C. BRIE pleaded guilty to having an anti-stall kink. He urged the A.R.B. to consider not only how many turns a machine should do in the spin and in the recovery, but also possible ways of avoiding the spin starting at all.

MR. N. H. WOODHEAD asked for a definition of "airworthiness." He thought it possible that the pilot's conception might not be the same as that of, the designer or constructor. He also pleaded for a simpler presentation of airworthiness mathematical problems in the technical Press. [When we get around to it, we will present Mr. Woodhead with a nice little book on Maths, without Tears.—ED.] He failed to understand why the Board's inspection was limited to machines of 10,000 lb. weight and ten passengers. With reference to "approved" firms he thought that if a firm was approved it should be approved and left to deal with its own inspection. [That is a point of view which Flight put forward more than once when the "approved" "scheme" (Programme) first came into being.

CAPT. R. C. PRESTON thought the work and position of the Ground Engineer had been inadequately recognised during the evening's debate. He related an experience he had last year, on a flight to Edinburgh. It had caused him some trepidation as it followed closely on the first renewal of his C. of A by the A.R.B. instead of by the A.I.D. He asked for close liaison between the technical staff and the working Ground Engineer.

In replying to the points raised in the discussion, Dr. Roxbee Cox said, to Capt. Digby, that the question of engine fading was one which was being closely examined by the Board. At present he could not say anything about possible preventive measures. Mr. Brie, had mentioned that the only sound basis for aviation was safety, and his (Dr. Roxbee Cox) own definition of airworthiness was "safety".

Dr. Roxbee Cox agreed with Capt. Cummins and others that it was up to all to collaborate with a view to making aeroplanes safe. Safety should be aimed at, even at the expense of performance and immediate profit. "If," Dr. Roxbee Cox said, "safety means carrying one less passenger, let us carry one less passenger."

In reply to Mr. Woodhead, Dr. Roxbee Cox said that he had recently had a talk with an eminent Dutch scientist who feared that accidents might have been caused in the past because certain warnings which he had expressed in too technical language had not been understood. He thought the reason for drawing the line at 10,000 lb. gross weight and ten passengers was that this quite arbitrary division was introduced because the Air Ministry felt that to pass all aircraft, irrespective of size, on to the A.R.B. would be rather a tall order. He thought there was a corresponding division in connection with ships, and that had probably been taken as a basis.— E D . J - (Flight March 1939 : pg 227)

1939 : RCAF peace time establishment : 23 squadrons total. Only 8 of 11 permanent squadrons in existence. <http://www.rcmf.museum/articles/articles-of-interest/air-force-history>. At the time the RCAF had only 4,061 officers and airmen (including the Non-permanent Force) and had only trained 45 pilots in 1939.

September 1939 : Imperial's technical expert, Major Mayo, followed up with a report to determine how the airline might select better equipment in future. This report was prefaced by a damning critique of the Short flying boats are:

- I. susceptible to damage because of a too lightly constructed hull.
- II. The hull could be reinforced but only at the expense of further payload, which was already down on specification. The rate of accidents was high in consequence of this design flaw, but even if it could be corrected,
- III. Mayo acknowledged flying boats were inherently more liable to damage.
- IV. flawed planning assumptions were inherent in the EAMS "scheme" (Programme) but were then compounded by poor engineering:
- V. the operational problems that bedevilled EAMS were due mainly to unreliable engines.
- VI. Mayo's principal recommendation - go over to landplanes, something Edgar Johnston could have told him four years earlier.

September 1939 : The Trans-Atlantic Air Service (Imperial Airways) airport at Gander, Newfoundland is complete and ready for use by civil air operations.

09 December 1939 : Order in Council establishing Regulations to control the flying of civil aircraft <sup>234</sup>  
Canada Gazette (Extra) 9th December, 1939

<sup>234</sup> Proclamations and Orders in Council Passed under the authority of The War Measures Act R.S.C. (1927) Chap. 206 (Vol.1)

## Notes on "Civil Aviation"

P.C. 3987

AT THE GOVERNMENT HOUSE AT OTTAWA

Tuesday, the 5th day of December, 1939

present :

His Excellency

The Governor General in Council

His Excellency the Governor General in Council, on the recommendation of the Minister of Transport, and under and by virtue of the provisions of the War Measures Act, being Chapter 206 of The Revised Statutes of Canada, 1927, and notwithstanding the provisions of any other Act, Regulation or Order, is pleased to make the annexed regulations to control the flying of civil aircraft in Canada during war, to be cited as "The Defence Air Regulations, 1939," and they are hereby made and established accordingly.

H. W. LOTHROP

Assistant Clerk of the Privy Council.

1. These regulations may be cited as "The Defence Air Regulations, 1939."

2. No foreign civil aircraft shall be flown over Canada or Canadian waters, as defined by the Customs Act, unless

(a) Such aircraft is operated on an international scheduled air transport service licensed by the Minister of Transport under Part VII of The Air Regulations, 1938, or

(b) Permission for the entry of such aircraft into Canada has been given by the District Inspector of Civil Aviation of the Department of Transport into whose district it is proposed to fly such aircraft.

3. Applications for permission for entry of foreign aircraft into Canada shall be made to the following officers of the Department of Transport in respect of each of the Customs airports noted hereunder.

Moncton or Shediac, N.B.

Montreal, P.Q.

District Inspector, Air Regulations, Room 607, 400 Youville Square,

Montreal, P.Q.

Hamilton, Toronto and Windsor, Ont.

District Inspector, Air Regulations, No. 1 Montgomery Avenue, Postal

Station "K," Toronto, Ontario,

Winnipeg, Manitoba.

District Inspector, Air Regulations, 717 Dominion Public Building,

Winnipeg, Manitoba.

Lethbridge, Alberta.

District Inspector, Air Regulations, 402 Blowey-Henry Building, Jasper

Avenue, Edmonton, Alberta.

Vancouver, B.C.

District Inspector, Air Regulations, 420 Federal Building, 325 Granville

Street, Vancouver, B.C.

Permission shall be given under this regulation for daylight flying only.

4. (a) No civil aircraft, other than an aircraft licensed to operate on a scheduled air transport service, as provided under Part VII of The Air Regulations 1938, shall be flown over any of the prohibited areas set forth in Schedule A to these regulations without the permission of one of the following officers of the Department of National Defence.

—

(i) For the Province of Nova Scotia, and prohibited areas within New Brunswick, Prince Edward Island and Quebec, the Air Officer Commanding,

Eastern Air Command,

Royal Canadian Air Force,

17 South Street,

Halifax, N.S.

(ii) For prohibited areas in the Province of Ontario, the

Air Officer Commanding,

Air Training Command,

Royal Canadian Air Force,

Prudential House, 55 York Street,

## Notes on "Civil Aviation"

Toronto, Ontario.

(iii) For prohibited areas within the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia, the  
Air Officer Commanding,  
Western Air Command,  
Royal Canadian Air Force,  
715 Hastings Street West,  
Vancouver, B.C.

(£>) The Pilot or other person in charge of any aircraft having obtained permission under paragraph (a) of this regulation to fly over any of the said prohibited areas shall facilitate identification of such aircraft from the ground, and to that end the following procedure shall be followed.—

(i) The aircraft shall be flown via the route specified by the officer granting permission and shall enter and leave the prohibited area within the time limits named in the permit to enter, and special recognition signals shall be made or displayed, if called for, during the flight,

(ii) The aircraft shall cross the perimeter of the prohibited area with the undercarriage in the "down" position at a height not greater than 2,000 feet above the surface of the ground or water over which the aircraft is being flown at the time,

(iii) The aircraft shall, if it is necessary to land within the prohibited area, proceed in a straight line to the landing area before circling to land,

(iv) The aircraft leaving a prohibited area shall fly clear of that area with the least possible delay after take-off.

5. No civil aircraft shall be flown at night without the permission of the Minister of Transport.

6. (1) No person shall, by means of any radio apparatus installed in any civil aircraft under a licence granted by the Minister of Transport under The Radio Act, 1938, transmit or receive any message except a message relating to the navigation of such aircraft or the safety of life; provided that the Minister may permit the transmission and reception by means of such radio apparatus of commercial messages under such conditions and restrictions as he may prescribe.

(2) No person shall transmit or receive by means of radio apparatus, installed in any civil aircraft, messages in code or in any language other than English or French.

7. No person shall give or display from any civil aircraft, in flight or on the ground, any signal not authorized by The Air Regulations, 1938.

8. No arms or munitions of war or explosives, other than explosives authorized by the Minister of Transport to be used for signal purposes, shall be carried in a civil aircraft without the permission of the Minister of Transport.

9. No aerial photographs shall be taken from any civil aircraft without permission of the Minister of Transport, nor shall any photographic apparatus, plates or films be carried in any civil aircraft except as baggage or express, in which case such apparatus, plates or films shall be locked in a compartment of the aircraft separate from the passengers.

10. In addition to the documents required under paragraph 9 of Part VIII of The Air Regulations, 1938, every civil aircraft in flight in Canada, and every aircraft entering Canada on a scheduled air transport service shall have on board a written record showing:-

(a) The nationality of each passenger and each member of the crew;

(b) The immediate and ultimate destination of each passenger;

(c) The nature, place of origin and destination, and the name and address of the consignor and consignee of all cargo carried by such aircraft.

11. *Every licence or certificate issued* under The Air Regulations, 1938, to:

1. a pilot of other than British nationality,

2. *an air engineer of other than British nationality*

3. a pilot of the nationality of any power allied or associated with His Majesty in the prosecution of the war which commenced on September 10, 1939,

4. *an air engineer of the nationality of any power allied or associated with His Majesty in the prosecution of the war* which commenced on September 10, 1939,

*shall be suspended* upon the coming into force of these regulations *unless, in the opinion of the Minister of Transport, it is in the national interest (of Canada) that such licence or certificate remain in force.*

## Notes on "Civil Aviation"

*12. No civil aircraft registered in Canada as a private aircraft shall be flown within or beyond Canada without permission of the Minister of Transport.*

13. No civil aircraft operating on an international scheduled air transport service, licensed under Part VII of The Air Regulations, 1938, shall depart from the air route authorized under such licence, except under stress of weather or in the interest of safety, and for the purpose of this regulation such air route shall be deemed to have a width of twenty miles with the centre line extending in a straight line between the Customs airports between which such aircraft is in flight.

14. Every pilot or other person in charge of a civil aircraft registered in Canada or any other of His Majesty's Dominions or the United Kingdom, and operating on a scheduled air transport service licensed under Part VII of The Air Regulations, 1938, and every member of the crew of such aircraft shall take and subscribe the oath of allegiance to His Majesty and the oath of secrecy contained in Schedule B to these regulations, and refusal to take and subscribe either of such oaths shall be cause for cancellation by the Minister of Transport of the licence or certificate authorizing such person to act as pilot or member of the crew of such aircraft.

15. No civil aircraft shall be flown within any of the prohibited areas set forth in Schedule A to these regulations unless such aircraft is engaged in training pilots or other personnel for the Royal Canadian Air Force, in which case the aircraft shall —

- (a) Confine its flying to such training only, and
- (6) Be coloured and marked in the manner prescribed by the Royal Canadian Air Force; and
- (c) Confine its flying to daylight only and restrict its flights to areas as close as possible to the immediate vicinity of the aerodromes from which it takes off.

16. (a) These regulations shall extend and apply to aircraft owned by and operated in the service of His Majesty in the right of Canada or of any Province of Canada or of any other of His Majesty's Dominions or of the United Kingdom, and to every pilot and other person engaged in the operation of such aircraft.

(b) Every pilot or other person in charge of a civil aircraft mentioned in the next preceding subsection of this section shall take and subscribe the oath of allegiance to His Majesty and the oath of secrecy contained in Schedule B to these regulations; and refusal to take and subscribe either of such oaths shall be cause for cancellation by the Minister of Transport of the licence or certificate authorizing such person to act as pilot or member of the crew of such aircraft.

17. Every person who operates any civil aircraft otherwise than in accordance with these regulations and any order or direction duly made or given under any of these regulations, shall be deemed to contravene these regulations.

18. Every person who contravenes or fails to comply with any of these regulations, or any order or direction duly made or given under any of these regulations, shall be guilty of an offence and shall be liable on summary conviction to a fine not exceeding five hundred dollars, or to imprisonment for a term not exceeding twelve months, or to both fine and imprisonment, but such person may, at the election of the Attorney General of Canada, be prosecuted upon indictment, and if convicted shall be liable to a fine not exceeding five thousand dollars or to imprisonment for a term not exceeding five years, or to both fine and imprisonment.

19. The Minister of Transport may arrange to warn, in any manner deemed advisable, civil aircraft flying over or across any of the prohibited areas set forth in Schedule A to these regulations that such aircraft are liable to be fired upon by any of His Majesty's Forces, without warning.

20. These regulations shall come into force upon publication thereof in the Canada Gazette.

### SCHEDULE A

#### List of Prohibited Areas

### SCHEDULE B

I, (A. B.), solemnly and sincerely swear that I will not, without lawful authority in that behalf, disclose or make known to any person any information, matter or thing which comes to my knowledge by reason of my employment as pilot of any aircraft (or otherwise as the case may be) with respect to any of the prohibited areas set forth in Schedule A to the Defence Air Regulations, 1939, or any prohibited place as defined by The Official Secrets Act, Chapter 49 of the Statutes of 1939, or any other information, matter or thing which might be directly or indirectly useful to a foreign power or which might be used for a purpose prejudicial to the public safety or the safety of the State.

## Notes on "Civil Aviation"

Published under Proclamations and Orders in Council Passed under the authority of The War Measures Act R.S.C. (1927)  
Chap. 206 (Vol.1)

P.C. 108

Certified to be a true copy of a Minute of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 13th January, 1940.

The Committee of the Privy Council have had before them a report, dated 10th January, 1940, from the Honourable C. G. Power, Convener of the Committee of the Cabinet on Legislation, stating:

—

1. That under the provisions of The War Measures Act, a large number of Orders in Council, many of them having the force of Statutes, have been passed;
2. That many of such Orders in Council need to be referred to frequently by persons interested in the subjects thereof; and
3. That it is advisable that a compilation of all such Orders in Council should be prepared and published in book form, and that all Proclamations should be included therein;

The Minister, therefore, recommends that he be authorized to undertake the compilation and publication of all Proclamations, and of all Orders in Council passed under the provisions of The War Measures Act, Chapter 206, R.S.C., 1927, having the force of Statutes; that all such Orders in Council passed between August 25, 1939, and December 31, 1939, together with all Proclamations of the same period, constitute the first volume thereof; and that the cost of this and of subsequent volumes be a charge against the moneys provided by Parliament under The War Appropriation Act, 1939.

The Committee concur in the foregoing recommendation and submit the same for approval

(Sgd.) H. W. LOTHROP,

Acting Clerk of the Privy Council.

17 December 1939 : the United Kingdom, Australia, New Zealand and Canada met in Ottawa - set up the BCATP. There was no certainty as to where Newfoundland recruits might be incorporated into the scheme. As a temporary measure, the Commission Government decided to allow persons interested in RAF training to proceed overseas with artillery drafts. Once in Britain, they were examined and trade-tested by the RAF. If not up to air force standards, they were retained by two Newfoundland artillery regiments then being formed. A total of 71 men joined the RAF by this indirect route - See more at: <https://legionmagazine.com/en/2006/11/the-flying-newfoundlanders/#sthash.Iq96YWOW.dpuf> (Canadians were thought to be better trained than their Allied colleagues but (and this was a British opinion) less disciplined, too happy-go-lucky – and more popular with women.) BCATP recruits men and boys recruited for air training. all began their training from the ground up, with no present skills or experience. four main trades, "Fitter - aero-engine mechanic" "Rigger - air frame mechanic", sheet metal worker and fabric worker: - (Mary Ziegler, We Serve That Men May Fly, (Hamilton: RCAF (WD) Association, 1974), 11-15). the technological increase corresponded with a new manpower requirement.

December 1939 : C. G. Power, Canada's Minister of Air,

Even though the RCAF could currently muster only about 4,000 men in total, the training operation would require 33,000 air force personnel, as well as 6,000 civilians. in March of 1945, 72,825 were RCAF, 42,110 RAF, 9,606 RAAF and 7,002 RNZAF. This total does not include 5,296 RAF and Fleet Air Arm personnel trained in Canada prior to July 1, 1942 when the plan was renegotiated with Britain. Nor does it include over 50,000 Canadian ground crew who received their training in the Plan or the civilians and civilian organizations which participated conspicuously, running 10 Observation Schools and 30 Elementary Flying Training Schools. Cost to train each pilot in 1940-41: \$33,000.00! (Lifting the Silence: A World War II RCAF Bomber Pilot Reunites with his Past By David Scott Smith, Sydney Percival Smith)

## Notes on "Civil Aviation"

Initially, the BCATP recruiters wanted lower rank ground crew - technicians, mechanics, electricians (Lifting the Silence: A World War II RCAF Bomber Pilot Reunites with his Past By David Scott Smith, Sydney Percival Smith) - they needed them to build up the training maintenance force!

The first group of British pilot trainees was due to begin training in mid-September 1939, but the cataclysmic events of that month overtook the plan, and the trainees never arrived in Canada. Canada's sovereignty and independence from Britain was illustrated by the fact that it was not until one week after Britain's declaration of war that Canada's own decision to go to war was taken. That date was 10 September 1939.

British Prime Minister Neville Chamberlain had made an urgent appeal to Canada for the expansion of RCAF air training establishments. The British anticipated problems in meeting air personnel requirements, and stated that Canada could best assist by concentrating on training aircrew, to set a goal of training 2000 pilots annually, to enlist skilled mechanics, and to train as many observers and air gunners as possible

Equipment had to be procured. Aircraft were at the top of the list. Some 3500 aircraft were required at once, as well as 6500 engines and sufficient spare parts. In 1939 the RCAF had only 270(124 operational) service aircraft, many of which were obsolescent and few considered front-line equipment. To help out, Avro Ansons and Fairey Battles were promised from besieged Britain but, as it turned out, only delivered sporadically.

At home the domestic aircraft industry expanded miraculously to meet the challenge. Soon Noorduyn Aviation of Montreal was producing 100 Harvards a month. And a Canadian crown corporation called Federal Aircraft was formed to oversee production of Ansons in Canada. By June 1, 1943, 1850 Canadian-built Ansons were flying, well above original targets, but at the beginning, to fill the multi-engine gap, other twin trainers were procured including Cessna Cranes and Airspeed Oxfords.

Elementary training was to be mainly in de Havilland Moths, Fleet Finches and later in Fairchild (Fleet) Cornells, most of which would be built in Canada. To train fighter pilots, the state-of-the-art North American Harvard was ordered. Until deliveries would be sufficient to meet needs some North American Yales, originally intended for now-occupied France, were delivered to Canada instead.

In the first seven months of the Plan, by March 1940, adding mostly ground tradesmen, the RCAF more than doubled its strength to 10,375 and thousands of air crew recruits were placed on waiting lists until schools and instructors were readied. Meanwhile, the record-breaking planning and construction of bases across Canada proceeded in high gear, and schools of all types were soon opening at an astounding rate, ready (or almost ready) to receive their first classes.

The organized training of a successful air crew candidate would take between 50 and 90 weeks, often depending on the demand for various types of air crew which altered at different times. After recruitment, participants were sent to one of an eventual total of seven Manning Depots for an introduction to military life. It was here their path for aerial training was determined.

Those chosen for pilot training then proceeded to one of seven Initial Training Schools (ITS) to take part in a ten-week course in pre-flight training. From here, pilot trainees were posted to one of 30 Elementary Flying Training Schools (EFTS) (operated by government-supported civilian Flying Clubs across Canada) for eight weeks of flight instruction.

After soloing on Moths or Finches and an assessment of whether pilot aptitudes would be best suited for single-engine fighter, multi-engine bomber or transport, the successful neophyte headed off to one of 29 Service Flying Training Schools (SFTS) - twenty of these were twin-engine schools- for advanced training on more powerful aircraft. It was at the successful completion of this course that pilots finally won their coveted wings.

From SFTS the pilots moved to one of seven Operational Training Units in Canada or directly to an OTU in Britain. At OTU they were introduced to the aircraft which they would eventually fly into combat.

Those not chosen to follow the pilot route, including many who "washed out" of the pilot training program, were destined to fill out operational air crews as gunners, navigators, radio operators and air engineers. This was often far from their personal aspirations. Many of these men had counted on becoming pilots. But one thing, which you learned early, was to be a team player. Especially in Bomber Command this team aspect was to be of great significance.

Besides air crew, there were 72 other trades in the air force, from "fitters" (aero-engine mechanics) and "riggers" (airframe mechanics) to cooks. All had to be trained to do their jobs efficiently and effectively. And of course it goes without saying, the

## Notes on "Civil Aviation"

contribution of many thousands of ground crew at home and in all combat theaters was invaluable. Without them, no one flies! To the tribute and everlasting credit of Canadians, the recruitment of ground crew into the RCAF was never a problem during the war, particularly after women were accepted, forming the Canadian Women's Auxiliary Air Force, later the RCAF Women's Division "WD".

The BCATP, Canada's part in a wider program called the Empire Air Training Scheme, (EATS) actually traced its distant origins to World War I. During World War I Canada -specifically Ontario- became a major center of air training for the Royal Naval Air Service (RNAS)/Royal Flying Corps (RFC) which, by April of 1918 would become the Royal Air Force (RAF). The recruitment value alone of establishing this training program in Canada was obvious. No less than 25,000 Canadian servicemen entered the air force of the "Mother Country". (Texas provided training sites as well with the subsequent siphoning of thousands of American air and ground crew into the conflict before America's official entry into the war.) But, in Canada the politics of British authority over this training program had only exacerbated the larger controversy which British control over the whole Canadian war effort had engendered.

It follows then, that as World War II loomed on the horizon, most Canadians -including the politicians- were adamant that any future Canadian war effort remain under direct Canadian control. They wanted no more Passchendaeles where, in one Great War battle, Canada took 16,000 casualties! They wanted no more conscription which, although deemed necessary to feed the War's voracious appetite for Canadian soldiers, had nearly split the country in 1917. Post-WWI Canadian consensus held, right or wrong, that hundreds of thousands of Canadians had been sacrificed unnecessarily through incompetent British leadership. Canada, it seemed, was no longer willing to participate militarily as a "colony". She preferred instead the status of equal partner with control over her own forces.

The Royal Canadian Air Force, which succeeded the Canadian Air Board and the Canadian Air Force, had been born on April 1, 1924. During the time between the wars Canada, the senior Dominion, had allowed a few Canadians to be trained or selected at home for service in the RAF, and eventually agreed to the training of a few British pilots in Canada. However, to express her new, more independent relationship with Great Britain, Canada had refused to permit any of the training conducted on Canadian soil to be under British control.

80,000 ground crew, including approximately 17,000 in the Women's Division. While the purposes and the glory of the "Plan" was training aircrew, this training could not have been carried out without the ground crew. It is generally conceded that it took ten persons on the ground to keep one in the air. The training of ground crew was just as rigorous as that of the aircrew but generally less appreciated by the general population. Ground crew consisted of everything from aero engine mechanics (fitters) and air frame mechanics (riggers), instrument technicians, administration, vehicle mechanics and drivers to cooks, service police and some in other trades and occupations. Being already a half decent mechanic meant placement in the BCATP program to become an aircraft engine mechanic. In the southern Ontario region one of the larger "initial" training sites used during the BCATP was in Galt, Ontario (now Cambridge). This school, originally opened in February of 1915, still exists as Galt Collegiate Institute. From here the pupils (and more than a few of the teachers) scattered across the country to participate in the secondary training of various disciplines. In the fall of 1941 my father proceeded to the "St Thomas No. 1 Technical Training School" in south western, Ontario where he learned how to properly maintain, repair and service aircraft engines. This school now is the "St. Thomas Psychiatric Hospital". A historical plaque currently mounted at this site reads: "RCAF TECHNICAL TRAINING SCHOOL - The only facility of its kind in Ontario during the Second World War, No. 1 Technical Training School, St. Thomas was established by the Royal Canadian Air Force in 1939 to produce skilled ground crews for active wartime service. It was housed here in this hospital complex and was operated in compliance with Canada's commitment to establish air training facilities in sites removed from the theatre of war. Equipped to handle more than 2000 students at a time, the school offered six month courses for aircraft electricians and aero-engine, airframe and instrument mechanics in addition to specialized training for fabric and sheet metal workers. When the war ended in 1945 the school was closed and the complex was returned to the Ontario Department of Health."

From St. Thomas many of the graduates went on to further "hands-on" training while also acting as service crews on the planes used to train pilots at flight schools set up at many locations across Ontario. The "bible" for RCAF Aircraft Engine Mechanics was "Aircraft Engine Maintenance for the Aircraft Mechanic". these RCAF volunteers were disbursed to their various assigned locations, with most making their way via ships sailing out of Nova Scotia to the United Kingdom for active duty. Upon arrival at their final destinations they were ("finally") assigned to their squadrons or unit locations. In the UK the fresh men from BCATP-RCAF training were given additional instruction and experience in more relative areas of their posts. Pilots trained on the specific models of aircraft they would fly, and ground crews became more acquainted with the engines and systems. Plus all were physically and mentally hardened for what was ahead, being trained more thoroughly in the use of weapons, and ways of war. The Spitfire<sup>9</sup> aircraft is sometimes called the pinnacle of evolution of prop driven fighter planes preceding the advent of jets. It is the single most recognizable classic fighter plane. Over 22,000 were flown during the era of the war in all parts of the globe.

## Notes on “Civil Aviation”

Really a small fighter by today's standard the plane measured approximately 31 feet long, a bit over 12 feet tall at its highest point (prop tip), with a wingspan of about 37 feet. It was a single engine; single seat fighter outfitted with wing mounted machine guns and small caliber cannons. The weight of the plane was at a trim 7,500+ pounds.

Manufactured by Supermarine, and boasting up to a 1700 horsepower Rolls-Royce Merlin engine (or Packard in later years), the Spitfire was capable of a comfortable cruising speed of 280 mph, with a top speed on the flat of over 400 mph and maximum ceiling of 8 miles. Range with standard fuel load was just over 400 miles in the true fighter models. Use of an auxiliary “drop” tank could extend this flying range up to 200 miles. This flight range may appear great, but do remember the speed – even with drop tanks a return to a base for refueling would be required within several hours of takeoff. The engine burned fuel at an average rate of about one gallon per minute.

Initially the Spitfire fighter models were armed with four .303 machine guns, and two 20mm Hispano cannons (120 rounds each). By D-Day these lower caliber machine guns had been replaced by two high powered .50 Browning machine guns (250 rounds each) which had armour piercing capabilities. Most had the capability of carrying a 250 pound bomb on each wing, plus a 500 pound bomb on its belly. The Mark II Gyro Gun-sight used through the European campaign gave good targeting accuracy.

With a possible flying height of 40,000 feet, the planes were equipped with oxygen breathing apparatus and storage tanks.

It was small, quick, and maneuverable with a sting – a deadly combination in those times. Imagine a hornets' nest of these coming after you – coming down out of the clouds at almost 400 miles per hour with quite accurate armaments capable of permanently disabling a locomotive or armoured vehicle traveling at full speed. All through the war the Spitfire was constantly redesigned to improve its speed, fire power, and suitability to the many tasks it handled over land, sea, and in the air. All of this being necessary to keep pace with similar programs by the foe. Dozens of different models were produced, each improving to meet the needs of the time.

All of these planes were built light to maximize speed. Very little armour plating was present. The pilot's seat did have a curved bullet proof plate in its backrest which did provide some protection.

One must consider that the technology was not as advanced, in those times, as we enjoy (or deplore sometimes) today. There was no on-board radar, or tracking systems, or “smart” weapons. Just point it, get there, find a target, attempt hitting it, and then get out as quick as possible – all the while being watchful of those attempting to make you the target. Jet aircraft was not available to the RCAF squadrons at this time – but the Germans used them near the end of the war – a picture<sup>7</sup> of a captured Heinkel jet fighter is in the collages.

In Europe the day-fighter models of the Spitfire served to be much more than a suitable choice in its role to protect ground convoys, as a bomber escort, as an armed scout aircraft, and for use in direct daylight attacks on the enemy or to scramble to defend against incoming threats. In all, a high contribution was made by the Spitfire, its pilots and crews, in hastening eventual victory while minimizing losses.

The 416 Squadron flew the Spitfire Mark VB or VC early in its days, but used mostly Mark IXC and Mark XVI models within 1944 and 1945.

The days in Normandy were long with non stop “right-now” activity. On dry days the dust generated on the airfield was horrendous “You couldn't see 20 feet in front of you” – it rose in thick clouds on every takeoff or landing, and got into, and onto, everything, everybody, everywhere, and was a major problem at times with the air intake systems of the aircraft engines. (After all, the airfields were on dirt.) Planes were in the air within one hour of rising. Each squadron within the 127 wing typically had a dozen aircraft. Not all left immediately, but were staged out quickly and selectively through the day with replacements always being readied to take off just prior to those incoming. This activity would be further complicated by planes from other than the 127 Wing dropping in to refuel, rearm or repair. On top of this would be steady regular traffic of new arrivals, supply flights, squadron planes coming home early due to problems or out of ammo, and flights bringing in and taking out the wounded.

In every aerial operation, it is essential to address the importance of the groundcrew. They are, however, frequently forgotten or receive only slight recognition for the responsibility they held. Peter Conrad (Peter Conrad, *Training For Victory*, (Saskatoon: Western Producer Prairie Books, 1989), 41) highlights the neglected role of groundcrew, stating “The best available book on the BCATP.. fails to even mention the Technical Training Station... where **45 000 groundcrew received final training.**”<sup>14</sup> The countless tasks performed by the groundcrew in the BCATP ranged from the menial items of pulling chocks and fueling and directing aircraft, to heavy maintenance, including engine overhauls and major repairs. These tasks were daily occurrences at BCATP bases due to the frequency and intensity of flying operations, and they were carried out regardless of adverse weather and plummeting temperatures.<sup>15</sup> The groundcrew role was essential and remains among the most important links that drove the BCATP - <https://lurj.org/issues/volume-1-number-1/airtraining>

What BCATP cost

## Notes on "Civil Aviation"

The original figure of \$600,000,000 for the three year plan was thrown overboard early in the summer of 1941 when the Minister for Air estimated the joint expenditure of all countries to March 31, 1943, (the date the agreement will have to be renewed) would be \$824,000,000, plus \$28,000,000 for the completion of training pupils then in advanced schools.

A rough breakdown of the \$824 million:

- (a) United Kingdom's contributions in kind (aircraft, engines and spares) \$194,000,000
  - (b) Canada (cost of Recruiting and Manning Depots, Initial Training and Elementary Training of Canadian pupils) \$120,000,000
  - (c) Costs shared by Canada, Australia and New Zealand (of advanced training) \$510,000,000
- Total \$824,000,000

The final cost of the B.C.A.T.P. ended up being \$2,231,129,039.26 of which Canada contributed \$1,617,958,108.79.

Britain's Sir Winston Churchill referred to "The Plan" as Canada's greatest contribution to the Allied victory in WW II.

U.S President Roosevelt referred to Canada as "The Aerodrome of Democracy".

By 1945 the Royal Canadian Air Force was worlds 4th largest Air Force.

The average annual manufacturing output during the five years up to 1939 was about 40 airplanes, and the industry employed only 1,000 workers.

By 1943 aircraft production had become one of the outstanding industries of the country. The annual rate of output had reached 4,000 planes and more than 120,000 men and women were employed. By the end of May, 1945, a total of 15,905 aircraft had been produced.

The average unit weight of aircraft produced in 1940 was 1,920 pounds. by September, 1944, the average had reached 7,775 pounds and in 1945 was still climbing. The weights given are exclusive of aircraft engines, since no such engines have been produced in Canada. Of major importance to the allied war effort has been the production in Canada of aircraft components. Millions of dollars worth of components for the famous B-29 or Super-fortress and for other combat aircraft have been made in Canada for United States prime contractors. In addition Canada has supplied great quantities of

aircraft woods and other raw materials for airplanes manufactured in the United Kingdom.

Canada also assembled 3,200 aircraft from the United Kingdom and purchased more than 3,000 in the United States. A total of 5,000 service aircraft built in Canada has been delivered

to the United Nations in various theatres of war. In the first five months of 1945 production amounted to 1,209 airplanes, including 175 Lancasters, 166 Mosquito bombers, 183 Mosquito fighter bombers, 22 Mosquito trainers, 53 P.B.Y. flying boats and amphibians, 296 Curtiss dive-bombers, 77 Norsemen, 146 Harvards, one York and 90 Ansons. To keep its more than 12,000 service and training airplanes in the air, Canada developed an aircraft repair and overhaul program which operated in 20 major plants, assisted by 65 smaller contractors and 50 ancillary firms. The main contractors were strategically located from coast to coast and could handle any type of plane.

At one time this overhaul industry employed 18,000 men and women and occupied 2,000,000 square feet of factory floor space.

In 1943 a Canadian trans-Atlantic air service was instituted to carry armed forces mail and official passengers between Canada and the United Kingdom. At first only one aircraft was in service but by the end of 1944 five were operating on a tri-weekly service. All planes and equipment are owned by the Canadian government. As contracting operator Trans-Canada Air Lines is paid expenses for operations. The Northwest Staging Route, connecting Edmonton by air with Whitehorse, Yukon Territory, had been completed to the point of being in service before December, 1941.

Numerous improvements have been made since. New airports have also been constructed between Fort St. John and Vancouver with the object of establishing an airline service between Vancouver and Whitehorse.

The Northwest Staging Route now permits the operation of day and night service in all weather from North Vancouver and Edmonton to Whitehorse.

Two very large airports were constructed to facilitate the ferrying of aircraft from North America to Europe. One, at Dorval outside Montreal, Quebec, was constructed as the chief point of embarkation to the United Kingdom; the other, at Goose Bay, Labrador, as an alternative to the airport in Newfoundland.

Canada and the United States jointly constructed airports on

the Northeast Staging Route to enable aircraft to be ferried to Europe by way of The Pas and Churchill, Manitoba. Canada has reimbursed the United States for its expenditures in the construction of both northeast and northwest air routes. Exports to the United States signified under the miscellaneous group also reached a record level in 1943 - aircraft, \$26,000,000.

export values in millions : 1939 = 0.4, 1940 = 6.0, 1941 = 20.0, 1942 27.0, 1943 = 44.8 1944 = 107.1 source : CANADA AT WAR - Recapitulation Issue : ISSUED BY WARTIME INFORMATION BOARD, OTTAWA

## Notes on "Civil Aviation"

1939 : EAMS and Empire flying boats / imperial airways charged with preventing a repetition of the 1938 debacle. The bankruptcy of British civil aviation was now such that this civil service committee could think of nothing more substantial than to bring in the RAF to help shift the Christmas load, thereby returning policy to the standard set in 1921 when the RAF first carried mail across the Middle East. The years before 1939 are remembered wistfully as a Golden Age of British civil aviation. Contemporary works on the Empire flying boats celebrate them as 'the most efficient form of international transport available', although engineering historians have more accurately labelled them 'iron turkeys with a paper bottom'.<sup>59</sup> A discrepancy between nostalgia and harsh reality also characterises accounts of the "scheme" (Programme) as a whole, and not just its operating equipment. (The Journal of Transport History 28/1 "A gentlemen's club in the clouds - Reassessing the Empire Air Mail Scheme, 1933-1939" by Peter Ewer)

According to Sir Sefton Brancker, Director General for Civil Aviation within the British Air Ministry, Germany led Europe in terms of the development of civil aviation from the mid-1920s onwards (Myerscough, J. (1985), 'Airport Provision in the Inter-War Years', *Journal of Contemporary History*, p. 48)

1939 : UK AID was an engineering organisation, mainly civilian, but in part RAF. Primary purpose : ensure that all RAF and RN equipment manufactured or repaired by contractors and by RAF maintenance units was constructed to approved designs and was fit and serviceable for issue to the users, the operational and training units of the RAF and RN.

For administrative and technical control the staff of AID was divided into six divisions, namely aircraft, armament, engines, aircraft equipment, materials and general stores, the members of each division being specialists in the appropriate technical work.

1939 : With the outbreak of hostilities, peace-time civil air transport and the activities of the *International Air Traffic Association* are placed on hold.

1939 : Trans-Canada Air Lines  
carries 22,322 passengers - averaging 72 pax/day (6 day weeks assumed)  
carried nearly half a million pounds of regular Air-Mail  
carried 49,899 pounds of Express Air Mail

### CANADIAN AVIATION - 1940

May 1940 : Sir Archibald Sinclair - Secretary of State for Air

1940 : separate Royal Canadian Air Force Act enacted.

The world's foremost prophet of northern development and of northern aviation was Vilhjalmur Stefansson, whose *Northward Course of Empire*, published in 1922, made many predictions which, then widely ridiculed as fantastic, are coming true today.\* One of his sympathizers in the Government was J. A. Wilson, now Director of Air Services in the Department of Transport. Wilson strongly advocated sending Logan back to the Eastern Arctic at the head of an aerial reconnaissance expedition. This would have had to be carried out under •As early as 1917, in a letter written at Melville Island, Stefansson urged Sir Robert Borden, then Prime Minister of Canada, to institute an official examination of transpolar air routes.<sup>235</sup>

## Notes on "Civil Aviation"

1940 : Croil serves as the Inspector-General of the RCAF. [Air Marshal George Mitchell Croil CBE, AFC](#) (June 5, 1893 – April 8, 1959) was a [Royal Flying Corps](#) pilot during [World War I](#) who went on to become the first [Chief of the Air Staff](#) of the [Royal Canadian Air Force](#). He was asked to step down as CAS in 1940 and Croil then served as the Inspector-General of the RCAF [1] until his retirement in 1944 [2] when the post of Inspector General was abolished. [3]

### Early and family life

George Mitchell Croil was born on June 5, 1893 in [Milwaukee, Wisconsin, United States of America](#). His parents, Thomas Croil and Christian Mitchell, were Scottish immigrants to the United States. George Mitchell Croil was a [first cousin](#) of US Brigadier General [Billy Mitchell](#), a pioneer of American military aviation. [4]

When Croil was 11 years old, he moved, with his parents, to [Montreal](#) in [Quebec](#) where he attended the Westmount Academy from 1903 to 1907. From 1907 to 1911, Croil lived in Scotland, studying at [Robert Gordon's College](#) in [Aberdeen](#). Remaining in Great Britain, Croil studied Civil Engineering for the next two years. [4]

In 1912 Croil moved to [Ratnapura, Ceylon](#) where he gained employment as an assistant superintendent with the Mahawale Tea and Rubber Estate. His duties included overseeing the work routines of 700 plantation workers and ensuring that the machinery was kept running. [4]

### World War I

With the outbreak of [World War I](#), Croil enlisted in the [Gordon Highlanders](#) as a private soldier. [5] He was soon commissioned, serving as a machine gun officer in the 5th Battalion of the Gordon Highlanders. In January 1915 he received an acting promotion to [captain](#) and took up duties as a company commander. [4]

In May 1916, Croil was detached to the [Royal Flying Corps](#) and undertook a two-month period of flying training. On successfully completing the course and receiving his [pilot's wings](#) in July 1916, [4] Croil was seconded from the Gordon Highlanders to the [Royal Flying Corps](#) with the temporary rank of captain. [6]

### Inter-war service

Croil became a member of the Canadian Air Board in June 1920 and played a key role in the establishment of air bases at Morley and High River in Alberta. [4]

On the establishment of the [Royal Canadian Air Force](#) in 1924, Croil was one its founder officers. Although the RCAF was described as an [air force](#) and had a separate rank structure in line with the British air force, the RCAF was under the authority of the [Canadian Army](#). The following year, in 1925, Croil was posted to Great Britain where he served as a [liaison officer](#) with the [Royal Air Force](#). Croil also took a course of training at the [RAF Staff College, Andover](#). [2]

Returning to Canada by 1928, Croil was appointed Station Commander of [RCAF Station Borden](#) in Ontario which at that time was one of a very few RCAF training bases. Returning to Great Britain for further advanced training, Croil attended the [Imperial Defence College](#). Crossing back across the Atlantic once more, in 1934 Croil was appointed Senior Air Officer with the RCAF making him the head of the RCAF. In 1938, Croil succeeded in obtaining the RCAF's independence from the Army and accordingly his post was upgraded to [Chief of the Air Staff](#). Croil then only reported to the [Minister of National Defence](#). [4]

### World War II

Croil remained as Chief of the Air Staff until 1940 when he was replaced. He then served as Inspector-General of the Royal Canadian Air Force until 1944.

Croil died on April 8, 1959, in [Vancouver, British Columbia](#)

May 1940 : Lord Dowding writes the Air Ministry stating that not one more fighter aircraft be sent to France as it would cause the total, complete and irremediable defeat of England.

1940 : Royal Canadian Air Force Act of 1940 retains the disciplinary provisions of the British Air Force Act.

1940 : RCAF trades training : Airmen trained in two trades: radio operator and/or air gunner. At the start of the war, bombers had only two engines, were much simpler to operate and had a smaller crew. Airmen were expected to accumulate knowledge and responsibility for more than one function.

1940 : RCAF initially trained its wireless operators as air gunners, giving them the combined designation of "WO/AG".

As twin engined bombers were replaced by 4 engined bombers (Stirling, Halifax and Lancaster) with multiple and more complex flight, defensive and communication systems, with their seven crew members, the wireless operators as air gunners roles were

## Notes on "Civil Aviation"

separated as they required full-time specialists in each post. Dual-function training was retained as it was now prudent that each specialist be able to be replaced in an emergency so that the mission could proceed or safe return be made possible.

There was also a standard aptitude test — the RCAF Classification Test. After 4 or 5 weeks a Selection Committee decides whether the recruit would be trained for aircrew or groundcrew. the BCAT Plan required that recruits pass through multiple levels of testing and schooling before they were posted.

The "wireless course" is six months long and is the longest course offered in all the services.

Wireless mechanics had to learn how to assemble a receiver and a transmitter and understand / perform the maintenance of them. If an airman fails to qualify at his original choice of career in the Air Force, he is remustered (re-classified / re-assigned) into another trade by being sent to a Composite Training School.

1940 : G.A. Thompson, General manager of Canadian Airways Limited, writes the Chief of Air Services to complain about technical / maintenance personnel "poaching" by the RCAF and continued to complain of personnel shortages after the British Commonwealth Air Training Plan began to fall into stride: In order to fulfill our contract to operate No. 2 Air Observers' School at Edmonton it will be necessary for us to draw on Canadian Airways' engineers for key positions and for training of other mechanics at the Observers' School. This means that on some of our longer runs it will be difficult for us to send as crew men licenced air engineers to certify the aircraft and engine airworthy each day as required by Air Regulations.... To take care of this situation might we suggest that our experienced pilots be granted temporary air engineers' certificates for the duration of the war, so that they will be in a position to sign out any aircraft and will only require a helper with them as crew men.... This would materially assist not only Canadian Airways northern operations but most probably the operations of all companies operating in the north.... I understand a very similar arrangement has been made to provide B and D licensed air engineers for the elementary pilots training schools.... " - *Library and Archives of Canada* RG 12 Volume 1378 File 5258-118 volume 3; 28 June 1940; RG 12 Volume 1377 File 5258-118 volume 2; 2 July 1940; Memo, 25 October 1940

September, 1939 : Royal Canadian Air Force strength : 4,061 officers and airmen.

1940 : At first virtually all the Canadians trained as BCATP ground crew were required to staff B.C.A.T.P. schools and airfields across Canada and could not be spared to man Canadian squadrons overseas (whose ground crew was almost entirely found by the R.A.F) Production of ground crew increased from 5,917 in 1940 to 20,046 in 1941, about 10% of whom proceeded overseas as the beginning of a force which had increased to 35,369 by the conclusion of the European phase of the war. Included in these latter figures were approximately 5,000 radar specialists despatched overseas for service with the R.A.F. Of the graduates of ground crew courses enumerated in Table 23 approximately 97% were Canadians. (Source ref : Canada at War no.45 1945)

### CANADIAN AVIATION - 1941

14 February 1941 : a critical shortage of Canadian engineering, scientific and technical personnel was met by setting up the Bureau of Technical Personnel - Labour Minister McLarty, director to be E.M.Little (gen mgr of Anglo-Canadian pulp and paper and Gaspesia Sulphite Co) (Source Montreal Gazette feb 15 1941) . The Bureau of Technical Personnel evolved into an agency for the supply and control of technical personnel within the armed forces and essential civilian industry. (see also" Canada's Greatest Wartime Muddle: National Selective Service and the Mobilization of Human Resources during World War II" By Michael D. Stevenson - case studies show that mobilization officials achieved only a limited number of their regulatory goals and that Ottawa's attempt to organize and allocate the nation's military and civilian human resources on a rational, orderly, and efficient scale was largely ineffective) The Canadian National Selective Service "NSS" effectively governs civilian trades and trades persons.

17 - 25 February 1941 : Major Sir Frederick Banting - Royal Canadian Medical Corps arrives Gander on Hudson T-9449 en route to England via the Atlantic Ferry Organization (AT-FER-O) forerunner to Royal Air Force Transport Command. He was the second man to be so carried on an Atlantic ferry. 20 Feb. thirty minutes after departure Gander, the aircraft requests a bearing. 24 Feb. wreckage of T-9449 located 40 miles north-east Gander and ten miles inland from Musgrave Harbour. Pilot Officer Byrd - navigator, Royal Air Force, Snailham - Radio Officer and passenger, Sir Frederick Banting all dead, Captain Joseph Mackey - pilot survived. Airport engineer Jerome Coulombe in charge of checking the aircraft for mechanical safety testified at the civilian enquiry, "To my knowledge, there was no special guard put on this machine." He added, "I can't say whether the machine was in the hangar the first night it arrived or not." The enquiry also determined that mechanical checks were performed on the Hudson and determined the Hudson was airworthy, HOWEVER, no one signed the inspection sheet and no certificate of airworthiness was completed. The civilian enquiry found so many holes in airport security that Canadian Pacific Railway, contracted to manage the ferry operation, hired a new maintenance superintendent and reorganized its inspection system. Banting seemed concerned with the lack of security. He wrote in his diary, "An agent could certainly play the devil with the final checking, the hangar is overcrowded and planes have to be left outside and there is continual moving of planes. Magistrate Malcolm Hollett conducted a civilian inquiry shortly after the crash. The inquiry revealed flaws in the security at Newfoundland Airport and determined the cause of death. In Banting's case it was attributed to concussion and shock. That inquiry did not examine why the engines failed. That was left to the military - three-member military enquiry, chaired by Air Commodore George Walsh of the RCAF met in Gander in early March, 1941 and concluded their work on March 22. The military ensured right from the start that only innocuous bits of information would be released. An excerpt from the minutes of the meeting of the Commission of Government of Newfoundland dated April 2, 1941, stated: "The Commissioner will issue a Press Communique stating that the report has been received and that its findings relate to purely technical matters which it is not in the public interest to make public." That statement was, no doubt, dictated by the military brass. The military enquiry's official dispatch was printed in the Evening Telegram: "The report of the Court Inquiry has been received and examined. It has been decided by this Government that publication of the contents of the report would not be in the public interest. The findings of the court deal exclusively with purely technical considerations affecting the immediate and underlying cause of the accident." Four official copies of the report were made, two for the Canadian Government, one for the Newfoundland Government and the fourth to Canadian Pacific Railways. Researchers from England to Toronto have searched for the past 60 years but have been unable to find a copy of the military report. The Case of Mechanical Failure Innocuous bits and pieces of the military report were released stating that the port engine failed due to mechanical failure while the starboard quit due to carburetor icing.

There was one report of grass and rocks and a piece of cloth an inch wide inside the cylinder. The Globe and Mail on March 23, 1941 reported that sand and grass was placed in the oil supply.

Dr. Patrick McTaggart-Cowan the renown chief meteorologist stationed at Gander had a theory about the oil coolers. He said that new square oil coolers were being put into the Hudsons, replacing the older, rounder ones. According to McTaggart-Cowan the new coolers were too weak for cold weather starts and were rupturing. Bob Banting, grand-nephew of the great scientist, is the manager of information technology security at Atomic Energy of Canada. He has spent years accumulating data about the crash. He calls the oil-cooler theory "utter nonsense". Banting's research found that Lockheed never changed its round coolers to round ones. He did discover that engineers replaced the air induction units that sucked air into the engines. He thinks Mc-Taggart got the two confused.

Bob Banting also takes issue with the mechanical failure cited by the military. In short he has demolished the reasoning the military gave for the port engine failure. Banting also disagrees with the military theory that the starboard engine failed due to carburetor icing.

The Hudson could not get across the North Atlantic unless an extra fuel tank was installed in the cabin. All of the fuel flowed to the engines through a single pipe, there was no alternative route. If that small pipe clogged, it was game over. Someone intent on

## Notes on "Civil Aviation"

having the aircraft come down over the Atlantic could introduce sufficient dirt into the fuel tank to eventually clog the fuel filter. Military documents in the National Archives of Canada indicate that one method used by saboteurs was to put sugar into the fuel tanks. Eventually it would mix with the fuel, get into the engines and seize the cylinders. Bob Banting thinks the Hudson was a victim of sabotage. He thinks the most likely method used, and one used quite often by saboteurs, was placing sand in the oil. The sand would jam the oil cooler, inhibiting oil intake to the engines.

### CONCLUSION

It was a tragic, costly and unnecessary loss. It makes one question why Dr. Banting's trip was not kept secret. The lack of security is surely reprehensible and not at all indicative of what should have been done. The military would be most irresponsible to release a report that would indicate a lack of security during the war. However, 55 years after the war is over would seem to be a fairly safe time to "find" the military report.<sup>236</sup> In 1999 Canadian scientists named Sir Frederick Banting as the greatest scientist of the twentieth century.

1941 : Allied Air Transport Command conceived.

1941 : UK A.I.D "Common Services" division created to deal with administrative matters and supervision of female personnel. A consultant on Radiological Inspection (CRI) is appointed. The outbreak of the war saw Director A.I.D with director's status. October 1941 - upgraded to Deputy Director General. June 1943 upgraded to Director General, with coincident re-grading of other senior staff.

02 April 1941 : Shenstone "one of the leading airplane designers of the British Empire" - Globe and Mail, Toronto.

12 April 1941 : Shenstone credited with "smoothing out problems" concerning adding heavier armament to US aircraft destined for delivery in Britain, and responsible for the highly successful aerodynamic performance of England's Spitfire fighter - Toronto Times. RJM - "the genius to visualise, without the precise knowledge what had to be done, to reach out for something nearer to perfection"

23 April 1941 : PRODUCTION AND ACQUISITION OF AIRCRAFT <sup>237</sup>.

July 1941: Women's Division of the Royal Canadian Air Force organised.

02 July 1941 : WORKERS (DISCHARGE) <sup>238</sup> .

Mr. Mander asked the Minister of Aircraft Production why hundreds of employ  s are being discharged from aircraft factories at a time when aircraft are most urgently required?

Lieut.-Colonel Moore-Brabazon While the total number of persons in, and the output of, the aircraft industry continues to increase, it is true that, as a result of developing methods of production and the introduction of women labour, there are, in some aircraft factories, men who are, or who will become, available for alternative employment. Actual discharges are made only with the permission of a national service officer under the Essential Work Order. It will be appreciated that changes in the article under construction in order to meet modern operational requirements are necessary, particularly with aircraft, and that when this occurs a period involving the release of some labour is inevitable.

Mr. Mander Is not my right hon. and gallant Friend aware that there is considerable dissatisfaction in aircraft factories at the apparent lack of co-ordination and because the workers object to being paid for doing nothing? Will the Minister alter those conditions or make it clear to the workers why they are being paid for doing nothing?

Lieut.-Colonel Moore-Brabazon I am making arrangements for explanations to be given to the men, but it is sometimes a little difficult to do so. If we were able to go on with a perfectly plain programme, all would be well, but sometimes machines are stopped because they are not operationally required

## Notes on "Civil Aviation"

02 July 1941 : AIR TRANSPORT AUXILIARY SERVICE <sup>239</sup> LORD SEMPILL : I have been privileged on several occasions to submit for your Lordships' consideration suggestions appertaining to the aircraft industry and the use of the products thereof, whether for purposes of defence or of commerce. [...] the Motion which stands in my name regarding the supply of air material from that very great nation, the United States of America, that is marshalling and dispatching to us with all rapidity so much of the resources of which she is possessed [...] The importance of air power is becoming greater, as has so often been emphasized in your Lordships' House; and, as one who is justly proud of again serving in the Naval Air Service, I need not emphasize to your Lordships the vital need for us to obtain more aircraft for the Battle of the Atlantic, the Mediterranean struggle and elsewhere. These requirements, of course, are small by comparison with those of that magnificent Service created by the noble Viscount, Lord Trenchard, the Royal Air Force, the deeds of which will decorate the pages of history for all time [...]

Mr. Garro Jones asked the Minister of Aircraft Production whether he contemplates any changes in the relationship of the Air Ministry to the Air Transport Service?

Lieut.-Colonel Moore-Brabazon : I presume my hon. Friend refers to the "Air Transport - Auxiliary Service". If this is so. the answer is "No."

Mr. Garro Jones : Why was it necessary for this service to be performed by civilian workers? Is the **Air Auxiliary Transport Service** really our old friend **British Overseas Airways**, and would it not be better to say so?

Lieut.-Colonel Moore-Brabazon : It is quite a different organisation. It comprises pilots who are operationally unfit. It is a great relief to the Royal Air Force that we can employ pilots on this work who cannot be employed by the R.A.F.

Mr. Garro Jones : Is it not a fact that the people who employ these pilots in the Air Transport Auxiliary Service do so at a very large profit over what they pay to the Air Ministry?

Lieut.-Colonel Moore-Brabazon : The "service" is under me and not under the Air Ministry. I am responsible for delivery of machines to the Royal Air Force.

Mr. Garro Jones : Seeing that I have failed to receive any enlightenment upon this question from the various Ministers concerned, I beg to give notice that I shall take a convenient opportunity of raising the matter on the Adjournment.

Mr. Garro Jones then asked the Secretary of State for Air by what amount the pay of a pilot, who flies aircraft on active service, falls short of the pay of the Auxiliary Transport Service ferry pilot who delivers the aircraft from factory to aerodrome?

Sir A. Sinclair : As the answer is long and contains detailed figures, I will, with the hon. Member's permission, circulate it in the OFFICIAL REPORT.

Mr. Garro Jones : Is it not a fact that pilots who fly aircraft from the factories to the stations get almost twice the amount received by pilots who fly the aircraft on operational duties?

Sir A. Sinclair : Rather than ask me to make a calculation by mental arithmetic perhaps my hon. Friend would wait until he sees the statement.

Official Statement of Secretary of State for Air re amounts of the pay for a pilot who flies aircraft on "active service" (RAF) receives – 1941

22 April 1941 : Ernest L. Janney dies in Winnipeg

24 April 1941 : Ernest L. Janney buried in Brookside Cemetery. When a stone was installed, it read, "Sub-Lieutenant Ernest L. Janney, RCNVR, 1893-1941—Lest We Forget." - See more at: <https://legionmagazine.com/en/2004/07/a-high-flyer-indeed/#sthash.TvoKVHoh.dpuf>

1940 : Pilot candidates in the BCATP were sent to initial flying training schools, while those men who demonstrated a high level of mechanical aptitude were sent to St. Thomas, Ontario, to learn aircraft body design, engine maintenance, or instrument repairs - Peter C. Conrad, Training for Victory The British Commonwealth Air Training Plan in the West. Saskatoon: Western Producer Prairie Books, 1989

June 1940 : Canada : C.P. Edwards, Chief of Air Services, who wrote to Brintnell that the Board of Transport Commissioners was investigating duplication of services in civil flying. "[In] this connection we cannot too strongly urge upon you the necessity for co-operation with other operators and taking such steps as are possible within your own organization to cut your requirements to the bone.,"

Britnell replied: *In regard to our list of mechanical personnel, I would like to point out that we have an overhaul and repair organization called "Aircraft Repair", where we now employ forty-seven men.*

*These are all skilled and trained personnel, and this organization is going to be used on overhaul work for the Air Force, in connection with the air training program.*

*We have been advised by the Department of Munitions and Supply that these men will not be disturbed for any purpose whatsoever, and furthermore, if they do join any branch of the Service, they will be taken back for this work.*

13 August 1941 : Appointment of a National Transport Controller announced

Munitions Minister C.D. Howe announces the appointment of W.J. Lynch of Quebec as transport controller, with "widespread powers over all forms of transportation throughout Canada" from Ottawa

Under the Order In Council authorizing his appointment, Mr. Lynch has:

1. Complete control over use of transportation companies, with
2. Complete control over operation of transportation companies
3. The power to establish schedules, and
4. The power to establish fares to be charged by transport companies.
5. has the authority to issue, reissue, or cancel permits or licenses, and to prohibit, restrict, limit, or extend the working of vehicles.
6. has power to stagger working hours to relieve transportation congestion,
7. may order any employer to arrange or alter hours of employment of employees in order to assure that such proportions as the controller may fix will, as far as possible, arrive at, or depart from, their place of employment at such times as may be directed."

[Toronto Globe and Mail, 14 August 1941]

November, 1940 : The first air crew graduates of the B.C.A.T.P. began arriving in the United Kingdom

"I am convinced that the material we have today is fully worthy of the example handed down by the pilots and crews who so decisively won the Battle of Britain last September."

CAPTAIN H. H. BALFOUR, M.P.,

Under-Secretary of State for Air" After inspecting an R.A.F. Initial Training Wing on February 15th, 1941.

BECAUSE no man can take his place in the Royal Air Force, whether he is destined for service in the air or on the ground, until he has become thoroughly proficient, it might be appropriate to discuss the work of the training commands before dealing with the operational and other branches. The excellent way in which that training is carried out is shown by the high standard of fighter and bomber pilots, by the resource and skill of the crews of

our giant machines, and by the efficiency with which British aircraft have been kept airworthy under the difficult and dangerous conditions of wartime.

Until recently there was only one Training Command in the R.A.F. but when the force began to expand at such an extraordinary rate it became obvious that there must be separate organizations to deal with flying and ground work. Flying Training Command and Technical Training Command are now certainly among the largest in the whole wide range, and it is necessary that they should be, for an air force must work with one eye towards future requirements.

Flying Training Command is divided into six groups.

One group looks after the initial training wings; two are responsible for elementary flying training schools and air observer-navigation schools; two control the Service flying training schools; and the sixth maintains the bombing and gunnery schools. A pilot's tuition is really divided into four stages, though they are continuous. Whether he is a volunteer or a man called up under an age group any entrant attending the recruiting centre may express a preference for air crew duties. Subject to a satisfactory preliminary medical examination his papers are then marked provisionally for flying duties. The next stage is attendance before the Aviation Candidates Selection Board, who test him in mathematics and other subjects of importance to an airman and satisfy themselves that he is up to the required educational standards. He then has to pass the medical examination proper and the physical standards required are high before he is told to report at a receiving wing.

The young recruit is now ready to start his training. After receiving his uniform and kit he is taught how to salute, given lectures on Service discipline and etiquette, learns how to distinguish ranks, and, in short, is generally fitted for a career in the flying Service. After about a fortnight the recruit is transferred to one of the schools of an initial training wing, where elementary instruction is given in mathematics, navigation, aircraft recognition, armaments and signals. At the same time he is drilled and sent on marches and runs, so that his physical and mental education progress side by side.

Candidates for flying duties are sometimes rejected on the ground that they do not reach the prescribed educational standards. Often they are hurt, and their friends are indignant. Does the R.A.F. want men or doesn't it? And what has education got to do with flying? Those are the sort of questions one hears occasionally. There are, however, very good reasons for laying down minimum educational qualifications for men who are to fly.

Pilots, for example, must write reports of their part in operations and they must be clear and free from ambiguity, for those reports are studied carefully, experience gained in actual operations sometimes determining changes in tactics or resulting in improvements in the aircraft employed. An airman cannot afford to be weak in mathematics, for navigation is essentially a mathematical subject. New instruments have been devised which make some of the processes automatic and cut out lengthy calculations, but even with such simplification one principle always holds good that the navigator who

readily understands what he is doing, and Wriy, is better in an emergency than one who does everything by rule of thumb. And emergencies are bound to occur sometimes on active service.

Bomb aiming is another task for which a basic training in mathematics is invaluable. A bomb sight is a complicated instrument, requiring various adjustments to allow for the type of bomb being used, for height and speed of the aircraft, and for wind direction and drift. There are two kinds of bomb-aimers those who know exactly what they are doing and those who have merely learned a lot of meaningless rules. The first type of man sets his sight intelligently, because he realizes the factors for which he is making allowances, while the second type merely loosens a screw, rotates a dial and tightens another screw because he is told that he must do so, trusting to providence that all this weird magic will work. In an emergency there is no doubt which man would be the more likely to hit his target.

It is for all those reasons that the R.A.F. set out to discover, while he is at the first stage, whether a man has sufficient knowledge of the vital subjects to enable him to become a successful pilot, navigator, bomb-aimer or wireless operator-air gunner. There is a mid-course examination in mathematics, in which 60 per cent of marks must be obtained to qualify for completion of the course.

Throughout the long weeks at the I.T.W. he has not been in the air once and has probably not even seen an aeroplane at close range. Nevertheless he has had the sound grounding which will enable him to benefit by the slightly more advanced instruction he will receive at the next stage the elementary flying training school. This is the really vital stage of his training. Though pupils are sometimes rejected even later, it is usually here that a man shows whether he is likely to make a good pilot or not.

If an intending pilot fails at any stage of his training he may be re-mustered for air crew duties or he may be given ground employment.

This gives some idea though by no means a complete picture of how the R.A.F. trains its recruits for the air.

The whole range of ground and air training is controlled by an Air Member, Air Vice-Marshal Garrod. Under him, are Air Commodore A. J. Capel, D.S.O., D.F.C., who is Director of Operational Training; Air Commodore A. H. Orlebar, A.F.C., Director of Flying Training; and Group Captain M. Thomas, Director of Technical Training. Air Commodore Orlebar will be remembered for the prominent part played in Britain's success in the Schneider Trophy races. After the 1929 contest he set up the world's speed record of 357.7 m.p.h. in a Supermarine Rolls-Royce S.6.

Technical training is even more complex than that for flying duties, for it embraces so many subjects. Many thousands of young men are constantly going through the Command's hands, and when they have concluded the course they are skilled or semi-skilled craftsmen.

Technical Training Command is sub-divided into three groups. Two are responsible for general training, and

the other is confined entirely to the allied subjects connected with signals, such as all forms of ground wireless, teleprinters and telephones. Throughout the country there are a number of schools, which are rather more like vast camps, covering many acres of ground.

Men embarking on a technical training go straight from civilian life to the receiving wing of a recruiting centre, where a Trade Selection Board decides for which calling his qualifications make each man best suited. For a week or so his life is very much like that of the new recruit for flying duties, for he is supplied with uniform and kit, does a great deal of drill, learns Service discipline, and so on, and at the end of this time he is drafted to a school to learn his appointed trade. The duration of the course depends on the trade. When this has been completed the most successful pupils go for a short period to a squadron and then come back to a training centre to qualify for a more responsible post.

The vast majority of young men are trained as flight riggers and flight mechanics. These are the engine and airframe fitters. But in addition there is an almost bewildering variety of trades, such as lorry driver, motor transport mechanic, fitter driver (who can overhaul vehicles), fitter-armourer (for both bombs and guns), motor-cyclist, motor mechanic, machine-tool setter and operator (including turners, grinders and millers), blacksmith, acetylene welder, coppersmith, sheet-metal worker, instrument repairer, fabric worker, parachute packer, aero-carpenter, batman, mess waiter, cook and butcher, photographer (developers, printers, enlargers and processors), police, fire-fighter and physical training instructor.

This is not a comprehensive list, but it is enough to show the vast variety of jobs for which men must be trained if an air force is to operate successfully.

In civil life many of the physical training instructors are professional boxers, cricketers and footballers. At one time one R.A.F. training establishment had under instruction a football "team" whose combined transfer fees amounted to 150,000. The same station could put into the field a cricket eleven composed almost entirely of men who have played for England. There were also several boxers of international repute.

The training establishments are all well fitted up, possessing a cinema, concert hall, gymnasium and swimming bath. Though they work hard the pupils enjoy their life here, for there are first-class facilities for sport and recreation, the food is good, and there is enjoyable companionship. They are taught intelligently, without any of the bad old "sergeant-major" stuff, and by the time that they have finished the course they have the comforting assurance of having mastered a skilled or semi-skilled trade which, should the war end on the morrow, would be of value to them in civilian life.

In considering the work of an air force one is apt to think only of the achievements in the air, forgetting that for every member of a flying crew there must be between thirty and forty men on the ground. Without their ground crews bomber squadrons and fighter squadrons, too, would be lost and would have to cease operations after a very short time. Every time that a bomber completes a

successful raid it is, indirectly, a tribute to the efficiency of the maintenance staffs the men whose unexciting task it is to keep the machines airworthy. Upon the standard of their work depends the safety not only of the valuable aircraft but of the crews of five or more; it is a great responsibility.

The maintenance men take a great pride in their work and a personal interest in the particular aeroplane for which they are responsible. They will even speak of it as "my Wellington" or "my Whitley," and if it has done well on a raid they will glow with pride and be as pleased as if they had taken part in the raid themselves. The pilots and flying crews trust these men implicitly, for they know from experience that it would be regarded as base treachery to give what is tantamount to a certificate of airworthiness for a machine which was faulty in the smallest respect. Long experience of working together has created between the men on the ground and the men who fly a very real understanding and friendship. The maintenance men are the technical experts, and often their advice is sought about such things as minimum safety margin for fuel loads (enabling a maximum bomb load to be carried) and other knotty problems on which the fliers' lives may well depend.

When a bomber is going on a raid the ground crew stay with it until it takes off and wait to take it over on its return. As soon as it has landed, the fitters, riggers, armourers, electricians and instrument experts go over it thoroughly and get it ready for the next "outing." The speed at which these men work is, almost incredible. After a raid on Germany a bomber returned to its station at 3.30 a.m. It had to undergo one of the thorough inspections made at the end of every 30 hours' flying time and it had to be re-doped that is to say, have all its exterior surfaces sprayed. Six hours later it was ready. Another machine had been fairly badly damaged in a night raid, but at ten o'clock the following morning, when an officer came from group headquarters to examine it, everything had been put right and the bomber-^ Whitley was all set for the next raid.

Whether it has been hit or not, every bombing aircraft has an inspection after thirty flying hours, and each overhaul becomes progressively more severe and extensive up to one hundred and twenty hours, when the process starts all over again.

In wartime the maintenance crews have to work under pretty bad conditions. It is not safe to leave aircraft in hangars, because of enemy attacks, and so they are deployed on the airfield. The ground men, therefore, have to work in the open in all weathers. Each heavy machine needs a team of twelve to keep it in trim. A corporal, two fitters and two riggers do all of what may be called the running repairs. Then there are the armourers, whose task it is to "bomb up" and feed ammunition into the guns.

The filling of the fuel tanks alone is no small task. For every hour in the air a heavy bomber, such as a Wellington or Whitley, requires between 80 and 90 gallons of petrol. It is not uncommon for these giant machines to make flights of eight hours, so that something like 700 gallons of fuel have to be loaded on to each aircraft. Petrol weighs

## Notes on "Civil Aviation"

round about yi lb. a gallon, so that a total weight of over 5,000 lb. has to be shifted before a single bomber can start out on a raid. And on top of that there is oil to be thought of; tons of bombs have to be loaded into the racks; as well as flares, pyrotechnics and a host of other things. This gives some (though an inadequate) idea of what work is entailed in the operation of a heavy bomber squadron. Fully loaded, a typical British heavy bomber aircraft, the Whitley, weighs between 12 and 14 tons. Yet, like all the smaller machines, it has its beginning in thousands of small parts, many of them not so big as the palm of one's hand. There is something truly romantic about seeing these giants take shape. One can walk in at one end of a factory, watch girls stamping out little bits of aluminium alloy; go on to another great hall where the fuselages are being assembled on steel jigs; travel on again and see detachable parts of the wings, tail units and wing spars being prepared; watch men juggling with seemingly endless and inextricable tangles of wires and electrical fittings, women working at fabric coverings, men spraying the airframes and others fitting engines; and finally, after what seems like a route march, emerge on to the testing ground to see a finished bomber being put through its paces.

All those little bits and pieces have somehow been moulded together into a monster which is nearly 70 feet long, has a wing span of 84 feet, can rise to a height of about 5 miles and can carry five men for a distance of about 2,000 miles at a cruising speed of considerably over 200 miles an hour.

It is an experience which is rather apt to take one's breath away and leave one with a sense of unreality.

For some time now Army officers who wished to do so and who passed the medical and educational tests and concluded their flying training, have been accepted as pilots for Army cooperation work.

For some time now Army officers who wished to do so and who passed the medical and educational tests and concluded their flying training, have been accepted as pilots for Army cooperation work. (aero) and fabric workers (balloon), equipment assistants; for administrative duties and for various clerical duties; as teleprinter operators, radio operators and tracers, telephone operators, four kinds of aircraft hands, dental clerk orderlies, and sick-quarter attendants. Women who have been upholsterers, machinists or tailoresses are found to be good at fabric work, while those who have had experience in factories or wireless shops usually make excellent instrument mechanics. Women who want to become wireless-telegraphy slipreader operators must be experienced typists (preferably touch-typists), while general duties clerks must be able to type at a minimum rate of thirty words a minute. Commercial artists are among those employed as tracers, whose job it is to trace in and colour maps. Some women are engaged in tracking enemy aircraft operating over this country, and in this responsible occupation they work in close touch with the Royal Observer Corps. A new school for code and cypher officers of the

## Notes on "Civil Aviation"

W.A.A.F. was opened in 1940. It is in a big country house in one of the royal counties of England, and is the first of its kind in the Service. The school is actually administered by the Technical Training Command of the R.A.F. W.A.A.F. officers take a short course, which is on the lines of that at the Royal Air Force Staff College. When that course has been completed the WAAF officers are posted to an R.A.F. unit, and in addition to their code and cypher duties they are then responsible, in conjunction with the administrative W.A.A.F. officers, for the welfare and recreation of the airwomen attached to the unit. For some trades it is necessary to pass a selection board. Trained women are then posted to R.A.F. stations, but those with little or no previous knowledge of their trade receive a special course of tuition. There is no direct entry for officers, all of whom are promoted from the ranks. The women undertake to serve anywhere, including overseas.

In the middle of January, 1941, the Air Minister announced plans for the new Air Training Corps (opened April 15th 1941). The "scheme" (Programme) was divided into three parts. Units were to be formed at the universities, at public and secondary schools, and locally. At the universities the Air Ministry was arranging a six months' course for youths who wished to serve as pilots or navigators and who were regarded as potential candidates for commissioned rank. While at the universities the young men would join the Varsity air squadrons and would carry out a course of instruction in Service subjects similar to those taken at the initial training wings of the R.A.F. Flying Training Command. At the same time they would pursue a course of study given by the teaching staff of the university in subjects of value from the Service point of view, such as mathematics and mechanics, electricity and magnetism, engineering, meteorology and navigation. All selected candidates were required to take the first of these and one of the other four subjects. Arrangements had been made whereby boys would be full members of the university while taking the course. Selected candidates would be attested for the R.A.F. before going into residence but would be placed on deferred service during this period. All expenses, except such personal ones as for laundry, were to be paid by the Air Ministry, but the young men would not draw Service pay. On completion of the course candidates who secured the university air squadron certificate and who satisfied the Joint Universities Recruiting Board of their diligence and progress in their other studies and who were regarded as being otherwise suitable would go direct to a flying training or observer training school. That is to say, their training at the university, having been similar to that given at the initial training wings of the R.A.F., would be substituted for the first stage of their Service training.

In order to get the "scheme" (Programme) going the Air Minister persuaded Uppingham School to release for a period of six months their brilliant headmaster, Mr J. F. Wolfenden, and he became the Air Ministry's first Director of Pre-Entry Training. The Director is directly responsible to Air Marshal A. G. R. Garrod, the Air Member for Training. Responsibility for the training of all units and for the administration of local units is vested in Air Commodore J. A. Chamier, who was formerly Commandant

## Notes on "Civil Aviation"

of the Air Defence Cadet Corps.

Naturally, the local "scheme" (Programme) forms by far the largest part - There is no corner of the country where a unit has not been formed. It is here that the organization of the Air Defence Cadet Corps has been most useful.

It is here that the organization of the

Air Defence Cadet Corps has been most useful. Where there had been a local cadet squadron the committee readily offered their services; where there had not, a local organization was set up without delay. Arrangements were made with the local authorities for instruction to be given at Air Ministry expense in such essential subjects as mathematics. Smaller schools were encouraged to link up with local units, and many have done so.

An Air Training Corps Council of Welfare was also set up, together with a small board of trustees. For potential air crew candidates the local "schemes" (Programmes) are now providing a syllabus approximating to that of an R.A.F. initial training wing. The principal subjects are mathematics, navigation, signals and the theory of flight. Wherever possible Link trainers are being provided. Special syllabuses have also been prepared for potential entrants for mechanical and signals ground duties. In many cases schoolmasters have volunteered to act as instructors, while hundreds of men with R.A.F. experience have also come forward.

On the day after the "scheme" (Programme) had been announced in the Press offers to form squadrons, to help with this and that, came pouring into the Air Ministry. The department was almost overwhelmed.

When war overtook this country the shortest time for a flight across the Atlantic was 10 hours 33 minutes, set up in September, 1937, by the Imperial Airways flyingboat Cambria during an experimental flight from Botwood, Newfoundland, to Foynes, in Eire. Atterro had not been functioning very long before a British ex-civil air line pilot brought the record down by nearly an hour, while in the spring of 1941 some of the American bombers were getting over in 8½ hours. And, remember, they could not come down at Foynes. One has actually crossed in the almost unbelievably short time of 7½ hours.

Among the American aircraft which have been brought over in this way are the Consolidated P.B.Y. flying-boat, known in this country as the Catalina; the Boeing 6-24 heavy bomber (British name, the Liberator) ; the Lockheed Hudson and Lockheed Vega Ventura; and the Boeing B-29 (the "Flying Fortress").

for any aeroplane with a sufficiently long range has been flown across to England ever since October, 1940. The complete machines are

## Notes on "Civil Aviation"

delivered to Canada from the United States factories, taken on to Newfoundland and then flown direct to reception depots in this country. The success of this enterprising method of delivery has been extraordinary. Up to the time when Lord Beaverbrook made the House of Lords speech already referred to only a single aeroplane, representing a decimal of 1 per cent, of the total, had been lost. The author knows for a fact that that still held good some time later. It may still represent the sole casualty. Yet those machines have been brought across, week after week and month after month, in weather which was often totally unsuitable for cross-ocean flights

"A pilot's tuition is really divided into four stages, though they are continuous. Whether he is a volunteer or a man called up under an age group any entrant attending the recruiting centre may express a preference for air crew duties. Subject to a satisfactory preliminary medical examination his papers are then marked provisionally for flying duties. The next stage is attendance before the Aviation Candidates Selection Board, who test him in mathematics and other subjects of importance to an airman and satisfy themselves that he is up to the required educational standards."

### CANADIAN AVIATION - 1942

1942 : Number of personnel required to keep one RAF Avro Lancaster B Mark I flying :

## Notes on "Civil Aviation"

3x Operations staff:

1x flying control officer,  
1x WAAF parachute packer,  
1x meteorological officer,  
1 Avro Lancaster bomber, 7 aircrew:  
pilot / captain,  
navigator / observer,  
air bomber,  
flight engineer,  
wireless operator/air gunner  
air gunner  
air gunner

12 flight maintenance crew:

Non Commanding Officer - fitter,  
Non Commanding Officer - fitter,  
flight maintenance mechanic,  
flight maintenance mechanic  
flight maintenance mechanic  
flight maintenance mechanic  
flight maintenance mechanic  
electrical mechanic,  
instrument repairer,  
radio mechanic  
radio mechanic:

Bombing up (Loading) team;

Tractor with a bomb train and 4 crew members  
WAAF tractor driver  
bombing-up crewman  
bombing-up crewman  
bombing-up crewman

17 ground servicing crew members:

corporal mechanic,  
aircraft mechanic  
aircraft mechanic  
aircraft mechanic  
aircraft mechanic,  
engineer officer,  
fitter/armourer,  
armourer  
armourer  
armourers  
radio mechanic  
instrument repairer  
instrument repairers,  
bomb handler  
bomb handler  
bomb handler,  
machine gun belt fitter

AEC Matador petrol tender with 2 re-fueling crewmen,  
Mobile workshop with 3 workshop crewmen.

February 1942 : Women's Division of the Royal Canadian Air Force formally integrated.

## Notes on "Civil Aviation"

24 March 1942 : Parliament - Ottawa, Ontario : Right Hon. W. L. MACKENZIE KING (Prime Minister): make a statement concerning measures recently adopted giving additional effect to the government's policy with respect to the mobilization of man-power - cite the various orders including:

1. P.C. 638, March 4, 1942, Essential work (scientific and technical personnel) regulations, 1942.
2. P.C. 26/1840, March 10, 1942, providing for extension and improvement of training in personnel management, for the appointment of a director of personnel training, and for the appointment of personnel managers.

[...] An important phase of the man-power **problem has to do with providing** in war industries **the necessary supervisory personnel**. It has been found that, as war industries continue to expand, **it is increasingly difficult to secure sufficient supervisors, personnel managers, and foremen, to direct the enlarged work forces**. Many plants producing urgently needed war materials are now operating day and night, seven days in the week. Others that might be operating on the same basis are **hampered by lack of supervisors**. A recent statement by Mr. Bevin on **the importance of personnel factors in war production in Great Britain is equally applicable to Canada**. It reads: *In the layout of our war effort, sufficient attention was not paid to the personnel problem. . . . The longer the war goes on, the more necessary it becomes to pay greater regard to this personnel side of industry. The absence of a proper understanding of the problem has been one of our greatest handicaps in this great struggle. . . . Hence my additional plea for the personnel manager, who should be specially trained to have an equal position in industry with others members of the executive. Indeed, I am sure and I would emphasize this: that our post-war position will be materially helped. Mobilization of Man-Power and the future prospects of British industry enhanced, by a full appreciation of this important fact. To assist our Canadian employers to meet their personnel problem, provision has been made by the government for training in personnel management. The universities have agreed to cooperate. Experienced personnel men will serve as instructors and sponsors. Trainees will be given practical instruction in the classroom, and on the job. If the experience of this undertaking warrants, these facilities will be extended to foremen and other supervisors. It is hoped by this means greatly to reduce an important area of difficulty in war production. Moreover, better personnel policies and practice should minimize friction between management and men, improve morale, and thereby increase output...* [...] Another step in the allocation of man-power recently taken, relates **to the diversion of technicians to war service**.

It concerns persons normally engaged **in the engineering profession** as civil, mechanical, electrical, chemical, metallurgical or mining engineers; **also production** and industrial engineers, college teachers of engineering science, persons trained in any branch of the science of chemistry, research scientists and persons other than teachers holding university degrees in engineering, chemistry, physics, geology, mathematics, architecture, or in any natural science; also all technically qualified members of the Engineering Institute of Canada, the Canadian Institute of Chemistry, the Canadian Institute of Mining and Metallurgy, the Royal Architectural Institute of Canada and of any provincial association of professional engineers, chemists or architects.

About a year ago, **with the aid of the professional engineering societies, there was established in the Department of Labour a war-time bureau of technical personnel**.

The bureau has accumulated information **on most of the professional engineers of the country**.

It has sought to make engineers available as needed in the armed services and in war industry.

**The time has come, when in the opinion of the government, all technical men should be shifted** from non-essential activities to war or other essential services.

Under regulations at present in force, if, at the request of the Minister of Labour an engineer is willing to transfer to more essential work, his present employer is obliged to release him and to reinstate him when his undertaking on essential work is completed.

**Employers who hire or release technical employees are required to** notify the bureau so that technical men as needed in the war effort may be quickly located.

**Contracts of employment for the services of technicians require the approval of the Minister of Labour.**

This measure is restricted for the present to professional technicians. It may, however, become necessary as an essential war service, also to require skilled workmen in certain categories, to remain in their existing occupations in war industries, or to move from one war industry to another, or to remain in certain essential civilian occupations.

Should such widespread control become necessary, every effort will be made to reduce its arbitrary aspects to a minimum, and to secure, from workmen and employers alike, the largest measure of voluntary cooperation.

In order to increase the numbers of men available for service in the armed forces, in war industry, or in other essential occupations, regulations have been made which prohibit the entry into employment in a wide variety of occupations, of men who are of military age and physically fit. These occupations will be known in future as restricted occupations.

25 June 1942 : Ottawa : Orders in Council : Aircraft Control Regulations — office of deputy Aircraft Controller established - ORDER IN COUNCIL # 5387

August 1942 : RCAF bomber squadrons began to redeploy to RAF stations in Yorkshire, in preparation for

## Notes on "Civil Aviation"

coming under the command of the still unformed Canadian No. 6 Group.

August 1942 : RCAF bomber squadrons become responsible for their own administration and aircraft maintenance.

12 to 17 August 1942 : Moscow Conference, Kremlin, Russia. Churchill meets Stalin and Molotov at the Second Moscow Conference between the major Allies. Churchill wrote "mission was like 'carrying a large lump of ice to the North Pole'<sup>241</sup>"<sup>242</sup>

October 1942 : C.D Howe and Ralph Bell (Dir. Gen.Aircraft production branch - Dept. of Munitions & Supply: Fed. Dept. charged with all defence production) visit England and are briefed on developments in Jet Engine Technology.

01 July 1942 : Canadian Pacific Railways, which briefly had been included in a proposal to create the national airline, decided to create its own air service. Canadian Pacific Air Lines started operations.

### CANADIAN AVIATION - 1943

Early 1943 Air Council of the opinion that "A sound aircraft Industry capable of producing its own designs was an absolute essential foundation of the future of Canadian air power"

01 April 1943 : Aviation Week reporting : House of Lords Debates - London UK, Development Of British Postwar Civil Aviation : The Future of British civil aviation has been very much In the public eye lately, but a recent discussion in the House be done at present to improve the prospects.

Critics of the British government are by no means. Lord Londonderry, himself a former Secretary for Air, was in favor of transferring civil aviation from the Air Ministry to a separate Ministry of Air Transport or, possibly, a reconstructed Ministry of Transport, thus subjecting aviation to the same control as land and sea traffic.

Lord Mottistone also favored Air Transport and Research, Viscount Bennett, the former Canadian Prime Minister, finding the fault in another place, demanded the reorganization without delay of the British Overseas Airways Corp.

He declared its directors should have no interest in other enterprise, there should be a managing director, the best executive organization money can buy, and regional managers, accountable to their managing director, for North and South Atlantic routes. The Duke of Sunderland proposed the establishment of an Air Trans. Command in the RAF. and Lord Brabazon made a similar suggestion by recommending formation of an Air Transport Corps in the RAF.

All speakers thus seemed to find fault with the present organization of British civil aviation and the government was charged with lack of policy. given by Lord Sherwood. Joint Under Secretary of Air. who emphasized that the government was giving earnest study to the problems of civil aviation and to the types of craft which would be required after the war. Close attention modification of bomber types for transport, he pointed out. Until new types of transport aircraft could be produced.

January 1943 : THE LABOUR GAZETTE : Wartime Controls Found Valid : Supreme Court of Canada Upholds Validity of Order in Council Delegating Power to Controller and of Order Issued by Controller under this Authority

<sup>241</sup> Winston S. Churchill, The Second World War, Volume IV: The Hinge of Fate, Penguin Classics, 2005, p. 428

<sup>242</sup> [http://ww2history.com/key\\_moments/Eastern/Churchill\\_meets\\_Stalin\\_in\\_Moscow](http://ww2history.com/key_moments/Eastern/Churchill_meets_Stalin_in_Moscow)

## Notes on "Civil Aviation"

*The authority of the Governor in Council to delegate to subordinate agencies the powers conferred on him by the War Measures Act was upheld in a unanimous decision rendered on January 5 by the Supreme Court of Canada.* The judgment has removed doubts as to the validity of the Government's system of wartime controls, a system which has been in operation since the beginning of the war and has been steadily extended in scope until it is now of basic importance to the entire war program.

It was first challenged when a charge of an offence against an order made by the Oil Controller was dismissed by the senior County Court Judge in the County of York on the ground that the authority vested in the Governor in Council could not validly be delegated to a Controller. A few days later, another charge, this time involving an infraction of the National Selective Service Regulations, was dismissed by a Kingston magistrate, and in other cases judgment was withheld.

As a result, doubt was cast on the validity of a wide range of regulations under the War Measures Act, including the Defence of Canada, price control, wages stabilization, foreign exchange control and manpower regulations and the orders issued under them.

A Reference was therefore made to the Supreme Court to determine:-

- (1) if an Order in Council relating to chemicals, which was considered to be representative, was ultra vires of the Governor in Council, and
- (2) if an order issued under that Order in Council was ultra vires of the Chemicals Controller who had issued it. The unanimous opinion of the Court was that neither the Order in Council nor the order were invalid except for one paragraph of the Order in Council which was held to be clearly in conflict with a section of the War Measures Act.

\*In the matter of a Reference as to the validity of the Regulations in relation to Chemicals enacted by the Governor General of Canada on the 10th day of July, 1941, P.C. 4996, and an Order of the Controller of Chemicals, dated the 16th day of January, 1942, made pursuant thereto.

### Act Itself Not Open to Challenge

It was pointed out that there could be no dispute as to the validity of the War Measures Act itself, this matter having been finally determined by the Privy Council in *Fort Frances Pulp and Paper Company v. Manitoba Free Press Company* (1923) A.C. 695. Moreover, it could not be suggested that the various subjects dealt with by regulation and order, whether by the Governor in Council direct or by subordinate agencies under a delegated authority, were not within the powers vested in the Governor in Council by the Act.

The question to be determined, therefore, related purely to the delegation of power to subordinate agencies, and this involved particularly the interpretation of Sec. 3 of the Act which provides that The Governor in Council may do and authorize such acts and things, and make from time to time such orders and regulations, as he may by reason of the existence of real or apprehended war, invasion or insurrection deem necessary or advisable for the security, defence, peace, order and welfare of Canada. . . and that All orders and regulations made under this section shall have the force of law. . .

### Legislative Powers Conferred on Governor in Council

*Chief Justice Duff expressed the opinion of the Court* when he stated that the decision in *re Gray* (1918) 57 Can. S.C.R. 150 involved the principle, which must be taken by this Court to be settled, *that an Order in Council in conformity with the conditions prescribed by, and the provisions of, the War Measures Act may have the effect of an Act of Parliament.*

That is, *the Act confers law-making authority on the Governor in Council, and within the ambit of the Act he has powers as great as those of Parliament itself.* Apart from conditions expressed in other sections of the Act, the validity of an order passed under Sec. 3 depends on a two-fold condition:

1. that it could be enacted as a statute by Parliament, in execution of its emergency powers, or otherwise; and furthermore,
2. *that Parliament is not precluded by the British North America Act, or by any later enactment concerning its legislative powers, from committing the subject matter of it to the Executive Government for legislative action.*

At the same time, the risk of an abuse of power is avoided because Parliament still remains the ultimate authority:

Under the War Measures Act the final responsibility for the Acts of the Executive rests upon Parliament. Parliament abandons none of its powers, none of its control over the Executive, legal or constitutional.

## Notes on "Civil Aviation"

Sec. 3 of the Act is couched in *extremely comprehensive terms* : "the Governor in Council has power to do any act or pass any order which he deems necessary for the security, defence, peace, order and welfare of Canada." *These words, on their natural meaning, cannot be interpreted as precluding delegation of authority.*

*In Britain in the last war wide powers were delegated to Boards and Controllers under authority of a statute whose language was less comprehensive than that of the War Measures Act, and in the Defence of the Realm Act of 1939 the necessity of this procedure was recognized by the fact that it was explicitly provided for.*

*Actually, the imposition on the Governor in Council of the duty of safeguarding the supreme interests of the State in itself necessarily implies that he has the power to delegate his authority, for otherwise he would be unable to perform his duty adequately.*

I find it impossible to suppose that the authors of the enactment did not envisage the likelihood of the Executive finding itself obliged .... to make use of such [subordinate] agencies.

The Governor in Council has been vested with full discretion in performing the duty imposed on him and he alone is competent to decide what it is necessary to do. Subject to the conditions expressed above it is not within the powers of any court to canvass the considerations which led him to believe that any regulations he might pass are necessary or advisable.

The words are too plain for dispute: *the measures authorized are such as the Governor in Council (not the courts) deems necessary or advisable.*

### Governor in Council not a Delegate

Mr. Justice Rinfret amplified this reasoning in certain particulars.

Citing the case of *Hodge v. the Queen* (1883) 9 App. Cas. 117, he stated that the powers conferred on the Governor in Council are "not in any sense to be exercised by delegation from or as agents of the Parliament."

Within the limits prescribed, the authority of the Governor in Council is as plenary and as ample as the Parliament "in the plenitude of its powers possessed and could bestow." The "devolution effected by the War Measures Act" (to borrow the expression of my Lord the Chief Justice in the *Gray* case) is not to be assimilated to a so-called delegation; and such a devolution has no analogy with agency;

The maxim "Delegatus non potest delegare" therefore does not apply as having no reference to legislative authority.

The Governor in Council within the ambit of the Act, is not a delegate.

The Act constitutes a devolution of the legislative power of Parliament, and, within prescribed limits, it can legislate as Parliament itself could.

Therefore it can delegate its powers whether legislative or administrative.

June 1943 : Transportation and Public Utilities: Air Transportation :-

Canadian Pacific Air Lines Ltd. and its Employees Engaged on Air Transportation, Field Maintenance and Shop Employees Engaged in the Maintenance of Aircraft, Aero Engines and such other Equipment as may be used in Air Transportation, as Represented by a Duly Accredited Committee of the Said Employees.

Hours: For field maintenance employees, 8 hours to be specified if possible; if required to work more than 48 hours per week, compensatory time off to be allowed. For shop employees, the normal working day to be 8 hours; for work in excess of 48 hours in a week, compensatory time off to be allowed.

Vacation: after one year's service, monthly rated employees to have two weeks' vacation with pay.

1943 : Canadian Pacific Air Lines Ltd monthly wage rates for certain classes:

1. Inspector \$175,
2. Licensed Air engineer, Senior grade) \$175,
3. Licensed Air engineers \$115 during first year to \$155 during fifth year and after;
4. Apprentice Air Engineer \$60 to \$150
5. Journeyman Air Mechanic \$165,
6. Junior Air Mechanic \$105 to \$125,
7. Apprentice Air Mechanic \$60 to \$150

## Notes on "Civil Aviation"

8. Dopers, upholsterers, fabric workers \$110 and \$130,
9. Mechanic's helpers \$60 to \$100,
10. Cleaner and labourer \$75,
11. Storekeepers \$100 to \$125,
12. Shipper and receiver \$110 and \$115,
13. Stores issuer \$60 to \$90,
14. Stores truck driver \$85 to \$100.

NOTE: Apprentices, if accepted, are to serve five years apprenticeship. After which they will (if passing their tests) be classified as Journeymen mechanics or Air engineers in their respective classifications. Provisions are also made for seniority rights and for the settlement of grievances.

COLLECTIVE AGREEMENTS AND WAGE SCHEDULES : Air Lines in Canada, is in effect from June 1, 1942, to May 31, 1943, and thereafter subject to notice. This is an amended agreement, the original having been summarized in the Labour Gazette, June, 1941, p. 701. Sub-foreman, tool and die makers, helpers, chauffeurs and janitors are added to the classes of workers covered.

Minimum monthly wage rates, based on a 48 hour week, are:

1. crew chief, air engineer and aircraft inspector, \$175 (no change from previous agreement)
2. sub-foreman, tool and die maker, \$175 (not in previous agreement),
3. detail inspector \$165 (formerly \$175),
4. mechanic \$165 (no change),
5. junior mechanic \$120 to \$150 (no change),
6. learners \$60 to \$110 (no change);
7. helper \$120 (not in previous agreement),
8. chauffeurs \$85 to \$110 (not in previous agreement),
9. janitors \$75 to \$95 (not in previous agreement),
10. cleaner \$75 (no change);
11. stockkeeper \$130 to \$140 (formerly \$120 to \$125),
12. shipper and receiver \$120 to \$130 (formerly \$110 to \$115),
13. assistant stockkeeper \$100 to \$115 (formerly \$100 to \$105),
14. issuer \$60 to \$90 (no change).

Vacation: the date on which employees are classified as having a year's service and eligible for a two weeks' vacation (or less service and eligible for a partial vacation) is March 31, instead of June 30. A Co-operative Committee to be set up to work in conjunction with the management on matters requiring joint consideration.

**An amendment** was made to this agreement from October 1, 1942, **to cover** the employment of **female workers in the maintenance and overhaul department**. Female workers:

1. start at \$55 a month for the first month (or longer if necessary to determine fitness to be learners)
2. if assigned a cleaner, basic rate will then be \$70;
3. if assigned as a learner, basic rate of \$55, with advancement each six months as for male learners except that female learners are paid \$5 less per month than male learners;
4. in the stores department female issuers or assistant stock-keepers are paid the same rates as male employees if capable of performing the same work

1943 : aircraft factory workers refs in the labour gazette:

Belleville, 1129;  
Dartmouth 987;  
Fort Erie, 637;  
Malton, 85;  
Moncton (Lakeburn), 987;  
Moose Jaw, 85,  
Toronto, 987;  
Vancouver, 1699.

Practically all manufacturing plants were working full time. Skilled craftsmen were needed for work on aircraft, and trainees were being sought for aircraft maintenance and assembly work

## Notes on "Civil Aviation"

Trans-Canada Air Lines and Their Employees, Represented by International Association of Machinists, Lodge 714 (Aircraft Maintenance Mechanics, Etc.).

This agreement, which covers aircraft maintenance at all landing fields of the Trans-Canada Air Lines in Canada, is in effect from June 1, 1942, to May 31, 1943, and thereafter subject to notice. This is an amended agreement, the original having been summarized in the Labour Gazette, June, 1941, p. 701. Sub-foreman, tool and die makers, helpers, chauffeurs and janitors are added to the classes of workers covered.

Minimum monthly wage rates, based on a 48 hour week, are: crew chief, air engineer and aircraft inspector, \$175 (no change from previous agreement) sub-foreman, tool and die maker, \$175 (not in previous agreement), detail inspector \$165 (formerly \$175), mechanic \$165 (no change), junior mechanic \$120 to \$150 (no change), learners \$60 to \$110 (no change); helper \$120 (not in previous agreement), chauffeurs \$85 to \$110 (not in previous agreement), janitors \$75 to \$95 (not in previous agreement) cleaner \$75 (no change); stockkeeper \$130 to \$140 (formerly \$120 to \$125), shipper and receiver \$120 to \$130 (formerly \$110 to \$115), assistant stockkeeper \$100 to \$115 (formerly \$100 to \$105), issuer \$60 to \$90 (no change).

Vacation: the date on which employees are classified as having a year's service and eligible for a two weeks' vacation (or less service and eligible for a partial vacation) is March 31, instead of June 30. A Co-operative Committee to be set up to work in conjunction with the management on matters requiring joint consideration.

An amendment was made to this agreement from October 1, 1942, to cover the employment of female workers in the maintenance and overhaul department: female workers to start at \$55 a month for the first month (or longer if necessary to determine fitness to be learners) ; if assigned as a cleaner, basic rate will then be \$70; if assigned as a learner, basic rate of \$55, with advancement each six months as for male learners except that female learners are paid \$5 less per month than male learners; in the stores department female issuers or assistant stock-keepers are paid the same rates as male employees if capable of performing the same work. 1. Minister of Labour : Hon. Humphrey Mitchell
2. Deputy Minister of Labour : A. Macnamara
3. Associate Deputy Minister : V. C. MacDonald

31 December 1943 : the strength of the Royal Canadian Air Force : 206,350

31 December 1943 : the strength of the Women's Division of the Royal Canadian Air Force :15,153

October 1945 RCAF Maintenance Command formed at Uplands

1943: RCAF traveling trade test board (UK) tests Squadron ground crew personnel : their findings were disappointing. This was true of engine and airframe mechanics. One can imagine that the general state of competence of these specialists could reasonably be extrapolated as to suggest those working at Croft (a satellite airbase situated 5 miles south-west of Middleton St George) were not that different. HR-910 could then have been attended by workmen who's proficiency was below what it should have been. Furthermore, the material conditions and schedules under which these mechanics had to repair aircraft during WWII was less than ideal. They sometimes had to do maintenance and repair work out in the open. In addition, whereas the replacement of a Merlin engine should normally take up to a week, Squadron mechanics would be able to manage with only five hours. Of course, the high expertise they developed «under fire» can explain this rather miraculous result, but could it also guarantee 110% quality under such circumstances? Could they submit every inch of a shaken up airframe to an extensive and scrupulous inspection up to standards we wouldn't do without today? The Halifax was designed modularly, with a set of subassemblies being built individually

## Notes on "Civil Aviation"

and then pieced together in final assembly; the modular construction permitted more rapid construction, straightforward road transport of subassemblies, and relative ease of repair.

01 June 1943: British built Avro 683 Lancaster Mk III Canadian "Civilian" registered to Trans-Canada Airways as CF-CMS takes to the skies, this is the first flight of a 4-engine civil aircraft registered in Canada.

18 October to 3 November 1943 : The 1st Moscow Conference<sup>243</sup> . Representatives of the Governments of the United States of America, the United Kingdom, the Soviet Union, and China meet in London, UK. results in 1) the demand for the unconditional surrender of Axis powers and 2) the proposed the establishment of an international organisation for peace (UN).

Original intention : to progress Anglo-American relations with the USSR. The Americans redirect the thrust of the conference from the issue of "creating a world peace organisation" to the "question of Germany's future".

It was decided that Germany should be completely disarmed and made to pay reparations for the damage inflicted on the Soviet Union and Allied countries. The European Advisory Commission was established to work on the terms of surrender to be proposed to Germany and its Axis satellites after the end of the war.

Also on the agenda was the proposed plan for the (Allied) invasion of (occupied) France.

Britain and America assured the USSR that the invasion would happen the following spring.

This was combined with a declaration against Nazi atrocities in the occupied territories.

Further actions included a protocol on joint Anglo-Soviet action to bring Turkey into the war on the side of the Allies.

The conference also saw the **Four-power or Four-nations Declaration**, otherwise known as "**the Moscow Declaration**", issued on 30 October.

China was invited to join the USA, UK and the USSR in signing this declaration.

**The Moscow Declaration** emphasised the need for the unconditional surrender of Axis powers and reiterated the United Nations Declaration proposing an international organisation for peace.

Clause 4 of **the Moscow Declaration** stated: 'That [the four powers] recognise the necessity of establishing at the earliest practicable date a general international organisation, based on the principle of the sovereign equality of all peace-loving states, and open to membership by all such states, large and small, for the maintenance of international peace and security.'

10 November 1943 : Canadian Air Council deliberates on the prudence of preparing specifications for an experimental aircraft type such as a fighter small bomber to use jet engines currently being developed.

1943 : Brabazon committee selects de Havilland Co. to be committed [i.e they are elected by the air ministry?] to the design and construction of a service / civil jet-engined air-liner.

### CANADIAN AVIATION - 1944

11 February 1944 : Ottawa : **Topic:** Royal Canadian Air Force. **Subtopic:** Transfer of Canadian personnel from RAF to R.C.A.F <sup>244</sup>

James Sinclair Liberal :

"I should like to direct a question to the Minister of National Defence for Air or his parliamentary assistant.

Yesterday the minister informed the house that he is now holding discussions with representatives of the British air ministry on matters affecting the R.A.F. and the R.C.A.F. There is one matter which is of great interest to all Canadian airmen serving overseas, that is, the transfer to the R.C.A.F. of Canadian airmen who enlisted in the R.A.F. either prior to or subsequent to the declaration of war. These men have given heroic service and have added great lustre to Canada's name. I ask the minister or his parliamentary assistant if consideration is being given in these discussions to the transfer of Canadians in the R.A.F. to the R.C.A.F."

<sup>243</sup> <http://www.bbc.co.uk/history/ww2peopleswar/timeline/factfiles/nonflash/a1141921.shtml>

<sup>244</sup> <http://www.lipad.ca/full/1944/02/11/2/>

## Notes on "Civil Aviation"

Cyrus Macmillan (Parliamentary Assistant to the Minister of National Defence for Air) Liberal :

"While it is hoped that the minister will not be pressed for *piecemeal reports of the conference* [since he has undertaken to give a report when it terminates] I can say now that, "the matter has been raised in the house many times, that the question of transfer from the R.A.F. to the R.C.A.F. of Canadian nationals is one of the problems being considered". It has been under negotiation for some time. In August last, concrete and detailed proposals were made to the air ministry and the minister hopes that out of the conferences at present being held there will be a final and mutually satisfactory solution"

13 February 1944 : The "Dominion Wartime labour Relations (P.C. 1003)"

issued under the War Measures Act suspends the **Industrial Disputes Investigation Act, 1907**.<sup>245</sup> The Liberal government passes the emergency "Order-in-Council". Dominion Wartime labour Relations (P.C. 1003) **will have an impact on the Air Engineer in years to come**. the wartime administration of [W.L. Mackenzie King](#) exercising its wartime emergency powers issue Order in [Privy] Council - P.C. 1003, granting Canadian workers collective-bargaining rights that American workers already enjoyed under the Wagner Act.

P.C. 1003 allowed for a greater degree of public intervention in the bargaining process than in the USA.

Investigative and cooling-off provisions in labour disputes were already a cornerstone of Canadian policy (going back to Mackenzie King's Industrial Disputes Investigative Act of 1907), and

wartime conditions demanded a "no-strike provision" (linked to the mandatory inclusion of binding arbitration of grievances in union contracts), which became a permanent feature of Canadian [labour-relations law](#).

During the war, the Canadian mass-production sector was rapidly organized by CIO unions.<sup>246</sup> P.C. 1003, a Federal Cabinet Order, contained a comprehensive framework<sup>247</sup> for recognizing unions, which *informs* Canadian laws to this day.

Influenced by the Wagner Act, the central features of this framework were the following<sup>248</sup>:

1. non-managerial employees (other than excluded categories) were given the right to form and join unions;
2. actions by employers against employees exercising the right to unionize were prohibited;
3. labour boards, not courts, were authorized to certify unions as bargaining representatives for appropriate bargaining units, on proof of majority support;
4. once certified, *a union became the exclusive bargaining representative of all employees in the bargaining unit, whether or not they were union members*;
5. employers had to bargain in good faith;
6. before resorting to economic sanctions, the parties were required to participate in government-sponsored conciliation; and
7. during the term of a collective agreement, the parties could not engage in strikes or lock-outs, but instead were required to submit differences arising under the collective agreement to a neutral third party for grievance arbitration.

Following WWII, each province introduced its own legislation, based on the P.C. 1003 model<sup>249</sup>.

Mr. J. G. Diefenbaker (Lake Centre): I should like to ask a question of the Minister of Labour in regard to war-time labour regulation P.C. 1003.

"Does this proposal apply to professional engineers, mining engineers, architects or professional chemists? If it does, I would ask if it is the intention of the government 'to withdraw them from its application.'"

Humphrey Mitchell (Minister of Labour) Liberal :

"Mr. Speaker, while I should not like to anticipate the functions of the wartime labour relations board, set up under the authority of the order in council, and while I should not like to interpret those functions, I would say to my hon. friend that this is still a free country"

## Notes on "Civil Aviation"

Karl Kenneth Homuth - National Government : "Don't be too sure of that, now."

Humphrey Mitchell (Minister of Labour) Liberal: If hon. members in their judgment wish to form a trade union, I guess they could apply to the wartime labour relations board, as a trade union, to settle their differences.

John George Diefenbaker - Progressive Conservative: Is that the best answer I can get?

16 February 1944 the signatories to the BCATP agreed to begin a gradual reduction in the plan. Because of a backlog of trained aircrew the RCAF in June 1944 ceased recruiting aircrew and by October the closure of schools was stepped up. As an example of the excessive number of aircrews, during 1944 and 1945, it was common practice for aircrew to receive an Army commando course prior to proceeding overseas and as a result of a shortage of flight engineers, a second pilot. (pilots were in short supply as late as 1943) with flight engineers training was supplied.

February of 1944 : CF-AND destroyed by fire at Nakina, Ontario while Austin Airways mechanics were heating her engine [using blow-torches].

10 March 1944 : Comments made in the House re "PRIVILEGE" by the Hon. Mr. McLenaghan <sup>250</sup> in response to Mr. Harry Leader (Portage la Prairie)<sup>251</sup>:

1. *"The record should be kept straight in fairness to all members of the [...] profession".*
2. *"When a layman - Meaning myself - presumes to make statements concerning a matter [...] of which he has no knowledge, he is assuming a great onus,"*
3. *"A great onus rests on a public man, who makes statements and blazons them to the world.*
4. *Irreparable harm can be done unless all the facts are known.*
5. *Such statements could be damaging unless based on facts, creating in the minds of "people" [...] falsehoods based [...] "experiments" which have not stood the test of time,"*
6. *the remarks [...] made in the house [...] were based on facts substantiated by [...] authority, and*
7. *the reflection [...] made upon "people of the profession or trade" [...] was based on facts I had from men who should know. [and should know better!]*
8. *I had no other object in view [...] but to give something to the world that might help others [...]"*

01 May 1944 : The Commonwealth Prime Ministers (Empire Premiers) Meeting<sup>252</sup> (CPMM) replaces the Imperial Conference in London. Lord Beaverbrook , head of the UK Ministry of Aircraft Production ... London.

1. William Lyon Mackenzie King - Prime Minister of Canada
2. Field-Marshal Jan Smuts - Prime Minister of South Africa
3. Sir Godfrey Huggins - Prime Minister of Southern Rhodesia.
4. Peter Fraser, Premier of New Zealand
5. John Curtin - Prime Minister of Australia
6. Winston Churchill Prime Minister of Great Britain
  1. members of the British Imperial War Cabinet.
  2. Anthony Eden
  3. Clement Attlee,
  4. Lord Beaverbrook

03 May 1944 : Stedman memo to CWC re "problems experienced by RCAF to this point are a result of NOT HAVING a domestic aircraft or manufacturing capability to meet RCAF needs" .. this also would reflect the inherent inspection capacity required during mfr that tied to design. Stedman noted that "Canada was losing talented aeronautical personnel to other countries, and that if government was to support mfrs' it should do so to keep these people at home. CWC took notice.

## Notes on "Civil Aviation"

10 May 1944 : In the House of Lords on Wednesday , May 10th<sup>253</sup>, My Lords, I beg to move that the House do sit in Secret Session. Moved, That the House do now sit in Secret Session.—(Lord Templemore.) On Question, Motion agreed to, and ordered accordingly. The Official Reporter then withdrew. House in Secret Session. Sitting then resumed in Open Session.

**Mr. Stokes** asked the Secretary of State for Air how many British and American bombers, respectively, were lost over Germany and Northern Europe during the first four months of 1944.

**Sir A. Sinclair** "During the first four months of 1944, 1,041 British and 1,117 U.S.A.A.F. bombers operating from this country were reported lost over Germany and Northern Europe"

The 9th Marquess of Londonderry (Edward Charles Stewart Robert Vane-Tempest-Stewart) asked the (British Imperial) Government to make a statement on their proposed policy for the development of British civil air transport on the following matters :

- A. Ministerial responsibility for civil aviation in the United Kingdom ;
- B. **international regulation** of civil air transport;
- C. air lines
  - (i) internal air lines
  - (ii) inter-Commonwealth air lines
  - (iii) Empire air lines
- D. **chosen instruments**
- E. subsidies
- F. types of aircraft
- G. the scope and powers for operating companies.

I. **Lord Rennel** expressed the view (Whose view?) that

- A. a system of civil aviation which was under the direct control of the Air Ministry would never take us anywhere.
- B. While the U.S. Air Transport Corps had earned the praise and good will of people it had carried, he could not say the same for the R.A.F. Air Transport Command.
- C. American air transport was run by people who realised they were pioneers of future civil aviation, and the difference between the two systems was that the Americans were air-minded and were trying to develop civil aviation.

II. **Air Transport Command** (declared)

- A. It was not doing anything of the sort.
- B. Almost any control would be better than that of the Air Ministry at the present time and there was probably a good argument for making a **Department of Civil Aviation in the Ministry of War Transport** after the war.

III. **Lord Beaverbrook**, in replying, said that

- A. Transport Command was intended to serve the military machine
- B. Transport Command was not for civil purposes
- C. He was satisfied that B.O.A.C. would continue to function as in the past, with satisfaction to the community.

The question of the chosen instrument was fixed by Statute. Ministerial responsibility for civil air transport in the United Kingdom rested with the Air Ministry, and the responsibility for co-ordinating future policy lay with the committee of which he (Lord Beaverbrook) was chairman, but this committee was not an executive body and had no administrative duties.

Internal air lines were controlled by the Air Ministry, and the findings of the Commonwealth conversations on inter-Commonwealth and Empire air lines provided for adequate regulation and included plans for an all-red air route.

Although we must admit that the U.S. had a long lead over us in air transport, we had a number of excellent designs for new types, and although progress had been disappointing no blame could be attached to anyone— it was entirely due to the prior needs of war. The York was in small-scale production and giving excellent service with Transport Command and B.O.A.C. A York recently flew 6,857 miles from this country to Delhi in a flying time of 32 hours, which gave an average ground speed of 214 m.p.h. The aircraft carried a payload of four tons on this flight. The Shetland flying boat was due to make its maiden flight in a few weeks' time, but would not yet be put into production. The transport version of the Halifax might fly late this year, but would not be put into production this year; whilst a De Havilland feeder-line small transport machine might fly in about 12 months' time. The Tudor had been held up by military necessities and could not be put into service for some time yet - Flight pg 523

## Notes on "Civil Aviation"

THE COMMONWEALTH CONFERENCE MAY, 1944 By GRANT DEXTER, WINNIPEG FREE PRESS

"The conference took place at a time described by Mr. Churchill as "the most deadly climax" of the Post-war policy in the widest concept was the chief question to be discussed.

This discussion would follow from the Atlantic

Charter, the Declaration of the United Nations, and the Moscow Declaration (Article Four) which recognized):

". . . the necessity of establishing at the earliest practicable date a general international organization, based on the principle of the sovereign equality of all peace-loving nations, and open to membership of all such states, large and small, for the maintenance of international peace and security."

The structure of this international organization had already been studied by the Big Four and further meeting to draft the final .. it had been announced, would be held in the near future.

The British government, it was made known, had prepared a plan. It may be assumed that the other Commonwealth governments had been similarly engaged.

But before the British government entered these further, and perhaps final, negotiations it was desirable that there should be a meeting of the heads of the Commonwealth governments. It may be assumed that whatever plan the British experts had devised, it would not be finally adopted until the views of the other governments had been obtained.

"The British government would have gone into the negotiations with the United States and Russia confident that its views were acceptable to the other governments of the Commonwealth. But when the conference assembled on May 1, there was no assurance of unanimity.

Only one government — the Canadian government— had defined its position clearly.

Mr. King, (the Canadian Prime Minister) did so in the (British) House of Commons on January 31, 1944.

He (the Canadian Prime Minister) then declared (Canada) in favor of the kind of world organization forecast in the Moscow Declaration and against any kind of Commonwealth centralization looking to a post war world to be ruled by Titans (of which a unified commonwealth would be one).

Collaboration and consultation—yes; unification in any form of empire institution or otherwise—no."

Source : WINNIPEG FREE PRESS PAMPHLET NO. 1 "THE COMMONWEALTH CONFERENCE MAY, 1944" By GRANT DEXTER

(The Decision of the Canadian Government at the Conference resulted in the Government of Canada adopting an American ideology on Aeronautics and Aviation Engineering , maintenance and inspection processes.. This further served as a means to alter the role of the Canadian Air Engineer (Aeronautical Ground Engineer) towards an American styled "Aircraft Maintenance Engineer in Charge" with junior technicians reporting to the AME. In Canada, the Canadian Government replaced the term "Air Engineer" (being the person tasked with inspection of aircraft and aircraft engines etc during manufacture, repair and maintenance and attesting to the compliance with airworthiness standards and legislation) their legislative documents with the American term "Aircraft Maintenance Engineer" or AME with US Military trades-persons trade categories of M, E and S replacing the former British terminology A, B, C and D in the Canadian licensing structure for Civil Aviation Safety Inspectors.)

18 May 1944, Flight pg 518 : In connection with the recent Anglo-American talks, Lord Beaverbrook threw some light on what was evidently in his mind at the Press conference when he stated that "Britain has had to make concessions".

## Notes on "Civil Aviation"

It now appears that on our side we were prepared to subscribe to what has been termed "the Canadian Draft Convention", which went into great detail concerning "international control".

Mr. Berle, on behalf of America, wanted something more elastic, and the principles agreed upon at the Imperial Conference last October were found acceptable.

America's promise, made by Mr. Berle, that aircraft will be made available to us after the war on a nondiscriminatory basis was another reassuring fact.

Lord Beaverbrook's statement that the United States and Great Britain are in agreement on the broad principle that there must be control of subsidies and of international standards, as well as an elimination of uneconomic competition and an equitable participation in world air transport, indicates that although the forthcoming international conference will have many problems to solve, there is no disagreement on basic principles.

18 May 1944, Flight pg 534 Aircraft Engineer Training - Recommendations by the S.B.A.C. Committee:  
The Society of British Aircraft Constructors have for some time past had under consideration the importance of adequate and co-ordinated training in the aircraft industry and, as we announced recently, under the auspices of the Society, a Sub-Committee of Apprentice Supervisors has met and evolved a set of recommendations for the training of aircraft engineering apprentices.

These recommendations have now been accorded the approval of the Council of the Society.

The Committee are of the opinion that a more careful and scientific selection of apprentices is desirable and that the most useful men for the aircraft industry of the future can be obtained from a well thought out apprentice training "scheme" (Programme) in which all firms in the industry would cooperate by planning their training "schemes" (Programmes) along similar lines.

Such a "scheme" (Programme) will produce men who will have had:

1. practical training in the [trades'] workshops
2. theoretical training in [trades] technical schools,
3. practical training in the [Engineer's] workshops
4. theoretical training in [Engineer's] technical schools,
5. practical training in other educational establishments
6. theoretical training in other educational establishments.

From the general recommendations it appears that at each [manufacturer's] works there should be a Board of Interview, whose duties would include the selection of "engineer apprentice" [entrants] from outside [trade] sources and from [within] the firms' trade apprentices.

Such a Board would, of course, have to consist of engineers of experience and understanding and could, for example, include:

1. the chief engineer,
2. the works manager and
3. the firm's appointed apprentice supervisor.

No boy is to be admitted to an apprenticeship below the age of 16,

The training should not cease before the age of 22

the Board may, in exceptional circumstances, admit a candidate who is older than 18 years and will arrange, if he is admitted to a shortened apprenticeship, that his standard of theoretical training will be correspondingly higher.

while undergoing Trade apprentice training a boy may prove by their outstanding ability that they are deserving of upgrading.

Outstanding [trade] apprentices should have the opportunity of transferring [upwards] to the category of "aeronautical engineering apprentice" (aircraft or engines).

Any trade apprentice who obtains the ordinary National Certificate should be considered by the Board of Interview for up-grading.

\*\*\*\*\* Form of Indenture \*\*\*\*\*

Among the other recommendations put forward are that a form of agreement between:

1. the company
2. the apprentice
3. and the parents of the apprentice

## Notes on “Civil Aviation”

should be provided upon the lines of the form published by the Engineering and Allied Employers’ National Federation.

Further, the practice of requiring premiums for apprenticeship training should be discontinued, and the apprentice should be paid the rates of wage agreed to by the above Federation.

This appears to be a commendable recommendation in that the lad of capability with ambition and zeal to “get on in the industry” is no longer to be handicapped by the unfortunate financial circumstances of his parents.

The minimum academic qualifications for apprentice aeronautical engineers should be the possession of one of the recognised School Certificates with credits in mathematics and a science subject.

Consideration should, however, be given to applicants who have other approved qualifications, such as a diploma of a Junior Technical School.

Boys entering a works to take up a [trades] apprenticeship should undergo a probationary period of six months.

[Boys entering a works to take up a [Engineers’] apprenticeship should undergo a probationary period of six months.]

At the end of his training, if his apprenticeship has been completed satisfactorily, the boy should be given a certificate to this effect.

Whether, on the satisfactory completion of his apprenticeship, the applicant will be required to remain for a further period in the employ of the firm is not made clear.

It has been the custom with certain of the firms in the past to insist on retaining the services of an apprentice after the completion of his apprenticeship up to a period of two years; possibly this clause may still have to be included in the present proposals.

To ensure that he shall receive a sound engineering training, it is proposed that the apprentice should pass through all the engineering departments of the works and should spend not less than two-thirds of his apprenticeship in these departments, being moved from one section or department to another following a set syllabus in the following order : —

The Aeronautical Engineer Apprentice : — Aircraft

- a) Pattern-making and foundry work (where available in the works or in a technical school in the locality).
- b) Fitting work. Detail fitting. Aircraft Sub-assemblies and Aircraft erection ; engine installation.
- c) Machining. On all the usual types of machine tools in the works.
- d) Tool Room. It is desirable that all apprentices should pass through the tool room for a short period, say, three months.
- e) in order to acquire a knowledge of precision work, all apprentices should spend some time in a calibration shop.
- f) Sheet metal work.
- g) Aircraft electrical installations.
- h) Bench equipment and jig assembly.
- i) Final erection.

Having passed through the general training referred to above, the apprentice should then receive a more specialised training in one or more of the following departments, according to his capabilities and inclinations : —

- a) Material testing and inspection.
- b) Experimental and research department.
- c) Aeronautical Laboratory.
- d) Aircraft Design offices, or jig and tool drawing office.
- e) Rate - fixing (price determination) department.
- f) Estimating and planning.

The Aeronautical Engineer Apprentice— Engines

This apprentice should pass through the following sections or departments : —

- a) Pattern making and foundry work.
- b) Machining. On all the usual types of machine tools in the works.
- c) Fitting and erecting work (all stages).
- d) Tool room.

As for aeronautical engineering apprentice — aircraft engine testing.

## Notes on "Civil Aviation"

Having passed through the above training, the apprentice, according to his capabilities and inclinations, may receive specialised training in one or more departments : —

- a) Material testing and inspection.
- b) Experimental and research department.
- c) Laboratory.
- d) Design offices, or jig and tool drawing office.
- e) Rate - fixing department.
- f) Estimating and planning.

Obviously not every, firm in the aircraft industry will have all of these facilities for the training of apprentices, and it is suggested that arrangements should be made with other firms in the industry for "transfer of apprentices".

Such transfers might be arranged on a reciprocal basis with firms outside of the industry, and in this respect the S.B.A.C. will be prepared to assist.

A most important feature of the "scheme" (Programme) is that the Board of Interview may recommend in special cases that the apprentices should have the opportunity, by means of the S.B.A.C. Scholarship or by special assistance from the industry , to enter a Senior Engineering College or University , and in any case all engineering apprentices would be encouraged to join the Royal Aeronautical Society or the Institution of Production Engineers.

For theoretical and practical work, training schools established within the works and run by the firm are considered the best from the point of view of discipline, attendance and saving of time in travelling , etc ., and the more general establishment of workshop schools is recommended.

When first entering a works, apprentices should be assured of training in the use of hand and machine tools, and should spend a **minimum period of six months on this training before entering the works.**

Where it is not possible to arrange for a workshop school, arrangements would be made for the apprentice to attend technical classes at the local institutes on one or two days a week.

In this respect very satisfactory arrangements are already in force, and it is not considered practical nor desirable to discontinue the work already being done by these technical schools.

In view of this, and where circumstances dictate, an arrangement should be arrived at to dovetail the programme of works schools and technical schools in order to meet the full need of theoretical and practical training of each works in each locality .

The exclusive use of evening classes as a means of technical instruction is considered unsatisfactory.

Provision should therefore be made for daytime attendance at technical schools.

Apprentices pursuing advanced courses of study, such as for the Final "B.Sc. Eng." degree, or the Higher National Certificates, might well be given at least a day and a half for their studies.

In some places the local technical schools are close at hand and it is no hardship for boys to attend the classes provided.

In other places these technical schools are at a great distance from the works, thus causing serious difficulties for the boys to attend classes.

It is in places where the distances to the local technical schools are great that particular effort should be made to provide the technical education in a works school, and here the Board of Education are able to give certain assistance, details of which can be obtained from the Board of Education .

The local Education Authorities also might be called upon to assist. [what was the viewpoint of the "Educators" ? did they undermine the technical education ?]

If satisfactory facilities exist in a technical school in the district, the theoretical training can be given in this school, and there should be co-operation between the works and the school so as to ensure that the theoretical work is directly associated with the practical work in the factory .

## Notes on "Civil Aviation"

For instance, the works' could supply drawings, technical information and samples of construction to the technical school for the purpose of technical studies.

It is desirable to have a common syllabus of technical training, and a great amount of reorganisation is still called for in connection with the theoretical training to be given to apprentices in the various Government [public] technical schools.

There is a great variation in the facilities available in various districts, and there is also variation in the syllabus of training.

Some schools are working in close co-operation with the aircraft or engine [manufacturing / operating ?] firm nearest to them, and a good standard of technical training is being imparted.

In other places the facilities are not so good, and every effort should be made to improve them.

The ideal curriculum should provide classes of instruction up to the standard of the Higher National Certificate in mechanical and production engineering.

With regard to "production engineering",  
a Joint Committee of :

1. the Institution of Mechanical Engineers,
2. the Institution of Production Engineers and
3. the Board of Education

prepared and issued specimen syllabuses for the general guidance of those colleges and schools which wish to inaugurate the Higher National Certificate courses in production engineering.

The "pamphlets which gave details of the syllabuses" could be obtained from the UK Board of Education.

Apprentices who have a leaning towards "management and production engineering" should be able to obtain the necessary training and should be encouraged to take the Higher National Certificate [HNC] courses, which can be provided if the demand is sufficient.

[by the mid 1960's the HNC was no longer being supported as the ICAO required education was only that of a trades technician - not that of a Aeronautical or Production engineer. Did ICAO cut it's own throat?]

Flight 18 may 1944 pg 537

06 June 1944 :Parliament - Ottawa - the Hon. C. D. HOWE (Minister of Munitions and Supply - Liberal) moved that the house go into committee to consider the following resolution: That it is expedient to introduce a measure to amend the Aeronautics Act to provide for the establishment of an air transport board to:

1. perform the functions of a licensing and regulatory body in respect of commercial air services and
2. to advise the minister on matters connected therewith.

Provision will be made by the said measure for the payment for services of the members of the board and the employment of necessary officers, clerks and employees.

C. D. HOWE : The bill before the committee amends the Aeronautics Act of 1922 in order to give effect to the government's announced policy on domestic civil aviation. The discussion on that subject a few weeks ago covered the government's intention in that regard, and this amendment to the Aeronautics Act puts into force the policy announced at that time.

The effect of the amendments is to form a board of three, a chairman and two members, who will administer the Aeronautics Act, take over the duties now being performed by the board of transport commissioners in regulating civil aviation as well as the duty of assigning air worthiness certificates and of licensing aviation enterprises within Canada. In addition, the board will function to advise the government as to ways and means of advancing civil aviation. The board will take the initiative in laying out routes, within Canada and overseas, which promise possibilities of profitable operation and will guide the government in seeing that these routes are operated by Canadians who are capable of carrying out such undertakings. The judicial functions of the board are not new, but the functions of the board as advisers to the government on aviation policy are new, and will, I think, be helpful in bringing about the rapid development of civil aviation, both internal and external.

In general, the act follows the provisions of the Aeronautics Act of the United States.

## Notes on "Civil Aviation"

The functions of this board will be similar to the functions of the civil aeronautics authority of the United States.

I think detailed discussion should await second reading of the bill, when we shall have the amendments in detail before us, and when a more complete discussion of the purpose of the bill and the means of effecting that purpose can be arranged.

In the meantime I shall be glad to answer any questions on the subject matter of the resolution that hon. members may wish to ask.

Howard Charles Green - National Government : *The Aeronautics Act was passed in 1919 and amended in 1922*

C. D. HOWE : Yes.

Howard Charles Green : And has not been touched since. In that act the Minister of National Defence is named as the minister in charge. I believe that when the transport board was set up it was given quite wide powers over air transportation in Canada, despite the terms of the Aeronautics Act. Will the minister explain whether now one minister is to administer the Aeronautics Act, or whether there are to be two, one dealing with civil aviation and the other with military aviation, because, as it now reads, this act would seem to cover both military planes and passenger and freight planes.

C. D. HOWE : The Department of Transport Act, 1936, transferred the control of civil aviation from the Minister of National Defence to the Minister of Transport, and since 1936 the Minister of Transport has been the minister named in the act. Military aviation is an entirely separate branch; it has its own airworthiness standards and its own regulations governing military operations.<sup>254</sup>

Howard Charles Green : But it comes under the Aeronautics Act, does it not?

C. D. HOWE : No; it comes now under the regulations of the Department of National Defence for Air. Only civil planes come under the civil Aeronautics Act.<sup>255</sup>

Grote Stirling - National Government : *But the Aeronautics Act has not been amended yet*; it must have been put in abeyance.

C. D. HOWE : The act has been amended several times since 1919, but I will speak only of the practice. I have been administering the act since 1936, and I can say that the Minister of Transport has no jurisdiction over military planes, which come entirely under the jurisdiction of the Minister of National Defence. In the amendments proposed, the minister means the Minister of Transport except for military matters, in which event the minister means the Minister of National Defence. Section 5 of the Department of Transport Act, 1936, reads: "**The control and supervision of the civil aviation branch** of the Department of National Defence is hereby **transferred from the Minister of National Defence to the Minister of Transport**, and **the said branch is hereby transferred from the Department of National Defence to the Department of Transport**".

Howard Charles Green : Then is the Minister of Transport to be the minister in charge under the Aeronautics Act as it is to be amended?

C. D. HOWE : A situation exists there which I have explained in the house once or twice already. When I was transferred from the ministry of transport to the ministry of munitions and supply, by arrangement with the then Minister of Transport and by direction of the Prime Minister, and by the exercise of the Transfer of Duties Act, the air services branch of the Department of Transport was transferred for administration to the Minister [DOT] of Munitions and Supply. That was done [DOT] because one of the important duties of the ministry of munitions and supply at that time was the building of airports. The air services branch of the Department of Transport had developed a highly skilled engineering personnel for the building of airports, and it was my feeling that the Department of Munitions and Supply should not be required to duplicate that personnel. It was and is the duty of the Minister of Munitions and Supply to construct the airports required by the armed services, and the practical way of bringing about an organization to do such work seemed to be to transfer the air services branch of the Department of Transport to the new ministry. Therefore the air worthiness branch is administered at the present time by the Minister of Munitions and Supply.

Howard Charles Green : Who will be administering the new [Aeronautics] act?

C. D. HOWE : The Minister of Munitions and Supply [until the Transfer of Duties Act is again called upon to move it back to the department from which it came]

---

<sup>254</sup> <http://www.lipad.ca/full/1944/06/06/16/>

<sup>255</sup> <http://www.lipad.ca/full/1944/06/06/16/>

## Notes on "Civil Aviation"

Howard Charles Green : Why is it necessary to go back to the Aeronautics Act and give the minister, who apparently now will be the Minister of Munitions and Supply, the very wide powers contained in that act? They are very much wider than the powers given to the transport board, as the minister knows. Why was it necessary to give such very wide powers as are contained in the Aeronautics Act?

C. D. HOWE : The powers contained in the Aeronautics Act are those required for the control of civil aviation. The Department of Transport only exercised certain regulatory functions, but the Aeronautics Act covers a great many matters that are not at present within the purview of the board of transport commissioners. That board [board of transport commissioners] is a judicial body, which simply interprets legislation, and does not initiate projects. It acts as a judicial body in connection with Air matters.

Howard Charles Green : Are the powers under the Aeronautics Act to be reduced?

C. D. HOWE : No.

Howard Charles Green : The minister [of Munitions and Supply] himself will have all the powers that are at present contained in the Aeronautics Act?

C. D. HOWE : Yes.

Howard Charles Green : Some of those powers are set out in section 3, which states: It shall be the duty of the minister

- (a) to supervise all matters connected with aeronautics;
- (b) to study the development of aeronautics in Canada and in other countries, and to undertake such technical research as may be requisite for the development of aeronautics, and to cooperate with other institutions in carrying out such research;
- (c) to construct and maintain all government aerodromes and air stations, including all plant, machinery and buildings necessary for their efficient equipment and upkeep;
- (d) to control and manage all aircraft and equipment necessary for the conduct of any of His Majesty's services; [That would be wide enough, of course, to include the post office or any other service.]
- (e) to operate such services as the governor in council may approve;
- (f) to prescribe aerial routes;
- (g) to cooperate with other officers of His Majesty, and to assist in the carrying out of any services under their jurisdiction which may require aerial work of any nature, and to collaborate with the officers employed in existing air services of His Majesty in such extension of their present work as the development of aeronautics may require;
- (h) to take such action as may be necessary to secure, by international regulation or otherwise, the rights of His Majesty in respect of his government of Canada in international air routes;-

Then we come down to paragraph (k), which reads:

- (k) to investigate, examine and report on all proposals for the institution of commercial air services within or partly within Canada or the limits of the territorial waters of Canada. I understand that all these powers are to be given the minister?

C. D. HOWE : That is correct.

Howard Charles Green : Is it the intention to have Trans-Canada Air Lines operated by the government under this act? As I see it, [the new act allows] Trans-Canada Air Lines can be operated by the minister direct; that is what it amounts to.

C. D. HOWE : Trans-Canada Air Lines has its own act.

It operates under the Trans-Canada Air Lines Act.

Its operations are *subject to the regulations of the Aeronautics Act*, just as the operations of any other service are subject to the Aeronautics Act.

Karl Kenneth Homuth (National Government) : Which [Act] takes precedence? [*the Aeronautics Act or the Trans-Canada Air Lines Act*]

C. D. HOWE : That is provided for by the amendment.

The Trans-Canada Air Lines Act provides for management for the Trans-Canada Air Lines.

It also provides the manner in which it shall be assigned routes, and the limits governing its operation.

## Notes on "Civil Aviation"

I assume *that the minister, under the Aeronautics Act, will confine his attention to such matters as are not covered by the Trans-Canada Air Lines Act.*<sup>256</sup>

Howard Charles Green : Then the situation will be that the Trans-Canada Air Lines *will no longer be operated by Canadian National Railways*, but *will come under and be operated directly by the government*.

C. D. HOWE : No, not at all.

The only difference will be that the directors of Trans-Canada Air Lines will not be directors of the Canadian National Railways. Trans-Canada Air Lines will be operated by a board of directors, just as the Canadian National Railways is operated by a board of directors. But the two *will not be operated by the same* board of directors.<sup>257</sup>

Howard Charles Green : Will the board of Trans-Canada Air Lines be civil servants? Or outsiders

C. D. HOWE : No., Yes, outsiders

Howard Charles Green : But they [the outsiders ] will be very directly under the minister

C. D. HOWE : No more so than the board of directors of the Canadian National Railways.

Howard Charles Green : But if it is administered under this act it will be very directly under the minister.

In effect, **it makes the minister a dictator** in respect of all the airways in Canada, does it not? <sup>258</sup>

C. D. HOWE : **Perhaps** so; but, who would you suggest should be dictator?

Howard Charles Green : I do not think there should be a dictator.

Thomas Langton Church - National Government : This resolution is presented to the committee in a very awkward fashion. In the first place, the minister is to create a board just for the purpose of licensing and regulating.

The present Minister of Munitions and Supply was formerly Minister of Transport.

I very well remember when a board such as he now proposes to appoint in respect of commercial aviation in Canada was appointed to regulate railways.

In the first place the Board of Railway Commissioners for Canada was set up.

The organization is now known as the board of transport commissioners. At that time it was limited to railway rates. We have seen what it did with this country. That board did not regulate anything.

It was a political board, and there was afterwards added to it control over express, telephone companies and all that kind of thing. It was given wide jurisdiction.

I have looked into the original Aeronautics Act the minister now proposes to amend. [what did Thomas Langton Church find?]

This parliament will run into all kinds of damage suits if it proceeds with this measure, because I believe the amendment proposed to the statute law, as now suggested by the Minister of Munitions and Supply, is ultra vires [beyond the legal power or authority] of this parliament, and is confiscatory since bonds were sold of one aviation company.<sup>259</sup>

I should like to find out what the Minister of Justice and Attorney General of Canada has had to say about this.

Was he [the Minister of Justice and Attorney General of Canada ] consulted in respect of this amendment?

Or was this matter looked into by the lawyers for Trans-Canada Air Lines - [being] the minister's own lawyers?

Were they, [the lawyers for Trans-Canada Air Lines ]the legal people who drafted this resolution which proposes an amendment?

I protest against the measure. We are now in the seventy-second day of the session. It is hopeless for the minister to think he can have an act of parliament passed through like this, one which upsets the whole policy of the country in regard to civil aviation. The proposal for civil aviation would involve millions of dollars, and it will interfere with the rights, the functions, the statutory privileges and property rights of two other large railway corporations.

It is practically confiscatory [the act of something being taken away from someone by a government]

That is my opinion with respect to the proposed bill to set up the board.

Why does a minister of the crown need a board to advise him as to the way to arrange licences and regulations?

Is a minister of the crown not responsible to parliament?

<sup>259</sup> <http://www.lipad.ca/full/1944/06/06/17/>

## Notes on "Civil Aviation"

Under our parliamentary system of government, is he not responsible to the country?

Is he not responsible to the people for the very large expenditures which are to be made?

This is a leap in the dark.

This whole programme and policy of civil aviation proposed by the minister, and this regulatory board *do not commend themselves to the wisdom and judgment of the people of Canada.*

We had a long debate on this matter only a month ago. Now we have before us a resolution, to be followed by a bill.

I do not believe parliament has power to pass such legislation in its present form.

If we do, we shall get into all kinds of trouble, because we cannot have what we call freedom of the air under a regulatory body such as this.

Here we have a minister of the crown, asking parliament to pass a resolution on which a bill is to be founded setting up a regulatory board, which will also advise on licences, *with powers which no minister of the crown can have under our constitution.*

Not only is this wrong, from the point of view of law, but it is bad public policy.

This was never attempted before.

A board is to be set up, and it is to have supervision over a minister of the crown in respect of the expenditure of money allocated to his department.

It will have power over functions which he would have, under our constitution.

We are taking a leap in the dark. It will lead to all kinds of trouble.

Certainly it is not in the interests of civil aviation. I believe it will sound the death knell of civil aviation.

More than a year has passed since 02 April 1943, and in that time nothing has been done.

To-day a report was withdrawn by the hon. member for St. Boniface, as chairman of the select committee on railways and shipping.

They went into matters connected with Trans-Canada Air Lines and the policy herein of the minister.

An inquiry was conducted, and questions were asked.

I was surprised to note what was done this afternoon.

We saw that the report of the committee was presented; as a matter of fact it was presented last Friday.

There was reference made in that report to the policy contained in this resolution, namely, that of civil aviation.

There was further reference to licensing, and all that kind of thing.

Then the chairman of the committee rose in his place this afternoon and, all of a sudden, withdrew his report.

What was his reason for doing that?

Because the report would have to be discussed' before this resolution could come up.

Under the rules of the house with respect to anticipation it could not be accepted, when this resolution was to be introduced, and when there was to be a discussion as to the setting up of a regulatory body with powers to issue licences, and all that kind of thing.

I must confess I cannot understand it, and I never saw that procedure before.

The committee was to go over these expenditures of the Canadian National Railways, and affiliated bodies, including Trans-Canada Air Lines. It did that. Witnesses were examined, and there was a good deal of the hallelujah chorus in the committee about what a wonderful system they had. Yet when one of our own ministers wanted to go across to the continent we had to go to Washington and get a Liberator.

Civil aviation is only in its infancy in Canada.

I have been before the board of railway commissioners many times in the past and also before the board of transport commissioners.

I have appeared in connection with telephone rates, freight rates, passenger rates and express rates.

They never regulate anything.

The applicant always gets what he asks for, with interest.

And this particular board will be nothing but a board of moonshine.

It will appoint a lot of officers and servants and agents and other people-to do what?-to help strangle the movement.

I hope the committee will stop, look and listen before the minister is permitted to make this step.

I can say this: I really believe he is wrong.

He is wrong in policy;

he is wrong in principle;

he is wrong in the law.

## Notes on "Civil Aviation"

It is going to mean confiscatory legislation with respect to a very fine transportation company which has borne the burden and heat of the day.

As I said a month ago when this matter was up, I think it should be sent to a committee of the house where the minister's policy could be thoroughly considered and everybody concerned given a hearing.

Stanley Howard Knowles (Whip of the Co-operative Commonwealth Federation) : The minister realizes, in introducing this bill, that in certain instances where there is a concentration of power there is only one thing to do, namely, to place that power in the hands of the people, and in the sense in which this bill proposes to do that with respect to civil aviation it has our support.

Thomas Reid : If you lived in British Columbia you would not be so keen on public control [power in the hands of the people]

C. D. HOWE : The bill provides that there shall be no common ownership of surface carriers and air carriers.

Howard Charles Green : In what way is the new board, the air transport board, subject to the minister? What is the tie between the minister and the air transport board?

C. D. HOWE : The minister is responsible *for the administration of civil aviation* in Canada.

The board has certain judicial functions in its own right, and *can decide certain judicial matters*.

Karl Kenneth Homuth : Would their [The board] judicial functions be within the control of the minister, or Would their [The board] judicial functions be separate from the minister?

C. D. HOWE : The judicial functions are directly under the control of the board, except that in certain cases there is an appeal to the minister.

But the government is not attempting to divest itself of its responsibility for administering civil aviation.

The government's experience, and my own, are wholly against an attempt of that sort.

We had a perfect example of that in 1932, when the Conservative government of that day undertook to divest itself of responsibility for the administration of the Canadian National Railways. It set up a trusteeship of three men to administer the property, and by 1936, when the trusteeship was dissolved, it needed about one or two more years to make it a trusteeship in bankruptcy. The [rail] road was rapidly heading that way. The government at that time again assumed its responsibilities for the railway, and the [...] I could mention, *if I were not getting fairly close to home*, other examples where a government has tried to divest itself of responsibility, without success to the government or prosperity to the object.

Karl Kenneth Homuth : We might go near home on that, eh?

C. D. HOWE : Yes. So that we shall not discuss that.

Nevertheless this government believes in government responsibility for government operations, and the amendments proposed to the act are not inconsistent with that belief.

Howard Charles Green : In other words, the air transport board is to be directly under the minister?

C. D. HOWE : Correct.

Mr. GREEN: The minister said that that, as I understand it, was not the position of the board of transport commissioners.

Mr. HOWE: That is correct, yes. The board of transport commissioners is a judicial body equivalent to a court, and its duty is to administer an act. That board has no function beyond the administration of the act, a wholly judicial function.

This is a board which is both judicial and advisory.

Mr. GREEN: In other words, the board of transport commissioners had to decide whether an applicant for a licence should get the licence, on certain well-defined principles, which might be summed up as public convenience and necessity, and it had also to follow certain judicial principles in deciding what tolls would be charged.

Mr. HOWE: That is right.

Mr. GREEN: As I understand it, this new transport board will no longer be subject to those stipulations; it will no longer have to decide on the basis of public convenience and necessity whether or not a licence should be granted?

Mr. HOWE: The jurisdiction is set out in the bill. I think if my hon. friend will delay this discussion until he sees the bill he will find that his fears in that regard are unnecessary.

Mr. GREEN: But in effect, *now the minister is over and above that air transport board*?

Mr. HOWE: [yes, but] Not in judicial matters.

Mr. GREEN: While he was "not over and above the board of transport commissioners"? Is that not so?

Mr. HOWE: I might point out that the board has two sets of functions.

## Notes on "Civil Aviation"

One is purely judicial; that is, *when deciding matters of fact the board will be governed by the act*; in that case the minister has no right to overrule them, except in the event of an appeal.

Mr. GREEN: Would it not be wise to maintain some board that did act in a judicial manner and let perhaps some department of government do the advising and initiating, rather than try to make the board sit on both sides of the fence at once? It does not seem to me as though those two functions can be carried out by the one body. The minister may be able to solve that in some way or another. How does he propose to get around that difficulty?

Mr. STIRLING: Has not the board of transport now got those two functions?

Mr. GREEN: No. The board of transport commissioners has far more independence in deciding on applications than this air transport board will have.

Mr. HOWE: I will agree that the board of transport commissioners is an entirely independent body, but

I point out that the duty of the board of transport commissioner is wholly negative.

It initiates nothing. If an application comes before the board, it determines whether the application complies with the Transport Act, or whether it does not.

If such application does comply with the act it is approved; if it does not it is rejected.

I point out that this new board has judicial functions in a similar way.

Mr. GREEN: On the same principles as are set out in the Transport Act?

Mr. HOWE: The hon. member had better wait for the bill to determine that. The principles are set out in the bill. They are varied in some particulars.

The new board also has the function of attempting to build as well as to regulate.

*Civil aviation in the United States, which is more highly developed than in any other country*, has been developed by a board of this type, and, I believe, developed admirably.

I think that by and large the air transport system of the United States is a very successful development, and that its civil aeronautics authority has contributed much toward that fortunate situation.

I believe it is a model which Canada can very well follow.

Mr. GREEN: On the question of international agreement, *now that the British have announced that they cannot follow the Canadian plan*, is the government proceeding on the basis of making bilateral agreements with other nations?

Mr. HOWE: No.

Mr. Agar Rodney Adamson - Progressive Conservative: The minister has paid a high compliment to the United States civil aviation board. I understand there is a radical difference between the policy in the United States and the policy proposed by the minister [...]

1942 to 1945 : Sir Roy Fedden, aeronautical engineer, special adviser to the **minister of aircraft production**, Sir R. Stafford Cripps.

Fedden creates the UK's aeronautical "technical advisory committee" of WW2 with full approval of the Royal Aeronautical Society. Fedden instructed to report back to technical advisory committee of the Royal Aeronautical Society at the end of the war, Fedden sent to North America [with a powerful team] "to seek technology which might help the war effort".

While he was studying "American technical education" an idea first came to him which **had consequences of major importance**.

As a result of Fedden's persuasion,

**minister of aircraft production** [Cripps] creates an inter-departmental committee to **study the higher educational needs of the British aircraft industry**.

Fedden made chairman committee.

October 1944 : inter-departmental committee to **study the higher educational needs of the British aircraft industry**. produces "the Fedden report".

October 1944 : "the Fedden report" recommends the creation of a "postgraduate college of aeronautics",

## Notes on “Civil Aviation”

1946 : postgraduate college of aeronautics created at Cranfield. Fedden sits on the board of governors until 1969.

Cranfield college developed first as “primarily an aviation establishment”.

late 1950s a [College?] policy of diversification begins.

1. College of aeronautics expands to include [?]
2. Expansion leads to a strong and broad based advanced engineering faculty [ year?]
3. Finally evolves as a “management school” which becomes one of the leaders in its field. [year?]

1969 : “Cranfield college of aeronautics” renamed “the Cranfield Institute of Technology”[by grant of a royal charter]

“Cranfield Institute of Technology - the only wholly postgraduate, post experience, University in the UK” <sup>260</sup>

19 May 1944 : Inaugural meeting of the Society of Licensed Aircraft Engineers (SLAE) <sup>261</sup>

Canada's post-war planning for international civil aviation was influenced by London and Washington <sup>262</sup>.

At the time, Canadian aviation policy was “driven by ambitions” [which were] not easily reconciled” <sup>263</sup>.

- a) Collective - security idealism;
- b) Commercial advantage;
- c) The desire to reconcile British and US policies;
- d) The desire to raise Canada's international profile.

These issues are explained and analysed in

the lead-up to and in the events of the Chicago International Civil Aviation Conference in November–December 1944.

What emerges challenges a considerable part of the conventional wisdom about:

- a) Canadian diplomacy and
- b) the role Canada played at the Chicago Conference

picture of the powerful motives of the day - and the stage upon which the “civil-aviation drama” is played out.

11 June 1944: Canadian Pacific Railway owns more than 40 air operations. Concerned that this private railway company had been allowed to purchase such a large share of Canadian domestic air services, C.D Howe expresses his opinion of the “Board of Transport Commissioners” in the House of Commons and at their poor performance in approving of such purchases and allowing this monopoly to occur:

“The Board of Transport Commissioners is bound by the Transport Act and is concerned chiefly with railway problems”.

The effect of the administration of the Board was this:

In 1938, when the Act was passed, there were a great number of independent air operations in this country.

Four years later, there was only one independent air operation.

Every other [meaning all other] air operation in the Dominion is [now] owned and operated by the railway companies.”

### 14 June 1944 :

C.D Howe addresses the “Canadian Manufacturers association” re wartime industrial initiatives for post-war growth. Howe uses jet propulsion as an example: “the gas turbine promises to become the “Prime-Mover, ranking in importance with the steam engine and present day Internal Combustion engine””

---

<sup>260</sup> Fedden was concerned with Cranfield from its first day to the end of his life. He supported it, he worked for it, he criticized it, he loved it. It was the embodiment of his vision.’ [Robin Higham in ODBN]. Bookseller Inventory # 24845

## Notes on "Civil Aviation"

### 11 September 1944 :

The Canadian *Transport Act* is amended to provide for "*the removal of commercial air services from the jurisdiction of the Board of Transport Commissioners*".

### 11 September 1944 :

The Canadian *Aeronautics Act* creates a new "Air Transport Board" (ATB) to provide "licensing and regulatory functions".

In the House of Commons, CD Howe explains "the new *Aeronautics Act*":

- I. A much more scientific method,
- II. a fairer method,
- III. a method more in keeping with the supremacy of Parliament is being adopted."

The role of the Air Transport Board is clearly laid out in the Act:

- I. An "administrative body, subject to close ministerial control".
- II. Could issue licences and regulations, but only subject to the approval of the Minister of Transport.
- III. Responsible for recommending policy changes to the Minister.
- IV. Advise the Department of Transport in matters pertaining to:
  - I. civil aviation subject to the approval of the Minister of Transport, and
  - II. to license all commercial transports, subject to the approval of the Minister of Transport.

In effect, the new Air Transport Board has none of the independence of the former Board of Transport Commissioners.

### 27 September 1944 :

CWC meets, has letter from IAM lodge 712 - re employment opportunities post War. CWC agrees with IAM.

### October 1944 :

B.C.A.T.P. recruiting ceases. Men already in training continued their courses and on graduation were placed on the air force reserve and allowed to return to civilian life, subject to recall. not all training schools were closed, for a limited number were retained to train additional air crew for the Royal Air Force on a contract basis. A "shadow training scheme" is retained in a state of readiness to provide for any emergency. Certain operational training units were also retained chiefly for Canadian requirements. These were carried on as R.C.A.F. commitments after the end of March, 1945.

### 9 to 19 October 1944 :

Moscow Conference<sup>264</sup> Moscow, Soviet Russia. Meeting regarding decisions to be made on:

1. Russia's entry in the war against Japan;
2. post-war division of the Balkans;
3. the future of Poland.

In attendance:

- a) British Prime Minister Winston Churchill, incl. adviser Anthony Eden
- b) Soviet leader Joseph Stalin, incl. adviser Molotov;
- c) US ambassadors and military officials.

1944 : Allied Air Transport Command employs 400,000 people, operates 3,000 aeroplanes. 600 million miles flown to date.<sup>265</sup>

### 01 November 1944 :

International aviation conference held in Chicago, Illinois, USA **400 delegates** from Fifty-four nations (States) attend. **about 90 delegates were (serving) military officers.**

---

<sup>264</sup> <http://www.bbc.co.uk/history/ww2peopleswar/timeline/factfiles/nonflash/a1144874.shtml>

<sup>265</sup> AN HISTORICAL SURVEY OF INTERNATIONAL AIR LAW SINCE 1944 - Peter H. Sand, James T. Lyon, Geoffrey N. Pratt, McGill University

## Notes on "Civil Aviation"

Proposals from 4 principle nations were submitted for forming the "Private air law" structure of a post war "International Organisation" with "Global Oversight" of Civil Aviation:

1. The United States proposals:
  - a) international body with **executive functions in the technical field**, but
  - b) international body with **advisory functions in the economic field**.
2. The United Kingdom proposals :
  - a) power to fix routes,
  - b) power to fix frequencies (route schedules), and
  - c) power to fix rates (airfare prices).
3. The Canadian proposals :
  - a) power to issue permits for international air transport operators.
4. The Australia-New Zealand proposals :
  - a) international ownership and operation of all international air services (rejected)

22 November 1944 : Ottawa Canada : Orders in Council: The Civilian Government Employees (War) Compensation Order  
P.C. 45/8848 <sup>266</sup>

Certified to be a true copy of a minute of a Meeting of the Treasury Board, approved  
by His Excellency the Governor General in Council, on the 22nd November, 1944-  
The Board had under consideration a memorandum from; the Honourable the  
Minister of Finance reporting:

—  
"That by Order in Council P.C. 311/6181 dated August 4, 1943, made under the  
War Measures Act, provision was made for the payment of benefits to and in respect  
of civilian employees of the Government of Canada who, having been sent out of Canada in the clourse of duty, suffer disability or  
death due to enemy action or  
counter action against the enemy;

That by Order in Council P.C. 2187 dated October 20, 1922, amended by Order in Council P.C. 1165 dated June 15, 1927, and  
made under Section 6A of the Air Board Ajct (now Section 7 of the Aeronautics Act, R.S.C. 1927, Chapter 3) provision was  
made for compensation for death or injury to public servants as a direct result of a flight taken in the course of duty;  
That, reference to said Order in Council P.C. 2187 discloses that it was made 'primarily and perhaps entirely for the protection of  
aerial observers, and that it did not anticipate coverage of civil servants who would fly on commercial passenger  
planes;

That the rates of compensation provided by said Order in Council P.C. 2187 are based upon salary of the employee and are  
designed to parallel' the ratio between income and compensation of members of the Forces provided in the schedules to the  
Pension Act up to and including the rank of Major;

That because of the generality of the provisions of said Order in Council P.C. 2187, and because of the changed conditions since  
1922 arising not only out of the war but also out of the establishment of aeroplane passenger services and the cheapness of  
protective insurance coverage upon flights in such passenger planes, the said Order in Council has caused difficulties in the matter  
of creating any comprehensive scheme of pension rights for civilian employees in the matter of accidents in the course of  
duty arising out of war eonditionis;

That because the said Order in Council P.C. 2187 was intended for the protection of certain salaried classes of civilian employees  
the schedule of rates therein is not deemed adequate to compensate civilian employees in the higher salary categories,  
and: therefore, notwithstanding the generality of its terms, it is not suitable as a general provision to cover accident during flights;  
That the necessity for some comprehensive pension scheme for civilian employees undertaking risks in flight by bomber plane and  
other non commercial planes (apart from the hazards of enemy action or counter action) has become increasingly  
apparent;

That the whole subject of pension and compensation rights of civilian employees arising out of accidents due to conditions brought  
about by the war has been under review by the Pensions Advisory Committee, which Committee has recommended inter alia: (a)

<sup>266</sup> ORDERS in COUNCIL pg 371-375 CANADIAN

## WAR ORDERS AND

REGULATIONS - 1944,

VOLUME IV No. 8, NOVEMBER 27, 1944 - STATUTORY ORDERS AND REGULATIONS DIVISION PRIVY COUNCIL OFFICE  
OTTAWA - EDMOND CLOUTIER, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY - 1944

## Notes on "Civil Aviation"

That Order in Council P.C. 311/6181 of August 4, 1943, be amended to include coverage of death or disability suffered by the employee as a direct result of an air flight either within or outside of Canada undertaken in the course of duty arising out of the war but not including an injury resulting from a flight by commercial air line plane in a scheduled flight, and also as a direct result of a flight either within or outside of Canada undertaken in the course of duties not arising out of the war made in other than a commercial air line plane provided such mode of travel was necessitated by war conditions.

(b) That the rates (of pension in said Order in Council P.C. 311/6181 be amended and increased so that the same shall be placed upon an equality in all respects with the scale of pensions provided for members of the Forces under the Pension Act.

(c) That the said Order in Council P.C. 2187 of October 20, 1922, be amended to exclude from its provisions flights made on commercial passenger planes, and also to revise the scale of pensions thereunder to the levels of the Pension Act.

The undersigned, concurring in the recommendations of the Pensions Advisory Committee, has the honour to recommend pursuant to paragraphs (a) and (b) of the said recommendations, and under authority of the War Measures Act that Order in Council P.C. 311/6181 be rescinded and that the following regulations be made and established in substitution thereof:

### ORDER

1. This Order may be cited as the Civilian Government Employees (War) Compensation Order.

2. For the purposes of this Order and any regulations made thereunder, the following expressions shall, unless a contrary intention appears, have the meanings stated below:

(a) 'employee' means any person engaged as a permanent or temporary civilian employee of the Government of Canada and includes any person serving as such with or without remuneration, but not including a person engaged locally in any place outside of Canada.

(b) 'Commission' means the Canadian Pension Commission.

(c) 'Department' means the Department of Veterans' Affairs.

(d) 'salaried employee' means any employee paid a regular periodical salary or wage, including an employee in respect of whose services, provided directly to the Government of Canada, the Government of Canada reimburses to his employer such salary or wage.

(e) 'war injury' means any physical injury which, during the war with Germany and Germany's allies, as a direct result of enemy action or counter action taken against the enemy, has been sustained by an employee who is out of Canada having been sent from Canada to perform duties for or on behalf of the Government of Canada.

(f) 'war flight injury' means any physical injury which, during the war with Germany and Germany's allies, has been sustained by an employee as a direct result of an air flight either within or outside of Canada, undertaken

(i) in the course of duties arising out of the said war, but not including an injury resulting from a flight made in a commercial air line plane on a scheduled trip;

(ii) in the course of duties not arising out of the said war, when the injury results from a flight made in other than a commercial air line plane on a scheduled trip, provided such mode of travel was necessitated by conditions arising out of the said war.

(g) 'commercial air line plane on a scheduled trip' shall exclude a plane in the Canadian Government Trans-Atlantic Air Service.

3. Otherwise than as provided by paragraph 9, this Order shall be administered by the Canadian Pension Commission and all the provisions of the Pension Act which are not inconsistent with the provisions of this Order, or any regulations made thereunder, shall apply to every claim for pension made under this Order, and every such claim shall be dealt with and adjudicated upon as if such claim were a claim under the Pension Act and as if the employee were a member of the Forces at the time of incurring the war injury or war flight injury.

4. Any salaried employee who sustains a war injury or war flight injury may be granted special leave with pay for such period of time as may be certified as necessary by a qualified medical practitioner and approved by the Commission, but not exceeding a total of 180 days.

5. Subject to the provisions of these regulations pensions shall be awarded in accordance with the rates set forth in schedules 'A' and 'B' of the Pension Act, to or in respect of any employee who suffers disability or death as a direct result of a war injury or a war flight injury, according to the salary range set opposite the military ranks shown in the following table:

Salary Range Military Rank  
\$3,000.00 or less • Lieutenant

## Notes on "Civil Aviation"

\$3,001.00 to \$3,750.00 .Captain

\$3,751.00 to \$5,000.00' Major

\$5,001.00 to \$6,500.00 Lieutenant Colonel

\$6,501.00 to \$8,000.00 /Colonel

\$8,001.00 or over Brigadier

6. In respect of an employee serving without remuneration or of a part time employee, (a) rating shall be made of salary status for the purposes of the Table in paragraph 5 hereof according to the salary that would be paid a permanent full time civil servant for the nature of the duties performed, and

(6) such rating shall be made in the first instance by the Deputy Minister of the Department concerned who shall, whenever possible, certify in writing such rating to the Commission before such employee becomes exposed to risk of war injury or war flight injury, and

(c) if the Commission makes 'any change in such rating adversely to the applicant for pension, an appeal on the part of the applicant for pension from the Commission's decision thereon, shall be to the Treasury Board, whose decision thereupon shall be final.

7. In the case of an employee who is a salaried employee, and who qualified for benefits under Section 4 hereof, payment of pension in respect of disability shall not commence until the date following completion of the initial period of treatment, or 180 days after the incurrence of the injury, whichever is the earlier date.

8. All benefits under this Order shall be in addition to any benefits to which the employees or their dependents may be entitled under the provisions of the Civil Service Act or the Civil Service Superannuation Act, but shall be subject to deduction of any other compensation receivable on account of the war injury or war flight injury from any source to which the employee has .made no direct contribution.

9. (1) The Department may examine, give treatment to and admit to hospital an employee who, in the opinion of the Department, is suffering from a war injury or war flight injury, provided that if the Commission renders a decision that the disability is not attributable to a war injury or war flight injury, treatment and hospital care shall not be continued at the expense of the Department longer than seven days after issue of notification by the Commission of such decision.

(2) The Department may examine, re-examine, give treatment to. admit to hospital and re-admit to hospital an employee who, in the opinion of the Department, is in need of such services in respect of a disability which at any time previously thereto has been determined to be attributable to a war injury or war flight injury.

10. The Commission may make regulations not . inconsistent with this Order for the purpose of carrying the Order into effect. Such regulations may (without prejudice to the generality of the foregoing) make provisions for prescribing:

—  
(a) the person by whom and the form and manner in which applications may be made, and

(6) the records, documents, or other information which must be furnished to the Commission in connection with any application.

11. Pensions granted under authority of Order in Council PC. 196/4417 of June 18, 1941, or Order in Council P.C. 311/6181 of August 4, 1943, may be increased in accordance with the new schedule of rates established herein effective as from the date hereof.

12. All payments required to be made under this Order shall be out of f&nds provided from the War Appropriation.

"

The Board concur in the above report and recommendation, and submit the same for favourable consideration.

A.D.P. HEENEY

Clerk of the Privy Council.

### 07 December 1944 :

Chicago international aviation conference final agreement [in English only], a joint plan incorporating other States proposals. A compromise with deficiencies adopted and signed by all except Liberia.

"Private Law" differs from "Public Law", the new "ICAO" is a management executive of private companies" a NON Governmental Organisation (NGO).

## Notes on "Civil Aviation"

The ICAO headquarters in Canada and then seeks a Canadian "Companies License" at the "Federal" level in order to operate "across Canada".

Obtaining a "Canadian License" meant that ICAO was now "legally recognised" to operate as a business in Canada, but as a "Private Entity", it is NOT granted or endowed with National Legislative decision making powers. To do so would subvert and undermine Parliament.

Once a Canadian "License" to operate is obtained, the Montreal based ICAO petitions the United Nations with a request to be recognised as "The only International Body with rule and decision making powers for it's international members" and as such should be recognised by the UN as an "Authority in international Civil Aviation matters"..

The UN grants the ICAO application and International Aeronautics oversight now comes from a "Corporation controlled private entity" [run mainly by pilots and big business] masquerading as a "International Decision Making Authority". Big business has taken control of international political decision making...

ICAO is

1. a NGO with NO "National" rule or policy making authority.
2. a Business Entity that has placed itself above the control of National Legislation making bodies - does it have the "Legal Right" to make decisions on airworthiness that affect aviation at a national level ?

21 December 1944 : Orders in Council : Aircraft Control Regulations amended — office of deputy Aircraft Controller - ORDER IN COUNCIL # 9491

NOTE : Air Force Act PC # 7524

R.C.A.F. (Air Force Act Amendment) Order No. 1, 1943, (National Defence for Air) amended 28/9/44. " PC. 7524

AT THE GOVERNMENT HOUSE AT OTTAWA

Thursday, the 28th day of September, 1944.

present :

His Excellency

The Governor General in Council:

Whereas "The Royal Canadian Air Force (Air Force Act Amendment) Order No. 1, 1943", (Order in Council P.C. 6190 of August 26, 1943 as amended by Order in Council P.C. 9379 dated 7th December, 1943), effected certain modifications, adaptations and exceptions to the Air Force Act in force in the United Kingdom on the 1st day of May, 1943, for the purposes of their application to the Royal Canadian Air Force, under Section 11 of The Royal Canadian Air Force Act; And whereas the Minister of National Defence for Air reports that, in the adaptation of Section 44 of the Air Force Act to the Royal Canadian Air Force, it is desirable to introduce in the scale of punishments that may be awarded by courts-martial to officers the punishment of "reduction to a lower commissioned rank in the air force" thereby bridging the gap between the punishment of "dismissal from His Majesty's Service" and the next lower punishment of "forfeiture of seniority of rank";

That, in the adaptation of the said Section 44, it is desirable to introduce in the scale of punishments that may be awarded by courts-martial to airmen the punishment of "discharge from His Majesty's service", thereby bridging the gap between the punishment of "discharge with ignominy from His Majesty's service" and the next lower punishment of "reduction to the ranks"; That further minor adaptations are required to be made to the said Section 44 in its application to the Royal Canadian Air Force; and

That it is desirable to effect the foregoing amendments or adaptations to the Air Force Act in its application to the Royal Canadian Air Force by further amending "The Royal Canadian Air Force (Air Force Act Amendment) Order No. 1, 1943".

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of National Defence for Air, and under and by virtue of the War Measures Act, Chapter 206, Revised Statutes of Canada, 1927, and notwithstanding any Act, law, regulation or prerogative of the Crown to the contrary, is pleased to order, and it is hereby ordered as follows

:

1. The modifications and adaptations made to Section 44 of the Air Force Act by "The Royal Canadian Air Force (Air, Force Act Amendment) Order No. 1, 1943" (as amended) set out in the second column of the Table- thereto (opposite Item

## Notes on "Civil Aviation"

(10)), are hereby revoked, and the modifications and adaptations to the said Section 44 of the Air Force Act in the second column of the Table to this Order (opposite Item (10)) are substituted therefor.

2. "The Royal Canadian Air Force (Air Force Act Amendment) Order No. 1, 1943" is hereby further amended accordingly, as of and from the date hereof.

A. D. P. HEENEY,

Clerk of the Privy Council. Pg 7 of the Orders in Council report 1944.

### CANADIAN AVIATION - 1945

#### 31 March 1945 :

BCATP officially terminated. Between 1939 to 1945 the BCATP graduated 131,553 "air" crew.

72,835 (more than 55%) of the graduates were R.C.A.F. "Air Crew" personnel

42,097 (32%) of the graduates were Royal Air Force "Air Crew" personnel

The remaining 13 % of the graduates were Royal Australian Air Force and Royal New Zealand Air Force "Air Crew" personnel. The BCATP was credited for being a major contributing factor to winning "air superiority" in Europe and provided "Air Crew" personnel in the following ratios.

- I. 49,707 pilots (38%)
- II. 29,963 navigators (23%)
- III. 15,673 Bombardiers (12%)
- IV. 18,696 wireless operators
- V. 15,700 air gunners (wireless operator /air gunners combined = 25.5%)
- VI. 1913 "flight engineers" (1.5%)

798 men and women of the combined "Commonwealth Air Forces" are reported "missing" in Canada and the "adjacent lands and waters" between 1939 and 1945. They have have never been found and have no known graves.

The BCATP was credited for being a major contributing factor to winning "air superiority" in Europe.

1945 : Uniformed RCAF personnel and retirees "transfer" to the Department of Transport. (Transport Canada remains a favourite "retirement destination" of former Canadian Armed Forces members)

1939 - 1943 : Canadians manned flying squadrons overseas during WW2 - but "ground crew" utilised by "Canadian Squadrons" was comprised almost entirely riggers, fitters and Technical Officers (NCO's and Commissioned Officers) educated, developed and supplied by the R.A.F.'s apprentice and Technical training program. of 1920-1939. This utilisation of RAF technical "Ground Crew" continued until 1943.

#### April 1945 :

White paper by C.D Howe on "Employment and Income".

1. A "Canadian Government policy" aimed at ensuring full employment for the returning veterans.
  1. Was this Policy mainly directed at Air Crew (Pilots) ?? or did it encompass "ALL" Crew, Air and Ground ?
2. Howe 's policy ensured the driving force for post-war activity in military (and Civil?) aircraft development and design came from the RCAF
3. This "new Federal policy" is similar / identical to pre-war British policy whereby the Air Ministry either drove or stifled aircraft development.

16 to 19 April 1945 : 57 members of Forty-one airlines (mostly Europe and North America) from 31 countries meet in Havana, Cuba for the International Air Transport Operators Conference and found the "new IATA" the "*International Air Transport Association*". It is the successor to the International Air Traffic Association, founded in 1919<sup>267</sup>.

The members of the Havana Conference unanimously elect the President of Trans-Canada Air Lines, Mr. H.J. Symington, as the first President of the Association and decide that the first annual meeting will be held at the Windsor Hotel in Montreal in October 1945.

---

<sup>267</sup> [http://www.icao.int/secretariat/PostalHistory/iata\\_international\\_air\\_transport\\_association.htm](http://www.icao.int/secretariat/PostalHistory/iata_international_air_transport_association.htm)

Article II of the IATA 1945 Statutes states that "The Head Office of this Association shall be maintained in the city in which the headquarters of the International Civil Aviation Organization is located."

The new *International Air Transport Association* functions:

- A. economic regulator of international air transport, concerning rates and service conditions.
- B. establish uniform air transport documents
- C. establish "general conditions" for contracts of air carriage, in accordance with the interests of the carriers.

Additional functions include the exchange of information on accidents, operating practices, and airline cooperation with ICAO.

Regional Traffic Conferences fix the international air rates by unanimous resolutions.

The new *International Air Transport Association* is headquartered in Montreal, and is subsequently incorporated in Montreal by an Act of the Canadian Parliament<sup>268</sup>, not as a corporation under Canadian law, but as "a **corporation** to which Canadian law attributes an **international nature**".

The *International Air Transport Association* has 4 Standing Committees:

1. Financial,
2. Legal,
3. Technical, and
4. Traffic

The *International Air Transport Association* also has:

- I. a Clearing House in London,
- II. an Enforcement Office in New York, and
- III. 3 Regional Offices in
  - 1) New York,
  - 2) Paris, and
  - 3) Singapore.

IATA contributes to various ICAO Technical Panels.

Cooperation between ICAO and IATA is vital in drafting standards and practices for civil aviation.

IATA's Legal Committee maintains close links with ICAO, presenting the airline industry's views on international conventions.

To ensure that cooperation between IATA and ICAO is simple and effective, they work closely together to further the development of international civil aviation, both Organisations have been located in the same city from their inception in 1945.

May 1945 : Sir Archibald Sinclair ceases to be Secretary of State for Air

**06 June 1945 :**

"Provisional" International Civil Aviation Organization (P.I.C.A.O.) - representing the various national governments - convention comes into effect.

The signatory States to P.I.C.A.O. undertake to collaborate in international measures to secure the uniformity of:

- I. aviation regulations,
- II. aviation standards,
- III. aviation procedures, and
- IV. aviation organization.

The conference - **driven by the USA ?** - revolves around the following:

- I. The Paris Convention of 1919 contained "technical rules" for air navigation.
- II. Pre WW2, international air law was mainly the prerogative of the European States
- III. The Chicago Convention does not contain "technical rules for air navigation".

<sup>268</sup> 20th Parl., 9 George VI, 1st session 1945; Royal Assent received December 18, 1945; IATA Bulletin, No. 2 (1945), Annex 3, p. 15.

## Notes on "Civil Aviation"

The new "technical rules for air navigation" are laid out in the ICAO "Technical Annexes". Not requiring ratification by signature, the ICAO "Technical Annexes" are generally considered as "simple recommendations without binding force".

### 06 July 1945 :

What was initially known as Operation Overcast begins in Europe. Operation Overcast moved captured Austrian and German scientists, engineers, technicians and their equipment to the United States. Months later the US War Department began an intra-office code of tagging the files of their most reprehensible Nazi recruits with paper clips — these Nazis were to be smuggled in, made known to no other US bureaucracies — Operation Overcast thus became known as Operation Paperclip. Wernher von Braun's dossier was never transferred to NARA.

### 1945 to 1950 :

9 different British firms are producing 14 different aircraft types.

### 28 November 1945 :

Memo from United States Ambassador Winant, in the United Kingdom to the US Secretary of State *"The British Govt, however, are in deadly earnest in their insistence on the establishment of some method of controlling rates to prevent subsidy and rate wars. We know that in the last few days the British have made a careful check of the views of nearly all of the European countries on this matter, and they are certain that they will all support the British view on rate control... The Department (US Civil Aeronautics Board and Dept of Commerce) is, of course, aware that France and many of the European countries do not look upon aviation as a business, and unless a "scheme" (Programme) is worked out under which rates cannot be controlled unilaterally by one operator or one country, the probabilities are great that the tourist associations, the hotel keepers and possibly the airline officials who are not under the compulsion of making money but only to enhance the prestige of their country, will reduce rates way below cost if there are no safeguards. ... Railey (Howard B. Railey, American Civil Air Attaché in France) has been here this week and wishes the Board and Department to know that the French position on IATA is the same as the British"*<sup>269</sup>

### 18 December 1945 :

Assent given to a special Act of the Canadian Parliament incorporating IATA : ACT TO INCORPORATE INTERNATIONAL AIR TRANSPORT ASSOCIATION.<sup>270</sup>

### 1945 :

Air Engineer Mr. H. (Rex) Terpening - Manager of the Air Observer School (A.O.S.) at Edmonton, later Maintenance Superintendent of the A.O.S.<sup>271</sup>

### 12 December 1945 :

Air-Commodore Harvey asked the Under-Secretary of State for Air <sup>272</sup>

1. to state the number of engine failures on four-engined aircraft in the R.A.F. since 1st September, 1945
2. if he is satisfied with the standard of maintenance generally.

Mr. Strachey : 255 cases of an engine failure in four-engined aircraft have so far been established for the period from 1st September to 30th November, 1945.

The figure is not yet complete, particularly for commands overseas, as each case of apparent engine failure is investigated, and this necessarily takes time. Both the standards and methods of maintenance throughout the Service are under constant review and we shall always aim to make further improvements in dealing with these technical problems. We are specially watching the maintenance requirements for Transport Command and for the trooping programme.

Wing-Commander R. Robinson asked the Under-Secretary of State for Air to provide:

1. the monthly number of accidents in Transport Command from August to date, giving
2. the number of casualties,
3. the number of fatalities or
4. the number of otherwise, in each case.

Mr. Strachey : Following is the table: (not in the Hansard)

<sup>272</sup> [http://hansard.millbanksystems.com/written\\_answers/1945/dec/12/engine-failure](http://hansard.millbanksystems.com/written_answers/1945/dec/12/engine-failure)

## Notes on "Civil Aviation"

Flying-Officer Bowden asked the Under secretary of State for Air how long is the period of initial training given to young men joining the R.A.F.; and if he is aware that men are being posted overseas at the age of 18, after only two months' training.

Mr. Strachey The initial training given to airmen on joining the R.A.F. lasts for eight weeks. If we are to fulfil our programme of bringing home men due for release or repatriation on completion of their overseas service, I am afraid we have no alternative but to post some air men overseas at the age of 18 on completion of their initial training.

Colonel J. R. H. Hutchison asked the Minister of Supply and of Aircraft Production <sup>273</sup> how much the crash of the Handley Page Hermes aircraft will delay the production and delivery of large aircraft suitable for British air lines.

Mr. Woodburn I would like to take this opportunity of expressing my sympathy—and I am sure that of the House also—with the relatives and colleagues of the two men who lost their lives in this accident. While some delay in the development of the Hermes aircraft is inevitable, its full extent cannot be known until it is seen whether the accident investigation necessitates changes in design. There are, however, four other types of aircraft suitable for British air lines either already in production or coming into production early in the New Year.

Captain C. Smith asked the Minister of Education <sup>274</sup> whether the method of marking and assessing the final examinations for engineering cadets is the same as that for the Higher National Diploma in engineering; how many assessed subjects there are in the Engineering Cadet Diploma examination and how many assessed subjects are normally taken in the Higher National Diploma; and whether she is satisfied that the two examinations are of approximately the same standard.

Miss Wilkinson The method of marking and assessing the final examination for Engineering Cadets is the same as that for the Higher National Diploma in Engineering. The number of assessed subjects in the final part of the examination for the Cadet Diploma is six, the same as the number normally assessed in the examination for the Higher National Diploma. Four subjects are also assessed at an earlier stage of the course for the Cadet Diploma; in the course for the Higher National Diploma the equivalent stage is examined by the school and is not assessed. I am satisfied that the two examinations are of approximately the same standard. They are both accepted under similar conditions and for the same purposes by the professional engineering institutions.

Sir W. Smithers asked the Parliamentary Secretary to the Ministry of Civil Aviation <sup>275</sup> why he prohibited Pan-American Airways from landing as many aeroplanes as they wish in this country, and from charging what fares they think it.

Mr. Ivor Thomas It is a cardinal feature of the policy of His Majesty's Government in the matter of international air transport that there should be inter-Governmental approval of the capacity to be operated and the fares to be charged on any particular route. Pending the negotiation of a formal bilateral agreement with the United States of America, His Majesty's Government have intimated that they were prepared to allow United States airlines, authorised by the Civil Aeronautics Board to operate to the United Kingdom, to come to this country on an approved number of frequencies and on the understanding that the fares to be charged were approved by His Majesty's Government. The company referred to by the hon. Member declared their intention to operate at a fare which had not been the subject of prior consultation or agreement. An assurance was, therefore, sought that United States air carriers would conform with international practice and not seek to increase their frequencies before they had obtained the necessary permission of the country to which they desired to operate.

### 14 December 1945 :

**Mr. S. Shephard** asked the Undersecretary of State for Air <sup>276</sup> how many non-British aircraft are now in use in R.A.F. Transport Command; and how many British Halifaxes and Lancasters are at present in storage in this country and not in use?

**Mr. Strachey** Just over 1,000 non-British aircraft are now in use in Transport Command. It would be contrary to the present policy to publish figures for our heavy bomber reserves. The operational bombers now in storage will, of course, go to squadrons in due course. Some bombers have been converted to meet the urgent needs of the trooping programme, but they are not really suitable for transport use because they have little room in the fuselage for anything but a bomb load, which takes up much less space than passengers or freight.

**Sir R. Glyn** asked the Under-Secretary of State for Air how many persons have been killed and injured, respectively, whilst flying as passengers or crew of aircraft of the R.A.F. Transport Command during the five weeks ended Sunday, 2nd December; what types of machines have been involved; and what have been the findings of the courts of inquiry in each case of accident.

<sup>276</sup> [http://hansard.millbanksystems.com/written\\_answers/1945/dec/14/transport-command#S5CV0417Po\\_19451214\\_CWA\\_17](http://hansard.millbanksystems.com/written_answers/1945/dec/14/transport-command#S5CV0417Po_19451214_CWA_17)

## Notes on "Civil Aviation"

**Mr. Strachey** The provisional figures for passenger-carrying flights in Transport Command during this period are the same as those shown for the month of November in the table accompanying my answer of 12th December to the hon. and gallant Member for South Blackpool (Wing-Commander R. Robinson).

The types of aircraft involved in these accidents were as follows:

1. Douglas Dakota
2. Liberator
3. Short Stirling

As I stated in my reply to the hon. Member's Question of 31st October, I am afraid that I cannot give the information asked for in the last part of the Question as it would be contrary to the public interest to disclose the findings of courts of inquiry, which are privileged.

The foreknowledge that they might be published would impose a restraint upon both court and witnesses, whereas it is essential that all concerned should speak freely, and, if need be, criticise fearlessly, without regard to rank or person.

### CANADIAN AVIATION - 1946

#### 19 Jan 1946 :

the Air Council approve Air-Vice-Marshal G.V. Walsh's proposal that the RCAF roundel with a red maple leaf in the centre be used to mark RCAF aircraft in lieu of the standard RAF Roundel.

1946 : Design laid down for a post war Civil "Jet Transport". Comet 1, designed by deHavilland's Ron Bishop, designer of the DH Mosquito, will introduce a new category of passenger aircraft:

1. Cruise altitude to 40,000 ft.
2. Cruise speed 460 mph
3. 1,500 mile range
4. cabin pressure equivalent to 8,000 ft at cruise altitude
5. 20 degree swept wings.
6. Wingspan : 115 ft
7. Maximum Weight : 105,000 lbs
8. Seating for 36 to 44 passengers, 4 abreast
9. wings mounted low for the structure to pass below the pressure cabin,
10. Four DH Ghost 50 engines, each delivering 4,450 lbs thrust.
11. smooth nose with an "unstopped" windscreen.
12. integral wing fuel tanks,
13. power assisted flying controls,
14. cabin pressurisation using engine bleed air, and
15. tricycle undercarriage.

The new jet aircraft's design is subjected to extremely rigorous testing including both pressure and water tank trials

### CANADIAN AVIATION - 1947

1947 : The Royal Aeronautical Society (with which is incorporated the Institution of Aeronautical Engineers).

Founded: 1866.

Offices ; 4, Hamilton Place, W.I.

President : Sir Frederick Handley Page, C.B.E., F.R.Ae.S.

Vice-Presidents : Dr. H. Roxbee Cox, Ph.D., D.I.C., B.Sc., F.R.Ae.S., Sir Oliver Simmonds, M.A., F.R.Ae.S. and N. E. Rowe.

Librarian: Mr. J. E. Hodgson, Hon. F.R.Ae.S.

Secretary : Captain J. Laurence Pretchard, Hon. F.R.Ae.S.

The Royal Aeronautical Society, founded in 1866, is the oldest institution in the World devoted to flying. It exists for the furtherance of the Science of Aeronautics.

*Branches of the Royal Aeronautical Society exist in the following places in England :—*

## Notes on "Civil Aviation"

Belfast, Birmingham, Bristol, Brough, Cambridge, Coventry, Derby, Glasgow, Gloucester and Cheltenham, Hatfield, Isle of Wight, Leicester, Luton, Manchester, Portsmouth, Reading, Rochester, Southampton, Weybridge, Yeovil, and overseas at:

- A. Sydney, Australia ;
- B. Montreal, Canada;**
- C. Ottawa, Canada;**
- D. Capetown, S. Africa;
- E. Wellington, New Zealand.

The Royal Aero Club of the United Kingdom. Founded - 1909.

Offices; 119, Piccadilly, London, W.1.

Affiliated to the Federation Aeronautique Internationale.

President : Lord Brabazon of Tara, M.C., P.G.

Vice-Presidents :

- 1. The Duke of Sutherland, K.T.,
- 2. The Marquess of Londonderry, K.G., P.C., M.V.O.,
- 3. Lord Gorell, C.B.E., M.C.,
- 4. Captain Sir Geoffrey de Havilland, O.B.E.,
- 5. Lt-Col. Sir Francis K. McClean, A.F.C.,
- 6. Sir W. Lindsey Everard, D.L., J.P., and
- 7. Sir Frederick Handley Page, C.B.E. Chairman :

Air Cdre. Whitney Straight, C.B.E., M.C., D.F.C.

Secretary- General : Colonel Rupert Preston, C.B.E.

1947 : The costs of the new airport to be built at Nausori, Fiji - a small airfield used by the Royal New Zealand Air Force during the war - will be borne equally by the governments of New Zealand, Great Britain, Australia and Canada. (Src - Janes' all the worlds aircraft 1947 pg 13b)

1947 : INTERNATIONAL AIRCRAFT MARKING Prefix : "CF-"

1947 : Dominion of Canada - Air Force :

### THE ROYAL CANADIAN AIR FORCE

The Royal Canadian Air Force is administered by the Department of National Defence, Canada, through the Minister of National Defence, who is advised by an Air Council consisting of the following members :

—

#### THE AIR COUNCIL

The Hon. Brooke Claxton, M.P., Minister of Defence. (President of the Air Council).

H. F. Gordon, Deputy Minister of Defence. (Vice-President of the Air Council).

Air Vice-Marshal Robert Leekie, C.B., D.S.O., D.S.C., D.F.C., Chief of the Air Staff.

Air Vice-Marshal N. A. C. McCreath, C.B.E., D.S.C., E.D., Air Member for Air Staff.

Air Vice-Marshal H. L. Campbell, C.B.E., Air Member for Personnel.

Air Vice-Marshal C. R. Slemon, C.B., C.B.E., Air Member for Supply and Organisation.

Air Vice-Marshal A. L. James, C.B.E., Air Member for Research and Development.

#### Special Appointments-

Director of Construction and Engineering : Air Cdre. J. G. Bryans, O.B.E.

Director of Equipment and Supply : Air Cdre. R. A. London, O.B.E.

Director of Accounts and Finance: Air Cdre. J. M. Murray, C.B.E.

Director of Organisation and Appointments : Air Cdre. A. C. Gordon, (J.B.E.

Commandant, R.C.A.F. Staff College : Air Cdre. A. D. Ross, G.C., O.B.E.

Chairman, Officers' Selection Board : Air Cdm. W. A. Orr, O.B.E.

#### ADMINISTRATION

Administration of the Force is exercised by R.C.A.F. Headquarters, Ottawa, through five "Commands"—three "Operational" Commands and two "Air" Commands, as follows :

—

#### OPERATIONAL COMMANDS

- 1. Eastern Air Command, Halifax, Nova Scotia - Air Officer Commanding-in-Chief : Air Vice-Marshal A. L. Morfoo, C.B.E.

## Notes on "Civil Aviation"

2. Western Air Command, Vancouver, British Columbia - Air Officer Commanding : Air Marshal J. L. Plant, C.B.E.
3. North Western Air Command, Edmonton, Alberta - Air Officer Commanding & Air Vice-Marshal T. A. Lawrence, C.B.

### AIR COMMANDS

No. 1 Air Command, Trenton, Ontario. - Air Officer Commanding; Air Marshal E. E. Aliihileton, C.B.E.

No. 2 Air Command, Winnipeg, Manitoba. - Air Officer Commanding ; Air Marshal K. M. Gutlirio, C.B.E.

R.C.A.F Overseas (Headquartered in the United Kingdom) - Air Officer Commanding, Air Marshal G. O. Johnson, C.B., ALC.

### NON-OPERATIONAL COMMANDS

Maintenance Command : Air Officer Commanding ; Air Marshal R. E. Alui'Burm'V, C.B.iL

No. 9 Group (Training). Air Officer Commanding : Air Cdre. J. IL Wrav, O.B.iL, A.F.C.

### ORGANIZATION

The Minister of National Defense has announced that the peace-time strength of the R.C.A.F. is to be established at approximately 81,000 of all ranks.

It will comprise:

- A "Regular Force" of 11,100 - capable of rapid expansion,
- An "Auxiliary Force" of 4,000, and
- A "reserve" force of 10,000 consisting almost entirely of officers and airmen who served during the War and have since returned to civil life.

It is proposed that the present 5 Commands will be reduced to 2, to be based at

1. Trenton, Ont. and
2. Edmonton, Alta.

The Commands at Halifax, Winnipeg and Vancouver are being reduced to Group headquarters.

The "Regular Air Force" will be made up of 8 operational squadrons.

Plans for an "Auxiliary Air Force", now to be incorporated in the organisation of the R.C.A.F. for the first time, provide for an Ultimate maximum of 15 squadrons - to be located at the main centres of population throughout the Dominion.

### NAVAL AVIATION

Director of Canadian Naval Aviation ; Capt. R. IL H. Bidwell, C.B.E., R.C.N.

Deputy Director: Capt. G. A. Hothoram, D.S.O., O.B.E., R.N.

The Canadian Navy is retaining an "Air Section" in its post-war organization.

2 light carriers are being transferred to the Royal Canadian Navy and 4 Royal Navy squadrons were, some time ago, allocated for manning by R.C.N. personnel for ultimate transference to the Royal Canadian Navy for service on these carriers.

Canada's 1st aircraft carrier, HMCS *fl'nrh*», was commissioned in March, 1946 and. Nos. 803 and S25 Squadrons were transferred to R.C.N. control to serve as the *Warno7*'s Air Group.

The two other squadrons earmarked for transfer (Nos. 826 and 888) have been temporarily disbanded in the United Kingdom, but will reform as R.C.N squadrons when the second carrier HMCS. *Magnificent*, is commissioned.

### 1947 : Civil Aviation in Canada

Civil Aviation in Canada is controlled by the Civil Aviation Department of the Department of Transport, Ottawa, Ont.

Controller of Civil Aviation: A. D. McLean.

#### Departments

##### 1. Air Regulations Department.

Superintendent: Mr. S. Graham,

The duties of this department include:

1. Inspection of aircraft
2. Registration of aircraft;
3. certification of aircraft for airworthiness;
4. the examination and licensing of pilots;

## Notes on “Civil Aviation”

5. the examination and licensing of air engineers;
6. supervision of flying clubs;
7. prevention of dangerous flying;
8. inquiries into the cause of aircraft accidents ; and
9. International flying.

10. Airways and Airports Department.

Superintendent of Airways : Mr. R. Dodds.

Chief Airways Construction Engineer : Mr. F. C. Jewett

Chief Illumination Engineer : Mr. H. Ainsworth.

The duties of this department include:

1. the inspection, licensing and registration of airports and seaplane bases ;
2. the construction and maintenance of airports and intermediate aerodromes, which now includes all the principal municipal airports in Canada:
3. assistance to municipalities in the designing and constructing of municipal airports ;
4. the lighting of government airports and air routes ;
5. the development and construction of radio range sites and the erection of radio range stations with the exception of the installation of radio equipment ;
6. the construction of buildings and telephone and power lines ; and
7. the calibration and testing of radio aids to air navigation.

THE AIR TRANSPORT BOARD - Canada

Address : Room 123, No. 3, Temporary Building, Lyon Street, Ottawa.

Members of the Board :

1. Chairman: Mr. R. C. Henry
2. Air Vice-Marshal Alan Ferrier,
3. Mr. J.O. Romeo Vachon.
4. Chief, Aeronautical Engineering - Research : Dr. J. J. Green, M.B.E.,
5. Chief, Economies Division : Mr. J.C. Lessard,
6. Chief, Traffic Division: Mr. A.S. Kirk.
7. Secretary and Legal Adviser : Mr. C.S. Booth.

The Air Transport Board has been *designed not only to perform regulatory duties* with respect to air traffic in Canada *but is also charged with the responsibility on advising* the Government on ways and means of bringing about a rapid and well-planned expansion of transport by air.

The Board will be in a position to give prompt attention to all matters affecting air transport requiring governmental consideration.

The **regulatory duties** of the Board include:

1. the establishment of tariffs and the regulating of rates,
2. examination of the ownership, financial structure, operations, and financial position of air carriers ;
3. the making of recommendations for needed financial assistance; and
4. generally *advising* the Government *on all matters relating to civil aviation and the performance of such other allied duties* for which the attentions of the Board may be directed.

Creation of the Air Transport Board **removes** from the Board of Transport Commissioners ***the regulatory duties*** with respect to air transport which were formerly under their jurisdiction.

The Department of Transport will continue to administer those portions of the Aeronautics Act and The Air Regulations which deal with civil aviation and do not come within the scope of the Air Transport Board.

## Canadian Flying / Aviation ASSOCIATIONS

The Royal Canadian Flying Clubs' Association, formed in R)2i) at Ottawa represents the Federation Aeronautiqao internationale.

The central organization of the Canadian Light Aeroplane .Chib.s. j'abron : lion. President ; J. A. Wilson.

President : 8. R. Bernardo.

Tr<'asun\*r : H. A. Yates.

Secretary-Afanager : \1'. G. Wclstciid. .

Address : ,lemma! Building, Ottawa, Out.

Zone \hce-Presiilents ; .1. W. Hurnplirey (Alai“itiine), A. 8.

## Notes on "Civil Aviation"

Dawes (St. Lawrence), E. G. Srorie (C'entrari. .1. R. Morgan  
(Alid-West). A. J. E. Sumner (Saskatchewan), W. R. Alay  
(.Alberta), W. G. AlcKenzie (Pacific).

The Association is the parent organization of the Canadian flying clubs and is the Canadian representative of the Federation  
Aerodiaatigie Intermitiunal.f (F.A.1.).

Before the war membership comprised twenty-two active flying clubs.

By the end of 1941 the number was approximately 100.

Air Industries and Transport Association of Canada. .

Address : 110, Blackburn Building, Ottawa, Ontario.

Directors:

C. H. Diekins, ALB.E. (President),

P. G. Harratt (Vice-President),

H. C. Cottrell (Hon. Secretary),

A. B. McLaren (Hon Treasurer),

B. IV. N. Deisher, (' , R. ia'uA'eus, D. 8,

C. Ormond, A. L. Gibson, (Irant, AlaeDuiuid. G. h\ l'earce,

C. D. Fairweather. l'lxccut ive Secretary : VV. B. Bnrchall.

National Aeronautical Association of Canada, Inc.

Address: 442, Goufcdoraliou Life Building, IT, thieeu Street East,  
H'oronto.

President : R. W. Richards.

General .Managei' : C. R. Patterson.

Institute of Aircraft Technicians.

President : D. T. Jackson (Department of Transport, Montreal),

Vice-President ; H. V. IVright (Canadian M'right, Ltd.).

Secretary : J. R. Chadburn.

Canadian Air Line Pilots' Association (C.A.L.P.A.). .Affiliated with Air Line Pilots' Association of U.S.A. and British Air  
Line Pilots' Association.

President : Capt. C. L. Skelding (T.C.A.).

Vice-Presidents:

Capt. J. F. Crosby (T.C.A.) and

Capt. C. R. Robinson (C.P.A.L.).

Secretary and Treasurer;

Capt. R. J. Baker (T.C..V.).

The Air Cadet League of Canada. .

Address : 122, Wellington Street, Ottawa, Ont.

President and Executive Chairman:

C. D. Taylor,

Managing Director : G. M. Ross.

Secretary and Treasurer; Mr,s. R. S. Godfrejx

### 1947 - Air - Transport Companies

1. **Canadian Pacific Air Lines, Limited,**  
620, Dominion Square Building, Montreal, Quebec.  
President : Grant W. McConachie.  
Vice-President : W. M. Neal.
2. **Maritime Central Airways, Limited,**  
Charlottetown, Prince Edward Island.  
President : J. K. Curran.

## Notes on "Civil Aviation"

General Manager : C. F. Bruke.

### 3. Trans-Canada Air Lines

Head Office : P.O. Box 2873, McGill Street, Winnipeg, Manitoba.

President : H. J. Symington, C.M.G., K.C.

Equipment:

- A) 11x Lockheed 14,
- B) 14x Lockheed "Lodestar",
- C) 24x Douglas DC-3
- D) 6x Douglas DC-4M to be delivered in 1947.

## 1947 - PROVINCIAL OR OTHER GOVERNMENTAL OPERATIONS

### 1. Ontario Provincial Air Service.

Chief Base : Sault Ste. Marie.

The oldest provincial operator of aircraft. Maintains forest patrols, fire-fighting services, air transportation for provincial government officials.

### 2. Saskatchewan Government Air Service.

Chief Base : Prince Albert, Sask.

Maintains forest patrols and fire-fighting services, also provides transportation for Government officials on business with mines, fishery, hunting, game-trapping, etc. Flying ambulance service in the North.

### 3. Royal Canadian Mounted Police, Aviation Division.

PT.Q. : Rockliffe, Ont.

Responsible for :

- a. air transportation of personnel and supplies,
- b. search and rescue work,
- c. anti-smuggling patrols and
- d. mercy flights.

Also employed on tours covering all R.C.M.P. gasoline and food caches in the North.

Equipment operated:

- a. 1x Noorduyn Norseman,
- b. 1x Grumman Goose
- c. 2x Beechcraft 18S.

Pilots on staff : 7

### 4. Central British Columbia Airways.

Base ; Prince George, B.C.

Commercial company holding a contract with the British Columbia Government for forest patrol and the transportation of personnel and supplies to the scenes of forest fires.

## OTHER OPERATORS

There are many operators which are engaged in non-scheduled flying, charter work, flying instructions, air photographic, etc. Since the end of the war there has been a considerable increase in the number of such undertakings (however an up-to-date and reliable list of these concerns was not available at the time of going to press).

## AIRPORTS

Prior to the war there were 103 licensed airports in the Dominion of Canada.

During the war many of these closed down due to:

- a. curtailment of commercial flying
- b. abandonment of private flying
- c. abandonment of club flying.

By the beginning of 1946 licensed airports numbered 98 and by the end of 1946 this number had increased to 168.

This number does not include emergency landing areas, flight strips and seaplane harbours.

Altogether, there are *nearly 600 locations in the Dominion* which have runways of land or water and can handle air traffic.

## Notes on "Civil Aviation"

1947 : Newfoundland : Aviation Administration of the airport at Gander, Newfoundland is accomplished by the Newfoundland Department of Public Works.

Oversight of the Newfoundland department of Public Works - Civil Aviation Division, rests with the Commissioner for Public Utilities in St. John's, Newfoundland.

Commissioner for Public Utilities ; Hon. Mr. J. S. Neill.

Newfoundland Director of Civil Aviation: Mr. H.A.L. Pattison.

### INTERNATIONAL TRANSPORT COMPANIES

There are no Newfoundland Air Transport undertakings at present.

International Companies operating to or through Newfoundland include the following :-

1. Trans-Canada Airlines.
2. British Overseas Airways Corporation.
3. Pan American World Airways.
4. Transcontinental and Western Air, Inc. (Trans World Airline).
5. American Overseas Airlines.
6. Air France.
7. Svensk Interkontinental Lufttraffik A.B. (S.I.L.A.).
8. Royal Dutch Airlines (K.L.M.). (In Summer only).

### AIRPORT

The Newfoundland Airport (Gander) is the only Airport in Newfoundland licensed for civil use.

Lat. 48°57'N., Long. 54°34'W. 493 ft. above sea level.

Four paved runways with magnetic headings as follow's :

1. 320°- 140° 6,000 ft X 400 ft.,
2. 180°-360° 6,000 ft. X 400 ft.,
3. 090°-270° 6,000 ft. X400 ft.,
4. 230°-000° 4,500 ft. X 600 ft.

The Airport has all facilities. Radio, Meteorological office, Navigational Aids, etc.

The Botwood base used by Pan American Airways, American Export Airlines and British Overseas Airways for their trans-Atlantic flying-boat services became inoperative in **October, 1945** with **the conversion of all trans-Atlantic services from flying-boats to land-planes.**

The Torbay Airport, on the outskirts of St. John's, was built and used by the R.C.A.F during the war.

The land comprising the Torbay Airport has been granted to Canada in fee simple and it is now' being operated as a civil airport by the Canadian Department of Transport. It serves as the St. John's terminal for the Trans-Canada Air Lines' local services.

Other airports include:

1. Harmon Field at Stephenville, a U.S. Army field on territory leased to the U.S. for Atlantic defence and used by U.S.A.A.F. Air Transport Command ;
2. Argentia, a U.S. Navy field leased on similar terms ; and
3. an emergency landing strip at Buchans operated by the Canadian Department of Transport.

British Pacific Commonwealth Airlines, Ltd. Head Office, Sydney, Australia

This company has been established to operate Trans-Pacific and Pacific regional air services under the control of the Australian, New Zealand and United Kingdom Governments.

Lord Knollys, chairman of B.O.A.C., is the U.K. Government representative.

As the result of an air agreement signed by Australia, and Canada, Australia, and Canada (**through designated operators**) will conduct **trans-Pacific service jointly between Vancouver, BC and Sydney, Australia.**

British Commonwealth Pacific Airlines (B.C.P.A) will operate as the "Australian airline" company.

Australian National Airways, interim contractors for B.C.P.A., began flying the route on September 16, 1946.

It is expected that the Canadian company will begin to operate in 1947 with pooling of rights and in parallel in partnership with B.C.P.A.

1947 : Government of Canada : budgetary defence cuts : Canadian Air Force Historian's staff is reduced to two members.

## Notes on "Civil Aviation"

1947 :- THE AVRO 691 LANCASTRIAN.

The Lancastrian is a High-Speed long-range transport conversion of the Lancaster bomber rail details of which were given in The 1946 issue of this Annual.

The first conversions were made in Canada, by Victory Aircraft, Ltd. for Trans-Canada Air Lines and are operated by this company, on behalf of the Canadian Government, on a trans-Atlantic mail and passenger service between Montreal, Canada and Prestwick, UK.

The Canadian Lancastrians are fitted with four 1,280 h.p Packard-built Rolls-Royce "Merlin 28" engines and have accommodation for ten passengers, mail and freight.

Production of the Lancastrian has since been undertaken by A. V. Roe & Co., Ltd. and deliveries have been made to the R.A.F., B.O.A.C. and British South American Airways.

The four main variants of the Lancastrian are designated as follows :

—  
Mk. I. Nine-seat version for B.O.A.C.

Mk. II. Trimotor aircraft for R.A.F. Transport Command.

Mk. III. Thirteen-seat version for British South American Airways.

Mk. IV. Similar aircraft for R.A.F. Transport Command.

Type.—

Four-engined Long-range Mail, Freight and Passenger Transport.

WINGS.—Cantilever or mid-wing monoplane.

Aerofoil section NACA 230 series.

All-metal two-spar structure consisting of constant chord centre-section integral with centre-section of fuselage ; two tapered outer wings and detachable tips.

Leading and trailing edges detachable.

All units are built up individually with all fittings and equipment before assembly.

Spars have extruded top and bottom booms built up to single heavy-gauge web plate.

Pressed aluminium-alloy elongated ribs strengthened by swaged flange stiffness.

Smooth aluminium skin.

Wing chord 10 ft. 0 in. (4.88 m.) ; tip chord 7 ft. 1 in. (2.29 m.) ; aspect ratio 8.92 ; net wing area 1,203 sq. ft. (112 sq. m.) ;

gross wing area 1,297 sq. ft. (120.5 sq. m.).

Balanced metal ailerons on miter winch arc metal covered to hinge, with fabric covering aft.

Controlable trim-tabs in each aileron span 17 ft. 3 in. (3.33 m.).

Aileron area 83.3 sq. ft. (7.94 sq. m.).

Hydraulically-operated all-metal split trailing-edge flaps between ailerons and fuselage in two sections each side.

Flap area 133.3 sq. ft. (12.59 sq. m.).

FUSELAGE.

All-metal structure of oval cross-section in five separate assembled sections.

Fuselage laced with formed by joints of extruded longerons half-way down the three middle sections.

Cross beams between longerons support floor and form roof of bomb-bay (on Lancaster). Vertical U-bolts and ribs bolted to longerons carry the smooth metal skin, remaining sections consist of oval frames and formers, longitudinal stringers and riveted metal skin.

All equipment and fittings installed before final assembly of separate units. Fuselage tail sections formed of smooth metal sheet and replace gun-turrets of Lancaster.

Maximum internal width 5 ft. 3 in. (1.60 m.).

Vertical Unit.—Vertical elevator in one-piece structure with twin longitudinal

rudders mounted as endplates. Two-surface airfoil plane constructed in two main sections and joined on fuselage centre-line. Metal covering over all surfaces except elevator, which are fabric-covered.

Controllable trim-tabs in rudders and elevator.

Tailplane span 33 ft. 9 in. (10.28 m.) ; tailplane and elevator root chord 8 ft. 5 in. (2.39 m.). Gross tailplane area 143.9 sq. ft. (13.35 sq. m.) ;

elevator area 87.3 sq. ft. (8.1 sq. m.) ;

rudder area 41.2 sq. ft. (3.83 sq. m.).

Landing Gear.—Retractable two-wheel type.

## Notes on "Civil Aviation"

Each main wheel 5 ft, 6 in. (1.65 m.) diameter carried between pair of Dowty shockabsorber legs with diagonal cross-bracing and rear bracing struts, and retracts rearwards into inner engine nacelle, being fully enclosed in the retracted position by mechanically-operated twin doors.

Hydraulic-operation. Track 23 ft. 9 in. (7.24 m.). Fixed tailwheel carried in fork on shock-absorber leg.

Power Plant.—Four 1,120 h.p. Rolls-Royce Merlin 24 twelve cylinder liquid-cooled engines with two-speed superchargers mounted on welded steel-tube bearers cantilevered from front wing-spacer. D.H. Hydraulic three-litre constant-speed in-flight feathering airscrews, 13 ft. (4.0 m.) diameter.

Fuel tanks in wing (2,154 Imp. gallons = 5,248 litres) and in bomb-bay (1,020 Imp. gallons = 4,140 litres).

ACCOMMODATION (Nine-passenger version).—

Group of four consisting of pilot (on right) and co-pilot side-by-side with dual controls, with navigator and wireless-operator behind. Crew compartment has volume of 286 cub. ft. (8.1 cub. m.). Aft of crew compartment is crew's toilet room, with volume of 135 cub. ft. (3.8 cub. m.).

Aft of this is galley of 125 cub. ft. (3.6 cub. m.) capacity and seat for steward. Main cabin (capacity 670 cub. ft. = 16.1 cub. m.) follows, and has nine passenger seats on port side facing to starboard.

Gangway on starboard. These seats are convertible into six bunks. Maximum cabin height 6 ft. 4 in. (1.93 m.).

Windows on starboard side only. Main entry door on starboard side with coat-room opposite. Emergency escape hatches in roof, fore the rear of main cabin is toilet compartment with volume of 93 cub. ft. (2.6 cub. m.). Rear luggage hold aft with capacity of 41 cub. ft. (1.2 cub. m.); loading hatch in roof. Forward freight compartment in nose has capacity of 227.6 cub. ft. (6.4 cub. m.); hinged nose-door for loading.

ACCOMMODATION (13-passenger version).—Crew compartment, toilet and freight holds as on 9-passenger version. Crew's toilet reduced to 60 cub. ft. (1.7 cub. m.) capacity, and galley reduced to 85 cub. ft. (2.4 cub. m.). Main cabin of 69.6 cub. ft. (1.96 cub. m.) capacity accommodates thirteen passengers arranged in six seats on starboard and seven on port, with central aisle. All seats face forward except cockpit seats from front, which face aft. Windows on both sides of cabin.

Equipment.—Two dinghies, one in each wing root trailing-edge and (on 9-passenger version) one in coat-room at rear. Oxygen bottle in floor under pilot's cockpit.

Dimensions.—Span 102 ft. (31.1 m.), Length 76 ft. 10 in. (23.4 m.), Height (tail down) 17 ft. 10 in. (5.44 m.).

Weights and Loadings (Nine-passenger version).—Weight empty (fully equipped and furnished) 37,190 lbs. (16,870 kg.), Crew (5) baggage and food 1,100 lbs. (499 kg.), Passengers (9) 1,530 lbs. (694 kg.), Passengers' baggage (9 at 50 lbs. = 27 kg.) 460 lbs. (204 kg.), Mail or freight 210 lbs. (95 kg.), Fuel and oil 24,520 lbs. (11,122 kg.), Weight loaded 65,000 lbs. (29,484 kg.). Maximum landing weight 68,000 lbs. (26,309 kg.). Wing loading 60 lbs./sq. ft. (244.1 kg./sq. m.). Power loading 10 lbs./h.p. (4.63 kg./h.p.). WEIGHTS AND LOADINGS (Thirteen-passenger version).—Weight empty (fully equipped and furnished) 36,190 lbs. (16,416 kg.), Crew (5), baggage and food 1,100 lbs. (499 kg.), Passengers (13) 2,210 lbs. (998 kg.), Passengers' baggage (13 at 50 lbs. = 27 kg.) 660 lbs. (295 kg.), Mail or freight 4,050 lbs. (2,110 kg.), Fuel and oil 17,060 lbs. (7,740 kg.). Normal weight loaded 61,860 lbs. (28,058 kg.), Maximum permissible weight loaded 65,000 lbs. (29,484 kg.), Maximum landing weight 68,000 lbs. (26,309 kg.), Wing loading (at normal load weight) 47.6 lbs./sq. ft. (232.4 kg./sq. m.), Power loading (at normal loaded weight) 9.5 lbs./h.p. (4.3 kg./h.p.). PERFORMANCE (Speeds at 54,000 lbs. = 24,494 kg.).—Maximum level speed 315 m.p.h. (507 km/h.) at 12,000 ft. (3,660 m.), Speed at sea level 255 m.p.h. (459 km/h.). Speed at 3,500 ft. (1,065 m.) 300 m.p.h. (483 km/h.), Maximum weak mixture cruising speed 290 m.p.h. (467 km/h.) at 17,500 ft. (5,335 m.) at sea level 246 m.p.h. (394 km/h.) at 11,000 ft. (3,355 m.) 280 m.p.h. (451 km/h.). Rates

## Notes on "Civil Aviation"

of climb (at 65,000 lbs. = 29,484 kg.). Maximum rate of climb (at maximum climb rate) 970 ft./min. (296 m./min.) at 10,000 ft. (3,050 m.) at sea level, 950 ft./min. (290 m./min.), Maximum rate of climb on three engines, 490 ft./min. (149 m./min.) at sea level ; at 16,000 ft. (4,870 m.) 250 ft./min. (76 m./min.). Ceiling (at maximum climb rate) 25,000 ft. (7,620 m.), Service ceiling 24,300 ft. (7,405 m.), Three-engine ceiling 20,500 ft. (6,250 m.), Three-engine service ceiling 19,000 ft. (5,790 m.), Take-off distance to 50 ft. (16 m.) 1,200 yds. (1,097 m.), Landing run (at 42,000 lbs. — 19,061 kg.) 550 yds. (503 m.).

Range (Nine-passenger version).—(At optimum cruising conditions) 4,100 miles (6,598 km.) at 230 m.p.h. (370 km.h.) at 20,000 ft. (6,095 m.) With 2,190 lbs. (993 kg.) payload , • 3,280 miles (5,278 km.) at 280 m.p.h. (451 km.h.) at 20,000 ft. (6,095 m.) with 4,340 lbs. (1,969 kg.) payload. (At maximum weak mixture cruising conditions) 3,600 miles (5,793 km.) at 280 m.p.h. (451 km.h.) at 20,000 ft. (6,095 m.) with 2,190 lbs. (993 kg.) payload ; 3,200 miles (5,167 km.) at 280 m.p.h. (451 km.h.) at 20,000 ft. (6,095 m.) with 4,870 lbs. (2,209 kg.) payload.

Range (Thirteen-passenger version).—(At optimum cruising conditions) 2,820 miles (4,538 km.) at 230 m.p.h. (370 km.h.) at 20,000 ft. (6,095 m.) with 7,510 lbs. (3,406 kg.) payload ; 2,710 miles (4,361 km.) at 230 m.p.h. (370 km.h.) at 20,000 ft. (6,095 m.) with 10,650 lbs. (4,831 kg.) payload. (At maximum weak mixture cruising conditions) 2,450 miles (3,943 km.) at 280 m.p.h. (451 km.h.) at 20,000 ft. (6,095 m.) with 7,510 lbs. (3,406 kg.) payload; 2,420 miles (3,894 km.) at 280 m.p.h. (451 km.h.) at 20,000 ft. (6,095 m.) with 10,650 lbs. (4,831 kg.) payload.

### THE AVRO NENE-LANCASTRIAN.

An experimental version of the Lancastrian fitted with two Rolls-Royce "Nene" centrifugal-flow turbo-jet units in place of the outboard Merlin engines.

The object of this installation was to obtain performance figures of a jet-propelled air-liner, and generally to investigate the efficiency of the jet engines so installed.

Modification work was completed by Bolls-Boyce Ltd., with the approval of A. V. Roe & Co. Ltd., and the Nene Lancastrian made its first flight at Hucknall in August, 1946.

Alteration to the main spar, ailerons and flaps and the control runs between the inner and outer engines, was necessitated by the jet unit installation.

Extensive experimental equipment is carried, including separate sets of instruments for the Merlin engines and the Nene jet-units.

The Nene Lancastrian has a considerably improved performance over the standard aircraft.

Altitude can be maintained easily on three engines, and *the aircraft was flown satisfactory with both Merlins and one Nene stopped.*

The additional fuel required for the jet-units is accommodated in auxiliary tanks in the fuselage.

The standard wing tanks, three in each wing, are retained.

Two wing tanks then carry kerosene and one wing tank carries petrol.

Total capacity is 2,385 Imp. gallons (10,848 litres) paraffin and 740 Imp. gallons (3,364 litres) petrol.

The weight loaded is 62,670 lbs. (28,381 kg.).

Using only the Nene engines this aircraft has a range of over 800 miles (1,287 km.).

### 04 April 1947 :

ICAO Convention - Chicago comes into force.

The legal status of ICAO in Canada and in the Province of Quebec is questionable : Finally, the "Convention on Privileges and Immunities of Specialized Agencies of the UN" are applied to ICAO's headquarters and staff by the Government of Canada.

ICAO functions now regulatory, judicial, and executive : administrative ( registration by the Council, of bilateral aviation treaties and agreements) technical, and economic matters..

1947 : ICAO (from Janes 1947) THE INTERNATIONAL CIVIL AVIATION ORGANIZATION (I.C.A.O.)  
THE COUNCIL

Headquarters : Dominion Square Buildings, Montreal,  
Canada.

President ; Dr. Edward P. Warner (U.S.A.).

Vice-Presidents ; Dr. F. H. Copes Van Hasselt (Netherlands) ;  
Col. C. Y. Liu (China) ; and G. E. Saurez (Columbia).

Secretary-General : Dr. Albert Roper (France).

Member States : Australia, Belgium, Brazil, Canada, Chile,  
China, Columbia, Czechoslovakia, Egypt, El Salvador, France,  
India, Iraq, Mexico, the Netherlands, Norway, Peru, Turkey,  
United Kingdom, and United States. A seat on the Council  
has been reserved for Russia.

A, Provisional International Civil Aviation Organization  
was established when the Interim Agreement on International  
Civil Aviation came into force on June 6, 1945, after 10 nations  
had announced their formal acceptance of the Agreement.

The Organization was established for an interim period to  
last until a new permanent convention on international civil  
aviation shall have come into force.

The International Civil Aviation Organization, successor to  
the Provisional International Civil Aviation Organization  
(P.I.C.A.O.), came into being on April 4, 1947, following the  
ratification of the Permanent Convention by the required  
number of States.

The Organization consists of an Assembly and a Council.

The Assembly

To meet annually and be convened by the Council. Extraordinary  
meetings of the Assembly may be held at any time

when called by the Council or at the request of any ten member

States. All member States have equal right to be represented

at the meetings of the Assembly and each member is entitled

to one vote. The powers and duties of the Assembly are :

(a) to elect at each meeting its president and officers ; (6) to elect  
the member States to be represented on the Council ; (c) to  
examine and take action upon the reports of the Council ; (d)

to determine its own rules of procedure and establish such  
subsidiary commissions and committees as are needed ; approve

an annual budget and determine the financial arrangements of

the Organization ; (e) to refer any specific matters to the Council  
;

(f) to delegate the necessary powers and authority to the Council  
which are needed for the duties of the organization ; and (g)

to deal with any matters not specifically assigned to the Council.

The Council

The Council to be composed of not more than 21 member  
States elected by the Assembly for a period of two years, adequate  
representation to be given to : (1) those member States of chief  
importance in air transport ; (2) those member States not otherwise  
included which make the largest contribution to the provision  
of facilities for international civil air navigation ; (3) those  
member States not otherwise included whose election will ensure  
that all major geographical areas of the World are represented.

No representative of a member State on the Council may be

## Notes on "Civil Aviation"

actively associated with or financially interested with the operation of an international air service.

The Council shall elect a President, who will have no vote.

One or more vice-presidents to be elected from among the members, who will retain the right to vote when serving as acting president. Decisions of the Council to be deemed valid when approved by a majority of all members. Any member State not a member of the Council may participate in deliberations whenever any decision is to be taken which especially concerns such a member State. But such a State may not vote. In any case in which there is a dispute between one or more member States not members of the Council and one or more member States who are members of the Council, any State within the second category which is party to the dispute shall have no right to vote on that dispute.

The duties and powers of the Council are -

- (1) to discharge the directives of the Assembly.
- (2) to determine its own organization of the Assembly.
- (3) to determine the method of appointment, emoluments and conditions of service of the employees of the organization.
- (4) to appoint a Secretary-General.

(5) to provide for the establishment of any subsidiary working groups which may be considered desirable, including the following interim Committees :

- 
- (a) A Committee on Air Transport.
- (b) A Committee on Air Navigation.
- (c) A Committee on International Convention on Civil Aviation.

(6) to prepare and submit to the Assembly budget estimates of the Organization and statements of accounts of all reports and expenditures.

(7) to enter into agreements with other international bodies when deemed advisable for the maintenance of common service and for common arrangements concerning personnel and, with the approval of the Assembly, enter into such other arrangements as may facilitate the work of the Organization.

In addition, the functions of the Council are to maintain liaison with the member States, calling on them for such data and information as may be required; receive, register and hold open to inspection by member States, all existing contracts and agreements covering routes, services, landing rights, airport facilities, or other international air matters to which any member State or its airlines is a party; supervise and co-ordinate the works of the three Committees, consider their reports and transmit the Committee's reports and the findings of the Council to the member States. In addition, the Council is to make recommendations on technical matters to the member States of the Assembly, submit an annual report to the Assembly and, on the direction of the Assembly, convene another conference on international civil aviation or, at such time as the Convention is ratified, convene the first Assembly under the Convention. When requested by all the parties concerned, the Council will act as an arbitral body on any difference arising among member States relating to international civil aviation matters which may be submitted to it.

The expenses of the Provisional Organisation are borne by

## Notes on "Civil Aviation"

the member States in proportions to be decided by the Assembly and funds are to be advanced by member States to cover the initial expenses of the Organization. Each member State bears the expenses of its own delegation to the Assembly and those of its delegates on the Council and its representatives on committees or subsidiary groups.

Each contracting State undertakes that its international airlines shall file traffic reports, cost statistics and financial states with the Council. Each contracting State may designate the route to be followed within its territory by any international air service, and the airports which any such service may use. If the Council is of the opinion that the airports or other navigation facilities of a contracting State are not reasonably adequate the Council may consult with the State and others affected, to find means of correcting the position and may make recommendations. If requested by the State, the Council may provide all or a portion of the costs needed for the remedies.

A contracting State may at any time discharge any obligation into which it has entered and take over airports and other facilities which the Council has established in its territory by paying to the Council an amount considered reasonable.

The Council may suggest to contracting States that they form joint organizations to operate air services on any routes or in any regions.

The duties of the Committees established under the Council shall be :

—

The Committee on Air Transport : To observe, correlate and continuously report on facts concerning the origin and volume of international air traffic and the relation of such traffic, or the demand for it, to the facilities provided ; collect, analyse and report on subsidies, tariffs and costs of operation ; study matters affecting the organization and operation of international air services, including the international ownership and operation of international trunk lines ; and study and report, with recommendations to the Assembly as soon as practicable on matters on which agreement was not reached at the Chicago International Civil Aviation Conference.

The ICAO Committee on Air Transport :

To observe, correlate and continuously report on facts concerning the origin and volume of international air traffic and the relation of such traffic, or the demand for it, to the facilities provided ; collect, analyse and report on subsidies, tariffs and costs of operation ; study matters affecting the organization and operation of international air services, including the international ownership and operation of international trunk lines ; and study and report, with recommendations to the Assembly as soon as practicable on matters on which agreement was not reached at the Chicago International Civil Aviation Conference.

The Committee on Air Navigation : Study and advise on standards and procedures for communications systems and air navigation aids including rules of the air, traffic control practices, licensing of operating and mechanical personnel, airworthiness, registration and identification of aircraft, meteorological protection of international aeronautics, log books, maps and charts,

## Notes on "Civil Aviation"

airports, customs, accident investigation and so forth. In addition the Committee will work towards the adoption of minimum requirements and standard procedures for all the above and continue the preparation of technical documents in accordance with the recommendations of the Chicago Conference.

1947 : (from Janes 1947) THE INTERNATIONAL AIR TRAFFIC ASSOCIATION (I.A.T.A.)

04 April 1947 :

The "International Convention on Air Navigation" (ICAN) created 13 October 1919 ceases to be in force.

Headquarters : Central Station Building, Montreal, Canada.

Branch Offices : Cairo, Rio de Janeiro and New York.

President : H. J. Symington, C.M.G. (Canada).

President Elect: Hafez Afifi Pasha (Egypt).

Director-General: Sir William Hildred (England).

Executive Committee: John E. Slater (U.S.A.) (Chairman),

J. R. McCrindle (England), Rene Briand (France), Per A. Norlin

(Norway), A. F. T. Cambridge (India), Albert Plesman (Netherlands), J. Benito Ribeiro Dantas (Brazil), Hassan Sadek Pasha

(Egypt), W. Hudson Fysh (Australia), T. H. Shen (China) and

T. B. Wilson (U.S.A.).

Traffic Committee. Chairman: O. A. Rheinstrom (U.S.A.).

Financial Committee. Chairman: G. Temple Mailer (G.B.).

Legal Committee. Chairman : John C. Cooper (U.S.A.).

Technical Committee. Chairman: A. C. Campbell Orde (G.B.)

The International Air Transport Association was formally inaugurated on April 19, 1945, at Havana, following a conference of international airline operators. Invitations to the conference and plans for the new organization were drawn up at a conference held in Chicago in December, 1944, on the initiative of the American Air Transport Association and attended by 34 representatives of 21 nations. The new Association succeeds the original International Air Traffic Association founded in 1919.

Headquarters of the new I.A.T.A. are at Montreal, Canada, and the association consists of a General Assembly, comprising all air transport companies, and an Executive Committee, in which is vested the management of the association. The post of President is an honorary position.

The aims and objects of I.A.T.A. are to promote safe, regular and economical air transport ; to foster the development of air commerce, and to study all problems connected therewith ; to provide efficient machinery for collaboration among all air transport operators who are engaged directly or indirectly in international air transport service ; and to co-operate with the International Civil Aviation Organization (I.C.A.O.) and other international bodies.

There are two categories of membership—Active and Associate. Any air transport undertaking is eligible for active membership if it operates a scheduled air service under proper authority for passengers, mail or cargo, between the territories of two or more States, under the flag of a State eligible for membership in the International Civil Aviation Organization.

The Active Members are :—A.B. Aerotransport (Sweden) :

## Notes on "Civil Aviation"

Aer Lingis Teoranta (Eire) ; Aero Portuguesa (Portugal) ;  
 Air France : All-India (Tata) ; American Airlines, Inc. ;  
 American Overseas Airlines ; Braniff Airways ; British Overseas  
 Airways Corporation ; British West Indian Airways ; Ceskoslovenske  
 Aerolinie ; China National Aviation Corporation  
 ;  
 Cia Mexicana de Aviacion ; Colonial Airlines ; Det Danske  
 Luftfartsselskab ; Det Norske Luftfartsselskap ; Empresa de  
 Viacao Aerea Rio Grandense, Expreso Aereo Inter-Americano ;  
 Indian National Airways ; K.L.M. ; K.N.I.L.M. ; Linen  
 Aeropostal Venezolana ; Lineas Aereas Iberia ; Misr ^ Virwork  
 (Egypt) ; Northeast Airlines ; Northwest Airlines ; Pannii' do  
 Brasil ; Pan American Airways ; Pan American-Jrace Airways ;  
 Polskie Liniie Lotnicze ; Qantas Empire Airways ; Servicos  
 Aereos Cruzeiro do Sul ; Sabena ; South African Airways ;

Svensk Inter-Kontinental Lufttrafik ; Swissair ; d'.A.C.A.  
 (El Salvador) ; Tasman Empire Airways ; Trans-Canada Air  
 Lines ; Trans-continental and Western Air, Inc. ; United Air  
 Lines ; Western Air Lines ; and others),  
 Associate membership may be obtained by any air transport  
 concern operating an authorized service under the  
 flag of a State "eligible for membership in the International  
 Civil Aviation Organization, the Associate Member Companies  
 are :—Aerovias Nacionales de Colombia ; Alaska Airlines ;  
 All-American Aviation ; All-India Airways (Oandor Denver) Ltd. ;  
 Australian National Airways ; Compania Cubana de Aviacion ;  
 Companhia de Transportes Aereos (Portugal) ; Delta Air Lines ;  
 Eastern Airlines ; Linea Aerea Naciona (Chile) ; National  
 Airlines ; Pennsylvania-Central Airlines ; and Portsmouth  
 Aviation, Ltd.

I.A.T.A. has four standing committees : financial, legal,  
 technical and traffic. Each is divided into working committees  
 and sub-committees as necessary.

The Financial Committee concerns itself with all financial  
 matters connected with air transport : standardization of  
 methods of rendering, verifying and settling accounts for revenue  
 transactions as between members: clearinghouse problems

;  
 insurance questions: introduction and control of international  
 air traffic

1  
 monetary instruments. and the twin issues of  
 credit, and statistical matters.

The Legal Committee deals generally with legal matters  
 having a bearing on international air transport. [particularly  
 with international conventions on public and private air law,  
 and on other means of transport : collision, of law and arbitration.

The Technical Committee, ranges over the whole field of  
 international air transport technicalities. It deals with operational  
 matters, the promotion of safety and efficiency in flight, standardization  
 of equipment, the rules of meteorology, maintenance of  
 aircraft, airports and airports of registration.

The Traffic Committee is concerned with all international  
 air traffic matters, involving passenger, cargo and the handling  
 of mail. It studies in particular the principles involved in

## Notes on "Civil Aviation"

fixing tariffs, rates and schedule; general conditions of carriage, traffic forms, conditions and provisions, restrictions and procedures, government, formal regulations and procedures. Methods of administration and public relations, administrative matters [pertaining to] agents,

1947 : (From Janes). FEDERATION AERONAUTIQUE INTERNATIONALE (F.A.I.)

Head Office ; 11, Rue Gauthier, Paris, France.

President : Lord Brabazon of Tara, P.C., M.C.

Associate-Presidents : Jonkheer van den Bergh van Heemstede (Netherlands), General B. J. Kwiecinski (Poland), S. E. Mohamed Taher Pasha (Egypt), The Marquess of Londonderry (Great Britain), Bay Sueru Kocak (Türkey), Colonel W. N. Gerber (Switzerland), G. A. de Ro (Belgium), Baron de la Grange (France).

Secretary-General ; Felix Camerman.

Treasurer-General : E. Blondel La Rougerie.

The Federation Aeronautique Internationale was founded in Paris, in October, 1905. The countries represented at its foundation were Belgium, France, Germany, Great Britain, Italy, Spain Switzerland, and the United States of America. The aim was co-operation between nations concerning aeronautics and with the development of aviation the F.A.I. has become the international representative body of world aviation. The first record to be officially homologated by the F.A.I. was a speed record of 41.29 km.li. (25.0(> m.p.h.) set up on November 12, 1906 by Alberto Santos Dumont. He was timed, over a distance of 220 metres (721 feet), which was as far as he could then fly.

Between the two wars many international arrangements were made under the supervision of the F.A.I. and international rules and sports codes for private flying were drawn up. For example, most of the countries who were represented on the F.A.I. through their accredited national Aero Club, agreed to recognise the Garnet de passage en Douane making private flying between countries easier. Landing facilities and international sport and touring licences were introduced. The F.A.I. also played an important role in the development of gliding and soaring.

All World or International Records must be observed by a representative of a national Aero Club affiliated to the F.A.I. before such a record is "homologated" or approved by the F.A.I.

The F.A.I. sits annually in general conference, but its various commissions sit more often. The last conference was held in London in September, 1946.

The following is the list of national aero clubs which are affiliated to the F.A.I. (correct to December 31, 1946)

-

The Royal Aero Club of the United Kingdom, 119, Piccadilly, London.

Aero Club of South Africa, P.O. Box 3550, Johannesburg, South Africa.

A(M'or Club) Argentine,

## Notes on "Civil Aviation"

Argentina.

National Aero Clubs, formerly members of the P.A.I., about  
which the Federation has at present no information :

—

Eesti Aeroklubi, Tallinn, Estonia.

Latvijas Aeroklubs, Riga, Latvia.

## Notes on "Civil Aviation"

Lietuvos Aero Klubas, Kaunas, Lithuania. Nasa Krila, Belgrade, Yugoslavia.  
Aero-Club de Grece, Athens, Greece.  
The Aero Clubs of Germany and Japan. are considered to have ceased to exist.

1946 - 1947 Linha Aerea Transcontinental Brasileira - bought six Canadian built Avro "Anson" aircraft from the Canadian War Assets Corp'n (Crown Assets Disposal).

Head Office; Avenida Erasmo Brago 20-A, Rio de Janeiro.

This company was formed in 1944 and plans to establish airlines through the interior of Brazil.

1939-1946 (WW2) - A total of about 9,000 Oxfords were built, 4,411 by Airspeed, Ltd. Other companies contributing to the total were the de Havilland Aircraft Co., Ltd., Percival Aircraft, Ltd. and the Standard Motor Co., Ltd.

The Oxford is used in service Flying Training Schools in the United Kingdom, Canada, Australia, New Zealand, Southern Rhodesia and the Middle East, and it is also employed on light transport and communication duties. A small number was made available under reverse Lend/Lease to the U.S.A.A.F. in Great Britain.

Type.—Twin-engined Advanced Trainer.

Wings.—Cantilever low-wing monoplane. Centre-section built separately from fuselage. Outer sections tapered in chord and thickness and attached to centre-section by four bolts and lockingnuts, one to each spar joint. Bolts pass through tapered high-tensile steel plugs at each end to take shear. Structure consists of two box-spars of spruce and birch three-ply. Former ribs of normal girder type constructed in three sections. Special system of inter-spar bracing consists of built-up diagonal struts. Plywood covering. Metal-framed Handley Page slotted ailerons with fabric covering. Split trailing-edge flaps of duralumin construction in five sections extending under fuselage. Hydraulic operation. Aspect ratio 8.1.5. Gross wing area 348 sq. ft. (32.33 sq. m.). FUSELAGE.—Semi-monocoque wooden structure in two main sections.

Front section is built as a unit and comprises pilot's cockpit and cabin. Rear section with integral fin.

Tail Unit.—Cantilever monoplane type. Wooden framework with wooden covering over tailplane and fin, and fabric-covered elevators and rudder. Balanced rudder hinged to fin only, with hinge-line inclined forward. Controllable trim-tabs in elevators.

Landing Gear.—Retractable two-wheel type. Main wheels each carried between pair of oleo shock-absorber legs which retract backwards into the engine nacelles, leaving a small portion of each wheel exposed. Twin doors enclose logs. Some aircraft have fairing plates in front of legs and wheels. Hydraulic operation. Dunlop low-pressure tyres and pneumatic wheel brakes. Nonretractable Dunlop tail-wheel.

Power Plant.—Two 353 h.p. Armstrong Siddeley Cheetah XV seven-cylinder radial air-cooled engines mounted on welded steel-tube bearers and driving Fairley-Reid two-blade fixed-pitch metal airscrews. Two main fuel tanks in centre-section between spars, and two auxiliary tanks in outer wings interconnected with main tanks. Total capacity 155 Imp. gallons (710 litres). Combined oil tanks and coolers mounted behind engines. Total oil capacity 17 Imp. gallons (77 litres).

Accommodation.—Normal crew of three. Alternative stations for pilot, navigator/second pilot, bomb-aimer, wireless-operator and camera operator. Pilot's cockpit in nose on port, with seat for second pilot/navigator on starboard. Dual controls, second set

## Notes on "Civil Aviation"

removable to provide prone bombing position beside pilot. Bombaiming window in nose. Navigator (when carried) occupies second pilot's seat, which is moved back in line with chart table. Wirelessoperator on seat on rear sjjar facing aft on starboard side.

Equipment.—Eqnijnnt can be installed to enable aircraft to be used for navigational training (including night-flying) ; W/T, D/F and S.B.A. training , • bombing training ; air photography and ab initio twin-engine pilot training (including night-flying and synthetic two-stage amber day/night training). Also available as an ambulance with accommodation for two stretchers.

Dimensions.—Span 53 ft. 4 in. (15.23 m.), Length 34 ft. 6 in. (10.5 m.), Height 11 ft. 1 in. (3.3 m.).

Weights and Loadings.—Weight empty 5,322 lbs. (2,412 kg.), Removable load varies according to function, Weight loaded 7,000 lb.s. (3,150 kg.), Wing loading 21.8 lbs./sq. ft. (106.4 kg./sq. m.), Power loading 10.6 lbs. /h.p. (4.8 kg. /h.p.).

Performance.—Maximum speed 188 m.p.h. (301 km.h.), Stalling speed 64 m.p.h. (103 km.h.). Rate of climb at 6,300 ft. (1,920 m.) 960 ft. /min. (293 in./min.), Climb to 10,000 ft. (3,050 m.) 12 minutes, Service ceiling 19,500 ft. (5,945 m.).

1940-1946 - THE AVRO 634 LINCOLN. The Lincoln, conforming to Specification 14/43, is a four engined heavy bomber which is virtually a sealed-up version of the Lancaster. The Lincoln I and II were in fact known originally as the Lancaster IV and V.

The Lincoln was intended for use in the Pacific Theatre, but appeared just too late to be flown operationally. Various modifications and improvements were incorporated in the design as a result of experience with the Lancaster. The overall dimensions were increased to permit greater loadcarrying abilities and 12.7 in. (320 mm) machine-guns were fitted in all positions. Later versions carry two 20 mm cannon in the dorsal turret.

The Lincoln I is powered by Pratt & Whitney Merlin 58 engines driving Rotol four-blade airscrews, while the Mk. II has Merlin 68 (Packard-built 66) or Merlin 100 (Packard-built 100) engines driving D.H. five-blade airscrews.

The designation Mk. XV was given to the version of the Lincoln I built by Victory Aircraft, Ltd. of Canada (since acquired by A. V. Roe & Co. Ltd.). Six aircraft were built and they were converted to freighters for the Royal Canadian Air Force.

From 1941 until August 15, 1945, 7,711 Mosquitos were built in Great Britain, Canada and Australia, and production has continued in both Great Britain and Australia. In Great Britain 4,300 were built by de Havilland, 917 by Standard Motors, 198 by Percival Aircraft and 12 by Airspeed, Ltd. Canada built 1,032 and Australia 108.

Gloster Meteor - Single-seat Fighter - Tropical and winterisation trials were undertaken during 1945-46 on standard Meteor aircraft at Khartoum, in the Sudan, and at Edmonton, Alberta, Canada. The latter trials were conducted in the winter months under extremely arduous conditions with ground temperatures as low as 30° below Zero.

HAWKER-SIDDELEY AIRCRAFT GO., LTD,  
Registered Office ; 65-66, Pall Mall, London, S.W.1.  
Directors ; T. O. M. Sopwith, C.B.E., F.R.Ae.S. (Chairman),  
Sir Frank Spencer Spriggs, Hon. F.R.Ae.S. (Managing Director),  
H. Biirotighes, F.R.Ae.S., Sir Roy Dobson, C.B.E., F.R.Ae.S.  
and H. A. Meredith, O.B.E.

The Hawker-Siddeley Aircraft Co., Ltd., which was formed  
in 1935, is the controlling organization of Sir W. G. Armstrong  
Whitworth Aircraft, Ltd., Armstrong Siddeley Motors, Ltd.,  
Gloster Aircraft, Ltd., Hawker Aircraft, Ltd., A. V. Roe & Co.,  
Ltd., A. V. Roe (Canada), High Duty Alloys, Ltd. and Air  
Service Training Ltd.

The component companies of the Hawker-Siddeley Group were responsible for providing approximately 30% of all the  
equipment supplied by the British Aircraft Industry to the  
R.A.F. throughout the whole period of the European War.

Total deliveries consisted approximately of 40,089 aircraft,  
inclusive of spares, and 38,664 aero -engines. In addition, the  
Group repaired 11,010 aircraft and 9,777 aero-engines. Aircraft  
production in the group rose from 1,753 in 1938-39 to a peak  
figure of 8,795 in 1943-44, the latter figure not including 2,190  
repaired or re-conditioned aircraft. Engine production rose  
from 2,175 in 1938-39 to 8,008 in 1942-43.

Factory space increased from a floor area of 2,000,000 sq. ft.  
(185,800 sq. m.) in 1938 to 15,000,000 sq. ft. (1,393,500 sq. m.)  
in 1944 and the rate of new aircraft production from 60 to 600  
per month.

PERCIVAL.

PERCIVAL AIRCRAFT, LTD.

Head Office and Works : Luton Airport, Luton,  
Bedfordshire.

Directors : P. L. Hunting (Chairman), Wing Cdr. G. L. Hunting,  
Capt. C. P. Hunting, W. A. Summers, K. D. Morgan, N. R.  
Whiteside and R. R. S. Cook.

Chief Designer : A. A. Bage, A.F.R.Ae.S.

Works Manager : W. E. Salmon.

The Percival Aircraft Company was formed in 1932, It was  
re-organized as Percival Aircraft Ltd. in 1937, and the works  
were moved from Gravesend to Luton. A branch office was  
opened at Toronto, Canada, early in 1946.

A. V. ROE (CANADA), LTD.

Head Office and Works: Malton, near Toronto, Ont.

Chairman : J. P. Bickell.

President : Sir Roy Dobson, K.B.E.

Vice-President and General Manager : Walter N. Deisher.

Assistant to Vice-President : B. S. Sheostone.

In 1945, A. V. Roe & Co., Ltd. of Manchester, England,  
acquired from the Canadian Government the Crown-owned plant  
formerly operated by Victory Aircraft, Ltd., which between  
1942 and 1945 was responsible for the production of the Avro  
Lancaster X bomber. Victory Aircraft also built seven special  
civil versions of the Lancaster (in reality, the prototypes of  
the Avro Lancastrian) for the Canadian Government trans-  
Atlantic air service operated by Trans-Canada Air Lines. Six Avro Lincolns were also completed, by Victory Aircraft in 1945,

and they were subsequently converted to freighters for the E.C.A.F.

A. V. Roe (Canada) Ltd. has also taken over the Government owned Turbo-Research, Ltd., which was formed in August, 1944, and the activities of which are being concentrated at the Malton plant.

The company will continue the development of the turbo-jet engine initiated by Turbo-Research, Ltd. and will also design and build the aircraft in which it will be installed. It is also engaged in the development of a training aircraft to a Canadian Government specification for the R.C.A.F.

All profits earned by A. V. Roe (Canada), Ltd. will be shared with the Canadian Government on a fifty-fifty basis.

Northwest Industries Ltd  
Municipal Airport, PO Box 517, Edmonton Alberta.

Works ; St. Laurent, P.Q.

President : Victor M. Drury.

Executive Vice-President : William Harty.

Vice-President and General Manager : L. McCoy.

The Canadian Car & Foundry Co. Ltd., the largest manufacturers of railway equipment in the Dominion, entered the Canadian Aircraft Industry by acquiring from the Grumman Aircraft Engineering Corpn., of Bethpage, L.I., N.Y., the licence to construct the Grumman two-seat fighter biplane.

During the late war the Company held, contracts with the Canadian Government for the manufacture and assembly of Avro Ansons and for the overhaul and repair of aircraft of various types, including the maintenance and modification of aircraft of the R.A.F. Transport Command.

The Company also had contracts with the British Ministry of Aircraft Production for the manufacture of the Hawker Hurricane for the R.A.F., and with the Departments of Munitions and Supply for the R.C.A.F. Over 1,400 Hurricanes were built. Spares produced were equivalent to well over another 1,000 aircraft.

Canadian Car & Foundry Co. Ltd. was also awarded a contract to build the Curtiss Helldiver single-engined dive-bomber monoplanes under licence from the Curtiss-Wright Corpn. for the U.S. Navy.

The Company is also exclusively licensed in the Dominion of Canada under the Burnelli patents and has developed the prototype of a twin-engined transport which at the time of writing was undergoing flight trials for its Certificate of Airworthiness.

C.C.F. has recently acquired the principal assets of Noorduyn Aviation, Ltd., and will henceforth manufacture the Norseman

## Notes on "Civil Aviation"

single-engined general purpose aircraft for domestic and export requirements. The current version in production is the Mk. V, an improved version of the Mk. VI which was built by the Noorduynd company during the War for the U.S.A.A.F. as the O-64. The C-64 has since become surplus to military requirements and many aircraft of this type have been sold by the United States in various parts of the World.

### CANADAIR LTD.

Head Office and Works : Cartierville, Montreal, P.Q.

President and General Manager : H. Oliver West.

Chief Engineer : , P. W. Gooch.

Canadair, Ltd., was formed in December, 1944, by the separation of the Aircraft Division of Canadian Vickers, Ltd. from the parent Company and its formation into a new Company to be solely responsible for the manufacture of aircraft. Canadian Vickers, Ltd. will devote its entire facilities in the future to, shipbuilding. In 1947 it was announced that Canadair, Ltd. had been acquired by the Electric Boat Co., of New York, one of the largest builders of submarines in the World, but a company which had not previously engaged in aircraft manufacture. The deal includes the transfer of the Canadian Government's rights in the DC-4 to the new owners.

In the years before the war Canadian Vickers, Ltd. was engaged in the design and development of special types and the adaptation of existing types of aircraft to suit the special requirements of Canada. It made a specialty of winter landing equipment embodying the experience which the long snow period in Canada afforded and float equipment which is essential for summer operations among the lakes and rivers of Northern Canada.

During the war Canadian Vickers undertook extensive contracts in the manufacture of military aircraft for both the Canadian and United States Governments, details of which have been given in previous issues of this Annual.

Canadair, Ltd. is building the Douglas DC-4 and it has been and still is engaged in an extensive C-47—DC-3 conversion programme for airlines in many parts of the World. The Canadair DC-4M is being produced for use by Trans-Canada Airlines. A provisional order of twelve for use by the R.C.A.F. as transports has been cancelled.

#### THE CANADAIR DC-4M.

The DC-4M is a modified version of the standard Douglas DC-4 and conforms to the specified requirements of Trans-Canada Airlines. The major requirement in the T.C.A. specification called for the use of the Rolls-Royce Merlin liquid-cooled engine, with which T.C.A. has had extensive experience on transatlantic service. To meet the Canadian specification the aircraft can be regarded as being 40% re-designed, the major design changes to the standard DC-4 being supplied by the Douglas company.

Designed for trans-ocean and international air traffic, the DC-4M has accommodation for 40 passengers and space for about 4,000 lbs. (1,820 kg.) of mail and freight. The powerplant consists of four Merlin 620 liquid-cooled engines in self-contained power nacelles specially developed by Rolls-Royce, Ltd. for this installation.

The first DC-4M.1, which is not pressurized, first flew on July 20, 1946 and has been delivered to Trans-Canada Airlines for service trials. Five more DC-4M.1's are being built. Later

## Notes on "Civil Aviation"

aircraft, will be pressurized, will have a 5,000 lb. (2,270 kg.) higher take-off weight, and will be known as the DC-4M.2.  
Dimensions.—Span 111 ft. 6 in. (35.8 m.), Length 97 ft. 3 in. (29.7 m.), Height 27 ft. 8 in. (8.4 m.).  
Weight Loaded.—78,000 lbs. (35,412 kg.).  
Performance.—Maximum speed 353 m.p.h. (565 km.h.) at 23,900 ft. (7,290 m.), Maximum cruising speed 32.5 m.p.h. (520 km.h.) at 22,600 ft. (6,890 m.). Most economical cruising speed 240-300 m.p.h. (384-480 km.h.) according to operating conditions. Cruising range 3,500 miles (5,600 km.) at 28,000 ft. (8,540 m.). Service ceiling 36,000 ft. (10,980 m.).

In 1946, Noorduyn Aviation, Ltd. was reconstituted under the name Nuclear Enterprises, Ltd. (P.O. Box 6083, 715, Windsor Street, Montreal, P.Q.) and the manufacture of aircraft and aircraft parts was abandoned. The manufacturing rights for the Noorduyn Norseman were disposed of to the Canadian Car & Foundry Co., Ltd. of Montreal, which company is now in production with the Norseman V

### FEDERAL.

#### FEDERAL AIRCRAFT LTD.

Head Office : 276, James Street West, Montreal, P.Q.

President : W. A. Newman, B.Sc.

Vice-President : A. S. Dawes.

General Manager and Treasurer : A. E. Balcombe.

Secretary and Assistant General Manager : G. H. Montgomery, Jr.

Federal Aircraft, Ltd. was formed in July, 1940, as a wholly owned Government company to supervise the production of the Avro Anson in Canada for use in the Empire Air Training Plan. Eleven Canadian aircraft plants were entrusted with the manufacture and assembly of the major components, Federal Aircraft, Ltd. being responsible for the direction and management of the whole Anson programme.

Under Federal direction a total of 2,882 Ansons was built in Canada; 1,832 Mk. IIs, 1,049 Mk. Vs and one Mk. VI.

These Canadian-built Ansons have been described and illustrated in previous issues of this Annual. The last Canadian-built

Mk. V Anson was completed early in 1945. MacDonald Bros.

Aircraft, Ltd. of Winnipeg has been designated as the continuing contractor for the overhaul and repair of Anson aircraft on behalf of the Royal Canadian Air Force.

Federal Aircraft, Ltd. was formed solely for war purposes and by the time this edition appears the company will probably have surrendered its charter.

### FAIRCHILD,

#### FAIRCHILD AIRCRAFT LTD.

Head Office AND Works : Longueville, P.Q.

President and Managing Director : H. M. Pasmore.

Executive Vice-President : R. B. Irvine.

Vice-Presidents: Howard Murray, O.B.E. and W. Taylor-Bailey. ; .

Secretary : P. Bindoff.

Treasurer: D. H. Sutherland.

Fairchild Aircraft, Ltd., is a direct outgrowth of the aviation activities of the St. Maurice Valley Protection Association which began operations in 1919 and was the first concern to demonstrate that it was practical to use aircraft for commercial purposes in the Dominion. From the St. Maurice Association was formed Fairchild Aerial Surveys of Canada, Ltd., in 1922, and in 1929, Fairchild Aircraft, Ltd., was formed to act solely as a manufacturing and servicing organization.

The factory, built in September, 1930, comprised 38,000 square feet of floor space. Extensions to date now total over 600,000 square feet with machinery and equipment installed valued at approximately \$2,000,000.

The Company, in association with five other Canadian aircraft manufacturers, was awarded a contract by the British Air Ministry for the manufacture of twin-engined Hampden bombers. Certain specific components for the Hampden were built by Fairchild. Manufacture started in June, 1939, and the contract was completed in the early part of 1942.

It has also completed a contract with the Canadian Government for the manufacture of Bristol Bolingbroke twin-engined monoplanes. The Bolingbroke was generally similar to the Bristol Blenheim IV. The landing-gear could be fitted with either wheels, floats or skis. Some were fitted with the Boulton Paul power-operated gun turret for use as trainers for air-gunners..

In addition to the production of the Bolingbroke, the Company built the Curtiss Helldiver for the U.S. Navy under licence from the Curtiss-Wright Aircraft Corporation. The U.S. Navy contract was placed in October, 1942, and the first Fairchild-built Helldiver flew on August 28, 1943. This contract was completed in April, 1945.

With the cancellation of all war contracts in August, 1945, Fairchild Aircraft, Ltd. began the development of a specialised freight-carrying aeroplane suitable for Canadian conditions. This aircraft, the Fairchild Husky, was completed in 1946.

It is described below.

#### THE FAIRCHILD F-11 HUSKY.

The F-11 Husky was designed as a replacement type for the Fairchild 71 and 82 transport monoplanes which were used extensively for bush-flying in Canada and although a float, wheel or ski landing gear can be fitted, it is intended primarily for operation as a seaplane. The prototype F-11, made its first flight from the St. Lawrence River near Montreal in June, 1946. Production was expected to begin in September, 1946, and to reach an ultimate output of one per week early in 1947.

Type.—Single-engined Transport.

WINGS.—Strut-braced, high-wing monoplane. All-metal two-spar structure braced to bottom of fuselage by parallel struts.

—  
Top

surface metal-covered from leading-edge to front spar with fabric covering aft to trailing-edge; bottom surface metal-covered from leading-edge to front spar and from rear spar to trailing-edge, with fabric covering between spars. —Spot-welded leading-edge. Fabric-covered metal ailerons. Slotted trailing-edge flaps between ailerons and fuselage. Aspect ratio 8.45; chord 6 ft. 9 in. (2.74 m.); wing area 355 sq. ft. (32.97 sq. m.).

Fuselage.—All-metal structure of oval cross-section; underside of rear portion swept upwards to provide loading door at rear of

## Notes on "Civil Aviation"

main cabin. Maximum external depth 6 ft. 6 in. (1.98 m.) ; maximum width 6 ft. 2 in. (1.57 m.).

Tail. Unit.—Cantilever monoplane type. Metal structure with metal-covered fixed surfaces and fabric-covered rudder and elevators. Spot-welded leading-edge to fin and tailplane.

Landing Gear.—Twin Edo metal floats carried on N-struts with droop-bar-s and wire-bracing. Alternatively a fixed tricycle landing gear may be fitted, or twin rigidly-mounted skis on pedestalals with the aircraft in tail-up position.

loading 13.4 lbs./h.p. (6.07 kg./h.p.).

Performance (Seaplane—fully loaded).—Maximum speed (450 h.p.)

138 m.p.h. (222 km.h.) at 2,300 ft. (700 m.), Cruising speed (300

h.p.) 121 m.p.h. (195 km.h.) at 10,000 ft. (3,060 m.), Stalling speed

(without flap) 67 m.p.h. (108 km.h.), Stalling speed (with 40

degree flap) 58 m.p.h. (94 km.h.), Initial rate of climb 675 ft./min.

(206 m./min.), Take-off run, (no wind, 30 degree flap) 733 yds.

(670 m.).

FLEET.

FLEET AIRCRAFT LTD.

Head Office, Works and Airport : Fort Erie, Ontario.

Managing Director ; T. Y. Smith.

Sales Manager ; J. M. Pengelly.

Chief Engineer : G. E. Otter.

Fleet Aircraft, Ltd., is an independent Canadian-owned company and is completely managed by Canadian personnel.

The Company built an up-to-date factory at Fort Erie in 1930 and by 1938-89 this factory had been enlarged to ten times its original size.

The Company took over the complete World's rights from the Consolidated Aircraft Corpn. (U.S.A.), its original parent company, for the Fleet Trainer. It later developed the Model 50K twin-engined freighter and the Model 60 two-seat advanced training monoplane.

The Fleet Trainer, or Finch, was used for primary training in the Commonwealth Air Training Plan. An original order for: 404 was completed in 1940 many months ahead of schedule.

A further contract for 202 was completed in 1941.

The Model 60, or Fort, was put into production for use as an advanced training type under the Commonwealth Air Training Plan, but on the completion of the IGOth machine production ceased on this type in favour of the Fairchild M-62, or Cornell, which had been adopted as the primary trainer in the R.C.A.F. to replace the Foyt and the Finch.

The first Cornell was turned out in the Summer of 1942, one month ahead of schedule. Over 1,000 were produced in the first year of production. Owing to curtailment in the Training Programme production of the Cornell was tapered down towards the end of 1943 and finally expired in May, 1944. Thereafter the Company undertook sub-contract work on the Canadian Lancaster production programme.

Since the end of the War the Company has decided to abandon the Finch and Fort designs and to concentrate on the development of new aircraft. Its first post-war design is the Model 80 Canuck, a two-seat light cabin monoplane with an 85 h.p. Continental engine, and the company is now engaged on an initial production programme of 1,500 aircraft. Other types of aircraft are under development.

#### THE FLEET MODEL SO CANUCK.

Type.—Two-seat Light Cabin Monoplane.

Wings.—Strut-braced high wing monoplane. Two-spar structure in two sections attached directly to fuselage and braced by streamlined steel-tube struts. Spars have extruded alloy booms with 24ST webs and steel fittings. Ribs of pressed 24ST sheet. . Aluminium alloy tubular drag-struts. Metal leading-edge and fabric covering over remainder. Cross wing area 173.6 sq. ft. (16.12 sq. m.). All-metal mass-balanced ailerons with metal covering.

Fuselage.—Welded chrome-molybdenum steel-tubular structure, with light wooden formers and fabric covering. Panels behind fire-wall and front decking of aluminium-alloy.

Tail Unit.—Strut-braced monoplane type. Welded chrome-molybdenum steel structure with fabric covering. Horn-balanced and mass-balanced rudder. Adjustable elevator trim-tab. :

Landing Gear.—Fixed two-wheel divided type, consisting of two side-vees and half-axles of welded chrome-molybdenum steel tubing hinged to underside of fuselage. Rubber-cord shock-absorbers under cabin floor, Goodyear single-disc hydraulic wheel brakes, toe-operated. Track 6 ft. 11 in. (1.86 m.). Sooty steerable full-swivelling tail-wheel carried on leaf spring shock-absorber. Tail float or ski landing gear optional.

## Notes on "Civil Aviation"

Power Plant,—One Continental C86-12J four-cylinder horizontally opposed air-cooled engine rated at 85 h.p. at 2,676 r.p.m., and equipped with Exocel fuel-injection system. Two-blade wooden fixed-pitch surserow, with variable-pitch airscrew optional. 16 Imperial gallon (73 litres) fuel tank in fuselage, with long-range tank of 21 Imperial gallons (95 litres) capacity optional. Oil tank of 1 U.S. gallon (4 litres) capacity attached to engine.

Accommodation.—Enlosed cabin seating two side-by-side with dual controls. Adjustable welded steel-tube seat with 16 x 38-in. (41 X 96 C.T.O.) rubber cushion and back. Access by aluminium alloy door on each side. Plexiglas windshield and side-panels. Cellulose acetate roof windows. Baggage compartment 36 x 34 x 112 in. (91 X 86 X 81 cm.) with allowance of 104.5 lb. (48 kg.) behind seats.

DIMENSIONS (Landplane).—Span 34 ft. (10.36 m.), Length 22 ft. 4 in. (6.83 in.), Height 7 ft. 1 in. (2.16 m.).

Weights and Loadings (Landplane).—Weight empty 8.58 lbs. (389 kg.). Fuel and oil 122.5 lbs. (55 kg.). Pilot and passenger 340 lbs. (164 kg.). Baggage 104.5 lbs. (48 kg.). Weight loaded 1,425 lbs. (645 kg.). Wing loading 8.2 lbs./sq. ft. (40 kg./sq.m.). Power loading 16.7 lbs./h.p. (7.5 kg./h.p.).

Weights and Loadings (Seaplane).—As Landplane except weight empty 1,018 lbs. (462 kg.), Baggage 19.5 lbs. (9 kg.). Weight loaded 1,500 lbs. (680 kg.). Wing loading 8.6 lb3./sq. ft. (42 kg./sq. m.), Power loading 17.6 lbs./h.p. (8 kg./h.p.).

Weights and Loadings (Skiplane).—As Landplane except weight empty 913 lbs. (414 kg.). Weight loaded 1,480 lbs. (672 kg.). Wing loading 8.5 lbs./sq. ft. (41.5 kg./sq. in.). Power loading 17.4 lbs./h.p. (7.88 kg./h.p.).

Performance (Landplane).—Maximum speed 111.5 m.p.h. (179 km.h.), Cruising speed (66% power) 100 m.p.h. (161 km.h.). Stalling speed 45 m.p.h. (72 km.h.). Maximum diving speed 160 m.p.h. (257 km.h.), Initial rate of climb 550 ft./min. (168 m./min.), Initial rate of climb (less passenger) 700 ft./min. (213 m./min.). Service ceiling 12,000 ft. (3,660 m.). Range at cruising speed (no reserve) 400 miles (644 km.), Take-off distance in 7 m.p.h. (11 km.h.) wind from asphalt 140 yds. (128 m.), Fuel consumption at cruising speed 25 m.p.g. (8.8 km. per litre).

Performance (Seaplane).—Maximum speed 103 m.p.h. (166 km.h.), Cruising speed (66% power) 88 m.p.h. (142 km.h.), Stalling speed 46.5 m.p.h. (75 km.h.), maximum diving speed 160 m.p.h. (257 km.h.), Initial rate of climb 425 ft./min. (130 m./min.), Range at cruising speed (no reserve) 250 miles (563 km.), Fuel consumption 22 m.p.g. (7.7 km. per litre).

Performance (Skiplane).—Maximum speed 105.5 m.p.h. (170 km.h.), Cruising speed (66% power) 92 m.p.h. (148 km.h.), Stalling speed 46.5 m.p.h. (75 km.h.), Maximum diving speed 160 m.p.h. (257 km.h.). Initial rate of climb 475 ft./min. (145 m./min.), Range at cruising speed (no reserve) 350 miles (579 km.), Fuel consumption 22.6 m.p.g. (8 km. per litre).

1. Assistant Chief Mechanic, and
2. Assistant Chief Inspector

employed by TCA, Winnipeg Manitoba" for Certification. (Canadian Dept. of Labour reference no. DLS 7-721).

The application (Labour Gazette October 1947, pg 1450 (L.G., October 1947, p. 1450) is rejected after *an investigation into the application and a public Hearing* - Reasons for the judgement *is not given at this time*.

17 December 1947 : Air Engineer's Society of Canada application for certification of bargaining representatives for a bargaining unit consisting of "ALL Licensed Air Engineers BELOW THE RANK of assistant chief mechanic and assistant chief inspector employed by TCA - Board decision ruling in Ottawa : <sup>278</sup>

The Board consists of :

1. Mr. A.H. Brown Vice-Chairman
2. Mr. Deschampes
3. Mr. Hills
4. Mr. Mosher
5. Mr. Picard
6. Mr. Taylor

The applicant : The Air Engineers' Society of Canada - represented by Mr. J.K Godfrey and Mr. G.Land.

Respondent : Trans-Canada Air-Lines (a government department)- represented by Mr. E.H. Moncrief and Mr. A.M Sutherland

Intervener(s) : - represented by Mr. G.P Schollie and Mr. G.M. Boak and Mr. S. Wallace

1. Air-line lodge 714
2. Trans-Oceanic Lodge 1751
3. International Association of Machinists

The Applicant Claim(s) :

1. Air Engineers are Licensed by the D.O.T and constitute a "Separate Craft" and as such are entitled to recognition as a separate and appropriate craft unit for collective bargaining issues.
2. The interests of the Air Engineers' are not adequately represented by the Intervener unions as the membership of such unions is predominantly "Shop" personnel (unlicensed personnel)

The Respondent Claim(s) :

1. Licensed Air Engineers are NOT a "Separate craft group" but
2. Licensed Air Engineers are part of the "mechanic craft" group - employed in it's maintenance and overhaul departments, and
3. The Respondent OPPOSES the application.

The Intervener(s) Claim(s) :

1. Licensed Air Engineers are NOT a "Separate craft group" but
2. are part of the mechanic craft group - employed in it's maintenance and overhaul departments, and
3. OPPOSES the application.
4. Deny that the "Interests of the Air Engineers are inadequately represented" as alleged.
5. There are no technical OR professional educational qualifications required for a licensed air engineer.
6. The Air Engineer works up thru the ranks of mechanic classifications in the company's establishment, namely:

## Notes on "Civil Aviation"

1. Learner
2. Mechanic
3. Senior Mechanic
4. Air Engineer
7. In order to obtain an Air Engineer License from the Dept. of Transport, an Air Engineer must go thru a training period of several years on air-engines, the length of time depending upon the:
  1. type of air engine, and
  2. type of aircraft and
  3. the company requirements

The Board is advised (by whom ??) that:

1. DOT regulations require the Airworthiness of the aircraft must have been certified and signed for by an Air Engineer before it may be flown.
2. an Air Engineer cannot sit for a DOT examination (for the license to certify) for the type flown by the company until he:
  1. has had a 5 year training period, and
  2. has been approved by the company to sit for such examination.

18 July 1947 : PRESIDENT'S LETTER APPOINTING THE Air Policy Commission

DEAR Sir :

The rapid development of aviation in recent years has made many of our former concepts out of date.

At the same time, there exists a danger that our national security may be jeopardized and our economic welfare diminished through a lowered aircraft production and a failure of the aircraft industry to keep abreast of modern methods, with consequent retarding of the development of air transportation. There is an urgent need at this time for an evaluation of the course which the United States should follow in order to obtain, for itself and the world the greatest possible benefits from aviation.

## Notes on "Civil Aviation"

It is for these reasons that, upon the recommendation of the Secretaries of State, War, Navy, and Commerce and of the Air Coordinating Committee, I am creating a temporary Air Policy Commission to make an objective inquiry into national aviation policies and problems, and to assist me in formulating an integrated national aviation policy. Because of your knowledge of our national needs and our industrial capabilities, as well as your public-spirited concern for the national welfare, I ask you to serve on this Commission.

The Air Policy Commission should study, among other pertinent aspects of the problem, such questions as the current and future needs of American aviation, including commercial air transportation and the utilization of aircraft by the armed services; the nature, type, and extent of aircraft and air transportation industries that are desirable or essential to our national security and welfare; methods of encouraging needed developments in the aviation and air transportation industry; and improved organization and procedures of the Government that will assist it in handling aviation matters efficiently and in the public interest. The final recommendations of the Commission must, however, go beyond the limits of any one phase of aviation.

They should be so broad in scope and purpose that they will assist in revising old policies and in framing new ones, and will serve as a guide for formulating a carefully considered national air policy.

Because of the urgency of the problem, I request the Commission to complete its studies in time to submit its final recommendations to me by 01 January 1948.

In its work, the Commission will have the full cooperation of all agencies of the Government, including the Air Coordinating Committee, which has been making detailed studies of aviation policies and problems.

Although the Commission will organize its own regular staff and secretariat, the Secretary of Commerce will provide any special staff assistance which may be needed, as well as office headquarters and routine administrative services.

Sincerely yours,  
HARRY S. TRUMAN.

DECEMBER 30, 1947. LETTER OF TRANSMITTAL by the US President's Air Policy Commission

DEAR MR. PRESIDENT: We have the honor to transmit the report on national aviation policy as directed by your letter of July 18, 1947, establishing the undersigned Air Policy Commission.

During the 5-month period since the appointment of the Commission we have consulted on all phases of aviation with the best-qualified Government and private sources.

The members of the Commission are in unanimous agreement on the conclusions expressed.

Respectfully,

THOMAS K. FINLETTER, Chairman.

GEORGE P. BAKER, Vice Chairman.

PALMER HOYT, Member.

JOHN A. McCoNE, Member.

ARTHUR D. WHITESIDE, Member.

**CANADIAN AVIATION - 1948**

**01 January 1948 : United States : SURVIVAL IN THE AIR AGE .**

A Report by the US President's Air Policy Commission International Competition

It takes 4 to 7 years to develop a new plane from the engineering board to production. It takes longer than that to develop many of the weapons which will be used in any future war. No airplane was used by the United States in World War II which had not been designed before we entered the war.

Only improvements were made after Pearl Harbor; there was no change in fundamental design in any plane which saw war service. [...] We must therefore be prepared [...] Moreover, we must not think that the atom bomb alone will win a war [...] we cannot drop atomic bombs and sit back. What we need during this Phase is an integrated Military Establishment, (i) capable of an atomic attack, (2) stronger in air power than that of any other country, and (3) capable of a sustained and powerful air counteroffensive, either directly or by the way of intermediate bases [...] Once committed to combat, losses of planes and personnel are very high. From experience in the European and Pacific theaters, we know that many operating groups lose 25 percent of their equipment every month of actual combat. Losses must be replaced immediately. At the outbreak of a war, industry cannot expand in time to make up combat losses in the first year. Unless, therefore, there are planes in reserve, combat forces would diminish rapidly after the beginning of hostilities and we would be left without a fighting Air Force after a few months of war.

The solution of this problem is one of the most serious tasks faced by the Air Force and the aircraft industry. Plans for the rapid expansion of industry will help, but no evidence presented to us indicates that any plan can be devised which will insure the production of planes by industry in time to replace combat losses in the first year of a war. We are informed by the Bureau of the Budget that for the current year Out of the total budget of \$10,098,000,000, \$4,050,000,000 is for the Air Force and naval aviation (exclusive of the cost of construction and operation of aircraft carriers) It is not enough to have an Air Force in being on the day war begins. Mobilization plans must be made in peacetime to enable us to expand our production of airplanes and other equipment as

rapidly as possible after war begins. This subject is dealt with in section II below, in our discussion of the aircraft industry.

Plans must also be made in peacetime for the rapid mobilization of our manpower in event of war. In the case of our Air Establishment this problem centers on the so-called civilian "components" of the Air Force and naval aviation. In the case of the Air Force the civilian components are the National Guard and the Air Force Reserve.

In the case of the Navy, they are the Organized Reserve and the Volunteer Reserve. The problem is to have enough trained personnel to man and handle the planes which are in storage and those which will be built after war begins.

We have examined this question but are not prepared to make specific recommendations with respect to the air components. There is no point in developing a training program until the plans to provide the planes are farther advanced. If the recommendations of the Commission for the increase in the Air Establishment are put into effect, it will be necessary to develop corresponding plans for the training of pilots and ground crews to man these planes.

When the Industrial Mobilization Plan has been farther advanced, estimates must be made as to the number of planes to become available under this plan; and corresponding plans for the training of personnel must be developed.

A strong aircraft industry is an essential element in the Nation's air power. Our air establishment would be useless unless backed by a manufacturing industry skillful in technological application, efficient in production, capable of rapid expansion, and strong in basic financial structure.

On the basis of the evidence, the over-all aircraft industry of the United States now meets only the first of these specifications. Since World

War II, military aircraft have become much more complicated. The net result has been to increase the number of their component parts and to complicate their final assembly. The most efficient aircraft in the world, no matter how brilliant its performance, is of little value to the national defense unless it can be manufactured quickly in large

quantities.

The team concept is not limited to research and design. Production planning and production control groups are equally necessary, but it is more difficult to keep such teams together in peacetime. When production drops off to mere jobbing levels, their functions simply disappear. Means must be found to keep alive the special skills that have been evolved in these particular fields during the war years. If they are allowed to be dissipated, time and effort will be needed to replace them in a future emergency.

The techniques of aircraft manufacture widely with changes in the volume of orders. It is uneconomical to do extensive special tooling, either for manufacture or assembly, to turn out a few units. If, on the other hand, thousands of similar airplanes are required, the

expenditure of relatively large sums for special jigs, fixtures, and tools is justified. Between the two extremes are wide areas in which the exercise of good judgment is the only controlling factor. The only way such judgment can be generated is through actual production experience. In a freely competitive economy the number of companies manufacturing

a particular product levels off at a point determined by the ordinary laws of economics. In the case of the aircraft industry, however, it would be dangerous to rely only on the operation of these laws. The demand factor fluctuates too violently from peace to war.

If a reasonable degree of expansibility is to be maintained for periods of emergency, it is necessary to exercise some industry-wide control in the interests of national security. It may even be desirable to keep a few marginal manufacturers in business who might be forced out if the normal laws of supply and demand were allowed to operate.

Based on considerations of maximum security, it is essential to maintain at least two sources of supply for similar products. It has long been the practice for the procurement agencies of the Army and Navy to keep alive at least two separate producers of each type of aircraft, as well as two or more separate sources for each of the major components. We believe that this policy is sound and should be continued. It develops automatically a degree of manufacturing dispersal which might otherwise not exist. In a field in which the technology is changing rapidly, competition between design and development groups results in continuously improved products, and price competition between suppliers results in lower unit costs. The financial difficulties which harass the aircraft industry today

stem from many causes. Uncertain Government policies account for many of them. Some reflect faulty judgment by management. Others have come about from particular circumstances which have surrounded this peculiar industry in the postwar period of readjustment.

Some of them are :

- (1) A product that is, almost indivisibly, a weapon of war and a carrier of commerce;
- (2) A market with but one major customer, the Government, which purchases 80 to 90 percent of its entire output;
- (3) A violently fluctuating demand, due to uncertainty of requirements of its major customer;
- (4) A lack of the production continuity which is vitally important in sustaining a trained work force and in keeping production costs to a minimum;
- (5) A rapidly changing technology which causes a high rate of design obsolescence and abnormally high engineering costs;
- (6) An extremely long design-manufacturing cycle;
- (7) An organization in excess of present requirements.

## Notes on "Civil Aviation"

The financial strength of any individual company or of the industry cannot be measured by the amount of sales, the extent of working capital, or the total floor space of its plants. It depends upon profitable operation. A profitable organization will attract capital and credit. It will be able to employ and retain the most capable engineers and craftsmen. The concern which consistently loses money will deteriorate, its financial position will weaken, and the quality of its product will suffer as its best employees drift away in search of better opportunities. The Government cannot guarantee profits. Government can and should, however, create an atmosphere as conducive as possible to profitable operations in the aircraft manufacturing business. This can be done by longer-range planning, adequate volume, and the abandonment of uneconomic procurement practices. Under these circumstances, it will be the task of each manufacturing company to work out its own salvation. The 15 major airframe companies are:

1. Bell Aircraft Corp.
2. Boeing Airplane Co.
3. Consolidated Vultee Aircraft Corp.
- 1
4. Curtiss-Wright Corp.
- 2
5. Douglas Aircraft Co., Inc.
6. Fairchild Engine & Airplane Corp.
7. Grumman Aircraft Engineering Corp.
8. Lockheed Aircraft Corp.
9. The Glenn L. Martin Co.
10. McDonnell Aircraft Corp.
11. North American Aviation, Inc.
12. Northrop Aircraft, Inc.
13. Republic Aviation Corp.
14. Ryan Aeronautical Co.
15. United Aircraft Corp.

3

The nine major makers of personal and small commercial planes, most of whom were important producers of small military aircraft and aircraft components during the war, are:

1. Aeronca Aircraft Corp.
2. Beech Aircraft Corp.
3. Bellanca Aircraft Corp.
4. Cessna Aircraft Co.
5. Engineering & Research Corp.
6. Luscombe Airplane Corp.
7. Piper Aircraft Corp.
8. Taylorcraft, Inc.
9. Texas Engineering & Manufacturing Co.

most of the companies which were temporarily in aviation activities during the war have withdrawn from aviation with the exception of the Allison Division of General Motors, General Electric Co., and the Westinghouse Co., all of whom are active in the turbo-jet engine field.

We recognize the validity of the argument but recommend that the services weigh carefully the savings possible through contract overhaul, and the possible long-term advantages of building up civilian staffs trained in such work for use in an emergency.

Federal regulation of personal aircraft. The present detailed requirements

## Notes on "Civil Aviation"

for certificating light aircraft of new design are complex, and tend to retard experimental design. The Commission agrees with the Administrator of Civil Aeronautics that it is time to recognize and encourage the moral and legal responsibility of the light aircraft manufacturers for the safety and integrity of their products. The Federal Government should continue to promulgate aircraft design standards in collaboration with established technical groups, research agencies and safety organizations, but compliance with these standards should be the primary responsibility of the manufacturer. After careful initial checking for competence, each should be required to certify to the airworthiness, the proper flight characteristics and operational limitations of the production type and to the fact that the airplane has been submitted to an exhaustive performance and service test. The present testing procedure now executed by the CAA should be conducted and sworn to by the manufacturer.

To discourage the entrance of irresponsible or technically illequipped firms into the private aircraft industry and to prevent the deterioration of standards among established firms, we recommend that the Government establish simplified but adequate standards of fitness and ability to be met and maintained by each company selling personal aircraft. A manufacturer's certificate based on proven ability should be issued by the Department of Commerce. Periodic spot checks should be made, and the Department should have the power of revocation for just cause. By thus certifying qualified manufacturers they could, in turn, certify all personal airplanes. Conclusion. Setting up the National Military Establishment was one of the most important moves in the long struggle to provide the United States with adequate air power. As it settles down into a smooth running organization it can, and must, deal with the many policy problems that have long plagued our aircraft manufacturing industry in peacetime.

A number of those problems have been laid before the Commission in testimony. Our consultants have called our attention to others. We have seen some for ourselves in visiting aircraft and engine factories, and a few of our great research and development centers.

The above recommendations embody our opinion of the minimum requirements of the aircraft industry at the present time. The needs of this important element of our national defense must be dealt with sympathetically by those charged with the future security of the United States. During World War II we concentrated on the development of existing types of aircraft for production, and practically abandoned fundamental research in the aeronautical sciences. By VJ-day our reserve of research information was largely exhausted. If we are to have an air establishment of the first quality, we will have to concentrate, as other nations are doing, on our fundamental aeronautical research. Development, that is the making of new aeronautical devices, cannot move ahead faster than our fundamental research. The most serious shortage is in personnel. Due to the hiatus of the war years in the output of young engineers and scientists we are short of qualified people. Recognizing this need, the Commission is unanimous in its belief that every possible encouragement should be given to our universities and scientific institutions to train more, and better aeronautical scientists. Undergraduate course; should be strengthened and exceptional students encouraged to continue in advanced work. The proposed establishment of a National Science Foundation with its program of grants and fellowships would help materially. Government contracts for supplemental research granted to educational institutions offer one of the most effective means of providing funds for the purpose. The Commission recommends that this method be developed as far and as fast as is consistent with

## Notes on "Civil Aviation"

the results obtained.

For national security, second best military aircraft are simply not good enough.

On the commercial side, inefficient or unsafe aircraft and unreliable or inadequate navigational aids cannot be tolerated.

We must keep ahead in the race for military supremacy. And it is a race. Although the great aeronautical laboratories of Germany,

Italy, and Japan have been dismantled and destroyed, other strong contenders are now in the field. Britain, France, and Russia are

vigorously pushing new aeronautical research programs. The British, in spite of a generally strained economy, have made drastic sacrifices to make available this year some 30,000,000 pounds sterling (\$120,-000,000) for air research. They are modernizing war-worn equipment and are installing extensive new facilities, among them a National Gas Turbine Establishment at Whetstone, the new Aeronautical Research Center at Bedford, and the new Telecommunications Establishment at Malvern.

### Status of U. S. Aeronautical Research and Development

Military aviation in the United States had its beginning with the

establishment of the Aviation Section, Signal Corps, in 1907. A

few years later (1911) the Navy set up an Aeronautics Group in the Bureau of Navigation, which later became the Bureau of Aeronautics.

By 1915 it had become obvious that neither branch of the service could cope adequately with the problem of satisfying a growing need for basic research in aeronautics. To meet that need, Congress authorized (1915) the formation of the National Advisory Committee for Aeronautics, an independent Federal agency. Since that time, the NACA has produced most of the basic aerodynamic and structural data from which the Navy and the Air Force and the aviation industry have developed practically all commercial and military aircraft. It now operates three of the world's largest aeronautical laboratories, (1) at Langley Field, Va.; (2) at Moffett Field, Calif.; and (3) at Cleveland, Ohio. The first two cover aerodynamic, hydrodynamic, structural, and flight research. The latter engages chiefly in power plant studies of all kinds.

On March 21, 1946, a National Aeronautical Research Policy was formulated by the Army Air Forces, the Navy's Bureau of Aeronautics, the Civil Aeronautics Administration, the NACA and the aircraft industry. It was promulgated largely to clarify the relationships of the NACA with the other research and development agencies. Power plants. The Commission has been advised by witnesses that

gas turbines and rocket engines will ultimately replace reciprocating engines in future military aircraft. There is no doubt that these new and powerful power plants hold great promise for the future and research and development on them must be pursued diligently. The jet engine is applicable to high-speed fighters and fast bombers. It is the power plant that will make possible routine flights in the supersonic-speed range. Its development, therefore, is of prime importance.

The present limitation of the jet engine is its high fuel consumption, which reduces the range of the plane. Its service life is also relatively short. Research must be directed toward overcoming both handicaps.

The turbine-propeller combination offers possibilities for range improvement at somewhat lower aircraft speeds. Continued research and development on this type is also important.

The suggestion has been made that all research and development on piston-type engines should be abandoned to permit full concentration on the newer types. In this we cannot agree. The conventional combination of the piston engine and propeller will be useful for many years for both long-range bombers and transports and, therefore, any suggestion of the abandonment of research and development in this

## Notes on "Civil Aviation"

field seems premature. Moreover, it is not impossible that new applications of ducted fan or compressor jet designs may actually open up new uses for the piston engine. These potentials should be completely exhausted before the conventional engine is discarded.

Transport equipment. The design of transport and cargo aircraft benefits directly from research and development on military types. As far as basic theory is concerned, laboratory data secured for one class applies equally well to the other. For this reason there appears to be little need for specialized basic research (apart from develop

### 1 May 1948 :

Trans Canada Air Lines began service to Bermuda on a twice-weekly basis operating Canadair North Stars. One schedule operating to and from Montreal and the other to and from Toronto.

1948 : Lionel Chevrier is Canada's Minister of Transport.

1948 : Air Commodore Frank Whittle retires from the RAF and is knighted, joins BOAC as a technical advisor.

1948 : The Royal Canadian Air Force Association was formed as a national advocacy group<sup>279</sup> to support the Royal Canadian Air Force, and to unite Air Force veterans of the Second World War. Former Chief of the Air Staff, Air Chief Marshal L.S. Breadner accepted the task of organizing the new association. He successfully enlisted the participation of various community groups and clubs of former airmen and airwomen, and also invited unaffiliated air veterans to join as members-at-large. An Order-in-Council legitimized the new association. With Treasury Board funding and headquarters accommodation provided by the Department of National Defence, the RCAF Association held its first annual meeting in Ottawa, 16 September, 1948 at which ACM Breadner was named the first Dominion President.

Much organizational and administrative work followed, and the first membership cards were issued in February, 1949.

Constitution and Bylaws were framed so that the Association could be incorporated under the Companies Act.

A Charter under the Act was granted by the Secretary of State of Canada, on 14 May, 1951.

Over the years the Association grew and prospered, closely linked with the Royal Canadian Air Force.

In 1968, the RCAF ceased to exist with the unification and integration of Canada's three armed services. This results in a gradual disconnect between the RCAF Association and Canada's AIR element, redressed to some degree with the formation of Air Command in 1975.

in 1975 Air Command became the focal point for all regular and reserve Air Force activity.

In 1992 Air Command challenged the RCAF Association to reposition itself as both an advocacy group and a focal point for Air Force veteran activity.

12 August 1948 : DC-4M1 Argonaut operated by Trans Canada Air Lines crashed at Sydney, Nova Scotia, with 17 people on board, 11 passengers and 6 crew. No fatalities. Source: Aviation Safety Network website at <http://aviation-safety.net/>

## CANADIAN AVIATION - 1949

14 January 1949 : First Non-Stop Trans-Canada Flight from Vancouver to Halifax.

### April 1949 :

RCAF Maintenance Command re-designated Air Materiel Command (AMC) at Rockliffe.

### April 1949 :

*T.A. Fairbairn - obtains Air Engineer license, with A and C certification*

27 July 1949 : De Havilland G-5-1 / G-ALVG "Comet" prototype first test flight at Hatfield. Sir Geoffrey de Havilland's 67th birthday. De Havilland Chief Test Pilot John Cunningham turned 33 years old on the same day.

Comet 1

13 Production aircraft built :

---

<sup>279</sup> RACF Association History : Air Force Association of Canada Constitution & By-laws 2009

## Notes on "Civil Aviation"

Comet 1A : 8 built (1 scrapped)

Updated Comet 1 with higher weight and fuel capacity with water-methanol injection.

All Comet 1A's were recalled and were damaged in testing or were scrapped.

Comet 1X

2 Comet 1A's rebuilt with heavier-gauge skins to a Comet 2 standard for the fuselage.

Comet 1XB

4 Comet 1A's upgraded to a 1XB standard with a reinforced fuselage structure and oval windows.

DH 111 Comet Bomber- Not built

A nuclear bomb carrying design which received a negative evaluation from the Royal Aircraft Establishment.

Comet 2X

1 Built: Comet Mk 1 powered by four Rolls-Royce Avon 502 turbojet engines and used as a development aircraft for the Comet 2.

Comet 2E

2 Built : Comet 2 fitted with Avon 504's (Inner) and Avon 524's (Outer) and used by BOAC for proving flights.

Comet T2

2 Built : Comet 2 for the RAF as crew trainers.

Comet C2

8 Built : Comet 2 originally for commercial use but completed for use by the RAF.

Comet 2R

3 Built : Comet modified for use in radar and electronic systems development for the RAF to monitor Warsaw Pact signal traffic.

De Havilland set about relaunching Comet with a stronger and larger version of the aircraft whilst a small number of remaining aircraft were modified to Comet 1X or 1XB standard with a reinforced structure and (1XB) elliptical window apertures. One aircraft (G-ALYT) was also fitted with Avon 502 engines and larger intakes and appeared as the prototype Comet 2X - <http://www.baesystems.com/en/heritage/de-havilland-comet-1---2>

June 1949 : U.S.-Canadian Civil Aviation Meeting : USA : U.S.-Canadian Civil Aviation Meeting

The Department of State announced on May 23 that Russell B. Adams, Member, Civil Aeronautics Board, and Livingston L. Satterthwaite, Chief, Division of British Commonwealth Affairs, Department of State, will be chairman and vice chairman respectively of the United States delegation to the Conference on Civil Aviation between the United States and Canada. The Conference is scheduled to convene at New York City on May 23, 1949. Other members of the delegation are as follows

:

Louis W. Goodkin, Assistant Director, Bureau of Economic Regulations, Civil Aeronautics Board

George S. Roper, Civil Air Attache, American Embassy, Ottawa

Sydney B. Smith, Chief, Foreign Air Transport Division, Bureau of Economic Regulation, Civil Aeronautics Board

Stuart G. Tipton, General Counsel, Air Transport Association

Joseph J. Wolf, Acting Assistant Chief, Aviation Division, Department of State

The purpose of the Conference will be to discuss general civil aviation problems with Canada.

## Notes on "Civil Aviation"

Prior discussions on these problems were held in the winter of 1946-47.<sup>280</sup>

### CANADIAN AVIATION - 1950

1950 : Canadian *National Defence Act* (NDA). Replacing the former *Militia Act*, *Naval Services Act*, and *Royal Canadian Air Force Act*, the NDA introduced new legislative provisions for the Canadian Armed Forces and, for the first time, prescribed a Code of Service Discipline common to all three services. To acknowledge many statutory duties and functions, the NDA also enshrined in statute for the first time the position of the JAG as a Governor in Council appointment.

July - August 1950 : second Comet prototype (G-5-2 / G-ALZK) first test flight. Over 500 hours of flight test and route proving trials with technical observers on board from interested International Airlines will be accomplished.

#### October 1950 :

Canada has only one Judge Advocate General<sup>281</sup>. He may be a member of the Navy, Army or Air Force or a civilian. He has three deputies, one from the Navy, one from the Army and one from the Air Force and a staff composed of officers of the three services. The work of the office is divided on a purely functional and not service basis.

For example, the review of courts martial is carried out under the supervision of an Army officer, and all claims are dealt with under the supervision of an Air Force officer.

I may say that we have found this system works very well.

We have taken a further step recently.

At the last session of Parliament there was enacted an act known as the National Defence Act.

Under that act we have one code of discipline for the three services and identical systems of disciplinary administration.

All courts will follow the same procedure from now on and they will apply the same law.

This, we think, is a major step forward toward service unification.

We have felt that it is not fair that a naval rating who might commit an offence should be subject to any different punishment than an airman who commits the same offence.

All the provisions of the new code have not as yet gone into effect.

However, the part that has is working out very satisfactorily.

Now, Mr. Chairman, I have mentioned briefly the legal aspects of the efforts we in Canada are making to achieve some measure of unification in our armed forces.

May I suggest, however, that unification of the services of one nation is not enough.

Today we are faced with ever present danger.

We must not only unify our own national services, but we must also unify our national services with those of our allies so that we are ready and able to meet any threat from whatever source it may come with the full strength of our united forces.

That, I think, ladies and gentlemen, is all important.

*"The military establishment is, of course, a necessary organ of government, but the reach of its power must be carefully limited lest the balance between freedom and order be upset. The maintenance of the balance is made more difficult by the fact that while the military serves the vital function of preserving the existence of the nation, it is, at the same time, the one element of government that exercises a type of authority not easily assimilated in free society."*<sup>282</sup> Earl Warren, Chief Justice of the United States

Brigadier W.J. Lawson and Lieutenant Colonel J. C. A. Campbell also attended the business meeting of the Association at the Lee House on September 20 at which time Brigadier Lawson very interestingly developed the history of the Judge Advocate General's office in the British and Canadian Forces and gave some insight into the functioning of his own office as the unified law division for all the Armed Forces of Canada.

The address of Brigadier Lawson at the annual meeting is set forth below:

---

<sup>280</sup> Department of State Bulletin : Economic Affairs : June 5, 1949 pg 725 Vol. XX, No. 519 June 12, 1949

<sup>281</sup> Brigadier W. J. Lawson Judge Advocate General of the Canadian Forces Addresses the Association : BULLETIN No. 6 - The Judge Advocate JOURNAL - Published Quarterly By JUDGE ADVOCATES ASSOCIATION - An affiliated organization of the American Bar Association, composed of lawyers of all components of the Army, Navy, and Air Force

<sup>282</sup> MILITARY LAW UNDER THE CHARTER, 1986, Cony, David J.

## Notes on "Civil Aviation"

Mr. Chairman, gentlemen.

May I take this opportunity to thank you for permitting Colonel Campbell and me to attend your most interesting meeting this afternoon. I assure you that the information we have obtained here in Washington during these past few days will be extremely helpful and will prove to be of great value to us in our work when we return to Ottawa.

I thought this afternoon I might say something very briefly about the organization of the office of the Judge Advocate General in Canada.

To do that intelligently, perhaps I should refer briefly to its history.

Although most of you are no doubt familiar with the history of the office of the Judge Advocate General in the British Forces, some of you may not be.

Originally the power to convene courts martial was given to individual commanders as the need for it arose.

These commanders, of course, would employ members of the Bar to assist them in carrying out the legal aspects of their duties.

Such members of the Bar were employed temporarily for a particular campaign or war.

Early in the nineteenth century the office of the Judge Advocate General was created.

Oddly enough, this was a purely political office.

The Judge Advocate General was a minister of the Crown, holding a position similar to your Secretary of War or your Secretary of the Navy.

The Judge Advocate General was, as you would call it in the United States, a secretary.

He was appointed as a member of the government, and when the government was defeated, he went out with the rest of the cabinet.

This had many advantages, and gave the Judge Advocate General a great deal of influence.

But, on the other hand, it had very obvious disadvantages.

So, late in the nineteenth century this system was done away with and the President of the Probate, Divorce and Admiralty Division was appointed Judge Advocate General on a part-time basis.

It became obvious the job was too big to be handled in that way, so a Judge Advocate General of the Forces was appointed.

In England the Judge Advocate General has always been a civilian with a staff made up of members of the Army and the Air Force.

The Navy has an entirely different disciplinary system, and the chief legal advisor in the Navy is the Judge Advocate of the Fleet.

Recently, England has made a very material change in this set-up.

All the general work of the Judge Advocate General, such as claims and patents, has been taken away and is looked after by the legal branches of the various services.

There is a legal branch in the Army and one in the Air Force.

These legal branches advise on all pretrial matters, doing everything up to and including prosecuting.

The Judge Advocate General is now known as the Chief Judge Marshal.

He is a purely judicial officer.

He has a staff, the members of which sit on courts martial like your law members, but they differ from the law member or judge advocate, as we have always called them, in that they are, in essence, judges and the members of the court.

The officers who are on the court are, in essence, a jury.

The Judge Marshal is in the same position as a judge trying a criminal case with a jury.

He rules on the law and sums up the facts.

That is the position in England.

In Canada, we had no Judge Advocate General until the first world war.

Before that time, many of the senior officers in the Canadian Forces were from the United Kingdom, and referred legal matters either back to the Judge Advocate General there, or to the civilian law officers of the Crown in Canada.

The work became too heavy for this system to continue, so a Judge Advocate General was appointed and given a staff.

After the war, the Office was continued, but the Office, between 1919 and 1939, consisted of one officer with a couple of clerks.

In the second world war the Office, of course, increased gradually until there were over 400 officers employed in the Office of the Judge Advocate General. Following the war it was cut back again until now we have about 16 officers, 8 from the Army, 6 from the Air Force, and 2 from the Navy.

That is our total staff.

My appointment is Judge Advocate General of the Canadian Forces.

I am assisted by three deputy Judge Advocates General,

one from the Navy captain, one from the Army colonel, and one from the Air Force group captain.

They hold the rank of captain, colonel and group captain, respectively.

We have 7 of our officers stationed across Canada in key centers.

## Notes on "Civil Aviation"

In Halifax we have a Naval officer, in Montreal we have an Army officer, in Trenton, which is our large air base, we have an Air Force officer, and so on across the country.

They act as advisors to all of the services within their area.

They act as judge advocates on all courts, whether in the Army, Navy, or Air Force and they are not carried on the staff of the commander in the area, but on my staff and report directly to me.

The work in our central offices in Ottawa is divided much as is the work in your offices here.

We have our judicial section in which courts martial are reviewed.

We have our claims, patents, pensions and property sections.

The only section of the work that you have to deal with that we do not is procurement.

This is done by another department of the government.

There has recently been enacted by Parliament a new code of law applying to all three services which might be termed a uniform code of military justice.

We have also set up a court, composed of civilian judges, to hear appeals from courts martial.

I understand that the same things have been done here (in the USA).

This system we expect to bring into operation in about two or three months.

We in Canada are therefore faced with many of the same service legal problems that confront you here in the United States and working from different approaches have apparently attempted to solve them in much the same way.

09 September 1949 : Explosion in the Luggage Section of CP owned C-47-DL c/n: 4518 - conversion to a civil DC-3C, the aircraft was registered CF-CUA on February 6, 1947 and assigned fleet number 280 & reg CF-CUA) , At Murder trial of Jewler J. CAA Delay Blocks U.S. Test of Comet

Large nonsked, ready to spend \$3 million operating jet transport here, tries to order two planes.

^ But CAA hasn't accepted British certification, so de Havilland sells last three to Air France.

^ And elaborate plans to test craft in various uses must be shelved unless DH expands facilities

Britain's four-jet Comet transport  
could probably be operated at a profit in  
U. S. domestic service, but it may be  
1955 or 1956 before any of the planes  
are available to American customers.  
Tliat's wliat one U. S. airline operator  
found when it undertook an extensive  
study of U. S. jet transport operation.  
Tire company was ready to gamble  
\$3 million to operate two Comets.  
But CAA's delay in accepting the  
Comet's certification resulted in the  
U. S. operator's negotiations for purchase  
being superseded by firm orders  
for three Comets to de Havilland from  
Air France.

Waiting List—Unless DH steps up  
production schedules, the next Comet  
delivery dates available are late in 1955  
or 1956, the prospective U. S. buyer  
was told. Hower'Cr, London observers,  
noting the new Tory government's  
promise to increase British aircraft production  
and dollar earnings, say de  
Havilland might be encouraged to expand  
facilities and try to sell the Comet in this country at an earlier date.  
Just as in the case of air coach service  
it is a nonsked which is ready to pioneer  
the new field.

## Notes on "Civil Aviation"

The operator, Overseas National Airways, largest U. S. nonscheduled airline with a C.A.B exemption, was negotiating with de Havilland this month for two Comets with spares and equipment at a price of less than \$3 million. ONA figured it would cost \$3 million by the time the plane was earning revenue. But ONA could not clinch the deal because C.A.B. refused to accept the British certification of the plane. Then while negotiations were awaiting possible change of the C.A.B. attitude. Overseas National president George Tompkins received a cable from de Havilland informing him of sale of the last three available Comets, followed by a letter which said:

Strong Demand—"Owing to delay in (CAA) acceptance of the Comet's certification we have had to accept a firm order for the last two Series I (Gloster engine) aircraft that had been laid down, and also one additional one (all from Air France), and already we have further strong enquiries for Series I's, which we shall be unable to complete. We dare not continue further with Series I Comets, since to do so would affect deliveries already promised for Series H's (Avon engines).

"I know that you will appreciate our position, and that you will understand it is necessary for us to decide on our future programme at a much earlier date than would be possible if we awaited CAA's decision."

In the same letter the de Havilland official made observations about the politics involved in the proposed transport sales to U. S. airlines:

Sound Sense—"We cannot get over is making an aircraft available for prototype testing by CAA- We cannot expect BOAC to fall over themselves to help us introduce the Comet into service with their American competitors, for there is a school of thought there that claims that BOAC can eventually earn more dollars operating their Comets than could be gained by selling them to American operators.

"There is sound enough sense in this argument which rather weakens our claim that dollar sales of aircraft should take priority over any other business.

"As I said in my last letter we are fully appreciative of C.A.A.'s responsibility to the public and to Congress, and

we can quite understand the official point of view. The characteristics you mention are, I assure you, completely correct. An earlier de Havilland letter to Tompkins dated Oct- 11 revealed more of the de Havilland position regarding U. S. sales possibilities and the politico problems involved;

CAA vs. ARB—"You know" certainly maneuvered extremely skillfully, even to the extent of invoking what we know in this country as the 'prototype bill' ... I never - . . . thought it did not exclude foreign aircraft.

"During all the time that has elapsed since the war, this country has been relying mainly on the American manufacturers to supply their transport aircraft.

The British Air Registration

Board has accepted, 'carte blanche' the CAA certification of American aircraft and . . . feel very strongly that they are an equally competent body to judge airworthiness of an aircraft - . . . and that the American authorities should recognize their competence in the same way as we recognize theirs.

"Naturally the CAA will want to know more detail about the requirements for British jet transports, but we do feel that the US-CAA could obtain these from our Air Registration Board and that they should be a . . . However, there is no unwillingness on our part as manufacturers to submit to CAA evaluation trials. . . . Our difficulty has been that we have not got the flying or technical staff to deal with such further tests and requirements. Also, above all, there is no aircraft available to undergo such tests. . . .

BOAC Ready—"No. one Prototype is a very different aircraft to the production model. . . No. two prototype still remains in the hands of BOAC. . . .

"In the meantime, BOAC are clamouring to start regular services with their own aircraft. . . . Regular scheduled runs start early in the new

"After April BOAC will be extending the routes on which the Comet will operate as quickly as they can get deliveries of aircraft and these extensions are fully planned up till August, 1952, and can only be operated if we keep to our delivery programme."

As to U. S. sales of the Series II

-Avon-powered long-range Comets, an earlier de Havilland letter, dated Aug.

15, stated:

"On the present production programme the earliest delivery of Series II aircraft would be April, 1955."  
Could Exploit Lead—While these correspondents indicate that de Havilland has apparently made no real effort to sell Series I Comets in the U- S., the company says, "There is nothing we should like better than to pour Comets into the United States market . . . given the production facilities to do so, in other words, a relaxation from the needs of rearmament, we could exploit our lead in a big way during the next few years. We indeed hope that we shall still find a good market in your country with the Series II. . . ,"

Plan to Pioneer- President 'Tompkins of nonscheduled Overseas National Airways believes he can make money on his \$3-million gamble in buying two Comet jet transports. He believes his pioneer operation would lead the way for the scheduled airlines just as nonscheduled airlines have also led the way for the scheduled airlines in aircraft. Tompkins' gamble in buying jet transports for U.S. operation is planned to pay off in any of several ways:

- Flying U.S. trunk routes.
- Prestige to Overseas National name and conventional DC-4 service.
- Lease Comets to scheduled airlines.

Tompkins, for instance, is a close personal friend of National Airlines President G. T. Baker, who has long vowed he would lose to scalp competitor Eastern Air Lines on the New York-Miami trunk jet transport service. PanAm and TWA might also be interested—to enable them to meet British-French jet competition.

- Lease operation for Air Force.
- Prototype testing contract for Civil Aeronautics Administration. CAA has sought congressional money to test a B-45 jet bomber on "simulated transport operations" to learn about airways, airports and aircraft operations of the coming jet era. CAA Administrator Charles H. Home and Commerce Undersecretary Delos Rentschler last month cooperated with Tompkins to try to speed it with Tompkins' Comets but the idea came up too late in session for Congress. In short, Tompkins is confident the

## Notes on "Civil Aviation"

American operator with the only proven jet transports available could lease them or operate contract service even if difficulties arose on his own planned domestic trunk operations. He might resell them back to the British or to Air France, both of whom have less Comets than they would like to have. But most of all. Overseas National studies with de Havilland indicated O.N.A. could make money operating Comets itself. U. S. Route Pattern for Comet—In cooperation with de Havilland. Overseas National worked out a U.S. pattern especially featuring New York-Los Angeles via Tulsa and New York-Miami. These Overseas National studies, since used by Air Transport Assn. also, show that the Comet may operate at a much lower cost than the Boeing Stratocruiser. Estimates show direct flight cost of 51.03 a mile or \$464-15 an hour on the New York-Los Angeles. Most extensive research was done on the longest-stage route contemplated—New York-San Francisco via Tulsa—because if fuel requirements were met on that, the shorter stages would be easy. New York-Miami was carefully studied, too, because of the likely attraction of the Comet for super-service on that lucrative run. New York-San Francisco block-totally time via Tulsa comes to six hours and 45 minutes. New York-Miami service would take two hours. 41 minutes. Overseas National has planned, if it could get the Comet, to get high utilization by flying combinations of these route schedules; New York-Miami; Miami-Houston; Houston-Los Angeles; Los Angeles-New York-New York-San Francisco. Study of the routes planned indicates the Comet can carry full 10,000-lb. payload with required fuel reserve for alternate airports and holding patterns. Only Tulsa airport is marginal on takeoff if high headwinds are anticipated on a flight to San Francisco (n. 460 miles) and airport temperature is over 90 deg. Then the plane's rocket engine might be needed to assist takeoff. Chicago is not considered as the westbound runway is too short for routine Comet take off. Cost to Fly Comet in U.S.—Direct flight cost to operate the four-jet Comet

on transcontinental and New York-Miami routes is shown in table on p. 14. Here is how Overseas National Airways estimated these costs, with help of de Havilland aircraft.

- Fuel \$157.50 per hour. Stage length round trip 7,415 miles: fuel 132.87 lbs. or 19,775 gal.; round trip time 15 hours, 51 min.; consumption 1,050 gal. per hour; times 15 cents per gal. for kerosene equals \$157.50 fuel cost per flight hour.

- Crew \$46.50. Anticipating Line Pilots' demands for jet transport crew pay. Overseas National used the same pay and distance formula now used on the DC-6. Pilot pay of \$17.50 an hour was figured, comparing with ON's pay of \$10.00 an hour for C-54 flying. Other crew increases are similarly figured: co-pilot \$12.50; engineer \$8.50 and two stewardesses \$8.00, making total crew \$46.50 an hour.

- Maintenance of airframe \$50.00. With little airframe maintenance data available yet for the Comet, ONA uses the DC-46 estimate of about \$50 an hour.

- Engines \$64.35. This is taken from de Havilland "Report on Fixed Hourly Running Costs of the de Havilland Ghost 50 Civil Turbojet Engine Plant." But ON then increases it for higher U.S. pay scales and for line mechanic inefficiency compared with de Havilland. Life cycle of 375 hours is used including No. 2 inspection, which is kept anticipating CAA requirements although it has been dropped by de Havilland. Line maintenance cost is figured at \$25.52 per hour; overhaul cost at \$3,500 per engine or \$14,000 for 375 flying hours equals \$37.33 per hour; shipping cost is \$2.50 per hour, making total of \$65.36 per hour.

- Obsolescence \$50.12. ON figures a life of eight years with 20% residual value, making total of \$50.12 per hour depreciation. ON holds that the Comet may be another DC-3 of long useful life, in that it is the first modern plane of an era and most simple in design; while later jets five or more years from now may be more efficient, they will be costlier and more complex.

These are preliminary estimates made in ON's top Secret Transport Section. official, after visiting de Havilland has

ciirrenth flying its five DC-4s exclusively ...sively  
on the Pacific airlift under MATS  
charter, at a low figure of under \$1-20  
a plane mile. It believes it has the  
lowest charter cost of any Pacific lift  
carrier. It has been on the lift since  
its start and is the largest nonsked to  
get an individual exemption from CAB.

November 1951 - Aircraft developments:

The latest version of the "Norseman" the Norseman Mk. VII is available from the Canadian Car and Foundry, Montreal. Featuring all-metal wings and a re-designed "Slab-sided" fuselage. Lighter than the former wood and fabric models. Wing area is 369 sq.ft (compared to the previous 325 sq.ft wing) Span is 51ft 8in. fuselage lengthened by 2 ft to 36ft-4in. gross wt remains at 7400 lbs empty weight is up from 4250 to 4482 lbs. engine remains the 550 hp P&W R-1340-AN-1

The SARO Princess flying boat has been rolled out at the Saunders-Roe plant. Isle of Wight. featuring retractable tip floats. ten 3,500-hp. Bristol Proteus turboprop engines. When complete, the flying boat will weigh about 140 tons and will carry more than 105 passengers at a cruising speed of 380 mph. pressurized multi-decked hull - Three Princesses were to be built.

November 1951 - US labour market news : Labor Force Must Double in '52 Shortages showing up in iinskillletl categories as well as skilled: engineer situation critical.

Despite Die large increase in aircraft  
cniplonnicnt that already lias taken  
place since Korea, tlic industry will  
liave to iiiiorc than double its labor  
force by tlie end of next year if it is  
to meet planned production goals,  
'llicat is tlic forecast of Director  
Robert C. Goodwin of tlic Bureau of  
Einpioyinciit Security in a special report  
on manpower and partial mobilization  
issued by the U. S. Department  
of Labor.

During the first year after Kore.i,  
liic number of aircraft workers zoomed  
from '%.000 to 447,600. By the end  
of 1952, Goodwill estimates' than an  
additional 600,000 will be needed. jNot  
all of them will have to be rcxTiiited  
and hired by aircraft companies. Main  
will siin ^ ily shift from one kind iif work  
placed ill plants now engaged in imtoniobile,  
electrk-a! or some other kind  
of prodiiition. During the war more  
than two iiiillirm workers were in aircraft.  
Wiat Is Needed—. \ September survey  
by BKS showed that most of the  
aircraft manpower .shortages arc in  
lughly-.skilled talniical workers needed  
in planning and designing, laitcr sur-  
\cys disclosed shortages also beginning

to show up in ordinary production workers. Other shortages:

- Engineers. BKS found the "most persistently unsatisfied demand" in aircraft is for engineers of all types- mechanical, aeronautical, electrical, electronic, industrial and others. • Technicians. Hard to find also are workers with skills needed in getting ready for mass production-draftsmen, tool and die makers, designers, production planners, tool designers, radar and electronic technicians, template makers and stress analysts.
- Mechanics. Expansion in the industry is expected to intensify the shortage of aircraft mechanics, aircraft and engine mechanics and aircraft assembly mechanics.

Hiring standards are being relaxed in aircraft as a result of the inability to find enough qualified workers, BKS learned. Age restrictions are being relaxed; experience and physical requirements are becoming less rigid.

Other steps being taken to alleviate labor shortage include an increase in training, luring of women, lengthening of working hours and starting second and third shifts.

The labor market here is how the labor market snipes up in minor centers of aircraft production

- Shortage. Wichita, Hartford, San Diego and Phoenix are so called "labor shortage areas."
- Balanced supply. Seattle, Dallas, South Bend, Detroit and Baltimore are areas of "balanced labor supply."
- Moderate surplus. Los Angeles, Fort Worth and Patterson, N. J., have a "moderate labor surplus."
- Substantial surplus. New York City is the only center in this category.

## CANADIAN AVIATION - 1952

### 05 January 1952 :

*Canada Gazette* : Aircraft Mechanic, Grade 1. Department of Transport, Edmonton, Alta. \$214-9242 per month.

Open to qualified male residents of the Edmonton Air Services District (which consists of the Province of Alberta, the Northwest Territories west of the 110th meridian, Yukon Territory and that part of British Columbia north and east of a line ten miles west of the Alaska Highway).

Qualifications:

1. High school education;
2. At least five years of experience in the maintenance and repair of aircraft and aircraft engines;
3. Personal suitability and satisfactory physical condition conforming to the requirements for a Private Pilot's Licence;
4. Possession of an Air Engineer's Certificate endorsed in categories "A" and "C" or
5. Possession of the new Aircraft Maintenance Engineers "M" licence under Category "A" for at least one of the following aircraft;
  - A. Douglas DC-3;
  - B. Lockheed 1848. 10-A or 12-A;
  - C. Beechcraft C-18-vS or D-17-S;
  - D. Avro Anson V ;
  - E. DeHavilland DHC-2.

### August 1952 :

A.V. Roe UK prototype Avro 698 first flight. Initially called the "Ottawa" Vulcan

09 April 1952 : de Havilland DH106 "Comet" four-engined jet transport enters service. de Havilland Ghost 50 Mark I

December 1952 : Canadair, Ltd. was anxious to try out one of its Sabres (CL-13B "Sabre" Mk.6) powered with an Avro Orenda engine ( US Newsweek 1955 refers to Canadair Canada produced more than 1,200 of North American Aviation's Sabrejets modified to take the "British Orenda engine").

## CANADIAN AVIATION - 1953

### 29 May 1953 :

the first of two de Havilland DH106 "Comet" four-engined jet transports purchased by the RCAF is flown from the UK to Canada. These were the first jet transports to be used on trans-Atlantic service.

2 May 1953 :

Comet "G-ALYV" c/n 06008 operating as BOAC Flight 783/057 structural failure shortly after takeoff from Calcutta, India while climbing to cruising altitude. The 6 crew and 37 passengers onboard are killed. BOAC LHR - SIN route 1953  
London to Delhi to (1297 km) Calcutta to Rangoon to Bangkok to Singapore to Bangkok to Rangoon to Calcutta to (1297 km)  
Delhi to London. Weather is suspected as the cause

June 1953 : Queen Elizabeth, the Queen Mother and Princess Margaret fly in a Comet - special flight

16 June 1953 : the second RCAF de Havilland DH106 "Comet" jet transport is flown from the UK to Canada.

1953 : Buses represented close to 7 per cent of passenger travel, airplanes 3 per cent.

1953 : Avro "Atlantic" Jet transport announced.

#### CANADIAN AVIATION - 1954

10 January 1954 : Comet G-ALYP, 1452 km Rome-London, 27,000 feet. The Comet descended and crashed into the sea off the Island of Elba.

April 1954 : Comet G-ALYY disappears near Naples, Italy.

**To find out what caused the fractures which started on the roof**, BOAC donated G-ALYU (3539 TTAF / 1221 cycles) to the Royal Aircraft Establishment (RAE) Farnborough for destructive testing.

1. A massive hydro-static testing tank was built around G-ALYU.
2. The tank and the airframe were filled with water
3. Water was then pumped into and out of the plane to simulate pressurisation cycles.
4. Water was used for testing as it was revealed that the "energy released in the rupture of the cabin fuselage when pressurised with air was the force equivalent to the explosion of a 500 pound bomb in the cabin"

After the equivalent of only 3,000 cycles investigators concluded that the crash had been due to "failure of the pressure vessel" which initiated at the forward ADF "window" in the fuselage crown.

The ADF "windows" in Comet being the apertures in the skin for the flush mounted navigation system aerials, in which a fibreglass panel took the place of the 'glass' window formerly used for taking sun and star sightings on older aircraft types.

The design specification required the supports [doubblers] around the "windows" to be glued [bonded] AND riveted.

"Punch riveting" was used to rivet the supports to the skin, they were not glued.

"Punch riveting" creates an imperfect hole - with micro-fractures in the metal - which can result in fatigue cracks around the rivet hole if not properly cleaned up prior to driving the rivet. the mostly square shape of the airplane's windows concentrated stress around the corners, rather than distributing the stress, as with oval-shaped windows

metal fatigue of the "punch riveted" holes around the ADF window resulted in fatigue cracks from the repeated pressurisation and depressurisation of the aircraft cabin which, undetected, grew large enough to allow the ADF "window" to blow out.

Following the recovery of the wreckage extensive investigation carried out at the Royal Aircraft Establishment (RAE) Farnborough by the Air Accident Investigation Board (AAIB) and it reported to the National Board of Enquiry that the primary cause was a catastrophic failure of the pressure cabin due to metal fatigue. It identified that despite extensive

## Notes on "Civil Aviation"

testing in the design stage, the cyclical pressurisation and de-pressurisation of the fuselage had accelerated the stress levels around the corners of the ADF and some the main passenger windows, causing disastrous fractures in the structure and almost instant failure of the airframe. - <http://www.baesystems.com/en/heritage/de-havilland-comet-1---2>

Comet's pressure cabin had been designed to a safety factor of 2.5xP comfortably in excess of the 1.33x P [and an ultimate load of 2x P, P being the cabin 'Proof' pressure] required by British Civil Airworthiness requirements [BCARs] the accident caused a revision in the estimates of the safe loading strength requirements of airliner pressure cabins.

Recovery of a wreckage from G-ALYP revealed signs of inflight break-up.

1. Shreds of cabin carpet were found trapped in the remains of the Comet's tail section;
2. The imprint of a coin was found on a fuselage panel from the rear of the aircraft; and
3. Smears and scoring on the rear fuselage were tested and found to be consistent to the paint applied to the passenger seats of the Comet.

When most of the wreckage was recovered, investigators found that the sequence of events was:

1. fractures started on the cabin roof,
2. a "window" then smashed into the elevators,
3. the rear fuselage then tore away,
4. the outer wing structure fell, then
5. the outer wing tips broke away and
6. finally the cockpit broke away and
7. fuel from the wings set the debris on fire.

"In every step and progress, we've had to pay for it in blood and in treasure.  
And, God knows that in this case we have paid in full" - Lord Brabazon

The de Havilland company halts production and then redesigns the airplane, producing the Comet 4.

All Comet 1's are withdrawn from service and the production line at Hatfield is halted - <http://www.baesystems.com/en/heritage/de-havilland-comet-1---2>.

1954 :

Boeing has been working on a design project centered around an airframe that could serve both as a jet powered troop transport and tanker military capable of flying fast enough to refuel the new B-52 bomber. Dissemination of the findings of the DH Comet investigation lead Boeing to produce the turbo-jet powered "-80" or "Dash 80" airframe design :

1. the KC-135 flying tanker for service aviation
2. the 707 for civil aviation.

The "707" airframe derivative aircraft:

1. 720,
2. 727, and
3. 737.

1954 : AVRO - working on Avro Atlantic - Delta wing SST

### CANADIAN AVIATION - 1955

"for the purpose of intercepting Soviet bombers" such as the Tupolev Tu-95 Bear intercontinental turboprop bomber. The design results in the creation of the AV.Roe Arrow.

**March 1955 :** Orenda Engines, Ltd. 6,000 employees, has turned out over 1,500 Canadian-designed and built Orenda jet power units for Canadian Sabre jets.

**28 October 1955 :**

The Council of ICAO convene a diplomatic conference at The Hague, Belgium with the following protocol : to Amend the Convention for the Unification of Certain Rules Relating to International Carriage by Air Signed at Warsaw on 12 October 1929 in English, French and Spanish with being of equal authenticity.

1955, the Canadian federations followed suit the next year by uniting in the [Canadian Labour Congress](#) (CLC). At that point, 70 percent of all Canadian unionists belonged to international unions with headquarters in the United States.<sup>283</sup>

### CANADIAN AVIATION - 1956

September 1956 :

**Four RCAF pilots led by John McElroy flying Canadair CF-86 with Orenda engines intercept "The Beast" & inadvertently bring down a U-2 spy plane piloted by Howard Carey.**

The Mark 6 Canadair CF-86 Sabres, equipped with Orenda jet engines, could fly up to 50,000 feet at 0.92 Mach.

1956 : UK : A.I.D headed by Director, Mr R. E. Swift (appointed in 1950), grouped with other inspectorates of the Ministry of Supply under a Director- General of Inspection and a Board of Inspection which rationalized the procedures of the several UK Government Inspectorates.

### CANADIAN AVIATION - 1957

**October 1957 :**

Sputnik I is launched from Baikonur, Soviet Russia.

**1957 :**

Canadian Government re-organisation - "Elites" elevated, non "Elites" removed.

- "Air Engineers" seen as "NON Elites" while those "Engineers" (and graduated from a University) within the Transportation Ministry deemed themselves "Elite" -
- Ref to "Vertical Mosaic: An Analysis of Social Class and Power in Canada" by John Porter.

### CANADIAN AVIATION - 1958

The Comet 4 entered service in 1958 followed a few weeks later by the Boeing 707.

04 October 1958 : 1st of the new Comet 4's "G-APDB" enters commercial service with B.O.A.C. the use of "George" in the call-sign refers to King George V. The elegant Lockheed Constellation, used by TWA and others, could make 340mph at best, while the two-decked Stratocruiser cruised at 300 mph. Jets promised speeds of 500mph-plus.

In 1958, Britain, smarting from Suez but not yet wholly resigned to post-imperial mediocrity, still believed in pulling off the odd first. That was the atmosphere of the time when the four Avon turbojets of G-APDB sprang into life. BOAC had decided to pull a fast one on Pan-American, its brash US rival.

<sup>283</sup> <https://www.britannica.com/topic/organized-labor/The-United-States-and-Canada#ref540199>

## Notes on "Civil Aviation"

Pan-Am had been promising that it would be the first airline to mount "pure" turbojet services across the Atlantic with its newly-delivered Boeing 707s. They were due to depart from Paris and Rome for New York on October 27, with operations from London starting on November 14. Sir Gerard d'Erlanger, chairman of BOAC, thought differently. On October 3, BOAC issued a sudden announcement. The New York Port Authority, which governed flights into the city, had given the British airline permission to begin jet operations. The next day, two new Comet IVs would inaugurate its transatlantic service. One would take off from London and refuel at the Canadian staging post of Gander on Newfoundland before carrying on to New York. A second aircraft would fly from New York's Idlewild Airport (renamed John F Kennedy International Airport in December 1963) to London. The east-bound Comet, aided by strong tailwinds, would not require refuelling, making the journey in one hop. A flustered Pan American issued a press release questioning the Comet's ability to mount a viable service. Basil Smallpiece, managing director of BOAC, dismissed the claim in invincibly British style as "rather poor sportsmanship".

The westbound Comet left London at 8.45am and took 10 hours, 22 minutes to reach Idlewild, including the stop at Gander.

The eastbound Comet reached London in a record-breaking six hours, 11 minutes.

B.O.A.C passengers had a choice of 2 classes:

1. Deluxe, with seats spaced at 56 inches apart, cost £173 one-way (£2,914 in today's money), or
2. 1st, with seats spaced at ?? inches apart, cost £173 one-way (£2,914 in today's money)

31 March 1974 : British Airways forms when BOAC and BEA combine

- <http://www.telegraph.co.uk/travel/3166768/Transatlantic-travel-Flying-back-to-the-Fifties.html>

### 25 Mar 1958 :

A.V. Roe Canada - AVRO CF-105 "Arrow" first test flight, Malton Ontario

30 July 1958 : 1958: first flight of the de Havilland DHC-4 Caribou CF-KTK-X, on 30 July 1958. Crew: George Neal, Hans Brinkman and Dave Fairbanks at Downsview ON.

### 20 September 1958:

Avro "Ottawa" (Vulcan) prototype VX770 suffers catastrophic wing failure on a flight to test its Conway engines - at the end of the test flight the Vulcan was allowed to make a fly-past at the "Battle of Britain At Home" air display over RAF Syerston, UK. As the aircraft passed the Control Tower at a height of 250 feet and at a speed of 350 knots it pulled up in a shallow climb and began to roll to starboard. At this point a "kink" was seen to appear in the leading edge of the starboard wing which then began to break up, the aircraft shedding the wing and crashing in a near vertical dive. All four crew members were killed as were three runway controllers on the ground.

an air show.

### 23 September 1958 :

Prime Minister John Diefenbaker announces in the House of Commons <sup>284</sup>

"the number of supersonic interceptor aircraft required for the RCAF air defence command will be substantially less than could have been foreseen a few years ago,  
in fact such aircraft will [not] be required at all in the 1960's in view of the rapid strides being made in missiles by both the United States and the U.S.S.R.

The development of the Canadian supersonic interceptor aircraft the CF-105 or the "Arrow" was commenced in 1953 and even under the best of circumstances it will not be available for effective use in squadrons until late in 1961.

---

<sup>284</sup> Hansard, Parliament of Canada, September 23rd, 1958

## Notes on "Civil Aviation"

Since the project began, *revolutionary* changes have taken place which have made necessary a review of the program in light of the anticipated conditions when the aircraft comes into use."

1958 : Secretary of the UK Air Registration Board Sir Robert Hardingham visits Australia's Aeronautical Research Laboratories - Melbourne, and meets with Principal research scientist Dr David Ronald De Mey Warren (invited to join the technical committee investigating two fatal De Havilland Comet jetliner crashes in 1953 and begins developing an idea for an in-flight recording device. - Pilots rejected the concept, fearing that black boxes might be used to spy on crew) ; Enthralled with the idea, Hardingham brought Warren and his prototype "ARL Flight Memory Unit" - which allowed the storage of up to four hours of voice and flight-instrument data back to London and after a resounding response to demonstrations of the prototype a company was contracted to make the devices - which have always been coloured red. Australia became the first country to make flight recorders a mandatory legal requirement in 1963. While millions of "Black Boxes" have been made and sold worldwide, Dr. Warren, a PhD in chemical engineering from his research into rocket fuel, never received a penny for his invention. <sup>285</sup>

1958 : Canada : resolution adopted providing for "simultaneous translation" in the House of Commons. Hansard

1957-1958 :

*Lionel McCaffrey (LAC - RCAF) builds a full scale replica of the Silver Dart at RCAF Trenton.*

A ticket from London to New York on a BOAC Comet 3-4 in 1957 costs the equivalent of \$3,561 in 2017 \$.

1958 the US National Aeronautics and Space Act creates the National Aeronautics and Space Administration (NASA). NASA is specifically under the ACT to "provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof." as the director of NASA's Technology Utilization office noted in 1963, "In this age of automation, there is nothing automatic about the transfer of knowledge or the application of an idea to practical use. Src NASA SP-4216

1958 - the last edition of the Canada Year Book is published.

Statistics Canada will continue through other means to keep Canadians informed about their social and economic life.

### CANADIAN AVIATION - 1959

1959 : The Douglas DC-8 enters service.

1959 : UK - Until about 1959, the standard pattern of a City and Guilds course was a continuous 4 or 5 year syllabus divided into 2 parts. the first part a 2 or 3 year course leading to an intermediate certificate followed by an additional 2 year course leading to a "Final" Certificate. In some cases, a further year or more could be spent in gaining "Full Technological" certificate (FTC) which could lead to higher National Certificate studies. It was found however that the Final and Full technological certificates represented levels of achievement which very few "Craft" students attained. Usually those who did so became "Technicians or Managers". The majority who became competent journeymen took 4 or 5 years to gain an intermediate, which proved adequate for their needs... On the other hand, the more able students found Craft courses to easy at the beginning and could have started earlier on the more scientific and mathematical studies needed by technicians. The distinction between craft and technician levels in the City and Guilds was not clear. Since 1951, the craft "schemes" (Programmes) have been re-cast to bring them in-line with the needs of apprentices likely to become competent craftsmen, and the new technician courses which are separate from the craft courses from the start - introduced were the 2 in Aeronautical Practice (Nos. 332-333) and 2 in Aeronautical Engineering (Nos. 171, 175. 371 being added in 1969)<sup>286</sup>

### CANADIAN AVIATION - 1960

1960 : UK AID a part of the Ministry of Aviation - Inspection Division, the technical and professional staff = 903.  
Nimonic alloys, now various titanium alloys and hints of even more exotic metals to come; and, in non-metallics, the plastics and other synthetic materials, some of which are assuming importance as primary structural materials.  
All these have inspired new advances in inspection and quality control techniques.

The AID is now involved in close contact with the design authority and contractor from the early days of any project, the better to formulate inspection needs before the production stage is reached. AID laboratories actively contribute to technical advances—a recent instance was the devising of an optical method of measuring accurately the wall thickness of hollow, air-cooled turbine blades.(1963) Techniques of quality control pioneered by the AID are finding their way out of aeronautics and into the mass-production industries. There is a continuing emphasis on proving component lives, in terms of a mean functioning time between failures, to ensure designed operating lives. Automation is an accomplished fact, with pre-programmed machining and fabricating processes becoming daily more common.  
In all these the AID is concerned.

**April 1960 :**

*ICAO adopts a "Multilateral Agreement" Relating to Certificates of Airworthiness for Imported Aircraft*

1960 :

When the Canadian Bill of Rights<sup>39</sup> was enacted in 1960, it offered tremendous scope for review of military action by the civil courts, that is, if they had been willing to take up the gauntlet.

At the court-martial level, military lawyers cited the Bill of Rights on numerous occasions, but with little success. Only four Bill of Rights cases were heard by the Court Martial Appeal Court; all were denied except one, which was decided on other grounds. Only one of these cases, *MacKay v. The Queen* ((1980), [1980] 2 S.C.R. 370, 114 D.L.R. (3d) 393 [hereinafter cited

## Notes on "Civil Aviation"

to D.L.R.).) was appealed to the Supreme Court of Canada. It was decided in 1980, twenty years after the Bill of Rights was enacted.

The three cases prior to MacKay raised very specific issues in which the accused argued that a certain provision of the QR & Os violated the Bill of Rights.

In *Platt v. The Queen*,<sup>43</sup> the accused challenged article 111.60 of QR & Os, which states that a person charged is not entitled to have a defending officer appointed until after a court martial has been ordered by the convening authority.

The Court Martial Appeal Court rejected Platt's claim that the article violated his right to counsel as provided by section 2(c) of the Bill of Rights.<sup>42</sup>

The two cases that followed, *Robinson v. The Queen* (1971)<sup>43</sup> and *Nye v. The Queen* (1972),<sup>44</sup> both challenged article 112.54(3) of QR & Os.

A General or Disciplinary Court Martial<sup>45</sup> is composed of military officers who have minimal legal training. A Judge Advocate is appointed to assist the court martial and to give an opinion upon all matters of law and procedure. QR & Os, article 112.54(3) allows the court to disregard the opinion of the Judge Advocate when it has "very weighty reasons" for so doing. In both *Robinson* and *Nye*, the court martial disregarded the legal opinion of the Judge Advocate on a matter of law. In both cases, it was argued that article 112.54(3) denies the accused a fair trial according to law, and denies the right to equality before the law, and due process of law.<sup>48</sup> Therefore, it was submitted, the accused was denied the right to a hearing in accordance with the principles of fundamental justice pursuant to the Bill of Rights.

In *Robinson*, the appeal was allowed on other grounds; however, the Court Martial Appeal Court implied that it would favour a Bill of Rights challenge to article 112.54(3) if the matter arose in the future. When the issue was raised again in *Nye v. The Queen*, the Court Martial Appeal Court held that article 112.54(3) did not infringe the Bill of Rights.

Under that provision, the members of the court martial could only disregard the opinion of the Judge Advocate on a question of law when they had been convinced that his or her opinion was ill-founded. Therefore, according to the Appeal Court, the accused was not denied due process of law and fundamental justice.

*MacKay v. The Queen* (1980) <sup>50</sup> was the only major challenge to the military system under the Canadian Bill of Rights. In that case, Private MacKay was charged with trafficking in drugs under the Narcotic Control Act.<sup>51</sup> He was suspected of selling marijuana to fellow soldiers on his base located at Esquimalt, British Columbia. The offence was brought under the Code of Service Discipline, pursuant to section 120 of the National Defence Act.<sup>52</sup> MacKay was convicted by a Standing Court Martial on a number of counts and was sentenced to sixty days' detention. On appeal to the Court Martial Appeal Court, all but one of the convictions was affirmed.

Private MacKay appealed to the Supreme Court of Canada.

On appeal, the accused argued that section 120 of the National Defence Act was inoperative under the Bill of Rights, in that he was tried under military law for offences under the general law. A civilian would be tried in civil court for the same offences.<sup>53</sup> Therefore, MacKay argued that he was denied equality before the law, pursuant to section 1(b) of the Bill of Rights.<sup>54</sup> In addition, MacKay submitted that section 120 denied members of the Armed Forces the right to a fair hearing by an independent and impartial tribunal as contemplated by section 2(f) of the Bill of Rights.<sup>55</sup> The Supreme Court dismissed MacKay's appeal by a majority of seven to two.

Ritchie J. delivered the majority opinion. He pointed out that the National Defence Act was enacted by Parliament under section 91(7) of the British North America Act, 1867 (now the Constitution Act, 1867). That section gives Parliament the authority to enact legislation to control behaviour and discipline in the Forces and to establish courts to enforce this legislation. In reiterating the 'valid federal objective' test,<sup>57</sup> Ritchie J. held that legislation that deals with a particular class of people does not offend the Canadian Bill of Rights if, as here, the legislation had been "enacted for the purpose of achieving a valid federal objective."

In my opinion, the MacKay case was wrongly decided. Ritchie J. does not explain the meaning of a valid federal objective. He appears to have applied a division of powers test and suggested that once the legislation in question is found to be *intra vires* Parliament, it does not violate the Bill of Rights. That being the extent of the inquiry, Ritchie J. does not consider whether a military trial for civil offences serves a valid objective under the provisions of the Bill of Rights.

McIntyre J., in a separate concurring judgment, does attempt to provide some meaning to the valid federal objective test within the context of the Bill of Rights. He states that any departure from the general application of the law "should be countenanced only where necessary for that attainment of desirable social objectives, and then only to the extent necessary in the circumstances to make possible the attainment

## Notes on "Civil Aviation"

of such objectives."

McIntyre J. goes on to hold that in this case, the drug offences were sufficiently related to the service to justify treatment under military law. The offences, except one, occurred on military property and attacked the standards of discipline and efficiency of the service and, therefore, were properly tried by court martial.

While McIntyre J. is to be applauded for developing a meaningful test under the Bill of Rights, one must criticize him for not applying that test. Without proof of the fact, McIntyre J. held that military prosecution of drug offences is necessary to maintain the requisite objective of military discipline. Nevertheless, the test proposed by McIntyre J. is a useful one that attempts to establish an appropriate balance between constitutional rights and the legitimate and necessary interests of the state. This balancing approach in MacKay suggests an appropriate test, to be discussed later, for the application of section 1 of the Charter to constitutional claims.

In regard to the other ground of appeal, Ritchie J. held that a trial by court martial did not deprive an accused of a fair and public hearing by an independent and impartial tribunal. According to the majority, there was no evidence in the record to suggest that the President of the Court Martial acted in anything but an independent and impartial manner. Ritchie J. stated further that the President's experience in the military and his position in the Judge Advocate General's branch suggest that he was well qualified to adjudicate matters of military law.

In deciding a claim under the Canadian Charter of Rights and Freedoms,<sup>65</sup> the court must answer three fundamental questions. First, does the Charter apply?

Second, have any of the rights as guaranteed by the Charter been infringed?

Third, (and this question is probably the most difficult,) is the infringement a reasonable limitation of the person's rights, pursuant to section 1 of the Charter?

A. Does the Charter Apply to Military Law? Section 32(1) of the Charter states that the Charter applies to the Parliament and government of Canada in respect of all matters within the authority of Parliament including all matters relating to the Yukon Territory and Northwest Territories .

This clearly includes the Canadian Armed Forces, which completely falls within the authority of Parliament and the government of Canada.

Section 32(1) is subject to qualification: pursuant to section 33, Parliament may expressly declare in an Act of Parliament that the Act or certain sections of the Act shall operate notwithstanding section 2, and sections 7 through 15 of the Charter. To date, this override power has not been exercised with respect to the National Defence Act.

Until such a declaration takes place, the men and women of the military are protected under the provisions of the Charter. One provision of the Charter, the right to a trial by jury under section 11(f), specifically excludes trials under military law tried before a military tribunal.

In drafting the Charter, therefore, Parliament turned its mind to the military legal system.

In so doing, Parliament chose to deny service personnel only that right guaranteed under section 11 (f) of the Charter.

By implication, Parliament must have intended that the remaining provisions of the Charter would apply to military law.

B. Supremacy Clause: Section 52(1)

Section 52(1) of the Constitution Act, 1982<sup>68</sup> explicitly states that:

The Constitution of Canada is the supreme law of Canada, and any law that is inconsistent with the provisions of the Constitution is, to the extent of the inconsistency, of no force or effect.

The Charter is part of the "Constitution of Canada" <sup>69</sup> and, therefore, any law which is inconsistent with the Charter is "of no force or effect."

This clearly includes the National Defence Act and any other law that applies to the Canadian Forces.

Certainly, section 52(1) refers to the "Constitution of Canada" as a whole, which includes the authority of Parliament to enact legislation governing the military and the limiting provisions of the Charter. Before section 52(1) will apply, the court must not only find that a right or freedom as guaranteed by the Charter has been infringed, but also that the law in question is not a "reasonable limit... as can be demonstrably justified in a free and democratic society," pursuant to section 1 of the Charter. Therefore, any provision of military law that violates the Charter and is not saved by section 1 will be struck down by the civil courts. It will be of "no force or effect" both with respect to the matter before the court and any pending or future actions by the military authorities.

## Notes on "Civil Aviation"

Section 52(1) embodies the previous practice of the civil courts in determining a constitutional matter.  
Once the constitutional validity of the National Defence Act is properly placed in issue, the presiding tribunal must determine the constitutional question before proceeding with the case

1964, Hawker-Siddeley Aviation Limited and British Aircraft Corporation (who later merged to form British Aerospace)' emerged as the primary manufacturers of fixed wing aircraft. Bristol-Siddeley and Rolls-Royce remained as engine producers.<sup>80</sup> By 1965, the British government came to the realization that if they wanted to compete with the American aircraft manufacturers, they would have to collaborate with other European countries in forming a collective European aviation industry. (AIRBUS)

1964 : UK RAF : a new "Trade Structure" is introduced. The "single-skill Aircraft Apprentice" is replaced by the Technician Apprentice, to be trained in the four trades of:

## Notes on "Civil Aviation"

1. airframes,
2. propulsion,
3. electrics, and
4. armament.

The new "scheme" (Programme) was also designed to give the Technician Apprentice an "Ordinary National Certificate" in Mechanical Engineering.

The entry numbering sequence continued to follow the earlier Aircraft Apprentice series.

Simultaneous with the introduction of the Technician Apprentice, to meet the RAF's need for skilled craftsmen, the "Craft Apprenticeship" was introduced in the previous single skills, although the course length was reduced to two years and a new series of entry numbers in the 200 series was introduced.

From October 1969, one-year Mechanic Apprentice courses were also introduced, with entry numbers in the 400 series.

## Notes on "Civil Aviation"

### CANADIAN AVIATION - 1967

1967 : Canadian Flight Training activity "to license standards" in 1967 increased 14 percent over 1966;  
5,315 private pilots were trained.  
1,368 commercial pilots were trained.

### CANADIAN AVIATION - 1968

#### 1 Feb 1968 :

The Royal Canadian Navy, Canadian Army and RCAF are "unified" to become the Canadian Armed Forces. With unification comes "common rank, insignia and uniforms", the original uniform, rank and designations of the 3 Services are no longer used. Unification of the forces also harmonises terminology across the 3 services.

1968 : The RCAF is removed from having any control over "Civilian Aviation".

#### 1968 :

UK : Government White paper on "Civil Aviation Policy" :

10. In the Government's view the principal objective of civil aviation policy must be to:

- A. encourage the provision of air services by British carriers, in
- B. satisfaction of all substantial categories of public demand, at
- C. the **lowest levels of charges**
  - A. consistent with a **high standard of safety** and
  - B. **economic return on investment** and
- D. the stability and development of the industry.

11. The principle of the "minimum of restraint" on competition or innovation can, however, be applied only within the limits set by airline economics and the practical realities of international civil aviation.

British civil air transport is an international industry, with well, over 90 per cent of its output on international services.

Here its' competitive strength is crucial , and here it makes its greatest contribution both to the economy and the balance of **payments**.

12. The industry is , and will continue to be, highly regulated throughout the world for a number of reasons.

- 1. First, there is the need for the highest standards of safety and the need to control aircraft noise.
- 2. Second, there is the need for stability and regularity of public transport services.
- 3. Lastly, there is the inescapable fact that international services depend upon a world of agreements reached with, other countries, defining the traffic rights which airlines may enjoy.

The need, therefore, is to operate within this "framework" in such a way as to give the industry the biggest possible opportunities in the expanding world market.

At the same time, however, this framework of regulation can be modified by international bargaining, by both the airlines and the Government. This applies to fares as well as to traffic rights.

Britain's international bargaining power is far from negligible.

13. The Government will incorporate these broad objectives in a policy statement that will be published and made binding upon the future regulatory body, to guide its work over the whole span of its activities.

The rest of this White Paper sets out the Government' s views on the organisational changes that are needed, and the policies that should be applied, in order to reach these objectives.

This more detailed exposition of the ways in which the objectives should be pursued will form the foundation of the policy guidance to the new regulatory body.

The Government accept that it may become necessary to vary parts of this guidance from time to time, to give effect to any changes of emphasis that may be required.

## Notes on "Civil Aviation"

15. The encouragement of - structural changes on the lines now envisaged calls for more purposive regulation of the industry than the present legislation and licensing system permit. The Government accept that the task should be carried out by a Civil Aviation Authority charged by Statute to act in accordance with the objectives and policies laid down in the Government's formal policy statements.

The Civil Aviation Authority will be concerned with the structure of the industry both in its broader terms and, more narrowly, in its decisions on individual routes.

It is the broader structural issues that are the main concern of Government policy.

### Safety and Technical Regulation

90. The Report stresses the inter - relationship between the economic, operational and technical regulation of the industry. All aspects of airline activity have a bearing on the safety of the services provided to the public. Conversely, the achievement of high standards of safety imposes an economic cost which needs to be taken fully into account both in creating the conditions in which airlines can operate profitably and in assessing the ability of an airline to fill a particular role.

The more purposive direction of economic regulation which the Government now intend to adopt will make it more important to take account of these relationships.

The quality of decisions, both about an airline's capacity and performance and about the course of future developments, will be improved if the regulatory authority has the fullest possible knowledge and understanding of all aspects of airline activity.

91. There are close links between the work on operational safety, which is at present the responsibility of the Director General of Safety and Operations, and the work of the National Air Traffic Control Services, which both at present come within the Board of Trade (the latter jointly with the Ministry of Defence).

With technical advance, there are also increasingly close links between the operational safety work at present conducted by the Board of Trade and the work on airworthiness conducted by the Air Registration Board; indeed, the Air Registration Board has recently suggested that there might be a case for combining some of these functions.

The "several" aspects of operational regulation:

- I. the certification of airworthiness,
- II. the rules governing the flying of aircraft ,
- III. the testing of professional competence,
- IV. the assessment of an airline's ability to operate safely, and
- V. the control of aircraft movements -

are interlocking aspects of a single operating environment.

92. For these reasons, the Government accept that:

1. the enhanced economic functions should be carried out, in accordance with a published policy directive, by a regulatory authority outside the normal departmental machinery;
2. that this authority should combine with these functions responsibility for the operational regulation of the industry; and
3. that all the operational and technical functions should be brought together within the same body.

They accept, therefore, that there should be a single Civil Aviation Authority having responsibility for the whole spectrum of economic, operational and technical regulation, including responsibility for airworthiness and for the non-Military aspect of the air traffic control services.

A single body with responsibility over this whole field would be in the best position to form coherent judgments both on the activities of individual airlines and on the developments which will best serve the national interest in this rapidly expanding industry.

93. The Civil Aviation Authority will be able to develop a comprehensive expertise in all aspects of the industry's affairs.

As such, it would be well placed to attract staff of the many professional skills required.

A larger organisation such as this would be able to offer better career prospects to many of its highly skilled and specialised personnel, who would gain the opportunity to broaden their fields of specialisation by moving between areas of work that are at present in separate compartments.

At the same time, as the report points out, there would be a continuity of experience that the Civil Service is less able to guarantee. Provision will be made for some movement of staff between the Authority and Government Departments;

95. In accepting the recommendation that the responsibility for airworthiness should be brought within the Authority, the Government intend no reflection on the Air Registration Board's past performance.

## Notes on “Civil Aviation”

The Board justly enjoys a high regard throughout the world and the Government are anxious that the scope and character of the Board's relations with the manufacturing and operating industries should not be impaired.

The Government will be concerned therefore, to ensure a minimum of disturbance either to the present internal organisation of the Air Registration Board or to the present arrangements for consultations with outside interests .

The Authority will draw on the same sources of advice as are at present available to the A.R.B.

97. In taking over the safety of aircraft operations and responsibility for the civil side of air traffic control, the Authority will acquire certain responsibilities in relation to general aviation and will not be solely concerned with commercial airline operations. The Governments formal statement of policy will include guidance to the Authority in matters affecting aerial work and private flying.

1968 : Canadian Federal election gave Pierre Trudeau his first majority government

### CANADIAN AVIATION - 1969

1969 ? : Boeing introduces the 747.

1969 : Britain withdraws from the “Airbus” project development.

#### 1969 :

Britain : “Technical Education Council” (T.E.C)

British NATIONAL ADVISORY COUNCIL on EDUCATION FOR INDUSTRY AND COMMERCE : DEPARTMENT OF EDUCATION AND SCIENCE : Report of the Committee on Technician Courses and Examinations

#### APPENDIX No. 1 : LIST OF ORGANISATIONS AND PERSONS WHO SUBMITTED EVIDENCE

The Committee received evidence from the following organisations, bodies firms, establishments and individuals (those who gave oral evidence are indicated by an asterisk):

- a) Educational Organisations and Associations:
  - a) City and Guilds of London Institute (CGLI)
- b. Industrial, Business and Training Organisations :
  - Civil Air Transport Industry Training Board, British Aircraft Corporation (Operating) Limited,
- c. Professional and similar Bodies :
  - Society of Licensed Aircraft Engineers and Technologists

#### SUBJECTS :

- 1. Aeronautical Engineering - Practice : CGLI No. 171 (Ending 1969 being succeeded by CGLI No. 371)
- 2. Aircraft Electrical - Practice : CGLI No. 175 (Ending 1969 being succeeded by CGLI No. 371)
- 3. “**Aeronautical Engineering Technician**” [formerly Licensed Aeronautical Engineer, formerly Aeronautical Engineer, formerly Aeronautical Ground Engineer - ed] **Certificate** : CGLI No. 371

#### Chapter VIII — FUTURE PATTERN OF [Aeronautical Engineering] COURSES

##### GENERAL

The “new Councils” should bear in mind:

- I. the need for courses designed to produce technicians [manufacturing personnel] and their business counterparts [aircraft operating technicians] capable of “readily adapting themselves to changing circumstances”;
- II. devise effective arrangements for keeping the subject matter and structure of courses under review;
- III. give early attention to reducing the multiplicity of individual subject courses that exist at present;
- IV. and take steps to secure suitable representation from the training board and other appropriate industrial and commercial organisations on their advisory committees.

##### THE TECHNICAL [trades?] SECTOR

The T.E.C should “gradually establish a new general pattern of technician courses” [which are] “better suited to modern needs”.

The steps in this direction should:

## Notes on “Civil Aviation”

1. Initially be taken in the field of [aeronautical] engineering, and then
2. Extend “the pattern” at appropriate junctures [ ? ] to other technical fields until it becomes “the *normal pattern* of technician education for the technical [labour / trades?] sector”
3. The timing of its introduction would vary from one industry to another, and a substantial period might be needed before it becomes established as the universal pattern.
4. To minimise the possibility of confusion on nomenclature the T.E.C should make it clear that “new titles refer exclusively to new style courses and qualifications”

### Chapter IX GENERAL CONSIDERATIONS AFFECTING TECHNICIAN AND COMPARABLE COURSES

#### BRIDGING BETWEEN COURSES

1. Even with better selection and a more feasible pattern of courses, there will still be a need at certain points for “bridging” studies for some students.
2. Where formal courses have to be provided for this purpose, they will require sympathetic treatment under the criteria for the approval of courses.
3. Industrial training boards should encourage the grant of additional release time for students who are required to undertake extra bridging studies.
4. Bridging programmes should be readily available for higher technician students who wish to transfer to degree courses.

#### STUDENT ASSESSMENT

1. It would be “for the T.E.C and B.E.C to decide” in the circumstances of each course, the kind of assessment component or combination of components “that should be used to test the students”.
2. The principle should be that any student
  1. who fulfils the entry requirements for his course and
  2. who works reasonably hard and well
  3. should be entitled to expect that “he will pass the examination”.
3. The award of a technician qualification “should never depend solely on the student’s performance” in a formal examination,
4. the number of [formal examinations] should be kept to the absolute minimum.
5. The measurement of “performance” on the educational course is only one part of the total assessment of the trainee’s progress towards full preparation for his job.
6. The two Councils should:
  1. be ready to encourage the use of different combinations of assessment techniques for technician and comparable students, and
  2. consider in appropriate cases the award of qualifications for studies taken under the “credit” system.

#### DURATION AND FORM OF COURSES

The overall duration of technician and comparable courses, with what is basically a two year stage between one level of qualification and another,

#### GENERAL STUDIES IN TECHNICIAN COURSES

1. Time spent on a reasonable and relevant programme of general studies is time well spent, and
2. all syllabuses for technician and comparable courses should continue to prescribe these studies as an integral part of the course.
3. Each college should remain free to plan general studies in support of the main vocational studies, and link them closely in purpose and method in the way best suited to local needs and circumstances.
4. General studies should be of benefit in preparing technicians for a supervisory role.

There are in existence “Block Release Courses” in Aeronautical Engineering Practice complying with the City and Guilds courses 171 and 175, which are Technicians' courses leading to the awards of Part I and II certificates, and to the Full Technological certificate.

The aim of the “Block Release Courses”, as stated in the 1966 prospectus of Southall College of Technology: <sup>289</sup>

---

<sup>289</sup> JOHN H. COX, Student member RAeS : Assistant Chief Engineer, Cambrian Airways Limited 9th August 1966. JOURNAL OF THE ROYAL AERONAUTICAL SOCIETY pg 883 SEPTEMBER 1966

## Notes on “Civil Aviation”

"Is to produce, first and foremost, an aircraft servicing and maintenance engineer who will have the necessary academic and practical training which will enable him to apply his knowledge and technique on transport by air under present and future conditions"

The **City and Guilds Aeronautical Engineering Practice** courses have been carefully arranged to comply with the licence regulations of the British Civil Airworthiness requirements.<sup>290</sup>

A first class pass in a Part II certificate **gives complete exemption** from the appropriate ARB basic licence examination.<sup>291</sup>

The **Society of Licensed Aircraft Engineers and Technologists** also give certain exemptions from their examination requirements to holders of the City and Guilds Part II certificate.<sup>292</sup>

### CANADIAN AVIATION - 1970

1970 : Formation of “Airbus Industrie”, a consortium of nations in Europe building common project aircraft.

1970 : Airbus Industrie introduces the A300 design.

1970 : Air Canada inaugurates Boeing 747-100 service - C-FTOA.

1970 : Government “aviation” Structure

There are nearly 30,000 registered pilots in Canada:

21,300 private,

7,562 commercial, and

1,082 glider.

Canadian “Civil aviation” is under the jurisdiction of the federal government. The Canadian Department of Transport (DOT) is responsible for the promotion and regulation of all Canadian civil aviation, both foreign and domestic, and for the provision of facilities in connection with civil operators.

#### 17 February 1970 :

the Minister of Finance announced the long proposed re-organization of DOT. Changes include conversion of DOT into a ministry and creation of an Air Administration (TCCA).

The Air Transport Board (ATB) was established in 1944 to advise the Department of Transport in matters pertaining to:

I. civil aviation, and

II. to license all commercial transports,

subject to the approval of the Minister of Transport.

Under the National Transportation Act of 1970 the ATB becomes the Air Transport Committee (ATC) of the Canadian Transport Commission.

The aim of the National Transportation Act is to blend all modes of government and private transportation, with more direct control allotted to the Minister of Transport.

The Air Transport Committee, made up of five commissioners, was especially formed to help the industry to develop along sound economic lines that will give fair returns to the operator and adequate service to the public.

The Canadian aviation industry has so far expressed some confusion regarding the legality of many of the ATC's rules and regulations.

#### 1966 :

Canadian Government Policy toward Airlines

---

<sup>290</sup> JOHN H. COX, Student member RAeS : Assistant Chief Engineer, Cambrian Airways Limited 9th August 1966. JOURNAL OF THE ROYAL AERONAUTICAL SOCIETY pg 883 SEPTEMBER 1966

<sup>291</sup> JOHN H. COX, Student member RAeS : Assistant Chief Engineer, Cambrian Airways Limited 9th August 1966. JOURNAL OF THE ROYAL AERONAUTICAL SOCIETY pg 883 SEPTEMBER 1966

<sup>292</sup> JOHN H. COX, Student member RAeS : Assistant Chief Engineer, Cambrian Airways Limited 9th August 1966. JOURNAL OF THE ROYAL AERONAUTICAL SOCIETY pg 883 SEPTEMBER 1966

## Notes on "Civil Aviation"

the Canadian Government announced a new air transport policy that would allow for, among other things, limited regional carrier competition with Air Canada and Canadian Pacific, the transfer of some routes away from the two trunk carriers, and subsidies on a "use it or lose it" basis.

The new policy allotted the regional carriers a larger role in connection with the development of domestic and international charter services, inclusive tours, and new types of services. Regionals are allowed to operate along the so-called main line, but without nonstop authority between major terminals.

The Government would like to see closer cooperation among regionals, including interline and inter-ticketing agreements, joint training programs, and spares support.

The Government also announced that a committee would be established to develop greater cooperation between the mainline carriers and the regional carriers in a variety of fields ranging from technical and servicing arrangements to joint fare arrangements and other suitable areas of cooperation.

The airlines which are currently eligible for subsidies are Pacific Western Airlines, Transair, Nordair, Quebecair, and Eastern Provincial Airways. Continuation of any subsidy is dependent upon developing and maintaining an adequate volume of traffic.

In reviewing applications for subsidies the Air Transport Board is to consider suitability and availability of other means of transportation; require evidence that the service has or will have substantial use; and set limits upon the period of time during which the subsidy may be paid, unless cause is shown for continuation.

Steps are also to be taken to assist regional carriers in the acquisition of aircraft by development of a "scheme" (Programme) for consultation between the Government and the carriers regarding plans for new aircraft; and by a special investigation designed to explore the possibility of developing a joint approach to aircraft procurement on the part of the carriers.

All carriers operating on regular routes are required to report to the Government proposals for multi-engine aircraft purchases before firm orders are placed. Subsidies are to be given only to enable the provision of the minimum equipment for eligible air services and not to enable the carrier to re-equip needlessly at the public expense.

The Government reportedly will use Air Canada's profits to finance the new subsidies for regional airlines. Unfortunately, the Canadian aviation industry is experiencing a great deal of confusion regarding the Government's new policy. There has been little implementation of previously enunciated policy governing the mainline and regional carriers. The record to date shows no new competition, no transfer of routes, and discontinuance of the only subsidy payments made.

Historically, the Government's policy on scheduled international services has been that they should serve the Canadian interest as a whole and represent a single integrated plan.

Only Air Canada and Canadian Pacific Airlines have the right to provide international and trans-border services, and each has been given its own sphere of operations. Air Canada serves the United Kingdom, northern Europe (except Amsterdam, which is served by CPA) and the Caribbean. Canadian Pacific serves the Pacific, Asia, Australia, New Zealand, southern Europe, and Latin America. The United States, served by both airlines, and Africa, presently served by neither, are exempted from these spheres.

Air Canada and CPA will continue to be the only carriers to provide trans-continental service. During 1967 Canadian Pacific was permitted to inaugurate its second transcontinental service, and in 1969 increased it to five round trips daily. This brought CPA's share of the total market near the 25 percent granted in the Government formula for transcontinental service.

The Government's policy has been that Canadian Pacific's mainline service should not be allowed to compromise or seriously injure the economic viability of Air Canada's operations, but that above this basic minimum both Air Canada and CPA should be given an opportunity for growth.

### Aircraft on Register

Among free world countries, the Canadian civil aviation fleet is second in size only to that of the United States.

September 1969 there were 10,591 civil aircraft on the Canadian register,

- a) 3,113 commercial aircraft.
- b) 6,709 private aircraft,

## Notes on "Civil Aviation"

- c) 200 state owned,
- d) 18 experimental,
- e) 91 restricted commercial,
- f) 428 ultra light, and
- g) 32 private restricted aircraft. (See table 1).

September 1969 : Canadian Commercial Air Services

The two "major" Canadian airlines are:

1. Air Canada, a subsidiary of Canadian National Railways. Owned and financed by the Government of Canada. Canadian National Railways is a Crown Corporation.
2. Canadian Pacific Airlines (CPA), a subsidiary of Canadian Pacific Railways. Owned and financed by Canadian Pacific Railways. Canadian Pacific Railways is a Private Corporation.

In addition, there are four privately owned regional carriers providing scheduled (class 1) air service. They are

1. Eastern Provincial Airways,
2. Quebecair,
3. Transair,
4. Pacific Western Airlines.

There are also approximately 370 class 2 thru 7 air carriers which provide regular, irregular, charter, contract, and specialty services.

The new Federal Government (Liberal - Prime Minister Pierre Elliot Trudeau) "review of airline policy" issued during late 1968 has re-kindled interest in a possible merger of Air Canada and CPA, **but the view still exists** that "competition is necessary on domestic routes" and to a limited extent, on international routes.

1968 : Canadian air carriers transported

9.3 million revenue passengers [an increase of 3.8 percent over 1967]

445 million pounds of revenue goods [an increase of 21.3 percent over 1967].

Revenue passenger miles performed increased 11.5 percent to 8.2 billion, and goods ton miles increased 32.8 percent to 226 million.

Operating revenues were up 13 percent to \$614 million,

operating expenses increased 11.6 percent to \$576 million. (See table 2.)

Approximately 90 percent of the operating revenues and expenses were accounted for by the six scheduled airlines, the six scheduled airlines also carried over 90 percent of the passengers and 66 percent of the cargo.

Bulk traffic, or charter revenues, totaled \$70.1 million [a 21.8 percent increase over 1967]

51 carriers operating helicopters.

Helicopter operations:

flew an estimated 160,000 revenue hours

had operating revenues of \$18,614,000.

The group V2 carriers transported [in 1976]

216,660 revenue passengers [a decrease of 3.1 percent over 1967]

7,708 tons of goods [a decrease of 5.2 percent over 1967]

Revenue hours flown were 407,122 [an increase of 8.7 percent over 1967]

Foreign carriers operating scheduled service in Canada transported

2,648,252 revenue passengers [an increase of 69.6 percent over 1966]

34,508 tons of revenue goods [an increase of 20.8 percent over 1966]

Air Canada

Air Canada, whose name was changed from Trans Canada Airlines on January 1, 1965, serves approximately 61 communities in Canada, the United States, the British Isles, continental Europe, U.S.S.R., Bermuda, the Bahamas, and the Caribbean islands. It is the world's eighth largest carrier and the largest outside the United States and the U.S.S.R.

## Notes on "Civil Aviation"

(Under the proposed DOT reorganization announced on February 17, 1970, Air Canada would eventually become a separate crown corporation.)

In 1967 Air Canada started operating Toronto/Montreal/Miami, Montreal/Chicago, and Toronto/Los Angeles services.

In 1968 the company carried 6,413,000 passengers on scheduled flights, an increase of 1.3 percent over 1967.

Air freight increased 36.5 percent to 116,878,000 ton miles

Air express increased 16.3 percent to 7,878,000 ton miles

air mail rose 6.3 percent to 22,811,000 ton miles

Available seat miles on scheduled flights increased by 20.2 percent during 1968 to 9,683,835,000,

revenue passenger miles totaled 5,621,657,000, in 1978 up 7.7 percent,

making Air Canada seventh in the world in revenue passenger miles flown.

System total ton miles amounted to 711,393,000, an increase of 11.5 percent.

Net income after tax in 1968 was \$8,184,000 and return on investment

6.3 percent, compared with \$3,547,000 and 5.2 percent in 1967.

Operating revenues were up 12 percent to \$387,628,000

Operating revenues were split into

passengers (85 percent),

freight express and

excess baggage (9 percent),

mail (4 percent), and

charter and incidentals (2 percent).

1968 : Air Canada takes delivery of three 139-passenger DC-8's and three 196-passenger long-body DC-8-61's, increasing its DC-8 fleet to 27 aircraft.

Deliveries of 94-passenger DC-9 aircraft totaled 18 during the year, while six 72-passenger DC-9's were returned to McDonnell Douglas Corporation.

Introduction of additional jet aircraft, especially the long-body DC-8's, resulted in larger capacity, and concurrently total load factor dropped from 75 percent to 58 percent.

The airline has started a program to retire its fleet of Vickers Viscount and Vanguard aircraft.

Five of the airline's 23 Vanguards have been retired..

### Other Airlines

Among the smaller Canadian airlines are

1. Air Gaspé Inc.,
2. Airwest Airlines Ltd.,
3. B.C. Airlines Ltd.,
4. Cavalier, Eldorado Aviation Ltd.,
5. A.Fecteau Transport Aerien Limitee,
6. Gagnon Air Services Ltd.,
7. Georgian Bay Airways Ltd.,
8. Gordon Airways Ltd.,
9. Great Lakes Air Services Ltd.,
10. Laurentian Air Services Ltd.,
11. Matane Air Services Ltd.,
12. North Canada Air ,Ltd. (Norcan Air),
13. Northern Wings Ltd. (Les Ailes du Nord),
14. Northward Aviation Ltd., and
15. Parsons Air-wings Ltd.

### General Aviation

The Canadian Department of Transport (DOT) defines civil aviation as "all flying performed by civil aircraft other than route operations of scheduled carriers".

Canadian General aviation thus includes the non-route services of scheduled carriers, all other commercial flying, private and business flying, and flying performed by nonmilitary government aircraft.

Over 70 percent of the 10,591 aircraft on register as of September 30, 1969, were non-commercial.

## Notes on “Civil Aviation”

However, the average utilization of general aviation is quite low.

In 1968 an estimated 700,000 hours were flown by private flying, a 97,000 hour increase over 1967.

General aviation in Canada has been limited by the one problem aviation normally solves—distance.

The advent of the business jet, however, has eased the time and comfort considerations of the long distance commuting businessman.

Owned and leased corporate aircraft are increasingly supplementing their workhorse piston-powered predecessors.

The growth of advanced flying also reflects the trend toward more sophisticated equipment.

Even the famous bush operator is requiring “more specialised” aircraft for their operation.

### 1969 Canadian Private Flying

In the past few years private flying has increased more rapidly than commercial aviation and this trend is expected to continue.

September 1969 : 6,709 private aircraft are registered in Canada, 5,406 of which have valid certificates of airworthiness.

The percentage of private aircraft in the total aviation fleet has risen from 40 percent in 1951 to over 63 percent in 1968.

At the end of 1967 there were 21,089 licensed private pilots. (in 1988 there are only some 8 thousand AMEs!)

In 1969 an estimated 700,000 hours were flown by the private sector; 603,000 were flown in 1967.

All indications are that business aviation is at an all time high and that more and more business airplanes are being sold, chartered, or leased. In 1968 Canadian companies owned approximately 1,000 aircraft of a type or size normally operated in business/executive configurations, including 20 business jets. This was an increase of 240 over the 1967 fleet.

### Government Support of General Aviation

While the Federal Government has no national program designed exclusively to support general aviation, general aviation benefits from Government support of aeronautical facilities and services, particularly airports. In addition, the DOT administers a program of assistance for flying training which primarily benefits general aviation.

Charges for general aviation are kept low and revenues from general aviation represent only a small part of the services from which general aviation aircraft benefit.

All civil airports, other than a very small number of private airports, are available for use by general aviation.

However, at the largest scheduled carrier airports, beginning flying training is not permitted, and a special landing fee is charged at the three largest airports for small privately-registered aircraft, which may land elsewhere without charge.

The Government does not offer subsidies to any nonscheduled carriers.

The Government policy on licensing charter operators has changed several times in the past ten years:

in 1958 the Government adopted a “liberal policy” of granting licenses;

in 1962 the increased controls were reinstated;

in early 1966 the Government again liberalised its policy on granting licenses.

(src ref - World Survey of Civil Aviation - U.S dept of commerce)

1970's :

UK RAF - in the early 1970s it was decided to introduce a three-year “dual trade” Apprenticeship for the RAF Engineering Technician who would now be specialising in just two trades, “Airframes and Propulsion”. [is this the final result of the Canadian CAF failing to bring the UK structure for civil aviation onboard in 1919? Did Canada have a role in turning what was once a very highly skilled trades person, with a future advancement potential into officer country and retirement into Civy life with a solid trade or an AME license into a lowly A&P mechanic?

Was this done so that ex-RAF / RCAF technicians could find a job in the ICAO governed airlines?]

1970 :

the US Civil Aeronautics Board is eliminated.

## Notes on “Civil Aviation”

The United States Civil Aeronautics Board (CAB) was one-half of the U.S. Civil Aeronautics Authority that was responsible for all aviation matters in the United States related to “safety rulemaking, accident investigation, and economic regulation of the airlines.” (source ref. The Federal Aviation Administration and Its Predecessor Agencies, <http://www.centennialofflight.gov/essay/Government-Role/FAA-History/POL8.htm>)

### CANADIAN AVIATION - 1971

USA : When the results of the CARD study were released in March 1971, the report concluded that a healthy civil aviation industry and transportation system provided a variety of significant benefits to the nation. Consequently, the study recommended, the federal government should take an active role in developing a national aviation policy and conducting R&D to benefit civil aviation. - DOT- NASA Civil Aviation Research and Development (CARD) Policy Study. SRC ref NASA SP-4216

### CANADIAN AVIATION - 1972

1972 : Canada’s first licensed female AME - Maureen Rutledge - is granted AME license No. (Y)YZ - M License # 1081 issued in Carp, Ont. - Source Roger Beebe: [//www.helicoptersmagazine.com/career-development/serving-the-industry-1845#sthash.M5JevAts.dpuf](http://www.helicoptersmagazine.com/career-development/serving-the-industry-1845#sthash.M5JevAts.dpuf)

Interestingly “YZ” refers to the regional office in the airport where the license was issued (YYZ) and the M refers to “Maintenance”, does then “P = Private Pilot, C= Commercial Pilot, and T = Transport Pilot”.

### CANADIAN AVIATION - 1973

### CANADIAN AVIATION - 1974

“aircraft maintenance engineers are an essential part of the field of aeronautics and therefore constitute a work, business or undertaking coming within the exclusive jurisdiction of the Parliament of Canada”. <sup>293</sup>

### CANADIAN AVIATION - 1975

1975 :

In the UK the “Private Aviation Committee” resolved to approach the Civil Aviation Authority with a request for an ‘in depth’ review of the philosophy and implementation of light aircraft certification and maintenance<sup>294</sup>.

June 1977 : UK : introduction of new aircraft log books and extensions to the finite lives for aircraft piston engines.

The full “scheme” (Programme) will be introduced in 1978 and will involve changes to certification categories, maintenance schedules and airworthiness procedures<sup>295</sup>.

The proposals include provision of two levels of maintenance;

1. one for the Public Transport aircraft, and

<sup>293</sup> Field Aviation Co. v. Indust. Rel. Bd. (Alta.), 1974 ALTASCAD 62, [1974] 6 W.W.R. 596, 49 D.L.R. (3d) 234 (Alta. C.A.)

<sup>295</sup> (Light Aircraft Inspection J.E Heywood - Airworthiness Surveyor with the CAA Published by T & A D Poyser, UK (1977) ISBN 10: 085661016X ISBN 13: 9780856610165)

## Notes on “Civil Aviation”

2. one for the Private aircraft

However, at the time of writing, the proposals have not received formal acceptance.

“When in doubt over the state of an item  
always ask a qualified aircraft maintenance engineer for his judgement.  
*He may charge you for his advice but ....*”<sup>296</sup>

### CANADIAN AVIATION - 1976

1976 :

*Sir Frank Whittle, emigrates to the U.S.A, accepts position of NAVAIR - Research Professor at the United States Naval Academy from 1977 1979.*

### CANADIAN AVIATION - 1977

### CANADIAN AVIATION - 1978

*deregulation of the U. S airline industry in 1978 made the business much more competitive. As a result, accountants became more powerful players in purchase decisions, and airlines and airframe manufacturers became much more likely to reject new technology unless it was going to show a concrete, short-term profit. src NASA SP-4216*

### CANADIAN AVIATION - 1979

1979 :

*The International “Agreement” on Trade in regards to Civil Aircraft is signed on Apr. 12, 1979 (The GATT)*

### CANADIAN AVIATION - 1980

early 1980s, a proposal to reduce or even eliminate government support for aeronautical research led the White House Office of Science and Technology Policy (OSTP) to re-examine the government’s role in aeronautical research and development (R&D). After a year-long study, its final report concluded that “government support of aeronautics was not only still appropriate, but was a critical element to the continued economic health of the country”. 1980, the U.S. market share of large civil transport sales was 90 percent. By 1992, that percentage had dropped to 70 percent and was in danger of falling even further.

<sup>296</sup> (Light Aircraft Inspection J.E Heywood - Airworthiness Surveyor with the CAA Published by T & A D Poyser, UK (1977) ISBN 10: 085661016X ISBN 13: 9780856610165)

## Notes on “Civil Aviation”

the [Taft-Hartley Act of 1947](#), which applied unfair-labour-practice provisions to unions and in a variety of ways weakened their economic and organizational power, labour law in the United States became steadily more burdensome to the labour movement. By contrast, Canadian federal and provincial law retained, and even deepened, its pro-union bias.

No Canadian counterpart to U.S. President [Ronald Reagan's](#) decision in 1981 to break a strike by federal air-traffic controllers—an act of enormous symbolic importance that legitimized the resurgence of [antiunionism](#) in corporate America.

Anti-unionism gained no such public legitimacy in Canada.<sup>297</sup>

### CANADIAN AVIATION - 1982

*Ronald Reagan's science advisor also noted in 1982 that “aircraft are now the dominant common carrier for inter-city travel, and the safety and control of that travel are a federal responsibility.” Src ref NASA SP-4216*

#### 1982 :

the Canada Act, 1982 removes the last remaining ties of legal dependence on the Parliament of the United Kingdom

Government of Canada - Senate report : Industry Trade and Commerce : Vote 6C— Canadair Limited was established through Appropriation Act No. 1, 1980-81 at \$150 million. These loans were used to finance the development and production of the Challenger aircraft and other general obligations of the Company. It is proposed to expand the guarantee authority for Canadair loans to permit:

- the deeming of the inclusion of other financial arrangements with financial institutions such as promissory notes, banker's acceptances and bank charges to be included in the guarantee;
  - the increasing of the guarantee limit from \$150 million to \$1,350 million;
  - the refinancing of existing loans and the draw down of new loans as long as the aggregate liability of the Crown does not exceed the limit of \$1,350 million;
- and
- the declaration of an expiry date for the guarantee authority of March 31, 1991

A review of the Corporation's financial requirements indicates the necessity for loan guarantees would reach the \$1,350 million limit by mid 1983

Vote 7C—To clarify the current authority for loan guarantees to the de Havilland Aircraft of Canada Limited so as to deem that the "guarantee" authority includes other financial arrangements and that refinancing can be arranged assuming the aggregate liability of the Crown does not exceed the guarantee limits.

Explanation—The present loan guarantee to de Havilland was established through Appropriation Act No. 4, 1980-81 at \$450 million. These loans were used to finance the development and production of the DASH 8 aircraft and other general obligations of the Company. The requested authority clarifies the meaning of the loan guarantee to ensure that it includes financial arrangements such as promissory notes, banker's acceptances and bank charges incurred in making the loans. In addition, this proposed authority will provide de Havilland with the ability to refinance existing loans and draw down new loans so long as the aggregate liability of the Crown does not exceed \$450 million.

Eldorado Nuclear Limited and subsidiary Eldorado Aviation Limited

23 February 1982 : The Honourable Senator Perrault, laid on the table the Report of the Commission of Inquiry on Aviation Safety, Volume 3 (Commissioner, The Honourable Mr. Justice Charles L. Dubin), dated February 1982.

---

<sup>297</sup> <https://www.britannica.com/topic/organized-labor/The-United-States-and-Canada#ref540199>

1982 : While the civil courts have expanded the scope of review over inferior tribunals in recent years, they have been reluctant to interfere in military matters, unless:

1. the military tribunal has acted without jurisdiction or
2. the military tribunal has exceeded its jurisdiction.

Until recently, the civil courts would not inquire at all into matters involving the discipline of members of the Armed Forces.

“an action cannot be maintained by a subordinate officer against a commander for an act done in the course of discipline and under powers legally incident to the situation.”

Sutton v. Johnstone - Court of the Exchequer, London, England, 1786.

The plaintiff: Captain Sutton, Commanding Officer of Her Majesty's Ship Isis.

The defendant: Commander Johnstone, Officer Commanding, in charge of the British squadron.

In 1871 the British were at war with the French:

1. In April of 1781 Her / His Majesty's ship “Isis” was damaged in a naval engagement against the enemy.
2. The French fleet withdrew from the battle.
3. Commander Johnstone ordered Isis to pursue the enemy.
4. Captain Sutton did not obey Johnstone's order because of the [poor, battle damaged] condition of Isis..
5. Commander Johnstone had Captain Sutton arrested for disobedience of orders.
6. Captain Sutton was then tried by court martial for “*disobedience of orders*”.
7. Captain Sutton was acquitted.
8. Captain Sutton then brought civil suit against Johnstone for malicious prosecution.
9. The matter was tried twice in the lower courts.
10. Captain Sutton was awarded damages on both occasions.
11. Commander Johnstone appealed to the Court of Exchequer.
12. The Court of Exchequer finds in favour of Commander Johnstone and reverses the original judgment.
13. Captain Sutton appeals to the House of Lords.

## Notes on "Civil Aviation"

14. In the House of Lords, Lord Mansfield and Lord Loughborough state in obiter that "*an action cannot be maintained by a subordinate officer against a commander for an act done in the course of discipline and under powers legally incident to the situation.*"
15. The judgment of the Court of Exchequer is affirmed by the 'Lords on the ground that "Johnstone had probable cause for the prosecution".
16. The attitude of the courts was based on "obiter dictum".

The dictum of Lords Mansfield and Loughborough has been cited since 1786 for the broad proposition that "the civil courts will not inquire into the exercise of military discipline".

Dawkins v. Lord Rokeby - Military or civil court? (1866)

The plaintiff: Serviceman Dawkins

The defendant : Lord Rokeby

1. During ?? action ?? Lord Rokeby ??
2. Serviceman Dawkins ??
3. [Lord Rokeby has Serviceman Dawkins arrested, placed under irons ? and court martialled for disobeying ???]
4. Dawkins files a civil suit for damages for "false imprisonment and malicious prosecution."
5. The court held that "even assuming there was clear malice and absence of probable cause", the plaintiff, Dawkins, had no cause of action.

Dawkins v. Lord Rokeby - Court of the Exchequer, London, England 1873

The plaintiff: Serviceman Dawkins

The defendant : Lord Rokeby

A subsequent action to the 1866 case was brought by the same parties, and heard by the Court of Exchequer in 1873.

Kelly C.B. delivered the judgment of the Court and dismissed the plaintiffs action.

Kelly C.B. stated: With reference, therefore, to such questions, which are purely of a military character, the reasons of Lord Mansfield and the other judges in Sutton v. Johnstone [...] are [...] authorities to *show that a case involving questions of military discipline and military duty alone are cognizable only by a military tribunal, and not by a court of law.*

Canadian courts have followed the general 'hands off' attitude of the English civil courts regarding matters of military discipline.

1919 : Ex parte Fogan - Supreme Court of New Brunswick

1. the plaintiff serviceman was convicted by court martial for the offence of drunkenness committed while in a private home.
2. It was Fogan's third offence.
3. Fogan was sentenced to nine months' imprisonment at hard labour.
4. Fogan applied to the civil court by way of certiorari.
5. The civil court refused to intervene and in dismissing the action, the Court held that "*certiorari was not available to review a matter of procedural error made by a military tribunal.*"

One of the leading Canadian cases exemplifying the 'hands off' attitude of the civil courts regarding matters of military discipline is

Regina and Archer v. White - Supreme Court of British Columbia (1956)

The plaintiff(s) : The Crown, Archer - Superintendent of the Royal Canadian Mounted Police.

The defendant: White - Constable of the Royal Canadian Mounted Police

1. White is convicted of four disciplinary charges under the Royal Canadian Mounted Police Act.
2. White is dismissed from the force.
3. White applies for certiorari before the Court in order to remove the record of his convictions [held by RCMP Superintendent Archer]
4. The trial court recites the "common" law principle that "*the civil courts have no power to interfere with matters of military conduct and discipline.*"
5. Whites suit is dismissed.

## Notes on "Civil Aviation"

6. In dismissing White's application, the court held that disciplinary matters within the RCMP are akin to those before a military tribunal and, therefore, the same principles apply. Certiorari is not applicable to decisions of the RCMP disciplinary tribunal when that body has acted within its statutory powers.
7. White appeals the decision to the British Columbia Court of Appeal,
8. The British Columbia Court of Appeal held that certiorari was applicable in this case, because the military cases are not relevant to RCMP disciplinary matters.
9. Superintendent Archer appeals the ruling of the British Columbia Court of Appeal to the Supreme Court of Canada.
10. The Supreme Court:
  1. is unanimous in allowing Archer's appeal.
  2. restores the judgment at trial.
  3. only Justice Abbott J. agreed with the trial judge that *the courts have no power to interfere with internal matters of discipline within the RCMP*.
  4. The majority of the Supreme Court held that *the right of the court to intervene by way of certiorari is undoubted, both in respect of the military and the RCMP*.
  5. In this case, however, there was nothing in the material before the court to sustain charges of fraud, bias, or want of jurisdiction.
  6. Justice Rand J. expressed the opinion that *the court would be reluctant to interfere with proceedings before the RCMP tribunal if within the scope of authority granted*,
    1. wrongs are done by individuals, [and that is not beyond possibility,]
    2. the appeal must be to others than to civil tribunals, or
    3. as in the case of the Army, they must be looked upon as a necessary price paid for the vital purposes of the force.

Notwithstanding the general reluctance of the civil courts to interfere in military matters, when the exercise of military authority denies service personnel their fundamental common law rights and liberties, the civil court will intervene.

This principle was followed in

Rex v. Thompson (No.]) (1945) - which stands as one of the few cases in which the civil courts have been willing to interfere in the exercise of military discipline.

In this case, Thompson applied to the civil courts by way of habeas corpus.

Thompson - Non-Commissioned Officer in the Canadian Army.

Thompson was arrested on charges of theft of public property and improper possession of public property.

Thompson was detained in military custody for two and one-half months, and finally was brought before a District Court Martial. Thompson submitted that the Court Martial did not have jurisdiction to hear the case.

The Court Martial held that *it did have jurisdiction* and proceeded with the trial.

The Court Martial proceedings were interrupted by Thompson's application for habeas corpus brought before the High Court of Ontario.

the High Court of Ontario - Justice LeBel J.

LeBel J. examined the relevant provisions of:

1. the Army Act and
2. the military rules of procedure.

LeBel J. noted that "The jurisdiction of the Court Martial is conditioned upon *a prior hearing of the charge by the Commanding Officer (CO)*".

During this "Prior Hearing", the C.O must exercise his or her discretion by either:

1. dismissing the charge,
2. disposing of the case summarily,
3. referring the matter to proper military authority, or
4. remanding the case to trial by court martial.

LeBel J. found that the Court Martial did not have jurisdiction to hear the matter because the requisite hearing by the Commanding Officer had not been held.

LeBel J held that the Court Martial had acted without jurisdiction and ordered that Thompson be released from custody.

## Notes on "Civil Aviation"

Following his release from custody, Thompson was transferred to another regiment.

Thompson was re-arrested at his new posting on the same charges.

Thompson again petitioned the civil courts, this time by way of prohibition in order to prevent his new Commanding Officer from taking further proceedings on the same charge.

The Ontario High Court granted Thompson's application, and in so doing Urquhart J. expressed some concern that the new Commanding Officer knew little of Thompson apart from the charges pending before him.

Therefore, *the Commanding Officer could not reasonably exercise his discretion regarding the matter.*

Urquhart J. held that Thompson *had good cause for being apprehensive about his hearing before the new Commanding Officer and his trial by court martial.*

Rex v. Thompson is an exceptional case in a long line of Anglo- Canadian jurisprudence.

Although Urquhart J. in Rex v. Thompson (No.2)<sup>31</sup> found that there was a reasonable apprehension of bias, there was no express finding that the new Commanding Officer had acted without jurisdiction.

The statutory basis of the Commanding Officer's discretion does not require familiarity with the personnel brought before him or her.

Clearly Urquhart J. was more *concerned about the abuse of process* [in light of Thompson's initial release by way of habeas corpus] than he was about the legality of the proceedings under the new Commanding Officer.

*In Canada, service personnel do not entirely give up their common law rights upon enlistment. However:*

5. *The common law rights of service personnel may be expressly taken away by statute, ( [1946] O.R. 77, 4 D.L.R. 579, 86 C.C.C. 193 (H.C.).)*
6. *The common law rights of service personnel may be expressly taken away by order-in-council under the War Measures Act, (S.C. 1914 (2d Sess.), c. 2. See Re Gray (1918), 57 S.C.R. 150, 42 D.L.R. 1.) which grants the federal Cabinet the authority to suspend common law rights during a national emergency.*

The power of the federal Cabinet to authorize conscription in time of war was upheld by the majority of the Supreme Court of Canada in Re Gray (1918).

Anglin J. quoted with approval the judgment of Lord Atkinson in R. v. Halliday.

Anglin J. stated: However precious the personal liberty of the subject may be, there is something for which it may well be, to some extent, sacrificed by legal enactment, namely, national success in the war, or escape from national plunder or enslavement.

It is not contended in this case that personal liberty of the subject can be invaded arbitrarily at the mere whim of the executive.

What is contended is that the executive has been empowered during the war, for paramount objects of State, to invade by legislative enactment that liberty in certain states of fact.<sup>36</sup>

Once a person enlists in the military, he or she becomes subject to the Code of Service Discipline at all times and in all places and, consequently, his or her liberty is considerably constrained.

Once a person is conscripted into service, he or she becomes subject to the Code of Service Discipline at all times and in all places and, consequently, his or her liberty is considerably constrained.

While members of the Armed Forces may apply for review of a military matter, the scope of review is much narrower than the civil courts have exercised for other inferior tribunals.

The courts have been particularly loathe to interfere in military matters during a national emergency, and pursuant to sweeping powers granted under the War Measures Act, cabinet powers to suspend common law rights entirely have been held to be *intra vires*.

Generally speaking, under the common law, it is clear that military personnel have very limited rights of review.

## Notes on "Civil Aviation"

### CANADIAN AVIATION - 1983

1983 report of the White House Science Council stated that "The ultimate purpose of Federal support for R&D is to develop the science and technology base needed for a strong national defense, for the health and well-being of U.S. Citizens, and for a healthy economy. src ref NASA SP-4216

### CANADIAN AVIATION - 1984

### CANADIAN AVIATION - 1985

### CANADIAN AVIATION - 1986

1986, United States high-technology imports exceeded exports for the first time. The aerospace industry was one of the only remaining fields with a trade surplus, 90 percent of which was attributable to the sale of aircraft and aircraft parts. Compared to an overall U.S. trade deficit in manufactured goods of \$136 billion in 1986, the aerospace industry had a surplus of \$11.8 billion src ref NASA SP-2426

### CANADIAN AVIATION - 1987

November 1987 : licensed aircraft maintenance engineers, Laverne Ross and Keith Comyn of Frontenac Aviation, performed "a condition and conformity inspection" and a "100 hour inspection" of the Rideau Gliding Club's Cessna 150 aircraft.

### CANADIAN AVIATION - 1988

8 June 1988 : Shortly after take-off from Gananoque Airport a Cessna 150 owned by the Rideau Gliding Club crashes, resulting in death of Henry Janzen, the pilot and sole occupant. The Canadian TSB investigates and determines the cause of the accident was the in-flight separation [breaking] of the elevator control cable as a result of contact between it and the battery [positive] lead which caused the control cable to wear through the insulation of the battery lead. The subsequent contact between the elevator control cable and the copper wire core of the battery lead caused electrical 'arcing' that melted the strands of the elevator control cable, causing it to break in-flight resulting in loss of control the airplane.

During the accident investigation Safety Board investigator Enns spoke to both AMEs, Comyn and Ross, and neither could remember specifically inspecting the Cessna's battery area in respect to the contact [between flight controls and other] systems the previous November.

Mrs. Janzen subsequently files suit against the Rideau Gliding Club and their contracted inspectors Frontenac Aviation

At the "Civil" trial, Comyn testified that during the 100 hour inspection he would have disconnected the battery lead and serviced the battery as part of the inspection.

Both AMEs, Comyn and Ross, testify that the automotive battery lead found in the aircraft by the Transportation Safety Board investigation following the accident was not in the aircraft when they performed the inspection.

A witness, [Mr.] Jenkins, who was an aviation insurance adjuster, testified that he was told by Comyn that Comyn had no recollection of the specific work done on this 100 hour inspection.

Comyn admitted on cross-examination that he had no "specific memory" of the battery lead that was in the aircraft when he inspected it in November 1987.

A review of the evidence of the witness Ross also indicates that he actually had no specific recollection of the positioning of the battery lead in relation to the elevator control cable.

## Notes on "Civil Aviation"

The plaintiff, Mrs. Janzen, tendered evidence that the only record prior to the accident of an installation, or replacement of a battery lead, was an invoice dated March 24, 1983.

In response, the appellant, Frontenac Aviation, called a witness who testified that the battery lead found in the aircraft by the government [TSB] inspectors was an automotive part manufactured by the Whitaker Cable Company of Canada "some time after 1984".

The trial judge accepted the evidence of the expert, Mr. Max Vermij, that the elevator control cable had come into contact with the battery lead intermittently over a period of years, until the rubber insulation was finally worn through, resulting in the electrical arcing which melted and broke the elevator control cable.

Vermij emphasized that the overall appearance of the damage to the battery lead and its insulation "took years to develop".

Vermij denied that his opinion depended upon the battery lead having been installed in March of 1983, but stated that a lengthy time frame before the accident was consistent with his theory.

Vermij further testified that the damage to the battery lead that he observed could not have occurred if the battery lead had been installed shortly before the accident of June 18, 1988. [was an actual test accomplished on a like aircraft with the exact same conditions being present? A tie-wrap can chew thru a steel engine mount in less than 50 hours and a steel cable can saw thru a rubber sleeve within a few hours if the angle and pressure are correct]

Regardless of the actual date of the installation of the battery lead, the trial judge accepted the expert Vermij's evidence that the battery lead had been in the aircraft "some years before the accident". The trial judge further found on the "balance of probabilities" that the battery lead was in the aircraft prior to Frontenac Aviation's 100 hour inspection in November 1987.

Evidence was also placed before the trial judge that the deceased:

1. Removed the battery [from the aircraft] but left the [battery] lead in the fuselage.
2. Was working in a dark cramped area
3. Probably would not have noticed the damage to the [battery] lead as it [the lead] was black and the damage was on its [the leads] underside.

Furthermore:

1. the battery access panel permitted access only to the top of the battery.
2. the battery access panel permitted access did not permit visibility of the battery lead.
3. There was no evidence that the deceased had ever replaced or installed a battery lead in any aircraft.

It was further submitted [to the judge] [on behalf of the cross-appellant] that the deceased:

1. had no duty to check the condition on the battery lead when he removed the battery from the aircraft.
2. was entitled to rely on prior inspections [made by the AME] of all aircraft components, including the battery lead.

The essence of the trial judge's finding with respect to the appellant's negligence is as follows:

1. Given Mr. Comyn's observations, he and/or Mr. Ross should have inspected the battery box, the positive lead and the elevator cable much more carefully than they did.
2. I am convinced that if they had done so, they would have seen the problem and either replaced Exhibit #2 with a certified airplane part or at the very least secured the lead so that there would be no possibility that it would come in contact with the cable.

1988 - ONTARIO NORTHLAND TRANSPORTATION COMMISSION,  
a Crown Corporation of the Province of Ontario, purchases Air-Dale Limited (\$500,100) .

## Notes on "Civil Aviation"

The major assets of the company at the time of purchase were commercial air licences, operation certificates and experienced flight personnel. With the purchase, the Commission through NorOntair (Valued at \$15,942,700) now provides the air transportation services and Air-Dale Limited is essentially an inactive company.<sup>298</sup>

### CANADIAN AVIATION - 1989

1989 : UK RAF : studies of the RAF's need for *high grade tradesmen* into the next century were carried out in 1989 under the Aircraft Engineering Trades Review (AETR), the results of which were implemented in the UK in April 1991.

### CANADIAN AVIATION - 1990

### CANADIAN AVIATION - 1991

April 1991 : UK RAF The AETR introduce a "single gate, dual stream" method of entry to the flagship aircraft engineering trades, in which:

- A. all tradesmen are now initially trained as mechanics.
- B. After a period of up to two years productive service, the technician stream mechanics (and some of their mechanic stream colleagues) will be selected for "Further Training" to become aircraft technicians.

## Notes on “Civil Aviation”

C. Later, particularly able aircraft technicians will be selected for “Advanced Further Training”, leading to the award of a B.T.E.C “Higher National Certificate” [as seen previously, the HNC is the equivalent of the BSc. Engr.]

### CANADIAN AVIATION - 1992

April 1992 : the Agreement on Trade in Civil Aircraft," the 1992 bilateral agreement between the United States and European Communities (E.C.), is ratified and the formation of the World Trade Organization (WTO) and its Agreement on Subsidies and Countervailing Measures. 1992 Bilateral Agreements Between the United States and the E. C.: “The Airbus Accord”.

Although the negotiations began in 1984 no substantive agreement was created until April of 1992, with the creation of the Airbus Accord.

“The handful of flyers who could fly and fix their aircraft became the core of the fledgling Canadian flying industry”

[were they really licensed for both types of work? - Yes, some were]

The operational effectiveness of a squadron is dependent on numerous factors, but it is primarily related to personnel and equipment. Personnel need to be adequately trained and established in sufficient numbers to enable a squadron to fulfil its operational tasking. Centralized base aircraft maintenance and support organizations can be rationalized only in the context of static base operations, and yet these organizations may be impediments to executing expeditionary operations. To ensure operational effectiveness, the peacetime organization of a squadron and its support elements should reflect its war-time or contingency operational tasking.

If peacetime tasking is different (less demanding) than the wartime/contingency requirement (i.e., a peacetime 8 hour day over a 5 day work week versus a wartime/contingency 24 hour capability 7 days a week) then the squadron establishment needs either to include personnel “overages” to support the wartime/contingency tasking, or to create augmentation positions with trained personnel (including reservists) designated to fill these positions during war/contingency operations (i.e., peacetime establishment + augmentation = wartime/contingency establishment). Aircraft and equipment holdings must be similarly considered, and they need to be provided in both numbers and in effectiveness to permit squadrons to successfully undertake their wartime taskings. (ref : DND, The Aerospace Capability Framework, 19-27)

For example, the consolidation of all personnel and materiel resources into one command, like Bomber Command, reduces the chances that resources with one purpose will be dispersed and wasted. Likewise, activities like training, which is very expensive and resource intensive for air forces, is most efficient and effective when controlled by one organization with the expertise to organise and administer it. Therefore, the evolution of the Canadian Air Force into six communities, that has been described as inefficient stovepipes by some, actually reflects the most effective and efficient way of organizing air forces <sup>299</sup>

Without strategic-level oversight and leadership, the CF air element suffered from declining esprit de corps and serious professional development and doctrinal deficiencies.

Unification and Canada’s Air Forces 1968–1975:  
The CF Air Element and the Fragmentation of Command

Up to this point Canadian defence policy had been based on “a series of ‘contributions’” to alliances and to the UN “that prompted the development of a disjointed defence establishment centred on three services each with a small operational component.” This led to specialization and fragmentation among the three services and Canadian defence policy lacked a central focus. over the last 30 years there has been no central concept to guide planners, but rather continuous competition between the “ideas of unification, integration, public service management, and tri-service traditions

In 1960 the Royal Commission on Government Organization (the Glassco Commission) focussed its attention on the DND.

---

<sup>299</sup> Dr Allan English and Colonel John Westrop - CANADIAN AIR FORCE LEADERSHIP AND COMMAND: THE HUMAN DIMENSION OF EXPEDITIONARY AIR FORCE OPERATIONS. 2007

## Notes on "Civil Aviation"

Its report of the Royal Commission on Government Organization identifies numerous shortcomings in the administration of defence, including a dysfunctional committee system, the steady growth of an administrative "tail" in relation to operational "teeth," and lack of executive leadership.

To rectify these problems, the Commission recommended that:

1. the Chairman of the Chiefs of Staff Committee be given executive powers,
2. provided with an appropriate staff, and that
3. the position be re-titled "Chief of Canadian Defence Staffs.

These objectives were to:

1. preserve the peace by supporting collective defence measures to deter military aggression; to
2. support Canadian foreign policy including that arising out of our participation in international organizations, and
3. provide for the protection and surveillance of our territory, our air-space and our coastal waters.

There is only one adequate solution: the integration of ALL of the Armed Forces of Canada under a single "Chief of Defence" and a single defence staff.

1919 - 192x? To survive in the wilderness regions, aircraft needed maintenance.

There were, in fact, two types of "bush flying". One was purely commercial - passengers, mail contracts, freighting - conducted by private enterprise. The other was government sponsored - chiefly aerial mapping and forestry protection - carried on by the Air Board and then nascent RCAF

1980, the U.S. market share of large civil transport sales was 90 percent. By 1992, that percentage had dropped to 70 percent and was in danger of falling even further. technology has become more complex, transferring information about new concepts to the key people in industry has become more of a challenge. For years, the bulk of information about NASA research results was transferred through written documentation, such as technical memoranda, technical papers, articles in professional journals, tech briefs, and through professional conferences. In fact, a 1992 study of NASA's technology transfer activities found that researchers still often viewed successful transfer as writing a report on research results after the work was completed."

Yet there is a growing consensus that technology transfer efforts stand a much greater chance of success if they occur as part of the technology development process, through personal contact between  
src ref NASA SP-4216

### CANADIAN AVIATION - 1993

1993: although it can be a complex and often frustrating process, successful technology transfer is a critical step in advancing America's aeronautical industry. In early 1993, NASA Administrator Daniel S. Goldin stated that "the transfer of our valuable technology ...must be proactively sought and given the highest priority. SRC ref NASA SP-4216

1993 : Sowind Air Ltd. established an approved maintenance organization (AMO 7693) to maintain fixed-wing, piston aircraft

1993 : **Supreme Court ruling in *Edgeworth Construction v. N. D. Lea***

The resulting decision by the Supreme Court of Canada opened the courtroom doors to suits against architects and engineers brought by contractors, subcontractors and others "who had reason to believe the consultant had prepared the bid documents negligently" and thus caused them loss.

The Supreme Court ruling came as a shock to Canadian architects and engineers.

Justice McLachlin held that

"merely affixing his seal to the drawings was not enough to establish a duty of care from the engineer [...] to the contractor"

## Notes on "Civil Aviation"

"The seal is simply evidence that a qualified engineer prepared the drawing,  
but is not a guarantee of accuracy."  
- Supreme Court of British Columbia, Justice McLachlin

However, there was a measure of relief for the employees of consulting companies.  
Justice La Forest held that:

"The plaintiff would have to show that it was **relying on the particular expertise of an individual engineer**  
without regard to the corporate character of the engineering firm."  
- Supreme Court of British Columbia, Justice La Forest

### CANADIAN AVIATION - 1994

### CANADIAN AVIATION - 1995

03 August 1995 : judgment of Justice J. Lally re suit brought about as a result of the death of Henry Janzen, the pilot and sole occupant of a Cessna 150 aircraft owned by the Rideau Gliding Club, which crashed on June 18, 1988 shortly after take-off from Gananoque Airport.

Findings by Justice J. Lally:

1. Frontenac Aviation's aircraft maintenance engineers found negligent for:
  - a) failing to replace the automotive battery lead with a certified aircraft part, and/or
  - b) failing to secure the lead so that there would be no possibility that it would come into contact with the elevator control cable
2. 60% liability against Frontenac Aviation.
3. That the late Henry Janzen, husband of the plaintiff, Pierrette Janzen', was negligent in failing to notice the damaged battery lead and its proximity to the elevator control cable when he removed the battery from the aircraft shortly before the fatal crash.
4. Pierrette Janzen's claim against the Rideau Gliding Club based on the allegation that it is vicariously liable for the negligence of Frontenac Aviation is dismissed of her.
5. Bullock order awarded to Pierrette Janzen against Frontenac Aviation in respect to one-half the costs payable to the Rideau Gliding Club [for the loss of their aircraft] by Mrs. Janzen [due to the contributory negligence of her husband].

Frontenac Aviation subsequently appeals the finding that it [or it's staff] was negligent

Mrs. Janzen subsequently appeals the finding that her husband was found "contributorily negligent"

Mrs. Janzen subsequently appeals the Bullock order for one-half the costs payable to the Rideau Gliding Club.

### CANADIAN AVIATION - 1996

CARs introduced October 1996.

TC officials explained that "audits were suspended for approximately one year following the introduction of the new CARs" in October 1996 to allow both the industry and TC to adjust to the new regulations and to accommodate the heavy workload related to implementation of the new regulatory philosophy and process in TC.

TC uses an "Activity Reporting and Standards System" (ARASS) to assist [TC] management in analysing operational workload and resource requirements.

The ARASS is composed of discretionary and non-discretionary tasks.

1996 : TSB safety recommendations brought to the attention of the Minister of Transport:

A96-11 "risks and consequences of operating in marginal weather conditions" to the attention of the Minister of Transport.

## Notes on “Civil Aviation”

TC, in its response, stated that it would undertake new initiatives in response to recommendations from the Safety of Air Taxi Operations (SATOPS) Task Force and consideration of a targeted national promotion campaign would be done at that time. The SATOPS Report, finalized on 28 May 1998, addresses the issue of flight operations in reduced visibility. It concludes that Apilots are still pushing the weather,@ and recommends that a one-time attendance of the pilot decision-making course may not be sufficient for reduced visibility operations.

A96-12 “require that pilots involved in air taxi and commuter operations receive specialized training, including skills development, in making prudent decisions under deteriorating operational conditions”. TC, in its response, stated that it would task the Canadian Aviation Regulation Advisory Council (CARAC) to study and develop whatever additional specialized training may be required so that pilots involved in air taxi and commuter operations are fully capable of making prudent decisions under deteriorating operational conditions.

November 1996 : Sowind Air Ltd. acquires a “New aircraft” for it’s operation.. however it is a “Type” that it has never operated or maintained before.

The aircraft, which is Registered in the United States, is an Embraer EMB-110P1 Bandeirante serial no. 110-285 and has to be imported into Canada.

During the importation process, the aircraft is weighed by an AMO, and

1. a new Basic Weight and Balance Report and
2. A new Equipment Check List

are prepared, dated 20 November 1996 and signed by a TC rated AME employed by that AMO before being submitted with the importation paperwork for the aircraft.

TC subsequently issues a Canadian C of A to the aircraft, now identified on the Canadian register as C-GVRO.

### CANADIAN AVIATION - 1997

09 December 1997 : C-GVRO an EMB-110P1 Bandeirante operated by Sowind Air Ltd. [Sowind Flight 301] collides with terrain

COLLISION WITH TERRAIN in LITTLE GRAND RAPIDS, MANITOBA. In the accident the captain (the company’s chief pilot) and three passengers were fatally injured, and the first officer and the remaining 12 passengers were seriously injured <sup>300</sup>

There was nothing found in the examination of the wreckage or in the detailed examination of individual components to suggest that the aircraft had experienced a structural failure, flight control malfunction, or loss of engine power that would have caused the observed approach and manoeuvring.

Neither a CVR or an FDR was installed on the aircraft. Consequently, the TSB analysis was primarily concerned with the local weather, the possibility of aircraft contamination, the aircraft’s weight and balance, CFIT, the crew’s decision making and actions, and management.

It was identified during the investigation that:

Weight and Balance Estimates														
Sowind Air Ltd. Embraer EMB-110P1 Bandeirante, C-GVRO, Serial No. 110-285

14.5	141	F	14.5	188	M	14.5	141	F	43.5	470	513.5	513.5	238.6
14.5		M	14.5		M	14.5		M	43.5	0	43.5		
Seat 10 frame Weight	Seat 10 Pax Weight		Seat 11 frame Weight	Seat 11 Pax Weight		Seat 12 frame Weight	Seat 12 Pax Weight		Total Row Seat Weight	Total People Weight			
14.5	141	F	14.5	188	M	14.5	141	F	43.5	470	513.5	513.5	269.0
14.5		M	14.5		M	14.5		M	43.5	0	43.5		
Seat 13 frame Weight	Seat 13 Pax Weight		Seat 14 frame Weight	Seat 14 Pax Weight		Seat 15 frame Weight	Seat 15 Pax Weight		Total Row Seat Weight	Total People Weight			
14.5	188	M	14.5	188	M	14.5	188	M	43.5	564	607.5	607	301
14.5		M	14.5		M	14.5		M	43.5	0	43.5		
											322.5	2484	

The passenger weights used were “standard” [at the time] winter weights of:

- a) 188 pounds for an adult male,
- b) 141 pounds for an adult female, and
- c) 75 pounds for a child.

Important Note : The “total” passenger and seat weights include seat weights of 43.5 pounds per row. [or 14.5 lbs / pax seat]  
It would appear during the investigation that “Actual” passenger weights were not taken, however, at least two of the passengers weighed nearly double the standard weight (300+ and 255 pounds).

The baggage as weighed at the accident site = 359.0 pounds at 361.5 inches, however the flight manifest indicated a baggage weight of 295 pounds.

The cargo as weighed at the accident site = 574.0 pounds 361.5 inches, however the flight manifest indicated a cargo weight of 150 pounds.

Maximum take-off weight: 12 500 lb

Maximum ramp weight: 12 566 lb

Maximum landing weight: 12 015 lb

C of G limits: 255.5 inches to 272.0 inches aft of the datum at 12 500 lb (9.5% to 31% MAC)

## Notes on “Civil Aviation”

Weather conditions were conducive to somatogravic illusion in whiteout conditions.  
It is likely that the captain flew the aircraft into the terrain under the illusion that the aircraft was climbing.

The TSB determined that C-GVRO was operated for approximately one year, and over a wide range of loads, without accurate weight and balance calculations.

Although the weight of the aircraft at impact could not be determined with precision, it was determined to be 495 pounds to 1095 pounds greater than its maximum allowable landing weight, and 10 pounds to 610 pounds greater than its maximum allowable take-off weight.

In 1993, Sowind Air Ltd. had established an approved maintenance organization (AMO 7693) to maintain fixed-wing, piston aircraft. The company employed two licenced engineers and two apprentice engineers. Neither the company's AMO nor the company's maintenance staff were certified to maintain EMB-110P1 Bandeirante types. Maintenance of the EMB-110P1 Bandeirante was contracted to another AMO, Northeastern Aircraft Sales & Service, which held the appropriate qualifications. Sowind Air Ltd. subsequently produced a new maintenance control manual (MCM) as required by CAR 726.08. The MCM was approved by TC on 14 November 1997 and reflected that an approved maintenance agreement was in effect with Northeastern Aircraft Sales & Service for maintenance of the Bandeirante.

There were concerns raised by the maintenance dept. that company pilots had moved equipment between aircraft without coordination with / notification of the maintenance department .

The review of “initial weight and balance reports” for C of A is deemed a “discretionary task” dependent on the workload of the assigned TC inspector.

At one time, TC attempted to review all weight and balance reports submitted by operators, but found the workload prohibitive.

The weight and balance report for the Bandeirante owned by Sowind Air Ltd was received by TC and was [simply] placed in the aircraft's file. The information contained within the [weight and balance report] reports was not reviewed by an inspector in a TC office.

A significant number of audit findings, made during the post-occurrence audit, indicates that the company had difficulty with the transition from an air taxi operator to a commuter operator. Given that TC officials were of the opinion that the company had been well-managed and could cope with the transition, it is likely that the transition difficulties faced by the company were underestimated by TC.

TC's weight and balance policy allowed the basic weight and balance calculations for commuter type aircraft to be accepted without any [TC]review for accuracy.

At both take-off and landing [the crash] C-GVRO was about 1000 pounds heavier than the maximum allowable weight.

The weight and balance report that was submitted to Transport Canada, required for the importation of C-GVRO, contained numerous discrepancies; the report was not reviewed for accuracy by Transport Canada.

The emergency locator transmitter (ELT) produced a very weak signal because the antenna cable had been installed with little slack, and it pulled out of the antenna fitting during impact.

A significant number of discrepancies developed (see Appendix C) and were not detected or resolved.

### Company Management

Company management, as assessed by TC audits and inspections, had been deemed satisfactory before the introduction of the Bandeirante.

As revealed by the post-occurrence TC audit, the management of the company had not dealt effectively with the introduction of the Bandeirante.

While the president stated that the policy was to provide a higher standard of service, and that the company's first concern was safety, safety was compromised in three areas of management responsibility: training and standards, operations, and maintenance. The investigation revealed that the chief pilot's operational control diminished during the introduction of the Bandeirante.

Over time:

## Notes on "Civil Aviation"

1. the weighing of cargo became less effective,
2. the weighing of passenger baggage became less effective, and
3. GPS was used routinely on approaches in IFR conditions contrary to the provisions of the CARs.

The "operations manager" exercised little influence in the commuter operations, primarily flying in the air taxi operation and providing little supervision.

There were inadequacies in TC's oversight, whereby the post-certification audit of the company was not conducted, thus eliminating an important mechanism by which TC could have found, and addressed, the inadequate safety management practices, non-conformance with pilot training requirements, and related operating irregularities

Discrepancies noted in the Basic Aircraft Weight and Balance Report and Equipment Check List, dated 20 November 1996 prepared during the re-weigh at import:

1. The basic equipment check list was not updated as to items installed at the time of the re-weigh.
2. Items such as the portable toilet and divider panel were still being shown as installed when they were not.
3. The weight and balance report datum location [the main wheel axle] used to compute the new weight and balance report was incorrect.
4. A weight and balance report datum location 306.8 inches from rear jack point should have been used to compute the new weight and balance report.
5. The weight and balance report weighing diagram was incorrect; it should have been the jack point diagram Fig. 6.2, not 6.3, [which is?] as provided.
6. The moment calculation of 10.7 for the nose wheel weight was incorrect on the weight and balance report.
7. The moment calculation for the nose wheel should have been  $1080 \times 99.3 = 107.2$  (lb x in/1000)
8. The total moment and arm calculations on the weight and balance report were affected by the incorrect nose wheel moment calculation.
9. The C of G location stated on the report reflected a position 255.2 inches aft of the datum at 9.1% MAC.
10. A C of G location 277.9 inches aft of the datum at 37.9% MAC should have been reflected on the report.
11. The scale figures, taken during the re-weigh, were incorrectly transcribed onto the weight and balance form, making the subsequent weight and balance calculations meaningless.
12. No moment arm measurement was provided for the 6th row seat installation.
13. No conversion formula was provided on the balance sheets to calculate % MAC.

As a result of the weight and balance findings noted by the TSB, TC issued findings against the AME who signed the weight and balance completed at importation and the AMO who accomplished the work.

....

### CANADIAN AVIATION - 1998

18 June 1988 : Ontario Court of Appeal hearing re : Cessna 150 owned by the Rideau Gliding Club crashes shortly after take-off from Gananoque Airport. COURT OF APPEAL FOR ONTARIO : Justices McMurtry C.J.O., Laskin and Borins JJ.A. This appeal and cross-appeal from the judgment of Lally J. dated August 3, 1995

The opinion of McMurtry C.J.O was that:

1. **the employment** of Frontenac Aviation by the Rideau Gliding Club **to perform work** [the work being the "condition and conformity inspection" and the "100 hour inspection" of the Club's C-150] **did not fall into the "category of work or activity" that was inherently or necessarily dangerous.** The cross-appeal against the Rideau Gliding Club was therefore dismissed.
2. the work of "inspecting" [...] did not represent "activity that was inherently dangerous" while **the work performed** in the St. John (City) and Schubert cases was.
3. the consequences of a negligent "condition and conformity inspection" can be catastrophic for the users of the aircraft. The finding of negligence [for not rectifying the problem or bringing it to the owner's attention for resolution] by Frontenac Aviation was therefore held.
4. the consequences of a negligent "100 hour inspection" can be catastrophic for the users of the aircraft. The finding of negligence [for not rectifying the problem or bringing it to the owner's attention for resolution] by Frontenac Aviation was therefore held.

## Notes on “Civil Aviation”

Citations from the John (City) and Schubert cases:

“where work is necessarily attended with risk, the person causing it [the work] to be done has *the duty of seeing that effective precautions are taken*, and that person *cannot escape from the responsibility* by delegating it to a contractor”<sup>301</sup>  
[The employer's] vicarious responsibility arises, however, *where the danger of injurious consequences to others from the work ordered to be done is so inherent in it that to any reasonably well-informed person* who reflects upon its nature *the likelihood of such consequences ensuing*, unless precautions are taken to avoid them, *should be obvious, so that were the employer doing the work himself his duty to take such precautions would be indisputable*.<sup>302</sup>

That *duty imposed by law* he cannot delegate to another, be he agent, servant or contractor, *so as to escape liability for the consequence of failure to discharge it*.<sup>303</sup>

*That [...] is a principle applicable in such a situation whatever be the nature otherwise or the locus of the work out of which it arises*.<sup>304</sup>

Canadian courts such as in the Schubert case have referred to English courts when making determinations:

“An employer cannot divest himself of liability in an action for negligence by reason of having employed an independent contractor, where the work contracted to be done is necessarily dangerous, or is from its nature likely to cause danger to others unless precautions are taken to prevent such danger”<sup>305</sup>

*“the question of whether a duty of care arises will depend upon the circumstances of each particular case, not on predetermined categories and blanket rules as to who is, and who is not, under a duty to exercise reasonable care.”*<sup>306</sup>

Consider the following suppositions - would they hold if tested by the supreme court:

“where work [aircraft inspection, repair, maintenance overhaul etc., etc.] is necessarily attended with risk [the potential that something is done wrong or overlooked?] , the person [the Minister / aircraft owner] causing it to be done has the duty of seeing that effective precautions are taken, and that person [the Minister / aircraft owner] cannot escape from the responsibility by delegating it to a contractor [the AME?]”

Similarly, by ordering work [by way of the aeronautics act, air regulations and CARs] that involved construction, modification, repair, overhaul, dis-assembly and inspection of aircraft to ascertain air-worthiness, does the government have a duty to take precautions to provide properly educated, skilled and trained technicians and inspectors? Has the government breached this duty by not taking active steps to ensure the training and licensing of these two separate classes of persons was proper ?

15 October 1988 :

01 August 1998 : Expiration date of the TC granted an exemption for operators to comply with the requirement of CAR 605.33 (2) that a CVR be installed in particular types of aircraft.

CANADIAN AVIATION - 1999
--------------------------

1999 :

12 February 1999 : Ontario Court of Appeal : McMurtry, Chief Justice - Ontario (C.J.O) Findings:

1. The appeal of Mrs. Pierrette Janzen [ Plaintiff/Respondent] from the finding that her husband was contributorily negligent and *with respect to the Bullock order* **is allowed** with costs payable by Frontenac Aviation.
2. The appeal of Mrs. Pierrette Janzen from the dismissal of her claim against the Rideau Gliding Club [ Defendant] **is dismissed** with costs.
3. The appeal of 548975 ONTARIO INC., aka “Frontenac Aviation” [Defendant/Appellant] **is dismissed** with costs.

June 1999 : UK

“the shortage of engineers is mainly of industry's own making, which UK-CAA agrees with” <sup>307</sup>

June 1999 : UK

“To invest in training will help to secure the future of air transport undertakings, but that has to be managed in such a way to make an attractive career for young people or they will continue to drift into Financial Services, Computers and Marketing, which are, on the surface, more attractive and better paid” <sup>308</sup>

“Whilst we hear of some concerns about AN 47, most people agree with it.

Some industry managers however have apparently rejected advice from engineers that they [managers?] were unfit to continue and placed them [the engineers?] under undue pressure to reconsider their position.

That is unacceptable behaviour when it is now widely accepted that a safety culture and the management of safety are the important issues.” <sup>309</sup>

1999 :

Canadian Court cases where Licensed AMEs were held liable:

*Janzen v. Kovachik Aircraft Services Ltd.* (1999), 86 A.C.W.S. (3d) 248 (Ont. C.A.)

In *Janzen v. Kovachik Aircraft Services Ltd.*, an aircraft gliding club “hired a **survey company** to inspect a plane” that it owned. **Seven months** after the [surveyor's] report which indicated that the plane was in good condition was issued, the aircraft crashed, killing one man.

The Canadian Transportation Safety Board investigation revealed that the cause of the accident was “a broken elevator cable, due to contact between the cable and a battery lead” [cable arced and melted] .

The wife of the deceased sued the gliding club and the “**survey company**” [for what? wrongful death? loss of comfort?]

<sup>307</sup> Tony Ingham Chief Surveyor UK-CAA, UK CAA - CHIRP 1999

<sup>308</sup> “The Challenge of the Future” A paper on the shortage of maintenance personnel, the absence of adequately supported training schemes and the implications for industry in the future. Royal Aeronautical Society, June 1999

<sup>309</sup> Tony Ingham Chief Surveyor UK-CAA, UK CAA - CHIRP 1999

## Notes on “Civil Aviation”

At trial, the judge held the “surveyors” [persons who accomplished the inspection] of the aircraft 60% liable, based on the finding that an “automotive” battery lead had been installed, rather than an “aircraft” lead.

The error [in installing the automotive part] was made [probably by a club member - pilot] prior to inspection.

The judge held that:

1. “the surveyor [who conducted the inspection for “Airworthiness”] was therefore negligent”.
2. “The deceased [pilot?] was contributorily negligent for *not having noticed the problem during his routine inspections* of the aircraft.”

The judgement against the “Surveyor” was subsequently appealed [by the surveyor / L-AME]

On appeal, the Ontario Court of Appeal :

1. affirmed the ruling against the surveyors, and
2. overturned the finding of contributory negligence against the deceased [pilot].

It was held by the Court that “the husband [pilot] did not have a duty to inspect the lead” and [that the club/pilot ] was entitled to rely upon the expertise of the licensed aircraft maintenance engineer[s] who performed the inspection. (WHY ?)

The Ontario Court of Appeal also affirmed the trial judge’s ruling that “the flying club was not vicariously liable for the negligence of the inspectors it hired”. (WHY?)

The full liability for the loss was therefore on the inspection company.

In reading these 2 decisions, consider the following:

1. what does the aircraft log book and maintenance record identify?
2. what maintenance was performed?
3. Would any receipts re-imbursed to a club member for a “battery Cable” post the date of inspection be sufficient grounds to overturn the decision?
4. What is the period or duration of the inspection by an AME?
5. Why was the “husband” / Pilot later determined to NOT have a duty to inspect?
6. Is an AME responsible for any potential actions taken prior to / post their inspection?
7. What is the L-AME legally required to accomplish during an “Inspection” for airworthiness?

1999 :

“Limited companies **cannot exercise professional functions** except through “qualified individual employees”<sup>310</sup>

“**Those employees must realise it is their skill and experience the clients are engaging and will rely on.**

They [the employees of the limited company? the limited company itself? or both?] therefore owe a concomitant duty of care to those clients and are potentially liable in tort if they fail to meet that duty”<sup>311</sup>

“employees may be held personally liable for negligence in failing to meet duty of care owed to clients”<sup>312</sup>

Justice Edwards reviewed the decisions of the B.C. Court of Appeal in:

1. *R. v. R.B.O. Architecture Inc.*, and
2. *Boss Developments Ltd. v. Quality Air Maintenance Ltd*<sup>313</sup>.

In both decisions, the B.C. Court of Appeal had considered *Edgeworth*.

*Boss Developments Ltd. v. Quality Air Maintenance Ltd,*

## Notes on “Civil Aviation”

In *Boss Developments Ltd. v. Quality Air Maintenance Ltd.*, Justice Gibbs found that “an engineer could be personally liable to an aircraft purchaser for signing a report indicating an aircraft was properly maintained when it was not, although his employer, not he [the individual engineer], had a “contractual relationship” with the vendor to inspect the aircraft”.

There was nothing in the relevant contract [no language] purporting to limit the duty of care of the employer or of its employees.

With respect to the “individual employee,” Justice Gibbs noted that he [the employee] was liable because “Only an individual can be qualified as an aircraft maintenance engineer in this field of special skill and knowledge [...] it follows that it is the individual mechanic who certifies [who is the person] whose skill is being relied upon.”

In *R. v. R.B.O. Architecture Inc.*,

Justice Edwards states, “while it was true that [the] Strata did not engage CSA because it intended to rely on the skill of any individual it could identify by name, it was equally true that CSA held itself out as a firm with *engineers, architects and technologists* [...] [who] focus their interests exclusively upon [resolving?] the very problem [building deficiencies?] that [the] Strata contracted with CSA to address.”

Additionally, Justice Edwards found that:

1. There was no question that:
  1. all three of the [CSA] employees had a degree of experience, and
  2. all three of the [CSA] employees had a degree of technical skill, and that
  3. each of the three of the [CSA] employees was actively involved in the survey, and
  4. each of the three of the [CSA] employees was actively involved in the preparation or presentation of the report.
2. They [the CSA employees] must have known Strata would rely on their report
3. The extent of their [the CSA employees] involvement distinguished them from the engineers in *Edgeworth*.
4. Because, in *Edgeworth*, the Engineers “merely affixed a seal” to the contract documents [but had nothing to do with the end report?].

How does *Edgeworth* compare with the ruling re the Sowing EMB-110 crash post the importation and weighing which was accomplished by one Engineer, yet certified by another?

### CANADIAN AVIATION - 2000

19 April 2000 :

*Forsyth et al v Sikorsky et al*, 2000 BCSC 642 <sup>314</sup>

1. Sikorsky manufactured helicopter registration C-GHOG, bearing serial number 58-701, during the 1950's as one of some 2,200 helicopters designated the [type] H34.
2. The majority of these craft were used for military purposes, with 10 to 15 percent destined for the commercial market.
3. C-GHOG flew with the German military in the 1950s and 1960s before being taken to Brazil where Airplane Sales International Corp., of California, ("Airplane Sales") acquired the craft together with a number of spare parts from the Brazilian government.
4. Airplane Sales brought C-GHOG to North America and commenced converting it and 50 other military H34's from a military H34 to a civilian S58T for commercial use, following a Sikorsky program.
5. The military H34 to a civilian S58T conversion included the replacement of the original single piston radial engine with 2 PT6 turbine power plants aka the “Twin-pack”.
6. Tundra [Helicopters] president Steve Harrison purchased C-GHOG in August 1993 from Airplane Sales for USD \$780,000 including a spare parts package ("the Brazilian spares") valued at CAD \$300,000.
7. On 24 October 1995, Messrs. Forsyth and Kokoszka noticed a vibration in C-GHOG and they landed nearby for inspection.
8. inspection [was accomplished] by Mr. Schlienzy, a licensed aircraft maintenance engineer ("AME"), and his apprentice, Greg Hall, who were assigned by Tundra to maintain C-GHOG.
9. The pilots concluded the cause of the unusual vibration ought to be determined and resolved, if possible, before they resumed logging operations.

<sup>314</sup> <http://www.cfmlawyers.ca/practice-areas/aviation-law/aviation-law-selected-judgments/>

## Notes on “Civil Aviation”

10. Messrs. Schlien and Hall inspected the aircraft “on the ground”, particularly the tail-rotor area - which was suspected to be the source of the vibration.
11. Messrs. Schlien and Hall were unsuccessful in isolating the vibration during their ground inspection.
12. The pilots then flew C-GHOG with Mr. Schlien in the craft's rear section near the tail-rotor to try to determine the source of the vibration while they went to pick up a load of logs.
13. Mr. Forsyth piloted C-GHOG to pick up a load and fly to the log landing site.
14. As Mr. Forsyth placed the logs on the ground, he felt a massive vibration, heard a bang, and saw debris falling from the helicopter.
15. The pilots directed [flew] GHOG to a grassy area where it landed heavily, seriously injuring the three plaintiffs.
16. The crash destroyed GHOG.

*“helicopter plummets from the sky,  
a long trail of grey-black smoke spewing behind it,  
crashed in an explosion and fireball, killing both occupants”*

September 2002 :

The B.C. Supreme Court was to examine whether a Canadian Federal regulatory agency [Transport Canada] should be held responsible <sup>315</sup>for the deaths of:

Pilot : Robert Honour,

Passenger : Les Chadwick

Transport Canada was accused of breaking its own rules by licensing a helicopter service company "with an extensive history of unsafe practises" in a civil suit brought by Mr. Honour's family

But at the last minute, the agency [TCCA] avoided potentially embarrassing questions about its air safety operations, agreeing to a confidential out-of-court settlement just before the trial started.

The following points are noteworthy re TCCA cases:

1. how much Ottawa [TCCA] paid out to the Honour family was not disclosed.
2. Transport Canada admitted no liability.

*“Had the suit gone ahead, it would have been a rare test of how much accountability can be demanded of government agencies, as well as raising issues about the oversight of air transportation safety in Canada”* <sup>316</sup>

---

<sup>315</sup> <http://www.theglobeandmail.com/news/british-columbia/transport-canada-makes-out-of-court-deal-in-pilots-death/article579357/>

<sup>316</sup> Gerard Chouest, Toronto lawyer, specialist in aviation law

## Notes on "Civil Aviation"

"It's not in Transport Canada's best interest to have this issue discussed any more than necessary. They don't want to call attention to the fact that they have some vulnerabilities." <sup>317</sup>

Art Comeault, the owner of the service company, did not settle out of court, but after a brief two-day hearing in Vancouver last week, the judge found him liable and ordered him to pay \$645,000 in damages.

Settling lawsuits has been a pattern at Transport Canada.

An examination by The Globe and Mail of the federal Public Accounts over the past decade uncovered Federal Public Accounts / Treasury made at least nine "payments of claims" by Transport Canada to individuals as a result of aircraft accidents, totalling close to \$1.7 million.

Transport Canada's "role" in each accident was kept confidential.

a long paper trail of inspection reports by the Transportation Safety Board brings up questions that Ottawa might not have wanted to air in court - particularly, how it oversees the roughly 900 aeronautic companies across the country licensed to repair and maintain aircraft. <sup>318</sup>

The official TSB report [Report No. ] :

1. helicopter had "sustained substantial damage" after a crash in the United States in 1979 after losing engine power.
2. helicopter had "sustained substantial damage" in a rollover accident in Canada in 1997.
3. There is no record of any "accident" in the ... logbooks," as required by the Regulations.
4. Determined "a fuel-pump failure led to loss of engine power and a fire" in the helicopter.
5. maintenance actions to correct fuel pump defects were not completed
6. maintenance actions [on the aircraft] by Mr. Comeault and his company, A&L Aircraft were not completed.
7. Mr. Comeault, was licensed aircraft maintenance engineer since 1985
8. Stated that "The helicopter was not serviced or maintained in accordance with existing regulations,"
9. TSB investigators concluded caution in all their reports that their findings are not meant to "assign fault ... or criminal liability."

When contacted by the Globe & Mail, Mr. Comeault stated: <sup>319</sup>

1. TSB are a bunch of jerks
2. They make these stupid statements and then they walk away.
3. They don't prove it.
4. That helicopter was a good helicopter
5. pilot error caused the crash.
6. They (aircraft) all have problems.
7. It's a mechanical machine, you can't tell when it's going to have a problem or not.

## Notes on "Civil Aviation"

New Zealand,<sup>320</sup>

A maintenance company owner and a licensed aircraft maintenance engineer [who was employed by the company] are convicted of manslaughter in the death of Philip Heney, a helicopter pilot.

Philip Heney, was killed when a tail component failed while he was landing his Robinson R22 southwest of Nelson, NZ, in August 2005.

He had picked up the helicopter from the maintenance facility earlier the same day.

The Crown prosecutor successfully argued that the defendants had failed to ensure that the work done on the helicopter had been directly supervised by a licensed aircraft maintenance engineer and inspected twice by qualified engineers.

04 January 2013 : Letter sent to re AME Apprentice Tax incentives

02 February 2013 : Ministerial Correspondence 2013-0474471M4 - Gail Shea, M.P

12 February 2013 Ministerial Correspondence 2013-0474471M4 - Apprenticeship Job Creation Tax Credit<sup>321</sup>  
CRA Tags 127(9), 127(5), ITR 7310

Summary Under Tax Topics - Income Tax Regulations - Regulation 7310

Principal Issues:

1. For purposes of an employer computing its eligible salaries and wages payable *for purposes of claiming the apprenticeship job creation tax credit, whether an employee who is an apprentice in a federally regulated trade* such as an aircraft maintenance engineer licensed by Transport Canada *can be considered an "eligible apprentice"* within the meaning of subsection 127(9) of the Income Tax Act.
2. Whether *an individual apprenticing to become licensed as an aircraft maintenance engineer is entitled to:*
  1. the apprenticeship incentive grant, and/or
  2. the apprenticeship completion grant.

Position: 1. No. - [see reason 1]

Position: 2. No. - [see reason 2]

Reasons:

1. The definition of "eligible apprentice" in subsection 127(9) of the Act refers to "a trade prescribed in respect of a province or in respect of Canada."
  1. *It is interpreted to refer to* a trade prescribed in respect of a province and/or territory or a trade prescribed in *respect of Canada*.

<sup>320</sup> <https://www.helicoptersmagazine.com/procedures/company-owner-and-ame-guilty-of-manslaughter-in-new-zealand-799#sthash.l7oiyrGj.dpuf>

<sup>321</sup> <https://taxinterpretations.com/cra/severed-letters/2013-0474471m4>

## Notes on "Civil Aviation"

2. Although an aircraft maintenance engineer is a trade that is federally regulated and as such, *can be considered to be a trade in respect of Canada*, it is not a trade "**prescribed**" in respect of Canada.
3. Section 7310 of the Income Tax Regulations defines what is a "**prescribed trade in respect of a province**" (i.e., the Red Seal trades) and in that regard, an aircraft maintenance engineer is not a Red Seal trade.
4. As currently enacted, the Regulations are silent on what is a "**prescribed trade in respect of Canada**" and in this regard, there are no draft amendments to the Regulations currently proposed.

2. Not a Red Seal trade.

Response :

XXXXXXXXXX

Dear XXXXXXXXXXXX:

The office of your member of Parliament, XXXXXXXXXXXX, sent me a copy of your correspondence, which I received on January 4, 2013, about the apprenticeship job creation tax credit (AJCTC) and the apprenticeship incentive.

The **Income Tax Act** allows an employer to claim the AJCTC for its eligible salary and wages payable to eligible apprentices.

The Act defines an "eligible apprentice" as an individual who is employed in Canada in a trade "**prescribed** in respect of a province or **in respect of Canada**" during the first 24 months of his or her apprenticeship contract.

This contract must be registered with a provincial, territorial, or federal government under an apprenticeship program designed to certify or license individuals *in the trade*.

According to the Income Tax Regulations, a "prescribed trade in respect of a province" is a Red Seal trade under the Interprovincial Standards Red Seal Program.

*For a trade to be designated as a Red Seal trade, a number of provinces and territories should already have independently designated that trade for apprenticeship training and certification.*

It is up to the industry to submit a request for the designation of a trade under the Red Seal Program.

Your concern relates to apprentices training to be licensed by Transport Canada as "aircraft maintenance engineers".

This federally regulated trade is **not** a designated RedSeal trade and "the Regulations" do not define what a "prescribed trade in respect of Canada" is.

Since this trade is **not** a *prescribed trade* in respect of a province or Canada, an apprentice in this trade does not meet the Act's definition of "eligible apprentice."

Therefore, an employer cannot claim the AJCTC for apprentices in this trade.

I am unaware of any draft or proposed amendments to the Regulations at this time.

The Department of Finance Canada is responsible for setting tax policy concerning whether the AJCTC should include an employer's salaries and wages payable to apprentices in federally regulated trades.

Human Resources and Skills Development Canada (HRSDC) administers tax incentives for apprentices, such as the apprenticeship incentive and the apprenticeship completion grants.

To qualify for these grants, the apprentice must meet several conditions, including being registered in a Red Seal trade. Since the aircraft maintenance trade is not a Red Seal trade, an aircraft maintenance engineer apprentice would not qualify.

**HRSDC** is responsible for economic development policy concerning whether the eligibility for these grants should include apprentices in federally regulated trades.

You are concerned that the shortage of licensed aircraft maintenance engineers will only get worse.

However, I must confirm that there are currently no federal tax incentives to help employers wanting to hire and train more aircraft maintenance engineers or to entice individuals to choose a career in the aircraft maintenance trade.

## Notes on “Civil Aviation”

Since the concerns you raise are **policy** matters that are the responsibility of Finance Canada and HRSDC, I am forwarding a copy of our correspondence to the Honourable James M. Flaherty, Minister of Finance, and the Honourable Diane Finley, Minister of Human Resources and Skills Development, for their consideration.

I trust that the information I have provided and the referrals are helpful.

Yours sincerely,  
Gail Shea, P.C., M.P.

## “Prescribed Trades” - Canada

Power and procedure of court of survey: with respect to the court of Survey <sup>322</sup> :  
Per the Merchant shipping act:

### The Judge:

1. shall have the same power as the board of Trade
2. and his assessor shall have - for the purposes of this act - all the powers of an inspector appointed by the board of trade under the merchant shipping act
3. may appoint any competent person or persons to survey the ship and report thereon to the court
4. shall have the same power of the board of trade to order the ship detained or released (unless one of the surveyors concur with the detention, the ship shall be released [...] )

## highly technical legislation

This highly technical legislation <sup>323</sup> is a direct descendant of the first Canada Shipping Act of 1906 which was revised in 1927 and re-enacted in 1934. With the many changes which have taken place in shipping since the thirties a new and modern act is overdue. Despite these changes, and the complexities of International Conventions, the 1934 enactment, although revised in 1952, has already lasted longer than the 28 years separating it from the first Canadian act of 1906. This turn, by way of the British Merchant Shipping Acts of 1894 and 1854, contains phrases whose origins are lost in the antiquities of sea law.

When the Parliament at Westminster brought in the Merchant Shipping Act of 1854, the intention of the legislators was to regulate the conduct of British shipping throughout the world and it mattered little whether vessels were owned in England or Canada, or in any other of the British possessions for that matter, for all were trading under the same flag in an economic system which was still cast, to a great extent, in the mould of the navigation acts of the preceding century. In the year 1854 none of the Dominions were in existence and, while Canadian provinces passed many acts relating to local shipping, they were void, if in a

---

<sup>322</sup> Acts of the parliament of the dominion of Canada Vol 1-2. Brown Chamberlin, Law Printer to the Queen's Most Excellent Majesty, 1877

<sup>323</sup> USQUE AD MARE - A History of the Canadian Coast Guard and Marine Services by Thomas E. Appleton. [http://www.ccg-gcc.gc.ca/eng/CCG/USQUE\\_Shipping\\_Act](http://www.ccg-gcc.gc.ca/eng/CCG/USQUE_Shipping_Act)

## Notes on "Civil Aviation"

specific case, to use the legal term, they were "repugnant" to the law of England. This indeed had held from an early stage of colonial development under a theory that the acts of any colonial legislature were void if they conflicted with those of the Parliament of the United Kingdom.

This position was widened somewhat by the **Colonial Laws Validity Act of 1865** which, to remove unrealistic limitations in the jurisdiction of colonial legislatures:

- a) empowered colonial legislatures to make laws even though repugnant to English law, and
- b) declared that colonial laws would be invalid only to the extent of their conflict with the relevant British act.

Thus, under the Colonial Laws Validity Act, the legal position remained that statutes in respect of merchant shipping passed by the Parliament of the United Kingdom, whether before or after the constitutional date of 1867, were supreme over repugnant colonial laws.

In matter of certificates for masters and mates for example, we have noted that *Ottawa was unable to legislate for the introduction of examinations for certificates for masters and mates in Canada until the Parliament at Westminster authorized such a procedure.*

the Merchant Shipping (Colonial) Act of 1869 enabled the legislature of a British possession to

- a) pass laws for the regulation of its coasting trade,
- b) establish registrars of British shipping, and to
- c) declare that examinations of like standard to those held in Britain could be acknowledged by the granting of colonial certificates of the same force.

By the time that the Parliament of Canada passed the first Canada Shipping Act of 1906, the **constitutional position** had changed in fact if not in theory, and the Canada Shipping Act of 1906, though based broadly on the Merchant Shipping Act, was framed to meet Canadian requirements and to incorporate Canadian legislation.

**In recognition of the changing constitutional positions of all the British Dominions**, the United Kingdom Parliament gradually ceased to exercise its rights over colonial shipping and, **from 1911 onwards, all shipping legislation passed at Westminster was so framed as not to extend to the Dominions.**

After the first world war, progress towards Canadian autonomy became more apparent.

Following the Imperial Conferences of 1926 and 1930, recommendations were confirmed and ratified by the passing of the **Statute of Westminster in 1931** which, among other portentous matters, repealed the Colonial Laws Validity Act of 1865 and declared that henceforward no law passed by a Dominion Parliament would be void or inoperative on the grounds of repugnance to the law of England.

In the negotiations leading up to the Statute of Westminster much thought was given to the question of shipping, and a **conference on dominion merchant shipping legislation** was held in London in 1929.

1929 : Canada was represented by the then **Minister of Justice, the Hon. Ernest Lapointe**, who was particularly well qualified to review the position from his experience as [former] **Minister of Marine and Fisheries.**

*As a result of this conference, the way was cleared for the full and complete legislative authority of each dominion over all ships within its territorial waters or engaged in its coasting trade, and over its own ships within in international waters, wherever they might be.*

*There was a strong presumption in favour of concerted action between countries of the British Commonwealth of Nations as to the uniformity of their laws*, a principle which is still regarded today in matters of common interest although of diminishing importance in the face of wider international co-operation and a redistribution of shipping influence throughout the world.

But, in tracing *the origins of the Canada Shipping Act from its first root in the soil of English maritime law*, we must not lose sight of two other important roots, old and new, which have enriched the Act of 1906.

The second and older root springs from Canadian laws which, enacted by colonial and provincial legislatures from the late eighteenth century onwards, were followed, after Confederation, by a series of acts of the Canadian Parliament.

These enactments, covering many different aspects of shipping law, were necessary to amplify and extend the general philosophy of the British Merchant Shipping Act in terms of Canadian conditions, and they form a very important component of the Act of 1906 which, in effect, consolidated Canadian and British enactments.

## Notes on “Civil Aviation”

The third and most recent root, resulting from the birth of modern shipping technology, which may be said to date from 1914 when the first International Convention on the Safety of Life at Sea was held, stems from the work of many nations.

**This meeting [which illuminated a sea of hitherto pragmatic regulations by the light of technical method and reasoning, (meaning that up until this point regulations dealt with things sensibly and realistically in a way that is based on practical rather than theoretical considerations.)] was rendered ineffective** for a time because of the Great War.

However it was followed by other meetings in 1929, 1948 and 1960 which became known, all over the world, as the SOLAS Conventions.

By 1959 the supporting work for the SOLAS Conventions had become continuous and, in that year, the secretariat was placed in the hands of a specialized agency of the United Nations called the Inter-Governmental Maritime Consultative Organization, known as IMCO for short, with headquarters in London.

It will be seen that the keynote of the Canada Shipping Act is one of safety, founded on the best technical knowledge available. Although some of the early legislation was administrative, laws for the safety of rafts and vessels began to appear in the opening years of the nineteenth century. As the safety of shipping is the main task of the Marine Services of the Department today, it will be convenient to trace these developments through the history of vessel inspection and its influence on the Canada Shipping Act.

### CANADIAN AVIATION - 2017

June / July : TSB releases accident report into Halifax A-32X air accident.

## The Birth of “Air Regulation” ....

Well before the onset of aviation as we know it today, people with foresight realised that Air-Craft and people they carried could not be contained within “national” borders.

International flight - crossing sovereign domestic borders using heavier-than-air vehicles, balloons and dirigibles was soon to be a reality, and then it markedly increased.

1784: Paris police forbid balloon flights without a special permit, their decree is the earliest “documented” aviation legislation on record.

1880, the Institut de Droit International (Institute of International Law) includes aviation on the agenda of its Oxford, England convention.

1889 the 1st International Aeronautic Congress - Paris. creates a Permanent International Aeronautics Commission (PIAC).

1889 PIAC members : Brazil, France, Great Britain, Mexico, Russia and the United States

1899 - 1st International Peace Conference - The Hague, prohibits the discharge of projectiles and explosives from balloons or similar methods.

1900 - the 2nd International Aeronautic Congress - Paris

17 December 1903 the powered airplane adds a new dimension to transport

1905 - the Fédération aéronautique internationale (FAI) established by France as a non-governmental and non-profit organization to promote aeronautical and astronautical activities worldwide, particularly in the field of air sports, as well as to encourage relate skills, proficiencies and safety measures.

1906 - the 3rd International Aeronautic Congress - Milan

1907 - 2nd International Peace Conference - The Hague, prohibits the discharge of projectiles and explosives is not renewed.

## Notes on “Civil Aviation”

1907 - the 4th International Aeronautic Congress - Brussels

1908, 26 people (mostly German military officers) cross the Franco-German border by balloon and land in France.

1909 - the 5th International Aeronautic Congress - Nancy

1909 - The Comité juridique international de l'aviation, established in Paris, prepares a draft International Code of the Air through its national committees.

25 July 1909, Louis Blériot flies his Blériot XI crosses the Channel from France to England. He has no passport, and no authorisation to enter England.

18 May to 29 June, 1910 - 1st conference on an international air law code convened in Paris (International Air Navigation Conference, Conférence internationale de navigation aérienne) with the sole purpose of devising regulatory procedures relating to flights into and over foreign nations. This was the 1st diplomatic effort to formulate the principles of international law relating to Aerial (Air) Navigation. 19 European States (Austria-Hungary, Belgium, Bulgaria, Denmark, France, England, Germany, Italy, Luxembourg, Monaco, Netherlands, Portugal, Romania, Russia, Serbia, Spain, Sweden, Switzerland, and Turkey) attended this conference. Nations from other continents were not invited as the prospect of their aircraft operating in Europe was considered unrealistic. The 1910 Paris Conference dealt with 4 subjects:

- 1) National Laws;
- 2) Administrative and Technical Law;
- 3) Customs & Excise Law;
- 4) Regulation of Aerial Navigation

The Projet d'une convention internationale relative à la navigation aérienne 1910 draft comprised 7 Basic principles governing aviation within the following chapters:

- 1) Nationality of Aircraft and Registration Requirements;
- 2) Approval and Airworthiness Certificates;
- 3) Authorization for Air Traffic within the Borders and above a National Territory;
- 4) Regulations on Take-off, Landing and Flight;
- 5) Customs and Freight;
- 6) Public Aircraft;
- 7) Final Provisions,

55 articles and 3 Annexes:

- 1) marks of nationality and registration;
- 2) characteristics of the aircraft;
- 3) rules of the air traffic.

The Conference was divided between 2 concepts:

1. Freedom in the Air paralleling that of the Sea, and
2. National sovereignty extending into “International” air-space.

Most governments take action on the ratification of the convention, but equal treatment of “civilian” aircraft, whether national or foreign, within usable airspace met with failure. The cause of the failure was not the impossibility of reaching agreement as to the legal status of airspace; the cause was political and divided the conference between 2 concepts:

1. There should be “Freedom in the Air” paralleling that of “Freedom of the Sea”, and
2. that “National sovereignty” extended into “International” air-space.

1913, an International Committee of Aeronautic Law, Brussels, attempt to resume the work of the 1910 Paris conference also fails.

1916, Inter-Allied Aviation Committee established by France, Great-Britain, Italy and the USA to:

1. coordinate WW1 aircraft fabrication;
2. standardise aeroplanes, engines, appliances and other material.

29 April 1919: Using the basic precepts of the 1910 Paris Conference, Sir Winston Churchill issues the first Air Navigation Regulations for the United Kingdom and Commonwealth. The order covers Aircraft Design, Aircraft types, Aircraft Airworthiness, Aircraft Airworthiness inspection, Aircraft maintenance & maintenance personnel, aircraft.

13 October 1919: The Convention Relating to the Regulation of International (Cross-Border) Aerial Navigation

## Notes on “Civil Aviation”

(the “Paris Convention”) is ratified<sup>324</sup>.

This convention applies to the international cross-border operation of aircraft, the specific airworthiness of the individual aircraft applies to the states. Similar to the 1910 convention in content, substance. The precise wording of the articles and annexes stand out forcefully. Stresses the necessity of cooperation in post-war international aviation. The problems of international aviation were left to bilateral agreement. Rapid development of military (Service) aviation brings a decisive change in governmental attitudes towards Civilian (Civil) aircraft and air transport.

All neutral governments in WWI invited to adhere. Spain declined, partially due to Article 34 related to the uneven equivalency between parties.

1926, Spain withdraws from the League of Nations, its claim for a permanent seat on the Council rejected.

1926, the USA and most Central and South American States fail to adhere to the 1919 Paris Convention.

**25 to 30 October 1926, Ibero-American Conference on Air Navigation (Convenio Ibero Americano de Navegación Aérea, “CIANA”),** Madrid (Spanish attempt to assert authority in Latin America) Attended by 21 nations (Latin America, Caribbean Nations, Spain & Portugal). CIANA modelled after and worded virtually identical to the Paris Convention. CIANA assured:

- a) equal voting rights of its members (Article 34) and
- b) the right for a Contracting State to permit the flight above its territory of an aircraft that did not possess the nationality of a Contracting State (Article 5).

The Madrid Convention was never registered with any international body and was completely ignored in the Chicago Convention. Its lack of success was due to three factors:

1. Aircraft of the period were not sufficiently developed to tie together Iberia and Latin America;
2. Spain's political environment during the period was very unsettled, deteriorating into Civil War;
3. A few years after the Madrid Convention, Latin American energies focused on North America away from Iberia

1 November 1926 - Argentina, Costa Rica, Dominican Republic, El Salvador, Mexico, Spain and Paraguay ratify Havana Conference, but it does not come into force.

1944 the Convention on International Civil Aviation (the Chicago Convention)<sup>325</sup> Article 44(d) of the Chicago Convention of 1944 entrusts ICAO with the objective of fostering the planning and development of international air transport so as to meet the needs of the peoples of the world for safe, regular, efficient and economical air transport.<sup>326</sup> Article ?? deal with maintenance however Article ?? deals with airworthiness?

1995: World Trade Organisation (WTO) General Agreement on Trade in Services (GATS). GATS incorporated as one of the Annexes to the Agreement Establishing the World Trade Organisation (WTO).

The dual nature of air transport as a “public utility” and a “commercial activity” raises the question of whether market access in air transport should be brought under the purview of the WTO General Agreement on Trade in Services (GATS).

International “Air services” are governed by the GATS Annex on Air Transport Services.

The GATS Annex excludes from its scope the largest part of air transport services, namely traffic rights and services directly related to the exercise of traffic rights. The GATS Annex on Air Transport Services application is limited to three ancillary services: aircraft repair and maintenance, selling and marketing of air transport and computer reservation systems.<sup>327</sup> - LIBERALISATION OF INTERNATIONAL CIVIL AVIATION

---

<sup>324</sup> Convention Relating to the Regulation of Aerial Navigation, opened for signature Oct. 13, 1919

<sup>325</sup> Antogni Lykotrafiti, Liberalisation of International Civil Aviation – Charting the Legal Flightpath - Discussion Paper No. 2015-18, September 2015

<sup>326</sup> “So long as safety oversight and designation remain with the country of airline establishment, or, in other words, so long as the country of designation maintains effective regulatory control over the designated airline, the industry's standards of safety can be preserved. Therefore, liberalisation by means of relaxing the nationality restrictions does not stand in the way of safety.” Antogni Lykotrafiti, Liberalisation of International Civil Aviation – Charting the Legal Flightpath Discussion Paper No. 2015-18, September 2015

<sup>327</sup> For an account of how air transport got into GATS in the first place, see Havel, B., 2009. Beyond Open Skies – A New Regime for International Aviation. Wolters Kluwer, The Netherlands. ## Air Regulation in the United Kingdom (Imperial Britain)

### THE AERO CLUB OF THE UNITED KINGDOM 1909

<b>INFLUENCE OF THE AERO CLUB OF THE UNITED KINGDOM ON EARLY AERONAUTICS</b>
--

- I. Issued Aeronauts' Certificates for lighter-than-air-craft from 1905 onwards;
- II. Established first UK Airfield 1909.
- III. Granted the Royal prefix on 15th February 1910
- IV. Established worlds' first "aircraft type" production line (Wright design, under license)
- V. Issued Aviators' Certificates for heavier-than-air-craft pilots from 1910<sup>328</sup>
  - a) The first 4 certificates were granted to established pilots before any test had been agreed upon.
  - b) Certificate numbers 5 thru 65 were granted on tests made under the rules of the Aero Club de France
  - c) 1910 : UK Aviators Certificate No. 1 thru 45
  - d) 1911 : UK Aviators Certificate No. 46 thru 168 = 123 Certificates
  - e) 1912 : UK Aviators Certificate No. 169 thru 382 = 214 Certificates
  - f) 1913 : UK Aviators Certificate No. 383 thru 719 = 337 Certificates
  - g) 1914 : UK Aviators Certificate No. 720 thru 1032 = 313 Certificates
  - h) 1915 : UK Aviators Certificate No. 1033 thru 2250 = 1,218 Certificates
  - i) 1916 : UK Aviators Certificate No. 2251 thru .....
  - j) Until 1915 members included most of the UK military pilots
  - k) Until 1915 trained most UK military pilots
- VI. Gifted initial training facilities and aircraft to the Royal Navy.
- VII. Granted the Royal prefix on 15th February 1910
- VIII. Represents the UK in Fédération Aéronautique Internationale and has a major role in setting technical standards and negotiating with international official bodies.
- IX. Responsible for control of UK:
  - a) private and sporting flying from 1909 until 1919 (?)
  - b) aviation records and competitions from 1909 until 1919 (?)
- X. Member Sir Sefton Brancker, Director of Civil Aviation of the day - helped form the Light Aeroplane "Club scheme"
- XI. Current Patron: HM the Queen
- XII. Current President, HRH Prince Andrew, Duke of York.

To the Members of the Aero Club of the United Kingdom,  
166 PICCADILLY  
LONDON, W.,  
January 6th, 1909

DEAR SIR, OR MADAM,

I am instructed by my Committee to inform you that from the commencement of the year 1909, an Official Organ of the Aero Club of the United Kingdom, entitled " FLIGHT," will be sent out weekly to all members of the Club free of charge. The attention of members is particularly directed to the column headed " Aero Club of the United Kingdom," wherein all notices and announcements affecting the Club will appear from time to time, instead of being communicated by circular as heretofore.

Yours faithfully,  
HAROLD E. PERRIN, Secretary

<b>ROYAL AERO CLUB (R.AE.C) - AVIATOR'S CERTIFICATE RULES - 1ST MARCH 1910</b>
--

The Royal Aero Club "R.Ae.C" of the United Kingdom will grant certificates in accordance with the rules of the Federation Aeronautique Internationale to aviators who have complied with the following rules:

- I. Three separate "trial" flights must be made:
  - a) each of 3 miles round a circular course without coming to the ground.
  - b) They need not necessarily be made on the same day.
  - c) On the completion of each flight the engine must be stopped in the air, and a landing effected within 150 yards of a given spot previously designated by the candidate to the Official Observers.
  - d) Each of the three trials must be vouched for by officials appointed by the Royal Aero Club, and a certificate obtained for each flight.
- II. All trials to be under the control of, and in places agreed to by, the Royal Aero Club.
- III. Before being allowed to compete for Pilot certificates, candidates must, if called upon, satisfy the Committee of the Royal Aero Club of their ability to fly 500 yards, and of making a gliding descent with the engine stopped.
- IV. All attempts must be made between sunrise and sunset, and suitable previous notice must be given to the Secretary of the Royal Aero Club.
- V. The Royal Aero Club declines all responsibility for any accidents, or any damage that may occur to the aviators, their machines, or to any third parties during or in connection with the qualifying tests of the candidate.
- VI. Candidates desirous of qualifying for certificates must make application on a form provided for that purpose.
- VII. Expenses incurred, if any, must be borne by the candidates.
- VIII. The Committee of the Royal Aero Club will decide if the candidate has qualified for a certificate, but reserves the right to refuse the same or withdraw the same at any time **without giving reasons**.
- IX. Foreigners belonging to a country represented on the Federation Aeronautique Internationale can only receive a certificate from the Royal Aero Club after having obtained the consent of their national sporting authority, as approved by the Federation Aeronautique Internationale.
- X. A certificate may be granted to a foreigner whose country is not represented on the Federation Aeronautique Internationale.
- XI. The decision of the Committee of the Royal Aero Club in all matters connected with the trials is final and without appeal.
- XII. The Committee of the Royal Aero Club may in special cases waive any or ail of the above rules, and grant certificates at its discretion.

Announced 24th September 1910

"Any aviator taking part in a public exhibition of flying without having obtained an aviator's certificate will render himself liable to have the granting of his certificate postponed for such period as the Committee of the Royal Aero Club may determine .

<b>ROYAL AERO CLUB "SPECIAL" CERTIFICATE.</b>
---

Under the rules of the Federation Aeronautique Internationale, Published 11th November 1911

1. Candidates must hold the F.A.I. Aviators' Certificate, and be entered on the Competitors Register of the Royal Aero Club.
2. The Royal Aero Club of the United Kingdom will grant a "Special Certificate" to aviators who have passed the following tests. The requirements are:
  - A) A cross-country flight, out and back round a point situated at least 50 miles from the starting point -
  - B) The turning point will be selected by the Royal Aero Club, and will not be indicated to the candidate until one hour before the starting time selected by the candidate. This flight shall be completed within five hours of the selected starting time.
  - C) A separate altitude flight of at least 1,000 feet rise, which shall be verified by recording barograph, sealed by the observers prior to the start.
  - D) To glide from a height of at least 500 feet above the ground to earth, with engine completely cut off, and alight under normal conditions within 100 yards from the starting point. This glide may, at the candidate's option, be the conclusion of Test 2. A sealed barograph must be carried in all flights.
  - E) Each of the flights must be vouched for in writing by observers appointed by the Royal Aero Club. All tests to be under the control of, and in places agreed to by, the Royal Aero Club.
  - F) All flights must be made between sunrise and one hour after sunset, and suitable previous notice must be given to the Secretary of the Royal Aero Club.
  - G) Candidates must make application on a form provided for that purpose. Any expenses incurred must be borne by the candidates.
3. The Royal Aero Club will decide if the candidate has qualified for a certificate, but reserves the right to refuse the same or withdraw the same at any time without giving reasons.
4. The decision of the Royal Aero Club on all matters connected with the tests is final and without appeal.
5. The Royal Aero Club reserves itself the right to add to, amend or omit any of these rules, should it think fit.
6. The Royal Aero Club declines all responsibility for any accidents, or any damage that may occur to the aviators, their machines or to any third parties during or in connection with the qualifying tests of the candidate.

## "A Second Englishman Flies"

The first recognised powered and sustained flight in the United Kingdom occurred on 16 October 1908 at Farnborough by British Army Aeroplane No 1 (Cody 1) Biplane.

The 2nd was the flight of Mr. Moore Brabazon flying a Voisin.

### **"FLIGHT" THE OLDEST WEEKLY AVIATION JOURNAL IN THE WORLD**

FLIGHT was an outgrowth of Stanley Spooner's "AUTOMOTOR JOURNAL"

"AUTOMOTOR JOURNAL" evolved from Stanley Spooner's "The Automotor Journal and Horseless Vehicle".

February 1902 first documented account of aircraft and aeronautics by AUTOMOTOR JOURNAL

February 1902 AUTOMOTOR JOURNAL reprints a 4,000 word paper by Wilbur Wright on glider experiments.

January, 1906 AUTOMOTOR JOURNAL's formal recognition of powered flight

28 August 1908 SCIENTIFIC AMERICAN's formal recognition of powered flight.

November 5, 1908 AUTOMOTOR JOURNAL issues a section on aeronautics entitled, "Flight"

December, 1908, J.T.C. Moore-Brabazon, pioneer British aviator, writes a letter to Stanley Spooner stating that AUTOMOTOR JOURNAL should change its title "so as to show it recognises aviation, the "Conquest of the Air, and are able to prove it."

"My dear Stanley, How in the world you can think of wasting your time and your money on a flying paper beats me. Obviously flying can never amount to anything serious."<sup>329</sup> - Mr. Claude Johnson, managing director of Rolls-Royce, Ltd., circa 1908

02 January 1909 Stanley Spooner starts publishing FLIGHT as "A Journal devoted to the Interests, Practice; and Progress of Aerial Locomotion and Transport". FLIGHT is registered at the G.P.O as a "Newspaper" and the First Aero Weekly in the World. FLIGHT's Office: 44, ST. MARTIN'S LANE. LONDON, W.C.

Founder and Editor 1909-1934 : STANLEY SPOONER - aeronautical journalist (1855-1940).

02 January 1909 FLIGHT headlines with a picture of Mr. Moore Brabazon (the second Englishman to fly) flying his Voisin.

Spooner's editorial comment "as an offspring, FLIGHT are carrying on a tradition started by the AUTO MOTOR JOURNAL,

Anything which tends towards progress in aerial navigation . . . essentially comes within our immediate purview ." (first edition)

August 1912 A E (Algernon) Berriman, Technical Editor of the magazine *Flight*, *observer the first recovery from a fully-developed spin to be witnessed. Avro G biplane (no 7)*

FLIGHT has chronicled and indexed numerous events in British and international aeronautics:

- a) records,
- b) races,
- c) aero meets and displays,
- d) trade shows,
- e) new aircraft,
- f) technical developments;
- g) Photographs
- h) 3-view drawings, cut-away drawings & detailed views of cockpits and components
- i) Royal Aeronautical Society lectures;
- j) private flight

<sup>329</sup> Flight- The Aircraft Engineer & Airships No. 1633 Vol XXXVII pg. 333 - 11 April, 1940

## Notes on “Civil Aviation”

- k) flying clubs ,
- l) airports ,
- m) military aviation
- n) commercial aviation
- o) Personalities and Key figures

1910 FLIGHT prints over 1,000 editorial pages

1919 FLIGHT prints 1,670 editorial pages.

6 and 13, March 1909 FLIGHT prints “The Human Side of Flying, an account of Messrs. Orville and Wilbur Wright”

1913 - FLIGHT hires WW1 veteran John Yoxall as staff photographer. Yoxall pioneers air-to-air photography.

22 May 1919 FLIGHT prints Yoxall’s air-to-air shot of Mr. A.V. Roe looping an Avro 504 at Hunslow

15 December 1932 1st cut-away drawing. Max Millar’s drawing of a D.H. “Puss” Moth

1973 companion journal “The AEROPLANE MONTHLY” first edition. Provides in-depth articles on aviation history.<sup>330</sup>

Original copies of “FLIGHT” prior to the 1940’s are now valued at upwards of \$200/ copy -Ed

<sup>330</sup> United States EAA publication “The VINTAGE AIRPLANE” page 5, March 1985 Vol. 13, No.3

## Civil Flying in Imperial Britain: United Kingdom & Commonwealth 1919

- I. Post WW1, except for a brief period during Easter, "civil flying" did not officially "open" in the United Kindom until 01 May 1919.
- II. May to November 1919, made a convenient period on which to make a preliminary review of the work done by, and to estimate the future of, the Department of Civil Aviation.
- III. Between 12 February 1919 - on which date it was announced in the House of Commons that the Government had decided to set up a Department of Civil Aviation — and 01 May 1919 (the official date of the opening of civil flying in the United Kingdom) a small staff began to attack the multiplicity of problems and difficulties attending the transition period from War to peace, which had to be met in the commencement of civil aviation.
- IV. There were the adjustment and redistribution of activities between the service and civil sides:
  - A. The framing, with the assistance of representatives from the industry and other experts, of the Air Navigation Regulations for the control of civil flying at home, as distinct from the International Air Convention, governing the regulations for international (between -borders *Ed.*) flying ;
  - B. The necessity for deciding upon which routes traffic was most likely to follow and develop, and
  - C. The aerodromes which should therefore, be retained in the general after-War liquidation.
- V. There were also a number of other problems of a kindred nature to assist in the solution of which there were no landmarks, no established precedents and no accumulated experience".<sup>331</sup>

<b>REASON FOR THE AIR MINISTRY</b>
------------------------------------

"The Air Ministry exists to [among other duties] administer the laws and regulations under which aerial navigation is carried on," <sup>332</sup>

---

<sup>331</sup> Flight - Nov 9th, 1919 page 1506

<sup>332</sup> Flight- The Aircraft Engineer & Airships No. 611 (No. 37, Vol XII) pg. 970, Sept 09, 1920

## The Imperial British Air Ministry and Regulation of the Air : 1919

### AIR NAVIGATION REGULATIONS

- I. The Air Navigation Regulations which came into force on May 1, 1919, were based on War experience and on an estimate of the requirements of civil aviation.
- II. In a few directions, *experience has shown that there are omissions*, while in others *the Regulations have been found to be somewhat in advance of requirements* [...]
- III. It has not always been easy to administer the Regulations so as to secure the safety of the public without handicapping the expansion of air work, but frequent consultations between the Department and representatives of the industry and the goodwill of all concerned have enabled a very fair measure of success to be obtained in this respect.
- IV. Any defects in the Regulations or in the method of administering them brought to light by experience are corrected as rapidly as possible.

### ACCIDENTS

- I. Stress has been laid on the necessity for the punctual report and investigation of accidents, as only by this means can the weak points in administration, personnel and material be eliminated and the safety of the public proportionately increased.
- II. The organisation for this work built up during the War by the R.A.F. has been absorbed by the Civil Aviation Department.
- III. On receipt of the report of an accident involving a fatality, or injury to personnel, or serious damage to a machine, experts are immediately sent to investigate matters on the spot.
- IV. This work has fortunately been exceedingly light and the facilities afforded by the firms concerned have enabled the necessary investigations to be carried out satisfactorily

### AERODROMES AND LICENSING

- I. In the same way as ships require harbours, so aeroplanes and seaplanes require aerodromes, which have to be built, inspected and licensed.
- II. Licences also are necessary for the pilots competent to control the machines, and for the officials at the aerodromes qualified to pass machines as fit for flying, while every civil machine has to be registered and numbered in the same way as a motor car, and, if flying for hire, must in addition be certified as "airworthy."
- III. A special branch of the Department of Civil Aviation deals with this and kindred questions, and Between May 1 and October 31 (the UK Department of Civil Aviation) granted the following licences and certificates :
  1. Licences for pilots : 374
  2. Licences for *ground engineers* : 258
  3. Licences for *engineers* : 1
  4. Licences for navigators : 2
  5. Licences of aerodromes : 92
  6. Certificates of registration : 303
  7. Certificates of airworthiness : 241

NOTE: The reason that there has as yet been little or no demand for "engineers" or "navigators" licences is that conditions which would necessitate the inclusion of these classes in the crew of an aircraft are not yet common.

### COLLATION OF INFORMATION

## Notes on "Civil Aviation"

- I. Technical information is collected and collated by the Information Branch from the various foreign journals with a view to assisting the constructive side of the industry, civil and service.
- II. From time to time, as thought necessary, technical memoranda on different subjects are issued.
- III. The Research Branch of the Air Ministry is kept supplied with information, as also is the business community interested in civil aviation.
- IV. In regard to foreign markets, close co-operation has been established with the activities of the Department of Overseas Trade and the various naval and military attaches.
- V. By these means British firms are supplied with information in the form of periodical summaries on such matters as foreign aviation, amalgamation of foreign aircraft firms, regulations and by-laws affecting civil aviation in foreign countries.
- VI. During the past two months 45 special notices have been sent out through the Society of British Aircraft Constructors, and numerous requests from British firms for information on urgent questions have been received and answered.
- VII. This Branch is also responsible for the issue of official Press communiques on all questions affecting civil aviation.

<b>AIR MINISTRY STAFF</b>
---------------------------

- I. The staff of the Department of Civil Aviation on October 31 1919 consisted of a total of 143, of which 52 are administrative officials and 91 clerical subordinates, at a total salary of £50,000 per annum.
- II. These figures include the Air Ministry Meteorological staff, but not the personnel of the Meteorological Office recently transferred to the Air Ministry.
- III. It should be borne in mind that the staff of :
  - A. the Communication branch,
  - B. the Accidents branch, and
  - C. the Meteorological branchare engaged on technical work for both the civil and service sides.
- IV. The selection of a staff to deal with the many questions involved has not been an easy task owing to the fact that the Department must, in the nature of things, be a civil one, and that those *officers possessing the requisite administrative and technical experience* can usually be found only among those who have served in or with the Royal Air Force.
- V. It has been impossible, until conditions are more certain, to offer fixity of tenure in the Department of Civil Aviation, and the terms of appointment have been necessarily brought into unfavourable comparison with the improved rates of pay recently conceded to the Royal Air Force. The result has been that recruitment has been difficult and slow. Steps are being taken to remedy this.
- VI. It has been the object of the Department to ensure the safety both of the flying and non-flying public, without imposing irksome restrictions on the various firms concerned.
- VII. In numerous problems on which technical advice has been required, the Department of Civil Aviation has received the assistance of the directorates of research and aeronautical inspection of the Department of the Director-General of Supply and Research, which is a separate Department in the Air Ministry from that of civil aviation.
- VIII. Hitherto, *all machines employed by civil aerial transport firms have been converted war machines*, and although numerous new types are on the stocks, *it may be said that no true commercial machine has yet appeared.*
- IX. *Divergencies in type and construction between service and civil aircraft will, however, rapidly appear"* <sup>333</sup>

---

<sup>333</sup> F. H. SYKES, Controller-General of Civil Aviation, November 1, 1919, Air Ministry. published in Flight 20 November 1919, pg 1508

## Imperial British Air Ministry : announcements : 1919

### APPLICATION OF THE REGULATIONS - NATIONAL CONTROL OF AVIATION

- I. The official Air Navigation Regulations apply to the United Kingdom (Does the United Kingdom include the Commonwealth Nations? and if not, does pre-existing "Imperial British Law" apply to those commonwealth nations who are excluded ?) only.
- II. They do not permit of civil aircraft flying from England across the Channel to any foreign country, and are not applicable elsewhere than in the United Kingdom. [see note questions above]
- III. Overseas civil flying [Meaning international x-border between nations] will not be possible until the International Regulations for the Control of Aviation are published.<sup>334</sup>

### INSPECTION OF AIRCRAFT AT AERODROMES

- I. It will be noted that a necessary part of the aerodromes management is the provision of licensed ground engineers.
- II. As there has not yet been time for firms to provide these, the A.I.D. has been called upon, as a temporary measure, to provide a certain number of skilled personnel to assist.
- III. It must be remembered also, that it is only from aerodromes where licensed ground engineers are located that aeroplanes can start.

### AIRCRAFT MILITARY MARKINGS

- I. The bulk of machines which will at first take part in civil flying, having been built as Service (R.A.F & R.N.A.S) machines, are marked with red, white and blue rings, and bear Government [registration] numbers.
- II. The existing Government numbers will be allotted to these machines as temporary registration marks.
- III. When permanent marks are allotted the old registration numbers must be erased and the new permanent marks put on within 14 days of allotment.
- IV. Owners of aircraft upon which the service ring markings are painted must obliterate them.

### AIR MINISTRY LICENSES

All applications for licenses of every class, aerodromes, air-worthiness of machines, pilots, ground engineers, etc., should be addressed to the Air Ministry (Controller General, Civil Aviation "C.G.C.A")

---

<sup>334</sup> Flight 08 May, 1919

## Imperial British Air Navigation : Regulations

### THE FRAMING OF THE AIR NAVIGATION REGULATIONS

"the framing of *the Air Navigation Regulations* which came into force on 30 April 1919, and especially that part of the regulations dealing with ground engineers [...] necessitate the creation of "a new class of official" [...] wherein the inspection of aircraft must necessarily differ from that of other vehicles of locomotion"<sup>335</sup>

### THE DUTIES OF A GROUND ENGINEER

- 1) A ground engineer is **responsible for maintaining the validity of the certificate of airworthiness**, and to do so is required to certify each day on which a flight is made that the aircraft is safe in every way for flight.
- 2) The **experience** during the past two years **has been that** in some cases **there has been a tendency to consider such certificates as merely a piece of formality which must be fulfilled**.
- 3) Sometimes the ground engineer hands over the machine to the pilot, and takes but little, if any, interest in what happens on its journey, although **the pilot generally bases his certificate as to fitness for each flight on the ground engineer's daily certificate, and may also rely on the ground engineer to see that the petrol, oil and water in the tanks are sufficient for the proposed journey**. (Ed. note: **Nothing in this meant that the G/E was the person responsible for petrol, oil and water provisioning, but that they could assist the pilot**)
- 4) **The ground engineer is responsible for the air-worthiness of the machine until the very moment when it takes the air**, and the last few minutes on the ground and the first few in the air often provide evidence which should be carefully noted.
- 5) **Aircraft require continuous maintenance, and the ground engineer is responsible that the machine to which the original certificate of airworthiness was granted is unaltered by such maintenance**.
- 6) The ground engineer must also consider the conditions under which the machine is stored ; how these are likely to affect the various parts of which the machine is composed.
- 7) The ground engineer must **decide when it is necessary to fit a spare part**, whether this be a nut or a complete component. The mere fitting of the new part is but the smallest part of this duty.
- 8) The ground engineer **must satisfy himself that**:
  - a. The part has been correctly made in accordance with the drawings on which the certificate of airworthiness was granted;
  - b. The part is of the material specified in these drawings.
  - c. The part must have been inspected during construction (as laid down in detail in paragraph 21 of Section 3 of the 'Directions');
  - d. There is actual evidence that it has passed such inspection;
  - e. The part has not been damaged or deteriorated since such inspection was carried out.
- 9) The Certificate concerning the fitness of the engines is probably one of the most difficult duties of a Ground Engineer. Obviously the airworthiness of the aircraft depends very largely upon the engines.
  - 1) **Records taken** over a considerable period show that for every eight forced landings due to engine failure, one is actually due to defect in the engine itself, the remainder being directly caused by some default in the installation of the engine.
  - 2) So long as **the engine and the aircraft structure are designed as separate units, installation must remain a weak point of the whole machine**, so that the ground engineer must give his constant attention to the daily routine of cleaning petrol filters, checking petrol flows and water connections, etc., ensuring that all ignition leads, switches and contacts are in good order.
  - 3) He should **verify** each day that the engine runs up to its proper speed, see that the oil pressure builds up and is properly maintained, and that the radiator temperature is normal.
- 10) The ground engineer **should also make a point of inquiring of the pilot** as to any sign of excessive engine vibration in the air, the flexibility of the engine and any unusual circumstances which may have characterised its running during the daily trips.
- 11) The **repairing** of an engine **requires** on the part of the ground engineer in charge of it **almost a wider and more detailed knowledge than is needed in the building-up of a new engine**, in that **he must determine**:
  - 1) **the safe limits** to which crankshafts, cylinders and the like may be re-ground, and
  - 2) **the extent to which partially worn** components may be retained.

<sup>335</sup>Extracts from a paper by Lieut.-Col. H. W. S. OUTRAM before the R.Ae.S. on 3 February 1920. Flight, 1920

## Notes on "Civil Aviation"

- 12) A **sound knowledge of materials and their** heat treatment (**manufacturing processes**) , too, **is essential to justify his responsibility** in the acceptance of new parts. This all-round knowledge is not easily obtainable under normal conditions of works organisation and employment.
- 13) One result of both Service and Civil experience is that **various small points come into prominence which it is desirable to draw to the notice of all ground engineers**. "Notices to Ground Engineers" are therefore issued.
- 1) "Notices to Ground Engineers" are published in the technical press (FLIGHT, The Aeroplane, etc.,) and are sent to all registered owners of aircraft, who are expected to pass them on to their ground engineers.
  - 2) It is here urged that ground engineers and aircraft operators generally should suggest matter for such Notices.
  - 3) Experience with any particular type of aircraft or engine usually brings to light the little troubles to which it is particularly prone. Such experience gained by the larger companies operating a number of machines would be of value to the owner or operator of a single machine of the same type, and in many cases to owners of machines of similar types, and could often be published as ' Notices to Ground Engineers ' with advantage.
  - 4) Occasionally particular points of weakness only become apparent after more or less prolonged use or as the result of an accident. **When such cases come to light the certificates of airworthiness for all machines of the type in question are suspended until such time as the defect has been remedied.** Information of such suspensions is issued as a "Notice to Ground Engineers".
  - 5) Once the ground engineer's attention has been drawn to a point of weakness it is sometimes possible to permit the aircraft to fly until temporary or permanent replacement has been made without taking the machine out of service.
- 14) **The insurance of aircraft** is already of such importance as to call for a separate paper, and on this occasion it is only proposed to touch on one aspect, that of the relation of the ground engineer to the insuring company. **So far as the Air Navigation Regulations are concerned, the ground engineer is only required to certify that the aircraft is in every way safe for flight.**
- 15) The **risk of insuring** any aircraft is governed to a large extent by the following points, all of which have to be taken into consideration :
- (a) The design and primary standard of construction of the aircraft.
  - (b) the "Condition of the Aircraft" when setting out for the flight.
  - (c) Pilot Skill
  - (d) Meteorological Conditions..
- Of these factors the second is that which concerns the ground engineer. It may often, therefore, be his duty not only to maintain that minimum standard insisted upon by [...]
- 16) It is suggested that it may be found necessary to consider the formation of a senior grade of Ground Engineer.
- 17) It is already probable that a large operating company would find it find it desirable to place their ground engineers under the control of one man **who had higher technical qualifications and ability than are required for the ordinary ground engineer**. Such a man would go far towards ensuring the reliability of any service and would **advance the status of 'ground engineering ' nearer to that which must be attained if these men are to safeguard adequately the aerial transport of the future.**"
- 18) In two appendices Lieut.-Col. Outram gave:
- 1) a list of " Notices to Ground Engineers" published by the Air Ministry, and
  - 2) the results of Air Ministry examinations of ground engineers up to December 31, 1920, which showed that out a total of 664 applicants, 155 did not pass, 509 were "**passed and licensed**" and 132, were "**operating and under supervision**" during 1920

### EXAMINATION OF GROUND ENGINEERS FOR LICENSING

- I. The procedure of examination of candidates for Ground Engineer Licenses:
- A. by a Board composed of Air Ministry inspectors;
  - B. such examination can only guarantee to weed out those who are insufficiently qualified;
  - C. The Board can do no more than state that *in their opinion* a candidate is **reasonably likely to be** an efficient ground engineer;
  - D. the only way to determine definitely whether a man is a properly qualified ground engineer is to watch him at his work, and in particular to note the results of such work.

## Notes on "Civil Aviation"

- II. It is seldom that any one man is called upon to cover the whole range of a ground engineer's duties [...] the following subdivision of [Ground Engineers'] licences into four [alphabetised] categories :
- A. Rigging and daily maintenance of aircraft at the aerodrome;
  - B. Overhaul and construction of aircraft;
  - C. Top overhaul and daily maintenance of the engine at the aerodrome;
  - D. Overhaul and construction of aero engines.
- III. The majority of Ground Engineer candidates may be divided into two classes:
- 1) One class consists of men:
    1. who have a sound knowledge of aerodrome practice;
    2. who have a fair knowledge of ordinary workshop methods;
    3. who have a surprising ignorance of the qualities of the materials from which an aircraft or aero engine is built;
    4. who have even less knowledge of the many ways in which such materials may be spoilt by bad treatment and
    5. who are ignorant of the materials' peculiar properties.
  - 2) The other class consists of men:
    1. whose experience has been limited to a large extent to the construction of aircraft or aero engines;
    2. who have gained the knowledge of materials referred to;
    3. who are expert in modern aeronautical workshop practice;
    4. who have only a very general or theoretical idea of what happens when the aircraft takes the air.
- Each of these classes is again sub-divided into:
- A. the metal-worker;
  - B. the wood-worker.
- IV. Generally a candidate with good and sound knowledge of metal work has but an elementary knowledge of wood and non-metallic materials, or his knowledge of the latter pre-dominates.
- V. Only a few men have shown equally sound knowledge of both branches of aircraft construction.
- VI. It has been found that in the majority of cases a candidate can be placed in one of these classes within the first few minutes. The remainder of his examination is spent in ascertaining whether his experience and knowledge in the other divisions are sufficient to warrant a recommendation.
- VII. The examination of a ground engineer is only completed when his work has been watched

**SUPERVISION OF GROUND ENGINEERS DURING WORK**

- I. The examination of a ground engineer is only completed when his work has been watched. In order, therefore, to supervise the work of the ground engineer, the power of re-inspection provided in paragraph 6 of Schedule 3 of the Regulations and paragraph 8 of Part IV of the 'Directions' is exercised. [is this what the military officers in the fledgling CAF used to assert their "dominance over the Ground Engineer?"]
- II. It was decided to arrange for periodical re-inspection of all aircraft in use, and thereby supervise the work of the active ground engineers.
- III. The method adopted for periodical re-inspection of all aircraft in use is as follows :
  - a) All certified aircraft must fly from licensed aerodromes.
  - b) The Air Ministry have a complete list of such aerodromes, which is kept up to date.
  - c) Each is visited in turn, and the aircraft examined, the work done by the ground engineers responsible for the daily certificates for such aircraft being checked and noted.
  - d) It has been found that this method gives a useful record of nearly every ground engineer who is operating. Should any escape such supervision, the fact becomes apparent when they apply for renewal of their licence, and in such cases particulars of the work done are required.
- IV. The first two years' supervision has shown that aircraft operators may be divided into two classes :
  1. Those whose chief aim is to run a regular and reliable service:
    - a) who have a number of machines in operation;
    - b) employ an organised staff of ground engineers.
  2. The owner-operator or small syndicate with one or two machines whose main object is to obtain the biggest return for their outlay by "joy-flying" exhibition flights and the like, at sea-coast resorts or inland holiday centres.

It is appreciated that at this stage the latter class of operator is important from the point of view of the public education in flight. It is, however, this latter class of operator that requires the more careful supervision, and it is claimed that the small number of accidents which have occurred have proved that adequate and efficient supervision is possible without undue expense to the State or such a degree of State control as to seriously hamper the operator.

## SUPPLEMENTARY AIR REGULATIONS 1919<sup>336</sup>

**LICENSING OF PERSONNEL**

- I. With reference to Regulation j (3) and Schedule II, applications for licences should be made to the Secretary, Air Ministry, London, W.C. 2. (II)
- II. Technical Examination:
  - A. Rules as to lights and signals, and rules of the air.
  - B. After satisfactory practical tests have been passed, candidates will submit themselves when summoned to examination on :
    1. Flying machines;
      - a) Aeroplanes:
        - (1) Theoretical abstract knowledge of the resistance of the air in connection with planes, rudders, elevators and propellers;
        - (2) functions of the different parts of the machine and of their controls.
        - (3) Assembling of aeroplanes, propellers, undercarriages, rudders, elevators and their controls.
        - (4) Practical tests on rigging and
      - b) Seaplanes:

---

<sup>336</sup> Flight May 1919

## Notes on "Civil Aviation"

- (1) Theoretical abstract knowledge of the resistance of the air in connection with planes, rudders, elevators and propellers ;
- (2) functions of the different parts of the machine and of their controls.
- (3) Assembling of aeroplanes, propellers, undercarriages, rudders, elevators and their controls.
- (4) Practical tests on rigging.

### 2. Engines;

- a) General knowledge of internal combustion engines, and their various functions; valve gear, carburation, ignition, exhaust.
- b) Characteristics of aero engines and a general idea of their construction, adjustment and assembling.
- c) Causes of the faulty running of engines.
- d) Fuel and oils.
- e) Description of the details of the aero engines used.
- f) Adjustments, lubrication, upkeep disassembling and assembling of the principal parts ;
- g) Causes of breakdown.
- h) Use of throttle and other controls.
- i) Practical tests in running repairs.

### 3. Navigation.

<b>GENERAL KNOWLEDGE</b>
--------------------------

- I. International rules for aerial and maritime navigation.
- II. Practical knowledge of international aerial legislation.

<b>CERTIFICATES OF AIRWORTHINESS</b>
--------------------------------------

## Notes on "Civil Aviation"

- I. With reference to Regulation 2 (1) and Schedule III, applications for certificates of airworthiness should be made to the Secretary, Air Ministry London, W.C. 2.
- II. Application forms will be supplied on demand.

<b>"TYPE" AIRCRAFT</b>
------------------------

- I. Subsequent to the forwarding to the Secretary Air Ministry of an application form duly completed for a certificate of airworthiness for a type aircraft, the applicant shall forward to the Director of Research, Air Ministry:
  - a) general arrangement drawings of the proposed aircraft; together with
  - b) such particulars of load, fuel, engines, etc.,as will enable a preliminary opinion to be formed as to general safety.
- II. The applicant shall forward subsequently such drawings and particulars of the proposed aircraft as may be necessary for the checking in detail of the safety of the aircraft
- III. The information and drawings required for this purpose should be, where applicable, in accordance with forms to be supplied on application. (CO. Forms 12 and 13.)
- IV. Blue prints or rough sketches may be sufficient to enable the said checking to proceed provided they are fully dimensioned.
- V. The applicant may proceed with the construction of any part or parts of the aircraft as and when these are approved by the Secretary of State.
- VI. The workmanship and materials of construction of the aircraft shall be approved by the Secretary of State in accordance with detailed directions in para. 20 below.
- VII. On completion of the aircraft, flying trials will be carried out by the applicant's or constructor's pilot in the presence of representatives of the Secretary of State.
- VIII. The applicant will be instructed to deliver the aircraft to the official aerodrome for official trials after the satisfactory completion of:
  - 1. the check calculations,
  - 2. inspection, and
  - 3. applicant's flying trials, and
  - 4. after any modifications considered necessary for safety have been completed to the satisfaction of the Secretary of State.
- IX. At any time prior to the delivery of the aircraft for official trials, modifications to the aircraft may be made by the applicant, provided that:
  - 1. full particulars of the proposed modifications are first submitted to the Director of Research, Air Ministry;
  - 2. drawings of the proposed modifications are first submitted to the Director of Research, Air Ministry of the proposed modifications are first submitted to the Director of Research, Air Ministry, and
  - 3. such as affect the safety of the aircraft are approved by the Secretary of State,
- X. During official trials (which may be attended by a limited number of representatives of the applicant):
  - 1. the aircraft will be in the charge of the representatives of the Secretary of State, but
  - 2. the Secretary of State and /or his representatives shall not be liable for any loss or damage caused to such aircraft during official trials.
  - 3. If any modifications are considered by the Secretary of State to be necessary for safety as a result of such official trials, such modifications shall be carried out by the applicant, and on completion thereof the aircraft shall be delivered, if required, for further official trials.
- XI. On the completion of official trials:
  - 1. The applicant will be notified, and
  - 2. Reports on calculations and tests will be supplied to him by the Secretary of State on application
  - 3. The aircraft will be handed over to the applicant at the official aerodrome for removal, or

## Notes on "Civil Aviation"

4. The aircraft will be delivered by an official pilot to an aerodrome selected by the applicant, and approved by the Secretary of State.
- XII. Prior to the issue of a certificate of airworthiness, the applicant shall deliver to the Director of Research, Air Ministry, a complete set of working drawings (process tracings) of the aircraft.
- XIII. Only upon the satisfactory completion of the official trials, and after the completion to the satisfaction of the Secretary of State of any modifications considered necessary for safety, will a certificate of airworthiness be issued.

### **"SUBSEQUENT TYPE" AIRCRAFT**

Following the receipt by the Secretary, Air Ministry, of an application form, duly completed, certificates of airworthiness for *subsequent aircraft which conform in all essential respects* with a "**type aircraft**" *for which a certificate of airworthiness has previously been issued*, will be granted, subject to the following conditions and procedure.

- I. The applicant may:
  1. make modifications (including change of engine type) to the aircraft and
  2. may depart from the approved complete set of working drawings (process tracings) of the type aircraft that are in the possession of the Secretary of State ;
  3. but full particulars and drawings of the proposed modifications shall first be delivered to the Director of Research, Air Ministry, and such as affect the safety of the aircraft shall be approved by the Secretary of State.
- II. During the construction of the aircraft the inspection of the workmanship, construction and materials shall be as approved by the Secretary of State in accordance with detailed directions in para. 21 below.
- III. In the case of an aircraft, which in the opinion of the Secretary of State:
  - A. differs considerably from the "type aircraft",
    1. on completion of the aircraft, the Secretary of State may require flying trials to be carried out, by the applicant's or constructor's pilot, in the presence of his representatives,
    2. and/or may require the aircraft to be delivered to the official aerodrome for additional trials.
    3. The procedure in this case will be in accordance with the procedure governing similar trials in the case of a type aircraft, as laid down in paras. 10, n and 12 hereof.
  - B. in the case of an aircraft built by a constructor not familiar with the type aircraft:
    1. on completion of the aircraft, the Secretary of State may require flying trials to be carried out, by the applicant's or constructor's pilot, in the presence of his representatives,
    2. and/or may require the aircraft to be delivered to the official aerodrome for additional trials.
    3. The procedure in this case will be in accordance with the procedure governing similar trials in the case of a type aircraft, as laid down in paras. 10, n and 12 hereof.
- IV. On the satisfactory completion:
  1. Of the aircraft; and
  2. Of any trials that may be required by the Secretary of State; and
  3. When any modifications considered necessary for safety have been completed to the satisfaction of the Secretary of State,A certificate of airworthiness will be issued.
- V. Prior to the issue of such certificate, the applicant shall deliver to the Director of Research, Air Ministry, a complete set of working drawings (process tracings) of any modifications to or departure from the type aircraft.
- VI. In the foregoing; directions the term " aircraft " includes the aircraft and all equipment (unless the context otherwise implies), except that working drawings will not be required for engines or equipment of approved types.

### **APPROVAL OF WORKMANSHIP AND MATERIALS**

Type Aircraft.

## Notes on "Civil Aviation"

- I. **Inspection of type aircraft will be carried out by representatives of the Secretary of State.**
- II. The Director of Aircraft Inspection will accept, wherever in his opinion possible:
  1. the **inspection of details**,
  2. the **inspection of components** and /or
  3. the **inspection of materials** for type air-craftmade by employees of the constructor under the supervision of his representative, but each component will be finally inspected and approved by a representative of the Director of Inspection, who will co-operate with the constructor's inspecting staff.
- III. Constructors must notify Director of Aircraft Inspection seven days before commencing work on any part of the aircraft, the inspection of which is necessary prior to further Work.
- IV. The constructor **must also fulfil the conditions detailed hereunder for subsequent aircraft.**

<b>CERTIFICATION OF AIRCRAFT OF THE "SAME TYPE"</b>
---

- I. Constructors must satisfy the Secretary of State that their inspecting staff is such as to **ensure that aircraft passed by them conform in all essential respects to the type design.**
- II. Constructors must purchase **material to the specifications approved for the type design**, and must arrange that each and every batch of such **material is proved to comply with such specifications by suitable examination, sampling and testing**, as may be approved by the Director of Aircraft Inspection.
- III. Constructors must make such arrangements at their works as will **preclude the use of material other than that approved** as in para, (II) above.
- IV. Constructors' inspecting staff members must stamp or otherwise **provide means for the identification of each and every detail, in such a way that the individual responsible for such approval can subsequently be traced**, selective inspection being adopted where considered possible.
- V. Constructors must **issue only approved details (Drawings and data) or parts** to the shops for assembly into components.
- VI. Constructors must maintain an efficient process **inspection during such work of assembly, (Staged Inspection process)** and record such inspection on a process card for each component.
- VII. Every component must be **finally inspected by a qualified member of their inspecting staff**, who will stamp the component in such a way that he may afterwards be identified, and will also sign the process card.
- VIII. Constructor's **methods of carrying out the following operations must be approved** by the Director of Aircraft Inspection, or other recognised authority, viz. : **Heat-treatment of steel, seasoning and conversion of timber, glueing of important parts, and doping.**
- IX. Constructors must **ensure that all instruments and other parts affecting airworthiness purchased from sub-contractors have been inspected and approved in accordance with these conditions.**
- X. Aircraft and/or engine constructors **must ensure that all aircraft and/or engines** have:
  1. been **inspected in accordance with these conditions** and
  2. been **approved in accordance with these conditions**, and further,
  3. satisfactorily **undergone** such bench tests as are required by the Secretary of State, and for this purpose that suitable test stands and accessories are provided to the satisfaction of the Director of Aircraft Inspection.
- XI. Aircraft constructors must carry out an efficient **inspection of**:
  1. the **installation** of all engines;
  2. the **installation** of all instruments;
  3. the **installation** of all parts ,

## Notes on "Civil Aviation"

that are **fitted** by them **into the aircraft**, such inspection to **ensure** that **they function correctly**, the individual responsible being indicated by a signature on the process card referred to.

XII. Constructors must limit the power of their inspection staff to grant concessions to matters which:

1. do not affect the weight of the part;
2. do not affect the strength of the part;
3. do not affect the functioning of the part -

Should any of these points be affected, the matter must be referred to the designer of the aircraft, and if affecting the type design, to the Director of Research as laid down for modifications to type designs.

## Imperial British Board of Trade : Licensing of Competent Persons

"as the Board of Trade protects the public by inspecting ships and railways, so it should intervene in the public interest to inspect aircraft, test materials, and examine designs"<sup>337</sup>

The Safety Certificate which is required for ships by Article 57 of the Convention on Safety of Life at Sea can be issued after an inspection either made by officers of the State to which the ship belongs or by surveyors nominated by the government for this purpose or organisations recognised by it.

"In every case the Government concerned fully guarantees the completeness and efficiency of the inspection and survey." (Article 57.) J. M. Spaight, *Aircraft in Peace and the Law*. page

M. Lochet's concluded that:

1. "the best guarantee of airworthiness was the pilot's own interest in preserving his life", but
2. To rely upon the caution and judgment of a young airman, perhaps of an abnormally optimistic temperament, in such a matter could not be justified where passenger carrying aircraft are in question<sup>338</sup>

The Interpretation Act, 1889, applies for the purpose of the interpretation of these regulations as it applies for the purpose of the interpretation of an Act of Parliament, and as if these regulations were an Act of Parliament.

The definition of Personnel in 1919 meant, in relation to any aircraft and included "any pilot, commander, navigator, and engineer (not specific to one type or another), and any operative member of the crew"

I. With respect to "Competent Persons" to undertake:

- A. "Periodic Inspection"
- B. "Overhaul"
- C. Examination before each Flight of Aircraft

### GROUND ENGINEERS

I. With reference to Air Navigation Regulation No. 2 (1) and Schedule III (3 and 5 thru 10), the following is the procedure for any person desirous of being licensed as a competent person, hereinafter referred to as a "ground engineer", to:

1. undertake the inspection of periodic overhauls of aircraft required to be certified as air-worthy, or
2. as a competent person to examine such aircraft before each flight.

<sup>337</sup> Sir Fortescue Flannery, House of Commons debate, February, 1919

<sup>338</sup> James Molony Spaight, *Aircraft in Peace and the Law*. page 39

**APPLICATIONS FOR ENGINEER LICENCES**

- I. Applications for licences should be made to the Secretary, Air Ministry London, W.C. 2
- II. Application forms will be supplied on demand.
- III. Subsequent to the forwarding to the Secretary, Air Ministry, of an application form for a ground engineer's licence, the candidate will be requested to report to a local representative of the Director of Aircraft Inspection for examination. At this examination the candidate will be required to submit proof :
  1. That he is not less than 21 years of age.
  2. That he has served:
    - a) at least two years as a mechanic or engineer on internal combustion engines, or
    - b) a like period on aircraft construction or maintenance, or
    - c) a period of not under three years on joint aero, engine and aircraft construction or maintenance.
- IV. From 1919 Ground Engineer licenses are of two functions
  - 1) to perform maintenance on aircraft and / or engines and
  - 2) to perform inspection / certification of aircraft and / or engines, andwere issued for either one purpose or a combination of purposes:

A candidate *may apply to be licensed as a ground engineer* to:

  1. **inspect** all flying machines *each day before flight*
  2. **inspect** all engines *each day before flight*
  3. **inspect** all flying machines and engines *each day before flight*
  4. **inspect** all flying machines *after overhaul*
  5. **inspect** all or engines *after overhaul*
  6. **inspect** all flying machines and engines *after overhaul*
  7. **overhaul** all flying machines
  8. **overhaul** all engines;
  9. **overhaul** all flying machines and all engines
  10. A candidate may apply for a licence limited to the inspection of any named type or types of flying machine or engine either after overhaul and /or each day before flight.
- V. From 1919 Ground Engineer licenses were issued with "Type Ratings" for inspection and certification of aircraft and / or engines.:

A candidate may apply *for a licence limited to the inspection* of:

  1. any **named type or types** of flying machine after overhaul;
  2. any named type or types of flying machine each day before flight;
  3. any named type or types of flying machine after overhaul and each day before flight;
  4. any named type or types of engine after overhaul;
  5. any named type or types of engine each day before flight;
  6. any named type or types of engine after overhaul and /or each day before flight
- VI. From 1919 candidates who applied *to be licensed as a ground engineer* in the United Kingdom could be examined on 3 areas. This examination took place post apprenticeship and after their training / education. (NOTE: The United States adopted and follows this system to this day, but uses different terms to differentiate *the person performing maintenance* - "A&P" - from *the person holding inspection and certification authorisation* - "A&P with I.A". To correctly recognise the UK originated term "AME", the correct use of these two United States differentiations must be adhered to and followed by all who refer to "AMEs", especially those in the legislative bodies and regulatory agencies of the world' nations) :
  1. *may be examined* in part by:
    - a) written questions, and
    - b) oral questions
    - c) *may be required* to give practical proof of knowledge
    - d) *will be required* to submit proof of knowledge:
      - (1) For engines :
        - (a) **knowledge of** the general principles of:
          - i) internal combustion engines applied to aircraft, including
          - ii) the general principles of ignition,
          - iii) the general principles of carburation,

## Notes on "Civil Aviation"

- iv) the general principles of lubrication and
  - v) the general principles of cooling ;
  - (b) **knowledge of the:**
    - i) inspection necessary for the installation of the complete power unit in the aircraft,
    - ii) inspection necessary for the functioning of the complete power unit in the aircraft,
    - iii) testing necessary for the installation of the complete power unit in the aircraft,
    - iv) testing necessary for the functioning of the complete power unit in the aircraft,
    - v) adjustments necessary for the installation of the complete power unit in the aircraft,
    - vi) adjustments necessary for the functioning of the complete power unit in the aircraft **and**
  - (c) the **capacity** to:
    - i) **supervise** running repairs [being accomplished by mechanics], or
    - ii) **inspect** running repairs [being accomplished by mechanics] **and / or**
  - (d) the **capacity** to:
    - i) **supervise** the overhaul [being accomplished] of particular engines [by mechanics], or
    - ii) **inspect** the overhaul [being accomplished] of particular engines [by mechanics].
- (2) For flying machines :
- (a) The **general principles of:**
    - i) the construction;
    - ii) the rigging;
    - iii) the trueing up; and
    - iv) the adjustment of flying machines;**and**
  - (b) a **detailed knowledge of:**
    - i) the construction,
    - ii) the adjustments,
    - iii) the maintenance, and
    - iv) the final inspection of the flying machine's components;**and**
  - (c) the **capacity to:**
    - i) **supervise** running *repairs*, or
    - ii) **inspect** running *repairs*,**and /or**
  - (d) the **capacity to:**
    - i) **supervise** the **overhaul** of specified types of flying machines, or
    - ii) **inspect** the **overhaul** of specified types of flying machines.
- VII. Aircraft certified daily by such licensed ground engineers will be periodically re-inspected by a person or persons - **duly authorised by the Secretary of State**, who reserves the right to suspend or revoke licenses granted as above should such certified aircraft be deemed by him as a result of such examination to be unsafe. [is the ref to "periodically re-inspect" the root of the "Officer" certifying as "Airworthy" above the G.E? and the military "Technical Officer" then having the ability to prevent an aircraft from flying if found to be "NOT Airworthy"? Is this what the pilots have usurped as their legal right simply because they assumed that the T.O was a Pilot signing the release? When did the Secy.-of-State give this role to the civilian pilots? per the regulations, the pilot was simply a "Licensed operator of the craft", nothing more., however at the time the bulk of the pilots were officers - young and uneducated in legal responsibility. If this is the case, then the pilot's have placed themselves in a position of authority higher than their Secretary of state, i.e higher than their legal right allows]
- VIII. Ground engineers certifying flying machines or engines as **airworthy after overhaul, must be in a position to certify that all the conditions required for the inspection of subsequent aircraft during construction that apply to the overhaul** have been carried out.
- IX. *The Secretary of State reserves the right to suspend or revoke the licence of the ground engineer* responsible for certifying that the overhaul has been correctly carried out, should a test inspection be deemed by the former to indicate that the flying machine is not airworthy.

## Notes on "Civil Aviation"

- X. Ground engineers' licences will be issued at a charge of 5s., and will be valid for a period of twelve months, and will then be subject to renewal. (The root for the renewal of AME licenses. It cannot be stressed enough that the US-FAA A&P has NO period of mandatory renewal and that *this condition of renewal only applies to the US-FAA A&P with I.A)*
- XI. The Secretary of State reserves the right to re-examine the candidate for renewal, if considered necessary.
- XII. In the event of any applicant being required to undergo a practical examination, a further fee of one guinea will be charged.

### CERTIFICATES OF SAFETY OF AIRCRAFT : 1919-

#### DAILY CERTIFICATE OF SAFETY OF AIRCRAFT

Flying Machine Type \_\_\_\_\_ Registered No \_\_\_\_\_ Inspection at \_\_\_\_\_ on \_\_\_\_\_ time

"I hereby certify that I have this day examined the above flying machine and that I consider it safe in every way for flights to day when conducted as specified in the Certificate of Airworthiness."

Signed (Ground Engineer) \_\_\_\_\_.

Date: \_\_\_\_\_

#### DAILY CERTIFICATE OF SAFETY OF ENGINE

Flying Machine Type \_\_\_\_\_ Registered No \_\_\_\_\_ Inspection at \_\_\_\_\_ on \_\_\_\_\_ time

"I hereby certify that I have this day examined the engines, engine installations and accessories of the above flying machine, and that in my opinion they are in every way safe for flights to-day."

Signed (Ground Engineer) \_\_\_\_\_.

Countersigned: \_\_\_\_\_.

Date: \_\_\_\_\_.

NOTE.—*Both certificates may be signed by the same individual if licensed for both "flying machines" and "engines".*

### INSTRUCTIONS FOR USE OF LOG BOOKS

With reference to Regulation 2 (3) and Schedule V, the log books should contain the information shown below.

- I. The **constructor should fill in and sign the original entries in the log book**, as far as he is in a position to do so.
- II. Subsequent entries should be made and signed by the pilot or competent person.
- III. A copy of *the certificate of airworthiness should be kept* in the pocket at the end of *the aircraft* log book.
- IV. **All entries to be in ink**, except in the case of journey and signal log books, the entries for these may be made in pencil in a rough notebook, but should be entered in ink in the log book every 24 hours. *In the event of any official investigation the rough notebook may be called for.*
- V. **No erasures should be made in, nor pages torn from, any log book.**
- VI. A copy of these instructions should be inserted in each log book.

### "JOURNEY LOG" : INFORMATION TO BE NOTED

- A. Type to which the aircraft belongs:
- B. its nationality
- C. In addition, for each journey :
  - 1. The name, nationality and residence of the pilot and crew,
  - 2. The place, date and hour of departure,
  - 3. the route followed, and
  - 4. all incidents en route, including landings and weather conditions.

## Notes on "Civil Aviation"

### **"AIRCRAFT LOG" : INFORMATION TO BE NOTED WITHIN**

- A. Type to which the aircraft belongs,
  - 1. its nationality and registration marks,
  - 2. the name, Christian names and nationality and residence of the owner,
  - 3. name of constructor and
  - 4. the carrying capacity (weight in cargo / # of persons), and
  - 5. capacity of tanks (fuel, oil, water).
- B. Type and series number:
  - 1. of engine(s) showing:
    - a) (Serial) number and
    - b) maker's name,
  - 2. type of propeller(s) showing:
    - a) (Serial) number,
    - b) pitch,
    - c) diameter and
    - d) maker's name,
- C. Type of wireless apparatus fitted,
- D. Table showing *the necessary rigging data* for the information of persons in charge of the aircraft and of its maintenance.
- E. A *fully detailed engineering record of the life of the aircraft*, including all:
  - 1. acceptance tests;
  - 2. overhauls;
  - 3. replacements;
  - 4. repairs; and
  - 5. all work of a like nature (see specimen sheet the form of which should be followed).

### **"ENGINE LOG" : INFORMATION TO BE NOTED WITHIN**

- A. *A separate log book shall be kept for each engine* and shall always accompany the engine.
- B. *It shall contain* the following particulars :
  - a) Type of engine,
  - b) series number,
  - c) makers' name,
  - d) Hp rating,
  - e) Normal and maximum revolutions of engine,
  - f) date of acceptance (mfr) and
  - g) first date put into service;
  - h) petrol consumption;
  - i) oil consumption
  - j) Registration mark and type of aircraft in which the engine has been installed,
  - k) A fully- detailed engineering record of the life of the engine, including all:
    - (1) acceptance tests,
    - (2) hours run,
    - (3) overhauls,
    - (4) replacements,
    - (5) repairs and
    - (6) all work of a like nature (see specimen sheet, the form of which should be followed).

### **SIGNAL LOG, INFORMATION TO BE NOTED**

- A. Type to which the aircraft belongs,
- B. its nationality and registration marks
- C. the name, Christian names and nationality and residence of the owner.
- D. Place, date and time of the transmission or reception of any signal,
- E. Name or other indication of the person or station to whom a signal is sent or from whom a signal is received.

A. Specimen sheets are given in "Flight" which show the following details :

<b>STRUCTURAL DESIGN REQUIREMENTS FOR AEROPLANES OF THE ROYAL NAVY AND ROYAL AIR FORCE</b>
--

## Air Ministry publication No.1208 (Air Pub.1208)

In the United Kingdom the information gleaned during the Great War about the design and inspection of aeroplanes could not remain the sole realm of the Military's Air Service - the RAF.

A large number of ex-service machines were being purchased by civilians for use as personal transportation and also for commercial ventures.

In addition to the massive knowledge of structural requirements gleaned by the Service, the knowledge of how to inspect as well as what to inspect and what you were looking for that was now known by the Service was going to be needed within the "Civilian" aviation world as the bulk of this knowledge had not been available - nor understood - prior to the war. For the Civilian Aviation world, the Air Ministry compiled a comprehensive book - publication no. 1208 - on the separate subjects of Civil aeroplane "Design" and "Inspection" which was issued in 2 parts. Volume 1 - Design requirements for Civil Aeroplanes and Volume 2 - Inspection requirements for Civil Aeroplanes.

## Aeroplane General Sundries (A.G.S) - Standard parts in 1919

<b>AEROPLANE GENERAL SUNDRIES LTD.</b>
--

The War has provided many opportunities for successful endeavour, and a case in point is that of **Aircraft General Sundries, Ltd.** Two years before the Great War, a Miss Doris M. Nicholson had "gone mad on flying" and spent most of her time at the Hendon Aerodrome.

Anxious to do something to help on the aircraft industry during the war, Miss Nicholson decided to utilise her business ability by endeavouring to meet the demand for small parts for aeroplanes. Her efforts were so successful that she felt she could launch out for herself, and the result was the birth of **Aeroplane General Sundries, Ltd.** of which Miss Nicholson is the Managing Director. At first a tiny office sufficed, and Miss Nicholson acted as her own buyer, salesman, stenographer, book-keeper and packer, but more and more business flowed her way, and very soon the days of her one-woman business were over. Fresh capital was introduced, representatives were appointed, a factory was started, and so the tale gradually grew until the business became what it is to-day.

Now her firm is branching out into the motor business.

They have excellent commodious premises, where they can handle all motor parts and accessories as well as the old lines of aircraft parts and fittings. They have their representatives throughout the provinces, and have a most complete buying organisation.

flight JUNE 5, 1919

## Air Ministry Notices

Beginning in 1919 / 1920 Notices to Pilots, Ground Engineers and Aeroplane owners were issued by the Air Ministry<sup>341</sup>  
Air Ministry notices concerning aircraft airworthiness were also published in "Flight - The Aircraft Engineer & Airships".<sup>342</sup>

Air Ministry notices were issued to Civil airmen ["airman" means "pilot"] on green paper<sup>343</sup> and concerned such things as:

- a) UK wireless stations in operation in connection with civil air routes, together with the call sign and wave lengths used by each, and the latitude and longitude - there are similar lists for France, Belgium, Denmark, and other countries;
- b) warnings to pilots of temporary obstructions at airfields, etc;
- c) Informing Pilots of the plan for the compulsory examination of pilots in meteorology;
- d) rules governing importation of goods by air into France, Holland, and other countries;
- e) new signposts and lighthouses [the subject of frequent notifications]
- f) Warnings to aviators re the flying of kite balloons at various airship stations
- g) "summer time" regulations in various European countries
- h) the movement of lightships
- i) the enlargement of the "aerial corridor" into France
- j) The revision status to and amendments of the "Consolidated List of Aerodromes for Civil Use" which tabulates all Government-owned aerodromes containing accommodation, all emergency aerodromes, all licensed civil aerodromes, all unlicensed private aerodromes, the nearest railway station, the height of the aerodrome above sea-level, and other particulars.
- k) cloud, visibility, and weather signals displayed at airfields for the information of passing airmen and the simple code on the ground which enables him to see ahead the conditions he will have to fly through

Air Ministry notices were issued to Ground Engineers on yellow paper<sup>344</sup> and concerned technical details such as:

- a) the lightening of bracing wires,
  - b) the disuse of high-compression pistons on a particular type of engine,
  - c) a warning as to the discovery of a weakness in the valve rocker of a certain type of engine,
  - d) a warning that certain control cables should be replaced by a stronger kind,
  - e) a caution that the rubber connections in petrol systems must be frequently examined,
- and many other technical details only understood by the expert.

**AIR MINISTRY NOTICES : LIST OF NOTICES TO AIRMEN**

**NOTICE NO. 83 OF 1926 : FITTING OF SAFETY BELTS**

- I. IT is notified that with reference to Notice to Airmen No. 17 of the year 1926 and to the Air Navigation Directions, 1926 (A.N.D. 6), para. 49(1)(i)(a) of which stipulates that<sup>345</sup>:
1. A safety belt must be carried in all flying machines for each person (including the pilot) carried in an open cockpit;
  2. Such equipment must be maintained in working order;
  3. The attention of pilots is drawn to the necessity for ascertaining before flight that the belts are properly secured in all cases;
  4. When a seat is unoccupied the safety belt should be so fastened as to avoid the possibility of fouling the controls.

**NOTICE NO 140 : AUTHORISED PATTERNS OF LOG BOOKS TO BE USED SECTION V "Log Books"**

- I. Of the Directions issued by the Secretary of State for Air, under the Air Navigation Regulations, 1919 [...] 2. The log books shall contain all the information and particulars provided for in the authorised patterns referred to in the preceding paragraph, and the Instructions for Use set-out in the authorised patterns -shall be complied with [...]
- II. For the purpose of this paragraph the term "repairs" shall be deemed to include:
- a) all overhauls,
  - b) replacements,
  - c) repairs and work of a like nature."
- III. Subsequent entries shall be made and signed :
- a) In the case of the journey and signal log book by the pilot, unless there is a commander of the aircraft other than the pilot, in which event the entries shall be made and signed by such commander ;
  - b) In the case of the aircraft and engine log books by the ground engineer ; provided that as regards matters which could not have come to the notice of the ground engineer, the pilot shall be responsible for making and signing the entries.
- IV. All entries shall be made in ink, except in the case of journey and signal log books : the entries for these may be made in pencil in a rough notebook, but shall be entered in ink in the log book every twenty-four hours. In the event of any official investigation the rough notebook may be called for..
- V. No erasures shall be made in, nor pages torn from, any log book.
- VI. A NOTICE (NO. 17) to Ground Engineers has been issued; It is in identical terms to the Notice Airmen No. 140.

## AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1919 TO 1920

<b>EXAMINATIONS FOR AVIATION GROUND ENGINEERS - 1920</b>
--

AIR MINISTRY COMMUNIQUE NO. 608

The Air Ministry announces : —

Examinations of candidates desiring to become certified ground engineers (aircraft or engines) will be held at the following centres during September and October :—

September.

London, Wednesday, Sept. 15th, and Wednesday, Sept. 29th; Bristol, Tuesday, Sept. 21st; Birmingham, Wednesday, Sept. 22nd; and Manchester, Thursday, Sept. 23rd.

October. —London, Wednesday, Oct. 13th, and Wednesday, Oct. 27th;

Leeds, Tuesday, Oct. 19th; Newcastle, Wednesday, Oct. 20th; and

Glasgow, Thursday, Oct. 21st.

The examinations may be partly written, partly oral, and partly practical. They will be based on the syllabus outlined in Section 4" of the Air Navigation Directions, 1919.

Candidates desiring to be examined can obtain application forms from the Secretary, Air Ministry, London, W.C.2, and should submit their completed forms of application, accompanied by a fee of 5s., at least seven days prior to the date on which examination is desired.

Candidates should also state at which of the above places they wish to be examined.

**NOTICE NO. 1 OF 1920 ACQUAINTING GROUND ENGINEERS WITH TECHNICAL INFORMATION**

- I. It is announced by the Air Ministry<sup>346</sup> that the question of acquainting ground engineers with such technical information in connection with civil aircraft as is essential to the efficient discharge of their duties has been under consideration by the Air Council, resulting in a decision to issue such information periodically in the form of "Notices to Ground Engineers" in a similar manner as information of importance to pilots is now issued in the form of "Notices to Airmen."
- II. "Notices to Ground Engineers" will contain:
- information as to the embodiment of modifications affecting the safety of aircraft and
  - such points in regard to inspection as have been shown by experience to require special attention.
- III. These "Notices" will be issued to:
- all owners of aircraft and to
  - such public bodies as are interested.
- IV. In order that the information circulated in this manner may be of value:
- it is essential that it should reach all licensed ground engineers, and
  - it is therefore incumbent on owners of aircraft as the employers of persons giving certificates of fitness before flight to see that the "Notices" are communicated to and observed by all such persons in their employ.
- V. Further, all ground engineers when receiving their licences for the first time will be advised to ask their employers to acquaint them with these "Notices."

Tolerances for standard holes are in two grades, Classes A and B, the selection of which is for the user's decision, and is dependent on the quality of the work required.

Allowances for shafts are as follows:—

**Force Fits: Class F.**—The shafts made to this table require hydraulic pressure to force them into the holes. The allowances made are also suited for cases where one piece is shrunk on to another by heating and expanding the hole in one piece and allowing it to cool and contract in position on the other piece.

**Driving Fits: Class D.** will produce shafts that need to be **driven** into the holes.

**Push Fits: Class P.**—Shafts made to these limits can be pushed into the holes, but will not be sufficiently free to rotate without seizing.

**Running Fits** are divided into three grades. Class X for engine and other work where easy fits are wanted.

Class Y for high speeds and good average machine work.

Class Z for fine tool work.

The following extract from the "Gauge List" will now render possible a correct interpretation of the drawing:—

TOLERANCES IN STANDARD HOLES: CLASS B.		PRESS FITS: CLASS P.		RUNNING FITS: CLASS Y.	
Nominal Diameters . . .	51 to 75 mm.	Nominal Diameters . . .	26 to 50 mm.	Nominal Diameters . . .	25 to 50 mm.
High Limit . . . . .	+002 "	High Limit . . . . .	+006 "	High Limit . . . . .	+002 "
Low . . . . .	-018 "	Low . . . . .	-010 "	Low . . . . .	-004 "
Tolerance . . . . .	005 "	Tolerance . . . . .	016 "	Tolerance . . . . .	006 "

<sup>346</sup> Flight- The Aircraft Engineer & Airships No. 611 (No. 37, Vol XII) pg. 978 - Sept 09, 1920

**NOTICE NO. 2 OF 1920 : PETROL-RESISTING RUBBER TUBING AND CONNECTIONS**

**Petrol-Resisting Rubber Tubing and Connections**

ATTENTION is called to the necessity of frequent examination of all Petrol-resisting rubber tubing (Petro-Flex) and associated connections used on aircraft to convey petrol, oil, or hot water.<sup>347</sup>

VI. Engine failures in the air have been traced to the use of this material when in a deteriorated condition.

VII. Service conditions during the War have shown that this material must be regarded with suspicion after having been in use for a period of four months for sizes up to f-in. bore and six to nine months for larger sizes.

VIII. This tubing should conform with the requirements of the British Engineering Standards Association Specification No. 2.F.7 in which the requisite number of canvas plies should be:

- a) not less than two for the f-in. bore size,
- b) not less than three for bores ii-in. to i\$-in., and
- c) not less- than four for larger sizes. \_ . J

IX. The most efficient test of this tubing is:

- A. to boil a portion of the tubing in petrol for one hour, to be followed by
- B. immersing in cold petrol for a period of 24 hours, after which
- C. the sample should be examined for the quality of rubber, swelling, and adhesion of rubber to canvas.

Where it is not possible to carry out such a test, an indication of the condition may be obtained by " picking" at the end with the thumbnail, thereby enabling brittleness and lack of adhesion of rubber to the canvas to be detected.

X. Owing to the tendency of this tubing to perish when subjected to extreme temperatures or strong light, it should always be stored in a dark place at a normal temperature and should be coiled in such a manner as to prevent "kinking."

---

<sup>347</sup> Flight- The Aircraft Engineer & Airships No. 611 (No. 37, Vol XII) pg. 978 - Sept 09, 1920

<b>NOTICE NO. 3 OF 1920 : STREAMLINE FLYING WIRES</b>
---

### Streamline Flying Wires

- I. STREAMLINE WIRES<sup>348</sup> may be damaged<sup>349</sup> whilst being adjusted owing to pliers being employed either to turn the wires or to hold them whilst securing the lock-nuts.
- II. The rough jaws of the pliers make comparatively deep cuts in the surface which develop into cracks after being subjected to vibration in flight, and which ultimately cause the wires to fail.
- III. To obviate such failures a special tool for holding or turning the wires should always be used, and on no account should pliers be employed for this operation.
- IV. Cases have occurred where a wire has been twisted at one end during adjustment, and in one instance a wire was found to have four complete turns in its length.
- V. Twisted wires have their strength seriously reduced, and in addition they no longer fulfil their streamline functions.
- VI. Care is necessary to ensure that the fork ends used on the smaller sizes of wires are not opened out during adjusting.
- VII. If a fork is damaged in this way it should not be closed in to make the shackle pin fit, but a new fork end should be provided before the machine is flown.

---

<sup>348</sup> Aeronautical Engineering - Supplement to The Aeroplane, pg 528 September 15, 1920

<sup>349</sup> Flight- The Aircraft Engineer & Airships No. 611 (No. 37, Vol XII) pg. 978 - Sept 09, 1920

<b>NOTICE NO. 4 OF 1920 : SAFETY BELTS AND HARNESSSES</b>
---

### Safety Belts and Harnesses

- I. ATTENTION is drawn to the necessity of ensuring that the fitting and maintenance of safety belts and harness in-aircraft is secure and functions correctly.<sup>350</sup>
- II. Service conditions have shown the necessity of any belt or harness safely withstanding a tensile load of 500lbs. without visible signs of fracture, and that the release gear is capable of operating when the belt is under a load of 200 lbs. In consequence, anchorage fittings should be of the same strength.
- III. Where ropes (Wire) are used for attaching the belts, the strength of the rope should be approximately 10 cwts.
- IV. "Lapped" joints in the ropes are considered "Unsatisfactory" and the use of ropes which allow of a spliced or "Whipped" joint is more satisfactory.
- V. In all cases of "whipping" good quality kite cord should be used and the "whipping" carried out while the joint is under tension in order to minimise the slip when subjected to subsequent strain.
- VI. All loose ends of ropes should be "served" to prevent fraying, and in no case should a rope be connected directly to a plate where chafing may occur.
- VII. Anchorage plates, where secured by bolts, should be so arranged that the shear is taken near the bolt head. instead-of the screwed end, as cases have arisen where the plates bearing on the screwed end have sheared the bolt.
- VIII. The minimum diameter of any bolt to be used in anchorage fittings should be 2 B.A.
- IX. The fixing of an anchorage plate or connection to the middle of a structural member should be avoided, and the belt should be so arranged as to sustain the upper part of the body.
- X. The release gear on the belt should -always be correctly positioned for easy manipulation and should be maintained in a lubricated condition.
- XI. The leather portions of the belt should be periodically treated with linseed oil or wax.

---

<sup>350</sup> Flight- The Aircraft Engineer & Airships No. 611 (No. 37, Vol XII) pg. 978 - Sept 09, 1920

<b>NOTICE NO. 5 OF 1920 : CONTROL PULLEYS AND RUNNING CABLES</b>
--

**Control Pulleys and Running Cables**

PARTICULAR attention should be given to control pulleys and running cables on machines operating from the seashore or sandy places.

The cables in the vicinity of pulleys and leads should not be greased on these machines owing to the cutting action of the sand and grit which adheres to the grease.

Flight- The Aircraft Engineer & Airships No. 611 (No. 37, Vol XII) pg. 978 - Sept 09, 1920

<b>NOTICE NO. 6 OF 1920 : NAPIER "LION" ENGINES - OIL FILTERS</b>
---

**Arrangement of Oil Filter on Aeroplanes Fitted with Napier "Lion" Engines**

CERTAIN aeroplanes fitted with the Napier "Lion" engine have the oil filter so fitted that the top of the filter is approximately level with the top of the oil tank.

The oil pipe from the tank leads to the bottom connection on the filter body and the top connection takes the pipe leading to the oil pump.

This arrangement allows the possibility of an air lock forming in the pipes, and if, therefore, any aeroplanes are still in service with the filter fitted as above, the pipes should be re-arranged so that the oil pipe from the tank should lead to the top connection of the filter and the bottom connection should lead to the oil pump.

If, however, the oil tank is fitted above the pressure oil pump inlet, a cock should be fitted in the pipe between the filter and the oil tank. This cock should be capable of being locked in the open position.

It is further recommended that a warning plate should be fixed in a conspicuous position in the pilot's cockpit, directing attention to the necessity for opening the cock before starting the engine and for closing the cock on completion of engine running.

This latter precaution is necessary to prevent oil draining from the oil tank through the pump gears and flooding the engine sump.

Flight- The Aircraft Engineer & Airships No. 611 (No. 37, Vol XII) pg. 978 - Sept 09, 1920

<b>NOTICE NO. 7 OF 1920 : AVRO 504 AND 536 ENGINE STRUT FAILURES</b>
--

Avro 504 and 536 Type Machines

Upper Shoe Fitting for Engine Diagonal Strut (Part 100)

ATTENTION is drawn to the above-mentioned fitting (Part 100) on Avro 504 and 536 type machines.

Instances of the failure of this part have been discovered which, if undetected, might result in failure of structure.

All ground engineers operating should make a special examination of this fitting in all machines of these types under their supervision.

Sept 16, 1920

<b>NOTICE NO. 8 OF 1920 : FITTING OF BALLAST IN AIRCRAFT</b>
--

**Fitting of Ballast in Aircraft**

ATTENTION is drawn to the precautions necessary when fitting ballast in aircraft for trimming purposes.

The ballast should take the form of bags filled with earth or sand, or of weights made of sheet lead.

Bags of small shot or stones should not be used, as experience has shown that such bags wear out quickly and allow the filling to escape.

The bags or covers for the lead should be made of stout canvas or other strong material, and should be provided with adequate means of attachment, such as straps or strong cord, by which they can be secured in the cockpit.

In order to preclude all risk of accidents, such as fouling of controls or falling out of the aircraft, the ballast should always be securely attached in the cockpits.

Air Ministry, Sept 11, 1920 - Published Sept 15 in Flight, Sept 22 in The Aeroplane

<b>NOTICE NO. 9 OF 1920 : DEFECTS IN AIRCRAFT TIMBER</b>
--

### Defects in Aircraft Timber

ATTENTION is drawn to a common defect found in aircraft timber, especially spruce, which is usually known as "Spiral " and sometimes erroneously identified as "Cross Grain."

The existence of such a defect is due to the twisting of the tree during growth, and consequently cannot be determined by a casual examination of the straightness of the grain.

It can, however, be detected by closely examining the direction and inclination of the wood fibres.

It is usually most apparent on the "flower" side of the grain, and takes the form of small resin channels of a brownish colour, running at an inclination to the axis of the strut or spar, as the case may be.

A slight inclination is of no disadvantage, but when the slope is great the timber is liable to break off short.

An indication of the amount of slope, which, from experience, has been found to be satisfactory, is roughly when the inclination of the fibres is not more than 1 in 15.

The defect is more readily found by means of splitting the timber, the angle of the split giving the true slope of the fibres, and when making new timber parts for replacement it is recommended that the part be made slightly longer, to allow for a short piece to be cut off for splitting purposes.

When making such tests the split should be made in two directions :

- (1) In line with the grain, and
- 2 ) At right angles to it.

Air Ministry, Sept 11, 1920 - Published Sept 15 in Flight, Sept 22 in The Aeroplane

<b>NOTICE No. 10 OF 1920 : FUEL SYSTEM CONTAMINATION</b>
--

**Foreign Matter in Petrol Systems.**

It is hereby notified : —

Forced landings may be caused by the presence, of foreign matter in the petrol systems, which is liable to choke the non-return valves, filters, etc., with consequent reduction in the supply of petrol to the engine.

Although petrol systems are designed to be proof against the entry of dirt and other impurities, it is, nevertheless essential that the Ground Engineer should be careful to see that all precautions are taken to keep the petrol system clean.

The following preventative methods are suggested :—

- (1) Clean out filters daily.
- (2) Always use a chamois leather and fine-mesh, gauze petrol funnel when filling tanks.
- (3) Inspect non-return valves and pumps before flight.
- (4) Check petrol flow daily to ensure that there is no stoppage in the pipe.
- (5) Take particular care when fitting new tanks to ensure that they are perfectly clean.

Air Ministry, Sept. 23rd, 1920.

<b>NOTICE NO. 11 OF 1920 : STRENGTH OF CONTROL CABLES</b>
---

**Strength of Control Cables**

THE use of 5 cwt cable for aircraft flying controls provides an insufficient margin of safety.

All cables used to repair or replace any part of the flying control system should have a breaking strength of at least 10cwt. (Air Ministry Spec 2.W.2 )

Air Ministry, Sept. 27th, 1920..

Flight- The Aircraft Engineer & Airships No. 41, Vol XII pg 1063. 07 October 1920

<b>NOTICE NO. 12 OF 1920 : AVRO 504 AND 536 ENGINE STRUT FAILURES</b>
---

**Avro 504 and 536 Type Machines Upper Shoe Fitting for Engine Diagonal Strut (Part 100)**

WITH reference to Notice to Ground Engineers No. 7 of September 2, 1920, further investigation has revealed that the above-mentioned fitting has shown such signs of weakness that it cannot now be regarded as reliable from the point of view of the airworthiness of the aircraft.

Owners of all British registered aircraft concerned have therefore been notified that the certificates of airworthiness of the machines in question will be suspended unless the following action be taken :—

1. Close inspection of the fitting must be made forthwith 2. In cases where the part is found to have weakened it must be replaced immediately, and before any further flying takes place, by a new fitting as shown on Drawing A.D. 2988.
3. In cases where no sign of weakness has yet shown itself the above replacement need not be made for a period of 3 months from the date of this notice or until the aircraft requires overhaul, whichever period is the shorter, provided that within a week of the date of this notice a reinforcing strap as shown on Drawing A.D.2996 is fitted over the existing fitting.

Ground engineers are reminded that they cannot issue a daily certificate of fitness to fly in the case of aircraft for which a certificate of airworthiness has been suspended.<sup>351</sup>

Air Ministry, Oct. 13th, 1920

---

<sup>351</sup> Flight- The Aircraft Engineer & Airships 1920

<b>NOTICE NO. 13 OF 1920 : HANDLEY PAGE 0/400 TAIL PLANE FITTINGS</b>
---

**Handley Page 0/400 (Bomber) Tail Plane Fittings**

1. ATTENTION is drawn to the undermentioned tail plane fittings on the Handley Page 0/400 and cognate types, i.e., 0/7, 0/10, 0/11 and 0/14.

- (1) The rudder post attachment fittings (top and bottom) on rear tail plane spars.
- (2) The strut attachment fittings (top and bottom) on front tail plane spars.

Instances of the failure of these parts have been discovered, which if undetected might result in failure of structure. The first signs of failure are small cracks which develop at the base of the lugs supporting the rudder post and interplane struts.

2. Owing to the weakness of these fittings, owners of all British registered aircraft concerned have been notified that the Certificates of Airworthiness of the machines in question will be suspended unless the following action be taken:

a) Close inspection of the fitting must be made forthwith, and if no signs of failure are observed, further inspection must be made after every succeeding period of thirty hours' flying.

For the purpose of these inspections the fabric should be kept permanently removed from the rudder post fittings.

(b) In cases where the part is found to have weakened it must be replaced immediately, and before any further flying takes place, by a new fitting, as shown on Drawing A.D. 2963.

(c) In cases where no sign of weakness has yet shown itself the above replacement need not be made until the aircraft requires complete overhaul, provided that a strengthening clip, as shown on Handley Page Drawing 932, is fitted over the existing fitting within a week of the date of this Notice.

3. Ground engineers are reminded that they cannot issue a Daily Certificate of Fitness to Fly in the case of aircraft for which a Certificate of Airworthiness has been suspended.

Air Ministry, Oct., 23rd, 1920

Flight- The Aircraft Engineer & Airships No. , Vol XII pg.

<b>NOTICE NO. 14 OF 1920 : 120 &amp; 160 HP BEARDMORE ENGINE CARB HEATING</b>
---

**Beardmore Engines, 120 H.P. and 160 H.P. Water Pipe, Part No. 1135812.B., connecting the Top Water Rail with the Carburettor Jacket**

1. Certain engines of Beardmore 120 h.p. and 160 h.p. types were supplied with the water pipe made of copper tubing, but owing to cases of failure it became necessary to introduce a modification, and the material was changed to steel to Air Board Specification S.26, the lower end of the pipe being connected by a short length of flexible P.R. tubing.

2. It is therefore recommended that :

- (i) Any engines which have not already been modified should be converted as above before installation in civil aircraft,
- (ii) In cases of failure of this pipe in any engine not so converted and already installed, this modification be introduced forthwith.

Air Ministry, Nov. 23rd, 1920.

Flight- The Aircraft Engineer & Airships No. 49, Vol XII pg 1240. 02 Dec. 1920  
Aeronautical Engineering (supplement to "The Aeroplane") December 1, 1920 pg 850

<b>NOTICE NO. 15 OF 1920 : HIGH COMPRESSION PISTONS IN SIDDELEY ENGINES</b>
---

**Siddeley "Puma" Engines: Disuse of High Compression Pistons**

1. SIDDELEY " PUMA " engines, manufacturers' numbers from 8199-9982, were fitted with high-compression pistons As the result of Service experience it was decided to convert these engines to low compression, by replacing pistons, part No. 703/19, with pistons, part N o. 703/10a.
2. A considerable number of these engines have already been converted, and can be identified by reference to the Log Book, or to the statement stencilled on the crankcase.
3. Ground engineers operating should ensure that all " Puma" engines in use or intended for use in civil aircraft are converted as above. In all such cases the letters " HC " on the crankcase and the compression ratio figures on the instruction plate should be defaced, and a note inserted in the Log Book.
4. After converting an engine to low compression, a test run of at least 30 minutes' duration should be made, and if lubrication and pistons appear satisfactory on inspection, a short test at full power should be given.
5. *No aircraft equipped with a Siddeley "Puma" engine fitted with high-compression pistons can be granted a Certificate of Airworthiness.*

Air Ministry, Nov. 27th, 1920.

Flight - The Aircraft Engineer & Airships No. 49, Vol XII pg 1240. 02 Dec. 1920

<b>NOTICE NO. 16 OF 1920 : GROUND ENGINEER LICENSE RENEWALS &amp; A.M NOTICES</b>
---

**Renewals of Licences : Complete sets of Notices Necessary.**

It is hereby notified :—With reference to Notice to Ground Engineers No. 1 (Explanatory Statement), all Ground Engineers will in future, when applying for renewals of their licences, be required to submit proof that they have received a complete set of Notices to Ground Engineers issued up to date.

All Ground Engineers will be supplied regularly with free copies of "Notices to Ground Engineers" on application to the Secretary (C. of, 1.), Air Ministry, London, W.C.2  
Air Ministry, Dec. 17th, 1920.

<b>NOTICE No. 17 OF 1920 : ENTRIES REQUIRED IN LOG BOOKS</b>
--

**Authorised Patterns of Log Books to be used : A.N.D 1919 SECTION V "Log Books "**

**Log-Books** shall contain all the information and particulars provided for in the authorised patterns referred to in the preceding paragraph, and the Instructions for Use set-out in the authorised patterns -shall be complied with [...]

The constructor shall fill in and sign the original entries in the log books as far as he is in a position to do so. Subsequent entries shall be made and signed:

In the case of the aircraft and engine log books by the ground engineer ;  
provided that as regards matters which could not have come to the notice of the ground engineer, the pilot shall be responsible for making and signing the entries.

4. All entries shall be made in ink, except in the case of journey and signal log books : the entries for these may be made in pencil in a rough notebook, but shall be entered in ink in the log book every twenty-four hours. In the event of any official investigation the rough notebook may be called for..

5. No erasures shall be made in, nor pages torn from, any log book. For the purpose of this paragraph the term " repairs " shall be deemed to include all overhauls, replacements, repairs and work of a like nature.

see also Air Ministry - Notice to Airmen # 140: Air Navigation Directions Amendments.

Flight - The Aircraft Engineer & Airships No. , Vol XIII pg. 06 January 1921

## AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1921

<b>NOTICE NO. 1 OF 1921: STRUT ROT IN LOWER SOCKETS</b>
---

In several instances recently it has been noted that lower ends of wooden inter-plane and centre-section struts have rotted in the sockets <sup>352</sup> <sup>353</sup> due to prolonged exposure the of the aircraft to the weather under winter flying conditions.

2.The attention of Ground Engineers is therefore directed to the necessity of a careful examination of this portion of all such struts.

3. The tendency of the strut end to rot can be materially reduced by providing some arrangement to prevent water from entering the socket, thus obviating constant contact between moisture and the end grain of the strut.

(Authority: Air Ministry Notice to Ground Engineers No. 18 of the year 1921.) —

### Laminated and Built-Up Spars

In all cases where airplanes have laminated or built-up spars, these are to be examined for opening up of glued joints. If a joint has only opened up an inch or two the spars should be bound with glued tape and varnished, but if the opening extends along the spar or if there are several bad places on one spar, then that spar must be scrapped. This action has been necessitated by the fact that bad cases of this sort have been found on airplanes in service.

— Canadian Notice to Air Engineers No. 3 - 1921.

(With reference to the above notices it may be noted that some of the Canadian terms differ not only from those used in the United States but also from the terms in use in Great Britain. Canada has introduced the term "air-harbor" for airport, which latter seems to be more convenient on account of its greater brevity. The Canadians also call ground engineers "air engineers", which might lead to some confusion the day when large aircraft will carry among their crew licensed engineers in charge of the power plant.

An agreement on such and similar terms as far as they affect English speaking peoples would therefore appear highly desirable. Editor. Aviation Weekly - 13 June 1921)

---

<sup>352</sup> Flight - The Aircraft Engineer & Airships No. 8, Vol XIII pg 129. 24 February 1921

<sup>353</sup> Aviation Weekly - 13 June 1921 Notice to Canadian Air Engineers No. 1, 1921. which referenced "Authority: :Air Ministry Notice to Ground Engineers"

<b>NOTICE NO. 2 OF 1921 : TOP OVERHAUL OF ENGINES AFTER STORAGE</b>
---

1. All engines that have been in storage or unused in machines for more than three months since previous running, as recorded in the log-book, should be subjected to top overhaul before being passed by the Ground Engineer for flight.<sup>354</sup>
2. The internal condition of the engine should be carefully examined for signs of corrosion, particular attention being paid to cylinder bores and all ball and roller bearings.
3. In addition to the usual precautions taken after top overhaul to ensure that all parts of the engine, including ignition and carburation systems, function correctly, special attention should be given to the flushing of all oil-ways, flushing, cleansing, adjustment, refilling, etc., of lubricators, filters, etc.

---

<sup>354</sup> Flight - The Aircraft Engineer & Airships No. 8, Vol XIII pg 129. 24 February 1921

<b>NOTICE NO. 3 OF 1921 : ROLLS-ROYCE "EAGLE" ENGINES : FITTING OF EPICYCLIC GEAR</b>
---

ROLLS-ROYCE " Eagle " engines fitted with high compression pistons will, in future, not be regarded as airworthy unless fitted with the modified epicyclic gear, incorporating friction damped control to the sun wheel.

Engines provided with the old type epicyclic reduction gear can be accepted only with standard low compression pistons.

Engines in service which do not conform with the above conditions should be modified at the first opportunity.

A number of engines with the old type reduction gear have already been modified by the makers by fitting low compression pistons ; such engines are stamped with the letter " K " on the name-plate above the maker's name.

Flight - The Aircraft Engineer & Airships, 1921

<b>NOTICE NO. 4 OF 1921 : 80 AND 110 H.P LE RHONE : WEAK VALVE ROCKER SUPPORT</b>
---

THE original type of valve rocker support or Tee piece fitted to earlier engines of the above types has been found to be weak to an extent which renders the engine unairworthy unless fitted with safety clips of sheet-steel to Air Ministry Drawing (A.D) No. A.B.3634.

Such clips must, therefore, be fitted in all cases where the above type of valve rocker support is fitted.

In fitting these clips care must be taken to ensure that the holes for the pins through the fins on the cylinder heads are drilled in such a manner as to prevent the clips tearing away.

The defective type of Tee piece in some cases has been further weakened by the drilling of a tommy-bar hole at right angles to the housing of the horizontal bearing, and in all cases may be readily recognised, as the vertical stems are tapered instead of parallel.

This type should be replaced at the first opportunity by the English type, which has a parallel vertical stem drilled with a 10mm hole.

Flight - The Aircraft Engineer & Airships, 03 March 1921

<b>NOTICE NO. 5 OF 1921 : DUAL CONTROL IN PASSENGER AIRCRAFT</b>
--

EXPERIENCE having shown that the presence in passenger-carrying aircraft of "dual controls", which can be interfered with by passengers is a source of danger.

1. It has been decided that the daily certificate required from a ground engineer will be held to have been given improperly in cases where an aircraft fitted with dual control is used for passenger carrying without proper arrangements being made for the prevention of interference with the dual control.
2. Suitable protection can be given by removing the control lever and by the provision of a suitable cover which will allow for the movement of the dual rudder bar, control link and cables, and by adequately protecting or disconnecting the dual ignition and engine controls.
3. This instruction is not intended to discourage the fitting of dual control, but merely to ensure that when a machine so fitted is used for passenger carrying the necessary precautions will be taken.

N.B.—This Notice was issued in circular form to aircraft owners in October, 1919.

Flight - The Aircraft Engineer & Airships, 03 March 1921

<b>NOTICE NO. 6 OF 1921 : THROTTLE CONTROL FOR NAPIER "LION" ENGINES</b>
--

IT is highly desirable that all aircraft fitted with Napier "Lion" engines with a compression ratio of 5-5 to 1 or 5-8 to 1 should be provided with an approved Gate type throttle control, with the object of limiting, in normal conditions, the travel of the throttle lever at altitudes below 5,000 ft.

In such cases a warning plate should be displayed in the pilot's cockpit to the following effect:-

"The throttle control lever must not be moved through the Gate except when above 5,000 ft. or in cases of emergency."

Attention is also drawn to the fact that propellers for such aircraft should be so designed as to allow the engine to run at 1,800 r.p.m. on the ground as a minimum.

Flight - The Aircraft Engineer & Airships, 23 June 1921

<b>NOTICE NO. 7 OF 1921 : OVER-TIGHTENING OF BRACING WIRES</b>
--

1. THE attention of Ground Engineers is directed to the detrimental effect of over-tightening bracing wires or rods.
2. In truing u p aircraft, o r when making flight adjustments by means of turnbuckles, etc.,great care must be exercised to ensure that no undue stress is produced in any member of the structure.

Flight - The Aircraft Engineer & Airships, 21 July 1921

<b>NOTICE NO. 8 OF 1921 : PAINTING OVER INSPECTION STAMPS</b>
---

1. WHEN painting aircraft, care must be taken that the inspection stamps on the parts so painted are not obliterated.
2. Ground Engineers are responsible for ascertaining that all parts of the aircraft have been manufactured under the conditions laid down in Air Navigation Directions, Section III, Paragraphs 20 and 21, and Inspection Stamps are the only evidence that these conditions have been fulfilled.

Flight - The Aircraft Engineer & Airships, 22 Sept, 1921.

**NOTICE NO. 9 OF 1921 : BRISTOL "TOURER" AND "FIGHTER" : AILERON CONTROL PULLEYS**

1. The existing arrangement of aileron pulley guards on the Bristol "Tourer" and Bristol "Fighter" type aircraft used for civil purposes is such that the aileron control and balance cables tend to "jam" between the pulleys and their guards, and accidents on this type of aircraft have been attributed to this cause.

2. Modified pulley guards, in accordance with Drawing •No. A.D. 3329, should be fitted to all civil aircraft of the above type at the earliest opportunity.

The only new fittings required are the new pulley guard and shackle shown in the drawing, and, since the guard is split, the new fittings can be assembled in position on the aircraft over the existing cable, without it being necessary to renew the latter.

3. It is also advisable that seven-strand cable should be used in preference to four-strand cable for these and other controls.

4. Copies of Drawing No. A.D. 3329 may be obtained on application to the Secretary (C.A.L.), Air Ministry, Kingsway, W.C. 2.

5. New certificates of Airworthiness will not be granted, nor will existing certificates be renewed, unless the new type Of pulley guards have been fitted to the aircraft.

Flight - The Aircraft Engineer & Airships, 13 October 1921

<b>NOTICE NO. 11 OF 1921 : DE HAVILLAND 4 AND 4A : FUSELAGE WIRING PLATES</b>
---

1. The attention of ground engineers is directed to the fuselage wiring plates (Part No. 10653) taking the fuselage cross bracing behind the engine and to the washer plates (Part No. 10654) on the other side of the longerons in D.H.4 and 4A aircraft, instances having occurred in which, after a heavy landing, the wiring plates have pulled away from and the washer plates bedded into the longerons, with consequent damage to these members.
2. Close and frequent inspection of the wiring plates, washer plates, and longerons should be made, especially after a bad landing.
3. Conditions may be improved by replacing the washer plate (Part No. 10654) by a triangular washer plate of increased size and thickness, viz., 10 G. Steel or duralumin plate, measuring 9 ins. in length (along longeron) and 3 ins. in overall width.

Flight - The Aircraft Engineer & Airships, 13 October 1921

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1922**

**NOTICE NO. 1 OF 1922 : MAINTENANCE OF A.V. 8 AND A.V. 12 TYPE MAGNETOS**

THE following precautions should be observed with A.V. 8 and A.V. 12 type magnetos :—

1. Lubrication.—Before starting up an engine fitted with a magneto which has been drawn from store or has not been run for some time, care must be taken to ensure that the oil well of the distributor bearing, which is of the plain phosphor- bronze type with wick lubrication, is filled, by passing approximately a teaspoonful of oil down the left-hand hole in the oil cup at the distributor end of the magneto (facing the distributor). Six drops of oil should also be injected into each main bearing through its respective oil cup ; one or two drops to the contact breaker cam lubricating pad, and one to the contact breaker pivot pin. To effect the last, it is only necessary to move the retaining spring to one side.

This provision of oil should normally be sufficient for twelve hours' running.

Thereafter, at similar intervals, twelve drops of oil should be given to the distributor gear wheel bearing, with treatment of the other bearing as stated above.

2. Contact Breaker.—The gap between the contact breaker points should be maintained within  $\cdot 013$  in. and  $\cdot 011$  in. A gap of  $0.012$  in. may be regarded as normal.

The contact breaker points, which are slightly convex, should be cleaned, if necessary, with very fine emery cloth, care being taken to ensure that no emery dust is left on the contact breaker.

A file should not be used for this purpose.

A soft brush is convenient for cleaning the contact breaker.

3. Distributors.—In changing the magnetos on an engine, it is essential that the original distributor block should be removed, and the new magneto attached complete with its own distributor. The changing of a distributor block from one magneto to another is most undesirable, owing to the possibility of the rotor brush fouling the distributor segments, due to the small gap between these parts and to the working tolerances necessary on distributor, end plate, gear centres, etc.

The setting of the spark gap between the rotor main electrode and the distributor segments must be correctly maintained within the limits of  $0.010$  in. and  $0.015$  in.

Normally it should be unnecessary to interfere with this gap, which is correctly set for each individual magneto before its despatch from the maker's works.

The gap between the rotor starting electrode and the distributor segments should be between  $\cdot 020$  in. and  $\cdot 030$  in.

4. Hand Starter Terminal.

Care must be taken, when fitting the starter lead to the distributor, that the terminal screw is properly locked by the spring strip provided for the purpose.

The screw should be tightened by a box spanner which at the same time will press down the spring clear of the hexagon ; on release, the spring should lock the screw, the latter being turned slightly, if necessary, to ensure this. No part of the screw or the locking spring must project beyond the face of the distributor.

Flight - The Aircraft Engineer & Airships, pg 23, 12 January 1922

<b>NOTICE NO. 2 OF 1922 : AVRO 504K TYPE AIRCRAFT : GRAVITY TANKS</b>
---

1. The gravity tank on the top centre section is to be considered a standard fitting on Avro 504K aircraft.
2. No Certificate of Airworthiness in respect of this type of aircraft will be issued unless a gravity tank is fitted.
3. No renewal of an existing Certificate of Airworthiness in respect of this type of aircraft will be granted unless a gravity tank is fitted.
4. These gravity tanks are obtainable from Messrs. A. V. Roe and Co., Ltd.

Flight - The Aircraft Engineer & Airships, pg 160, 16 March 1922

<b>NOTICE NO. 3 OF 1922 : "PETROFLEX" TUBING AND JOINTING</b>
---

The following precautions should be observed when using " Petroflex " tubing :—

1. The ends of piping or connections to be joined by means of "Petroflex" should be parallel, with sharp edges removed.
2. Pipes should enter the short lengths of "Petroflex" up to the first corrugation, but no further.
3. On no account must the lining of the tubing be stretched or contracted by attempting to fit it to connections of a size other than that for which it was manufactured.
4. Ends of " Petroflex " joints should be slightly •jell- mouthed (to the extent of approximately -fa in.) in order to prevent the lining from being forced back or injured when assembling.
5. Care should be taken not to twist or disarrange the tubing during assembly.
6. Gold size may be applied to the connections before fitting the tubing. This facilitates assembly and makes a good joint. On no account should soft soap or oil be used as a lubricant for this purpose.
7. Tubing must be securely fixed by means of approved hose clips.
8. " Petroflex " must not be used in either water or lubricating oil systems.
9. " Petroflex " tubing should be stored in a dry place.

Flight - The Aircraft Engineer & Airships, pg 160, 16 March 1922

<b>NOTICE NO. 4 OF 1922 : BRISTOL "TOURER" AND "FIGHTER" : AILERON CONTROLS</b>
---

1. T H E attention of ground engineers is directed to the aileron control cable fairlead which passes through the compression rib adjacent to the aileron control pulley in the wing on Bristol " Tourer" and Bristol " Fighter" aircraft.
2. Instances have occurred of aileron control cables badly fouling these fairleads during normal travels of the ailerons.
3. When fitting modified pulley guards as detailed in Notice to Ground Engineers No. 9 of 1921, or in cases where they have been fitted, it will be necessary for the fairlead through the compression rib adjacent to the pulley to be deleted.
4. The hole remaining in the compression rib should be elongated to allow the aileron control cable to clear at all positions of the pulley.

Flight - The Aircraft Engineer & Airships, pg 234, 21 April 1922

<b>NOTICE NO. 5 OF 1922 : AVRO 504K TYPE AIRCRAFT : LIFT WIRE FITTINGS</b>
--

1. The attention of ground engineers is directed to the necessity of ensuring that the wiring plate and socket (Join H, item 1.F.103) taking the duplicate lift wires at the upper end of the outer rear interplane struts (port and starboard) on Avro 504K aircraft are of standard pattern.
2. The standard fitting is made up of 14 S.W.G. plate, the lower part, which carries the socket and wiring lugs, being reinforced on its upper face by the addition of a plate of similar thickness (item 18F.80), joined by edge welding, but cases have come to notice in which this part of the fitting has consisted of a single plate only.
3. All licensed Avro 504K aircraft should be examined forthwith, and any single plate fittings found should be replaced by standard fittings.
4. No Certificate of Airworthiness will be issued or existing Certificate of Airworthiness renewed in respect of any aircraft of this type unless the standard fittings are incorporated.

Flight - The Aircraft Engineer & Airships, pg 271, 11 May 1922

<b>NOTICE NO. 6 OF 1922 : RE-BALANCING OF PROPELLERS AFTER RE-TIPPING OR REPAINTING</b>
---

1. GROUND engineers are reminded that when propellers are re-tipped or even re-painted, it is essential that they be properly re-balanced before being replaced on aircraft.

2. Such re-balancing can easily be carried out by fitting a metal or hardwood plug into the boss of the propeller, such plug carrying a 1-in. diameter steel spindle, which is, in turn, supported by two steel knife edges.

The propeller should be balanced while under test by the application of additional paint or varnish as may be necessary.

Flight - The Aircraft Engineer & Airships, pg 304, 25 May 1922

**NOTICE NO. 7 OF 1922 : REPAIR OR OVERHAUL OF LICENSED AIRCRAFT : APPROVAL OF MATERIALS**

1. GROUND Engineers licensed in categories " B " and " D " are reminded that, before they can certify as airworthy aircraft and/or aero-engines that have been repaired or over- hauled, they must have evidence that all materials used in such repair or overhaul have been proved by test, at an approved test house, to comply with all the requirements of the appropriate specification.
2. Similar proof that the material is correct is essential for spares or fittings purchased and built into aircraft or aero engines, and, should the spares be of such a nature that a complete inspection is impossible on the finished part, the Ground Engineer should ascertain that the manufacturing process or internal workmanship, which cannot be seen in the finished article, has been satisfactorily carried out.
3. Many manufacturers of aircraft materials and spare parts are able to issue certificates with regard to material, process inspection and/or workmanship.
4. Where such certificates cannot be obtained, the Ground Engineer must make other suitable arrangements to prove the condition of the material.
5. Ground Engineers licensed only in categories " A " and " C " are reminded that they are not empowered to certify repairs or overhauls.

Flight - The Aircraft Engineer & Airships, 22 June 1922

**NOTICE NO. 8 OF 1922 : FLEXIBLE RUBBER CONNECTIONS IN AIRCRAFT**

THE attention of Ground Engineers is directed to the following information with regard to the maintenance of flexible rubber connections as fitted to aircraft :

1. The term " rubber joint " as used in this notice is to be taken to include all flexible rubber connections in aircraft or on aero engines, for oil, petrol or water.
2. Rubber joints fitted to engines or aircraft that have been stored for a period exceeding three months should be regarded as serving only as dust excluders. Immediately before the engine and/or aircraft first takes the air, all rubber joints throughout the machine should be renewed, the date of the renewal being entered in the aircraft and/or engine Log Books.
3. New joints thus fitted may be considered serviceable for three months from the date of fitting. They should, however, during this period, be frequently examined and renewed if deterioration be detected.
4. After having been fitted for three months, all rubber joints for petrol should be considered under suspicion, and should be frequently and carefully examined. Any signs of restricted flow, collection of particles of rubber in the filter and/or such fittings as three-way petrol cocks, must be carefully watched for, as an indication of the condition of the rubber joint.

At least once a month, a joint should be taken out of the petrol system and examined internally and for reduced adhesion between the plies. Immediately any such deterioration is detected, the whole of the joints in the petrol system should be replaced.

In every case, all rubber joints for petrol should be renewed six months after the date of fitting.

5. Similarly, joints in the oil and water systems should be specially examined after having been fitted for three months, and periodically removed, but, in these cases, they need not be renewed until the first signs of deterioration are apparent. In the water system the joints that usually deteriorate most rapidly are those through which the water flows at its highest temperature.
6. It is pointed out that deteriorated joints can always be detected by simple examination. Chemical and other special tests are only required to detect liability of deterioration.
7. Great care should be taken that the result of each examination and the date of renewal of all rubber joints are recorded in the Log Books. Particular care should also be exercised that, when fitting rubber joints, all sharp edges at ends of pipes be removed before the rubber tubing is slipped on, as, unless this is done, damage to the interior of the tubing will result. Consequent on such damage, particles of rubber detected in the filters might create the impression that exceptionally rapid disintegration is taking place.
8. All rubber connections, where stored, should be kept in cool, dark and damp places.
9. Cancellation.  
Notice to Ground Engineers No. 2 of 1920 is hereby cancelled.

Flight - The Aircraft Engineer & Airships, pg 425, 27 July 1922

**NOTICE NO. 9 OF 1922 : INSPECTION AND CERTIFICATION OF INSTRUMENTS**

1. THE attention of Ground Engineers is directed to Article 11 and Schedule II, para. 8, of the Air Navigation Order, 1922, and to paras. 29, 35, 37, 41, 42 and 43 of the Air Navigation Directions, 1922 (A.N.D. 3), in so far as these relate to the instruments to be carried by British flying machines registered in the British Islands, and to the inspection and certification of such instruments.

2. These in consequence of the dangers resulting from the frequent ascents of and altitudes attained by the captive balloons flown from the Chalais-Meudon establishment (south-west of Paris and east of Versailles), all aircraft are prohibited from flying at any altitude over the area defined by the following points :—

To the South.—The village of Petit Bicestre (on the Versailles-Choisy le Roi road).

To the West.—" La Garenne de Villacoublay," " La Grange Dame Rose " and " l'Etang des Fonceaux."

To the North.—That part of the Paris-Montparnesse-Versailles railway from Bellevue Station to the Meudon viaduct. To the East.—The north-east edge of the Clamart wood and

the road from Chatillon to Le Petit Bicestre.

2. Previous notice affected : Notice to Airmen No. 44 of 1922. (No. 87 of 1922.) Belgium : Circuit Rule for Aircraft in the Vicinity of State Aerodromes

1. In future all circuits made by aircraft on departing from public aerodromes owned by the Belgian State shall be left-handed, i.e., anti-clockwise.

In the event of there being an exception to this rule, a further notice will be issued.

2. Authority.—Belgian Notice to Airmen No. 12 of 1922. (No. 95 of 1922.)

Publications may be obtained direct from H.M. Stationery Office, Imperial House, Kingsway, W.C. 2, or through any bookseller, at a cost of nrf. and 3d. respectively.

2. It will be observed that on and after November 1, 1922, certain instruments must be carried by all British flying machines registered in the British Islands, and that the inspection and certification of such instruments before flight, in accordance with Schedule II, para. 8, of the Order, must be carried out, except in the case of the instruments specified in (d) of para. 35 of the Directions (A.N.D. 3), by a Ground Engineer licensed in Category E.

3. Arrangements have accordingly been made whereby licensed Ground Engineers who are desirous of having their licences extended to cover Category E "inspection of the instruments" other than those specified in (d) of para. 35 of the Air Navigation Directions, 1922 (A.N.D. 3) can undergo examination for this purpose.

These examinations will be held in London from September 1 onwards.

In the case of Ground Engineers operating at the London Terminal Aerodrome, Croydon, arrangements will be made for the examination to take place at that station, while in the case of Ground Engineers operating in the provinces, examinations may be arranged during October if the number of applications received is sufficient to warrant special " Boards " in provincial centres.

Applications for examination should be made to the Secretary (D.C.A.), Air Ministry, and should be accompanied by the necessary fee of 5s.

Candidates will be informed of the date and time fixed for examination.

Applicants for licences under this category may apply to be licensed for all the instruments specified in paras. 41 and 42 of the Air Navigation Directions, 1922 (A.N.D. 3), other than those specified in (d) of para. 35 thereof, or for such instruments only as the nature of their employment may require them to certify.

The minimum requirements for a licence will be ability to pass an examination in the following instruments, which must be carried by all flying machines: Air speed indicator, altimeter, gauges, revolution indicator.

5. The examinations will be based on the following syllabus :—

(1) Air Speed Indicator.—General principles of construction and operation—Installation of indicator and pitot head in the aircraft—Pipe lines—Methods of testing—Detection and rectification of defects in installation.

(2) Altimeter.—General principles of construction and operation—Installation in aircraft—Method of testing.

## Notes on "Civil Aviation"

(3) Gauges (including air and oil pressure gauges and radiator thermometer).—General principles of construction and operation—Installation in aircraft—Methods of test.

(4) Revolution Indicator.—General principles of construction and operation—Installation in aircraft—Causes of failure to function.

(5) Indicator of Wheel Position.— General Principles of operation.

(6) Compass: General Principles of construction and operation of various types—Installation in aircraft—"Swinging" of compass—Maintenance and minor adjustments.

(7) Turning Indicator.—General principles of construction and operation of the various types—Installation in aircraft - Methods of testing and minor adjustments to installation.

(8) Watch.— Installation in aircraft—Setting and adjustments

(9) Lighting Set (including navigation lights, landing lights and illumination of instruments).—General principles of lay-out and installation in aircraft—Wiring diagrams— Tracing of defects—Care and maintenance of instruments connections and accumulators General knowledge of standard requirements with regard to electrical installation in aircraft.

(10) Electrical Bonding (in the case of aircraft fitted with Wireless Apparatus).—Methods of jointing—Points where bonding is necessary and position of same—Methods of testing for electrical continuity—External wiring of approved wireless apparatus—General knowledge of standard requirements with regard to electrical installation in aircraft .

( 11 ) Drift Indicator.—General principles of construction and correct methods of installation in aircraft.

(6) The descriptive handbook issued as Air Publication 388, " General Instrument and Oxygen Equipment " (1921), will be of use to candidates for this examination. This handbook may be obtained direct from H.M. Stationery Office, Imperial House, Kingsway, W.C. 2, or through any bookseller, price 5s. net.

Flight - The Aircraft Engineer & Airships, pg 519, 07 Sept 1922

<b>NOTICE NO. 11 OF 1922 : ROLLS-ROYCE "EAGLE VIII" ENGINES : FRICTION ANCHORAGE</b>
--

THE correct method of assembling the friction plates, whether keyed or not, in the anchorage unit of Rolls-Royce "Eagle VIII" engines is as follows:

- (1) Fit anchor ring G. 6405 into the epicyclic gear-box G. 6386.
- (2) Slip in one of the non-keyed plates (which are stiffer than the friction plates, with the object of sustaining the load).
- (3) Place in position the various keyed plates one after another.

In one or two instances recently it has been observed that the non-keyed or backing plate has been left in position in the aluminium gear-box, and the anchor ring then added. Since, in this way, the backing plate is left with no spigot attachment, it has jammed back underneath the anchor ring and cracked the aluminium case which supports it.

Flight - The Aircraft Engineer & Airships, pg 674, 16 November 1922

**NOTICE NO. 12 OF 1922 : W/T INSTALLATION AND EARTH SYSTEM : STANDARD REQUIREMENTS**

1. THE attention of Ground Engineers licensed in Category E (10), Electrical Bonding, is directed to the Air Ministry standard requirements in respect of the W /T Installation and Earth System in aircraft.
2. Ground Engineers responsible for signing daily certificates of safety for aircraft in which W/T apparatus is installed may obtain copies of these requirements on application to the Secretary (D.C.A.), Air Ministry, London, W.C. 2.

Flight - The Aircraft Engineer & Airships, pg 706, 30 November 1922

**NOTICE TO AIRMEN NO. 92 OF 1922 : SWINGING OF COMPASSES IN AIRCRAFT**

1. Compasses in aircraft, owing to their delicate construction, are liable to be thrown out of t r u th by many different causes. A compass should, therefore, be swung whenever, for any reason, there may be a doubt as to its accuracy. In particular, the compass should be swung :—
  - (1) On change of position of any magnetic material in the vicinity of the compass, such as change of an engine, electrical or Wireless equipment, etc.
  - (2) On replacement of the compass in an aircraft by another.
  - (3) After the aircraft has been standing in one position for four weeks or more {e.g., after undergoing overhaul or large repairs}.
  - (4) At any time when the accuracy of the deviation table is open to doubt.
  - (5) In addition, after a bad landing, the cap and pivot should be tested.
2. Pilots should keep a constant watch on the behaviour of, and take every opportunity to test, their compass whilst flying over a long stretch of road or railway, the magnetic bearing of which has been ascertained beforehand. It is only by the constant use of the compass during fine weather and when the ground is visible that pilots will obtain sufficient confidence in the reliability of their compass to enable them to be assisted by i t under adverse weather conditions.

Flight - The Aircraft Engineer & Airships, pg 498, 31 august 1922

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1923**

<b>NOTICE NO. 1 OF 1923</b>
-----------------------------

**Watford C.6. Type Magnetos**

1. IT has been found that the original type of Contact Breaker Rocker Arm fitted on the Watford C.6. type magneto is liable to fracture due to the development of cracks in the sharp square corners between the lug carrying the platinum contact screw and the web of the rocker arm.
2. A new type of rocker arm, strengthened by the provision of fillets in the corners referred to, has now been standardised in accordance with Modification No. D. 1817.
3. All engines fitted with the above type magnetos in licensed aircraft should be examined forthwith, and any original type rocker arms replaced.
4. Certificates of Airworthiness will not be issued, nor existing Certificates of Airworthiness renewed in respect of any aircraft fitted with Watford C.6. type magneto unless the new type of contact breaker rocker arm is fitted.

Flight - The Aircraft Engineer & Airships, pg. 461, 02 August, 1923

**NOTICE NO. 2 OF 1923 : HIGH TENSILE STEEL FORK ENDS AND TURNBUCKLES**

**High Tensile Steel Fork Ends A.G.S. 168 to 178 and High Tensile Steel Turnbuckles A.G.S. 138 to 149<sup>355</sup>**

1. High tensile steel fork ends, A.G.S. 168-178, have been found unsafe, and their use on any aircraft is prohibited. Ground engineers should, therefore, make a careful examination of all aircraft under their charge with the object of replacing any such fork ends by mild steel fork ends conforming to A.G.S. 412-422, or B.E.S.A. Specification S.P.3. The following table gives the A.G.S. numbers of the H.T.S. fork ends and of the M.S. fork ends which replace them:—  
A.G.S. Nos. of prohibited H.T.S. fork ends : 168 169 170 171 172 173 174 175 176 177 178  
A.G.S. Nos. of M.S. fork ends superseding the above : 412 413 414 •415 416 417 418 419 420 421 422  
M.S. fork ends are identified by the flats on the ends of the forks, together with the counterboring which extends down each side of the fork gap, whereas H.T.S. fork ends are readily distinguished by the small ribs at the sides of the pin holes.
2. The use of high tensile steel turnbuckles, A.G.S. 138-149, on civil aircraft is still permitted, but, as these turnbuckles are all of War-time manufacture, they should be carefully re-inspected to ensure that no faults have developed during service. The particular defects to be guarded against are fine hair cracks and flaws in the steel ends, and season-cracking of the barrels. (This class of turnbuckle may be readily identified by the A.G.S. number stamped on each turnbuckle.)
3. When replacing any high tensile steel turnbuckle by a mild steel turnbuckle conforming to A.G.S. 490-497, particular care should be taken to ensure that the former is replaced by its equivalent in the latter class. The following table gives, in each class, the respective A.G.S. numbers of the turnbuckles which are interchangeable in respect of strength and diameter of pin :—  
A.G.S. Nos. of old design of H.T.S. turnbuckle : 140 141 142 143 144 145 146 147 148 149  
A.G.S. Nos. of mild steel turnbuckles of equivalent strength : 491 492 506 493 507 494 508 495 496 497  
Note.—The one exception is M.S. turnbuckle A.G.S. 490, for which no strictly interchangeable H.T.S. size exists, as A.G.S. 138 and 139, which it replaces, were made with two eye-ends only and not with the customary fork and eye-ends.
4. In the case of seaplanes and flying boats, turnbuckles with mild steel barrels should not be fitted owing to their liability to rust ; turnbuckles with delta metal barrels (B.E.S.A. Specification B.1) should be fitted to this class of aircraft.
5. No Certificates of Airworthiness will be issued, or existing Certificates of Airworthiness renewed, in respect of any aircraft on which high tensile steel fork ends are fitted.

<sup>355</sup> Flight - The Aircraft Engineer & Airships, pg. 661, 25 October 1923

<b>NOTICE NO. 3 OF 1923 : NAPIER "LION" ENGINE VALVES AND SEATS</b>
---

**Napier "Lion " Engine Valves and Seatings** <sup>356</sup>

1. The fitting of valves and valve seatings in Napier " Lion engine cylinders requires special attention in order to prevent distortion, overheating and stretching of the valves in service.
2. When new valves or seatings have been fitted to an engine during overhaul, it is essential that the faces of both valves and seatings should be examined after the first two hours' running and trued up by grinding in, or machining if necessary, before the engine is approved for flight.
3. Re-cutting of valve seats must be done with the seating screwed in position. The thickness of the flange of the seat after re-cutting, with normal width of valve face, must not be less than  $\frac{1}{8}$  in. ; this permitting of a total reduction of flange thickness of  $\frac{1}{16}$  in.
4. Cylinder headers should not be removed from cylinders or valve seatings extracted unless for the purpose of actual renewal.

---

<sup>356</sup> Flight - The Aircraft Engineer & Airships, pg. 661, 25 October 1923

<b>NOTICE NO. 4 OF 1923</b>
-----------------------------

**Napier "Lion " Engines : Precautions**

1. Type Engines : Compression Ratio.

Only the Series II low compression Napier " Lion " engines are approved as airworthy for civil aircraft.

The high compression engines are for use under the service conditions of the Royal Air Force.

The actual compression ratio of an engine is stamped on the name plate, and is also noted in the log book.

(a) High Compression.

5:8 to 1 is the standard high compression, and this type of engine is rated at 450 b.h.p. at normal r.p.m.

(b) Low Compression.

5:0 to 1 is the standard low compression, and this type of engine is rated at 425 b.h.p. at normal r.p.m.

2. Fuel.

It is essential that the fuel used should contain at least 30 per cent, of aromatic hydrocarbons, viz: far Eastern or Borneo spirit is used, it is necessary that 15 percent, of benzole be added.

(b) If an American spirit is used, it is necessary that 25 percent, of benzole be added

3. Connecting Rods

Only the heavy type connecting rods to assembly No, 10823 may be fitted. Medium and light type rods must be replaced.

Where light type rods have to be replaced, new pistons will also have to be provided owing to the variation in the gudgeon pin diameter

It is further recommended that oil filters be opened up, cleaned and examined after each flight. Should particles of white metal be found, the engine should be dismantled for thorough examination and overhaul.

4. Cancellation: Notice to Ground Engineers No. 10 of 1921 is cancelled.

Flight - The Aircraft Engineer & Airships, pg. 661, 25 October 1923

## Notes on "Civil Aviation"

### **NOTICE NO. 5 OF 1923 : MAINTENANCE OF A.V.8 AND A.V.12 TYPE MAGNETOS (AMENDMENT)**

1. THE following amendments are made to Notice to Ground Engineers No. 1 of 1922 :— ... ' -V, Paragraph 3—Distributors.

Page 2, line 3. For "limits of .010" and .015", read "limits of .018" and .022"

Page 2, line 7. For "between .020" and .030", read "between .025" and .030"

2. The amendments should be noted on existing copies of the Notice in question, and will be incorporated in the reprinted copies which will be issued, as required in future.

Flight - The Aircraft Engineer & Airships, pg 729, 29 November, 1923

### **NOTICE NO. 14 OF 1923 :**

### **NOTICE NO. 15 OF 1923 :**

<b>NOTICE No. 16 OF 1923 :</b>
--------------------------------

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1924**

<b>NOTICE NO. 1 OF 1924 : THE AIR NAVIGATION ORDER, 1923</b>
--

**Air Navigation (Consolidation) Order, 1923**

IT is notified :—

1. The Air Navigation (Consolidation) Order, 1923, came into operation as from January 1, 1924, revoking on that date the Air Navigation Orders, 1922 and 1923. Attention is drawn to certain effects of the new Order, as follows:

2. Log Books, etc.

The journey log book to be kept in respect of every British aircraft registered in Great Britain and Northern Ireland is to be one issued by the Secretary of State.

These books will be issued on demand by the Air Ministry at a price of 4s. each.

Each book will be issued in respect of an individual aircraft, and the page containing the description of the aircraft will be completed by the Air Ministry.

The certificate of airworthiness of the aircraft is to be kept in the pocket of the journey log book, and all aircraft so registered are required to carry this log book when flying.

The aircraft and engine log books are no longer required to be carried in the aircraft.

3. Smoking in aircraft.

Smoking in aircraft registered in Great Britain and such aircraft may be, or in any other aircraft when in or over Great Britain and Northern Ireland.

NOTE: This Notice was issued as Notice to Airmen No. 105 of 1923, and is now republished for the benefit of Ground Engineers.

Flight - The Aircraft Engineer & Airships, pg. 47, 24 January 1924

<b>NOTICE NO. 2 OF 1924 : ENGINE CONTROL SWITCHES</b>
---

**Engine Control Switches on Aircraft Fitted with Dual Control**

It is notified :—

1. Every civil aircraft which has a rotary engine, is fitted with dual control and is used for the preliminary training of pupils, must be provided with a master switch so situated that it can be operated only by the instructor. Aircraft fitted with a master switch are to have the following notice posted near the engine switch in the pupil's cockpit :

"CAUTION" Before controlling the starting of the engine by this switch see that it is not cut out by the master switch."

2. Aircraft fitted with dual control and used for advanced training need not be fitted with a master switch.

3. All switches must be readily accessible for the instant operation of the instructor or pupil as the case may be, but it should not be possible for any switch to be accidentally operated. Indicator plates, showing clearly the direction of operation, should be fitted near all switches.

4. The direction of operation of switches is to be standardised as follows :—

(a) Ordinary control switches : down for "off" up for "on" or running position.

(b) Instructor's master switch, when fitted: down to include pupil's switch in circuit, up to cut out pupil's switch.

5. The provisions of Ground Engineers Notice No. 5 of the year 1921 in regard to the protection of controls must be observed when aircraft fitted with dual control are used for passenger carrying.

(No. 2 of 1924) Flight - The Aircraft Engineer & Airships, pg. 67, 31 January, 1924

<b>NOTICE NO. 3 OF 1924 : INTERNAL INSPECTIONS OF FABRIC-COVERED COMPONENTS</b>
---

**Periodical Internal Inspection of Fabric-Covered Components**

1. ATTENTION is directed to the necessity for a periodical inspection of the internal details of fabric-covered components, particularly in the case of components incorporating spars of laminated construction

2. The inspection of aircraft by representatives of the Secretary of State for the purpose of renewal of the Certificate of Airworthiness, which normally takes place at yearly intervals, will accordingly in future include inspection of the internal details of fabric-covered components, and the certificate will not be renewed without such internal inspection. Under existing methods of construction of such components, this will necessarily involve the opening up of the fabric to a considerable extent, and in some cases the complete stripping of the component may be required.

NOTE : This was also published as Notice to Airmen No. 5 of 1924

Flight - The Aircraft Engineer & Airships, pg. 77, 07 February, 1924

<b>NOTICE NO. 4 OF 1924 : AIRCRAFT CABLE WRAPPING / LACING CORD</b>
---

**Standard Straining Cord in Aircraft Cables**

THE use of straining cord which is protected against corrosion by galvanising only is prohibited on account of the unreliability of soldered joints, due to the difficulty of obtaining good adhesion between the solder and the galvanised surface.

2. Only straining cord with a tinned surface is permissible. The galvanising of the individual strands previous to the drawing of the wire is permissible provided the strands are subsequently tinned previous to the manufacture of the straining cord.

3. Galvanised extra flexible cables, however, are still permissible, as the splices of this class of cable do not require a soldering operation.

Flight - The Aircraft Engineer & Airships, pg. 256, 01 May, 1924

<b>NOTICE NO. 5 OF 1924 : REPAIR OF BLOW-HOLES IN ENGINE CASTINGS BY SOLDERING</b>
--

**Aluminium Soldering of Blow-Holes in Aero Engine Castings : Precautions**

No process of aluminium soldering or welding has been approved by the Air Ministry for the repair of broken or cracked aero engine parts.

2. Any small blow-holes that are found in accepted castings and are unlikely to influence the strength or reliability of the part should be left untouched.

To secure a sound oil or water-tight joint face, however, a screwed plug should be applied to the filling of the defect wherever possible.

3. If screwing, as in paragraph 2, is not feasible, aluminium soldering may be employed, provided that the blow-hole is such that the filling is properly keyed into the casting so that it cannot shake loose under vibration.

The part to be treated should be uniformly heated up to a temperature not exceeding 250 degrees C. in a suitable oven or furnace providing an even and controllable temperature.

The small blow-holes to be filled must be carefully scraped and scratch-brushed before soldering, after the completion of the heating operation, and no flux must be used.

A blow lamp is not under any circumstances to be used in the soldering operation, but a soldering iron only.

Details of the process as carried out should be recorded in the engine log book.

(No. 5 of 1924.) Flight - The Aircraft Engineer & Airships, pg. 256, 01 May, 1924

<b>NOTICE NO. 6 OF 1924 : OPERATING SPEEDS OF CIVIL AIRCRAFT ENGINES</b>
--

**Engines in Civil Aircraft : Running Speeds**

1. THE approval of engines for civil aircraft is based on the satisfactory completion by a representative engine of type tests, and the Certificate of Airworthiness of an aircraft is subject to the continued use of the engine in the aircraft under the conditions of power and speed upon which this type approval was granted.

2. As a result of each such type test " maximum " and " normal " engine speeds are laid down.

The running of engines at, or in excess of, the maximum permissible speed, for more than a few minutes at a time in emergencies, is prohibited, since it inevitably tends to the early deterioration of the engine and increases its liability to breakdown.

3. The following table gives the normal and maximum permissible speeds of all British-built airworthy engines:

Engine	H.P Rating	Normal RPM	Maximum RPM
B.R. 1	150 Hp	1250	
B.R. 2	200 Hp	1250	
Gnome - Mono	200 Hp	1250	
LeRhône	80 Hp	1250	
LeRhône	110 Hp	1250	
Beardmore	120 Hp	1250	
Beardmore	160 Hp	1250	
Green	35 Hp	1250	
Green	100 Hp	1250	
Sunbeam "Dyak"	100 Hp	1250	
Siddeley "Puma"	100 Hp	1250	
R.R. "Hawk II"	100 Hp	2200	
R.R. Falcon III	100 Hp	1500	
R.R. Eagle VIII	100 Hp	1620	
R.R. Eagle IX	100 Hp		
R.R. Condor I and II	100 Hp		
R.R. Condor II	100 Hp		
Sunbeam Maori III	100 Hp		
Sunbeam Manitou	100 Hp		
Wolseley Viper	100 Hp		
Napier Lion	100 Hp		
Bristol Jupiter IV	100 Hp		
Bristol Lucifer	100 Hp		
Bristol Cherub	100 Hp		
Siddeley Jaguar III	100 Hp		
Siddelev LvnX	100 Hp		

(No. 6 of 1924.) Flight - The Aircraft Engineer & Airships, pg. 267, 08 May, 1924

<https://www.flightglobal.com/pdfarchive/view/1924/1924%20-%200267.html?search=ground%20engineers>

<b>NOTICE NO. 7 OF 1924 : AVRO 504K LIFT WIRE FITTINGS</b>
--

**Avro 504K Type Aircraft: Lift Wire Fittings**

1. THE attention of Ground Engineers is directed to the necessity of ensuring that the wiring plate and socket taking the duplicate lift wires at the upper end of the outer rear interplane struts (port and starboard) on Avro 504K aircraft are of standard pattern.
2. The standard fitting is made up of two plates, item 1.F.103 and item 18.F.80. The first, in 14 S.W.G. Plate, carries the socket and wiring lugs, and is reinforced on its upper face by the second item in 16 S.W.G. plate, but cases have come to notice in which this part of the fitting has consisted of a single plate only.
3. All licensed Avro 504 K aircraft should be examined forthwith, and any single plate fittings found should be replaced by standard fittings.
4. No Certificate of Airworthiness will be issued or existing Certificate of Airworthiness renewed in respect of any aircraft of this type unless the standard fittings are incorporated.
5. Cancellation.—Notice to Ground Engineers No. 5 of 1922 is cancelled.

(No. 7 of 1924.) Flight - The Aircraft Engineer & Airships, pg. 388, 12 June, 1924

<b>NOTICE NO. 8 OF 1924 : "I" SECTION SPARS IN BRISTOL F.2.B. TOURER</b>
--

**Bristol F.2.B. and Bristol Tourer Type Machines : Strengthening of "I" Section Spars**

1. The attention of the Ground Engineers is directed to the necessity of ensuring that in cases in which the front spars of top main planes and top centre sections are of I-section, they shall be strengthened by glueing and screwing J in. three-ply to the underside of the top centre plane and of the inner bays of the top main planes.

The three-ply should extend from the leading edge to the rear of the front spar.

2. Planes having I-section spars can readily be identified by the examination of the exposed ends of the spars.

3. No Certificate of Airworthiness will be issued or Certificate of Airworthiness renewed in respect of any aircraft of above types with I-section spars unless these have been strengthened in the manner indicated.

(No. 8 of 1924.) Flight - The Aircraft Engineer & Airships, pg. 388, 12 June, 1924

<b>NOTICE NO. 9 OF 1924 : DRILLING OF MAIN PLANE SPARS IN AVRO 504, 536, 548 AND 552</b>
--

**Avro 504, 536, 548 and 552 Types Aircraft : Drilling of Main Plane Spar**

1. THE attention of Ground Engineers is directed to the necessity for observing the following inspectional precautions during overhaul of the main planes fitted to the above types of aircraft.
2. The packing blocks on the top and bottom of the spars should be removed and the stripped spars carefully examined. Special points to be noted are :—
  - (a) That the vertical holes through the packing blocks at the interplane strut fittings do not penetrate the spar itself.
  - (b) That no cases of double drilling of the vertical holes for the bolts carrying the aileron control pulley have occurred.
3. After such inspection new packing blocks should be temporarily fitted in position in such a manner that they may be drilled and then removed so that the drilling may be inspected. The packing blocks should then be fitted in the approved manner.
4. The horizontal and vertical spar drillings which take the bolts securing the outer rear strut socket fittings (top and bottom) should be examined to see that these drillings do not cut into one another.
5. No certificate of airworthiness will be issued or renewed in respect of any aircraft of the above types, constructed or overhauled subsequent to the date of issue of this Notice unless the above precautions have been observed. (No. 9 of 1924) Flight - The Aircraft Engineer & Airships, pg. 734, 09 October, 1924

**NOTICE NO. 10 OF 1924 : INSPECTION MARKS ON AIRCRAFT AND/OR AERO ENGINES**

**Inspection Marking on Aircraft and/or Aero Engine "Detail parts and Components"**

1. ALL aircraft for which an Air Ministry Certificate of Airworthiness is desired are required to have all detail parts and components suitably marked in accordance with the provisions of paras. 20 and 21 of A.N.D.3.

These markings take the form of legible impressions of a stamp on the part or component whereby the individual responsible for the inspection thereof may be readily identified.

Similarly, when repairs, replacements, or overhauls are undertaken to aircraft in possession of an Air Ministry Certificate of Airworthiness, Ground Engineers licensed in categories B and D must ensure that all new detail parts and components used on the aircraft bear inspectional markings.

2. These inspectional markings signify :—

- (a) That there is definite evidence that all materials used and the processes of manufacture involved have been previously approved by an authorised inspector (see Notice to Ground Engineers No. 7 of the year 1922);
- (b) That the material is free from defects so far as can be determined by visual examination ;
- (c) That the workmanship is satisfactory as regards quality, truth and final assembly ; and
- (d) In the case of assembled components that the assembly is complete and bears the necessary inspectional markings.

(No. 10 of 1924.) Flight - The Aircraft Engineer & Airships, pg. 734, 20 November, 1924.

**NOTICE TO AIRMEN**

Official Air Routes : Observance of Regulations

1. THE attention of all pilots is drawn to the Air Navigation (Consolidation) Order, 1923, Schedule IV, Section III, paragraph 31, which requires that :—

" An aircraft flying along or in the neighbourhood of an officially recognised air route shall, so far as it may be safe and practicable,—

- (a) Keep to the right-hand side of the route at a distance of not less than 100 yards therefrom.
- (b) When flying beneath low clouds, fly at such a distance below the clouds as will enable it readily to see and be seen.
- (c) When crossing from one side of the route to the other, cross at right angles thereto and as high as reasonably practicable.
- (d) When flying on the left of and parallel to the route keep a distance therefrom of not less than 7 miles."

2. Certain portions of the following routes have been officially recognised by the authorities concerned :—

London-Paris. Vide Notice to Airmen No. 64 of 1922.

London-Brussels. „ „ „ „ 5 of 1923.

Paris-Brussels. „ „ „ „ 23 of 1923.

London-Rotterdam-Amsterdam. ~)

Amsterdam-Berlin. ( ^ Vide Notice to Air-

Rotterdam-Berlin, r men No. 8 of 1924.

Rotterdam-Brussels-Paris. J

3. Instances have recently occurred in which pilots have been careless in the observance of the above rules which have been expressly designed for the general safety of all aircraft.

## Notes on "Civil Aviation"

4. The importance of rigidly adhering to these regulations cannot be too strongly accentuated, and all pilots are invited to report at once to the Secretary, Air Ministry (D.C.A.), any infringements which may come to their notice.  
(No. 22 of 1924.)

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1925**

**NOTICE NO. 1 OF 1925 : CONSTRUCTION OF D.H.4, D.H.9 AND D.H.9A MAIN PLANE SPARS**

1. THE attention of ground engineers is directed to the necessity for observing the following inspectional precautions during overhaul of the main 'planes fitted to the above types of aircraft.
2. Each spar should be carefully examined for general quality of the timber, which must be one of the following :
  1. Sitka spruce,
  2. West Virginia spruce or
  3. Oregon pine.
3. In addition the type of spar construction must be specially noted to ensure its being one, or other, of the following:
  1. Vertically laminated spars containing two or three laminations either continuous or with one lamination spliced ; spliced as for a solid spar ; having a half spar of two laminations spliced to a half spar of three laminations ; or having a solid half spar spliced to one of two or three laminations.
  2. Horizontally laminated spars containing laminations with butt joints in the inner laminations, but with the top and bottom laminations continuous, or containing continuous laminations throughout.
3. Box spars with continuous or jointed flanges, and sides.
  1. **These spars are entirely covered with glued-on fabric which renders inspection difficult.**
  2. This fabric or taping should be examined for dis-coloration which reveals the presence of moisture.
  3. If such dis-coloration be present the entire spar should be unwrapped, as in all probability failure of the glued joints may have occurred.
  4. If, on the other hand, no defects are visible stripping of the fabric need not be made, but a careful examination of the fabric wrapping must be made for any signs of shakes or broken joints.
4. All box spars must be provided with 1/8 in. inspection holes indicating the positions of the internal packing blocks.

If no such holes are present, 1/8 in. holes must be drilled on one vertical face of each spar on the neutral axis close up to, and verifying, the correct positions of both ends of each packing block.
5. **Splices must be carefully examined for soundness.**
6. The only approved types of splice are:
  - a) the plain scarf and
  - b) the R.A.E. type, the latter taking the form of a dovetail splice with a central square wedge.

**The "bird's mouth" type of splice is not permitted.**

(chart here: <https://www.flightglobal.com/pdfarchive/view/1925/1925%20-%200097.html?search=ground%20engineers> )

(Copies of these drawings when necessary may be obtained application from the Secretary (R.D. 3), Air Ministry, on Kingsway. W .C.2. on pre-payment.)

7. No certificate of airworthiness will be issued or renewed in respect of any aircraft of the above types, constructed or overhauled subsequent to the date of issue of this Notice unless the above precautions have been observed.

(No. 1 of 1925.) Flight - The Aircraft Engineer & Airships, pg.97, 19 February, 1925

<b>NOTICE NO. 2 OF 1925 : "PETROFLEX" TUBING</b>
--

IT is notified that the use of internally un-armoured "Petroflex" tubing in aircraft shall be discontinued forth- with. No certificate of airworthiness will be issued or renewed in respect of any aircraft on which the above instruction has not been carried into effect.

(No. 2 of 1925.) Flight - The Aircraft Engineer & Airships, pg.97, 19 February, 1925

<b>NOTICE NO. 3 OF 1925 : INDEX OF OPERATIVE [IN-FORCE] NOTICES</b>
---

The following Notices to Ground Engineers are cancelled :

- a) 1920 : Nos. 2, 6, 7, 13 and 17.
- b) 1921 : No. 10.
- c) 1922 : Nos. 5 and 9.

Ground Engineers and others in possession of the Notices should check their sets and, if they find them to be incomplete, should apply for the Notices which are missing to :

The Secretary (D.D.A.T.)  
Air Ministry,  
Kingsway, London  
W.C.2.

Flight - The Aircraft Engineer & Airships, pg. 282, 07 May, 1925

**NOTICE NO. 4 OF 1925 : ROLLS ROYCE "FALCON III" ENGINE : MODIFICATIONS**

THE undermentioned modifications, 1 to 10, all of which have been individually established for several years, are considered essential, and must be included in any "Falcon III" engine, which does not already contain them before it is passed as airworthy :

1. The planet expanding bolt in the epicyclic gear must be replaced by new bolt Pt. No. G. 6196 together with nut, washer and cones.
2. Where two Watford 6-cylinder magnetos are fitted, they must be replaced by two B.T.H. 12-cylinder magnetos and strengthened platforms.
3. Shouldered studs, together with castellated nuts and split pins, must be used to secure the distributor rotor on the B.T.H. magneto.
4. A vent hole must be provided in the distributor bearing and the oil level raised.
5. A tab washer must be provided for locking the nut on the adjustable contact screw.
6. A special washer for locking H.T. insulator for distributor rotor must be provided to prevent the insulator unscrewing.
7. The gap between the main electrode on the distributor rotor and the distributor segments must be increased to 0.020 in., and that between the starting electrode and the distributor segments, to 0.030 in.
8. The approved type fittings must be provided when metal braided ignition cable is used.
9. K.L.G. F. 12 type sparking plugs must be fitted.
10. The material of the petrol valve seating of the carburettor must be of hard drawn brass and be of the new type, giving a bearing surface increased 100 per cent.

The following modifications, 11 to 23, are desirable modifications, which should be embodied whenever possible:

11. Aluminium engine suspension brackets should be replaced by steel ones.
12. The fibre washers on cylinder studs underneath the camshaft casing should be replaced by aluminium ones.
13. Clearance between the rotor and body of the water pump should be increased to overcome the trouble of water freezing. The increase must be obtained by taking material off the pump body and not by reducing the rotor which would affect the efficiency of the pump.
14. The aluminium split nut for camshaft drive housing should be replaced by the strengthened steel nut in one piece.
15. The old type sleeve of camshaft casing stud should be replaced by one provided with a grooved shoulder to overcome oil leakage.
16. The wrist-pin, bolt, and washer of the articulating rod should be replaced by a strengthened type, Parts Nos. E. 16613-4 and E. 6234.
17. The release valve spring should be one made of 17 S.W.G., and should require a load of 5 lb. to compress to 0.755 in.
18. The free end of the reinforced contact breaker springs should be bent inwards slightly in order to prevent chafing at this point.
19. The distributor gear wheel should be balanced with distributor rotor in position by drilling  $\frac{1}{8}$ -in. diameter hole in web.
20. The low-tension connection between the condenser and the contact breaker should be fitted above the condenser clip with a split pin for further security.
21. The aluminium timing lever on contact breaker housing should be replaced by one of brass, as the former is easily fractured.
22. H.T. cable ends should be provided with special thimbles at magneto end in order to provide a better and more secure connection.
23. The swaged type of slow-running jet should be substituted for the early type having the restriction soldered in position.

Flight - The Aircraft Engineer & Airships, pg. 425, 02 July, 1925

**NOTICE NO. 5 OF 1925 : ROLLS ROYCE "EAGLE VIII" ENGINE: MODIFICATIONS**

1. THE under- mentioned modifications, (1) to (9), all of which have been individually established for several years are considered essential and must be included in any "Eagle VIII" engine, which does not already contain them before it is passed as airworthy :—

- (1) Planet wheel bolts of the Oldham coupling type epicyclic gear must be replaced by the new bolt of the hollow or drilled type.
- (2) The ball bearing for the planet wheel of the Oldham type epicyclic gear must be one with 11 balls. Hoffman bearing with 10 balls must be replaced.
- (3) Drain holes must be provided to prevent an accumulation of oil in the starter casing.
- (4) Pistons with compression ratio of 5 to 1 only may be fitted with those engines having the Oldham coupling type epicyclic gear. High compression pistons with 5.3 to 1 ratio may only be used on engines fitted with the friction type epicyclic gear.
- (5) Exhaust manifolds with the old form of welding must be replaced by those whereby the welding flanges are turned back approximately 30 deg., to form positive groove for welding material.
- (6) K.L.G. F. 12 type sparking plugs must be fitted.
- (7) Chater Lea type socket terminals must be fitted on the H.T. cables at sparking plug ends and secured by K.L.G. spring clip. The brass tubular "eyelet" terminal must not be used.
- (8) The new pattern strengthened contact breaker rocker arm must be fitted. This is provided with fillets between web and lug for platinum contact.
- (9) The material of the petrol valve seating of the carburettor must be of hard drawn brass and be of the new type giving a bearing surface increased by 100 per cent, over the old type, which was in gun metal.

2. The following modifications, (10 to 28), are desirable modifications which should be embodied whenever possible :—

- (10) The nipple of the oil relief valve should be of new type with hole of reduced diameter in order to keep the pressure down in the low pressure system.
  - (11) The spring of oil relief valve should correspond to Drawing E. 14423.
  - (12) The rotor of the water pump should be of the type with straight vanes, the curved vane type should be replaced.
  - (13) Clearance between the rotor and body of the water pump should be increased to overcome the trouble of water freezing. The increase must be obtained by taking material off the pump body and not by reducing the rotor which would affect the efficiency of the pump.
  - (14) The fibre washers on cylinder studs underneath cam- shaft casing should be replaced by aluminium ones.
  - (15) The baffles for the camshaft casing rocker should be of a type with radius edges to overcome oil leaks. Old type baffles with square edges should be replaced.
  - (16) The wrist pin, bolt and washer of the articulating rod should be replaced by the strengthened type, Parts Nos. E. 13982, E. 13985 and E. 13986. (Where these parts have already been changed by Messrs. Rolls-Royce the washer is stamped "A").
  - (17) Old type cylinders should be replaced by those provided with corrugated water-jacket.
  - (18) Dowel pins in crankcase for cylinders should be deleted on overhaul.
  - (19) The latest type of valve springs, Part No. E. 9905, should be fitted.
- NOTE.—The compressed pressure is 33 lbs. against 47 lbs. with the old spring and the inside diameter is increased from 1.125 to 1.15 ins.
- (20) The planet roller bearing should be of a type with 17 rollers and a parallel bore.
  - (21) The sun wheel carrier with bores reduced from 4.35 to 4.15 ins. made from special nickel steel, should replace any of the old type made from C.H.N.S.
  - (22) The friction damped epicyclic gear should be fitted.
  - (23) The steel collet of the propeller shaft should be replaced by one of phosphor bronze. (Applies to Engines Nos. 5716 and onwards only.)
  - (24) The aluminium split nut for camshaft drive housing should be replaced by the strengthened steel nut in one piece.
  - (25) The new type of condenser with strengthened lug for earth connection and condenser endplate altered to take

## Notes on "Civil Aviation"

same, should be fitted.

(26) A bakelite bush should be fitted in the rocker arm in place of the red fibre bush originally provided.

(27) The dust cover for the armature housing should be provided with security clip fitting against underside of the distributor bearing,

(28) Swages type of jet should be substituted for the earlier type having restriction soldered in position.

(No. 5 of 1925.) Flight - The Aircraft Engineer & Airships, pg. 424, 02 July, 1925

**NOTICE NO. 6 OF 1925 : SIDDELEY "PUMA" ENGINES: MODIFICATIONS**

1. The undermentioned modifications, (1) to (17), all of which have been individually established for several years, are considered essential and must be included in any "Puma" engine which does not already contain them before it is passed as airworthy :

- (1) A horizontal groove, 4 mm. wide and 5 mm. deep, should be provided in the bottom half of the big end bearing to come within 7-5 mm. of each end.
- (2) The new type oil baffles should be fitted to decrease the oil consumption.
- (3) Connecting rods with strengthened-up big ends must be fitted.
- (4) A dowel must be provided in the big end bearings to prevent rotation
- (5) Low compression pistons, compression ratio 4-95-1, are to be fitted.
- (6) The new type of inlet valve outer spring to take load of 63J lb. as against the original spring of 55J lb. is to be fitted when high lift camshaft is used.
- (7) The inlet valve with solid stem adjusted by cap is to be used when high lift camshaft is fitted.
- (8) The following alterations must be embodied in the lubrication system :—
  - (a) Part No. 701-149.—Oil gallery nipple.—Hole to be opened out J-in. diameter.
  - (b) Part No. 701-145A.—Oil delivery pipe, from filter.— Pipe to be altered to f-in. outside diameter.
  - (c) Part No. 701-33A/B.—Intermediate bearing (701- 34A/B centre bearing).—Hole altered to J-in. dia- meter and countersink altered to " 10 mm. dia. at 90°."

Position of oil groove in top half altered and groove extended round oil hole. Oil groove added in bottom half.

  - (d) Part No. 701-32A/B Front Bearings : Mud groove altered to 2 mm by 3 mm. in each half
  - (e) Part No. 701-35A/B Rear Bearings : Mud groove altered to 2 mm by 3 mm. in each half
  - (f) Part No. 701-74A.— Oil 3-way piece stud.—New to be fitted.

As an alternative modification and in order to adapt the existing part, two holes 5/32 in. diameter can be drilled at right angles to the existing holes, one above and the other below these holes. The new holes must not be drilled right, through but only to the centre.

  - (g) Part No. 701-148A.—Main oil gallery pipe.—Pipe to be increased to 3/4 in. external diameter.
  - (h) Part No. 702-1A.—Crankshaft.—Oil holes in Nos. 3, 5 and 7 journals are to be elongated at top.
- (9) The oil pressure pipes to camshaft to be bent at the top and bottom ends, to run close and be bound to the oil drain pipe, by means of tape lagging, the tape being subsequently varnished.
- (10) The following oil pipes are to be lagged with tape and varnished :
 

701-77.—Crankcase thrust oil pipe.

701-78.—Oil pipe front.

701-145A.—Oil delivery pipe from filter.

701-148A.—Main oil gallery pipe.
- (11) The vertical shaft coupling to be of the serrated type instead of hexagon.
- (12) The material of the union and union nuts to be of gun- metal instead of aluminium to overcome stripping of threads.
- (13) Narrow slots for the air passages in place of large drilled holes to be provided in the altitude control valve in order to limit the range of control and render the action more gradual. Or, alternatively, the altitude control must be rendered inoperative.
- (14) Connecting rod on carburettor, interlocking vacuum control and throttle levers, to be removed.
- (15) Slow running jets.—The number of petrol feed holes to be increased from two to four in order to obviate undue restriction in the petrol supply.
- (16) Feed holes through needle seating to be increased from 1/8 in. to 3/16 in. diameter to increase the available petrol flow.
- (17) The drilled holes from float chamber to the diffuser base to be increased from 1/8 in. to 5/32 in., in order to increase the petrol supply.

2. It is very desirable that all engines be fitted with two magnetos in place of one magneto and one Remy coil ignition set, and be fitted with new type oil base with increased radius to underside of flange securing sump to crankcase, to prevent cracking of flange.

## Notes on "Civil Aviation"

3. The following modifications, (18) to (24), are desirable modifications which should be embodied whenever possible:—

(18) The diameter of the wire of locking ring of the gudgeon pin in the piston should be increased from 14 to 12 G. and gudgeon pin shortened accordingly.

(19) The white metal of the big end bearing and connecting rod should be dove-tailed into the gun-metal casing, and the fitting of the big end bearing on to the connection rod should be tightened to prevent same working loose.

(20) Oil holes in camshaft and extension should be increased from 1/16 in. to 1/8 in. diameter, and a 1/16 in. diameter hole drilled through the shaft immediately behind the rear of the No. 6 exhaust cam into the camshaft bore.

(21) The camshaft bearing should be modified to take die-cast white metal bush.

(22) The new design rocking lever and pins should be fitted to eliminate number of wearing parts.

(23) Swaged type of slow-running jet should be substituted for the earlier type having restriction soldered into position.

(24) A small triangular notch, 5 mm. by 5 mm., should be cut in the leading edge on the top side of the throttle barrel, to obtain slow running.

(No. 6 of 1925.) Flight - The Aircraft Engineer & Airships, pg. 425, 02 July, 1925

<b>CORRECTION TO THE NOTICE TO GROUND ENGINEERS NO. 6 OF 1925</b>
---

PARAGRAPH 1 (1) of the above mentioned Notice to Ground Engineers should be amended to read as follows :

"A horizontal groove, 4 mm. wide and 0.5 mm. deep, should be provided in the bottom half of the big end bearing to come within 7.5 mm. of each end."

2. Copies of the Notice in question should be altered accordingly.

Flight - The Aircraft Engineer & Airships, pg. 443, 02 July, 1925

**NOTICE NO. 7 OF 1925 : INSPECTION OF INSTRUMENTS (LICENCE CATEGORY "E" )**

Inspection of Instruments (Ground Engineers' Licence Category "E" )

IT is notified :—

1. It is proposed to abolish Category " E " Ground Engineers' Licences (para. 29, Section 111, A.N.D.3) as from January 1. 1926.
2. On and after that date the inspection of instruments required by (c) of para. 35, Section IV, A.N.D.3, will continue, but may be carried out (for the aircraft instruments) by Ground Engineers licensed in Category " A " and (for instruments connected with the engine or its installation) Category " C."
3. The forms of certificates set out in (a), (b) and (e) of para. 37 of Section IV, A.N.D.3, will be reworded accordingly, so that (a) and (b) will together include (c).
4. Effective January 1, 1926, questions on the prescribed aircraft instruments will be added to the syllabus of the examination for Ground Engineers License Categories " A " and " B," while questions on the prescribed instruments connected with the engine or its installation will similarly be added to the syllabus of the examination for Ground Engineers License Categories " C " and " D."
5. Ground Engineers possessing current licences in Category "A" and Category " E " or Category " C " and Category " E," will be considered competent to sign the new combined certificates.
6. Holders of current licences in Category " A " or Category " C " only (i.e., not including also Category " E ") should apply to the Secretary, Air Ministry (D.D.A.I., LA. [2]), if they wish their licences to be extended to entitle them to sign the combined certificate.
7. Licences in Category " A " or " C " will not be renewed after January 1, 1926, until the Secretary of State is satisfied that the holder has the required knowledge of instruments.

Flight - The Aircraft Engineer & Airships, pg. 785, 26 November, 1925

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1926**

<b>NOTICE NO. 1 OF 1926</b>
-----------------------------

**Locking of Cap on Sump Spindle of A.G.S. Petrol Filter**

IMMEDIATE action should be taken to provide on all aircraft a positive lock for the cap (Pt. No. 8} on the bottom of the sump spindle (Pt. No. 4) of A.G.S. petrol filters, A.G.S. Nos. 600, 601 and 602.

This is to be effected by removing the existing lock nut and sweating the cap to the sump spindle.

In cases where a drain cock or other fitting is substituted for the cap, a similar precaution must be observed.

Flight - The Aircraft Engineer & Airships, pg.116, 25 February 1926

<b>NOTICE NO. 2 OF 1926 : PLUNGER SWITCHES OF R.A.F. MARK H TYPE</b>
--

It is notified that in the case of aircraft fitted with plunger switches of the R.A.F. Mark H type, the following action should be taken :—

- (1) After the stranded conductors have been secured under the terminal screws at the rear of the switch, these connections are to be firmly soldered up to the screw heads and the body of the switch to prevent the possibility of the cables becoming disconnected under vibration.
- (2) Lengths of insulating sleeving of an appropriate internal diameter should first be threaded on the cables before these are connected to the switch ; after the connections have been made as described in (1) above, this sleeving is then to be slid back into position so as to cover all exposed conductors, and is to be secured in position by a whipping of waxed thread.
- (3) At the earliest opportunity the plunger switches of this type should be removed and replaced by others of an approved pattern.
- (4) Attention is specially directed to the fact that certificates of airworthiness will not in any case be renewed until the substitution referred to in (3) above has been carried out.

Flight - The Aircraft Engineer & Airships, pg.322, 03 June 1926

<b>NOTICE NO. 3 OF 1926 : SEPARATING CLIPS FOR STREAMLINE BRACING WIRES</b>
---

It is notified a case has occurred in which the brass clip, acting as a clip between duplicate streamline wires, has worn considerably into one of the wires so as to render the wire unserviceable.

Immediate action should be taken to examine the wires under all such clips to ascertain whether any wear has taken place.

Damaged wires should be replaced forthwith.

Flight - The Aircraft Engineer & Airships, pg.732, 11 November 1926

**NOTICE NO. 4 OF 1926**

<b>NOTICE NO. 5 OF 1927 : BOX SPARS IN D.H.4 AND D.H.9 AIRCRAFT</b>
---

THE stripping and examination of box spars called for herein must be carried out before any D.H.4 or D.H.9 aircraft is submitted for re-inspection for renewal of Certificate of Airworthiness.

2. In addition to the inspection of box spars called for in Notice to Ground Engineers No. 1 of the year 1925, it will be necessary for the main planes to be opened up sufficiently and the binding of the spars removed locally to establish that the butt joints in the flanges and webs are in accordance with Drawings A.D.1415 and A.D.1416 in type and position, and that such joints are in good condition. Any planes found to contain open or defective joints in the box spars shall be replaced. The joints on serviceable spars shall be re-sealed by means of glued-on tape.

3. Previous to any spare plane, containing box spars, being fitted to the above types of aircraft, the inspection requirements of the preceding paragraph must be met.

4. No Certificate of Airworthiness will be issued or renewed in respect of any aircraft of the above types, constructed or overhauled subsequent to the date of issue of this Notice, unless the above precautions have been observed.

Flight - The Aircraft Engineer & Airships, pg. 785, 10 November, 1927

<b>NOTICE NO. 4 OF 1926 : MAGNESIUM ALLOY CASTINGS</b>
--

IT is notified that owing to the corrosive tendencies of magnesium alloy castings (e.g., electron metal) particular attention must be given to aircraft parts made of this material when periodic examinations are being conducted. Any parts showing depreciation as a result of corrosion must be replaced.

Flight - The Aircraft Engineer & Airships, pg. 865, 30 December 1926

**NOTICE NO. 7 OF 1926**

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1927**

<b>NOTICE NO. 3 OF 1927 : TIGHTENING OF NUTS, LOCKNUTS, ETC.</b>
--

A SYSTEMATIC investigation of the causes of failure of aero engines and their accessories has brought to light several instances in which the primary cause was the stretching or fracture of studs due to initial over tightening of the nuts.

(2) The actual degree of tension applied to any given stud or bolt obviously cannot be determined by subsequent inspection. Adequate control, therefore, of this phase of erection can be exercised only by a general supervision of the type of tool used and the manner in which it is applied to each class of job.

(3) Ground engineers should accordingly take special care to ensure that the types of spanner used in the assembly of the various parts and components of aircraft, engines and their accessories are not likely in normal use to subject the threaded member to excessive loading and further, that the effectiveness of such spanners is not augmented by the use of additional pipes or hammering up. Particular attention is directed to the possible over tightening and or maltreatment of locknuts on streamline wires and tie-rods, through the use of unsuitable tools.

(4) The normal length of spanner appropriate to the various sizes of studs or bolts can be ascertained by reference to B.E.S.A. Specification No. 192.1924 —British Standard Spanners.

Flight - The Aircraft Engineer & Airships, pg.658, 15 September 1927

**NOTICE NO. 8 OF 1927 : MODIFICATIONS TO "MOTH" AIRCRAFT W/ "CIRRUS" ENGINE**

RENEWALS of Certificates of Airworthiness will not, in future, be granted until the aircraft embodies the modifications referred to herein. Ground engineers should, therefore, ensure that all such aircraft, for which they are responsible, have these modifications embodied.

This requirement is applicable to " Moth " aircraft of the following types :— D.H.60, Mark I ; D.H.60, Mark II ; D.H. 60X, Mark II.

(2) Fuel System.—The fuel system is to be modified in accordance with the following drawings :—  
Mod. D.H.'60/Mk.1 Drg. U/691 and M. 789; Mod. D.H./60/Mk.2,'G.A. 1074 and M. 790 ; Mod. D.H./60X/Mk.2'G.A. 1095 and M. 791.

A brief description of the above modification is given as follows :—•

(a) Owing to the risk of air lock the existing type cock is replaced by a modified type of cock.

(6) The pipe line between the tank and carburettor is increased from J in. diameter to  $\frac{1}{2}$  in.

The reason for this modification is that there is a possibility with the present system, under certain conditions of head of petrol, etc., for an inadequate supply of petrol to reach the carburettor.

(3) Mixture Control.—The carburettor mixture control is to be modified in accordance with Mod. No. Moth/518. This alteration makes the inter-locking between the mixture regulator and throttle levers of a more positive character, thereby removing the present risk of the throttle lever being sprung past the mixture regulator lever and so leaving the latter in a partially or fully closed position.

(4) The vent in the main fuel tank must be kept clear and maintained in the standard position with the opening facing forward and cut off at an angle of approximately 45°.

Flight - The Aircraft Engineer & Airships, pg.873, 22 December 1927

<b>NOTICE NO. 9A OF 1927 : REPAIRS TO CIVIL AIRCRAFT</b>
--

GROUND engineers are reminded that repairs to aircraft or engines which they are permitted to carry out under Paragraph 47 of the Air Navigation Directions (A.N.D.6), are limited to repairs which do not involve any modification of the detail design of the approved type of aircraft or engine.

(2) Repairs which do alter the detail design of the approved type must be regarded as modifications and dealt with as laid down in Paragraph 26 (ft) of A.N.D 6

(3) Information as to the method of obtaining approval of any contemplated method of repair can be given by the Inspector in Charge, A.I.D., at the works of the constructor of the aircraft or engine concerned.

(4) Ground engineers licensed in categories B and D must satisfy themselves that:

1. this design approval has, in fact, been obtained before they certify repairs of this description and
2. must include a reference to the authority received in the aircraft or engine log-book entry.

Flight - The Aircraft Engineer & Airships, pg.873, 22 December 1927

<b>NOTICE NO. 9B OF 1927 : ENGINE INSTALLATION REQUIREMENTS: FIRE PREVENTION</b>
--

The operation of notice to ground engineers No. 6 of 1927 on the above subject is hereby suspended until further notice.

Flight - The Aircraft Engineer & Airships, pg.873, 22 December 1927

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1928**

<b>NOTICE NO. 1 OF 1928 : AVRO 504N "LYNX" MODIFICATIONS</b>
--

THE modifications described herein must be embodied in all existing Avro 504N " Lynx " aircraft before any such aircraft is submitted for re-inspection for renewal of the Certificate of Airworthiness.

2. Modification No . 19.—The present design of petrol-cock control handle in the front cockpit is unsuitable owing to the ease of accidental operation. This handle must be replaced by a knurled disc or similar type of handle.

3. Modification No . 21.—The altitude control lever is unsuitable in its present form, due to the facility with which it can be accidentally operated. The lever must be shortened by approximately 2 inches.

4. No certificate of airworthiness will be issued or renewed in respect of any Avro 504N " Lynx " aircraft unless the above modifications have been embodied.

5. Drawings of these modifications can be obtained on application and prepayment from the Drawings Library, Air Ministry, Kingsway, London W.C.2

**NOTICE NO. 3 OF 1928 : AVRO AVIAN TYPE AIRCRAFT : BOTTOM MAIN PLANE HINGE JOINT FITTING**

AVRO Avian Bottom Main Plane Hinge Joint Fitting (Drawing No. D.979, Issue no. 1) on Fuselage

THE attention of ground engineers and all concerned is directed to the fact that cases have occurred where the above fitting has been found to be broken.

2. Ground engineers are to carry out, as a precautionary measure, frequent examination of this fitting in order to ascertain whether any cracks or signs of failure are developing.

3. Urgent action is being taken with a view to the replacement of the above by strengthened fittings of modified design and a further Notice to Ground Engineers will be issued in this connection.

Flight - The Aircraft Engineer & Airships, pg.962, 01 November 1928

<b>NOTICE NO. 4 OF 1928 : D.H.6 AIRCRAFT: ESSENTIAL MODIFICATIONS</b>
---

1. The modifications described herein must be satisfactorily incorporated in all existing D.H.6 aircraft before any such aircraft is submitted for re-inspection for renewal of the certificate of airworthiness.
2. A fireproof bulkhead must be fitted to insulate the engine bay from the rest of the aircraft, and, in addition, adequate protection must be provided for the underside of the fuselage.
3. Some means must be provided to lead all waste petrol and oil clear of the fuselage.
4. No certificate of airworthiness will be issued or renewed in respect of any D.H.6 aircraft unless the above mentioned modifications have been satisfactorily incorporated.

Flight - The Aircraft Engineer & Airships, pg. 980, 08 November, 1928

<b>NOTICE NO. 5 OF 1928 : SAFETY BELTS IN AIRCRAFT</b>
--

ATTENTION is drawn to the requirements of the Air Navigation Directions with regard to the provision and maintenance of safety belts in civil aircraft. . . . . 2 Paragraph 49 (1) (i) (a) of the Air Navigation Directions (A.T.M.D. 6) calls for the provision, in all flying machines, of a safety belt for each person, including the pilot, carried in an open cockpit.

3 Safety belts are regarded as part of the equipment of the aircraft, and both the belt itself and its attachment to the aircraft are therefore included in the items to be inspected and certified by a Ground Engineer licensed in category " A " in accordance with paragraphs 43 (a) and 44 (1) (a) of the Air Navigations Directions as amended by A.N.D.6A. In any case in which it is suspected that the strength of a safety belt has deteriorated, the Ground Engineer should remove the belt from the aircraft, support it by any convenient means in a manner similar to that in which it is attached in the aircraft and apply a proof load of 500 lbs. by loading the centre of the belt.

(4) "Attention is drawn to Notice to Ground Engineers No. 4 of 1920, which also deals with the question of safety belts and harness and is still operative.

Flight - The Aircraft Engineer & Airships, pg.995, 15 November 1928

**NOTICE NO. 6 OF 1928 : AVRO 504.N : ESSENTIAL MODIFICATIONS**

THE modifications described herein must be satisfactorily incorporated in all existing Avro 504 N civil aircraft before any such aircraft is submitted for re-inspection for renewal of the Certificate of Airworthiness.

2. Guard for Pilot's Feet : Modification jVo.Avro 504JV/29.

(a) In order to prevent the pilot's heels from becoming accidentally jammed between the foot board and the steel tubular diagonal frame member (Item No. 12/D.675), guards constructed of sheet aluminium are to be fitted to all Avro 504 N civil aircraft.

(6) Each guard is to be fastened to the front wooden cross member supporting the seat bearers by means of two wood screws, to the footboard by means of a series of wood screws, and to the diagonal tubular member by two clips.

(c) The arrangement is shown in Drawing No. V . 1375.

(d) The undermentioned items will be required in connection with the incorporation of this modification : see page for reference

3. Tail Skid Cables : Modification So. Avro 504 v . '43.

(a) The 10-cwt. cables are to be replaced forthwith by 20-cwt cables on those Avro 504 N aircraft fitted with compression rubber tail skid shock absorbers.

(b) This change will necessitate enlarging the hole in the shackle from  $\frac{1}{2}$  in. to  $\frac{3}{4}$  in. and fitting a correspondingly larger ferrule. Part No. 5SS351.

(c) It will be necessary to substitute the existing eyebolts anchoring the two upper cables by larger eyebolts, Part No. SS1425F.

4. Wing Skid Sockets.

(a) It has been found that on certain Avro 504N aircraft the small bolt which secures the wing skid in its front socket is incorrectly fitted in such a way that it lies parallel to the spar instead of to the chord. In this position the bolt is liable to foul the aileron pulley when the skid comes into contact with the ground.

(t) All Avro 504 N aircraft should, therefore, be examined in this respect and, if the above mentioned bolt is found to be wrongly fitted, a fresh hole should be drilled in the skid and socket to take the bolt in its correct position, i.e., lying parallel to the wing chord.

5. No Certificate of Airworthiness will be issued or renewed in respect of any Avro 504 N civil aircraft unless the above-mentioned modifications have been satisfactorily incorporated.

6. Drawings of these modifications can be obtained on application and prepayment from:

the Drawings library,

Air Ministry,

Kingsway, London

W .C.2.

Flight - The Aircraft Engineer & Airships, pg. 1026, 29 November, 1928

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1929**

<b>NOTICE NO. 17 OF 1929 : MAINTENANCE OF COCKPITS, ETC., IN WATERTIGHT CONDITION</b>
---

The attention of all ground engineers is directed to the importance of maintaining cockpits, windscreens, etc., in watertight condition so as to ensure protection of instruments and other equipment under adverse weather conditions.

Leakage of water through defective joints in cowling and windscreens may seriously impair the efficiency of the aircraft and must be prevented in order to maintain the aircraft in an airworthy condition.

Flight - The Aircraft Engineer & Airships, pg. 1062, 27 September, 1928

<b>NOTICE NO. 18 OF 1929 : AVRO "AVIAN" : BOTTOM FRONT CENTRE SECTION SPARS</b>
---

The spruce bottom front centre section spar in the fuselage of "Avian" Mark III, IIIA and IV aircraft is liable to split along the line of the bolt hole\*. This member should be frequently inspected, and, at the first sign of splitting, Modification No. Avian/25, which consists of replacing the existing spruce spar by a birch multi-ply spar of identical cross-sectional dimensions, should be embodied.

(2) No Certificate of Airworthiness will be issued or renewed in respect of "Avian" Mark III, IIIA, or IV aircraft unless the above-mentioned modifications have been satisfactorily incorporated.

(3) The above information is substituted for that contained in Notice to Ground Engineers No. 11 of 1929, which is hereby cancelled.

Flight - The Aircraft Engineer & Airships, pg. 1062, 27 September, 1928

<b>NOTICE NO. 19 OF 1929 : DOPING OF CIVIL AIRCRAFT</b>
---

The attention of all ground engineers is drawn to the necessity of strict compliance with paragraph 20 (g) of A.N. D. 7, which requires that operations such as doping must be carried out by methods approved by the Secretary of State.

2. The " approved " doping "schemes" (Programmes) normally require the dope to be applied in an atmosphere absolutely free from draughts and at a minimum temperature of 65° F.

3. When such conditions are not attainable, doping is not permissible unless recourse is had to special " approved " doping "schemes" (Programmes) which cater for wider ranges of temperature and humidity,

The manufacturer concerned issues full instructions as to the manner and conditions of application, and such instructions must be strictly adhered to.

4. All instructions for the application of " approved " doping "schemes" (Programmes) bear a reference to the approval authority. (

Flight - The Aircraft Engineer & Airships, pg. 1062, 27 September, 1928

<b>NOTICE NO. 1 OF 1929 : MODIFICATIONS TO AIRCRAFT AND / OR ENGINES</b>
--

subsequent to the issue of certificates of airworthiness

THE attention of Ground Engineers is directed to the revised regulations with regard to "modifications" to aircraft, as laid down in the Air Navigation Directions 1928 (A.N.D. 7).

2. Para. 35(1) of these directions requires that the approval of the Secretary of State shall be obtained for any modifications which affect the safety of an aircraft in respect of which a Certificate of Airworthiness is in force

3. Para. 57 requires the inspection and certification in the appropriate log book of such modifications by a qualified ground engineer or by an authorised representative of an approved firm.

4. Ground Engineers must, before inspecting and certifying modifications, ensure that design approval has been obtained, and must include a reference to the authority received in the log book entry.

Flight - The Aircraft Engineer & Airships, pg. 55, 17 January, 1929

<b>NOTICE NO. 2 OF 1929 : TIGHTENING CYLINDER HEAD HOLDING DOWN STUDS</b>
---

THE attention of all ground engineers is directed to the importance of avoiding overtightening the nuts on studs and bolts subjected to pulsating load, e.g., cylinder holding down studs, connecting rod bolts, etc.

2. Particular attention is necessary on engines where the cylinders and, or heads are retained by long external studs, it being essential in all such cases that due allowance is made when tightening the nuts, for the increased tension on the studs which will arise when the engine is heated.

3. No attempt should be made to remedy a leaky joint between a cylinder and cylinder head on such engines by overtightening the nuts as this will invariably lead to the parts being subjected to excessive loads and distortion. All such leaks should be rectified by attention to the joint itself.

Flight - The Aircraft Engineer & Airships, pg. 55, 17 January, 1929

**NOTICE NO. 3 OF 1929 : AVRO AVIAN AIRCRAFT : MODIFICATION TO BOTTOM REAR HINGE JOINT**

THE modification described herein must be embodied on all existing "Avian" aircraft fitted with retractable undercarriage to Drg. Xo. K. 974/3 before any such aircraft is submitted for re-inspection for renewal of the Certificate of Airworthiness. Ground engineers should therefore ensure that all such aircraft for which they are responsible have this modification embodied

This requirement is applicable to "Avian" aircraft of the following types : Avian Mark I, Avian Mark II, Avian Mark III, Avian Mark IIIA.

2. The modification consists of sawing off the existing lug on the bottom centre section spar and replacing this by the part shown on sketch No. 2814, dated June 22, 1928. . . . • . .

3 attention is drawn to the necessity for inspection, before each flight, of the bottom rear hinge joint for any indication of fracture between the roll and the plate until the modification is incorporated.

4. No Certificate of Airworthiness will be issued or renewed in respect of "Avian" aircraft fitted with retractable undercarriage unless the above modification has been embodied.

5. Cancellation.—Notice to ground engineers No. 3 of 1928 is hereby cancelled. (No. 3 of 1929) Flight - The Aircraft Engineer & Airships, pg. 55, 17 January, 1929

<b>NOTICE NO. 5 OF 1929 : INDEX OF NOTICES TO GROUND ENGINEERS : 1920 - 1928</b>
--

THE New Index has now been published (by AIR MINISTRY) giving:

- (1) the Cancelled Notices;
- (2) Operative Notices ;
- (3) Amendments.

Any communications relating to this should be addressed to:

The Secretary (C.A.2),  
Air Ministry,  
Kingsway, London,  
W.C.2.

Flight - The Aircraft Engineer & Airships, pg. 110, 07 February, 1929

<b>NOTICE NO. 14 OF 1929 : FORMATION OF BUBBLES IN AIRCRAFT COMPASSES</b>
---

In view of the fact that trouble has recently been experienced through the formation of bubbles in liquid compasses installed in Service and Civil aircraft, the attention of all concerned is directed to the following report on this subject:

1. The presence of a bubble in a liquid compass renders the liquid liable to disturbance whenever the movement of the aircraft changes in any way. These movements of the liquid affect the magnet system and usually render the compass completely unreliable. For this reason it is essential that aircraft compasses should be constructed so that they will remain free from bubbles under all normal flying conditions.

2. The formation of bubbles may be due to any of the following causes:

- (a) Leaking at one or more places where joints have been made, e.g., filling plug, verge ring, expansion chamber.
- (b) Expansion chambers which are too small or too stiff to cope with the temperature range experienced.
- (c) Inadequate de-aeration of the compass liquid before the bowl is finally sealed up

3. Attention is particularly drawn to 2 (c) above, owing to the fact that alcohol normally holds in solution a considerable volume of air, and, if the pressure on the liquid is gradually decreased, some of this air will be liberated and will form a bubble. Such conditions occur when aircraft climb high altitudes where the air pressure is low. Aircraft compasses should, therefore be guaranteed by their makers to be free from bubbles if placed in a chamber in which the air pressure is reduced to 3 lbs. to the sq. in."

(Notice to Airmen No. 45 of 1929) Use No.14 Notice to Ground Engineer. Flight - The Aircraft Engineer & Airships, pg. 908, 22 August, 1929

<b>NOTICE NO.13 OF 1929 : CORROSION UNDER BRASS IDENTIFICATION CLIPS : STREAMLINE WIRES AND TIE-RODS</b>
--

The attention of all ground engineers is directed to the fact that corrosion is found to take place under the brass identification clips of streamlined wires and tie-rods.

(2) These parts, therefore, should be immediately examined by moving the clips from their position and, should corrosion be found, the wire or rod must be replaced.

(3) Where frequent examinations are difficult, e.g., within covered components, the wires and rods may be protected under the clips by a coating of good varnish, care being taken not to damage this protective coating when replacing the clips in their final position. If the clips are a slack fit, they should be lightly closed to prevent their sliding on to the unprotected parts of wires or rods.

(4) To prevent the above mentioned corrosion, new materials introduced for the clips on wires and rods of future manufacture.

Flight - The Aircraft Engineer & Airships, pg. 908, 22 August, 1929

**NOTICE NO. 23 OF 1929 : SAFETY BELTS AND SAFETY HARNESS**

THE attention of ground engineers and all concerned is drawn to fact that the requirements of Design Leaflet E.3 of Air Publication 1208 will be brought into effect in respect of all applications for Certificates of Airworthiness as follows:—

- (i) Applications for type Certificates of Airworthiness after November 1, 1929.
- (ii) Applications for subsequent Certificates after February 1, 1930.
- (iii) Applications for renewals of Certificates of Airworthiness, so far as the requirements can be satisfied after February 1, 1930.

2. The requirements of Design Leaflet E.3 of Air Publication 1208 are as follow:—

Strength Requirements for Safety Belts and Safety Harness for Civil Aircraft.

(i) Only belts or harness of approved types may be used. Approval of a type will be notified by an addition to Leaflet E.I of Air Publication 1208, and will be obtained by submitting a sample belt or harness to the following tests:—

(a) Two-piece Belts

The complete belt, straightened out, is to be tested under tension until it fails, and must stand a load of not less than 1,100 lb. before failure occurs.

(b) Four-piece Harness

The shoulder straps of the completely assembled belt shall be attached to a cross bar at points 12 in. apart. The thigh straps shall be attached to a cross bar in a similar manner. Load shall be applied to the cross bars at points midway between the attachments of the straps and in such a manner as to extend the belt in the form of an X, all load passing through the release pin.

The harness must be loaded in this manner until it fails, and must support a total load of not less than 1,100 lb. before failure occurs.

(c) The belt or harness must be fitted with a release device that will function satisfactorily under a load of 250 lb. with the belt or harness arranged as specified in (a) and (b). This test is to be repeated three times.

(ii) Each and every belt or harness must be proof loaded by applying a total load of 300 lb. in the manner described at (i) (a) and (b) above, for two-piece belts and four-piece harnesses respectively. As a result of this test no sign of failure or deformation must be apparent.

(iii) Two-piece belts must be at least 4 in. wide, and capable of adjustment in order to prevent slipping downwards from the chest to the abdomen. The positions of the points of attachment must be such that the belt can be worn comfortably over the chest by an average person.

(iv) All end attachments and fittings used in conjunction with belts and harness, together with those parts of the aircraft to which the belt loads are transmitted, must be capable of withstanding the load arising from the belt load mentioned in paragraph 1 above. The distribution of the total load between the various points of attachment, if more than one, will depend upon the design of the belt or harness, and must, therefore, be considered separately for each type of belt or harness and each type of aircraft.

(v) Three-piece harness, i.e., harness with only one leg strap passing between the wearer's legs, will not be approved for use in civil aircraft.

(vi) The use of leather as a material for safety belts and safety harness is prohibited.

Flight - The Aircraft Engineer & Airships, pg. 1293, 06 December, 1929

<b>NOTICE NO. 24 OF 1929 : ADVERTISING STREAMERS AND BANNERS ON AIRCRAFT</b>
--

THE attention of Ground Engineers and all concerned who contemplate attaching streamers or advertising banners to aircraft is drawn to the fact that the attachment of such banners is considered to be a modification which affects the safety of the aircraft.

No such banner shall be fitted until approval has been given as required by Paragraph 35 of the Air Navigation Directions, 1928 (A.N.D.7).

(No. 24 of 1929.) Flight - The Aircraft Engineer & Airships, pg. 1293, 06 December, 1929

<b>NOTICE NO. 25 OF 1929 : EFFECTS OF TIMBER SHRINKAGE</b>
--

THE attention of all Ground Engineers is directed to the importance of maintaining as tight as possible without damage or distortion of the wood, all bolts which, in passing through wooden members, are connected by metal plates embedded in or on the face of the timber, as, in the case of fittings of this type, timber shrinkage may cause slackening of the bolt. Frequent examination is therefore essential, and, in the case of important fittings such as main spar joints, this examination must be made at least twice a year.

2. In cases such as the above, timber shrinkage may also cause cracks in the neighbourhood of the bolt holes. If the bolts are situated within a short distance of the extremity of the wooden member and the cracks are small and occur only between the bolts and the end, their presence need not normally be considered serious. If, however, the cracks pass through the bolt holes into the main body of the member, there is danger of the strength of the member being seriously reduced, and its reinforcement or replacement in an approved manner becomes essential.

3. The ends of spars must, therefore, be frequently examined, and when cracking is discovered, the wing must be opened up and the spar examined to see how far the cracks extend.

(No. 25 of 1929.) Flight - The Aircraft Engineer & Airships, pg. 1293, 06 December, 1929

**NOTICE NO. 7 OF 1929 : MAINTENANCE OF AIRCRAFT AND ENGINE : LOG BOOKS**

GROUND Engineers responsible for the inspection of British aircraft that are used for private flying only (i.e., not flown for carrying passengers or goods for hire or reward\*) are strongly recommended to take action to ensure that a complete record of the inspection by competent persons of all repairs and overhauls is maintained, preferably in aircraft and engine log books.

This record is particularly valuable when the aircraft has to be examined for renewal of its certificate of airworthiness. It will not only facilitate consideration of the owner's application for renewal, but will obviate the difficulties and consequential delay which are likely to arise when particulars of repairs and overhauls have to be obtained from the firms who have carried out such work since the aircraft was last examined.

The aircraft logbook (C.A. Form 27) and engine log book (C.A. Form 28) can be purchased from H.M. Stationery Office, either directly or through any bookseller, at a cost of 2s. 6d. each (exclusive of postage).

Refills for either book can similarly be purchased at a cost of 1s. 3d. each (exclusive of postage),

\*Note—Aircraft and engine logbooks are required to be kept for all aircraft intended or used for carrying passengers or goods for hire or reward.

Regulation referenced : para. 1 (b) of Schedule III to the Air Navigation (Consolidation) Order 1923.

Flight - The Aircraft Engineer & Airships, pg. 250, 21 March, 1929

Maintenance of Aircraft and Engine Log Books OWNERS of British aircraft that are used for private flying only {i.e., not flown for carrying passengers or goods for hire or reward\*) are strongly recommended in their own interests to maintain aircraft and engine log books so as to have available at all times a complete record of repairs and overhauls.

This record is particularly valuable when the aircraft has to be examined for renewal of its certificate of airworthiness. It will not only facilitate consideration of the owner's application for renewal but will obviate the difficulties and consequential delay which are likely to arise when particulars of repairs and overhauls have to be obtained from the firms who have carried out such work since the aircraft was last examined. The aircraft log book (C.A. Form 27) and engine log book (C.A. Form 28) can be purchased from H.M. Stationery Office, either directly or through any bookseller, at a cost of 2s. 6d. each (exclusive of postage).

Refills for either book can similarly be purchased at a cost of 1s. 3d. each (exclusive of postage).

\* Note.—Aircraft and engine log books are required to be kept for all aircraft intended or used for carrying passengers or goods for hire or reward.

See para. 1 (ft) of Schedule III to the Air Navigation (Consolidation) Order. 1923

(Air Ministry Notice to Aircraft Owners No. 15 of 1929.)

<b>NOTICE NO. 22 OF 1929 : D.H. 60 AIRCRAFT : RETAINING WASHER, PART NO. H. 16132, FOR AILERON KING POST BALL JOINT</b>
---

ATTENTION is drawn to the above-mentioned washer, Part No. H.16132 on D.H.60 type machines . Owing to this washer having been reversed OD one of the above aircraft, a failure at the shank of the rear end of the aileron gear connecting rod, Part No. H.I 1801, has resulted.

Ground engineers should, therefore, make a special examination of this washer on all machines of the above type under their supervision. (No. 22 of 1929) Flight - The Aircraft Engineer & Airships, pg. 1268, 29 November, 1929

<b>NOTICE NO. 7 OF 1930 : "MOTH" AIRCRAFT D.H.60, 60X, G, AND M</b>
---

It has been found that there is inadequate clearance between the washer, part No. H. 16132, and the rear ball race in the aileron connecting rod on aircraft of the above types. It is, therefore, desirable to incorporate the modification described in para. 3 below.

2. This modification must be incorporated before the next renewal of Certificate of Airworthiness. If, however, on examination, the washer, part No. h.16132, is found to be badly cracked, the modification should be incorporated at once and, in the case of slightly bent washers, at the earliest convenient opportunity.

3. The washers, part No. H.16132, should be removed and the connecting rod disconnected at its rearend. The studs, part No. H.11263, in the aileron lever should then be refitted on the inboard side of the lever as shown on drawing No. M.1308, this being most easily accomplished by changing

•ver the left- and right-hand aileron levers complete. New washers, part No. H.16132, modified (see drawing No. M. 1308) or part No. H.31185, must be fitted.

4. The above-mentioned drawing and new washers may be obtained from the De Havilland Aircraft Co., Ltd., Stag Lane Aerodrome, Edgware.

5. Cancellation.—Notice to Ground Engineers No. 22 of 1929 is hereby cancelled.

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1930**

<b>NOTICE NO. 18 OF 1930. : EXAMINATION OF APPLICANTS FOR GROUND ENGINEER'S LICENCES</b>
--

EXAMINATION boards will sit for the purpose of examining applicants for ground engineers' licences at the following times and places:—

2. Applications for licences should be made on the appropriate form, which is obtainable on request, and should be addressed to:  
The Secretary,  
Air Ministry (D.C.A.),  
Gwydyr House,  
Whitehall, London.

Applications for extensions to existing licences will also be dealt with at these boards, and such applications should be sent either by letter or on the usual application form to the address given above.

3. Applications for examination at the centres named at 1 (c), (d) and (c) above, can only be accepted provided that the application is received 14 days before the dates specified and provided also that the total number of applications received are within the capacity of the board.

Applicants whose applications are not accepted owing to these provisions will be given the opportunity for early examination at London or Croydon, or, alternatively, to be placed on a waiting list for the next board to be arranged in the particular place concerned

Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

<b>BLACKBURN " BLUEBIRD " MARK IV AIRCRAFT :</b>
--

**Pins in Connecting Rod between Control Sticks for Aileron Control**

1. THE attention of aircraft owners and ground engineers is drawn to the above-mentioned pins, which are not to exceed 0-470-in. in length under the head.
  2. The connecting rod, housed within the elevator rockshaft, is attached to the control sticks by  $\frac{1}{8}$  in. diameter pins and to the ailerons connecting rod by a  $\frac{1}{4}$  in. diameter pin. The pins are opposite flattened rivet heads inside the rockshaft tube, providing a fine internal clearance. Aircraft owners and ground engineers should examine this component part to ensure that pins of the correct length are fitted and that adequate clearance is provided in all positions of the control stick. "
  3. The modification is shown on Saunders-Roe, Ltd., drawings Nos. W.A.1502/4 and 1603/5, copies of which can be obtained upon application to Messrs. Saunders-Roe, Ltd., East Cowes, I.O.W.
- The appropriate part numbers for pins of the correct length are :—
- Part 8, Drg. No. N.A.1603/5 ;
- Part 4, Drg. No. N.A.1502/4 ; Part No. 383/51
- (No. 8 of 1930) Flight - The Aircraft Engineer & Airships, pg.138, 17 January, 1930

**INSPECTION TABS ON CONTROL AND BRACING CABLES**

1. IN the case of all aircraft fitted with inspection tabs in the eyes of splices of control or bracing cables, the following action should be taken.
2. Movement of the inspection tabs, and consequent chafing of the thimble and/or cable, must be prevented by securing the tabs alongside the turn- buckle or cable by wire or other suitable means.
3. Examination shall be made of all tabbed cable eyes, special attention being directed to cables which normally are hidden, and any loose tabs must be secured as indicated above.
4. Cancellation.—Notice to Ground Engineers, No. 1 of 1927, is hereby cancelled.  
(iVo. 9 of 1930.) Flight - The Aircraft Engineer & Airships, pg.138, 17 January, 1930

**PROVISION OF FIREPROOF BULKHEADS : TEMPORARY RELAXATION OF AIR-WORTHINESS  
REQUIREMENTS FOR CERTAIN AIRCRAFT**

1. It has been decided that aircraft fitted with rotary engines which are not provided with a fireproof bulkhead to insulate the engine from the rest of the aircraft may, notwithstanding the requirements specified in Leaflet D. 2 of the Airworthiness Handbook for Civil Aircraft (A.P. 1208), be granted a certificate of airworthiness, if the aircraft otherwise complies with airworthiness requirements, and is recommended for the issue of a certificate of airworthiness within six months from the date of this notification.

2. Similarly, aircraft of this description in respect of which certificates of airworthiness have been or shall have been issued, but which do not conform to airworthiness requirements in this respect, may, if the other requirements of airworthiness are met, be granted renewals of such certificates of airworthiness at any time up to two years from the date of this notification.

3. In each of the above cases the requirement in question will be rigidly enforced after the expiration of the period indicated.

NOTE.—In order to draw the special attention of aircraft owners to the information contained in the Notices hitherto known as "Notices to Ground Engineers," this series of Notices will, in future, be entitled "Notices to Aircraft Owners and Ground Engineers." (No. 26 of 1929.)

Top Front Spar Outer Joint on "Moth Aircraft" >vltH Slotted Winfis (D.H.60.X., G., and N.).

1. On aircraft of the above types the inner J in E.S.F. bolt at the top front spar outer joint should be replaced by a ^\ in. B.S.F. bolt, in accordance with Drawing No. N.1193, copies of which may be obtained from Messrs. De Havilland Aircraft Co., Ltd., Stag Lane Aerodrome, Edgware, Middlesex.

2. Certificates of Airworthiness for this type will not be renewed unless this modification has been incorporated. (No. 27 of 1929.) Flight - The Aircraft Engineer & Airships, pg.138, 17 January, 1930

<b>MANUFACTURE AND INSPECTION OF AIRCRAFT PARTS TO DRAWINGS</b>
---

- (1) THE attention of aircraft owners and ground engineers is drawn to the fact that cases have occurred where defective parts have been replaced by parts manufactured without reference to drawings, the defective part being used as a pattern.
- (2) It is pointed out that in such circumstances there is considerable risk of the new part being made of incorrect materials and/or to incorrect dimensions.
- (3) In every case where it is necessary to manufacture any detail or component of an aircraft for which a Certificate of Airworthiness has been issued or is to be issued or renewed, such replacements must be manufactured and inspected to approved drawings.
- (4) Certification of any repair affecting the safety of an aircraft under paragraph 57, sub-section 2, of the Air Navigation Directions, 1928 (A.N.D.7) should not be made unless either :—
- (a) The replacement part has been approved by the makers of the aircraft; (b) The part has been manufactured and inspected to standard approved drawings (approved repair "schemes" (Programmes) issued by certain makers coming under this head) ; or
- (f) The repair has been approved as a " modification subsequent to the issue of a Certificate of Airworthiness " under the procedure described in paragraph 35 of A.N.D. 7. (No. 1 of 1930.) Flight - The Aircraft Engineer & Airships, pg.138, 17 January, 1930

**GROUND ENGINEERS LICENSED IN CATEGORIES "A" AND "C" : DISTINCTION BETWEEN DUTIES**

1. THE Air Navigation Directions, 1928 (A.N.D. 7) stipulate that the certification of an aircraft, in accordance with paragraph 8 of Schedule II of the Air Navigation Order, shall be made, in respect of the aircraft itself by a ground engineer licensed in category " A," and in respect of the engines and engine installations, by a ground engineer licensed in category " C."<sup>357</sup>

2. When a certificate of safety for flight for any aircraft in respect of both. aircraft and engine(s) is given by one ground engineer licensed in both " A " and " C " categories no question arises in respect of the responsibility incident to one or other of the duties concerned. The question of the limits of responsibility does arise, however, when the certification is made by two separate individuals licensed in the separate categories.

3. In order that there shall be no doubt regarding the distinction between these duties, the following instructions are promulgated :—

(a) The inspection to be performed by the ground engineer licensed in category " A " includes :—

(i) the whole of the aircraft structure (including fuselage or hull, wings, ailerons, slots, tail-plane, elevators, fins, rudder, undercarriage, struts, bracings, and airscrew) for condition and correct assembly;

(ii) all flying"controls for assembly and correct functioning;

(iii) the flying instruments (aneroid, airspeed indicator, turn indicator and compass, where applicable) for installation and correct functioning ; (iv) aircraft equipment (safety belts and electrical services with, their batteries, wiring and bonding for W/T) for correct installation.

(6) The inspection to be performed by the ground engineer licensed is category " C " includes :—

(i) the whole of the engine installations, including the engine with its accessories and the fuel, oil, cooling, ignition and exhaust systems for condition, installation, correct functioning, and power output;

(ii) all controls connected with the engine and its ancillary systems for assembly and correct functioning;

(iii) the instruments relating to the engine and its installation (revolution indicator, pressure and contents gauges, and temperature indicator)' for installation and correct functioning;

(iv) the airscrew for correct attachment and smoothness of running.

---

<sup>357</sup> (No. 25 of 1930.) Flight - The Aircraft Engineer & Airships, pg. 905, 08 August, 1930

**DISCONTINUOUS ELEVATORS : COVERING OF WOODEN AIRSCREWS : FIREPROOF BULKHEADS :  
PROTECTION OF DUAL CONTROLS**

The attention of all aircraft owners and ground engineers is drawn to the fact that the following requirements of Air Publication 1208 will be brought into effect in respect of all applications for Certificates of Airworthiness as follows :

- (i) In respect of all applications for type Certificates of Airworthiness as given at (a).
- (ii) In respect of all applications for subsequent Certificates of Airworthiness as given at (6).

**A. Discontinuous Elevators**

J. The requirement of the additional sub-paragraph of paragraph I, of Design Leaflet B.4 is as follows :—"

Discontinuous Elevators.—The use of elevators in the same plane divided into separate sections which are not positively and rigidly coupled together is prohibited on aircraft in the acrobatic category."

2 The above requirement will be brought into effect as follows :— (a) As from July 17, 1930.

(b) and (c) As from October 17, 1930.

**B. Covering of Wooden Airscrews**

1. The requirement of paragraph VI of Design Leaflet B.8 is as follows :— "Covering.—The surface of wooden airscrews must be protected by varnish, varnished fabric, cellulose lacquer, or any other approved protective."

2 The above requirement will be brought into effect as follows :—(a), (fc) and [c] As from July 17, 1930.

**C. Fireproof Bulkheads**

1. The requirement of sub-paragraph (i) paragraph I of Design Leaflet

G.I is as follows :—" (i) A fireproof bulkhead possessing at least equivalent fire-resisting qualities to the following must be fitted in order to insulate the engine bay from the rest of the aircraft :—A sandwich consisting of best quality asbestos millboard of a minimum thickness of 3/32 in., held between aluminium or duralumin sheets, 24 S.W.G. thick, securely riveted together. In addition, adequate protection must be provided for the underside of the fuselage."

2. The above requirement will be brought into effect as follows :—(a) As from July 17, 1930. (6) and (c) As from October 17, 1930.

3. N.B.—The special concessions regarding the fitting of fireproof bulkheads to aircraft with rotary engines, granted by Notice to Aircraft Owners and Ground Engineers No. 26 of 1929, still remain in force.

**D. Protection of Dual Controls**

1. The requirement of sub-paragraph (ii) of paragraph I of Design Leaflet

B.6 is as follows :—" (ii) Adequate provision must be made to prevent the likelihood of the passenger(s) interfering with any of the controls of dual control aircraft when being used for other than training purposes."

2. The above requirement will be brought into effect as follows :—(a) As from October 17, 1930. (fc) and (c) As from January 17, 1931.

(No. 24 of 1930.) Flight - The Aircraft Engineer & Airships, pg. 905, 08 August, 1930

<b>FIREPROOFING OF SMOKING COMPARTMENTS</b>
---

1. THE attention of aircraft owners and ground engineers is drawn to the fact that the requirements of para. 6 Design Leaflet G 1 of Air Publication 1208 will be brought into effect in respect of all applications for Certificates of Airworthiness (i.e., applications for Type Certificates, applications for subsequent Certificates and applications for renewals of Certificates) as from the date of issue of this Notice.

2. The requirements of para. 6 Design Leaflet G.I of Air Publication 1208 are as follows :—

" Smoking compartments."\*—In every compartment in which smoking is Permitted, the furnishings, hangings, lagging and insulation shall, unless made of non-inflammable materials, be fireproofed in an approved manner. (No. 27 0/1930).

\*For further information regarding smoking in aircraft see Statutory Rules and Orders, 1923, No. 1508 (as amended by 1925, No. 1260, etc.), article 9 (iii).

page 1031, 12 sept 1930

**NAPIER "LION" ENGINE : TIGHTENING OF NUTS ON MASTER CONNECTING RODS**

1. THE attention of aircraft owners and ground engineers is directed to the special care necessary when tightening the nuts on master connecting rod studs of Napier " Lion " engines.
- 2- These nuts must be sufficiently tight to hold the bearing cap securely under running conditions, but not so tight as to cause stretching of the studs To ensure this correct tension the engine makers employ a spring loaded spanner set to give a maximum loading of 840 in./lb. (120 lb. at 7-in. radius).
3. It is very desirable to use a spanner such.as that referred to in paragraph 2, but when this is not available, a box spanner and a tommy bar, the latter to be 7 1/2 in. in length, can be used. The nuts must be tightened by applying a steady pressure to the spanner.
4. If any correction is necessary in order to obtain alignment between the split pin hole in the stud and the castellation of the nut, this must be effected by removing the nut and facing off the bottom face, care being taken that a true surface is obtained between this face of the nut and the bearing cap.
5. Studs for the " Lion " master connecting rod are now made from steel to B.E.S.A. Specification S/65. When any replacements are necessary, studs of this material, which are identifiable by a saw cut across the end, should be used.
6. Attention is drawn, in connection with the above, to Notices to Ground Engineers Nos.3 of the year 1927, and 2 of the year 1929.
7. Cancellation.—Notice to Aircraft Owners and Ground Engineers No. 14 of the year 1930 is hereby cancelled. (No. 28 of 1930.) **page 1031, 12 sept 1930**

<b>COMPASSES FOR CIVIL AIRCRAFT</b>
-------------------------------------

1. TYPES of compasses approved for use in civil aircraft are shown in Table III of Design Leaflet E.I of the Airworthiness Handbook for Civil Aircraft (A.P. 1208).
2. Notice to Aircraft Owners and Ground Engineers No. 14 of 1929 requires certain guarantees from compass manufacturers in connection with the question of freedom from bubble formation.
3. In order that all concerned may know when the requirements have been complied with, arrangements have been made with compass manufacturers whereby each compass will be accompanied by a " Guarantee,"
4. This guarantee will state that the compass has been inspected, that it complies with the appropriate specification and with the requirements of the Air Navigation Directions, and that it has passed a de-aeration test. All such guarantees will bear an Air Ministry Reference Number as evidence of validity.  
(No. 29 of 1930.)

<b>SLACKNESS IN THE OPERATING MECHANISM OF FLYING CONTROLS</b>
--

1. THEattention of aircraft owners, ground engineers and all concerned is drawn to the fact that slackness in the operating mechanism of flying controls may, under certain circumstances, give rise to flutter either of the wing-aileron system or of the tail unit.
2. Frequent examination of control systems should be made, and immediate steps taken to remedy slackness when found. (No. 30 of 1930.) **page 1031, 12 sept 1930**

<b>BLACKBURN "BLUEBIRD," MARK IV AIRCRAFT: OLEO LEG ATTACHMENT TO FUSELAGE</b>
--

1. THE attention of Aircraft Owners and Ground Engineers is drawn to Modifications Nos. 71 and 72, Attachment Bolts for Oleo Legs to Fuselage, Parts Nos. N.A. 124, Issue 3, and N.A. 7019, Issue 3, are now both provided with lubricators to obviate possible seizure in the trunnion blocks, PartNo. N.A. 7207.
2. Any existing bolts which show signs of wear, which are bent or which are not provided with lubricators, are to be replaced immediately by bolts to the preceding Part Nos.obtainable from Messrs. Saunders-Roe, Ltd., East Cowes
3. The fuselage fabric at the point of attachment of the oleo legs must clearly expose  
xposethelubricatortofacilitateapplicationofthegreasegu
4. No Certificate of Airworthiness will be renewed until this modification has been satisfactorily incorporated.  
(No. 31 of 1930.) Pg 1055 19 September, 1030

**NO. 6 OF 1930 : SAFETY BELTS AND SAFETY HARNESS**

1. THE attention of aircraft owners, ground engineers and all concerned is drawn to the requirements of the Air Navigation Directions with regard to the provision and maintenance of safety belts in civil aircraft. These are as follow :—

(i) Paragraph 60 (1) (i) (a) of the Air Navigation Directions 1928 (A.N.D., No. 7), calls for the provision, in all flying machines, of a safety belt for each person, including the pilot, carried in an open cockpit.

Safety belts are regarded as part of the equipment of the aircraft, and both the belt itself and its attachment to the aircraft are, therefore, included in the items to be inspected and certified by a ground engineer licensed in Category "A," in accordance with paragraphs S3 (a) and 54 (a) of the Air Navigation Directions (A.N.D. 7).

In any case in which it is suspected that the strength of a safety belt has deteriorated, the ground engineer should remove the belt from the aircraft, support it by any convenient means in a manner similar to that in which it is attached in the aircraft, and apply a proof load of 300 lb. by loading the centre of the belt.

(iii) Where ropes are used for attaching the belts to the aircraft, the strength of the rope should be approximately 14 cwt. "Lapped" joints in ropes are considered unsatisfactory and the use of ropes which allow of a spliced or "whipped" joint is more satisfactory. In all cases of "whipping," good quality kite cord should be used, and in order to minimise the slip when the rope is subjected to subsequent strain, the "whipping" should be carried out while the joint is under tension. All loose ends of ropes should be "Served" to prevent fraying, and in no case should a rope be connected directly to a plate where chafing may occur.

(iv) Anchorage plates, where secured by bolts, should be so arranged that the shear is taken at the bolt head rather than the screwed end, as cases have arisen where the plates bearing on the screwed end have sheared the bolt. The minimum diameter of any bolt used in anchorage fittings should be 2.B.A. The fixing of an anchorage plate or connection to the middle of a structural member should be avoided, and the belt be so arranged as to sustain the upper part of the body.

(v) The release gear on the belt should always be correctly positioned for easy manipulation, and should be maintained in a lubricated condition.

2. The attention of all concerned is also drawn to the fact that the requirements of Design Leaflet E.3 of Air Publication 1208 have been brought into effect in respect of all applications for Certificates of Airworthiness, as follows :

(i) Applications for type Certificates of Airworthiness after November 1, 1929.

(ii) Applications for subsequent Certificates after February 1, 1930.

(iii) Applications for renewals of Certificates of Airworthiness, so far as the requirements can be satisfied, after February 1, 1930.

3. The requirements of Design Leaflet E.3, of Air Publication 1208, are as follow •:—

**STRENGTH REQUIREMENTS FOR SAFETY BELTS AND SAFETY HARNESS FOR CIVIL AIRCRAFT.**

(i) Only belts or harness of approved types may be used. Approval of a type will be notified by an addition to Leaflet E.I of Air Publication 1208, and will be obtained by submitting a sample belt or harness to the following tests :—

(a) Two-piece Belts

The complete belt, straightened out, is to be tested under tension until it fails, and must stand a load of not less than 1,100 lb. before failure occurs.

(b) Four-piece Harness

The shoulder straps of the completely assembled belt shall be attached to a cross bar at points 12 in. apart. The thigh straps shall be attached to a cross bar in a similar manner. Load shall be applied to the cross bars at points midway between the attachments of the straps and in such a manner as to extend the belt in the form of an X, all load passing through the release pin.

The harness must be loaded in this manner until it fails, and must support a total load of not less than 1,100 lb. before failure occurs. c) The belt or harness must be fitted with a release device that will function satisfactorily

## Notes on "Civil Aviation"

under a load of 250 lb. with the belt or harness arranged as specified in (a) and (6). This test is to be repeated three times.

(ii) Each and every belt or harness must be proof loaded by applying a total load of 300 lb. in the manner described at (i) [a) and (i) (6) above, for two-piece belts and four-piece harnesses respectively. As a result of this test no sign of failure or deformation must be apparent.

(iii) Two-piece belts must be at least 4 in. wide, and capable of adjustment in order to prevent slipping downwards from the chest to the abdomen. The position of the points of attachment must be such that the belt can be worn comfortably over the chest by an average person.

(iv) All end attachments and fittings used in conjunction with belts and harness, together with those parts of the aircraft to which the belt loads are transmitted, must be capable of withstanding the load arising from the belt load mentioned in paragraph (i) above. The distribution of the total load between the various points of attachment, if more than on?, will depend upon the design of the belt or harness, and must, therefore, be considered separately for each type of belt or harness and each type of aircraft.

(v) Three-piece harness, i.e., harness with only one leg strap passing between the wearer's legs, will not be approved for use in civil aircraft.

(vi) The use of leather as a material for safety belts and safety harness is prohibited.

4. Cancellation.—Notices to Ground Engineers Nos. 4 of 1920, 5 of 1928 and 23 of 1929, are hereby cancelled. (No. 6 of 1930)

**NO. 37 OF 1930 : PROVISION OF SAFETY BELTS OR HARNESS IN CLOSED COCKPIT AIRCRAFT**

SAFETY belts or harness of an approved type must be provided for the pilot's seat in all closed cockpit or cabin type heavier-than-air aircraft. The installation of the safety belt or harness must satisfy the requirements of paragraph 4 of Design Leaflet E.3 of Air Publication 1208, Airworthiness Handbook for Civil Aircraft.

2. The above requirement will, in due course, be introduced into Section VII of the current Air Navigation Directions.

3. It will be brought into effect as follows :—

- (a) On January 1, 1931, in the case of aircraft in respect of which original Certificates of Airworthiness are issued on or after that date.
- (b) From January 1, 1931, in the case of aircraft in respect of which application is made on or after that date for renewal of an existing Certificate of Airworthiness.

NOTE.—For safety belt and harness requirements in connection with open cockpit aircraft, see Notice to Aircraft Owners and Ground Engineers No. 6 of 1930.

(No. 37 0/1930.) Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

<b>No. 38 of 1930 : HEATING SYSTEMS OF COCKPITS AND CABINS</b>
--

1. THE attention of aircraft owners, ground engineers and all concerned is drawn to the fact that heating systems which depend on jacketted exhaust pipes m a y , under certain circumstances, develop leaks which will enable exhaust gases containing carbon monoxide to enter the cabin or cockpit.
  2. Frequent examination of the exhaust pipes concerned should be made, particularly of the portions within the jacket or muff, to ensure that they are adequately gas-tight.
- (No. 38 o 1930.) Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

**No. 39 of 1930 : D.H. 80.A." PUSS MOTH " AIRCRAFT : RUDDER CONTROL LEVER**

1. ONcertain aircraft of the above types, the rudder control lever, part No. H.30300A situated immediately behind the cabin, has been found to be below strength, and trouble may be experienced, particularly if severe rudder bar loads are applied while the machine is on the ground.
  2. This control lever is, therefore, to be removed and replaced by part No. H.30300A modified, or by part No. H.33163A. The manner of making this replacement is shown on drawing No. M.I502, copies of which may be obtained from the De Havilland Aircraft Co.,Ltd.
  3. The modification is necessary in the case of the following aircraft only :—  
Constructor's Nos.—2001 to 2037, 2039 to 2063, 2068 to 2072, 2077, 2080 to 2085, 2090, 2091, 2093.
  4. This modification is to be incorporated on all the above aircraft within two months from the date of this notice. No Certificate of Airworthiness in respect of any of the above aircraft will be renewed until the modification has been satisfactorily incorporated.
- [No. 39 of 1930.) Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

<b>No. 40 of 1930 : SIMMONDS " SPARTAN " AIRCRAFT, FITTED WITH MAIN PLANES OF SYMMETRICAL SECTION</b>
---

1. THEattention of aircraft owners and ground engineers is drawn to the fact that distortion of the compression box ribs at the interplane strut attachment has occurred in aircraft of the above type.
2. These ribs should be examined immediately in all Simmonds " Spartan " aircraft fitted with main planes of symmetrical section.
3. Where replacements of these ribs are found to be necessary, Part No. 669 should be fitted.
4. No Certificate of Airworthiness will be renewed unless the above modifica- tion has been satisfactorily incorporated.
5. This notice does not apply to aircraft of the above type, which may be found to have compression box ribs in accordance with Sketch No.158, fitted in upper and lower planes at the interplane strut attachment.

[No. 40 0/1930.) Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

**NOTICE NO. 41 OF 1930. : EXAMINATION OF APPLICANTS FOR GROUND ENGINEER'S LICENCES**

EXAMINATION boards will sit for the purpose of examining applicants for ground engineers' licences at the following times and places:—

- (a) London, on the first and third Wednesdays in every month. (b) Croydon, on the second Wednesday in every month.
- (c) Manchester, on the first Wednesday in January and April.
- ,(d) Birmingham, on the first Wednesday in February and May. (e) Bristol, on the first Wednesday in December and March.

2. Applications for licences should be made on the appropriate form, which is obtainable on request, and should be addressed to The Secretary, Air Ministry (D.C.A.), Gwydyr House, Whitehall, London. Applications for extensions to existing licences will also be dealt with at these boards, and such applications should be sent either by letter or on the usual application form to the address given above.

3. Applications for examination at the centres named at 1 (c), (d) and (c) above, can only be accepted provided that the application is received 14 days before the dates specified and provided also that the total number of applications received are within the capacity of the board. Applicants whose applications are not accepted owing to these provisions will be given the opportunity for early examination at London or Croydon, or, alternatively, to be placed on a waiting list for the next board to be arranged in the particular place concerned

4. Notice to Aircraft Owners and Ground Engineers No . 18 of 1930 is hereby cancelled.  
(No. 41 of 1930.) Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

**NOTICE NO. 42 OF 1930 : AVRO 504 .K AND 504 .N AIRCRAFT : DISCONTINUOUS ELEVATORS**

THE requirement regarding discontinuous elevators, as set out in Design Leaflet B.4 of Air Publication 1208, and in Section A of Notice to Aircraft Owners and Ground Engineers No. 24 of the year 1930, is not applicable to aircraft of the above types.

(No. 42 of 1930.) Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

**NOTICE NO. 43 OF 1930 : CERTIFICATES OF AIRWORTHINESS—ACROBATIC CATEGORY**

Flight Requirements—Provision of Parachutes and Safety Harness.

(Landplanes and Seaplanes)

THE attention of all aircraft owners and ground engineers is drawn to the fact that the following footnote has been added to Design Leaflet F .I., and will be brought into effect as from the date of issue of this Notice:—

" Note.—Attention is drawn to the following requirements for all aircraft submitted for official flying trials prior to the issue of a Certificate of Air worthiness in the Acrobatic Category :—

(1) Provision is to be made for the fitting of four-piece safety harness of an approved type in the pilot's seat, if an approved type of harness is not already installed.

(2) Provision is to be made for the carrying of seat-type parachutes by personnel when testing the aircraft.

(3) The design of cabin or enclosed cockpit aircraft must be such that easy egress from the cabin is possible should a parachute descent be necessary."

(.Vo. 43 of 1930.) Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

<b>NOTICE NO. 44 OF 1930</b>
------------------------------

**D.H. 80 V. " Puss Moth " Aircraft : Aileron Controls**

1. CASES have occurred of the aileron controls of the above type of aircraft becoming partially jammed at either of two points. The first of these is where the aileron control cable passes through the rear floor of the cabin ; small nuts, screws, etc., may fall down the hole and lodge in the aileron chain below, and so jam in the pulley. The second is where the trailing edge flap hinges up to allow folding of the wings ; unless proper care is used when the flaps are being shut, the aileron cable may be left hanging; in a loop which is jammed as the flap comes down.
  2. To eliminate these risks, two modifications have been introduced. The first consists of two light aluminium covers, part No. H. 33279, for the cable where it passes through the floor, these being secured as shown on drawing No. M. 1514. The second consists of fitting an aluminium channel guard, part No. H. 33495, over the exposed length of cable, and a fibre block, part No. H. 33496, as shown on drawing No. M. 1531.
  3. Arrangements are being made by the makers of the aircraft to supply to all owners the necessary parts and drawings. If these are not received in due course, application should be made to the de Havilland Aircraft Co., Ltd., Stag Lane Aerodrome, Edgware, Middlesex.
  4. The above modifications are to be incorporated in all aircraft of the type in question within two months from the date of this notice.
  5. No Certificates of Airworthiness in respect of any such aircraft will be renewed until the modifications have been satisfactorily incorporated.
- {No. 44 of 1930.} Flight - The Aircraft Engineer & Airships, pg. 1388, 28 November, 1930

<b>NOTICE NO. 20 OF 1930 : CERTIFICATION IN LOG BOOKS</b>
---

NOTICE to Aircraft Owners and Ground Engineers No. 4 of 1930 stipulates that the certification in log books of overhauls, repairs, replacements, etc. must be worded in accordance with the requirements of A.N.D.7, para. 57.

A revised aeroplane log book, in which the actual work of certification will be rendered easier by the printing in each page of the wording of the certificate, will be available in the near future.

2. Where it is desired to use the existing type of log book the certification may be facilitated by having the formal wording of the required certificate written or stamped at the bottom of each page. It will then only be necessary when signing for work requiring certification to make reference to the certificate at the bottom of the page.

3. Whichever method is adopted the certification should be such that it clearly meets all the requirements stated in the Notice mentioned above.

Flight - The Aircraft Engineer & Airships, pg. 822, 18 July, 1930

**NOTICE NO. 21 OF 1930 : D.H. 60 X & G WOODEN FUSELAGE "MOTH" AIRCRAFT WITH GIPSY, CIRRUS III OR HERMES ENGINE : MODIFICATION OF FRONT ENGINE BRACKETS**

CASES of fracture of the front engine bracket have occurred on aircraft of the above types.

All such aircraft are, therefore, to be examined immediately for the presence of cracks in the furrow in the side of the bracket.

If any cracks exist, the aircraft is not to be flown until the modification described herein is incorporated. In any case, the modification described herein is to be incorporated within two months of the date of this notice, and the brackets should be frequently examined during that period.

2. The modification consists of removing the front engine brackets, parts No. H.22494, and substituting the new brackets, parts No.H.31682.

3. No Certificate of Airworthiness will be renewed until this modification has been satisfactorily incorporated.

4. This Notice does not apply to aircraft of the above types with Cirrus III or Hermes engines which may be found to be fitted with front engine brackets, parts No. H . 17075.

5. Cancellation : Notice to Aircraft Owners and Ground Engineers No. 12 of 1930 is hereby cancelled.

Flight - The Aircraft Engineer & Airships, pg. 822, 18 July, 1930

<b>NOTICE NO. 22 OF 1930 : "NOTICES TO AIRCRAFT OWNERS AND GROUND ENGINEERS"</b>
--

In order to draw the special attention of aircraft owners to the information contained in these Notices, all Notices as from No. 26 of 1929 have been issued under the revised title of " Notices to Aircraft Owners and Ground Engineers."

As a matter of convenience, the Notices issued prior to No. 26 of 1929 under the original title of " Notices to Ground Engineers " will also, in future, be referred to under the revised title.

A new index has now been issued and should be substituted for that published as "Notice to Ground Engineers No. 5 of 1929".

This index gives details of:

- (1) Cancelled Notices;
- (2) Operative Notices ; and
- (3) Amendments.

This index is now procurable from the Air Ministry.

Flight - The Aircraft Engineer & Airships, pg. 822, 18 July, 1930

**NOTICE NO. 13 OF 1930 : HIGH-TENSILE STEEL FORK JOINTS A.G.S. 168 TO 178, AND HIGH-TENSILE STEEL TURNBUCKLES A.G.S. 138 TO 149**

THE following information is substituted for that contained in Notice to Ground Engineers No. 2 of 1923 (revised 31.12.28), which is hereby cancelled.

2. High-tensile steel fork joints A.G.S. 168 to 178 have been found unsafe and their use on any aircraft is prohibited.

Ground engineers should, therefore, take steps to replace any such fork joints, which are incorporated in aircraft or held as spares by mild-steel fork joints conforming to A.G.S. 412 to 422, B.E.S.A. Specification S.P.3, or Stainless Steel fork joints to A.G.S. 678 to 689.

3. The following table gives the A.G.S. numbers of the prohibited H.T.S. fork joints and of the M.S. and S.S. fork joints which replace them.

M.S. fork-joints 412 to 422 are identified by the flats on the ends of the forks, together with the counterboring which extends down each side of the fork gap, and those of S.S. to A.G.S. 678 to 689 are similar but have no collar on the barrel, whereas the original H.T.S. fork-joints A.G.S. 168 to 178 are readily distinguished by the small ribs at the sides of the pin holes.

4. The use of high-tensile steel turnbuckles, A.G.S. 138 to 149, on civil aircraft is still permitted, but, as these turnbuckles are all of war-time manufacture, they should be carefully re-inspected to ensure that no faults have developed during service. The particular defects to be guarded against are fine hair cracks and flaws in the steel ends, and season-cracking of the barrels. (This class of turnbuckle may be readily identified by the A.G.S. number stamped on each turnbuckle.)

5. When replacing any high-tensile steel turnbuckle by a mild-steel turnbuckle conforming to A.G.S. 490 to 497, particular care should be taken to ensure that the former is replaced by its equivalent in the latter class. The following table gives, in each class, the respective A.G.S. numbers of the turnbuckles which are interchangeable in respect of strength and diameter of pin:

Note.—The one exception is M.S. turnbuckle A.G.S. 490, for which no strictly interchangeable H.T.S. size exists, as A.G.S. 138 and 139, which it replaces, were made with two eye-ends only and not with the customary fork and eye-ends.

6. No Certificates of Airworthiness will be issued, or existing Certificates of Airworthiness renewed, in respect of any aircraft on which high-tensile steel fork joints are fitted.

Flight - The Aircraft Engineer & Airships, pg., 23 May, 1930

**NOTICE NO. 23 OF 1930 : AIRCRAFT FITTED WITH CIRRUS ENGINES : REMOVAL OF AIR STRANGLING DEVICE**

1. CASES have recently been noted where aircraft with Cirrus engines installed have an air strangling device, to facilitate starting, fitted to the carburettor air intake.

This device consists of an air supply tube fitted into the pressure balance orifice in the carburettor diffuser jet boss, and a hand-operated sliding brass shutter working between the carburettor and air intake flanges.

2. Aircraft owners and ground engineers are hereby informed that the design of this device is not approved as complying with the safety requirements of civil aircraft, and, in consequence, the device is to be removed forthwith from all aircraft concerned and the standard air intake fitted.

3. The necessary alterations are :—

Remove:

(a) Air supply tube with its securing fittings

(c) Air intake with its special flange,

(b) Brass shutter.

Fit.—(a) Stud to carburettor air (4) Standard air intake and flange. .

(No. 23 Of 1930) Flight - The Aircraft Engineer & Airships, pg. 822, 18 July, 1930

**NOTICE NO. 14 OF 1930 NAPIER " LION " ENGINE : TIGHTENING OF NUTS ON MASTER CONNECTING RODS**

THE attention of aircraft owners and ground engineers is directed to the special care necessary when tightening the nuts on master connecting rod studs of Napier " Lion " engines.

2. These nuts must be sufficiently tight to hold the bearing cap securely under running conditions, but not so tight as to cause stretching of the studs. To ensure this correct tension the engine makers employ a spring loaded spanner set to give a maximum loading of 840in./lb. (120lb.at 7-in.radius).

3. It is very desirable to use spanners such as that referred to in paragraph 2, but when this is not available, a box spanner and a tommy bar, the latter to be not more than 6 in. in length, can be used. The nuts must be tightened by applying a steady pressure to the spanner.

4. If any correction is necessary in order to obtain alignment between the split pin hole in the stud and the castellation of the nut, this must be effected by removing the nut and facing off the bottom face, care being taken that a true surface is obtained between this face of the nut and the bearing cap.

5. Studs for the " Lion " master connecting rod are now made from steel to B.E.S.A. Specification S/65. When any replacements are necessary, studs of this material, which are identifiable by a saw out across the end, should be used.

6. Attention is drawn, in connection with the above, to Notices to Ground Engineers Nos.3 of the year 1927, and 2 of the year 1929.

(No. 14 of 1930.) Flight - The Aircraft Engineer & Airships, pg., 23 May, 1930

<b>NOTICE NO. 15 OF 1930 : BLACKBURN " BLUEBIRD," Mk. IV AIRCRAFT : RUDDER BAR</b>
--

1. THE attention of aircraft owners and ground engineers is drawn to Modification No. 53, which calls for a reduction of  $\frac{1}{2}$  in. in the length of the rudder bar tube and  $\frac{1}{2}$  in. diameter end plates on aircraft of the above type, in order to obviate fouling of the rudder bars when adjusted to the extreme front or rear positions.
  2. The modification is covered on Messrs. Saunders-Roe, Ltd., Drawing No. N.C. 1537, Issue 5, copies of which can be obtained upon application to Messrs. Saunders-Roe, Ltd., Cowes, I.O.W.
  3. Until the aforementioned modification has been effected, aircraft owners and ground engineers should ensure that the rudder bars are maintained in the " mean " position.
  4. No certificate of airworthiness will be renewed until this modification has been satisfactorily incorporated.
- (No. 15 of 1930.) Flight - The Aircraft Engineer & Airships, pg., 23 May, 1930

<b>NOTICE NO. 16 OF 1930 : GENET MAJOR ENGINE : INSPECTION AND REPLACEMENT OF AIRSCREW HUBS</b>
---

The rear flange of the original type airscrew hub (Part No. S.R. 15081) on Genet Major engines was found liable to crack at the inner ring of lightening holes, there being two such rings of 12 holes each in diameter in each.

2. In hubs of later manufacture (Part No. S.R. 15081/1) the number and diameter of the lightening holes were consequently reduced, the thickness of the rear flange increased, and the specification of the material of the hubs changed.

3. As the result of further experience, the latest type of Genet Major hub now in production, Part No. S.R. 15081/2, has no lightening holes, and has two concentric stiffening flanges on the outer face of the rear flange to obviate any distortion tendency on tightening the airscrew hub bolts.

4. Action has already been initiated by the engine manufacturer to call for the replacement of all the original type hubs referred to in paragraph 1.

5. Aircraft owners and ground engineers are hereby advised that no Certificates of Airworthiness will be issued or renewed in respect of aircraft with this engine installed unless hubs of one of the later types described in paras. 2 and 3 above, are fitted.

6. The replacement should in any case be effected as early as possible, and not later than one month from the date of this Notice.

7. Meanwhile, hubs of the original type should be examined after each flight, and must be discarded forthwith if any indication of cracking is found in the rear flange.

NOTE.—Part numbers are stamped on the outer face or periphery of the rear flange.  
(No. 16 of 1930) Flight - The Aircraft Engineer & Airships, pg., 23 May, 1930

<b>NOTICE NO. 20 OF 1930 : CERTIFICATION IN LOG BOOKS</b>
---

1. NOTICE to Aircraft Owners and Ground Engineers No. 4 of 1930 stipulates that the certification in log books of overhauls, repairs, replacements, etc. must be worded in accordance with the requirements of A.N.D.7, para. 57. A revised aeroplane log book, in which the actual work of certification will be rendered easier by the printing in each page of the wording of the certificate, will be available in the near future.

2. Where it is desired to use the existing type of log book the certification may be facilitated by having the formal wording of the required certificate written or stamped at the bottom of each page. It will then only be necessary when signing for work requiring certification to make reference to the certificate at the bottom of the page.

3. Whichever method is adopted the certification should be such that it clearly meets all the requirements stated in the Notice mentioned above.

(No. 20 of 1930.) Flight - The Aircraft Engineer & Airships, pg 822., 18 July, 1930

**No. 21 of 1930 : D.H.60 X . & G . WOODEN FUSELAGE "MOTH" AIRCRAFT WITH GIPSY, CIRRUS III  
OR HERMES ENGINE : MODIFICATION OF FRONT ENGINE BRACKETS**

CASES of fracture of the front engine bracket have occurred on aircraft of the above types. All such aircraft are, therefore, to be examined immediately for the presence of cracks in the furrow in the side of the bracket. If any cracks exist, the aircraft is not to be flown until the modification described herein is incorporated. In any case, the modification described herein is to be incorporated within two months of the date of this notice, and the brackets should be frequently examined during that period.

2. The modification consists of removing the front engine brackets, parts No. H.22494, and substituting the new brackets, parts No. H.31682.

3. No Certificate of Airworthiness will be renewed until this modification has been satisfactorily incorporated.

4. This Notice does not apply to aircraft of the above types with Cirrus III or Hermes engines which may be found to be fitted with front engine brackets, parts No. H. 17075.

5. Cancellation.—Notice to Aircraft Owners and Ground Engineers No. 12 of 1930 is hereby cancelled. (No. 21 of 1930.) Flight - The Aircraft Engineer & Airships, pg 822., 18 July, 1930

Index : 1920-1929

Note.—In order to draw the special attention of aircraft owners to the information contained in these Notices, all Notices as from No. 26 of 1929 have been issued under the revised title of "Notices to Aircraft Owners and Ground Engineers." As a matter of convenience, the Notices issued prior to No. 26 of 1929 under the original title of "Notices to Ground Engineers" will also, in future, be referred to under the revised title.

A new index has now been issued and should be substituted for that published as Notice to Ground Engineers No. 5 of 1929.

This gives details of (1) Cancelled Notices; (2) Operative Notices; and (3) Amendments.

This index is now procurable from the Air Ministry. (No. 22 of 1930) Flight - The Aircraft Engineer & Airships, pg 822., 18 July, 1930

**AIRCRAFT FITTED WITH CIRRUS ENGINES : REMOVAL OF AIR STRANGLING DEVICE**

1. CASES have recently been noted where aircraft with Cirrus engines installed have an air strangling device, to facilitate starting, fitted to the carburettor air intake.

This device consists of an air supply tube fitted into the pressure balance orifice in the carburettor diffuser jet boss, and a hand-operated sliding brass shutter working between the carburettor and air intake flanges.

2. Aircraft owners and ground engineers are hereby informed that the design of this device is not approved as complying with the safety requirements of civil aircraft, and, in consequence, the device is to be removed forthwith from all aircraft concerned and the standard air intake fitted.

3. The necessary alterations are :—

Remove.—(a) Air supply tube with its securing fittings

(c) Air intake with its special flange,

(b) Brass shutter.

36,

Fit.—(a) Stud to carburettor air (4) Standard air intake and flange. . intake flange  
in hole provided

**AIR MINISTRY NOTICES TO GROUND ENGINEERS : 1931**

**NOTICES NO. 24 OF 1931: MODIFICATION OF SUTTON HARNESS**

Owing to a fatal accident being attributed to the use of the two-pronged safety pin, a three-pronged type is in future to be fitted on this harness.

FLIGHT, APRIL 17, 1931 pg 348

**NOTICE TO PILOTS - PILOT'S SERIES A. No. 3 OF 1931 : AIR NAVIGATION REGULATIONS**

(1) The attention of all pilots and other persons engaged in air traffic over Great Britain and Northern Ireland is drawn to the necessity of keeping themselves familiar with the air navigation regulations, etc., already in force and of acquainting themselves with the amendments and additions to these regulations as issued.

(2) A list of the air navigation regulations, etc., at present in force in Great Britain and Northern Ireland, can be purchased from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, or through any bookseller.

(3) New regulations, adding to, amplifying or amending the existing regulations, are issued from time to time. Brief particulars of these are published in Notices to Airmen.

(Pilot's Series A. No. 3 of 1931.

<b>NOTICES No. 25 OF 1931: D.H. 60X, G &amp; M "MOTH" AIRCRAFT. MAIN PLANE LOCKING BOLTS</b>
--

Modification to the bottom front spar locking bolt of " Moth " aircraft.

The tapered end is shortened owing to it having been found that the bolt has exhibited a tendency to ride forward on the taper under load.

---

## Highlights from the "FLIGHT" Journals regarding:

<p><b>RESETTLEMENT OF EX-RAF OFFICERS AND MEN POST WW1<sup>358</sup></b></p>
--

THERE are many officers and men of the R.A.F. who are demobilised or about to be demobilised. In order to assist those who are undecided or are seeking advice as to their prospects in civil life, the Editor has arranged for an expert, with wide experience of service, industrial and educational conditions, to give advice to those who may solicit it through the medium of this Journal. Applications, which must be in writing, should be marked "Resettlement", and addressed to the Editor, FLIGHT, 36, Great Queen Street, Kingsway, W.C. 2. They will be dealt with in these columns, as far as possible, in rotation (in turn).

**T. R. H., EX-"FLIGHT" CADET (Officer).**—"We think the best course to pursue in your case is to

- (1) remain in your present post ;
- (2) take a degree course (evening) in mechanical engineering at a local polytechnic ;
- (3) study standard aeronautical books and
- (5) spend the time in the journals (read "Flight") ;
- (4) join the Royal Aeronautical Society ;

your vacation, if possible, taken in an aircraft works.

Once you have obtained the necessary qualifications there will certainly be good openings in commercial aviation in the capacity you suggest.

**Mr J. A.H., EX-FLIGHT SERGT. (Enlisted Man)** —You will be best advised to remain in your present post and await developments in commercial aviation. Judging from your Service experience only (*as you have not stated your civil qualifications*) we think that the kind of *post in civil aviation which you have a reasonable chance of obtaining is that of "ground engineer (engines)."* If you decide on this you should take the necessary steps to secure a licence. See **Section IV , Supplementary Air Regulations, Air Navigation Regulations**, reproduced in FLIGHT, May 8, 1919. (Flight May 15, 1919 pg. 658)

---

<sup>358</sup> Flight - The Aircraft Engineer & Airships, pg May 15, 1919)

## Notes on "Civil Aviation"

7. Inspection of Aircraft at Aerodromes.—It will be noted that a necessary part of the aerodromes management is the provision of licensed ground engineers. As there has not yet been time for firms to provide these, the A.I.D. has been called upon, as a temporary measure, to provide a certain number of skilled personnel to assist. It must be remembered, also, that it is only from aerodromes where licensed ground engineers are located that aeroplanes can start.

8. Military Markings.—The bulk of machines which will at first take part in civil flying, having been built as Service machines, are marked with red, white and blue rings, and bear Government numbers. The existing Government numbers will be allotted to these machines as temporary registration marks. When permanent marks are allotted the old registration numbers must be erased and the new permanent marks put on within 14 days of allotment. Owners of aircraft upon which the service ring markings are painted must obliterate them

### SCHEDULE II.—Licensing of Personnel - Licensing Authority

#### Pilots.

2. A person applying for a pilot's licence to fly passenger or goods aircraft will be required to—(a) pass a medical examination carried out under the control of the Secretary of State ; (6) produce a certificate of competency issued by the Secretary of State, or be qualified as a Royal Air Force pilot ; (c) submit proof of recent reasonable flying experience on the class of machine for which the licence is required, or failing such proof undergo practical tests.

3. A person applying for a pilot's licence to fly machines other than passenger or goods aircraft must either be qualified as a Royal Air Force pilot, or produce a certificate of competency issued by the Secretary of State.

#### Engineers.

5. A person applying for a licence to be engaged as engineer on passenger or goods aircraft will be required to—(a) pass a medical examination carried out under the control of the Secretary of State ; (6) submit proof of sufficient knowledge and experience in the management of aircraft engines ; (c) undergo, if necessary, practical and theoretical tests

### SCHEDULE III.—Certificates of Airworthiness for Passenger Aircraft and Periodical Overhaul and Examination of such Aircraft.

#### General

1. A certificate of airworthiness in respect of one aircraft of any type (hereinafter referred to as " a type aircraft ") will be issued by the Secretary of State in accordance with the conditions set out in this schedule at a charge of five guineas.

2. After the issue of a certificate of airworthiness to a type aircraft, any further aircraft of that type will be inspected for airworthiness by employees of the constructor, under arrangements approved by the Secretary of State, and if the aircraft in respect of which a certificate of airworthiness is desired conforms in all essential respects with the type aircraft, and is of satisfactory workmanship and materials, a certificate of airworthiness will be issued in respect of such aircraft by the Secretary of State at a charge of one guinea : Provided that the Secretary of State may take steps to test the inspection made by the employees of a constructor, and if such test inspection, in his opinion, warrants such a course, may order a further inspection to be carried out by any person or persons duly authorised by him, and to issue or refuse a certificate, as he may decide, after such inspection, or to refuse to issue certificates of airworthiness in respect of further aircraft of the same type

## Notes on "Civil Aviation"

as that subjected to such test inspection that have been or may be constructed by the particular constructor.

3. Licences to competent persons for the purposes of this schedule shall be granted by the Secretary of State on compliance with such conditions as he may direct.

### Periodic Overhaul

5. All passenger aircraft must be inspected, overhauled and certified as airworthy by competent persons appointed by the owners or users of them, and licensed for the purpose under this schedule, at such times as the Secretary of State may direct, and such certificate or certificates must be produced to the Secretary of State on demand.

6. Aircraft inspected, overhauled, or certified as provided in the foregoing paragraph may be inspected by authorised representatives of the Secretary of State, and the Secretary of State is entitled under these regulations to cancel or suspend the certificate of airworthiness of any aircraft deemed to be unsafe as a result of such inspection.

### Examination before each Flight

7. No passenger aircraft carrying passengers shall on any day proceed on any journey unless it has previously been inspected at least once on that day by a competent person licensed for the purpose under this schedule, who shall not be the pilot of the particular machine.

8. If such competent person is satisfied that the aircraft is fit in every way for the flight or flights proposed he shall sign in duplicate a certificate to that effect, which certificate shall be countersigned by another person in the employment of the owner, giving the time and date of such certification. For this purpose the countersignature of the pilot may be accepted.

9. One copy of each certificate will be retained by the owner of the aircraft, and the duplicate copy must be carried in the aircraft.

10. The pilot will be responsible for seeing that the aircraft, before commencing any flight, is, in his opinion, in a satisfactory condition, and does not carry more than the load specified in the certificate of airworthiness, and must sign a certificate to that effect.

## SUPPLEMENTARY AIR REGULATIONS

### METHOD OF APPROVAL OF WORKMANSHIP AND MATERIALS

20. Type Aircraft.—(a) Inspection of type aircraft will be carried out by representatives of the Secretary of State.

(6) The Director of Aircraft Inspection will accept wherever in his opinion possible the inspection of details, components and /or materials for type aircraft made by employees of the constructor under the supervision of his representative, but each component will be finally inspected and approved by a representative of the Director of Inspection, who will co-operate with the constructor's inspecting staff.

Constructors must notify Director of Aircraft Inspection seven days before commencing work on any part of the aircraft, the inspection of which is necessary prior to further work.

(c) The constructor must also fulfil the conditions detailed hereunder for subsequent aircraft.

21. Subsequent Aircraft.—(a) Constructors must satisfy the Secretary of State that their inspecting staff is such as to ensure that aircraft passed by them conform in all essential respects to the type design.

(b) Constructors must purchase material to the specifications approved for the type design, and must arrange that each and every batch of such material is proved to comply with such specifications by suitable examination, sampling and testing, as may be approved by the Director of Aircraft Inspection.

(e) Constructors must make such arrangements at their works as will preclude the use of material other than that approved as in para, (b) above.

## Notes on "Civil Aviation"

(d) Constructors' inspecting staffs, referred to in 21 (a) above, must stamp or otherwise provide means for the identification of each and every detail, in such a way that the individual responsible for such approval can subsequently be traced, selective inspection being adopted where considered possible.

(e) Constructors must issue only details or parts approved as in para. (c) above to the shops for assembly into components.

(f) Constructors must maintain an efficient process inspection during such work of assembly, and record such inspection on a process card for each component. Every component must be finally inspected by a qualified member of their inspecting staff, who will stamp the component in such a way that he may afterwards be identified, and will also sign the process card.

(g) Constructor's methods of carrying out the following operations must be approved by the Director of Aircraft Inspection, or other recognised authority, viz. : Heat-treatment of steel, seasoning and conversion of timber, glueing of important parts, and doping.

(h) Constructors must ensure that all instruments and other parts affecting airworthiness purchased from sub-contractors have been inspected and approved in accordance with these conditions.

(i) Constructors (aircraft or engine as may be arranged) must ensure that all engines have been inspected and approved in accordance with these conditions, and further, that they have satisfactorily undergone such bench tests as are required by the Secretary of State, and for this purpose that suitable test stands and accessories are provided to the satisfaction of the Director of Aircraft Inspection.

(j) Aircraft constructors must carry out an efficient inspection of the installation of all engines, instruments and parts that are fitted by them into the aircraft, such inspection to ensure that they function correctly, the individual responsible being indicated by a signature on the process card referred to above.

(k) Constructors must limit the power of their inspection staff to grant concessions to matters which do not affect the weight, the strength or the functioning of the part. Should any of these points be affected, the matter must be referred to the designer of the aircraft, and if affecting the type design, to the Director of Research as laid down for modifications to type designs.

### IV.—Persons Competent to Undertake Periodical Inspection and Overhaul and Examination before each Flight of Aircraft

1. With reference to Regulation 2 (1) and Schedule I II (3 and 5-10), the following is the procedure for any person desirous of being licensed as a competent person, hereinafter referred to as "ground engineer," to undertake the inspection of periodic overhauls of aircraft required to be certified as airworthy, or as a competent person to examine such aircraft before each flight.

2. Applications for licences should be made to the Secretary, Air Ministry, London, W.C. 2

3. Application forms will be supplied on demand.

4. Subsequent to the forwarding to the Secretary, Air Ministry, of an application form for a ground engineer's licence, the candidate will be requested to report to a local representative of the Director of Aircraft Inspection for examination. At this examination the candidate will be required to submit proof :—

(a) That he is not less than 21 years of age.

(b) That he has served at least two years as a mechanic or engineer on internal combustion engines, or a like period on aircraft construction or maintenance, or a period of not under three years on joint aero, engine and aircraft construction or maintenance.

## Notes on "Civil Aviation"

5. A candidate may apply to be licensed as a ground engineer to overhaul and inspect all flying machines and/or engines after overhaul and each day before flight ; or may apply for a licence limited to the inspection of any named type or types of flying machine or engine either after overhaul and /or each day before flight.
  6. Candidates will be required to submit proof of knowledge:—
    - (a) For engines : Of the general principles of internal combustion engines applied to aircraft, including the general principles of ignition, carburaticn lubrication and cooling ; knowledge of the inspection, testing and adjustments necessary for the installation and functioning of the complete power unit in the aircraft ; and the capacity to supervise, or inspect running repairs and/or overhaul of particular engines.
    - (b) For flying machines : The general principles of construction, rigging, trueing-up and adjustment of flying machines ; a detailed knowledge of construction, adjustments, maintenance and final inspection of the flying machine's components ; and the capacity to supervise, or inspect running repairs, and /or the overhaul of specified types of flying machines.
  7. The examination may be in part written, and in part oral. Candidates may be required to give practical proof of knowledge.
  8. Aircraft certified daily by such licensed ground engineers will be eriodioally re-inspected by a person or persons duly authorised by the Secretary of State, who reserves the right to suspend or revoke licenses granted as above should such certified aircraft be deemed by him as a result of such examination to be unsafe.
  9. Ground engineers certifying flying machines or engines as airworthy after overhaul, must be in a position to certify that all the conditions required for the inspection of subsequent aircraft during construction that apply to the overhaul have been carried out. The Secretary of State reserves the right to suspend or revoke the licence of the ground engineer responsible for certifying that the overhaul has been correctly carried out, should a test inspection be deemed by the former to indicate that the flying machine is not airworthy.
  10. Ground engineers' licences will be issued at a charge of 5s., and will be valid for a period of twelve months, and will then t e subject to renewal. The Secretary of State reserves the right to re-examine the candidate for renewal, if considered necessary.
- i r . In the event of any applicant being required to undergo a practical examination, a further fee of one guinea will be charged.

### V.—Instructions for Use of Log Books

1. With reference to Regulation 2 (3) and Schedule V, the several log books should contain the information shown below.
  2. The constructor should fill in and sign the original entries in the log book, as far as he is in a position to do so. Subsequent entries should be made and signed by the pilot or competent person.
  3. A copy of the certificate of airworthiness should be kept in the pocket at the end of the aircraft log book.
  4. All entries to be in ink, except in the case of journey and signal log books, the entries for these may be made in pencil in a rough notebook, but should be entered in ink in t h e log book every 24 hours. In the event of any official investigation the rough notebook may be called for.
  5. No erasures should be made in, nor pages torn from, any log book.
  6. A copy of these instructions should be inserted in each log book.
- I.—Journey Log.—(a) Type to which the aircraft belongs : its nationality and registration marks ; the name, Christian names, nationality and residence of the owner ; name of contractor and the carrying capacity.
- (6) In addition for each journey :—(i) The name, nationality and residence of the pilot and crew, (ii) The place, date and hour of departure, the route

## Notes on "Civil Aviation"

followed, and all incidents en route, including landings and weather conditions.

### II.—Aircraft Log.

A log book shall be kept for the aircraft and shall always accompany the aircraft. It shall contain the following particulars :

1. Type to which the aircraft belongs,
- 2.
3. nationality and registration marks, the name, Christian names and nationality and residence of the owner, name of constructor and the carrying capacity, and capacity of tanks. (6) Type and series number of engine, type of propeller showing number, pitch, diameter and maker's name, (c) Type of wireless apparatus fitted, (d) Table showing the necessary rigging data for the information of persons in charge of the aircraft and of its maintenance. A fully detailed engineering record of the life of the aircraft, including all acceptance tests, overhauls, replacements, repairs and all work of a like nature. Specimen sheets are given which show the following form of which should be followed. Date & hour of entry;
  - A. Name of Commanding officer ;
  - B. route flown;
  - C. time in air in hours & mins. ;
  - D. petrol consumed ; oil consumed ; water consumed ;
  - E. number of passengers carried;
  - F. repairs or replacements made;
  - G. time in the air since last overhaul in hours, mins.,
  - H. date of last overhaul;
  - I. remarks ;
  - J. signature of authorised person.

### III.—Engine Log.

A separate log book shall be kept for each engine and shall always accompany the engine. It shall contain the following particulars :-

1. Type of engine, series number, makers' name, power, normal and maximum revolutions of engine, date of acceptance and first date put into service; petrol consumption; oil consumption.
2. Registration mark and type of aircraft in which the engine has been installed,
3. A fully detailed engineering record of the life of the engine, including all acceptance tests, hours run, overhauls, replacements, repairs and all work of a like nature. Specimen sheets are given which show the following form of which should be followed.
  - K. Date & hour of entry;
  - L. Name of engineer in charge ;
  - M. Engine(s) revolutions per minute : on ground & time run ;
  - N. Engine(s) revolutions per minute : in air (state climbing or level) & time run ;
  - O. defects found ;
  - P. particulars of overhaul or replacements made;
  - Q. time run since last overhaul in hours, mins.
  - R. date of last overhaul;
  - S. remarks ;
  - T. signature of authorised person.

### IV.—Signal Log :-

1. Type to which the aircraft belongs,
2. nationality and registration marks ;
3. the name, Christian names and nationality and residence of the owner.
4. Place, date and time of the transmission or reception of any signal,
5. Name or other indication of the person or station to whom a signal is sent or from whom a signal is received.

the Air Ministry issued the Air Navigation Regulations, 1919, which are to control civilian flying until a more permanent set of rules, based on experience, can be formulated. The 1919 Regulations have been drafted for the (National) control, direction and assistance of civil aviation in the British Isles, and do not apply to international aerial traffic.

## Notes on "Civil Aviation"

Regulations (*that apply to **international aerial traffic***) will not be issued until the Peace Conference in Paris has agreed upon the shape such international regulations are to take.

It is understood, however, that :-

1. the present Regulations have been drafted in accordance with recommendations made by the Aviation Committee of the Peace Conference, so it is reasonable to assume that they bear some sort of family likeness to those that will ultimately be issued for the control of international traffic. (in fact the ICAN is based upon the British regulations - C.G Grey got this backwards)
2. these present Regulations' **do not apply to any of the British Dominions**, which are left free to formulate their own aerial laws (or adopt the British regulations) and which are, it is understood, drafting such laws now and basing them on their own conditions and their varying Customs requirements. (Canada adopted the British regulations, however it did so partially and only in so far as "Operations" were to be controlled as the Air Board adopted the RAF's KR&O!, the "technical aspect" followed was that for the RAF and entirely British to begin with) FLIGHT, May 8, 1919 pg 588

To begin with, *the rules as to the licensing of pilots are extremely stringent, as, in the interests of public safety, they must be.*

The applicant for a pilot's licence (for the carrying of passengers and goods) must :-

1. pass a medical examination carried out under the control of the Secretary of State,
2. produce a certificate of competency issued by the same authority, or be qualified as a Royal Air Force pilot.
3. submit proof of recent reasonable flying experience on the class of machine for which the licence is required, or, failing such proof, undergo practical tests.

In the case of applicants applying for licences to fly machines other than for the carrying of passengers and goods, the proof of recent flying experience is, apparently, not required.

*The regulation is practically identical in the cases of navigators and engineers except that again the **proof of recent flying experience** is not demanded.*

Pilots' licences remain in force for six months and others for twelve, but there is an additional proviso that *holders of (pilots') licences may be required from time to time to undergo further medical examinations under the control of the Secretary of State.*

FLIGHT, May 8, 1919 pg 588

*Stringent rules are made for the further periodic inspection and overhaul of all passenger aircraft, while it is also laid down that no such aircraft shall on any day proceed on a journey until it has been inspected at least once on that day by a competent person licensed for that purpose under the Regulations.*

*If the inspector is satisfied that the aircraft is fit in every way for the flight proposed, he must sign in duplicate a certificate to that effect, which certificate must be countersigned by the pilot **OR by some other person in the employ of the owner**, one copy to be carried in the aircraft while the other is to be retained by the owner.*

This seems again to be quite a sound arrangement.

It definitely fixes the responsibility for failure in case of any accident due to causes which ought to have been foreseen and guarded against, and will, moreover, tend to ensure care in the work of inspection.

Taken all round the Regulations, so far as they relate to the competency and fitness of aircraft and their crews and the consequent safety of aerial navigation, seem to leave very little to be desired. FLIGHT, May 8, 1919 pg 588

In Parliament : the staff and work of the Civil Aviation Department

Civil Aviation Department

Mr. JOYNSON-HICKS asked the Under-Secretary of State to the Air Ministry whether he can now make a statement as to the staff and work of the Civil Aviation Department ? May 1919 ??? HCD ?

Mr. Pratt (Lord of the Treasury) response:

1. The provisional staff for the Department of Civil Aviation has been put forward by the Controller-General and
2. the Controller-General's proposals are now being considered by the Re-organisation Committee preparatory to obtaining Treasury sanction for the organisation as a whole.

In the meantime, provisional *Treasury sanction has been obtained for some of the higher posts in the Department* and the Controller-General is carrying on *with a nucleus staff lent by the Royal Air Force and composed of officers who have during the War gained the necessary experience in the various directions required.*

The work which the Department of Civil Aviation will, at present, undertake may be broadly divided into four heads, of which I am circulating a full description with the Official Report, as it is too long for oral answer.

The following is the description referred to in the last paragraph of the foregoing answer :—

(1) For general consideration, co-ordination and planning, including that of air routes both at home and abroad. For examining and advising on the broad aspects of schemes for commercial aviation. The branch will have 2 main subdivisions:

1. one to deal with questions concerning the United Kingdom and

## Notes on "Civil Aviation"

2. the other *to deal with similar matters arising overseas.*

(2) To obtain, co-ordinate and issue technical and non-technical information of value to the industry and the other branches of the Department through the Controller-General to supply information to the Royal Air Force and all other services concerned.

In this branch 3 sub-divisions are being formed :-

1. one to deal with non-technical information ;
2. one to deal with technical subjects, and
3. the third to co-ordinate and issue information of every kind and to deal with publicity generally.

(3) The third branch will be known as the " Communications " Branch, and its duties will consist in giving technical advice and assistance to aerial navigation in regard to navigation questions and all forms of signals and communications, including wireless, directional, and otherwise, visual signals and land lines. This branch will also be responsible for work in connection with aerial surveys and for the preparation and issue of special maps and charts necessary for aerial navigation. It will have 2 main sub-divisions :-

1. one to deal with signals in a broad sense, and
2. the other with navigation, charts, maps, and survey.

(4) The fourth branch will deal with questions relating to the inspection and organisation of all aerodromes used for civil purposes, and with the licensing and registration of aerodromes, aircraft, pilots, and technical personnel employed in civil aviation. It will also carry out the investigation of accidents and their causes and the compilation of technical reports and records relating to this subject.

This branch will have 3 main divisions :-

1. The first will deal with the inspection and organisation of aerodromes, and airship and seaplane stations ;
2. the second with the licensing and registration of, aerodromes, aircraft, and personnel ; and
3. the third with accidents.

In addition to these four branches it is proposed that there should be a Meteorological Section directly under the Controller-General. This section would deal with the location and supervision of local meteorological centres and stations, the issue of forecasts, warnings, and upper-air information, and generally with the meteorology of air routes. It would also carry out special investigations into climatic conditions generally, taking care to co-ordinate its operations with any other services concerned. At present the general question of the organisation of the meteorological services is under consideration by the Cabinet, but pending a decision the Controller-General has taken over the meteorological branch which served the Royal Air Force during the War, and the personnel of this branch are being lent provisionally to his Department, which supplies all information required by the Royal Air Force. FLIGHT, May 8, 1919 pg 619

### EX-ARMAMENT CAPT., R.A.F.

1. We fear you would not possess sufficient technical knowledge for the kind of post you suggest.
2. In the Service what really matters is the ability to handle the finished article, but in a works it is different.
3. What is usually required in the latter is thorough practical knowledge with capability for design.
4. This knowledge generally takes years to acquire.
5. We think you would be best advised to approach one of the firms you mention with a view to spending a year or two in the works and subsequently specialising in Aerial Armament. FLIGHT, May 8, 1919

### A.H.G., LIEUT., R.A.F., B.E.F.

You can *improve your knowledge by private study and by taking advantage of the Army Education Scheme.* A few good books to read are :—

1. The Aeroplane," by A Fage, A.R.C.Sc. (Griffin and Co., Ltd.) ;
2. Aeroplane Design." by F. S. Barnwell McBnde, Nast and Co.) ;
3. The Design of Aeroplanes," by A. W. Judge, A.R.CSc. (Whittaker and Co.).

*On demobilisation* you will find that *there are facilities offered for a course of Aeronautical Engineering* by the "Appointment Department" of the Ministry of Labour. FLIGHT, May 8, 1919

### E.S.C., EX-LIEUT., R.A.F.

Unfortunately many others are in the same boat. We can only suggest that you seek employment in your normal profession. FLIGHT, May 8, 1919

## Notes on "Civil Aviation"

J.A.C., EX-LIEUT., R.A.F

We think you are well advised in starting in the motor trade. With your previous experience we cannot but anticipate that you will be successful. FLIGHT, May 8, 1919

G.M.H., EX-FLIGHT CADET.

We think you will be best advised to seek immediate employment in the profession in which you have served your apprenticeship, and in which you state you have had considerable experience.

*There is very little prospect of employment in any branch of aviation at present. Moreover, the supply is vastly in excess of the demand.* FLIGHT, May 8, 1919

Mr. L. G. R (Mechanic, Engines) (enlisted man)

In view of the large number of highly skilled mechanics available, and also the limited number required for civilian aviation, we fear that with your present *lack of "works experience"* there is little chance of you obtaining employment in commercial aviation as an engine mechanic. See also reply to J. A. H., Ex-Flight Sergt. above. (Flight May 15, 1919 pg. 658)

Mr. A.J H Ex-CORPORAL (balloon corps)

You may experience great difficulty in securing civilian employment of a similar nature to your Service work. Possibly Messrs. Vickers, Ltd., Basil Street, Knightsbridge, S.W. 3, may have vacancies for *hydrogen workers*. (Flight May 15, 1919 pg. 658)

W.S., EX-FLIGHT SERGT. Ex-Rigger (enlisted man).

In spite of your excellent record *you may experience great difficulty in finding employment in civilian aviation*. It is largely a matter of supply and demand. We think you will be best advised to resume your pre-War occupation and await progress in commercial aviation. You should watch the " Situations Vacant " columns in this journal ; for example, in last weeks' issue (May 22, 1910) Cricklewood, N.W. 2, advertised for aerodrome fitters and riggers. *When applying for a situation you should give details of your experience, such as the particular machines with which you are familiar*, your age, etc. (Flight 29 May 1919 pg. 721)

J.J.S., Ex-RIGGER. (enlisted man)

Models are not required when patenting an invention. The idea can be described and illustrated by engineering drawings. A fee of £1 has to be paid on making application to the Patent Office (25, Southampton Buildings, W.C.) for provisional protection of an invention. When a complete specification is filed, a fee of £3 is payable. A further fee of £1 is incurred on the application to have the patent sealed. The following fees have to be paid subsequently : 5th year, £5 ; 6th year, £6 ; 7th year, £7 ; 8th year, £8 ; 9th year, £9 ; and so on. With regard to the possibilities of employment as a rigger in civilian aviation see reply to W.S. above. (Flight 29 May 1919 pg. 721)

### THE BAN ON CIVILIAN FLYING

"SINCE the ban on civilian flying was raised (lifted) on May 1, 1919 there has been so much activity that it is only possible to record the outstanding flights, and a few which are but typical of many others.

Post WW1, The first (Civilian Transport) flight under the new regulations in England was that of a D.H. 9 with 250 h.p. B.H.P. engine, which left Hounslow *before dawn*, with a parcel of Daily Mails, for Bournemouth.

Unfortunately, fog was encountered in the neighbourhood of Portsmouth, and a forced landing on the Portsdown Hills resulted in the machine being wrecked and the pilot, Capt. H. J. Saint, D.S.C., and the passenger, Capt. D. Greig, being injured.<sup>359</sup>

### FOREST PROTECTION IN CANADA

MR. STUART GRAHAM, who *was a naval air pilot* in the R.A.F., has arrived at Ottawa to take charge of two planes released by the Canadian Department of Naval Affairs for forest protection in Quebec. (Flight - May 8, 1919 page 607)

---

<sup>359</sup> Flight - The Aircraft Engineer & Airships, pg 607 08 May, 1919

**AVIATION CLASSES**

[2226] I note that in your issue of November 1 you make reference to the classes which have recently been commenced at the de Havilland Aerodrome, Edgware, under the control of the Middlesex Education Committee.

You will be interested to know that students are prepared for the Air Ministry's certificates, Category A, B, C, D, and X, and (that) the Senior Classes prepare for the Associate Membership and Associate Fellowship of the Royal Aeronautical Society.

In most of the classes there are now no vacancies for students, but a few more can be included in the Senior Class. I should be grateful if, through the medium of your journal, you could make it known that a limited number of students may be admitted to fill these remaining vacancies. The fee for the session is 30s. or 15s. if single subjects are taken.

H. M. WALTON Middlesex Education Committee. November 19, 1929<sup>360</sup>

**NOTICE TO AIRMEN No. 15 OF 1929 : MAINTENANCE OF AIRCRAFT AND ENGINE LOG BOOKS**

OWNERS of British aircraft that are used for private flying only (i.e., not flown for carrying passengers or goods for hire or reward\*) are strongly recommended in their own interests to maintain aircraft and engine log books so as to have available at all times a complete record of repairs and overhauls.

This record is particularly valuable when the aircraft has to be examined for renewal of its certificate of airworthiness.

It will not only facilitate consideration of the owner's application for renewal, but will obviate the difficulties and consequential delay which are likely to arise when particulars of repairs and overhauls have to be obtained from the firms who have carried out such work since the aircraft was last examined.

The aircraft logbook (C.A. Form 27) and engine log book (C.A. Form 28) can be purchased from H.M. Stationery Office, either directly or through any bookseller, at a cost of 2s. 6d. each (exclusive of postage). Refills for either book can similarly be purchased at a cost of 1s. 3d. each (exclusive of postage),

\*Note—Aircraft and engine logbooks are required to be kept for all air-craft intended or used for carrying passengers or goods for hire or reward. (See para. 1 (b) of Schedule III to the Air Navigation (Consolidation) Order 1923.)

Flight - The Aircraft Engineer & Airships, pg. 250, 21 March, 1929

**ENGINEERS - EXAMINATION SUCCESSES!**

! First Class Honours ! PRIZES ! T.I.G.B. students win outstanding successes in practically all professional examinations—time after time they score higher pass percentages than all other candidates combined.

Nearly 200 Engineering Correspondence Courses—the widest selection in the world—completely covering every worth-while qualification—• A.M.I.Ae.E., A.M.I.Mech.E., A.M.I.E.E., A.M.Inst. B.E., Ground Engineers, etc., are in the MAGNIFICENT NEW 112-PAGE BOOK, "THE ENGINEER'S GUIDE TO SUCCESS."

FREE to you on request.

Write NOW . The T .I.G.B. Guarantees Training until Successful.

THE TECHNOLOGICAL INSTITUTE OF GREAT BRITAIN (Est. 1917), 248, Temple Bar House, London, E.C.4.

Flight - The Aircraft Engineer & Airships, pg xxvi. 73, 16 May , 1929

<sup>360</sup> Flight - The Aircraft Engineer & Airships, pg. 1268, 29 November, 1929

**FLIGHT CADETSHIPS FOR R.A.F AIRCRAFT APPRENTICES : FEBRUARY 1928**

Air Ministry announcement:

Five (RAF) Aircraft Apprentices have been selected for cadetships at the Royal Air Force Cadet College, Cranwell, on the results of the examinations held on completion of their *three years' training as aircraft* (trades') *apprentices*.

1. from No. 1 School of Technical Training (Apprentices), Halton,
  1. A . Earle (Beworthy, Devon),
  2. C . J . Giles (Leyton),
  3. W . Snwyer (Golders Green)
  4. W . N . VtiKschnie (Golders Green),
2. from the Electrical and Wireless School (Apprentices), Flowerdown,
  1. F . Wicks (Lacock, Wilts)

In addition,

"Sir Charles Wakefield" Scholarships, valued at £75 each, have been awarded to:

1. Flight Cadet A. Earle and
2. Flight Cadet C. J. Giles

the Hyde-Thomson Memorial Prize, valued at about £33, has been awarded to:

1. Flight Cadet F . Wicks (Lacock, Wilts)

Flight - The Aircraft Engineer & Airships, pg. 73, 02 February, 1928

**FLYING IN CANADA : CLUB MOVEMENT AND AIR SURVEY**

The influence of the flying club movement is spreading to the farthest corners of the globe <sup>361</sup>.

The *organisation adopted* (for the club) *is often an emulation of that which prevails in England*, which becomes natural when it is found that in many instances the organisers or instigators are well-known English pioneers of aviation, or whatever their aviation experience - it was obtained in England, invariably during the war.

A case in point is that at Victoria, British Columbia, where a flying club has been formed recently with Mr. Sydney Pickles as its honorary secretary. <sup>362</sup>

The directors (of the Victoria B.C Flying Club) "have considerable experience of aviation", *mostly as pilots*.

1. **Mr. A. V. Carter**, M.B.E., D.S.C., late Capt., R A F .- President.
  1. learned to fly in 1916 a
  2. saw service in France.
  3. Was attached to the Canadian Air Board as Air Station Supt., and
  4. *is now a certified commercial pilot and ground engineer.*
2. **Mr. Awde**, director
  1. Flight-Lieut., R.A.F (retired list),
  2. learned to fly in 1917,
  3. served in France with 56 Squadron,
  4. passed through a special instructor's course at Gosport,
  5. became instructor at the Central Flying School, Upavon, and
  6. became a test pilot in the R.A.F.
3. **Mr. L. de S. Duke**, director
  1. Capt., R.A.F,
  2. holds, the D.F.C.
  3. saw service in France.
4. **Mr. R. H. B. Ker**,

<sup>361</sup> Flight - The Aircraft Engineer & Airships, pg.214, 29 March 1928

<sup>362</sup> Flight - The Aircraft Engineer & Airships, pg.214, 29 March 1928

## Notes on "Civil Aviation"

1. late Maj., R.A.F.,
  2. learned to fly in 1915,
  3. Served in France
  4. was in command of a training squadron at Camp Borden, Ontario,
  5. Prominent business-man in Victoria.
5. **Mr. J. Gray, director**
1. B.Sc, Toronto University,
  2. late Capt., R.A.F.,
  3. learned to fly in 1917,
  4. served as instructor at Camp Mohawk, Canada,
  5. went to France with 27 Squadron,
  6. did test work at Martlesham.
  7. *In 1919 he did a lot of flying round Victoria in connection with the old Aerial League.*
6. **Mr. W. L. Stewart Macleod, director**
1. member of the London Aeroplane Club, which he joined in 1926.
7. **Mr. Evan Hanbury, director**
1. late Lieut., R.A.F.,
  2. holder of the Military Medal.
8. **Mr. E. Eve, director**
1. President of the B.C. Airways Co., Ltd.
9. **Mr. G. Cameron, director**
1. late R.A.F.,
  2. lawyer.
10. **Mr. Sydney Pickles - Club Secretary**
1. Australian pilot who was well known in England during the war and before the war.
  2. Obtained his pilot's certificate, No. 263, in 1912,
  3. served as assistant instructor at the Bristol School,
  4. served as chief instructor at the Ewen School, Hendon,
  5. Became a Flight- Lieutenant, Royal Naval Air Service 1914,
  6. saw active service under Commander Sampson in France,
  7. became chief instructor at Eastchurch,
  8. seaplane and flying-boat instructor at Calshot.
  9. During his career he has flown over 7,000 hours. [...]

In a fortnight, 38 flying members joined the club. The Dominion Government's gift of two light aeroplanes is hoped for by May, in order to commence flying instruction...."

## The "R.AE.S" and the "INST.AE.E"

Royal Aeronautical Society and the Institute of Aeronautical Engineers <sup>363</sup>

### ROYAL AERONAUTICAL SOCIETY

"THE ROYAL AERONAUTICAL SOCIETY"

WITHIN WHICH IS INCORPORATED

"THE INSTITUTION OF AERONAUTICAL ENGINEERS"

OFFICIAL NOTICES:
-------------------

- I. A DINNER was given at the Army & Navy Club by the Council of the Royal Aeronautical Society to Colonel "the Master of Sempill" - The Honourable William Francis Forbes-Sempill on November 8, as a mark of appreciation of the immensely valuable services which he has rendered to the Society during the period he has been Chairman.
- II. The Master of Sempill received, in July last, the unusual honour of being unanimously elected by the Council Chairman of the Society for a second year in succession. *During his term of office, and largely due to his genial and tactful personality, the long-drawn-out negotiations between the Society and the Institution of Aeronautical Engineers were brought to a happy conclusion after four years.*
- III. Among those present at the dinner were :
- a) R.A.F Colonel the Master of Sempill, The Honourable William Francis Forbes-Sempill, Engineer, FRAeS & British Peer,
  - b) R.A.F Air Vice-Marshal Sir W. Sefton Brancker, Deputy Director of Military Aeronautics (killed 5 October 1930 in the loss of airship R101)
  - c) R.N.A.S Captain P.D. Acland (Westland Aircraft, Percival Aircraft..)
  - d) Mr. Griffith Brewer (aeronautics patent agent, balloonist, first Englishman to fly in an aeroplane—as a passenger with Wilbur Wright in 1908)
  - e) R.F.C Major D. H. Kennedy, O.B.E., F.R.Ae.S
  - f) Mr. A. E. L. Choilton
  - g) Sir Charles Richard Fairey MBE, F.R.AeS (Fairey Aviation Co., & Aeronautical engineer)
  - h) Captain Professor Geoffrey Terence Roland Hill MC, M.Sc, M.I.Mech.E., FRAeS
  - i) Mr. J. E. Hodgson, Royal Academician - Librarian And Professor, Author,
  - j) Mr. H. B. Irving,
  - k) Mr William Oke Manning, aeronautical engineer
  - l) R.A.F Major R. H. Mayo,
  - m) R.A.F Lieut.-Col. Mervyn Joseph Pius O'Gorman, CB, Royal Engineers - Aeronautical engineer / aeronautical research, Superintendant of the Royal Aircraft Factory, Farnborough, 1909-1916. Chief Engineer to the Director General of Military Aeronautics to the Air Board 1916 - 1917. (the Factory, which had no initial funding or licence to build aircraft and was therefore reliant on the donation of used aircraft for its early work)
  - n) Mr Frederick Handley Page - Graduate engineer - University College, London, 1906, CBE, FRAeS
  - o) Mr. J. Laurence Pritchard,
  - p) Major G. H. Scott,
  - q) Major T. Sir Vvll Vvvvan
  - r) Dr. H. C. Watts,
  - s) Mr. R. McKinnon Wood

---

<sup>363</sup> Flight - The Aircraft Engineer & Airships, pg.996, 15 November 1928

## Notes on "Civil Aviation"

As noted & reported by Laurence Pritchard, Secretary RAeS.<sup>364</sup> <sup>365</sup>

### RAES : UK AIRCRAFT : "DATA SHEETS"

- I. ARRANGEMENTS have been made for the issue, early in 1927, of data sheets<sup>366</sup>.
- II. These sheets will contain abstracted information of use to:
  - a) ground engineers,
  - b) draughtsmen, and
  - c) all those engaged in the practical side of the industry.
- III. These data sheets will be issued at frequent intervals, and it is to be hoped that all those who wish for such information will write to the Secretary, so that those sheets for which there is a demand are printed as soon as possible.
- IV. The data sheets will be printed on an 8 by 5 in. page, convenient for notebooks, with a wide left-hand margin for insertion in the notebooks.
- V. They will enable anyone in the industry to collect together, in a convenient, condensed and usable form much of the information now scattered in various works of reference, B.E.S.A. specifications, private notebooks, and the like.
- VI. It is hoped that those who have any specialised or unpublished information of any kind which would prove useful to other members of the industry, will communicate with the Secretary, with a view to its publication.
- VII. The data sheets will be issued to all members of the society upon application. Any further information with regard to them can be obtained on. application to the Secretary - J. Laurence Pritchard, Honorary Secretary RAeS.

### ROYAL AERONAUTICAL SOCIETY "RAES" : ASSOCIATES

- I. A number of applications for membership in the newly-formed *grade(s) of "Associateship"* have been received.
- II. This new grade has been formed to enable:
  1. ground engineers, inspectors and examiners of aeronautical materials,
  2. those holding a pilot's " B " licence,
  3. those holding a navigators certificate,
  4. those who have a commissioned or permanent rank in the General Duties Branch of the Royal Air force, and
  5. those who have held a position equivalent to foreman for a period of not less than three yearsto take advantage of the facilities offered to them by the Society.

The subscription for this grade has been fixed as low as possible £1, 1s. a year, and Associates have all the usual privileges of members.

There is no entrance fee. J. Laurence Pritchard, Honorary Secretary RAeS<sup>367</sup>

### NOTES FOR THE GUIDANCE OF PERSONS WISHING TO OBTAIN PRIVATE PILOTS' LICENCES (CLASS A)

## Flight of private British flying machines within Great Britain and Northern Ireland

<sup>364</sup> Flight - The Aircraft Engineer & Airships, pg. 785, 10 November, 1927

<sup>366</sup> Flight - The Aircraft Engineer & Airships, pg. 838, 16 December 1926

<sup>367</sup> Flight - The Aircraft Engineer & Airships, pg. 227, 15 April 1926

## Notes on "Civil Aviation"

### General Conditions of Flying:

- I. A flying machine may not fly (except for the purpose of experiment or test and in accordance with certain other conditions) unless:
  - a) It has been registered and bears its nationality and registration marks and the name and address of the owner.
  - b) It has been certified as airworthy and complies with the conditions specified in its airworthiness certificate.
  - c) Its operating *personnel possess the prescribed certificates of competency and licences.*
  - d) It carries the prescribed documents and journey log •book, kept up to date in the prescribed form and manner. i
- II. 11. Registration.
  1. Application for registration must be made to the Air Ministry on C.A. Form 1 accompanied by a fee of £1 is.
  2. A diagram showing how the nationality and registration markings should be painted on the flying machine is sent out by the Air Ministry with the Certificate of Registration.
  3. These markings, with name and residence of owner, must also be inscribed on a metal plate affixed to the fuselage.
- III. In the event of change of ownership the Air Ministry must be notified and the registration lapses.
- IV. In the event of the flying machine being destroyed or permanently withdrawn from use the Air Ministry must be notified and the registration lapses.

### Certificate of Airworthiness

- I. Application for a Certificate of Airworthiness must be made to the Air Ministry on C.A. Form 3 accompanied by a fee of £5 5s. in the case of a " subsequent aircraft," i.e., a flying machine which conforms in all essential respects affecting its safety with a " type aircraft " in respect of which a Certificate of Airworthiness has been issued.
- II. Fees for " type aircraft " are higher and are based on the " tare " weight ; details are set out in Schedule VI of the Air Navigation (Consolidation) Order, 1923.
- III. Certificates of Airworthiness are normally valid for one year from date of issue and are renewable annually after inspection of the flying machine by the Aeronautical Inspection Directorate. For each renewal a fee of /5 5s. is charged.
- IV. All flying machines must carry instruments and equipment as specified in Section V of A.N.D. 3 (under amendment).
- V. Overhauls and repairs of private flying machines must be certified by licensed ground engineers, but daily certificates of safety are not required.
- VI. Certificated flying machines may be inspected by authorised representatives of the Secretary of State and the latter may cancel or suspend the certificate of airworthiness of any flying machine deemed to be unsafe.

### Prescribed Documents.

- I. The following documents must be carried in all private flying machines registered in Great Britain and Northern Ireland :
  - a) (i) Certificate of Registration.
  - b) Certificate of Airworthiness (to be kept in pocket of journey log book),
  - c) Pilot's Licence,
  - d) Journey Log Book.
- II. These log books are obtainable from the Air Ministry, price 4s. each ; they are issued only in respect of individual flying machines, and the first page of each book is completed by the Air Ministry before issue.<sup>368</sup>

## PROGRESS OF UK CIVIL AVIATION

<b>ANNUAL REPORT ON THE PERIOD APRIL 1, 1924, TO MARCH 31, 1925</b>
---

- I. In the section dealing with relations with foreign countries the Report states that the States which are now parties to the International Air Navigating Convention are :
  1. Belgium,
  2. Great Britain,
  3. Canada,
  4. Australia,
  5. South Africa,
  6. New Zealand;
  7. India;
  8. Irish Free State;

---

<sup>368</sup> Flight - The Aircraft Engineer & Airships, pg. 657, 08 October, 1925

9. Bulgaria;
  10. Czechoslovakia;
  11. France;
  12. Greece;
  13. Italy;
  14. Japan;
  15. Persia;
  16. Poland;
  17. Portugal;
  18. Romania;
  19. Kingdom of the Serbs, Croats and Slovenes;
  20. Siam;
  21. Uruguay.
- II. Bolivia, one of the original signatories to the Convention, is stated to have denounced the Convention with effect from August 30, 1924.
- III. During March 1924 - March 1925 the following Registrations, Licences or Certificates of airworthiness **were granted**<sup>369</sup>
- a) Pilot Licenses : 40;
  - b) Navigator Licenses : 2;
  - c) Ground engineer Licenses : 90;
  - d) Aerodrome Licenses : 130
  - e) Heavier-than-air craft registered : 80
  - f) Lighter- than-air craft registered : 2
  - g) Airworthy heavier-than-air craft : 128
  - h) Airworthy lighter-than-air craft : 1
- IV. The Report also gives the interesting information that on March 31, 1925, the following number of Registrations, Licences or Certificates of airworthiness **were current** :
- a) Pilot Licenses : 140 ;
  - b) Navigator Licenses : 3 ;
  - c) Ground engineer Licenses : 294 ;
  - d) Aerodrome Licenses : 44;
  - e) Heavier-than-air craft registered : 184;
  - f) Lighter- than-air craft registered : 7
  - g) Airworthy heavier-than-air craft : 186
  - h) Airworthy lighter-than-air craft : 1

## In Parliament (UK)

<b>R.A.F GROUND ENGINEERS' LICENSES</b>
---

Comprehension of the differences of performing maintenance work and the inspection/certification of maintenance work has not been well understood by officials in the military when comparing these duties to civilian aircraft...

- I. Sir F. Sykes on February 20 asked the Secretary of State for Air, Sir S. Hoare: "Sir, what proportion of Royal Air Force non-flying personnel have qualifications such as are required, as a condition of issue of ground engineers' licences ?"
- II. Sir S. Hoare replied: "Strict comparison (of RAF qualifications) is not practicable owing to differences between civil(ian) and service organisation. Broadly, however, the duties of the civil ground engineer are performed in the service by fitter (aero) and

---

<sup>369</sup> Flight - The Aircraft Engineer & Airships, pg. 655, 08 October, 1925

## Notes on "Civil Aviation"

carpenters (rigger) of sergeants' or higher rank. There are 569 airmen of these trades of sergeants' or higher rank, and it may be taken that they are qualified at least to the standard required for a ground engineer' licence."<sup>370</sup>

### BRITAIN'S AIRWORTHY AIRCRAFT

- I. on 15 June 1922 : Maj.- Gen Seely asked the Secretary of State for Air :
1. "Sir, how many civil aircraft are now licensed by the Air Ministry as airworthy?;
  2. how many of this number are of value for war purposes?;
  3. can he give the comparable figures for the two preceding years ?
- II. Capt. Guest (R.A.F) responded: "The figures, on June 1 are as follows" :
1. Number of aircraft holding Certificates of Airworthiness, 97 (1922) ; 137 (1921) ; and 240 (1920).
  2. Number of value for War purposes (including training), 83 (1922) ; 104 (1921) ; and 86 (1920).
  3. There are probably in existence in this country at the present time considerably more than 97 airworthy aeroplanes, but owing to lack of employment and other causes, certain aeroplanes are laid up, and the owners have allowed the certificates to lapse.
  4. Though the 83 aeroplanes referred to above would be of some value for training and war purposes, it must be remembered that in this number there are no less than 28 different types of aeroplanes which reduces their military value considerably.
  5. In particular, very great difficulties would arise in maintaining and organizing the issue of the necessary spares to keep all these different types serviceable for war purposes. Therefore, all that can be said is that they would be of some slight value.<sup>371</sup>

### CIVIL AVIATION

- I. "A system is being introduced by which a pilot's licence can be:
1. endorsed,
  2. suspended; or
  3. withdrawn for acts of
    - a) neglect,
    - b) carelessness; or
    - c) dangerous flying.
- II. The work of ground engineers licensed by the Air Council:
1. Will be more closely supervised than formerly, and
  2. Further qualifications in ability to inspect and maintain instruments will shortly be demanded from them.
- III. Operating firms are being requested to report fully on all cases of:
- a. engine failure; and
  - b. engine trouble,
- and each case will be investigated by experts with a view to eliminating the causes".<sup>372</sup>

### THE REQUIREMENTS & DIFFICULTIES OF (CIVILIAN) AIR TRANSPORT

- I. "I should also like to mention the examinations for ground engineers:
- A. These are verbal examinations,
  - B. are therefore the most difficult to organise, and
  - C. from what I have seen, they have a tendency to follow that unsound policy adopted temporarily years ago in some of the Board of Trade examinations for the marine engineers' tickets—it is that of trying to ' catch ' the applicant by trick questions instead of thoroughly ascertaining his education, experience and knowledge. *(reflects the statement by one who, while having an authoritative position based on social status and ability to purchase education has*

<sup>370</sup> Flight - The Aircraft Engineer & Airships, pg. 132, 05 March, 1925

<sup>371</sup> Flight - The Aircraft Engineer & Airships, pg 363, 22 June 1922

<sup>372</sup> Flight - The Aircraft Engineer & Airships, pg 363, 22 June 1922

## Notes on "Civil Aviation"

*NOT undergone a B.O.T course of apprenticeship for the foundation of the trade and therefore is uneducated in the material / process or background relating to the questions being asked)*

D. I consider that the examination papers for the applicants for these tickets should be laid down by the committee to which I have referred (Board of Trade ?)." <sup>373 374</sup>

- II. It is pertinent to remark that after *the system of "two Services" (the British Army "RFC" and Royal Naval Air Service "RNAS") had been given an exhaustive and lengthy trial* under war conditions.
- a) we had been at war *for three-and-a-quarter years* when the change was made.
  - b) *Parliament acted on the advice of those who knew and combined the R.N.A.S. and the R.F.C. into one single and distinct Service.*
  - c) It was not until this had been done that we attained to absolute superiority over the enemy in the air.
- III. We need not go over the whole sorry story of opposing interests in the two Air Services:
- a) fighting against each other to secure machines and material in competition, or
  - b) the malign influences this competition exercised over efficiency.
- IV. Nor is there need to do more than to refer to the petty jealousies manifested between the Services - jealousies which were inseparable from the dual control which existed and which did much to impede the common task of beating the enemy.
- V. All who had anything to do with the aerial side of the War, or who followed its history from inside, know to what we refer.
- VI. The plain fact remains to refute the arguments and the diatribes of the champions of the bad old order of things that it was not until the R.A.F. was constituted that our aerial forces came on to an efficient basis and evolved a real esprit de corps peculiar to the Air Service.
- VII. In war and in peace the R.A.F. has most completely justified itself and to retrograde as Sir Percy Scott and others would apparently have us do would be a capital mistake.
- VIII. Fortunately, those who have the ultimate say in the matter realise this, and there does not appear to be any immediate danger of the reactionaries having their way.
- IX. Sir Percy Scott is certainly wrong if his utterances have been correctly reported.
- A. Taken literally, Sir Percy Scott professes to say that the Air Service was taken away from the Navy during the War. It most certainly was not taken away.
  - B. Not a machine, not a pilot, not a mechanic, was "taken away" in any true sense of the word.
  - C. Administrative matters were transferred to the Air Ministry, but command remained with the Navy and the Army just as it had been before the change and as it remains now.
  - D. What did happen was that the ruinous competition, which had been the rule before, ceased, and supplies came forward and were allotted with due regard to the requirements of both Services.
- However, there is no need to pursue the subject further. There is to be no change in the existing order of things. So much was vouchsafed by Mr. Bonar Law in the House recently, when, in reply to a question by Major Glyn as to whether representations had been made by the Admiralty and the Army Council to the effect that it is advisable to return to the separate Air Services, he stated with emphasis that the answer was "in the negative."<sup>375</sup>

### DISPOSITION OF SURPLUS AIRCRAFT AND MATERIEL

<sup>373</sup> THE REQUIREMENTS AND DIFFICULTIES OF AIR TRANSPORT paper by Colonel Frank Searle, before the Royal Aeronautical Society on November 17

<sup>374</sup> Flight 24 Nov 1921 pg 789.

<sup>375</sup> Flight - The Aircraft Engineer & Airships No. 49, Vol XII pg 1230. 02 Dec. 1920

## Notes on "Civil Aviation"

"It is hoped that *surplus aircraft and materiel* [...] *will ultimately be handed over on approved terms to a private company to operate, and the results of these experiments and the knowledge and experience obtained will be available* to any such company"<sup>376 377</sup>

### EVERYTHING WAS SACRIFICED TO OBTAIN PERFORMANCE

- I. "during the War *everything was sacrificed to obtain performance*"<sup>378</sup>
- II. cost mattered very little and durability not at all<sup>379</sup>, as a machine had a short life in any case, due to enemy action, bad aerodromes or obsolescence of types
- III. we had, at the conclusion of the War, *a number of machines and engines which, although efficient for the purposes of the moment* (war), were direct developments of their predecessors of 1914<sup>380</sup>.
- IV. *Cheapness of construction and maintenance is of first importance in a civil machine*<sup>381</sup>, and as cheapness of construction goes with simplicity, and therefore ease and rapidity, it is also of great importance for war purposes.
- V. Aircraft as the War has left them, are flimsy structures, requiring continual looking after, and it is therefore desirable to seek a system of construction which will provide a stronger and more durable machine."<sup>382</sup>

### EXAMINATION FOR AVIATION GROUND ENGINEERS

- I. Examinations of candidates desiring to become certified ground engineers<sup>383</sup> (aircraft or engines) will be held at the following centres during September :
  - 1. London, Wed. Sept. 29;
  - 2. Bristol, Tues. Sept. 21;
  - 3. Birmingham, Wed. Sept. 22 ;
  - 4. Manchester, Thurs. Sept. 23.and during October <sup>384</sup>:
  - 5. London, Wed. Oct. 13;
  - 6. Leeds, Tues. Oct. 19;
  - 7. Newcastle, Wed. Oct.20;
  - 8. Glasgow, Thurs. Oct. 21
  - 9. London, Wed. Oct. 27
- II. The examinations *may be partly written, partly oral and partly practical*. They will be based on the syllabus outlined in Section 4 of the Air Navigation Directions 1919<sup>385</sup>

## The *Civil Aviation Branch* of the Department of National Defence, Canada

---

### CANADIAN REPORT, FOR THE QUARTER ENDING SEPTEMBER 30, 1931

---

- I. INCLUDED in the report, for the quarter ending September 30, 1931, issued by the Civil Aviation Branch of the Department of National Defence, Canada, are the following statistics concerning Air Mail services, etc in Canada.<sup>386</sup>
- II. During the period July 1 to September 30 the licences issued were:
  - a) private (pilot) : 41
  - b) commercial (pilot) : 39
  - c) air engineers : 41
  - d) aircraft registered : 39
  - e) air-ports licensed : 4
- III. This brings the total in force at September 30, 1931, to:
  - a) Private pilots : 271
  - b) Commercial pilots : 393
  - c) Air engineers : 406
  - d) Aircraft : 489
  - e) Air-ports : 75

## Annual Air Force Dinner

---

### The 4th annual Independent Air Force Dinner (1922)

---

The Rt. Hon Capt. J. E. Guest, Secretary of State for Air stated at the 4th Annual Air Force Reunion, 19 June 1922 <sup>387</sup> that:

- I. The fundamental view of British trade development. Every successful industry had been built up by healthy competition, and if Civil Aviation was ever to pay in this country, it must be on the basis of reasonable and healthy competition.
- II. *The first responsibility of the Government was to safeguard the public from avoidable risks by:*
  - A. guaranteeing the air-worthiness of aircraft;
  - B. the careful licensing of pilots;
  - C. the careful licensing of ground engineers,
  - D. satisfying themselves of the efficiency of a company before allowing it to operate [...]
- III. *The British Empire, however, was not confined to the British Isles, and had within its' boundaries and Dominions more wide stretches of territory, unbridgeable except by Air [...]*
- IV. Civil Aviation could be made a commercial success and Imperial Asset by the development of these routes. *Canada, India, Australasia, South Africa, all..."*

## Aviation Education / Aviation Schools

---

### The International Correspondence Schools "I.C.S" & Aviation Courses

---

- I. Before the 1st World War the International Correspondence Schools, of International Buildings, Kingsway, W .C. 2, included among the many subjects taught by post (by mail) that of "Aviation".<sup>388</sup> The textbooks used England (and Canada) were

<sup>387</sup> Flight - The Aircraft Engineer & Airships, pg 360, 22 June 1922

<sup>388</sup> Flight - The Aircraft Engineer & Airships, pg 666, 09 November 1922

## Notes on "Civil Aviation"

published by the International Correspondence Schools Ltd., The Kingsway, London. The I.C.S textbooks used in North America were published by "International Textbook Company" of Scranton, PA.

- II. Among the early I.C.S. students was Mr. Robert Slack, who flew a Blériot, and later Moraine monoplanes in 1911, 1912 and 1913.
- III. Mr. Slack won a prize presented by the I.C.S., if we remember rightly, and his great practical knowledge of his machine and engine proved that the I.C.S. course was sound and practical.
- IV. Then came the War, and for some years the "Aviation course" was dropped, owing chiefly to the difficulty of keeping up to date in aviation matters.
- V. The "Aviation course" has now been entirely re-written, and has furthermore been extended very considerably. Not only so, but by subdividing the course into 7 branches, it has been possible to reduce the price for any one section.
  1. The "Aeroplane Designer's" course has been arranged to give instruction in such subjects as come within the scope of draughtsmen and designers in an aircraft design office, dealing with aerodynamical as well as structural calculations.
  2. The "Special Pilot's" course has been drawn up from information supplied by the Air Ministry to assist intending candidates for examinations for a Class "A" (Private) or Class "B" (Commercial) pilot's licence. It deals thoroughly with:
    - a) the ordinary introductory papers on arithmetic,
    - b) Background on engines;
    - c) Background on aeroplanes,
    - d) Navigation,
    - e) Meteorology, etc .
  3. The "Complete Aero Fitter's and Rigger's" course includes both aeroplanes and engines;
  4. The "Aeroplane Fitter's and Rigger's" course deals with machines only, and does not include papers on engines.
  5. The "Aero Engine Fitter's and Rigger's" course deals entirely with engines, and does not touch work in connection with the machine.
  6. Five different "Ground Engineer's" specialty courses, drawn up to help those wishing to enter the Air Ministry examinations for ground engineers in Categories A, B, C, D and E;
  7. The "Complete Aeronautical Engineering" Course covers the entire ground of "Aviation" (Pilots and Engineers)
- VI. Altogether the I.C.S. courses appear to include every phase except actual flying, and we would advise those interested to write to national International Correspondence Schools, Ltd. , Inter-Buildings, Kingsway, W .C. 2.

### The Question of "Air-Worthy" Certificates

---

- I. CAPT. HERNE was fined [...] at Croydon on Saturday.
- II. Two of the charges were for carrying passengers without having a daily "airworthy" certificate as to the fitness of his machine from a licensed ground engineer.
- III. Considering that the Air Ministry charge these joy-ride and air-taxi people £10 a month for the garaging of each machine, it would appear that some arrangement could be made *whereby the A.I.D. Inspector already on the aerodrome, or a ground engineer supplied by the Air Ministry*, could inspect these machines and issue daily certificates.
- IV. The present arrangement, requiring each firm or individual to find their own ground engineers, makes it practically impossible for these small men to exist; and it must be remembered that they are a valuable asset to the air industry.<sup>389</sup>

### France's Policy in the Air

---

- I. M. Flandin advocated the continuation of close working between the civil and military organisations, and went on to emphasise that *efforts should be concentrated upon the improvement of the technical side of aviation rather* than upon the increase of the matériel
- II. While he *expressed the opinion that Germany was not to be feared* in regard to the numbers of her aeroplanes, he said *that her experimental activities must be emulated* ; new laboratories should be installed, makers should be formed into groups, so as to reduce prices by co-operative buying, *and aeronautical engineers be given special encouragement in their work.*<sup>390</sup>

---

<sup>389</sup> Flight August 18, 1921

<sup>390</sup> UK Under-Secretary of State for Aeronautics M. Flandin outlining the future air policy of France in a speech at a banquet held on October 9,

III. " We must attempt to hold the supremacy in the air," he said, " as England holds it on the sea, for *a nation that controls the means of transport is mistress of the world.*

## "A Complete Course of Instruction" - Ground Engineer Training

### **A COMPLETE COURSE OF INSTRUCTION FOR GROUND ENGINEERS A.B.C.D. & X LICENSES - 1937**

The authors of this course in instruction were well known and reputable- being involved in UK aeronautics and Aviation from, in some cases, the early days.

I. Published by "The New Era Publishing Co. 12 & 14 Newton St, Holborn, LONDON, W.C.2

II. Forward by H. Haselden Lewis, Air Registration Board

III. Chapter references:

### CORRESPONDENCE COURSE TEXTBOOKS 1925 - 1950

The International Correspondence Schools "I.C.S" issue numerous works on "Engineering" to persons applying to their courses of correspondence. The I.C.S books are published by the International Textbook Company., Scranton, USA.

A number of these courses are used by enlisted members of the Royal Canadian Air Force to upgrade their "Formal Knowledge" in order to pass tests and exams for higher placement and to obtain Civilian Air Engineer Licenses.

While a student at the Confederation College the author was given a number of these books [by Ralph] which once belonged to Flight Sergeant Harold William Gregory S/n R/90300 - RCAF of London Ontario.

20 year old F/S Gregory, H.W took part in Operation Jubilee, the Allied attack on the German-occupied port of Dieppe on 19 August 1942. His aircraft was one of 106 allied aircraft lost that day with the loss of 60 airmen - including 13 Canadians, his body was never recovered and he remains "Missing" to this day.

## Notes on "Civil Aviation"

1. **AERODYNAMICS AND FLIGHT.** (ELEMENTARY AERODYNAMICS / THEORY OF FLIGHT.) By James Ross Allen, Book # 594B Contents: Aerodynamic Laws and Theories; Physical Principles; Effects of Air Flow; Air Flow Against Flat Plate; Wind Tunnel; Action of Air-Stream and Airfoils; Airfoil Characteristics; Influence of Airfoil Dimensions; Arrangement of Airfoils; Variable Lift Devices; Parasite Drag. Theory of Flight Contents: Equilibrium and Balance; Fundamentals of Equilibrium; Stability and Control; Types of Stability; Lateral Stability Standards; Directional Stability Standards; Control Standards; Propeller; Introduction; Propeller Theory; Propeller Effects; Airplane Performance at Sea Level; Airplane Performance at Altitudes.
2. **AIRCRAFT WOODWORK PROTECTIVE COATINGS.** (WOODWORKING TOOLS / AIRCRAFT WOODWORK / PROTECTION OF AIRPLANE PARTS / COVERING AND DOPING AIRPLANE SURFACES.) by Daniel J. Brimm, Book # 607 Contents: Use of Woodworking Tools; Hand Cutting Tools; Boring Tools; Hand Finishing Tools; Sawing Machines; Surface Machines and Sanders; Sharpening Tools; Grinding Wheels; Oilstones; Sharpening Knife-Edged Tools; Woodworking Practice. Aircraft Woodwork Contents: Wood Airplane Structures; Properties of Wood; Construction of Airplane Parts; Examples of Aircraft Woodwork. Protection of Airplane Parts Contents: Devices and Methods; Wood Surfaces; Metal Surfaces; Spray Painting of Airplane Surfaces; Spray Guns; Spray-gun Accessories; Hose and Hose Fittings; Protective Devices; Handling Spray Equipment; Troubles in Spray-Gun Operation. Covering and Doping of Airplane Surfaces Contents: Fabric and Tape; Finishing Fabric Surfaces; Inspection Before Covering; Methods of Covering; Application of Dope; Marking Coverings; Exercises in Airplane Covering.
3. **THE SLIDE RULE** by Rufus T. Strohm and Archibald Degroot. Book # 255. Contents: Construction of Slide Rules; General Features of Slide Rules; Parts of Slide Rule; Graduations of Scales; Basis of Graduation; Principles of Operation of Slide Rule; Values of Graduations; Usual Operations With Mannheim Slide Rules; Location of Decimal Point; Multiplication With Slide Rule; Division With Slide Rule; Multiplication and Division Combined; Powers and Roots; Special Uses of Mannheim Slide Rules; Mantissas of Logarithms; Trigonometric Functions; Slide Rules With Folded Scales and Log Log Scales; Folded Scales; Log Log Scales; Trigonometric Functions With Duplex Rule; Circular Slide Rule.
4. **The Airplane and its Parts** 594A by Brimm, Daniel J.
5. **Elementary Aeronautical Engineering** 594B. by Brimm, Daniel J.

Hogg cites various authoritative definitions which identify the dominant or most important characteristics of the challenged law [p. 80]:

"What is the 'matter' of a law?"

1. Laskin says it is 'a distillation of the constitutional value represented by the challenged legislation';
2. Abel says it is 'an abstract of the statute's content';
3. Lederman says it is 'the true meaning of the challenged law';
4. Mundell says it is the answer to the question, 'what in fact does the law do, and why?';
5. the courts have sometimes said that it is the 'leading feature' or 'true nature and character' of the law, but usually they have described it as 'the pith and substance' of the law.

THE AEROPLANE HANDBOOK - The AEROPLANE & GENERAL PUBLISHING, Co., Ltd. - 61, CAREY STREET, London W.C.2.  
Edited by A. J. SWINTON, (R E. , retired)

THE AEROPLANE HANDBOOK is intended to provide a manual for the use of those who are engaged in the design, manufacture and use of aircraft.

## Definitions

### “AERONAUTICAL GROUND ENGINEER” - BRITISH, 1919

The British definition of the term “Aeronautical Ground Engineer” :- “a person licensed by the competent authority to certify that inspections, required by the regulations for the time being in force, have been made”

Privileges attached to aircraft maintenance engineer licences:

"A licensee whose licence is endorsed under Category "A" may:

- (a) before flight, certify as *airworthy OR serviceable*, any aircraft of a type endorsed on his licence under that Category;
- (b) certify that any minor repair or any replacement made to any aircraft of a type endorsed on his licence under that Category complies with the standards of airworthiness established by the Minister"

### “AIR ENGINEER” - CANADA, 1920

"a person licensed by the competent authority to certify that inspections, required by the regulations for the time being in force, have been made"

Privileges attached to aircraft maintenance engineer licences:

"A licensee whose licence is endorsed under Category "A" may:

- (a) before flight, certify as *airworthy OR serviceable*, any aircraft of a type endorsed on his licence under that Category;
- (b) certify that any minor repair or any replacement made to any aircraft of a type endorsed on his licence under that Category complies with the standards of airworthiness established by the Minister"

### “GROUND ENGINEER” - BRITISH

The British definition of the term “Ground Engineer” :- “a person licensed by the competent authority to certify that inspections, required by the regulations for the time being in force, have been made”

Privileges attached to aircraft maintenance engineer licences:

"A licensee whose licence is endorsed under Category "A" may:

- (a) before flight, certify as *airworthy OR serviceable*, any aircraft of a type endorsed on his licence under that Category;
- (b) certify that any minor repair or any replacement made to any aircraft of a type endorsed on his licence under that Category complies with the standards of airworthiness established by the Minister"

### “AIRCRAFT MAINTENANCE ENGINEER” - BRITISH, 1968

The British definition of the term “Aircraft Maintenance Engineer”<sup>393</sup> : “aircraft engineer” - “a person licensed by the competent authority to certify that inspections, required by the regulations for the time being in force, have been made”<sup>394</sup>

Privileges attached to aircraft maintenance engineer licences<sup>395</sup> :

"A licensee whose licence is endorsed under Category "A" may:

- (a) before flight, certify as *airworthy OR serviceable*, any aircraft of a type endorsed on his licence under that Category;
- (b) certify that any minor repair or any replacement made to any aircraft of a type endorsed on his licence under that Category complies with the standards of airworthiness established by the Minister"

<sup>394</sup> Glossary of aeronautical and astronautical terms, British Standards Institution, London 1969 - (TERMIUM Plus - The Government of Canada's terminology and linguistic data bank, 2018)

<sup>395</sup> Air Navigation Orders, Civil Aviation Branch, Ottawa Canada, 1968 (TERMIUM Plus - The Government of Canada's terminology and linguistic data bank, 2018)

### "AIRCRAFT MAINTENANCE ENGINEER" - CANADA, 1968

The British definition of the term "Aircraft Maintenance Engineer"<sup>396</sup> : "aircraft engineer" - "a person licensed by the competent authority to certify that inspections, required by the regulations for the time being in force, have been made"<sup>397</sup>

Privileges attached to aircraft maintenance engineer licences<sup>398</sup> :

"A licensee whose licence is endorsed under Category "A" may:

- (a) before flight, certify as **airworthy OR serviceable**, any aircraft of a type endorsed on his licence under that Category;
- (b) certify that any minor repair or any replacement made to any aircraft of a type endorsed on his licence under that Category complies with the standards of airworthiness established by the Minister"

### "AIRCRAFT MAINTENANCE ENGINEERING" - AMERICAN

The American terminology for aircraft maintenance engineering<sup>399</sup> from U.S Military terminology. The U.S Air Force **Aircraft Maintenance Engineering** course of study for **Aircraft Maintenance Officer** cadets in University ROTC training squadrons. The information contained within the course was classified "RESTRICTED" as it contained "information affecting the National Defense of the United States within the meaning of the "Espionage Ac, 50 U.S.C 31 and 32 - as amended. The transmission or revelation of its contents in any manner to unauthorised persons is prohibited by Law"

**NOTE:** The US Air Force position of "Air Inspector" is authorised under AF regulation 123-1, to ensure the highest possible standards of efficiency, safety and economy. The Inspectors are appointed and work with maintenance staff to make sure that maintenance, supply and other activities are being accomplished correctly. The Air Inspectors report to the Wing Inspector General - who reports to the Wing Commander. The Wing Inspector General has final over-all inspection responsibilities on the wing base. The staff of the Wing Inspector General comprises 3 main branches:-

- 1. The Air Inspector - who appoints assistant inspectors who accomplish detailed inspections of all activities and equipment and report on what they find.
- 2. Flight Safety -
- 3. The Air Provost Marshal -

### U.S. INTERPRETATION OF THE TERM "AIRWORTHY"

United States FAA interpretation of the term "AIRWORTHY"<sup>400</sup> , there are 2 conditions which must be met [complied with] :

**1. The aircraft must conform to its type certificate.**

- a. When aircraft configuration and the components installed are consistent with drawings, specifications, and other data that are part of the type certificate (T/C), and include any supplemental T/C and field approval alterations incorporated into the aircraft.

**2. The aircraft must be in condition for safe operation.**

- a. Aircraft, relative to wear and deterioration i.e., corrosion, fluid leaks, tire wear, window delimitation/crazing [...]

**NOTES:**

*If one of these conditions is not met, the aircraft **IS NOT** airworthy = "un-air-worthy"*

*If both of these conditions are not met, the aircraft **IS NOT** airworthy = "un-air-worthy"*

### "INSTRUCTIONS FOR CONTINUED AIRWORTHINESS"

<sup>396</sup> Glossary of Aeronautical Terms, British Standard No. 185

<sup>397</sup> Glossary of aeronautical and astronautical terms, British Standards Institution, London 1969 - (TERMIUM Plus - The Government of Canada's terminology and linguistic data bank, 2018)

<sup>398</sup> Air Navigation Orders, Civil Aviation Branch, Ottawa Canada, 1968 (TERMIUM Plus - The Government of Canada's terminology and linguistic data bank, 2018)

<sup>399</sup> Continental Air Command (ConAC) manual # 50-9, 1949. (superseding ConAC manual 50-66-1)

<sup>400</sup> Section 44704(d) of 49 U.S.C

## Notes on “Civil Aviation”

“*Instructions for Continued Airworthiness*” (ICA) means “all instructions published by the holder of the design approval for an aeronautical product that relate to “:

1. the **inspection** of that product.,
2. the **testing** of that product.,
3. the **repair** of that product.,
4. the **removal** of that product. and
5. the **replacement** of that product.

NOTE that:

1. ICA's **ALSO include** maintenance manuals and equivalent documents that were published *before the term* “instructions for continuing airworthiness” first came into use in 1981.
2. Supplemental ICAs *for a design change* not only cover:
  1. the items installed by the design change,
  2. **but also** those:
    1. *systems of the aircraft* affected by the change **and** the existing ICA pertaining to the affected areas,
    2. *parts of the aircraft* affected by the change **and** the existing ICA pertaining to the affected areas,
    3. *structure of the aircraft* affected by the change **and** the existing ICA pertaining to the affected areas and
    4. *areas of the aircraft* affected by the change **and** the existing ICA pertaining to the affected areas.
3. Unaffected areas need not be addressed. **However,**
4. the submitted supplemental ICA must include all items potentially affected by the installation, even where no actual change is required.<sup>401</sup>

<b>“CERTIFICATION MAINTENANCE REQUIREMENTS”</b>
---

**Certification Maintenance Requirements** (CMR) are:

“required inspections or maintenance tasks that are part of the ICA and fall within the definition of Airworthiness Limitations.”

They are tasks performed at certain times to detect or correct safety significant latent failures (failures not known to the crew). These latent failures, combined with one or more other specific failures or events, can cause hazardous or catastrophic failures. CMR are identified within the type certification process and usually developed as an alternative means to meet compliance requirements when the actual design in its own right cannot meet the design requirements. See FAA Advisory Circular AC25-19, Certification Maintenance Requirements, for additional information.

## The “AIR BOARD”

(LATER THE AIR MINISTRY - INCLUDING THE AERONAUTICS ADVISORY COMMITTEE)

The first Air Board, established by the Cabinet in May 1916 (see under War Office), was a joint Advisory Body to the War Office and the Admiralty.

The existence of a separate Department for the Air commenced with the establishment of the Second Air Board in December 1916 under a President and Parliamentary Secretary by the New Ministries and Secretaries Act, 1916 (6 & 7 Geo. V, c. 68), to:

1. secure and maintain an adequate supply of aircraft
2. be responsible for principles of aircraft - aeronautical design,
3. allocation of supplies between military and naval services.

The organization of actual manufacture (of aircraft, Engines, accessories and A.G.S parts) was transferred to the Ministry of Munitions, who were represented on the Board.

The AIR Board contained representatives of:

- A. Parliament,
- B. the Admiralty,
- C. the War Office,
- D. the Ministry of Munitions and
- E. various experts.

By the summer of 1917, the possibility of a surplus of aircraft over immediate requirements rendered further measures necessary to secure its most efficient utilization, and especially the provision of an Air War Staff for the Board.

Consequently, by the Air Force (Constitution) Act of Nov. 1917, the Air Ministry replaced the Air Board, and an Air Council was constituted on 2nd Jan. 1918, on similar lines to the Army Council. The Air Council included representatives of the Admiralty, War Office, and Ministry of Munitions. This body was entrusted with the duties of organizing a definite Air Force, the necessary powers being gradually transferred from the Admiralty and the War Office.

The Air Minister received the status of a Secretary of State.

The Ministry was established as a Permanent Department.

The Aeronautics Advisory Committee, established 1909, reported direct to the Prime Minister, until establishment of the AIR Ministry, when it then reported to the Air Council.

In Nov. 1919, the Meteorological Office (pre-war body) was transferred to the Ministry, the Meteorological Committee being reconstituted (see Cmd. 800, p. 7). References. Public General Acts, 1916, 1917-18 ; Cd. 9005, pp. 57-63.

ABBREVIATIONS USED:

A.M. = Air Ministry.

A.B. = Second Air Board.

A.A.C. = Aeronautics Advisory Committee.

N.P.L. = National Physical Laboratory.

R.A.F. = Royal Air Force.

R.F.C. = Royal Flying Corps.

---

### ACCIDENTS INVESTIGATION COMMITTEE.

App. by A.M., Jan.

1918. Obj. To advise Accident Department of A.M. on accidents and investigations concerning them. Repr. A.A.C. and other experts. Ref. Cd. 9145, pp. 12-13 ; Cmd. 448, pp. 23-4. Possibly Permanent.

---

### ADHESIVES

See S.I.R.

---

### AERIAL OPERATIONS COMMITTEE.

See Cabinet under Priorities, War, Committee.

## AERODYNAMICS

---

See AERONAUTICAL RESEARCH COMMITTEE

## AERONAUTICAL RESEARCH COMMITTEE

---

App. by A.M., on recommendation of Education and Research, Aeronautical, Committee (q. v.), in 1920. Obj. To take over, with extended powers, the functions of the A.A.C. Repr. Presumably, as with A.A.C., A.M., Royal Society, scientists, engineers, &c. Ref. Cmd. 1120, pp. 4, 5. Permanent Body. (The Committee was to act with appropriate Sub-Committees.)

## AERONAUTICS ADVISORY TECHNICAL SUB-COMMITTEES

---

App. by A.A.C. during the War, the Sub-Committees, though they partly arose from the normal work of the A.A.C, being actually appointed as a result of the War. Obj. To advise on special matters connected with various technical and engineering problems of aviation. Repr. A.M., A.A.C, Army, Navy, N.P.L., Royal Aircraft Establishments, Aeronautical Inspection Department, experts. Ref. Cd. 8629, p. 7 ; Cmd. 488, pp. 6, 11, 16, 18, 19, 20 ; Cmd. 1458, pp. 4, 5. Apparently Permanent Bodies.

The following Sub-Committees were appointed :

- A. Aerodynamics (1917 or 1918),
- B. Aeronautics (1916 or 1917),
- C. Airships and Kite Balloons (Aug. 1917),
- D. Engine, Internal Combustion Problems (Feb. 1917),
- E. Light Alloys (about Dec. 1917),
- F. Meteorology (Aug. 1918),
- G. Materials and Chemistry (1919 or earlier),
- H. Research, Co-ordination of Theory and Practice (1918),
- I. Scale Effects (1917).

Certain other Sub-Committees are dealt with below.

## AIR CONFERENCE

---

Held at Guildhall, London, 12th-14th Oct. 1920. Obj. General discussion of problems of military and civilian aviation. Repr. A.M., K.A.I.. Royal Society and various aeronautical and constructive societies, manufacturers, scientists. Ref. Cmd. 1157. The Conference passed a resolution in favour of holding Annual Conferences, and a Second Conference was held, Feb. 1922 (see Cmd. 1619).

## AIR-SCREW DESIGN COMMITTEE

---

App. by A.M. early in 1918. Obj. To investigate questions of air-screw design. Repr. N.P.L., experts. Ref. Cd. 9145, p. 8. Diss. Possibly replaced in 1919 by panel of Aerodynamics Sub-Committee (see under Aeronautics Advisory Technical Subcommittees.)

## AIRSHIPS.

---

See under Aeronautics Advisory.

## AIR TRANSPORT SUB-COMMITTEE

---

App. by Aeronautical Research Committee, in 1922 or 1923. Obj. To consider scientific and technical problems of Imperial Air Mail routes and act as co-ordinating body between Research Committee and Civil Aviation Department. Repr. These two bodies, Research Directorate. Royal Society, scientists. Ref. Aeronautical Research Committee's Report for 1922-8 (H.M.S.O., 1923:3)! Still in existence, end 1928.

## Notes on "Civil Aviation"

AIR. — See also Imperial Air Communications below. Cabinet, and W.O.

### ALLOYS RESEARCH COMMITTEE

---

A private Committee appointed by the Institute of Mechanical Engineers co-operating with Light Alloys Sub-Committee (see under Aeronautics Advisory Technical Sub-Committees).

Ref. Cmd. 488, p. 18.

### ALUMINIUM CORROSION. See S.I.K

---

### AMERICAN AVIATION MISSION

---

App. by U.S.A. Government in winter of 1918-19. Obj. To investigate military and civil uses of aviation in England, France, and Italy. Repr. U.S.A. War Departments and manufacturers. Ref. Cmd. 384. Diss. July-Aug. 1919.

### AVIATION, BRITISH COMMISSION IN PARIS.

—

Obj. To make contracts for aeroplanes and engines. See H.C. Nos. 83 etc., 1919, p. xv.  
For Aviation, see also Cabinet.

### BALLOONS.

—

See Kite Balloons.

### CHEMISTRY.

—

See under Aeronautics Advisory.

### CIVIL AERIAL TRANSPORT COMMITTEE

---

by B.A., April 1917.

Obj. To report upon possible post-war development of civil and commercial aviation and post-war uses of surplus aircraft and personnel of R.A.F.  
Repr. Parliament, prominent public men, various Government Departments, Meteorological Office, Dominions and Indian Governments, Aircraft and Aero-engine Manufacturers, Labour, aircraft experts. Ref. Cd. 8916. Diss. Report signed May, issued Dec, 1918.

(N.B. The Committee divided the inquiry between five Sub-Committees on Business Questions relating to Manufacture, Labour, Law and Policy, Research and Education, Technical Questions. See Cd. 9005, p. G4.)

### CIVIL AVIATION ADVISORY COMMITTEE AND (LATER) BOARD.

---

—App. by A.M., Feb.-May 1919. Obj. To advise the Civil Aviation Department (q. v.) on policy and methods of assisting civil aviation. Repr. A.M., W.O., manufacturers, insurance, flying and scientific experts. Ref. Cmd. 449, 770. Diss. Replaced in 1922 by permanent Civil Aviation Advisory Board with similar reference and wider representation (see Cmd. 1739).

### CIVIL AVIATION DEPARTMENT

---

4 ^ . by the Government through  
A.M., Feb. 1919. Obj. To develop civilian aviation, including transition from war to peace flying. Repr. Official and expert. Ref. Cmd. 418, p. 2.

Permanent Department.

#### COMMISSIONS BOARD (R.F.C.).

---

App. to select candidates for commissions  
in R.F.C. Ref. Cd. 8825, p. 80. Other details not given.

#### COMPETITIONS COMMITTEE.

App. by A.M., possibly in conjunction  
with aircraft industry, late in 1919. Obj. To draw up rules for competitions,  
with object of furthering safety and comfort of air travel. Repr. A.M. and  
aircraft industry, with expert assistance. Ref. Cmd. 800, p. 12. Diss.  
Early 1920.

#### CONTRACTS FOR CLOTHING, COURT OF INQUIRY

---

by Air  
Council, Aug. 1919. Obj. To investigate various allegations as to contracts  
for Women's Royal Air Force. Repr. A.M., R.A.F., Women's Royal Air  
Force. Ref. Cmd. 347. Diss. Aug. 1919. See also Tre.

#### DESIGN.

---

—  
See Air-screw Design, and Aeronautics Advisory.

#### EDUCATION AND RESEARCH, AERONAUTICS, COMMITTEE

---

App. by A.M., Oct. 1918, with revision of reference in 1919. Obj. To  
report upon organization of aeronautical education and research after the  
war and (later) upon decisions of Government in these matters. Repr. A.M., S.I.K., N.P.L., Imperial College of Science, Science  
Museum, aircraft  
manufacturers, scientists. Ref. Cmd. 554. Diss. Dec. 1919.

#### EDUCATION, ARMY, IMPERIAL

---

See W.O. EDUCATION. See also under Civil Aerial Transport Committee.

#### ELECTRIFICATION.

---

See Kite Ralloons.

#### ENGINE.

---

See Aeronautics Advisory.

#### FIREFIRE PREVENTION SUB-COMMITTEE.

—  
App. by A.A.C. in 1919.  
Obj. To consider measures to minimize risks of fire on aircraft, Repr. A.M.,  
A.A.C., R.A.F., Royal Society, scientists. Ref. Cmd. 1120, pp. 4, 13.  
IMPERIAL AIR COMMUNICATIONS COMMITTEE.

—  
App. by special  
Conference of Premiers of the Empire prior to Imperial Conference of  
June-Aug. 1921. Obj. To report upon cost of providing imperial service  
of airships and aeroplanes. Repr. A.M., CO., In.O., Tre., Governments of

## Notes on "Civil Aviation"

Dominions. Ref. Cmd. 1474, pp. 45-55. Diss. July, 1921.

### INFORMATION AFFECTING INSURANCE COMMITTEE.

---

—

App. by  
Conference held at A.M. with representatives of aviation and insurance, Jan. 1921. Obj. To consider procedure and responsibility for collecting and disseminating information. Repr. A.M. Society of Aircraft Constructors, Lloyds. Ref. Cmd. 1342, p. 12.

### INSTITUTES

---

See W.O.

### INTER-ALLIED AERONAUTICAL COMMISSION OF CONTROL.

---

See Cmd. 1073, pp. 19, 20. App. by Allied Powers jointly, in 1919 or 1920.  
to carry out aircraft provisions of Peace Treaties. Other details lacking.

### INTERNATIONAL COMMISSION ON AERIAL NAVIGATION.

---

App. in 1922 by Governments concerned in International Air Convention arranged by Peace Conference. Obj. To secure the carrying out of the Convention. Repr. The Governments concerned. Ref. P.G.A.. 1920: Cmd. 1559. J). 5. Permanent Body.

### [NTERNATIONAL RADIO COMMUNICATION TECHNICAL COMMITTEE.

---

///\* by chief Allied Governments between Mar. and Sept.  
1921. Obj. To deal with technical problems in connexion with International  
Radio Convention. Repr. Technical experts of countries represented. Ref.  
Cmd. 1559, p. 11.

### INT'L RADIO CONVENTION. GOVERNMENT DEPARTMENTAL CMTE.

---

App. apparently by Committee of Imperial Defence in 1919. Obj. To prepare British "scheme" (Programme) for such a Convention.  
Repr. Presumably Government Departments concerned, and possibly others. Ref. Cmd. 800, p. 6. Diss. During 1920.

### INTERNATIONAL SUB-COMMISSION ON AERIAL NAVIGATION.

---

App. by Peace Conference in 1919. Obj. To draw up "scheme" (Programme) for International Convention for the Regulation of  
International Aerial Navigation. Repr. Allied and Associated States. Ref. II. C, No. 266, 1919. Diss. Reported during 1919.

### INVENTIONS, AIR, COMMITTEE.

---

App. by A.R., Aug. 1917. Obj. To  
examine all inventions relating to heavier-than-air craft and develop and operate suitable ones. Repr. A.B., A.A.C., Adm., W.O.,  
R.A.F., M.M.,  
N.P.L., scientific experts. Ref. Cd. 9145, pp. 11, 12; Cmd. 488, p. 23.

### KITE BALLOONS, ELECTRIFICATION, COMMITTEE.

---

—

App. by  
A.A.C. in 1919. Obj. To report upon means of protecting kite balloons  
from damage caused by atmospheric electrical discharges. Repr. A.M.,  
A.A.C., R.A.F., Royal Society, scientists. Ref. Cmd. 1120, p. 4.

#### KITE BALLOONS.

---

—  
See also Aeronautics Advisory Technical Sub-Committees.

#### LOAD FACTORS SUB-COMMITTEE.

---

—  
App. by A.A.C. at request of  
A.M., Oct. 1919. Obj. To prepare rules for load factors of civil aircraft and  
grant of certificates of air worthiness. Repr. A.M.. A.A.C. Royal Aeronautical  
Societv, Society of British Aircraft Constructors. Ref. Cmd. 1120,  
pp. 4, 11.

#### MEDICAL ADMINISTRATION COMMITTEE.

---

— ^ ;, by A.B.. after  
establishment of separate medical air service, in 1917. Obj. To advise on  
administration of service. Repr. A.B., M.R.C, medical and other experts.  
Ref. Cd. 8981, p. 63. Diss. 1918 or 1919.

#### MEDICAL (CIVIL AVIATION). INTER-ALLIED, SUB-COMMITTEE.-

---

App. in 1921 to annual Anglo-Franco-Belgian Conferences on Civil Aviation  
by Governments concerned. Obj. To investigate fatigue and other medical  
problems, as affecting civil pilots. Repr. Medical experts of the three  
Countries. Ref. Cmd. 1559, p. 14. Presumably more or less Permanent.

#### MEDICAL INVESTIGATION, AIR. COMMITTEE.

---

—  
App. by A.B.. in  
consultation with M.R.C, in 1917. Obj. To advise generally on medical  
aspects of aeronautics, co-ordinate investigations, and circulate information.  
Repr. A.B., M.R.C, W.O., medical experts, scientific research, with  
correspondents in France. Ref. Cd. 8981, pp. 62, 77.  
(N.B. A Medical Research Committee, referred to in Cd. 9005, p. 63, as  
appointed to investigate physiological and similar problems of flying at  
high altitudes and disabilities specially affecting flying men, may be the  
same body.)

#### MEDICAL SERVICES, AIR, ADVISORY COMMITTEE

---

—./^, by A.B.  
in 1917. Obj. To advise upon best medical organization for war service.  
Repr. A.B., M.R.C, medical and other experts. Ref. Cd. 8981, p. 62.

#### METEOROLOGY.

---

—  
See Heading to Section and Aeronautics Advisory  
Technical Sub-Committees.

#### MUSICAL, AIR FORCE, DIRECTORATE.

---

—  
App. by A.M. in 1918. Obj.

## Notes on "Civil Aviation"

To provide music for R.A.F., and establish and administer School of Music for training musicians. Repr. Musicians. Ref. Cmd. 325, p. 100. School intended to be permanent.

### NAVIGATIONAL INSTRUMENTS COMMITTEE.

---

—  
App. by A.M. in 1920  
or 1921. Obj. To report generally upon subject with view to issue of directions by A.M. Repr. A.M., aircraft industries, insurance. Ref. Cmd. 1559, p. 6. Diss. 1921.

### ORGANIZATION, AIR, COMMITTEE.

---

App. by War Cabinet, Aug. 1917.  
Obj. To work out a "scheme" (Programme) to give effect to Cabinet's decision to establish A.M. Repr. War Cabinet, A.B., Adm., Tre., W.O. Ref. Cd. 9005, p. 59.  
Diss. By Nov. 1917.

### OXYGEN SUPPLY FOR FLYING MEN, INVESTIGATION COMMITTEE.

---

—  
App. by A.B. in 1917. Obj. To study supply of oxygen to flying men. Repr. Medical and other experts. Ref. Cd. 8825, p. 79.  
RESEARCH.-

—  
See Aeronautical Advisory Technical Sub-Committees,  
Civil Aerial Transport, Education, Medical Investigation.

### STAFFS INVESTIGATION COMMITTEE.

---

—  
App. by A.M. in 1919.  
Obj. To report on reductions of staff and redistribution of duties. Repr. Chief Departments of A.M. Ref. H.C., No. 168, 1919, p. 6.

### STORES ACCOUNTS (AIR MINISTRY) COMMITTEE.

---

— ^, apparently  
l>v A.M. in 1920. Obj. To prepare improved system of store accounts for A.M. Repr. Not stated. Ref. H.C., No. 321, 1920, p. xiv.

### TECHNICAL.

---

—  
See Aeronautics Advisory, and Civil Aerial Transport.

## British Ministry of Munitions (of War)

The Ministry of Munitions was established by the Ministry of Munitions Act, 1915 (5 & 6 Geo. V. c. 51) of 9th June 1915, under a Minister and Parliamentary Secretary and (later) Secretaries. It absorbed the Armaments Output Department of the War Office and various Committees.

## Notes on "Civil Aviation"

The object of the Ministry was to organize generally the output of munitions of war ; and the scope of its work was largely increased by transfers from other Departments and by the taking over of the Royal Arsenals. The Ministry was established for the period of the War. and not more than twelve months after its conclusion. See Public General Acts, 1915.

At the close of the War the Ministry of Munitions had sixty or more Departments, divided into ten groups:

- (1) Secretariat, including Priority, Requirements, Statistics, Demobilization and Resettlement. &c. ;
- (2) Finance, including Contracts. Factory Audit, Costs, &c. ;
- (3) Design, including Inspection;
- (4) Steel and Iron;
- (5) Materials, including Non- Ferrous Metals, Railway Materials, Optical Munitions, Potash, &c. ;
- (6) Explosives, including Oils and Chemical Warfare ;
- (7) Ordnance ;
- (8) Warfare, including Mechanical Warfare, Trench Warfare. Mechanical Transport, &c. ;
- (9) Aircraft ;
- (10) Labour.

After the Armistice proposals for re-organizing the Ministry as a Ministry of Supply were considered, but subsequently abandoned. It was decided by the Cabinet that the Ministry should cease as a purchasing department in Mar. 1920 (see H.C.. Nos. 100 &c., 1920, p. xx). This decision does not appear to have been carried out ; but the Ministry was subsequently wound up by the end of Mar. 1921, when the Disposals and Liquidation Commission (see below) took over its remaining functions (see H.C., No. 102. 1921, p. 18).

### ABBREVIATION'S

M.M. = Ministry of Munitions.

M.\Y.A.(s) = Munitions of War Act(s). The date after the letters M.W.A. indicates an Act of a particular year.

### ACCOUNTANTS, JOINT COMMITTEE.

—

App. jointly by M.M., Adm.,

W.O., in 1917 or earlier. Obj. To assist the Departments in systematizing costs. Repr. Accountants. Ref. H.C., No. 132, 1918, p. 15.

ACCOUNTS LIQUIDATION COMMITTEE.—^, by M.M.. under powers delegated by Tre., at end of 1919. Obj. To co-ordinate and expedite liquidation and settle disputes. Repr. Mainly Financial Officers of M.M. Ref. Cmd. 1055, p. 13 ; H.C., No. 97, 1919, p. 23. Diss. Not later than Mar. 1921.

(An Aircraft Production Sub-Committee was appointed by this Committee.)

ADVISORY COUNCIL. MUNITIONS.

—

See under Munitions.

AGRICULTURAL MACHINERY ADVISORY COMMITTEE.

—

App.

jointly by M.M., B.A., and M.F., at instance of M.M., Jan. 1917. Obj. To advise Agricultural Machinery Branch upon control of manufacture of machinery and implements. Repr. M.M., B.A., B.A.(Sc), D.A.T.I., M.F., agricultural machinery trade. Ref. J.B.A., Jan. 1917; B.T.J. , 11th Jan. 1917.

### AGRICULTURAL MACHINERY BRANCH.

—

App. by M.M. jointly

with B.A.,and M.F., Jan. 1917. Obj. To control manufacture of agricultural machinery and implements (control of distribution and use remaining with B.A.). Repr. Official and expert. Ref. B.T.J. , 11th Jan. 1917.

AIRCRAFT COMMITTEE, INTER ALLIED.—^ under Munitions Council. Inter Allied.

AIRCRAFT DISPOSALS COMPANY.—Formed to carry out disposal of

## Notes on "Civil Aviation"

surplus aircraft and aeronautical effects purchased from Disposals Board (see Cmd. 800, p. 11).

AIRCRAFT PRODUCTION. See under Accounts Liquidation above.

AIRCRAFT. See also Aviation.

ALCOHOL FOR MOTOR FUEL, INTER-DEPARTMENTAL COMMITTEE.

App. by Petroleum Executive (q. v.), Oct. 1918. Obj. To report generally upon manufacture and use of motor fuel from alcohol. Repr. Petroleum Executive, various Government Departments, motor users, oil companies, chemical research. Ref. Cmd. 218. Diss. June 1919.

ALCOHOL SUPPLIES COMMITTEE.

—

App. by M.M. at beginning of 1917. Obj. To advise M.M. on means of securing adequate supplies for war purposes and essential industries. Repr. M.M., B.A., B.T., Board of Customs and Excise, distilleries, rectifiers, methylenes, blenders, merchants. Ref. B.T.J., 4th Jan. 1917.

ALLOY STEEL. SHEFFIELD. COMMITTEE. App. by the Government in 1918 or earlier. Obj. To develop production of alloy steel for war purposes. Repr. Manufacturers, experts. Ref. Cmd. 325. p. 114.

AMMONIA EXECUTIVE COMMITTEE.— App. by M.M. after consultation with Nitrogen Products Committee (q.v.), Mar. 1917. Obj. To take necessary action to develop production of ammonia, &c., and provide plant, on lines laid down by Nitrogen Committee. Repr. M.M., W.O., technical engineers, explosives and other experts. Ref. Cmd. 482. p. 141. (See also Nitrogen, Synthetic Compounds.)

ARBITRATION TRIBUNAL, SPECIAL (MEN'S WAGES).

—

App. by M.M. Mar. 1915, under M.W.A., 1916. Obj. To advise M.M. on issue of directions as to wages of semi-skilled and unskilled men on munitions work, and deal with trade disputes referred to them under M.W.A.'s. Repr. Legal Profession. M.M., employers. T.U.'s of skilled and unskilled workers. Ref. P.G.A., 1914-16; Cole, p. 104; II. C. No. 185. 1918. pp. 19, 20. Diss. Had very few cases and appears soon to have fallen into abeyance.

ARBITRATION TRIBUNAL, SPECIAL (12 PERCENT. WAS BONUS).

The Committee on Production (see B.T.) was appointed as the Special Tribunal for dealing with disputes relating to the bonus, at end of Dec. 1917 under M.W.A., 1917. See Cole. p. 171; B.T.J., 14th Feb. 1918, p. 192.

ARBITRATION TRIBUNAL, SPECIAL (WOMEN'S WAGES). -App.

by M.M. Mar. 1915, under M.W.A., 1916. and reconstituted, in view of increased work. Oct. 1917. Obj. To advise M.M. on issue of directions as to women's wages on munitions work, and deal with trade disputes referred to them under M.W.A.'s. Repr. Legal Profession, B.T., employers and T.U.'s, women. Ref. P.G.A., 1914-16; L.G., July 1916, p. 265; Cole, pp. 84-5. Diss. Replaced after close of war by Interim Court of Arbitration (see M.L.).

ARMAMENTS OUTPUT COMMITTEE, (LATER) DEPARTMENT-

See W.O. This organization formed nucleus of M.M.

ARMAMENTS OUTPUT COMMITTEES, LOCAL.

—

App. under auspices of W.O. in April and May 1915. by local employers and T.U.'s, beginning with North-East Coast, 9th April, and taken over by M.M. Obj. To organize and develop generally by joint action munitions production in their areas. Repr. Employers and T.U.'s concerned. Ref. Cole, pp. 75-6, 124. Diss.

## Notes on "Civil Aviation"

Fell into abeyance by winter of 1915-16, being replaced sometimes by Boards of Management. District (q.v.).  
ARMY RESERVE MUNITIONS WORKERS.

—  
App. by. or by arrangement with, M.M. early in 1917. Obj. To secure necessary supplies of unskilled labour of military age for munitions work, subject to liability to recall to military service. Repr. Unskilled men of military age. Ref. Cole, pp. 136-7. Diss. Close of war.  
AVIATION, BRITISH. COMMISSION. App. either by M.M. or Adm. in 1917 or earlier, in Paris. Obj. To make contracts for aeroplanes and engines in France. Repr. Presumably expert. Ref. H.C., Nos. 83 &c, 1919, p. xv.  
BALFOUR-MACASSEY COMMISSION.

—  
See Clyde Munition Workers.  
BILLETING BOARD. CENTRAL.

—  
App. by M.M.. under Billeting of Civilians Act, in summer of 1917. Obj. To organize provision of billets for persons engaged on work of national importance. Repr. Government Departments concerned, and other members appointed by M.M., including housing experts and women. Ref. P.G.A., 1917-18.  
BILLETING COMMITTEES, LOCAL.— App. by Central Billeting Board (q.v.) from summer of 1917. in localities where civilian workers were billeted. Obj. To organize and supervise locally provision of billets. Repr. L.A.'s concerned and others chosen by Billeting Board. Ref. P.G.A., 1917-18.

BLEACHING POWDER USERS COMMITTEE.— by M.M., Nov.-Dec. 1916. Obj. To advise M.M. on needs of users of bleaching powder. Repr. Users of bleaching powder. Ref. B.T.J., 7th Dec. 1916.  
BOARDS OF MANAGEMENT. MUNITIONS, DISTRICT. App. in various districts, at instigation of M.M., from spring of 1915, forty-six being in existence at end of 1917. Obj. To develop and organize local munitions output. Repr. Employers in engineering and munitions trades, and, in a few cases, on their invitation, T.U.'s. Ref. II. C, No. 40. 1917, pp. 11. 12. (These bodies were sometimes known as Local Munitions Committees, and appointed various local representatives on their work.)  
BOARDS OF MANAGEMENT, MUNITIONS, EXECUTIVE COMMITTEE.

—  
App. by M.M. in or after summer of 1915. Obj. Presumably to carry out central administration in connexion with work of District Boards. Repr. Not stated. Ref. Cd. 8741, p. 8.

BOY WELFARE.

—  
See Health and Welfare Department.  
WILDING LABOUR COMMITTEE. App. by MAI.. Nov. 1915, and reorganized and attached to MX. in 1918. Obj. To secure uniformity in application of Fair Wages Resolution to Government Building Contracts, and (later) co-ordinate use of building labour by Government Departments. Repr. Government Departments concerned. Ref. Cmd. 325, p. 161 ; L.G., July 1918, p. 300 ; H.C., Nos. 185, p. 29, 221, p. 15, 1919. Still in existence as Inter-Departmental Consultative body at MX.  
BUILDING MATERIALS SUPPLY DEPARTMENT.

—  
App. by M.M.

## Notes on "Civil Aviation"

shortly after Armistice. Obj. To organize supply of building materials for housing "schemes" (Programmes). Repr. Official and expert. Ref. Cmd. 824, p. xlii ; Cmd. 1440, p. 121 ; H.C., No. 10. 1022, p. xxv. Diss. Transferred to M.H., June 1920, and in course of liquidation. Feb. 1922.

CANADIAN' SHELL COMMITTEE.— App. by Canadian, in co-operation with British, Government early in the War. Obj. To develop Canadian out put of shells. Repr. Canadian Government, business men, &c. Ref. H.C., No. 40, 1917, p. 15. Diss. Beplaced by Imperial Munitions Board (q.v.), Nov. 1915.

CANTEENS, MUNITIONS. FINANCE COMMITTEE.— App. jointly by M.M. and L.C.B.. Mar. 1917. Obj. To secure financial solvenev of canteens. Repr. M.M.. L.C.B. Ref. H.C., No. 100, &c, 1918, p. viii.

CHEMICAL COMMITTEE (MUNITIONS INVENTIONS DEPARTMENT).

^ See Cd. 9231, p. 2!). Details lacking.

CHEMICALS. MUNITIONS. COMMITTEE INTEH-A LLIED. - See wider Munitions Council, Inter-Allied.

CHEMICAL WARFARE COMMITTEE.—Mentioned Cmd. 905. p. 70. No details.

CHEMICAL WARFARE, MEDICAL PROBLEMS.

—

See W.O.

CHINA WOOD OIL SALES DEPARTMENTAL COMMITTEE.—, ^, by M.M.. probably in 1920. Obj. To inquire into contracts for sales of surplus oil. Repr. M.M. Ref. H.C.. No. 102. 1921. p. 28. Diss. Before Max- L92

CIVIL INDUSTRIES COMMITTEE. -App. by M.M.. originally in Feb. 1917, as Priorities Advisory Committee, and reconstituted under new title, Dee. 1917, as Sub-Committee of Priorities. War Committee (see Cabinet). Obj. To investigate needs of non-essential industries for raw materials, prevent undue restriction and arrange for supplies for them. Repr. Government Departments concerned and prominent business men. Ref. B.TJ.. 1st Aug. 1917 and 9th Jan. 1919. Diss. Jan. 1919.

CLYDE MUNITION WORKERS' COMMISSION. -App. by M.M.. Oct. 1915. Obj. To inquire into apprehended differences and discontent affecting munition workers in Clyde District. Repr. Composed of Lord Balfour of Burleigh and Mr. (now Sir) Lvndcn Maeassey. K.C. Ref. Cd. 8136. Diss. Nov. 1915.

COAL OAS See under (las Traction.

CONTRACTS, MUNITIONS, LIQUIDATION COMMITTEE.

—

App. by M.M., Sept. 1919. Obj. To expedite and be responsible for liquidation of contracts and co-ordinate work. Repr. M.M. (Financial Departments), business experts. Ref T., 23rd Sept. 1919, p. 11.

CONTRACTS, READJUSTMENT, ADVISORY COMMITTEE.

—

App. jointly by Disposals and Liquidation Commission (q.v.) and Tre., early in 1921. Obj. To advise Commission upon readjustment of contracts, on grounds of trade and monetary stringency, during post-war liquidations. Repr. The Commission, Tre. and others presumably. Rcf. II. C, No. 10, 1922, p. xxxiii, No. 102, 1921, p. 26.

CONTROLLED ESTABLISHMENTS, PROFITS.

—

See Limitation of Profits.

## Notes on "Civil Aviation"

CO-ORDINATING, MINISTRY OF MUNITIONS. COMMITTEE.

App.

by Munitions Council (q.v.) late in 1917. Obj. To co-ordinate work of various Departments of M.M. under the Council. Repr. The Council, various Departments. Ref. H.C., No. 132. 1918, p. 4.

COPPER, PURCHASE AND DISTRIBUTION, COMMITTEE.

App.

by M.M., Dec. 1916. Obj. To advise M.M. on these matters. Repr. Merchants, importers, Metal Exchanges. Ref. B.T.J., 14th Dec. 1916; T., 12th Dec. 1916, p. 5.

COSTS OF PRODUCTION (NATIONAL FACTORIES) COMMITTEE.—

App. by M.M. late in 1916 or in 1917. Obj. To control costing work of National Factories and secure improvements. Repr. Presumably largely expert. Ref. Cmd. 325, p. 111.

DEMOBILIZATION BOARD. MUNITIONS.

—

App. by M.M.. early

Nov. 1918, to co-operate with Demobilization and Resettlement Department (see M.L.). Obj. To secure speedy transition from munitions to normal production, and carry out liquidation of contracts, excluding questions assigned to M.L. Repr. M.M., the Military Services, &c, with financial and expert advisers. Ref. B.T.J.. 14th Nov., p. 609 ; L.G., Nov. 1918.

(See also Reconstruction and Demobilization.)

DESTRUCTION OF DOCUMENTS TRIBUNAL.— ^, by H.O., April

1921, under Tribunals of Inquiry (Evidence) Act, 1921. Obj. To report upon alleged instructions by officer of M.M. to destroy or conceal documents.

Repr. H.L., Legal Profession, business men, chartered accountants.

Ref Cmd. 1340. Diss. May 1921.

DILUTION COMMISSIONS, CLYDE AND TYNE.

—

App. by M.M.,

Jan. 1916. Obj. To organize and supervise drawing up of "schemes" (Programmes) of dilution in individual establishments, in consultation with shop stewards and local T.U. officials. Repr. M.M., B.T., Employers, Legal Profession, Labour. Ref. Cole, pp. 108-9 ; Orton, Labour in Transition, p. 85. Diss.

Tyne Commission, May 1916, work being taken over by Clyde Commission, which came to an end by 1st Sept. 1916.

(Provision was later made by appointment of Dilution Officers and otherwise for a similar development of dilution in other areas.)

DILUTION, SHOP COMMITTEES.— ^, by workpeople concerned at

suggestion of Dilution Commissions in Clyde and Tyne areas and of M.M. elsewhere in individual establishments, from 1916.

Obj. To discuss with

management details and difficulties of "schemes" (Programmes) of dilution. Repr. Sometimes skilled workpeople only (shop stewards and T.U.'s), sometimes firm and skilled workpeople jointly, usually with provision for arbitration on disputed points. Repr. Cole, p. 109 ; Orton, Labour in Transition, p. 85.

DISPOSALS ADVISORY COMMITTEES.

—

App. by M.M. from Jan.

1919. Obj. To advise the Sectional Boards established to deal with individual classes of property. Repr. Not stated, presumably largely expert.

Ref. II. C, No. 97. 1920. p. • > {}.

DISPOSALS ADVISORY COUNCIL.—This was a reconstitution of the Surplus Government Property Advisory Council (.sec M.R.). which was dissolved on constitution of Disposals Board (q.v.).

(This appears to be the Standing Advisory Committee of M.M. on Surplus War Munitions which in T. of 17th April 1919. p. 535. was referred

## Notes on "Civil Aviation"

to as having existed for some time.)

DISPOSALS AND LIQUIDATION COMMISSION. App. apparently by Government on closing down of M.M. at end of Mar. 1921. absorbing Disposals Board. Obj. To wind up accounts of war-time Ministries and Departments, and to carry out disposal of surplus stores. Repr. Parliament. W.O.. A.M.. M.M., Prominent Business Men. Chartered Accountants. Ref. Cmd. I 112, No. L02, 1921. passim. Still in existence at end of 1922. DISPOSALS BOARD. App. by M.M.. under Cabinet decision. Jan. 1919, in place of Surplus Government Property Disposals Board (see M.R.). Obj. To organize disposal of surplus government property. Repr. Parliament, M.M.. W.O., prominent manufacturers and business men. Ref. Cmd. 850, pp. .\*). 1.'5. Diss. Absorbed into Disposals and Liquidation Commission (q.v.), Mar. 1921.

(The Board appointed Sectional Boards to deal with particular classes of property.)

DISPOSALS BOA HI). AMALGAMATION COMMITTEE.

—

App. by the Board in 1920 or early 1921. Obj. To secure amalgamation of controls during disposal, with a view to economy. Repr. The Board. Ref. Cmd. 1412, p. 0.

DISPOSAL SECTIONAL BOARDS. See under Disposals Board.

DISPOSALS. See also Salvage, and M.R. under Surplus Government Property.

EMERGENCY (MUNITIONS' EXPENDITURE) COMMITTEE.—.SY<' Tre.

ENLISTMENTS. See Labour Enlistments.

ESTABLISHMENT, BRANCH SUB-COMMITTEES, App. by M.M. since Armistice. Obj. To expedite reduction of staffs of particular branches of M.M. Repr. Experienced officials. Ref. Cmd. 1055. p. 14.

ESTABLISHMENT COMMITTEE. App. by M.M., Feb. 1919. Obj. To expedite reductions in head-quarters' staff. Repr. Business men with experience of Government Departments. Ref. Cmd. 1055. p. 14.

EXPENDITURE, MUNITIONS. STANDING AND EMERGENCY

S TANDING COMMITTEES. Incidental reference on pp. 15. 16 of H.C., No. 102, 1921. The Emergency Standing Committee may be the Emergency

Committee referred to above. See also Tre.

EXPLOSIONS (COMPENSATION) ADVISORY COMMITTEE.

—

App.

by M.M. about end of 1916. under Munitions (Liability for Explosions) Act, 1916. Obj. To advise M.M. on rate of contributions to "scheme" (Programme) of insurance against liability to injury, fix rates and decide disputes. Repr. Mainly Insurance Experts. Ref. P.G.A., 1916.

(This is presumably the Explosions at Government and Controlled Factories Committee of Cd. 8741. p. 5.)

EXPLOSIONS IN EXPLOSIVE FACTORIES. STANDING COMMITTEE.

—

App. by M.M. in 1917. Obj. To inquire into causes of explosions and fires in explosives factories. Repr. M.M.. II. O.. and others. Ref. Cd. 9050, p. 2.

EXPLOSIVES AND EXPLOSIVES" MATERIALS INTER-ALLIED ADVISORY COMMITTEE.—. ^, jointly by chief Allied Governments early in 1918. Obj. To advise as to purchase of these products by British Government for European Allies. Repr. Chief Allied Governments. Ref. Cd. 9005.

EXPLOSIVES. HANDLING AND STORAGE COMMITTEE (LOCAL).

## Notes on "Civil Aviation"

App. by M.M. in 1917. Obj. To investigate this matter in a Northern Port. Repr. M.M.. H.O.. and others. Ref. Cd. 90.30. p. 2. Diss. Presumably later in 1917.

FERROUS SCRAP BRANCH.

—

App. by M.M. by May 1918. Obj. To organize recovery of materials from ferrous scrap. Repr. Official and expert. Ref. Cmd. 325. p. 114.

FERTILIZERS COMMITTEES.

—

See M.F. under Fertilizers. Phosphates and Potash, Sulphate of Ammonia.

FINANCE, MUNITIONS. ADVISORY COMMITTEE. -App. by M.M. prior to Sept. 1917. Ref. without details. Cd. 8741. p. 8.

FINANCE MUNITIONS COMMITTEE.—App. prior to June 1916.

Ref. without details, Cd. 8256, 8741, p. 8.

FLAX SUPPLIES COMMITTEE.

—

App. by M.M.. about Aug. 1917. after requisitioning of flax crop. Obj. To assist organization of M.M. at Belfast in purchase. &c., of crop. Repr. M.M.. the Linen Trade and. apparently, farmers. Ref. B.T.J. , 27th June 1918. p. 802. Diss. Transferred to B.f., April 1919 and terminated by Mar. 1920.

FOOD SECTION, MINISTRY OF MUNITIONS.

—

App. by M.M. in winter of 1917-18. Obj. To secure, in co-operation with M.F. L.C.B.. &c., adequate supplies of food for munition workers, and advise upon administration of canteens, taking over certain duties from L.C.B. Repr. M.M..

L.C.B., M.F., W.O. and others. Ref. Cmd. 325. p. 291. 340, p. 30. Diss.

Some duties transferred back later to L.C.B. For Food, see also S.I.R.

FOOD SUPPLY TO MUNITION WORKERS COMMITTEE (SOMETIMES CALLED MUNITIONS FOOD COMMITTEE). App. by M.M.

early in 1918. Obj. To advise on supply and distribution of food to munition workers. Repr. M.M.. Adm.. L.C.B.. medical and canteen

experts, Labour, women. Ref. B.T.J.. 25th April 1918 : Cd. 9005. p. 195. FRENCH MUNITIONS OUTPUT, MISSION ON.

App. by M.M., with

approval of French Minister of Munitions, Nov. 1915. Obj. To visit French industrial districts and report on causes of increased munitions output.

liepr. M.M., engineering employers, Labour, experts in munitions engineering.

Ref. Cd. 8187. Diss. Dec. 1915.

See W.O.

HOLIDAYS, MUNITIONS, COMMITTEE.

—  
App. by M.M., July 1916.

Obj. To recommend arrangements for workmen to take holidays in relays to secure uninterrupted output. Repr. Parliament, M.M., II. O., Employers, Labour, women, social experts. Ref. T., 28th July 1926.

HORSE CHESTNUTS.

—  
See M.F.

HOSTELS DEPARTMENT.

—  
App. by M.M. in 1916. Obj. To organize hostel accommodation for female and other munition workers required to live away from home. Repr. Official and expert. Ref. Cmd. 340.

HOURS OF LABOUR, MUNITIONS, COMMITTEE.

## Notes on "Civil Aviation"

App. by M.M.

late in 1915, in co-operation with I.O. Obj. To secure joint consideration by two Departments of applications for Sunday work or long overtime during the week. Repr. M.M., H.O. Ref. Cd. 8276, p. 6.

IMPERIAL MINERAL RESOURCES BUREAU INTER-DEPARTMENTAL COMMITTEE.

—

App. by M.M., June 1917. Obj. To prepare

"scheme" (Programme) for Bureau in London. Repr. M.M., In.O., G.I., The Dominions. Geological Survey. Imperial Institute, mining experts. Ref. Cd. 8916.

Diss. Late in 1917.

IMPERIAL MUNITIONS BOARD.— App. by Canadian Government, in co-operation with M.M.. Nov. 1915, replacing Canadian Shell Committee.

Obj. To develop Canadian munitions production, and act as purchasing agent for G.B. and (later) U.S.A. in Canada. Repr. Canadian Government, business men, &c. Ref. II. C, No. 40, 1917, p. 15 ; Cmd. 325, p. 118.

Diss. Operations terminated by M.M. immediately after Armistice.

IRISH BRANCH, MINISTRY OF MUNITIONS.— ^, by M.M. in second half of 1915. Obj. To organize munitions output in Ireland. Repr. Official and expert. Ref. Cd. 8303, p. xiii.

INDIA MUNITIONS BOARD.

—

See In.O.

INDUSTRIAL UNREST COMMISSION OF INQUIRY. See Cabinet.

INTER-ALLIED MUNITIONS BUREAU. See Munitions.

LABOUR ADVISORY BOARDS OR COMMITTEES ON WAR OUTPUT, LOCAL.

—

App. by M.M. and Labour Advisory Committee.

National (see next entry), mainly in Oct. and Nov. 1915, but some earlier and later. Obj. To assist in enrolment of W.M.V.'s, and generally investigate employers' failure to observe M.W.A.'s, secure records of changes in workshop practice and watch dilution "schemes" (Programmes). Repr. Munitions T.U.'s. Ref. L.Y.B., 1910, p. 112 ; Cole, p. 104.

LABOUR ADVISORY COMMITTEE ON WAR OUTPUT, NATIONAL.

—App. by the Government after Treasury Conference (Mar. 1915). and subsequently absorbed in M.M. Obj. To advise generally in regard to securing and utilizing labour for munitions work. Repr. Munitions T.U.'s. Ref. L.Y.B., 1910 ; Cole, p. 74. Diss. Superseded by Trade Union Advisory Committee (q.v.) about end of 1917.

LABOUR EMBARGOES JOINT CONSULTATIVE COMMITTEE.—

App. by the Government on recommendation of Labour Embargoes Inquiry Committee (q.v.), Oct. 1918. Obj. To advise M.M. and Adm. on means of securing best possible distribution of skilled labour in munitions trades. Rcpr. The Government, Employers and T.U.'s concerned. lief.

L.Y.U., 1919, p. 105 ; Cole, p. 156. Diss. Rendered nugatory by Armistice.

(The Trade Union Women's Advisory Committee were also invited to appoint members, but some difficulties arose over the representation to be accorded to them.)

LABOUR EMBARGOES INQUIRY COMMITTEE (MR. JUSTICE McCAR DIE'S COMMITTEE).

—

App. by M.M., Aug. 1918. Obj. To

investigate question of embargoes on employment of skilled labour and causes of strike over them. Rcpr. M.M., Adm., M.L., Employers, T.U.'s. Ref. H.M.S.O., 1918 ; Cole, p. 150. Diss. Sept. 1918.

LABOUR ENLISTMENTS COMPLAINTS COMMITTEE AND SECTION.

App. by M.M., April 1917. Obj. To deal with cases where Local

## Notes on "Civil Aviation"

Committees (q.v.) fail to agree. Rcpr. Presumably Departments concerned and Labour. Ref. L.Y.R., 1919, p. 147.

### LABOUR ENLISTMENT COMPLAINTS. LOCAL COMMITTEES.—

App. by M.M., April 1917, for each area, under Schedule of Protected Occupations. Obj. To deal with complaints of victimization and improper enlistment. Rcpr. M.M.. W.O., Adm., Chief Dilution Officer for each area, Labour. Ref. L.Y.R., 1919, p. 117.

### LABOUR PRIORITY MUNITIONS COMMITTEE.

—

App. by M.M.  
in 1915 or early 1910. Obj. To deal with questions of priority for available labour. Repr. Not stated. Ref. Cd. 8741, p. 8.

### LABOUR SUPPLY, MUNITIONS, CENTRAL COMMITTEE.

—

App. by  
M.M.. Sept. 1915. Obj. To promote and speed up dilution and preparation of definite "schemes" (Programmes). Repr. M.M.. National Labour Advisory Committee, engineering employers and T.U.'s. Ref. Orton, pp. 00, 72; Cole, p. 88.  
Dmj. In 1917. its functions having been gradually taken over by Arbitration Tribunals, Special (sec above).

### LEAD, SPANISH, PURCHASES. INTER-ALLIED COMMITTEE.—

App. jointly by the Chief Allied Governments early in 1918. Obj. To purchase supplies jointly. Rcpr. The Governments concerned. Ref. Cd. 9005.

LEAVING CERTIFICATES.—See under Rates of Skilled Time-workers.

### LIMITATION OF PROFITS. ACCOUNTANTS ADVISORY COMMITTEE.

App. by M.M. before .Line 1917. Obj. To advise on questions of valuation, accountancy. &c., in this connexion. Repr. Consulting chartered accountants. Ref Cd. 8623, pp. '5-5.

LIMITATION OF PROFITS, HOARD OF REFEREES. App. by M.M.  
under MAY. A.. 1915, by Munitions (Limitation of Profits) Rules. Sept. 1915. Obj. To decide disputed cases of assessment. &c. Repr. Largely expert. Ref. P.G.A., 1915; E.G., Oct. 1910 (Supplement, pp. 5-7) ; Cd. 87 U, p. 1 (Controlled Establishments. Hoard of Referees on Profits).

LIQUIDATION HOARD. App. by the Disposals and Liquidation Commission (q.v.), April 1921. Obj. To exercise certain of former powers of M.M. for liquidating accounts and contracts. Repr. The Commission Civil Service, Chartered Accountants. Ref. Cmd. 1640, p. 15.

### LOCAL MUNITION'S COMMITTEES.

—

See Armament Output Committees  
; Boards of Management, District ; Metropolitan Munitions Committee.

### LUBRICATING OILS ADVISORY COMMITTEE.

—

App. by M.M.  
prior to Sept. 1917. Ref, without details. Cd. 8741, p. 7.  
McCARDIE (MR. JUSTICE) COMMITTEE.

—

See Labour Embargoes.

MACHINE TOOLS CENTRAL CLEARING HOUSE. ~ ^ Lv;;. by M.M.  
late in 1916. Obj. To secure most efficient distribution of existing machine tools and plant. Repr. Official and expert. Ref. Cd. 9005. p. 7 1.  
(A Census of Machinery had already been carried out under W.O. and M.M. in 1915.)

### MACHINE TOOLS COMMITTEE.

—

## Notes on "Civil Aviation"

App. prior to Sept. 1917, either by M.M. or by Armaments Output Committee, and absorbed later in M.M.  
Obj. To organize and supervise output of machine tools. Repr. Machine tool makers and others. Ref. Cd. 8741, p. 7.  
MAN POWER. TRADE UNION. COMMITTEE.

—  
App. by Munitions  
Trade Unions (other than Amalgamated Society of Engineers) during negotiations with the Government, early in 1918. Obj. To discuss with Amalgamated Society of Engineers revision of schedule of Protected Occupations and demand for combing out of all dilutees before taking of skilled engineers for the Army. Repr. The T.U.'s concerned. Ref.T., 15th Feb. 1918, p. 7.  
MATERIALS.

—  
See Metals and Materials.  
MECHANICAL TRANSPORT INTER-ALLIED COMMITTEE.- Set e under Munitions Council, Inter- Allied.  
METALS AND MATERIALS ECONOMY COMMITTEE.— App. by M.M. Nov. 1916. Obj. To advise on most economical use of metals in manufacture of munitions. Repr. Not stated. Ref. B.T.J., 30th Nov. 1916.  
METROPOLITAN MUNITIONS COMMITTEE.

App. by M.M. in summer of 1915. Obj. To organize production of munitions in London area for M.M. Repr. Manufacturers and others in London area. Ref. B.T.J.

,  
23rd May 1918. Diss. Absorbed into central organization of M.M., Jan. 1918.  
MILITARY SERVICE COMMITTEE.— by M.M. in autumn of 1916.  
Obj. To examine cases of fit men of military age on head-quarters' staff, to secure release for military service of all not indispensable to efficiency of M.M. Repr. M.M., London Ship-owners' and Transport Workers' Military Service Committee. Ref. Cd. 8411. Diss. Oct.-Nov. 1916.  
MINERAL OIL.

—  
See under Oil.  
MINERAL RESOURCES ADVISORY COMMITTEE.

—  
App. by M.M..  
Mar. 1917. Obj. To advise on development of home resources (other than coal and iron) for war purposes. Repr. M.M., B.T., D.A.T.I., Geological Survey, mining and metallurgical experts. Ref. B.T.J., 5th April 1917 ; Cd. 9184. Diss. Reported Mar. 1918, but seems to have continued in existence subsequently.

### MINERAL RESOURCES DEVELOPMENT DEPARTMENT.

—  
App. by M.M., Mar. 1917. Obj. To examine and develop home mineral properties (except coal and iron) for war purposes. Repr. Official and expert. Ref. B.T.J. , 5th April 1917, p. 66; Cd. 9184..  
MOTOR VEHICLES PRIORITY.

—  
See under Priority, Munitions, Subcommittees.  
MOTORS, ARMY, SALES ADVISORY COMMITTEE. App. by Disposals Board in winter of 1918-19. Obj. To advise and assist in disposal of surplus army motors. Repr. Motor manufacturers and users. Ref. T., 20th Mar. 1919, p. 7.

## Notes on "Civil Aviation"

MUNITIONS ACT, 1915, AMENDMENT COMMITTEE.

—

App. by Munitions T.U.'s at a Conference with the Minister of Munitions. 30th Nov. 1915. Obj. To negotiate for amendments to M.W.A. Repr. Munitions T.U.'s. Ref. Cole, pp. 11521. Diss. The Committee appears to have come to an end, Dec. 1915, and a further National Conference of Munitions T.U.'s appointed another Committee to negotiate with M.M. (See also Munitions of War Bill, 1917.)

MUNITIONS ADVISORY COMMITTEE.

—

App. prior to June 1916. Ref. without details, Cd. 8256, p. 6. This appears to be either the Advisory Council or the Cabinet Committee (see below).

MUNITIONS ADVISORY COUNCIL.

—

App. by M.M. in 1915 or early 1916. Obj. To advise and assist M.M. generally. Repr. Heads of important departments in M.M. Ref. H.C.. No. 132, 1918, p. Diss. Absorbed into Munitions Council (q.v.), Aug. 1917. MUNITIONS BUREAU, INTER-ALLIED. App. prior to Sept. 1917. Ref. without details. Cd. 8741, p. 8. MUNITION'S. CABINET COMMITTEE. See Cabinet. MUNITIONS COUNCIL. App. by Minister of Munitions, in reorganization of M.M., Sept. 1917. and reconstructed shortly after the Armistice for purposes of disposal and liquidation. Obj. To co-ordinate and direct different branches of the work, and settle important questions of policy. Repr. Composed of the Minister, Parliamentary Secretaries and representatives of the ten Groups of Departments (see Heading to Section) in M.M. Ref. II. C. No. 151, 1917, p. xi; Cd. 9005, p. 68; Cmd. 325, p. 125. Diss. By end of Mar. 1921.

MUNITIONS COUNCIL, INTER-ALLIED. App. by Chief Allied Governments, June 1918. Obj. To organize single control of purchase and distribution of munitions for allies, and co-ordinate work of Committees (similarly constituted) for important branches of munitions work. Repr. Chief Allied Governments. Ref. Cmd. 825, pp. 2;}. 1089. 169. Diss. At or after Armistice.

(Committees were constituted for Aircraft, Chemicals, Explosives, Mechanical Transport, Nitrates (see Nitrate of Soda Executive), Non-Ferrous Metals, and Steel.)

MUNITIONS FOOD COMMITTEE. See Food Supply.

MUNITIONS INVENTIONS ADVISORY PANEL. App. by M.M.. Aug. 1915. Obj. To assist Munitions Inventions Branch in dealing with projects of inventions for munitions for land warfare. Repr. Scientific experts.

Ref. B.T.J.. Sept. 1915.

(The Panel appointed Committees of its members to investigate various projects.)

MUNITIONS INVENTIONS BRANCH, (LATER) DEPARTMENT.—

App. by M.M. in summer of 1915. Obj. To examine and develop projects for inventions for land warfare, submitted to M.M. Repr. M.M. and experts. Ref. Cd. 9005, p. 62.

MUNITIONS LEVY.

—

See Limitation of Profits.

MUNITIONS OF WAR BILL. 1917, TRADE UNION COMMITTEE.—

App. by 50 Munitions' Trade Unions after conference with Government, May 1917. Obj. To consider amendments to the Bill and confer with M.M. on its terms and on any grievances arising from it. Repr. The T.U.'s concerned.

## Notes on "Civil Aviation"

Ref. T. 11th May 1917. p. 3. Diss. Later in 1917.

MUNITIONS PARLIAMENTARY. PARLIAMENTARY EXECUTIVE COMMITTEES.— The former referred to without details in Cd. 8256, p. 6, was probably appointed in 1915. The Executive Committee (Ref. Cd. 8741, p. 8) would appear to have come into existence in 1916 or the first half of 1917, and was probably a reorganization of the Parliamentary Committee.

The purpose in each case was presumably to organize the work of Members of Parliament in expediting output of munitions and the Committees represented the chief parties in Parliament.

MUNITIONS WORK BUREAUX.

—

See War Munition Volunteers.

MUNITION WORKERS' COMB-OUT, AREA COUNCILS.

—

App. by

M.M.. May 1917. Obj. To carry out government "scheme" (Programme) for comb-out of munitions works under new Trade Card Scheme. Repr. M.M., M.L., M.N.S.. W.O., Labour, Enlistment Complaints Committee. Ref. T., 9th May 1917, p. 3.

NATIONAL FACTORIES COMMITTEE.— Referred to on pp. xvi. xvii. 126-7 of H.C., Nos. 100. &c, 1920. No details are given, but the Committee was apparently appointed by M.M.. who were represented by the Chairman.

See also Costs of Production (National Factories).

NITRATE OF SODA EXECUTIVE.— ^, after Inter-Allied Conference at Paris, Nov.-Dec. 1917, by chief Allied Governments, and attached to M.M. Obj. Joint purchase and supply of Chilean Nitrates for Allied Governments.

Repr. Governments concerned, Commission Internationale de Ravitaillement. Repr. J.B.A., Feb. 1918. Diss. April or May 1919.

NITROGEN PRODUCTS COMMITTEE.

—

App. by M.M., June 1916.

Obj. To advise upon problems of production, supply and distribution of nitrogen and its products in peace and war, and carry out experiments.

Repr. M.M., B.A., B.T., Royal Scientific Societies, eminent scientists, engineers and business experts. Ref. Cmd. 4872. Diss. May 1919.

NITROGEN PRODUCTS SUB-COMMITTEES were appointed by the Main Committee, 'to utilize the special qualifications and experience of its members to the best advantage,' for Economics, Experiments, General Purposes, Power and Gas-Firing Processes (see Cmd. 482. p. 2). A Research Section was also organized by the Munitions Invention Department (q.v.) to conduct experiments.

NITROGEN, SYNTHETIC COMPOUNDS, COMMITTEE OF MUNITIONS COUNCIL.

—

App. by the Council, Oct. 1917. Obj. To examine proposals of Ammonia Executive Committee for factory and processes for synthetic nitrogen production. Repr. Munitions Council. Ref. Cmd. 482, pp. 141-2. Diss. About April 1918.

NON-FERROUS METALS DEPARTMENT.

—

App. by M.M., Mar. 1917.

Obj. To assist in increasing home output. Repr. Official and expert. Ref. Cd. 9005, p. 71.

NON-FERROUS METALS, INTER-ALLIED, COMMITTEE.

See

Munitions Council, Inter-Allied.

OIL FUEL. PRODUCTION FROM HOME SOURCES, COMMITTEE —

## Notes on "Civil Aviation"

Ap/>. by M.M. in consultation with CO. and Petroleum Executive, April 1918. Obj. To advise on proposals of Petroleum Executive, and measures taken by M.M., to increase home production. Repr. Parliament, M.M.. Adm., Coal Controller, with technical adviser (Fuel Research Board). Ref. Cd. 9128. Diss. Later in 1918.

OIL, MINERAL. PRODUCTION DEPARTMENT.— ^ pp. by M.M. at instance of the Government, May or June 1917. Obj. To undertake production of oils from home sources. Repr. Official and expert. Ref. Cd. 9005, p. 135.

OILS AND FATS BRANCH. App. by M.M. as Branch of Explosives Department, on assuming control of these products, Mar. 1917. Obj. To organize control of fats, oils, oil seeds and products (except mineral and essential oils, butter and lard). Repr. Official and expert. Ref. B.T.J., Istli Mar. 1917.

OILS AND FATS CONSULTATIVE COMMITTEE.-- ^, by M.M. by arrangement with B.A. and F.C.. Mar. 1917. Obj. To assist in organizing control of fats, oil seeds and cake. &c. Repr. Government Departments concerned in control. Ref. J.B.A., Mar. 1917.

ORDNANCE FACTORIES COMMITTEE. See Woolwich.

ORDNANCE, MUNITIONS, COMMITTEE. App. by M.M. prior to Sept. 1917. Obj. To initiate and supervise research and, in advisory capacity, criticize and amend designs, submitted by Woolwich Arsenal and armament firms. Repr. 'Officers of high attainments and scientific ability.' Ref. Cd. 8741, p. 8; Cmd. '229. p. 12.

(The Committee worked through a number of Sub-Committees.)

PARLIAMENTARY EXECUTIVE, MUNITIONS, COMMITTEE.

—

See

under Munitions.

PETROLEUM ALLOC ATION COMMITTEE. App. by U.S.A. Fuel Administration about end of 1917. Obj. To avoid competition in placing orders in U.S.A. and (later) fix prices. Repr. The Fuel Administration. Ref. Cmd. 325, p. 204.

PETROLEUM DISTRIBUTION COMMITTEE.—. //>/>. as Committee of the Petroleum Supplies Pool Hoard (q.v.), about April 1917. Obj. To control and regulate distribution of supplies. Repr. The Pool Board. Ref.

B.T.J. , 3rd May 1917; J.B.A., Mar. 1918, p. 1481. Diss. Apparently absorbed into Petroleum Executive by end of 1917.

PETROLEUM EXECUTIVE.

App. at request of Cabinet, by Minister in charge of problem, to work in M.M., Aug. 1917. Obj. To settle questions of policy affecting petroleum oils and oil products and co-ordinate work of consuming Departments. Repr. Departments concerned, scientific and business experts. Ref. Cd. 9005, p. 136 ; B.T.J., 11th Oct. 1917.

PETROLEUM EXECUTIVE COMMITTEE.— Such a Committee, presumably advisory to the Executive, and appointed about the same time, is referred to (without details) in Cmd. 137.

PETROLEUM INTER-ALLIED COUNCIL.

—

App. jointly by American, British, French and Italian Governments, Nov. 1917. Obj. To advise Petroleum Executive on means of providing for Allied requirements and approve purchasing programmes. Repr. The four Governments. Ref. Cmd. 325, pp. 203-4. Diss. After close of War.

(The Council appointed Tank Storage and Specifications Commissions, which visited France and U.S.A. respectively, and eo-operated with the Programmes Committee for Petroleum, see Cabinet.)

PETROLEUM, REGULATION OF SUPPLIES. INTER-DEPARTMENTAL

## Notes on "Civil Aviation"

COMMITTEE.— App. by the Government and housed with M.M., Feb. 1917. Obj. To co-ordinate work of different Departments in connexion with petroleum. Repr. The Departments concerned. Ref. Cd. 9005, p. 135. Diss. Superseded later in 1917 by the Oil, Mineral. Production Department and the Petroleum Supplies Pool Board (q.v.).  
PETROLEUM SUPPLIES, MUNITIONS. BRANCH.

—  
App. by M.M..  
Feb. 1917. Obj. To organize provision and distribution of petroleum and similar oils for munitions purposes. Repr. Official and expert. Ref. B.T.J. , 18th Feb. 1917. Diss. Apparently absorbed into Petroleum Executive by end of 1917.  
PETROLEUM SUPPLIES, MUNITIONS, BRANCH. RESEARCH SECTION.

—  
App. by M.M., Feb. 1917 or later. Obj. To investigate and develop unproved home sources of supply of mineral oils. Repr. Petroleum technologists and experts. Ref. B.T.J., 25th Sept. 1917. Diss. Apparently absorbed into Petroleum Executive by end of 1917.  
PETROLEUM SUPPLIES POOL BOARD.

—  
App. at instance of Government,  
by chief Petroleum Companies jointly with M.M., April 1917. Obj. To ensure adequate supplies for essential purposes by pooling tonnage and distributing facilities and make possible release of men for the Army. Repr. M.M.. Petroleum Companies. Ref. B.T.J. , 3rd May 1917.  
PHOSPHATES AND POTASH DISTRIBUTION COMMITTEE.

—  
See  
under Fertilizers.  
POTASH PRODUCTION BRANCH.

—  
App. by M.M., June 1917. Obj. To secure increased supplies of potash, to meet shortage due to cessation of German imports. Repr. Official and expert. Ref. B.T.J. , 5th Sept. 1918.  
POWER AND GAS FIRING.

—  
See under Nitrogen Products Sub-Committees.  
184 Munitions of War  
PRINTERS' METAL FOR BULLETS, TRADE COMMITTEE.

App.  
by M.M. about Jan. 1918. Obj. To prepare "scheme" (Programme) for using printers' metal and plates for shrapnel bullets to save tonnage. Repr. Printing and publishing firms. Ref. B.T.J., 7th Eel). 1918.

App. in all  
British Overseas Dominions at instigation of M.M., apparently in first half of 1917. Obj. To secure uniformity in allocation of supplies throughout the Empire according to needs of Dominions. Repr. Not stated. Ref. Cd. 9005, p. 72.  
PRIORITIES, MUNITIONS. ADVISORY COMMITTEE.

—  
See Civil  
Industries Committee.  
PRIORITY, MUNITIONS, COMMITTEE.

—  
App. by M.M. in summer or  
autumn of 1915. Obj. To advise Priority, Munitions. Department (q.v.) in its work. Repr. Departments of M.M., and later other Government

## Notes on "Civil Aviation"

Departments concerned. Ref. B.T.J., 1st Aug. 1918.  
PRIORITY, MUNITIONS. DEPARTMENT.

—  
App. by M.M. in summer  
or autumn of 1915. Obj. To co-ordinate and adjust work of different  
departments and claims to priority. Repr. Official and expert. Ref.  
B.T.J., 1st Aug. 1918. Diss. April 1918.  
PRIORITY. MUNITIONS. LABOUR. See under Labour.  
PRIORITY. MUNITIONS, SUB-COMMITTEES.— App. in 1916 and  
1917 by M.M. for Gas Plant, Motor Vehicles. Railway Material and Textile  
Machinery. Obj. To perform functions of Priority Committee for those  
products." Repr. As with Priority Committee. Ref. B.T.J., 1st Aug. 1918.  
PROGRAMME SUB-COMMITTEE. App. by Munitions Council in 1917.  
Obj. To carry out continuous systematic review of munitions' programme.  
Repr. The Council and various Departments, and largely technical. Ref.  
II. C, No. 1918, j). 0.  
RAILWAYS MATERIALS. See Priority. Munitions, Sub-Committees.  
RATES OF SKILLED TIME-WORKERS DEPARTMENTAL COMMITTEE.  
App. by M.M.. Aug. 1917. Obj. To report upon these rates  
with special reference to relation to wages of less skilled men on payment  
by results, and to question of abolition of leaving certificates. Repr.  
Parliament. M.M.. Adm.. M.L., Employers, T.U.'s in Skilled Trades. Ref.  
Cole, pp. 100. 1 OS 9. Diss. Sept. 1917.  
RECONSTRUCTION AND DEMOBILIZATION COMMITTEE.

—  
App.  
by M.M. about June 1917. Obj. To deal with these questions as affecting  
M.M. Repr. Various Departments of M.M. Ref. Cd. 8910: Cmd. 25,  
j). 125. Diss. Absorbed, Nov. 1918. into Demobilization Board (see above),  
and into Department of Civil Demobilization and Resettlement (see M.L.).  
RESTORATION OF TRADE UNION CONDITIONS SPECIAL COMMITTEE.  
This was appointed by the Joint Committee on Labour Problems  
after the War, representing principal national Labour bodies, to  
suggest measures for making guarantees effective and generally watch  
position. (See Cole, pp. 190-5.  
(For other Committees on this subject see Cabinet. M.L.. M.R.)

RESTRICTIONS, TRADE UNION.

—  
See Trade Union Negotiating Committee,  
below.  
RHODESIA MUNITIONS. (LATER) MUNITIONS AND RESOURCES,  
COMMITTEE.

—  
App. by Chartered Company. Nov. 1915. Obj. To assist  
M.M. in developing local munitions production, in co-operation with  
similar Committee for Union of South Africa, and (later) to carry out  
general survey of Rhodesian resources. Repr. Not stated. Ref. B.T.J.,  
24th Oct. 1918.  
ROAD STONE CONTROL COMMITTEE.

—  
App. by M.M., May 1917.  
Obj. To put into operation control of road stone quarries and supplies for  
M.M. Repr. M.M., L.G.B., W.O.. quarry and road experts, R.f. B.T.J.,  
17th May 1918.  
ROAD STONE LOCAL COMMITTEES.

SLOUGH DEPOT. STANDING COMMITTEE.—^, by M.M. in 1920 or 1921. Obj. To deal with sale, &c, of depot. Repr. M.M. and experts, presumably. Ref. H.C., No. 102, 1921, p. 27.

SOCIAL STUDIES, JOINT COMMITTEES.

—

App. by Conference of

representatives of University Departments held apparently at instigation

of M.M. in 1916 or 1917. Obj. To consider means of training welfare workers. Repr. The Universities, social welfare workers, &c. Ref. Report

on Selection and Training of Welfare Supervisors (P. S. King & Son), 1917.

Diss. During 1917.

SOUTH AFRICA MUNITIONS COMMITTEE.—~.Sve under Rhodesia.

SPECIFICATIONS COMMITTEE.

—

App. by M.M. prior to 1918. Obj.

To advise generally upon specifications for contracts. Repr. Presumably largely technical. Ref. II. C, No. 132, 1918, p. 56.

STAFF, DEPARTMENTAL, COMMITTEE.

—

App. by M.M. about Jan.

## Notes on "Civil Aviation"

1918. Obj. To report on economies and improvements in organization of head-quarters' staff. Repr. Parliament. M.M.. Tre. (Staffs Committee), business men, women. Ref. Cd. 9220. Diss. Nov. 1918. For later Committee on M.M. and Disposals Board (staffing and methods), see T., 12th Sept. 1922. pp. 10, 11.  
STEEL, INTER-ALLIED, COMMITTEE.

—  
See under Munitions Council,  
Inter-Allied.  
STEEL ROLLING AREA COMMITTEES.

—  
App. jointly by M.M. and  
Adm., early in 1918, in six areas, covering whole country. Obj. To advise Steel Superintendent for the area, in carrying out control of steel rollings and arranging rolling programmes. Repr. Principal steel manufacturers in area. Ref. B.T.J., 21st Feb. 1918, p. 209.  
STORAGE OF FILLED GUN AMMUNITION COMMITTEE.— App. by  
M.M. in 1916. Obj. To investigate and advise upon methods of storage. Repr. M.M., H.O., and others. Ref. C<1. 8609, p. 4.  
STORES CENTRAL COMMITTEE.

—  
App. by Finance Department of  
M.M. in 1917. Obj. To take charge of custody and accounting for all munitions, except explosives. Repr. Official and expert. Ref. Cd. 9005, p. 79 ; Cmd. 325, p. 112.  
STORES CONCENTRATION. INTER-DEPARTMENTAL COMMITTEE.

—  
-UP- jointly by Disposals Board (q.v.) and other Government  
Departments concerned. Obj. To secure concentration of surplus stocks in a few depots. Repr. The Board, Departments concerned. Ref. Cmd. 1412, p. 7. Still in existence early in 1922.  
SUBSTITUTION DEPARTMENTAL COMMITTEES (INVESTIGATING,  
PLACING, AND CENTRAL). App. by M.M.. apparently in 1919.  
Obj. To carry out substitution of ex-service for non-service men within Department by discovery of suitable posts (INVESTIGATING COMMITTEE), providing suitable candidates for them (PLACING COMMITTEE), and dealing with disagreements between the two other Committees (CENTRAL COMMITTEE). Repr. M.M. and others. Ref. Lytton Committee, 1st Interim Report, pp. 4. 5 (H.M.S.O., 1923). Diss. At or before termination of M.M. See also M.L.  
SULPHUR COMMITTEE. App. by M.M., May 1 017. Obj. To carry out arrangements for purchase of supplies of Sicilian sulphur from Italian Government and distribution to consumers. Repr. M.M.. R.A.. B.T., CO.. F.O.. In.O. Ref. B.T.J., 26th Sept. 1918, p. 413.  
SULPHURIC ACID AND FERTILIZER TRADES, POST-WAR  
POSITION, DEPARTMENTAL COMMITTEE.

—  
App. by M.M., Jan.  
1917, after consultation with B.T. Obj. To consider post-war position of trades, and effects of war-time erections of plant. Repr. M.M., B.A., R.T., M.F., L.G.B., manufacturers. Ref. Cmd. 23. Diss. Reported Feb. 1918.  
SULPHURIC ACID TRADE ADVISORY COMMITTEE.

—  
App. by M.M.  
in 1917 or 1918. Obj. To assist M.M. in determining costs, prices, &c, under control. Repr. Sulphuric Acid Trade. Ref. B.T.J., 3rd Oct. 1918, p. 425.  
SUPERPHOSPHATE ADVISORY COMMITTEE.

## Notes on "Civil Aviation"

—  
App. presumably by  
M.M. prior to 1918. Obj. To advise generally on production of superphosphate.  
Repr. Not stated. Ref. Cmd. 185, 1919, p. h i.  
TEXTILE MACHINERY.

—  
See under Priority, Munitions. Sub-Committees.  
TIME-WORKERS.

—  
See Rates of.  
TIN, INTER-ALLIED EXECUTIVE.

—  
App. by Allied Governments,  
Sept. 1918, apparently to work in connexion with M.M. Obj. To distribute  
supplies equitably and prevent unnecessary competition. Repr. Allied  
Governments. Ref. Cmd. 325. p. 114.  
T.N.T. POISONING COMMITTEE.

—  
App. by M.M., Oct. 1916. Obj. To  
co-ordinate results of inquiries, advise on administrative action, and draw  
up rules for protection. Repr. M.R.C., medical and other experts. Ref.  
Cd. 8825, p. 85.  
TRADE UNION" ADVISORY COMMITTEE. MINISTRY OF MUNITIONS.

—  
App. by M.M., Aug. 1917, superseding Labour Advisory Committee,  
National (q.v.). Obj. To advise M.M. on various questions  
affecting labour and T.U.'s in regard to munitions. Repr. Munitions  
T.U.'s, the Committee being divided into three panels for Engineering  
(skilled workers), Shipbuilding (skilled workers), and General Labour.  
Ref. Cole, p. 152 ; L.Y.B.. 1919, p. 104.  
(Following difficulties as to the position of women on the General  
Labour panel, a separate Committee (see below) was established for them.)  
TRADE UNION NEGOTIATING COMMITTEE.

—  
App. by T.U.'s represented  
at Treasury Conference. Mar. 1915. Obj. To prepare detailed  
proposals on suspension of T.U. restrictions for negotiation with the  
Government. Repr. T.U.'s concerned. Ref. Cole, p. 70. Diss. At  
close of Conference.  
TRADE UNION WOMEN'S ADVISORY COMMITTEE.

App. by MM..  
Nov. 1917, following difficulty as to the position of women on the General  
Labour Panel of the Trade Union Advisory Committee. Obj. To advise  
M.M. on all questions of women's work on munitions. Repr. Women's  
T.U.'s in munitions industries. Ref. Cole, p. 70; L.Y.B., 1919, p. 104.  
TRAMWAYS COMMITTEE.

—  
See B.T.  
TRENCH WARFARE, CHEMICAL, COMMERCIAL. MINES. RESEARCH,  
ADVISORY COMMITTEES.

—  
App. by M.M., probably in  
1915 and 1916. Obj. To advise and assist Trench Warfare Department of M.M. in these subjects. Repr. Presumably largely  
expert (scientists,  
business nu n. &c). Ref. Cd. 8741, p. 11.  
TRIBUNALS. APPEAL, MUNTIONS.

—  
App. by Lord Chancellor and

## Notes on "Civil Aviation"

in Scotland Lord President of Court of Session, about Feb. 1916. Obj. To hear appeals from decisions of Munitions Tribunals on questions of law or mixed law and fact. Repr. To consist of Judges specially appointed. Ref. L.G., Mar. 1916 (Appendix). Diss. As with General and Local Tribunals or en rlier.

TRIBUNALS, GENERAL MUNITIONS. App. by M.M.. under M.W.A., 1915, in summer of 1915, reorganized Feb. 1916, and transferred to M.L. under Restoration of Pre-War Practices Act. Aug. 1919. Obj. To deal with offences and other questions under M.W.A.'s, not dealt with by Local Munitions Tribunals, and matters referred to them by M.M. from Local Tribunals, and, after the War. with cases from Local Munitions Tribunals under Wages (Temporary Regulation) and Restoration of Pre-War Practices Acts. Repr. Independent Chairman, appointed by M.M.. and two or four assessors representing employers and workpeople, the M.W.A., 1916 providing for creation of panels of assessors and for presence of woman assessor on workpeople's side in cases affecting women. Ref. P.G.A., 1915 and 1916; L.G.. Mar. and April 1916 (Statutory Orders printed in Appendices). Diss. About Sept. 1920 on expiry of Wages (Temporary Regulation) Act and close of work under Restoration of Pre-War Practices Act. TRIBUNALS, LOCAL MUNITIONS.

App. by M.M., as with General Munitions Tribunals. Obj. To deal with various offences under M.W.A.'s, applications for leaving certificates, and, after the War. with disputes under Wages (Temporary Regulation) and Restoration of Pre-War Practices Acts. Repr.. Ref.. Diss. As with Tribunals, General Munitions (q.v.). See (ils.) H.C., No. 185, 1921, p. 37.

(The Scottish and Irish General and Local Tribunals were appointed under separate Orders, but otherwise were the same as in England.) VALUATIONS COMMITTEE. App. by M.M. in winter of 1915-16 and subsequently retained by Hoard of Inland Revenue. Obj. To advise as Committee of experts in dealing with values of buildings, plant and machinery set up in Controlled Establishments. Repr. Auctioneers, civil engineers, (state agents, surveyors, and Receiver of Crown Lands. Ref. T. 18th Aug. 1917, p. i.

WAGES OF SKILLED TIME-WORKERS.

See Rah-, of.  
WALTHAM ABBEY.

See Gretna and Waltham Abbey.

WARBLE FLY COMMITTEE. App. by M.M. in 1917. Obj. To circulate information regarding the warble fly. and conduct trials of dressings for their destruction. Repr. Apparently B.A., B.A.(Sc), I. A.T.I. and others. Ref. Cmd. 1917. p. 56. Diss. Presumably replaced by Warble Ely Pest Committee, duly 1918 (see W.O.). See also B.A.

WAR BONUS 12%.—See Arbitration Tribunals.

WAR MUNITION VOLUNTEER SCHEME. App. by M.M.. June 1915.

Obj. To secure voluntary enrolment of skilled workers, for munitions work in any controlled establishment at choice of M.M.. two hundred Munitions Work Bureaux being established temporarily for enrolment. Kepr. Skilled workers. Ref. L.G., July 1915; Cole, pp. 80, 81. Diss. At or after close of war.

WELFARE DEPARTMENT.

See Health and Welfare.  
WELFARE. WORKS' COMMITTEES.

## Notes on "Civil Aviation"

App. in individual factories

during the War, some as result of Welfare campaign, others being Workers' Committees initiated by the workpeople, independently of or in consultation with the management, to organize welfare work and raise funds (see Cmd. 8570, p. 10), representing both male and female workers in various departments (see Cmd. 8570. p. 10). Obj. To secure co-operation of management and workpeople in welfare work within the factory. Repr. Management (in many cases), workpeople (male and female). Ref. Cmd. '5 10, p. 34. The movement was probably not entirely new, but received a great impetus owing to the War and was introduced for the first time in many factories. WOMEN'S SERVICE COMMITTEE.

—  
App. by Health of Munition

Workers' Committee in 1915 or 1916. Details lacking. Ref. Confidential Report (copy in Imperial War Services Museum Library, Women's Work Section). Diss. Reported before end of 1916. WOMEN.

—  
See also Arbitration. Trade Unions.

WOOL. BRITISH AUSTRALIAN, REALIZATION ASSOCIATION.—  
This was an independent company, formed in 1920, which took over from M.M. liquidation of remaining Government stocks of wool. It represented Australian wool growers who formed a directorate. An Australian Wool Council of 18 representing the growers of all the states of the Australian Commonwealth was formed to assist the Association. Similar organizations were contemplated for New Zealand and other wools. See Cmd. 1368, pp. xv, xvi ; B.T.J., 20th Jan. 1921, p. 69. WOOLWICH, ROYAL ORDNANCE FACTORIES, COMMITTEE OF INQUIRY.

—  
App. by M.M., July 1918. Obj. To report on work of factories, with special reference to efficiency, and suggest improvements. Repr. Parliament, M.M., Adm., W.O., engineers, National Shell Factories, accountants. Ref. Cmd. 229. Diss. Mar. 1919. WORKS' BOARD, MUNITIONS.

—  
App. by M.M., Feb. 1917. Obj. To examine proposals for, and supervise, extensions of Controlled Establishments. Repr. Official and expert. Ref. H.C., No. 132, 1918, p. 7. Diss. After the War, presumably. ZIRCONIUM.

—  
See S.I.R.

## RECONSTRUCTION - UK post WW1

### ENGINEERING TRADES (NEW INDUSTRIES) COMMITTEE.

---

App. by M.R., Dec. 1917.

Obj. To prepare list of engineering products, not adequately produced in U.K. before the War with special reference to labour required and to make recommendations for post-war establishment, &c. Repr. Employers in engineering and allied trades. Ref. Cd. 9226. Diss. Dec. 1918.

ENGINEERING TRADES (NEW INDUSTRIES) COMMITTEE, BRANCH COMMITTEES.

---

App. by main Committee early in 1918.

Obj. To deal with individual branches of the industry. Repr. Employers in branches concerned. Ref. Cd. 9195, 9226.

Diss. Late in 1918.

The branches in question included:

- a) Agricultural
- b) Leather-manufacturing,
- c) Paper-making,
- d) Printing,
- e) Printers' General
- f) Textile (Manchester)
- g) Textile (Nottingham)
- h) Wire
- i) Miscellaneous Machinery
- j) Aircraft
- k) Electrical Apparatus
- l) Hollow-ware, &c.
- m) Light Section Rolling and Drawing,
- n) Machine Tools,
- o) Motor Industry,
- p) Scientific Instruments.

ENGINEERING TRADES (NEW INDUSTRIES) COMMITTEE, LABOUR PANEL.

---

—  
App. by M.R. in 1917. Obj. To advise on all matters affecting labour interests arising out of Committee's work. Rejr. Labour Organizations (men's and women's). Ref. Cd. 9195. Diss. Dec. 1918.

ESSENTIAL INDUSTRIES BOARD, CONSTITUTION SUB-COMMITTEE.

---

—  
App. by Section III of R.A.C. in 1918. Obj. To report on appropriate constitution for the Board, as recommended by Commercial and Industrial Policy Committee. Repr. Not stated. Ref. Cmd. .325, p. 308. Diss. Reported during 1918.

## TRADE and Mines Department War Office - UK

ENGINEERING TRADES AFTER THE WAR, DEPARTMENTAL COMMITTEE of.

---

App. by B.T., Mar. 1916, as Joint Committee for Iron. Steel and Engineering, and reconstituted for Engineering only, July 1916. Obj. To consider position and necessary safeguards of trades after the War. Repr. Prominent engineering and other employers. Ref. Cd. 9073. Diss. Mar. 1917.

## APPENDIX A - THE ORGAINSATON OF THE BRITISH EMPIRE AND BRITAIN -1924-1926

### THE BRITISH EMPIRE

The British Empire consists of the Kingdom of Great Britain and Northern Ireland, six self-governing Dominions, India and the Crown colonies and protectorates. Its total area is 13,355,426 sq. miles, and its total population 449,583,000

#### THE KINGDOM OF GREAT BRITAIN

Consisting of England and Wales and Scotland, is governed directly by Parliament, which is also supreme over Northern Ireland, the Crown Colonies, India, and to a much more limited extent over the Dominions. Prime Minister, Rt. Hon. Stanley Baldwin. Northern Ireland has its OWN Parliament for domestic matters. Premier, Rt. Hon. James Craig; Governor, the Duke of Abercorn.

#### DOMINIONS

(1) The Dominion of Canada, including the Provinces of Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario, Prince Edward Island, Quebec and Saskatchewan. Governor-General, Lord Byng of Vimy;

Prime Minister, Rt. Hon. W. L. Mackenzie King. Capital, Ottawa, Ontario.

(2) The Dominion of Newfoundland. Capital, St.

John's; Gov. -Gen., Sir William L. Allardice; Prime Minister, W. S. Monroe.

(3) The Union of South Africa—including the Cape Colony, Natal, the Transvaal and Orange River Colony

Capital, Capetown. Gov. -Gen., Earl of Athlone;

Prime Minister, Gen. Hertzog.

(4) The Commonwealth of Australia, including New South Wales, Victoria, Queensland, South Australia,

West Australia and Tasmania. Capital, Melbourne, (territory has been secured for a Federal Capital at Yass Canberra). Gov. -Gen., Baron Baird of Stonehaven;

Prime Minister, Stanley M. Bruce.

(5) Dominion of New Zealand. Capital, Wellington.

Gov. -Gen., Gen. Sir Charles Fergusson, Prime Minister, Hon. J. G. Coates.

(6) The Irish Free State was inaugurated on December 6, 1922.

Capital, Dublin; Gov. -Gen., Timothy Healy;

President of the Dail Cabinet, William T. Cosgrave.

(7) Southern Rhodesia. Capital, Salisbury; Gov., Sir John R. Chancellor, K.C.M.G.

#### 1926 : Great Britain: THE BRITISH GOVERNMENT

There were few changes in the Baldwin Ministry in 1925. At the General Election on October 29, 1924, the Conservatives had been returned with a decisive majority over the Labor and Liberal parties combined.

## Notes on "Civil Aviation"

The figures were:—Conservatives, 412; Labour 152; Liberals 42; Constitutionalists, 3; others 6. During the year the Conservatives suffered several reverses at bye-elections, but not sufficient to affect their command of the House of Commons. Only four women were elected in October 1924, as compared with eight in the previous Parliament. As in the administration of Ramsay Macdonald, one woman was included in the Ministry. As yet no woman has enjoyed Cabinet rank in England.

The large majority of the Conservatives did not accurately reflect the politics of the voters. The Conservatives had 412 members of Parliament for a popular vote of 8,000,000. The Labour Party had 187 Members with a popular vote of 5,500,000; and the Liberals 42 Members with a popular vote of 3,000,000.

The Conservatives thus secured one member for every 20,000 Conservative votes.

The Labour Party one Member for each 36,000; and the Liberals had to secure 76,000 votes for each Member elected.

The House of Commons, as now constituted, has 615 members, as compared with 707 in that elected in December, 1918, and 670 the number before the passing of the Representation of the People Act of 1918, the Act which besides increasing the number of members, gave the vote, under certain restrictions, to women.

The Irish representation is now only 13 (all from Northern Ireland), instead of 105: owing to the erection of the Irish Free State which embraces the three Southern Provinces and which sends no members to the British House of Commons.

The House of Commons has never been able to seat all its members.

On the floor of the House there are 346 seats and the side gallery, set apart for Members, seats 82—making a total of 450 seats for 615 members.

The Strangers' Galleries will seat in all 209 persons, but if a member occupies a seat in them he is debarred from speaking.

The House of Lords, in 1924 had 738 members, of whom 104 held peerages created since 1916.

26 peerages were held by women, whom the House of Lords has so far excluded from membership. The 28 peers, elected by the Irish peers for life, were not affected by the Government of Ireland Act of 1922. The composition of the House of Lords is as follows:—Hereditary peers, 661; Irish elected life peers, 28; Scottish peers, elected for each new parliament by the Scottish House of Lords, which comes together at Holyrood, solely for this purpose, 16; Archbishops, 2; Bishops, 24; Lords of Appeal—(life peers created to act as Law Lords), 6. In 1925 there were 121 peers, including several minors, who had not taken their seats.

No title attaches to office in Cabinet or Administration. The title Right Honourable is given to all Privy Councillors. These are appointed for life, and every member of the Cabinet, who is not already of the Privy Council, is made a Privy Councillor.

The title Honourable is given to every member of the House of Commons.

### THE OFFICE OF PRIME MINISTER

Prime Minister—Rt. Hon. Stanley Baldwin

Until 1894 the office of the Prime Minister was officially unknown. It had developed as a consequence of the establishment of responsible government under a party leader, but the Prime Minister, as such, had no official rank and no precedence. The first official recognition was in the form of a mention in the Court Circular, and it was 1905 before, by Royal Warrant, the Prime Minister was given precedence next after the Archbishop of York. There is no salary attached to the office of Prime Minister, but the holder usually combines some other office which carries a salary. Mr. Baldwin is First Lord of the Treasury, an office usually held by the Prime Minister—Mr. Ramsay MacDonald was also Secretary of State for Foreign Affairs, but accepted only one salary for the two offices. In precedence the Prime Minister now has his place between the Archbishop of York and the Lord Chancellor of Ireland, and precedence over every member of his Government except the Lord Chancellor.

### THE GOVERNMENT DEPARTMENTS

#### THE TREASURY

Chancellor of the Exchequer—Rt. Hon. Winston Churchill.

First Lord of the Treasury—Rt. Hon. Stanley Baldwin

Financial Secretary to the Treasury—Walter Guinness

Parliamentary Secretary to the Treasury— Rt. Hon. B. M. Eyres-Monsell, (£2,000)

Lords Commissioners of the Treasury—Whips, £1,000 each. Major G. Hennessy; Major W. Cope; F. C.

Thomson, K.C.; Capt. Viscount Curzon, (unpaid);

Viscount Stanley, (unpaid)

Assistant Gov. Whip (unpaid), Capt. H. D. R. Margesson.

The Treasury, of which the Chancellor of the Exchequer is the political head, provides the means for meeting the charges for the military, naval, and civil services.

## Notes on "Civil Aviation"

The Parliamentary heads of each of the spending and administrative departments of the Government are responsible for the estimates for their respective departments ; but it is the duty of the Chancellor of the Exchequer, with the permanent Secretary of the Treasury, to check all these estimates before they are submitted to the House of Commons in Committee of Supply. The Cabinet becomes responsible for estimates which have been submitted to Parliament, and the rejection or reduction of an estimate by the House of Commons is tantamount to a defeat of the Government. The duties which bring the Chancellor of the Exchequer most prominently before the country, are those in connection with the Budget. The first Lord of the Treasury is one of its Parliamentary heads ; but the duties of the First Lord are little more than nominal, and the office is usually held by the Leader of the House of Commons. The Parliamentary Secretary to the Treasury is the official title of the Government whip in the House of Commons. The Junior Lords are his assistants. The Financial Secretary represents the Treasury in the House of Commons.

### THE HOME OFFICE

Secretary of State for Home Affairs—Rt. Hon. Sir William Joynson-Hicks.

Under Secretary—Godfrey Locker-Lamson, (£1,500)

The Home Department has the control of:

1. the London police force, and also
2. the oversight of the police forces in the counties and municipal boroughs ;
3. responsible for the administration of the factory code, and the laws relating to mining.
4. and, generally speaking, the Department is responsible for the internal peace of the country.

Prisons, convict establishments, criminal lunatic asylums, executions, and all matters connected with the post-judicial execution of the criminal law, come within the purview of the Home Office.

THE AIR MINISTRY Secretary of State for Air—Rt. Hon. Sir Samuel J. G. Hoare.

Under Secretary—Major Sir. Philip Sassoon.

At the close of the war the Air Ministry was made part of the War Department. So much objection was raised to this arrangement that in 1921 it was again erected into a separate Department and in 1923, when the first Baldwin Cabinet was formed, the Secretary was included in the Cabinet, as was also the case in both the Labour and Conservative Cabinets of 1924.

### THE FOREIGN OFFICE

Secretary of State for Foreign Affairs—Rt. Hon. J. Austen Chamberlain.

Under Secretary—Rt. Hon. Ronald McNeill, (£1,500)

All diplomatic intercourse is conducted by the Secretary of State for Foreign Affairs, who is usually of the House of Lords. The office is next in rank and importance to that of Premier, and is sometimes held in conjunction with that office. Ambassadors and consuls receive their instructions from the Foreign Office.

Foreign ambassadors in London have their audiences with the Secretary of State, and he also conducts the negotiations for international treaties. The Under Secretary represents the Department in the House of Commons.

### THE COLONIAL OFFICE

Secretary of State for the Colonies and Dominion Affairs—Rt. Hon. Lt.-Col. L. C. M. S. Amery.

Under Secretary—Hon. W. G. Ormsby-Gore, (£1,500)

The Colonial Office dates back to 1660, when a Committee of the Privy Council was appointed for the Plantations, as the Colonies were then called. This Council was continued until 1768, when colonial affairs were placed under the control of a Secretary of State.

When the United States secured their independence in 1783, the office of Colonial Secretary was abolished, and colonial affairs were managed from the Home Office.

From 1794 to 1854 the colonies were under the War Department.

## Notes on "Civil Aviation"

In 1854 a separate Secretaryship of State for the Colonies was created.

In August, 1907, the Colonial Office was organized in 3 departments;

- (1) Dominion Department, concerned exclusively with the self-governing colonies
- (2) Crown Department concerned with Crown Colonies; and
- (3) Department having charge of legal and financial business.

In 1925, the premier announced that the Colonial Office no longer correspond to the actual constitutional position within the Empire, and that the conduct of affairs for the Dominions would henceforth be under a separate new Secretaryship of State for Dominion Affairs, but that for convenience the new Secretaryship would be vested in the person of the Secretary of State for the Colonies.

### THE ADMIRALTY

First Lord of the Admiralty—Rt. Hon. Wm. C. Bridgeman.

Civil Lord of the Admiralty—Earl Stanhope, (£1,000)

Parliamentary and Financial Secretary to the Admiralty—

J. C. C. Davidson.

The Admiralty, which has charge of the Royal Navy, is administered by Lords Commissioners. The head of the Department, who is always of the Cabinet, is known as the First Lord of the Admiralty. The other Lords Commissioners or Junior Lords are officers without seats in Parliament, and are respectively at the heads of the departments into which the Admiralty is divided. The foreign movements of ships are at the instance of the Cabinet, the Foreign Office, and the Colonial Office, and it is from these authorities that the Lords of the Admiralty receive their orders. In time of war the orders go from the Cabinet. At other times the movements of vessels are directed by the Foreign Office and the Colonial Office.

### THE BOARD OF TRADE

President of the Board of Trade—Rt. Hon. Sir Philip Cunliffe-Lister.

Parliamentary Secretaries to the Board of Trade—  
Overseas Trade Department, Arthur Michael Samuel,  
(£1,200)

Mines Department, Lt.-Col. G. R. Lane-Fox.

The Board of Trade is in charge of the administration of the laws relating to limited liability companies, and bankruptcy; and it also has the oversight of all matters connected with the mercantile marine, harbours, canals, railways, and street car lines and electric lighting. The importance and range of work of the Board of Trade have been greatly increased since the War.

In 1921, it took over the duties of the Ministries of Food and Shipping.

### THE MINISTRY OF TRANSPORT

Minister—Lt.-Col. Rt. Hon. Wilfred Ashley.

Parliamentary Secretary—Lt.-Col. J. T. C. Moore-Brabazon.

The Ministry of Transport, created during the War to oversee the transportation of war materials and food, has proved of more permanent usefulness than was anticipated. It is proposed to turn over its duties to the Board of Trade, but this has not yet been done.

### LAW OFFICERS OF THE CROWN

Attorney General—Rt. Hon. Sir Douglas McG. Hogg,  
(£7,000 and Fees)

Solicitor General—Sir Thomas Inskip, K.C., (£6,000)

and Fees)

#### OFFICERS OF THE HOUSE OF COMMONS

Speaker—Rt. Hon. J.H. Whitley, (£10,000).

Deputy Speaker and Chairman of Committee of Ways and Means—James Fitzalan Hope, (£2,500).

Clerk of the House—Sir T. Lonsdale Webster, (£1,800).

Serjeant at Arms—Admiral Sir Colin Keppel, (£1,000).

Chaplain to the Speaker—Rev. Canon Carnegie.

Librarian—Austin Smythe.

Rt. Hon. J. H. Whitley, Speaker of the House of Commons, was first elected to his high office in April, 1921, on the retirement of Speaker Lowther. The holder of the office is strictly non-partisan, and is customarily re-elected irrespective of changes of party majorities in the House. A pension (£4,000 a year) is usually voted to a retiring Speaker and he is raised to the House of Lords.

#### THE BRITISH ARMY

Before the Norman Conquest every freeman was bound to bear arms in defence of his country at the call of the King. This national militia was partially, but never wholly, superseded by the feudal system, introduced by William I, under which lands were held in return for units of cavalry and infantry which had to serve for 40 days at the cost of the lord. In addition, kings frequently maintained mercenaries, first out of their private funds and later out of the royal revenues. Parliamentary consent to the maintenance of an army was established in the seventeenth century as a result of a struggle between the Commons and the Stuarts. The standing army became a national institution under James II, and the Mutiny Act, passed at the accession of William III, in 1689, and which has been renewed annually ever since, forms the basis of army discipline, without which a standing army would be impossible.

##### Administration

\ The Army is administered by the Army Council, the President of which is the Secretary of State for War. The other members are the Under-Secretary for War, who is Vice President; the Chief of the Imperial General Staff, the Adjutant General, the Quartermaster General, the Master General of Ordnance, the » Finance Member, and two permanent secretaries of the ! War Office. Only the President and Vice President are political appointments. Both are members of the ;

Ministry which goes out with the resignation of the Prime Minister. The King is ex-officio head of the Air , Council and Commander-in-Chief of the Army.

##### Composition

The Army consists of the Regular Army, the Reserves, the Territorial Army, which has absorbed the two old ^ forces of the Militia and the Yeomanry, and the Royal Marines, which are administered by the Navy but appear on both the army and the navy lists. Enlistment in all these forces in times of peace

is voluntary. The term of service in the regular army is 12 years, of which from 3 to 9 years are spent with the colors and the remainder of the term with the reserves. The usual service is seven years with the colors and five years in the reserve.

### RANK IN THE ARMY

Field Marshal; General; Lieutenant General; Major General; Brigadier General; Colonel; Lieutenant Colonel; Major; Captain; Lieutenant; Second Lieutenant.

### THE BRITISH NAVY

The British Navy, as a national force, dates back to the Tudors, although as early as the ninth century, King Alfred maintained ships of war out of the royal revenues. During the middle ages, and even after the reorganization of the Royal Navy by Henry VIII, naval defence was the duty of the ports and sea-board towns—a duty afterwards commuted into money, and levied by Charles I, under the name of Ship Money, in a manner which helped to bring about the Rebellion of 1642. The Navy entered its modern period under Charles II, and was greatly improved and enlarged under his successor, James II (1685-88). It then included 173 ships of a total tonnage of 101,892 tons, carrying, when in commission, 42,003 men and 6,390 guns. During the century which followed, many abuses crept into its management, and in 1797 occurred the mutinies of Spithead and the Nore, which brought about many reforms in the treatment and feeding of the sailors. At this time (the Napoleonic Wars) the Navy included 411 ships, totaling 402,555 tons. The nineteenth century saw the change from sail to steam and from wood to iron and steel with the consequent steady growth in tonnage, culminating in the modern Grand Fleet. At the present time the Royal Navy is governed by the Board of Admiralty at Whitehall, headed by the First Lord of the Admiralty who is a member of the Cabinet. In addition the Board includes 4 sea lords, the Deputy Chief of Naval Staff and the Assistant Chief, one Civil Lord, a Parliamentary and Financial Secretary and a permanent Secretary. The Civil Lord and the Parliamentary Secretary are members of the Ministry. The King is, ex-officio, Admiral of the Fleet.

The relative rank of officers is Admiral of the Fleet, Admiral, Vice-Admiral, Rear-Admiral, Commodore, Captain, Commander, Lieut-Commander, Lieutenant, Sub-Lieutenant, Commissioned gunners, boatswains, telegraphists, etc., Midshipmen.

### THE ROYAL AIR FORCE

The Royal Air Force is administered by the Air Council which consists of the King, as Chief of the Air Force, the Secretary and Under-Secretary of State for Air,—who are President and Vice-President of the Council,—Chief of Air Staff, Member for Personnel, Member for Supply and Research, and Secretary to

the Council.

The Stations of the Air Force are: three in England, one in Northern Ireland, and six abroad. The foreign stations have their headquarters in Northern Africa, Mesopotamia, India, Malta, Palestine, and Trans-Jordania.

The Estimates for the Air Force, for 1925-1926, presented to the House of Commons on February 19, 1925, totalled £21,319,300. This amount included £3,116,700 contributed by the Colonial Office for the Middle East, and £1,320,000 by the Admiralty for the Fleet Arm. The net vote was therefore £15,513,000, as compared with £14,500,000, for 1924-1925. Of this amount £3,412,000 was asked for pay for officers and men and £6,463,000 for research and experiment. The number of men of all ranks provided for in the Vote was 36,000, an increase of 1,000 over the number of 1924-1925. The increase was proportionately small, because, whereas in 1918 it took 81 men to keep one machine in service, in 1923 the figure had dropped to 65 and in 1925 to 51.

In presenting the Estimates, Sir Samuel Hoare stated that it was the intention of the Government to treble the strength of the Air Force over that of 1923, but that even with this rate of increase it would take years to attain numerical equality with that of France, which in 1925 outnumbered the British Force by three to one. In the summer of 1925 the British Force consisted of the equivalent of 54 squadrons, of which 43 were organized as such with 21 flights of an average strength of 6 machines—half the strength of a normal squadron provided for the Fleet Air Arm, or for operation from Coastal bases. Of the 43 squadrons, 25 were stationed at home, 8 in Iraq; 6 in India; and 4 in Egypt and Palestine. The number of completely formed regular squadrons for home defence was 18, a number which will be raised to 26 by March, 1926.

A scheme of Air Reserves, formed of fliers trained at civilian flying schools, was put into operation in 1925. When completed, the force will include 2 reserve squadrons and 4 auxiliary Air Force squadrons, available in time of emergency. In 1925, the Air Department continued to give aid to civilian flying routes.

#### OFFICIAL RANK IN AIR FORCE

Marshal of the Air; Air Chief Marshal; Air Marshal; Air Vice-Marshal; Air Commander; Group Captain; Wing Commander; Squadron Leader; Fleet Lieutenant; Flying Officer; Pilot Officer.

#### ORDERS OF KNIGHTHOOD, Etc.

The Order of Baronets, the lowest hereditary rank, was instituted in 1611; a Baronet is designated "Sir John Smith, Baronet"—usually written Bart. Taking precedence of Baronets are members of The Most

## Notes on "Civil Aviation"

Honourable Privy Council, who are addressed "Right Honourable."

The Order of the Bath, instituted in 1399, and revived in 1725, is divided into three classes—Knights Grand Cross, G.C.B.; Knights Commanders, K.C.B.; and Companions, C.B.

The Order of St. Michael and St. George, instituted in 1818, has also three classes—G.C.M.G., K.C.M.G., and C.M.G.

The Royal Victorian Order, instituted in 1896, has five classes—G.C.V.O., K.C.V.O., C.V.O. Members 4th and 5th classes—M.V.O.

The Order of the British Empire has four classes

—

K.B.E., C.B.E., O.B.E., and M.B.E.

In all Orders of Knighthood the Knights Grand Cross and the Knights Commanders have the prefix "Sir" with the initials of their class following the name.

Companions and Members bear no title, but have the letters C.B., C.M.G., M.V.O., as the case may be, attached to their names.

Knights Bachelors are gentlemen unconnected with any order who have received the honour of Knighthood, and are entitled to the prefix "Sir" and to "Knt." after name. They wear no insignia, and rank immediately after Knights Commander of the Victorian Order.

The following is a list of abbreviations used to indicate Honours and Decorations

K.G.—Knight of the Most Noble Order of the Garter.

K.T.—Knight of the Most Noble Order of the Thistle.

K.P.—Knight of the Most Illustrious Order of St. Patrick.

G.C.B.—Knight Grand Cross of the Most Honourable Order of the Bath.

G.C.S. I.—Knight Grand Commander of the Most Exalted Order of the Star of India.

G. C.M.G.—Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George.

G.C.I.E.—Knight Grand Commander of the Most Eminent Order of the Indian Empire.

G. C.V.O.—Knight Grand Cross of the Royal Victorian Order.

C. I. E.—Companion of the Most Eminent Order of the Indian Empire.

K.C.B.—Knight Commander of the Most Honourable Order of the Bath.

O.M.—Member of the Order of Merit.

K.C.M.G.—Knight Commander of the Most Distinguished Order of St. Michael and St. George.

Knt.—Knight Bachelor.

C.V.O.—Commander of the Royal Victorian Order.

C.B.—Companion of the Most Honourable Order of the Bath.

C.M.G.—Companion of the Most Distinguished Order of St. Michael and St. George.

M.V.O.—Member of the Royal Victorian Order.

K.B.E.—Knight Commander of the Order of the British

## Notes on "Civil Aviation"

Empire.

C. B.E.—Commander of the Order of the British Empire.

O.B.E.—Officer of the Order of the British Empire.

M.B.E.—Member of the Order of the British Empire.

D. S.O.—Companion of the Distinguished Service Order.

I.S.O.—Companion of the Imperial Service Order.

I.S.M.—Imperial Service Medal.

M.C.—Military Cross.

R.R.C.—Royal Red Cross.

V.O.—Victoria Cross

## DEPARTMENTS OF GOVERNMENT - Canada 1924-26

## CIVIL SERVICE COMMISSION

The Civil Service Commission was constituted by the Civil Service Act of 1908 (7-8 Edward VII., chap. 15) which introduced the merit system in the administration of a portion of the personnel of the Civil Service at Ottawa. The jurisdiction of the Commission was extended in 1918, when practically the entire personnel of the public service was placed under its control. As at present constituted, the Commission is administered by three Commissioners, who may be removed from office, only on joint resolution of the Senate and House of Commons.

### EXTERNAL AFFAIRS

The Department of External Affairs was constituted in May, 1909 (8-9 Edward VII, Chap. 13.) and placed originally under the Secretary of State. It has charge of the administration of all external affairs pertaining to Canada, as enacted between the Government of Canada, and the Government of any other country. Since April, 1912, the Department of External Affairs has been under the control of the Prime Minister, who carries the added title of "Secretary of State for External Affairs." An important duty of the Department is the issuing of passports to British born subjects or to persons naturalized in the Dominion.

Secretary of State for External Affairs, Rt.

Hon. William Lyon Mackenzie King,

C.M.G., M.A., LL.B., LL.D., Prime Minister

Commissioner General, Phillippe Roy

Secretary, Pierre Dupuy

### INTERIOR

The Department of the Interior was constituted in 1873, (36 Vic. Chap. 4), and originally had jurisdiction over the Northwest Territories, Dominion, Ordnance and Admiralty Lands, the Geological Survey and over the Indians. The scope of its duties in administering and developing the federal public domain has been greatly widened by the growth of the Dominion, particularly of the West.

The area under administration exceeds 2,000,000 square miles. Specialized management of the varied natural resources of these territories is furnished through ten major divisions of the Department including the Dominion Lands Branch, Forest Service, National Parks, Water Power and Reclamation Service, North-West Territories, Topographical, Geodetic and Boundary Surveys, Dominion Observatories,

## Notes on "Civil Aviation"

Natural Resources Intelligence Service, together with the financial and general administrative units. In addition to the direct management of the federally-controlled territories and resources, the several services of the Department provide the necessary facilities for broad national co-operative action where such is required to promote the efficient development and conservation of the Dominion's natural assets.

### MARINE AND FISHERIES

The Department of Marine and Fisheries was constituted in July, 1867, (31 Vic. Chap. 57). It is charged with the establishment of aids to navigation such as light-houses, fog alarms, buoys, beacons, submarine bells, etc., the construction and maintenance of the River St. Lawrence Ship Channel; the operation of harbours, wharfs, piers, and breakwaters and all matters affecting the merchant marine. Fish culture has been encouraged by the construction and equipment of fish breeding establishments in various parts of the country and the proper safe-guarding of the inland fisheries by necessary legislation. The Meteorological Service and the Life-Saving Service are under this department. Minister of Marine and Fisheries, Hon. P. J. A. Cardin \$10,000

### SECRETARY OF STATE

The Department of the Secretary of State was constituted in 1867 (31 Vic. Chap. 42), to have charge of the State correspondence, and to keep State records and papers not specially referring to other Departments. It also administers the Dominion Companies Act, the Naturalization Acts, and Boards of Trade, Trade Unions and Ticket of Leave Acts.

### SOLDIERS' CIVIL RE-ESTABLISHMENT

This Department was constituted in 1918, (8-9

Geo. V, \_

Chap. 42) to facilitate in every way the re-establishment in civil life of persons in the military

## Notes on "Civil Aviation"

or naval forces of the Dominion in the Great War, and the dependents of such persons. The duties of this Department include the provision of medical treatment, the granting of vocational training, the administration and payment of pensions, etc. Pensions are awarded by the Board of Pension Commissioners, which is entirely separate from and independent of the Department. The Federal Appeal Board, which hears appeals in respect of refusal of pensions or medical treatment is also an independent body.

### NATIONAL RESEARCH COUNCIL

President, H. M. Tory, D.Sc., LL.D.

Murray, M.A., LL.D.; Prof. R. F. Ruttan, B.A., M.D.

Secretary, S. P. Eagleson, West Block, Ottawa, Ont.

### DEPARTMENT OF NATIONAL DEFENCE - Canada

During the session of 1922, Parliament passed a bill entitled "The National Defence Act, 1922" creating the Department of National Defence, through the amalgamation of the Departments of Militia and Defence and the Naval Service and the Air Board. It was provided that the Act should come into effect upon a date to be announced by proclamation; and His Excellency the Governor General in Council subsequently issued a proclamation bringing the National Defence Act into effect from January 1, 1923.

Minister of National Defence—Hon. E. M. Macdonald, K.C., LL.B.

Minister's Private Secretary—Major T. W. MacDowell, V.C., D.S.O.

Deputy Minister—G. J. Desbarats, Esq., C.M.G.

Defence Council

President—The Hon. the Minister of National Defence.

Vice President—The Deputy Minister.

Members—The Chief of Staff and the Director of the Naval Service.

Associate Members—The Adjutant General, The Quartermaster-General, and the Director of the Canadian Air Force.

Secretary—A. B. Goldwyer-Lewis, Esq., B.A.

Military and Naval Branches

Chief of Staff—Major Gen. J. H. MacBrien, C.B., C.M.G., D.S.O.

Director of the Naval Service—Commodore W. Hose, C.B.E., A.D.C.

### MILITARY SERVICE

1. The Canadian Militia is composed of the  
Active Militia and Reserve.

2. The Active Militia consists of the Canadian  
Permanent Force and the Units of the Active Militia  
of the several branches of the Service which are organized  
and perform annual training.

3. The Reserve Militia consists of Reserve Units  
and of all able bodied citizens between the ages of  
18 and 60 with the following exemptions: Members  
of the King's Privy Council of Canada; Judges of all  
Courts of Justice; Members of the executive Councils  
of Provinces; Deputy Ministers of the Federal and  
Provincial Governments; Clergy and Ministers of all  
denominations; Telegraph clerks in actual employment;  
Officers and clerks regularly employed in the  
collection of revenue; Wardens and officers of all public prisons and lunatic asylums; Members of the  
Naval Militia; Members of the police force and fire  
brigade permanently employed in incorporated  
cities, towns and villages; Professors in colleges  
and universities and teachers in religious orders;  
Persons disabled by bodily or mental infirmity;  
The only son of a widow, being her only support;  
Pilots and apprentice pilots during the season of  
navigation; Persons who, from the doctrines of their  
religion, are averse to bearing arms or rendering personal  
military service, under such conditions as are  
prescribed.

4. The Reserve Formations of the Active Militia,  
as distinguished from the Reserve Militia mentioned  
in paragraph 3, comprise:—

- (a) Reserve units of City & Rural Corps.
- (b) Reserve Depots as may be provided for in  
the establishments laid down for the Canadian  
Militia.
- (c) The Reserve of Officers.

5. The Permanent Force is a small body of all  
Arms. Its duties are mainly to provide training  
depots and schools for the Non-Permanent Active  
Militia and the staffs necessary at Defence Headquarters  
and the Military Districts.

## Notes on "Civil Aviation"

6. The Non-Permanent Active Militia is a force consisting of all branches of the service, its total authorized strength at present being 10,458 officers and 111,461 other ranks.

(b) In addition to the above, authority exists for the formation of further units but their actual organization and recruiting of personnel is not to be proceeded with at present.

(c) Roughly speaking, all branches and active units are organized upon the British Army system.

Terms of Enlistment:

7. (a) Permanent and Non-Permanent Active Militia for a period of 3 years.

(b) Reserve Militia, for such period as is prescribed (namely, to age limit for various ranks).

(c) The Permanent Active Militia is available at all times for general service.

(d) The Governor-General in Council may place the Militia, or any part thereof, on active service anywhere in Canada, and also beyond Canada, for the defence thereof, at any time when it appears advisable so to do by reason of emergency.

### DEPARTMENT OF NATIONAL DEFENCE - ROYAL CANADIAN AIR FORCE BRANCH

#### THE AIR SERVICE

Under the Act creating the Department of National Defence, the powers, duties and functions, vested in the Air Board by the Air Board Act, Statutes of 1919, are administered under the direction of the Minister of National Defence.

The Air Services have been incorporated in the Department of National Defence since the passing of that Act in 1922.

The Air Service has three functions:

- (1) the air defence of the country.
- (2) the conduct of flying operations for the civil services of the Government.
- (3) the control of civil aviation.

All three functions are administered by the Director of the Royal Canadian Air Force,

Director of the Royal Canadian Air Force, Group Captain J. S. Scott, [M.C., A.F.C., A.D.C., is responsible to the Chief of Staff for the execution of these duties.

The Royal "Canadian Air Force" consists of an administrative Headquarters at Ottawa, and 6 Units as follows:

1. Vancouver, B.C.—Officer Commanding—Squadron Leader J. H. Tudhope, M.C.
2. High River, Alta.—Officer Commanding—Squadron Leader A. L. Cuffe.
3. Winnipeg, Man.—Officer Commanding—Squadron Leader G. O. Johnson, M.C.
4. Camp Borden, Ont.—Officer Commanding—Wing Commander L. S. Breadner, D.S.C.
5. Ottawa, Ont.—Officer Commanding—Squadron Leader A. B. Shearer.
6. Dartmouth, N. S.—Officer Commanding—Flying Officer T. A. Lawrence.

## Notes on "Civil Aviation"

The Headquarters organization is divided into three branches:

1. Assistant Director, Operations, Training, Staff Duties: Wing Commander J. L. Gordon, D.F.C
2. Assistant Director, Technical and Equipment: Wing Commander E. W. Stedman, O.B.E.
3. Assistant Director and Secretary: Mr. J. A. Wilson, Civil Aviation and other civil duties.

Camp Borden, Ont. is the main training station;

technical depot, including workshops and central stores, is at Ottawa.

The units at Vancouver, High River, Winnipeg, Ottawa and Dartmouth, in addition to Air Force duties, have undertaken large programmes of civil operations, principally for the forestry and survey services of the Dominion Government.

The total personnel employed in 1925-26 number 84 officers, 360 men, and 16 civilians.

The control of civil aviation is under the direction of an officer of the Permanent Air Force, who is appointed as "Acting Controller of Civil Aviation".

The "Acting Controller of Civil Aviation" is responsible for:

1. the technical work involved in the inspection, registration and licensing of aircraft and
2. the technical work involved in the inspection, registration and licensing of air harbours; and
3. *the examination and licensing* of commercial pilots and
4. *the examination and licensing* of air engineers; also,
5. "other duties" as called for in the Air Regulations.

On September 30th, 1925, there were in force, certificates and licenses as follows:

- A. Private Air Pilot's Certificates 7
- B. Commercial Air Pilot's Certificates 29
- C. Air Engineer's Certificates 86
- D. Registration of Aircraft Certificates 36
- E. Air harbour Licenses 24

As there has been little development of aviation as a means for the transportation of mails, supplies or passengers, the work of operating companies has largely been in connection with forest patrol and survey work for the Provincial Governments, lumber and pulp companies. Aerial photography is also beginning to play an important part in such work.

1932 : Source - FLight 20 OCTOBER 1932 No. 1243. (Vol. XXIV. No. 43.)

THE Secretary of State may issue such directions as he thinks fit for the purpose of supplementing or giving full effect to the provisions of this Order, including the Schedules thereto."

this sentence, which is Article 30 of the Air Navigation (Consolidation) Order of 1923, invests whoever happens to be Secretary of State for Air at any particular moment with pretty well unlimited power. "

Such directions as he sees fit " is sufficiently comprehensive to cover almost anything. As the Order became law some nine years ago, the aviation community should probably deem itself fortunate that no Secretary of State for Air has " seen fit " to stop all flying at some time during that period. Now, however, the Secretary has " seen fit " to put a ban on all experimental flying, and it has remained for Lord Londonderry, our present Secretary of State for Air, to put the crowning indignity on a long series of hampering restrictions. We do not for one moment believe that Lord Londonderry has been personally involved in drafting the offending clause in A.N.D. 11, but as Secretary of State for Air he cannot escape the responsibility for having affixed his signature to this amazing document,

The Air Navigation Directions, 1932 (A.N.D. 11), is an innocent-looking publication, price 9d., obtainable by anyone from His Majesty's Stationery Office, and outwardly shows no signs of the momentous

## Notes on "Civil Aviation"

ch.uses which, within its plain white covers, are so insidiously foisted upon an unsuspecting aviation community. The rules and regulations which surround anyone who is unfortunate enough to desire to get into the air are so numerous that we sometimes wonder that any ever bother to fly at all. Among the reams of red-tape notices of one kind and another, a small item like that of experimental flying may easily escape attention for a time, but, as in other spheres of endeavour, ignorance of the law is no excuse, and those who may have failed to see the new regulation would be soon shot down by the Air Ministry's "Very Pistol."

new clause which has been included in A.N.D. 11 states that no one may attempt to get off the ground without having first obtained the consent of the Secretary of State for Air.

p.24 of A.N.D. 11 under Section VI and Article 60, that with reference to proviso (a) to Article 3 (1) and proviso (E>) to Article 4 (1) of the Order (we nearly wrote the "Sacred Order") an aircraft which does not comply with all or any of the conditions there mentioned may, nevertheless, fly, provided that the flight does not contravene any of the other provisions of the Order, or that its flight is carried out by special permission of the Secretary of State for Air, or, finally, that the flight satisfies "A conditions" or "B conditions," which are then duly set forth in Section VI of A.N.D. 11. Upon looking up proviso (a) to Article 3 (1) and proviso (b) to Article 4 (1) of the Order, it is found that these refer to an exemption from having to comply with certain regulations if written dispensation has been obtained from the Secretary of State for Air before making the flight.

"A conditions" and "B conditions" of Section VI, Article 60, of A.N.D. 11. The "A conditions" lay it down that the flight may only be made if the aircraft has a certificate of airworthiness, is a "subsequent aircraft," that the flight is for the purpose of getting a certificate of airworthiness, or that application for a C. of A. has previously been made. Obviously, "A conditions" do not help us much either. Our last hope is now centred in "B conditions." Alas, "B conditions" are just as bad. In fact, they are on a par with the deep depression conditions in which Iceland seems to spend most of its unhappy time. In the main, "B conditions" relate to flights carried out under the supervision of "approved" firms, and with aircraft built by "approved" firms.

So there you are. If you are not an "approved" firm, you may not take anything into the air without written permission from the Secretary of State for Air. Bureaucracy can go no farther than that. The Secretary of State for Air has "seen fit" to put the official "kibosh" on all private enterprise. What business has a "disapproved" firm or person to want to take things into that air which is, apparently, the sacred property of the Air Council? What right have such as they to cause air eddies not approved by the N.P.L., with wings and fuselages unknown to Farnborough? If such things were to be permitted, who knows but that some day some totally unknown person, strongly "disapproved" by officialdom, might not be lucky enough to invent and try out some new form of flying machine, or introduce some new principle of flying.

The whole situation is preposterous, and would be comic if it were not fraught with serious consequences. What Divine right gives the Air Ministry powers to prevent any private individual or firm from taking experimental aircraft or engines into the air? The British aviation community has submitted tamely to one red-tape restriction after another being introduced, until by now no man, unless he be "approved" by the Air Ministry, has a soul he dares to call his own—aeronautically speaking. And even the "approved" firms are barely tolerated. They are regarded by officialdom as very inferior beings to the Air Ministry's "experts," but, of course, they have to be put up with because one could not do without them altogether, unless—blessed inspiration—the Air Ministry were to kill off all private aircraft and engine firms and revert to that happy state of affairs which obtained when Farnborough was the Royal Aircraft Factory and its machines were designed by "the best brains in the country."

By the new regulations, no private experimenter may make a "hop" across his own meadow unless he has got permission from the Air Ministry (in writing). The old limitation—that flights must not be made outside the three-mile limit of an aerodrome—was bad enough, but at least there was

traceable in it a sane desire to protect the public on terra firma from possible damage. The new regulation seems to be entirely without justification, unless it is the intention of the Air Council to squash all those who are just now keenly interested in the development of low-powered aeroplanes. We hope that we are not going to be the means of getting Senor de la Cierva into trouble, but as he is not an " approved " firm, he could, under this regulation, be stopped from testing the new machine which he is now flying at Hamble. That machine is never to be marketed. Consequently no application has been made for a certificate of airworthiness. But on it Senor de la Cierva has carried out invaluable research work which will unquestionably result in the production of better and still better " Autogiros." Must he, therefore, obtain the Air Minister's written permission every time he wants to make a short flight? One could probably think of several others quite as capable as Senor de la Cierva of deciding what is or is not a reasonably " safe " aircraft without asking the Air Ministry. Even an " approved " aircraft firm is likely to suffer through this ridiculous restriction. Let it be supposed, for example, that an aircraft has been built by X & Co., who are " approved," and that it is a " subsequent " aircraft. Y & Co. may be agents, and may have their aerodrome more than 6 miles from that of X. They may wish to stock a few of X's machines so as to have them ready to sell " over the counter," as it were. The C. of A. will not be wanted until the aircraft is sold, and consequently no application is made for it at once. But X cannot have it flown across to Y's aerodrome because the flight is not a test flight, nor is the aircraft being flown for its C. of A. So every time X & Co. want to fly a machine across to Y's aerodrome to replenish his stock, a special written permission must be obtained. This does not sound very formidable, but getting a decision from the Air Ministry on any subject is apt to be a lengthy business at any time.

This whole subject is one which has influences far outside the sphere of the S.B.A.C., and it will be interesting to see if bureaucracy is to be allowed to " get away with it."

<b>THE AIR NAVIGATION DIRECTIONS (A.N.D.) 11C</b>
---

Ground Engineer's "X" License : "The constructor shall ensure by suitable inspection that all engines, instruments, and parts (including wiring for electrical equipment other than wireless apparatus) that are fitted into the aircraft are to be installed as to function correctly, and, if wireless telegraphy or wireless telephony apparatus is fitted, that the installation of such apparatus, including bonding and screening, is not such as to prejudice the operation of the aircraft . . . the individuals responsible for such inspection shall be indicated by signatures on the inspection record.

There are a number of official publications dealing with various individual aspects of our subject, and in compiling this section free use has been made of the information contained in these, the principal of which are

Air Publication 1208: Airworthiness Handbook of Civil Aircraft.  
Inspection Instructions of the Aeronautical Inspection Directorate, Air Ministry.

## Notes on "Civil Aviation"

Admiralty Handbook on Wireless Telegraphy.

Ground Engineers must realize that, apart from routine tests of the continuity of wiring and insulation resistance of an installation in an aircraft, their duties also include a visual examination of all the various components, instruments, and wiring comprising the various circuits, for correctness to specification requirements, drawing requirements, and standard of workmanship.

Installation work, or work in connection with the modification of an installation, and the inspection and testing thereof, must be carried out by, or under the direct supervision of, a duly qualified ground engineer, or contractor officially approved for such work.

5. The necessary log book entries are made and certified, and any necessary action taken to obtain an official amendment of the aircraft's current Certificate of Airworthiness.

A word of warning in connection with installations in aircraft, or the incorporation of modifications : such action might invalidate the aircraft's Certificate of Airworthiness

In Air Publication 1208, Airworthiness Handbook of Civil Aircraft is published a list of officially approved items of equipment, but the appearance of the name of any specific item of equipment in such a list does not absolve a ground engineer from the necessity for obtaining adequate documentary evidence, by way of an approved release note or equivalent means, of the correct manufacture, inspection and test of the item in question in accordance with the specification and/or drawings quoted in Air Publication 1208.

### Colonel Frank Searle, British Army, C.B.E., D.S.O.,

Died 4th April 1948

1. Associated with the motor industry during most of his professional career.
2. educated at the Haberdashers' Aske's School, London,
3. educated at the Schmidt College in Germany.
4. 1890 to 1896 - Served an apprenticeship with the London, Brighton and South Coast Railway
5. 1896 - Erector with the London, Brighton and South Coast Railway, for a brief period gaining further experience as a fitter.
6. In charge of a depot for the South Eastern Railway.
7. Locomotive superintendent, Gold Coast Government Railways as.
8. 1903 - Returned to England and went into business as a consulting automobile engineer.
9. 1906 appointed chief engineer to the London General Omnibus Co,
10. elected a Member of the Institution [I.Mech.E? or R.Ae.S ?] in 1910.
11. 1911 - joined the Daimler Motor Company, engaged on the design of heavy vehicles.
12. 1914-18 - attached to the Ministry of Munitions ??
13. 1914-18 appointed head of the British War Mission to the United States in connection with the purchase of machine tools and other engineering products, the value of which ultimately amounted to 02,000,000. ??
14. 1916 - joined the Tank Corps and became head of the technical side.
15. 1919 - Demobilised from the Army with the rank of colonel
16. 1919 - Appointed managing director of the "Daimler Car Hire" service
17. 1924 - Appointed managing director for the air services' department of Imperial Airways.
18. 1928 - 1931 - Managing director of the Rover Motor Car Company, Ltd., of Coventry
19. 1941 - 1946 - deputy chairman and managing director of British Power Boat Co., Ltd., Hythe, Hants, and Poole, Dorset.

### Captain Eustace Broke Loraine, Grenadier Guards, RFC <sup>402</sup>

1. Born September, 1879, Died 05 July, 1912 - Killed in aircraft accident - Stonehenge
2. Elder son of Rear- Admiral Sir Lambton Loraine, Baronet., and Lady Loraine [daughter of Captain Charles Acton Broke, R.E, son of Sir Philip Broke, captain of the Shannon [captured the U.S. frigate Chesapeake June 1st, 1813]
3. 05 July 1899 - Gazetted second lieutenant in the Grenadier Guards upon joining the Army
4. May, 1900 - Promoted lieutenant
5. April, 1900, to May, 1902 served in South Africa, receiving the Queen's medal with three clasps and the King's medal with two clasps.
6. July, 1905, to September, 1906 - adjutant, Grenadier Guards, and was
7. July, 1907 Promoted captain Grenadier Guards

---

<sup>402</sup> Source : CG Grey : The Aeroplane. July 11th, 1912.

## Notes on "Civil Aviation"

8. October, 1908 - seconded for duty with the West African Frontier Force.
  9. 07 November 1911 - granted pilot's certificate (No. 154)
  10. June 1912 - appointed to the Military Wing of the Royal Flying Corps
- Succeeded as heir to the baronetcy by his brother, Percy Lyham Lorraine, a Secretary in the Diplomatic Service.  
"Not a reckless flier, but certainly daring, he was generally recognised as one of the finest fliers in the Army,  
He will be greatly missed by many friends"

### John Edward Bernard Seely, 1st Baron Mottistone CB, CMG, DSO, PC, TD

1. (31 May 1868 7 November 1947) was a British soldier and politician.
2. Conservative Member of Parliament (MP) from 1900 to 1904 and a
3. Liberal Member of Parliament (MP) from 1904 to 1922 and from 1923 to 1924.
4. Secretary of State for War for the two years prior to World War I.
5. Served as Under-Secretary of State for the Colonies under Herbert Henry Asquith between 1908 and 1911,
6. Served as Under-Secretary of State for War from 1911 to 1912,
7. Member of the Privy Council in 1909.
8. With Sir John French he was responsible for the invitation to General Foch to attend the Army Manoeuvres of 1912 and was active in preparing the army for war with Germany.
9. The mobility of the proposed Expeditionary Force, and in particular the development of a Flying Corps (the origin of modern day Air Force) were his special interests. According to "The Times" (London), "these developments played a significant role in the victory during World War I".
10. The "Curragh incident" in Ireland in 1914 forced him to resign,
11. 1914 he left England to fight in the First World War, becoming a Major General and commander of the Canadian Cavalry Brigade.
12. Seely won several medals and merited mention in dispatches five times, enhancing his reputation for bravery in battle.
13. Gassed and returned to England, 1918
14. The only member of the Cabinet, besides Churchill, to see active service in the war.
15. Appointed Parliamentary Secretary to the Ministry of Munitions, 1918
16. Appointed Deputy Minister of Munitions, 1918,
17. Appointed Under-Secretary of State for Air, 1919
18. Appointed President of the Air Council, 1919.
19. He resigned both posts (Under-Secretary of State for Air & President of the Air Council) at the end of 1919 after the Government refused to create a Secretary of State for Air during his tenure.

### Hugh Guthrie

C.R., a Member of his majesty's Privy Council and one of His Majesty counsel (Minister of Defence);

## Unionist ministers of militia, Major-General Sydney Chilton Mewburn and Hugh Guthrie\*

### Oliver Mowat Biggar,

C.R., vice-chair of the Air Board and one of His Majesty counsel (Lawyer, second Judge Advocate General for the Canadian Forces, first Canadian co-chair of the Canada-United States Permanent Joint Board on Defense. chief legal adviser and member of the Canadian delegation to the 1919 Paris Peace Treaty in Paris and Versailles  
vice chairman of the Air Board serving under Arthur Sifton  
Air Board from 1919 to 1922.  
counsel to the Department of Justice to represent the Canadian government  
1916 to 1917 - Assistant Judge Advocate General for Military District 13 (Calgary)  
1917 - Military Service Council

## Notes on "Civil Aviation"

advisor to Prime Minister Borden  
appointed Judge Advocate General of Canada in 1918  
organized Canada's Air Department to govern the aeronautics industry  
chairman of the Canadian Bar Association committee on international law  
chairman of the Canadian League of Nations Society executive committee

Colonel Samuel Hughes,  
Canadian militia officer with a pronounced distaste for British officers and regular soldiers.

Willoughby GARNONS Gwatkin

1. b. 11 Aug. 1859 in Twickenham (London), England d. 2 Feb. 1925 in Twickenham
2. Graduate of the Shrewsbury School, King's College, Cambridge.
3. Graduate of the Royal Military College, Sandhurst.
4. 1895 - Graduate of the Staff College, Camberley.
5. 1905 - director of operations and staff duties Canadian Militia
6. 1916 - appointed Companion of the Order of the Bath (CB)
7. 1918 - appointed Companion of the Order of St Michael and St George (CMG)
8. 1920 - appointed Knight Commander of the Order of St Michael and St George (KCMG)
9. Major-General Sir
10. -1922 Air Vice-Marshal, Inspector-General - Canadian Air Force.
11. provided advice and guidance to Air Commodore Arthur Tylee, Air Officer Commanding the Canadian Air Force.
12. 1922 - promoted honorary lieutenant-general, Militia Reserve.
13. During the war Gwatkin had opposed a separate Canadian air force, but his encyclopedic mind foresaw the problems and possibilities of post-war aviation.
14. Mindful of his ideas and his weariness, and having the CEF's leaders to employ, the government appointed him air vice-marshal and inspector-general of the Canadian Air Force.
15. Gwatkin saw the impossibility of maintaining a real air force on a part-time "militia" basis, as the government proposed, and understood the potential of aviation as a servant of many branches of government.
16. His prestige won the infant CAF its own ranks and uniforms.
17. He joined Sir Arthur William Currie\*, the inspector-general of the militia,
18. Major-General James Howden MacBrien\*, his successor as CGS, and
19. Sir Eugène Fiset\*, the deputy minister of militia,
20. in successfully urging that all of Canada's defence services be united in a single department of national defence.
21. At the same time he fought the army to give the CAF the same independence as the post-war Royal Air Force had in Britain.
22. As a final service to Canada, Gwatkin brought his knowledge of heraldry to the committee that designed the new Arms of Canada in 1919-20.

**Robert Leckie,**  
D.S.O., Superintendent of Air Operations - Lieutenant-Colonel

**James Stanley Scott,**  
CM, Superintendent of Certificates, Lieutenant Colonel

**Edouard Deville,**

Aeronautical Institute of Great Britain

## PARLIAMENTARY ACTS - BRITISH AND CANADIAN

### Defence of the Realm Act - Churchill's 1919 "Air Regulations"

The Defence of the Realm Consolidation Act, 1914 (5 Geo. 5, c. 8).

An Act to consolidate and amend the Defence of the Realm Acts. (27th November, 1914.)

*BE it enacted by the King's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows :*

- 1.—(1) *His Majesty in Council has power during the continuance of the present war to issue "regulations" (a)*
- (a) *"Regulations"*—The Regulations made under this and the amending Acts are (in accordance with provision made by Order in Council) reproduced in Consolidated Form as Part II of this Manual. As to "the continuance of the present war " see the Termination of the Present War (Definition) Act, 1918 (8 & 9 Geo. 5, c. 59)."

*for securing the public safety and the defence of the realm, and as to the powers and duties for that purpose of "the Admiralty and Army Council" (b)*

(b) (i) *Constitution of Army Council.*

The Army Council was constituted by Letters Patent of February 6th, 1904, which together with the Orders in Council of August 10th, 1904, February 15th, 1909, and August 2nd, 1910, distributing the business of the Council, are printed at pp. 1248-1252 of the Annual Volume of Statutory Rules and Orders, 1912.

By Order in Council of January 27th, 1916, it was provided that the Chief of the Imperial General Staff shall be responsible for issuing the orders of the Government in regard to military operations.

New Letters Patent are issued whenever a change in the Members of the Army Council occurs. By 9 Edw. 7, c. 3, s. 4, various powers and duties were transferred to the Army Council, and by Letters Patent of December 23rd, 1915, and Order in Council of January 27th, 1916, the constitution of the Council and the distribution of business were modified.

(b) (ii) *Air Council.*

By the Air Force (Application of Enactments) (No. 2) Order, 1918 (Order in Council of May 7, 1918), the Defence of the Realm Consolidation Act, 1914, was applied to:

- i. the Air Council,
- ii. the President of the Air Council, and
- iii. the Air Force and the officers and men thereof, and to
- iv. air force property and institutions
- v. and it was provided (Schedule) as follows:-

References to " the Army Council," " His Majesty's Forces," " His Majesty's forces by land and "military service" *shall respectively be construed as including references to the Air Council, Air Force, His Majesty's forces by air and air-force service.*

The Air Council was established by the Air Force (Constitution) Act, 1917 (7 & 8 Geo. 5, c. .51), s. 8.

(iii) *Powers of Minister of Munitions.*

Article - 3 of the Ministry of Munitions Order in Council, 1915 (printed as Statutory Rules and Orders, 1916, No. 580), provides that this enactment shall be read as if the Minister of Munitions were mentioned therein in addition to the Admiralty and Army Council.

This Order in Council was made under s. 2 of the Ministry of Munitions Act, 1915 (5 & 6 Geo. 5, c 51), which established a Ministry of Munitions.

The Ministry of Munitions Act, 1918 (8 & 9 Geo. 5, c. 60) extends the purposes of the Ministry to the supervision and regulation of the diversion to the production of articles required in times of peace of industries established or utilised for the production of war material.

*(iv) Powers of Food and Shipping Controllers.*

Ss.4, 6 of the New Ministries and Secretaries Act, 1916(6&7 Geo. 5, c. 68), provide that the Food Controller and the Shipping Controller shall respectively have such further powers as may be conferred on them by regulations under the Defence of the Realm Consolidation Act, 1914, and that regulations may be made under that Act accordingly.

For powers so conferred on the Food Controller, see Regs. 2b, ^E, 2p-2jj, 7, 8c, 8cc, 35a, and on the Shipping Controller, sec Regs. 37c, 39BBB, 39cc, 39CCC, 39dd, 39e, 39ee, 39ff.

*and of the members of his Majesty's forces and other persons acting in his behalf; and may by such regulations authorise the trial by courts-martial, (o)*

*(o) Trial by Jury.*

As to right of British subject to trial by jury, see 5 G€0. 5, c. 34, 8. 1 (2), printed at p. 7.

*or in the case of minor offences by courts of summary jurisdiction, and punishment of persons committing offences against the regulations and in particular against any of the provisions of such regulations designed:*

- (a) to prevent persons communicating with the enemy or obtaining information for that purpose or any purpose calculated to jeopardise the success of the operations of any of His Majesty's forces or the forces of his allies or to assist the enemy; or
- (b) to secure the safety of His Majesty's forces and ships and the safety of any means of communication and of railways, ports, and harbours ; or
- (c) to prevent the spread of false reports or reports likely to cause disaffection to His Majesty or to interfere with the success of His Majesty's forces by land or sea or to prejudice His Majesty's relations with foreign powers ; or
- (d) to secure the navigation of vessels in accordance with directions given by or under the authority of the Admiralty; or
- (e) otherwise to prevent assistance being given to the enemy or the successful prosecution of the war being endangered. (a)

*(a) Provisions of Regulations.*

For reference to the Regulations made as regards any particular subject, see the Analytical Index at the end of this Volume,

*(2) Any such regulations may provide for the suspension of any restrictions on the acquisition or user of land, or the exercise of the power of making by-laws, or any other power under the Defence Acts, 1842 to 1875,(b)*

(b) Defence Acts.—The Defence Acts, 1842 (5 & 6 Yict. c. 94), 1854 (17 & 18 Yict. c. 67), 1859 (22Vict.c.12),1860 (23 & 24 Yict. c. 112), and 1865 (28 & 29 Yict. c. 65), and the Defejice Acts Amendment Act, 1873 (36 & 37 Yict. c. 72), may be cited by the collective title " the Defence Acts, 1842 to 1873 " {see 59 & 60 Yict. c. 14}. Land acquisition powers under the Defence Acts were conferred on the Admiralty by the Naval Works Act, 1895 (58 & 59 Yict. c. 35, s. 2), which provides that .anu acquired by them shall be vested and managed under ss. 9 to 19 of the Admiralty Lands and Works Act, 1864 (27 & 28 Yict. c. 57), and that the corresponding provisions of the Defence Act, 1842, shall not apply. See also s. 11 of the

Ranges Act, 1891 (54 & 55 Yict. c. 54), which, as repealed in part by s. 28 of 55 & 56 Yict. c. 43, provides\* for the settlement by arbitration of the compensation for land acquired under the Defence Acts

*or the Military Lands Acts, 1891 to 1903, (c)*

(c) Military Lands Acts.

(c)(i.) "The Military Lands Acts, 1892 to 1903," which (see 63 & 64 Yict. c. 56, s. 6 ; 3 Edw. 7. c. 47, s. 2) comprise the Military Lands Acts, 1892 (55 & 56 Yict. c. 43) ; 1897 (60 & 61 Yict. c. 6) ; 1890 (63 & 64 Yict. c. 56) ; and 1903 (3 Edw. 7. c. 47).

(c)(ii.) The land acquisition powers under these Acts were extended to the Admiralty by 58 & 59 Yict. c. 35, s. 2, which provides that land acquired by them shall be vested and managed under ss. 9 to 19 of the Admiralty Lands and Works Act, 1864 (27 & 28 Yict. c. 57); the bye-law making powers were extended to the Admiralty by 63 & 64 Yict. c. 56, s. 2 (1).

(c)(iii.) The Military Lands Acts have been adapted in their application to County Associations by Regulations of the Army Council under s. 4 of the Territorial and Reserve Forces Act, 1907 (7 Edw. 7. c. 9) ("Appendix XYI. of the Territorial Force Regulations, 1912 "), printed in Statutory Rules and Orders, 1912, pp. 1211-1220.

(c)(iv.) By-laws under the Acts are " regulations " within the Documentary Evidence Acts, 1868 and 1882, and may be proved accordingly, see 55 & 56 Yict. c. 43, 8. 17 (3).

*and any such regulations or any orders made thereunder affecting the pilotage of vessels may supersede any enactment, order, charter, byelaw, regulation or provision as to pilotage. (d)*

(d) Pilotage.:

The principal enactments as to Pilotage are now comprised in the Pilotage Act, 1913 (2 & 3 Geo. 5, c. 31) and Pilotage Orders thereunder. For regulations made under s. 1 (2) above, see Regulation 39 printed at p. 136, and the Admiralty and Pilotage Authorities' Orders printed in Part III. of this Manual, pp. 466-473, referred to in footnote (b) thereto.

# The Education of “Engineers”

## University engineers and study of “government”

As a rule or “policy”, Engineering colleges [and Universities] offer “*minimum instruction in the study of government*”.<sup>406</sup> Frequently the course is entirely omitted, or presented from the point of view of political science<sup>407</sup>.

In the former case (course is omitted):

**engineers begin their careers without any systematic knowledge of the government** to which they owe obligations as citizens and by which they may be employed or regulated directly or indirectly in their construction and operating activities.

In the latter case (view of political science):

**engineers** acquire in connection with their study of government *only a slight knowledge, if any at all*, of the intricate and vital relations of engineering to government.<sup>408</sup>

**Thus, engineers are inadequately prepared to assume their responsibilities** either as citizens or in their profession<sup>409</sup>.....  
**literature required to fill this gap in engineering education.**

**Engineering college instruction literature should:**

- A. approach the subject of government from the standpoint of technology.
- B. lays emphasis on those aspects of government which particularly concern the engineer
- C. amplification of knowledge concerning government as law and politics to the numerous standard treatises by political scientists.
- D. study respecting the relations of technology and government
- E. treatise on technology and government in general

My purpose has not been to furnish an encyclopaedia but a suggestive guide to a field as yet almost unexplored, with the hope that other students will develop phases of the subject in detail.

Not until numerous special studies have been made respecting the relations of technology and government will it be possible to write anything approaching an ideal treatise on technology and government in general.<sup>410</sup>

The subject of "Aircraft in Warfare," with which Mr. Lanchester deals, is, and for some time will be, highly controversial. In each of its three aspects, the scientific, the military, and the material or manufacturing, it is still in the stage of experiment and speculation. The results obtained cannot always be made available for the information of the general public, and those which are available have usually been set forth in terms so technical, either in a scientific or a military sense, as to be somewhat difficult for the general reader to understand.

Very little trustworthy information, therefore, has been disseminated, and the uninstructed public, hungry for information on a novel and alluring subject, of which the national importance is evident, has fallen an easy prey to the imposter. Any plausible rogue, gifted with sufficient assurance, and aided by a ready pen or supple tongue, has been able to pose as an "aeronautical expert," and to find some kind of following.<sup>411</sup>

**Mechanical Flight.** Although the **elementary principles of mechanical flight are not of recent origin**, the practical development of the flying machine is confined almost entirely to the present century. Gravity propelled gliders and small models have been flown with success from a comparatively early date.

**There was no single element on the wright's successful machine that had not been proposed many years before** by Langley, Chanute, Montgomery, Henson, Mouillard, and others, but this first flight must be attributed principally to the fact that the

## Notes on "Civil Aviation"

Wrights started carefully and painstakingly to learn how to operate (By practicing with gliders) before starting on the first power machine.<sup>412</sup>

**If Langley had studied the operation of his machine as carefully as he did its theory and design, he would have been flying long before the Wrights as his original machine was afterwards successfully flown by Curtiss.**<sup>413</sup>

When once actual flight was achieved, and the success of the Wright Brothers became generally known, the **development proceeded with leaps and bounds. All the resources of science and engineering skill were at once applied to the new device until our present scientific knowledge of the aeroplane compares very favorably with the older engineering sciences.**<sup>414</sup>

The recent **investigation of engineering education** carried out with the support of the Carnegie Corporation through the **initiative of the Society for the Promotion of Engineering Education** has disclosed that **too frequently** the applicant for an engineering course has an **erroneous or a very vague notion of the nature of engineering practice.**<sup>415</sup>

This investigation showed that **something should be done to guide the boy to make a wise decision in choosing a life work.** A number of valuable pamphlets have been prepared by various institutions for the use of high-school boys, their parents, teachers, principals, and superintendents.<sup>416</sup>

This book has been written to meet **the requirements of engineers who are desirous of an introduction to the study of aeronautics. The fundamental principles of mechanics are unalterable, although the many interpretations and practical applications of such laws are the fruit of scientific labour.**

The **new science** of aeronautics, which has **necessitated a fuller understanding of the dynamics of the air**, must now be regarded as a branch of engineering, although each step forward into the realm of aeronautical research seems but to reveal an ever-increasing unexplored region.

The many unsound theories often advanced by well-intentioned people, who have had little opportunity to traverse the paths of aeronautical research, rather **tend to confuse** a new reader.

The reports of the several aeronautical laboratories have been drawn upon in the preparation of this book, and, as far as possible, no controversial matter has been discussed. Moreover, sketches and descriptions of aeroplane construction, which are of minor importance **Compared with a full understanding of the underlying principles of aeronautics**, have **only been considered briefly.** The author is greatly indebted to Mr L. Bairstow of the National Physical Laboratory for his helpful criticism and encouragement, and to Mr A. Landells, who kindly assisted in the laborious task of reading the proofs. The Aeroplane by ISBN 978-1-330-54397-9

**"Pre-war aviation was a sport; during war it has been a military weapon; after the war it will be one of the transport industries."**<sup>417</sup>

- M. d'Aubigny, French deputy and a recognised authority on aviation in France. **aply summed up the past, present, and future of:**

Before aircraft can be extensively utilized for private and commercial purposes and before aerial navigation can be developed to a point where it will afford an attractive field to insurance companies, **it will be necessary to effect a substantial readjustment of present-day conditions.**

<sup>413</sup> Aeroplane Construction and Operation; Including Notes on Aeroplane Design and Aerodynamic Calculation, Materials, Etc by John B. Rathbun ISBN 978-1-332-09776-0

<sup>414</sup> Aeroplane Construction and Operation; Including Notes on Aeroplane Design and Aerodynamic Calculation, Materials, Etc by John B. Rathbun ISBN 978-1-332-09776-0

<sup>415</sup> The Engineer His Work and His Education by Robert Lemuel Sackett ISBN 978-1-331-04156-6

<sup>416</sup> The Engineer His Work and His Education by Robert Lemuel Sackett ISBN 978-1-331-04156-6

<sup>417</sup> - M. d'Aubigny, French deputy - recognised authority on aviation in France.

The public, for example, will have to acquire a considerable amount of aeronautical knowledge before it will be prepared to admit the practicability of aerial navigation. There is also a crying need for a vastly greater number of official landing fields, laid out and managed in accordance with approved safety principles. It is likewise necessary to establish standard airways duly provided with aerial lighthouses and wireless signal stations; and to pass uniform and stringent laws governing the licensing of pilots the construction and use of air-craft, and the conduct of air-navigation generally.

In the present stage of development it is impossible to discuss the subject of "Airplanes and Safety" exhaustively and fully and the present book does not attempt to do so.

The title, "Air-man," designates primarily the pilot, together with all who actually fly, but it is also intended in its wider application to include the director, the manager, etc., of commercial enterprises connected with aviation, as well as that very important person, the mechanic, the value of whose interest and intelligent co-operation is, unfortunately, often underestimated.

It is hoped that the book may also prove of interest to persons less directly concerned with its subject.

The ideal airman must necessarily be somewhat versatile. He must have in him something of the sailor, the engineer, and the scientist, added to which he must possess more than an average share of common sense.

The title, "Complete Airman," is inevitably somewhat misleading, since it is obviously impossible to compress within the limited space available in a book of this type more than a very small proportion of the matter which covers so wide a field. The fact that it is written with a view to being of use and of interest to such widely differing classes of airmen further adds to the difficulty of choosing what to include and what to omit.<sup>418</sup>

## Apprentice and Apprenticeship Program

TO ESTABLISH A PROGRAM IN A COMPANY WITH or WITHOUT A LABOR AGREEMENT, THE PERSONNEL SHOULD :

1. ORGANIZE AN APPRENTICESHIP ADVISORY COMMITTEE,
2. DETERMINE ALL KNOWLEDGE AND SKILLS NEEDED FOR THE OCCUPATION,
3. SECURE THE COOPERATION OF WORKERS AND FOREMEN WHO WILL BE PROVIDING THE ON-THE-JOB SUPERVISION,
4. ARRANGE FOR THE NECESSARY RELATED CLASSROOM INSTRUCTION,
5. APPOINT AN APPRENTICESHIP DIRECTOR TO MAINTAIN STANDARDS, AND
6. WRITE A SET OF APPRENTICESHIP STANDARDS. BASIC STANDARDS HAVE BEEN ESTABLISHED BY A FEDERAL COMMITTEE ON APPRENTICESHIP. TO CONFORM WITH THESE STANDARDS, A PROGRAM MUST PROVIDE FOR
  1. A MINIMUM AGE,
  2. A FAIR OPPORTUNITY TO APPLY,
  3. SELECTION ON BASIC QUALIFICATIONS ONLY,
  4. A SCHEDULE OF WORK PROCESSES,
  5. ORGANISED "work related" TECHNICAL INSTRUCTION,
  6. A PROGRESSIVELY INCREASING WAGE,
  7. PROPER ON-THE-JOB SUPERVISION,
  8. PERIODIC EVALUATION OF PROGRESS,
  9. APPROPRIATE RECORDS,
  10. EMPLOYEE-EMPLOYER COOPERATION,
  11. RECOGNITION OF COMPLETIONS, AND
  12. be NONDISCRIMINATORY IN ALL PHASES.OTHER AREAS COVERED ARE:  
BASIC PROVISIONS [WHICH SHOULD BE A PART OF THE PROGRAM]  
THE "ACTUAL JOB" INSTRUCTION,  
THE COST OF APPRENTICESHIP, AND  
THINGS TO REMEMBER.  
ASSISTANCE must be AVAILABLE for the apprentice.

6. Accident to the Montgomery Aeroplane. Scientific American, July 29.
7. Ludlow's First Successful Flight Scientific American, November 4.
8. Natural and Artificial Flight Scientific American, December 16.

1906

1. F The Wright Aeroplane and its Performances April 7, 1906.
2. US Patent No. 821,393 is awarded to Orville and Wilbur Wright, May 22.
3. MOVIE: Santos-Dumont's 14-Bis takes flight, October 23.

1907

1. A New Flying Machine invented by Nemethy. The American Inventor, July, 1907.
2. Aerial Experiment Association formed, October 1.

1908

1. Lt. Selfridge writes to the Wright brothers, asking for details about their aircraft, January 15.
2. Wright brothers respond guardedly to Selfridges' request, Jan. 18.
3. AEA Red Wing flies for the first time, March 12.
4. AEA White wing makes first flight, May 18.
5. AEA June Bug makes first flight, June 21.
6. AEA wins Scientific American Trophy, July 4.
7. AEA files patent application, July 8.
8. Wright brothers write Curtiss concerning possible patent infringement, July 20.

## Notes on "Civil Aviation"

9. The Wright Brothers Aëroplane by Wilbur Wright. Century Magazine, September, 1908.
10. Lt. Selfridge killed in accident during Wright Ft. Myer trials, Sept. 17.
11. Farman makes first cross-country flight, Oct. 30.
12. AEA Silver Dart flown for the first time, Dec. 6.

1909

1. Aeroplanes and Motors at the First Paris Aeronautical Salon. Scientific American, January 23.
2. The British Army Aeroplane Scientific American, January 30.
3. The Aeronautic Society Aeroplane Scientific American, March 13.
4. MOVIE: The first film taken from an airplane, April 24.
5. A Novel French Aeroplane made by Givaudan. Scientific American, June 5.
6. Some New American Aeroplanes Scientific American, June 5.
7. Recent French Aeroplanes and Their Performances Scientific American, June 26.
8. Glenn Curtiss wins Gordon Bennett Cup, Rheims, Aug. 28.

1911

Wild Designs in Flying Machines. Scientific American, October 14.

1912

What Mouillard Did by Wilbur Wright. Aero Club of America Bulletin, May.

Code proposed by M. Edouard d'Hooghe, President of the International Juridical Committee of Aviation; Code proposed by Professor L. Von Bar, of Gottingen; Rules adopted at the Session of 1911 of the Institute of International Law; and Extract from the Report of the Committee on Aviation of the International Law Association; Code proposed by M. Le Moyne; Hague Convention respecting Bombardment by Naval Forces in Time of War; and Articles of the Hague Reglement relative to Bombardment in Land War; Belligerents and Neutral Wireless Installations - Extracts from the Hague Conventions on Neutrality in Land and Maritime War; British Aerial Navigation Acts, 1911 and 1913, and Extract from the British Army Act; "Précis" of the Franco-German Agreement as to the admission of German Aircraft to France and of French Aircraft to Germany.

CASE, John, M.A. (Cantab), A.F.R.Ae.S.,

Technician to the Bristol Aeroplane Co.; b. 1888; s. of John Case, The Crescent, Croydon. Ed. Brighton Coll. and Magdalene Coll., Cambridge. Training at Cambridge. Hons. degree, Mathematics and Eng. Career: 1910-15 and 1919-20—Teaching Eng. at Cambridge University;

1915-18—Royal Aircraft Establishment: Research on the Structural Design of Aeroplanes and Stress Calculations for War Aeroplanes;

1918-19 : CASE, John, M.A worked for the Aircraft Production Dept. of M. of M. published the following:

- i. further Researches in Aeroplane Structures, and
- ii. Inspection of War Designs from structural point of view.
- iii. Theory of D.C. Dynamos and Motors " a University Textbook; (Cambridge: W. Heller )
- iv. Loads and Stresses in Aeroplanes : an exhaustive series of Articles in "Aeronautics" shortly to be published in book form; "
- v. Synopsis of Theory of Heat and Heat Engines. Address: Filton, Bristol.

<b>"AERO ENGINEERING" PUBLISHED BY NEWNES LTD, 1938</b>
---

Sqn Ldr H. Nelson (Editor)

6-volume set - (books or actual Vols?) complete with "data" sheets on 50 aircraft types

Vol 1 pt 1 : Principles and Construction (p.1 - 416)

Vol 1 pt 2 : Principles and Construction (p.417 - 852)

Vol 2 pt 1 : Production (p.1 - 400)

Vol 2 pt 2 : Production (p.401 - 844)

Vol 3 pt 1 : **Maintenance and Overhaul (p.1 - 432)**

Vol 3 pt 2 : Maintenance and Overhaul (p.433 - 860)

## Notes on "Civil Aviation"

Vol 4 pt 1 :  
Vol 4 pt 2 :  
Vol 5 pt 1 :  
Vol 5 pt 2 :  
Vol 6 pt 1 :  
Vol 6 pt 2 :

### **"AEROPLANE MAINTENANCE AND OPERATION" PUBLISHED BY NEWNES LTD, 1938**

E.W Knott (Editor)

Vol 1  
Vol 2 Instruments Part 1 (2nd ed, 1942; vg int, sl soiled cloth) £12  
Vol 3 Landing Legs, Wheels & Brakes (1st nd; vg (cloth sl marked & fep cut) £12  
Vol 4 Airscrews Pt 1 1st, vg inc d/w £14  
Vol 5 Engines Part 1" (110pp plus index, covering Pratt & Whitney Wasp, Hornet & Twin Wasp engines; fine, vg d/w - £15.  
Vol 6  
Vol 7  
Vol 8  
Vol 9 Aeroplane Engines Part II; (1942 reprint of 1st); vg inc d/w - £15  
Vol 10 Hydraulic Equipment (1941 rep;rint of 1st) vg int, cloth sl faded £12  
Vol 12 Starters & Generators 1st, vg £12  
Vol 13 Aeroplane Engines Part 3 (1941) fine, vg d/w - £15  
Vol 14 Airframes Part 3 (1st, vg) £14.50  
Vol 16 Fuel & Oil Systems (1st, undated) ex-lib, fair - £9  
Vol 18 Aeroplane Carburettors Part II; 1st (nd) 132pp, 46 figs; vg inc c/w £14  
Vol 20 Airscrews Part 2 (2nd, 1942; good, fair d/w) £9  
Vol 21; Aero Engine Practice 1st (nd) 132pp, vg inc d/w £14  
Vol 22  
Vol 23  
Vol 24  
Vol 25 Engines Part 5 (112pp)1st, fine, vg d/w £15  
Vol 26 Engines Part 6 1st, (120pp) fine, vg d/w £15  
(NOTE : This 26 Vol series was also published as a 5 Vol hard-bound set)

### **GROUND ENGINEERS' LICENCE - COURSES BY SIR ISAAC PITMAN & SONS, LTD**

A licence : "Rigging & Maint. of Aircraft"  
B Licence : "Inspection of aircraft after overhaul"  
C Licence : "Aero Engines, Inspection before flight"  
D Licence : "Insp. of aero engines after overhaul"  
X Licence : "Elec. & Wireless Eq. & Instruments"  
A "Complete Course" for Ground Engineers' Licences ( A , B , C , D , & X ) - 1935

### **LIST OF BOOKS PUBLISHED BY SIR ISAAC PITMAN & SONS, LTD**

(Incorporating WHITTAKER & CO.) PARKER STREET, KINGSWAY, W.C.2.

ALL PRICES ARE NET. s. d.  
AEROFOILS AND RESISTANCE OF AERODYNAMIC BODIES, THE PROPERTIES OF. A. W. Judge. . . . 18  
AERONAUTICAL ENGINEERING. A. Klemin. . . .150  
AERONAUTICAL DESIGN AND CONSTRUCTION, ELEMENTARY PRINCIPLES OF. A. W. Judge . . . .76  
AEROPLANE STRUCTURAL DESIGN. Jones and Frier. . 21  
AEROPLANES AND AIRSHIPS. W. E. Dommatt . .30

## Notes on "Civil Aviation"

AIRCRAFT AND AUTOMOBILE MATERIALS OF CONSTRUCTION. Vol. I, Ferrous A. W. Judge  
 AIRCRAFT AND AUTOMOBILE MATERIALS OF CONSTRUCTION. Vol. II, Non-Ferrous and Organic. A. W. Judge  
 ALIGNMENT CHARTS. E. S. Andrews . . . .20  
 ALTERNATING CURRENT MACHINERY. Papers on the Design of. C. C. Hawkins, S. P. Smith, and S. Neville . . 21  
 ALTERNATING-CURRENT WORK. W. Perren Maycock . 10 6  
 ARITHMETIC OF ELECTRICAL ENGINEERING. Whittaker's 3 6  
 ARITHMETIC OF ALTERNATING CURRENTS. E. H. Crapper . 6  
 CALCULUS FOR ENGINEERING STUDENTS. J. Stoney . 3 6  
 CARPENTRY AND JOINERY: A PRACTICAL HANDBOOK FOR  
 CRAFTSMEN AND STUDENTS. B. F. and H. P. Fletcher 7 6  
 COIL IGNITION FOR MOTOR CARS. C. Sylvester  
 CONVERSION OF HEAT INTO WORK. Sir W. Anderson . 6  
 CONTINUOUS-CURRENT DYNAMO DESIGN, ELEMENTARY  
 PRINCIPLES OF. H. M. Hobart . . . . 10 6  
 CONTINUOUS CURRENT MOTORS AND CONTROL APPARATUS. W. Perren Maycock 76  
 DESIGN OF AEROPLANES, THE. A. W. Judge . . . 14  
 DESIGN OF ALTERNATING CURRENT MACHINERY. J. R. Barr and R. D. Archibald 30  
 DICTIONARY OF AIRCRAFT, A. W. E. Dommett . .20  
 DIRECT CURRENT ELECTRICAL ENGINEERING. J. R. Barr 15  
 DYNAMO: ITS THEORY, DESIGN AND MANUFACTURE, THE. C. C. Hawkins and F. Wallis. In two vols. Each 12 6  
 ELECTRIC CIRCUIT THEORY AND CALCULATIONS. W. Perren Maycock 10 6  
 ELECTRICAL INSTRUMENTS IN THEORY AND PRACTICE. Murdoch and Oschwald  
 ELEMENTARY AERONAUTICS, OR THE SCIENCE AND PRACTICE OF AERIAL MACHINES. A. P. Thurston . . .86  
 ENGINEER DRAUGHTSMEN'S WORK: HINTS TO BEGINNERS IN DRAWING OFFICES 26  
 ENGINEERING WORKSHOP EXERCISES. E. Pull . .36  
 ENGINEERS' AND ERECTORS' POCKET DICTIONARY: ENGLISH, GERMAN, DUTCH. W. H. Steenbeek . . .26  
 ENGLISH FOR TECHNICAL STUDENTS. F. F. Potter . .20  
 EXPERIMENTAL MATHEMATICS Book I, with Answers G. R. Vine  
 EXPERIMENTAL MATHEMATICS Book II, with Answers G. R. Vine  
 FUSELAGE DESIGN. A. W. Judge 30  
 GAS ENGINE TROUBLES AND INSTALLATION. J. B. Rathbun 80  
 GAS, OIL AND PETROL ENGINES: INCLUDING SUCTION GAS PLANT AND HUMPHREY PUMPS. A. Garrard . .60  
 GAS AND OIL ENGINE OPERATION. J. Okill . .50  
 GAS, GASOLINE AND OIL ENGINES. Including Glossary. J. B. Rathbun 80  
 HIGH-SPEED INTERNAL COMBUSTION ENGINES. A. W. Judge 18  
 INDUCTION COILS. G. E. Bonney  
 MAGNETO AND ELECTRIC IGNITION. W. Hibbert . .36  
 MANAGEMENT OF ACCUMULATORS. Sir D. Salomons . .76  
 MANUAL INSTRUCTION - WOODWORK. S. Barter . .76  
 MANUAL INSTRUCTION - DRAWING S. Barter 4  
 METAL TURNING. J. Homer . . . .40  
 METAL WORK REPOUSSE. C. G. Leland . . .50  
 METAL WORK. (Handbook). J. S. Miller . . .40  
 MODERN MILLING. E. Pull 90  
 PLYWOOD AND GLUE, MANUFACTURE AND USE OF. B. C. Boulton 76  
 PRIMER OF ENGINEERING SCIENCE, A. E. S. Andrews . 4 6  
 PRINCIPLES OF FITTING. J. Horner . . .76  
 PRINCIPLES OF PATTERN-MAKING ... 4 . 0  
 SLIDE RULE. A. L. Higgins ..... 6  
 SLIDE RULE. C. N. Pickworth  
 SILVERWORK AND JEWELLERY. H. Wilson  
 TRIGONOMETRY FOR ENGINEERS, A PRIMER OF. W. G. Dunkley . . 50  
 TRIGONOMETRY, PRACTICAL. H. Adams . . . .50  
 TRIPLANE AND THE STABLE BIPLANE, THE. J. C. Hunsaker 30  
 WIRELESS TELEGRAPHY AND HERTZIAN WAVES. A. R. Bottone . . . . .36  
 WIRELESS TELEGRAPHY: A PRACTICAL HANDWORK FOR OPERATORS AND STUDENTS. W. H. Marchant . .76  
 WORKMANSHIP, ON. H. Wilson . . . . .16

## **APPENDIX ?? : THE ENGINEERING JOURNAL - MEMBERS RELATING TO AIR ENGINEERS / AIR BOARD**

of Applications for Admission and for Transfer

April 1924 :

**ROBERT ARCHIBALD LOGAN**, of 136 West 52nd Street, New York City, U.S.A.

Born at Middle Musquodoboit, N.S., August 17th, 1892; Educ.,

Diploma, N.S. Tech. Coll. 1911;

D.L.S. 1914;

Two years study of languages and prac. astronomy in Germany (prisoner of war);

Cert. as Commercial Air Pilot and Air Engineer, Canadian Air Board;

1909, land surveys in N.S.; 1910-11, second asst.' on D.L.S. in Man., Sask.;

1912, 1st asst. on winter surveys, in Alta., 2nd asst. and leveller on base line surveys. Alta.;

1913, 1st asst. on base line surveys, Man.;

1914-15, 1st asst. settlement and inspection surveys, northern Alta.;

1915-16, aeroplane pilot and engr., R.F.C.;

1917-19, Flight Commdr., R.F.C.;
